METAURUS. River of Umbria, Italy, the modern Metauro. Here Hasdrubal, the Carthaginian general, was defeated in 207 B.C. by the Roman army while bringing reinforcements to his brother Hannibal (q.v.).

METAZOA. In zoology, name applied to all animals above the protozoa. In the latter, which include the lowest types of organisms, the animal consists of a single cell; in the metazoa it contains more than one cell, these being differentiated for performing various functions. Thus the cells form at least one double layer, or at any rate present a double aspect to environment; and it is the combination of these specialised cells that builds up the organs which perform the various functions of life. Metazoa, however, develop from a single cell.

METEOR. Small body which, circulating in interplanetary space, becomes visible by incandescence when it impinges on the earth's atmosphere. Such hodies move in regular orbits, and they are regarded hypothetically as fragments which may be the relics of a larger body, but which are in any case dispersed in a huge swarm. Such a swarm may be only a few hundred miles thick, but its length may amount to hundreds of millions of miles.

The great display of Leonids on November 12-13, 1833, first drew serious scientific attention to meteors. It was predicted that a particularly brilliant display would appear about every 33 or 34 years, a result confirmed in 1867. Some eighty showers are known, and the following is a list of the chief and their approximate dates. See Comet.

Name of Shower.	Date.
Quadrantids.	January 2-3.
Lyrids.	April 20-22.
7 Aquarids.	May 1-6.
8 Aquarids.	July 28.
Perseids.	August 10-12.
Orionids.	October 18-20.
Leonids.	November 14-16.
Andromedae.	November 17-23.
Geminids.	December 10-12.

METEORITE. Metallic or stony mass of matter reaching the earth from outside the earth's atmosphere. Large meteorites have been

found in Mexico, in Greenland, and S.W. Africa, weighing 50 tons, 36½ tons, and 50 to 70 tons respectively. Meteorites consist of iron or stone chiefly, though other elements, all of which are found on the earth, occur. The most probable hypothesis of their origin is that they are small masses, in reality tiny planets, revolving round the sun. See Aerolite.

Meteorite. The Willamette meteorite, a mass of iron found in the Willamette Valley, Oregon, in 1802. It is 10 ft. long, 6 ft. 6 ins. high, and nearly 16 tons in weight. Courtesy of the American Museum of Natural History.

METEOROLOGY (Gr. *meteoro*, lofty; *logos*, discourse). Science which deals with the processes going on in the earth's atmosphere, which manifest themselves as weather, and seeks to give a physical explanation of them. About the middle of the 19th century there grew up in most countries organizations for the collection and discussion of meteorological information. Meteorological stations, places where regular observations of weather are made and recorded, were established on a large scale, and their observations collected for discussion at central offices. An international conference of meteorologists at Leipzig in 1872 was the forerunner of many similar meetings, which have secured uniformity in methods of observation. Another method of discussion, the synoptic method, consists in bringing together observations made simultaneously at a large number of stations by plotting them on a map, thus giving a bird's-eye view of the weather conditions over a wide area. This method led to the recognition of definite meteorological systems, such as cyclones and anticyclones.

Meteorological observations were at first confined almost solely to those made at ground level. Observations of the form and motion of clouds were almost the only facts collected from the free atmosphere. During the last decade of the 19th century systematic efforts were made to extend our knowledge by direct observations of the conditions prevailing aloft. The most fruitful line of investigation has been to make atmospheric soundings with recording instruments (meteorographs) carried by kites or unmanned balloons. Direct observations of temperature made on aeroplanes are now also a recognized means of systematic observation. Weather forecasts are generally based on synoptic methods. See Anticyclone; Atmosphere; Climate; Clouds.

METEOROLOGICAL OFFICE. Headquarters of British meteorological activities. It was founded 1854, as a department of the Board of Trade, for the purpose of collecting and discussing weather observations made at sea. The office is now attached to the Air Ministry.

METEOROLOGICAL SOCIETY. ROYAL Society for the promotion of the science of meteorology. Founded in 1850, it publishes *The Quarterly Journal* and *The Meteorological Record*. The headquarters are at 49, Cromwell Road, London, S.W.7.

METER. Apparatus or instrument for measuring gases, liquids, electric currents, the intensity of light, etc. Usually they also record the results, as in gas, water, volt, and exposure meters, etc. Grain meters indicate the quantity of flowing grain discharged from a chute or hopper. An exposure meter is used for determining the intensity of light before exposing to it photographic plates or papers.

Methane. Also known as methyl hydride, this is the scientific name of marsh gas (q.v.).

METHIL. Seaport of Fifeshire, Scotland. On the N. shore of the Firth of Forth, 1 m S.W. of Leven on the L.N.E. Rly., it has a tidal harbour, with three docks, and exports coal. Pop. 12,295.

METHODISM. Name originally given to the evangelical revival which began at Oxford. It started in 1729 with a society in which John and Charles Wesley and other undergraduates handed themselves together.

The brothers were joined by George Whitefield, and, after a visit to North America, they began evangelistic work in England. In 1739 Wesley made his headquarters at Moorfields, London, and his followers built a meeting house at Bristol. Soon, however, on a point of doctrine, Whitefield broke away and left the movement in the hands of the Wesleys. John Wesley called the first conference of his followers together in 1744, and this may be said to have inaugurated Wesleyan Methodism. It spread to Ireland in 1747, and to Scotland in 1751. In 1784 Wesley consecrated Thomas Coke and Francis Asbury as superintendents for work in N. America. Coke afterwards called himself bishop, and so started the Episcopal Methodist Church of the U.S.A. Charles Wesley, who died in 1788, and greatly aided the movement as a hymn writer, and John Wesley, who died in 1791, both remained, nominally at least, in the Church of England; but in 1795 the English Methodist congregations severed connexion with that Church, an example followed in 1870 by their Irish colleagues.

In 1796 Alexander Kilham formed the Methodist New Connexion. In 1810 Hugh Bourne and William Clowes founded a body known as the Camp Meeting Methodists, who in 1812 became known as the Primitive Methodists. In 1815 arose the Bryanites or Bible Christians; in 1828 the Protestant Methodists; in 1835 the Wesleyan Methodist Association; in 1849 the Wesleyan Reform Association. The three last named bodies joined to form the United Methodist Free Church in 1857. The United Methodist Free Church joined in 1907 with the Methodist New Connexion and the Bible Christians to form the United Methodist Church.

Methodist organization includes hands, classes, circuits, districts, quarterly meetings of ministers and lay officers of circuits, semi-annual synods of ministers and selected laymen of a district, and a governing body known as the conference. The first Occumenical Methodist Conference, attended by 400 delegates, was held in the City Road Chapel, London, Sept. 7-20, 1881. The Methodist churches in Great Britain and Ireland have about 930,000 members, 5,000 ministers, and 1,500,000 scholars in the Sunday Schools.

A scheme for the reunion of the three remaining Methodist bodies was put forward after the Great War. It was approved by the conferences of the three churches, and the necessary Act of Parliament was passed to give effect to it. It needs still a final vote of those concerned. If this is favourable the first

united conference will meet in 1933. See Bible Christians; Primitive Methodists; Wesley. John: Whitefield, George.

METHUEN, BARON. British title. In 1738 Paul Methuen, M.P. for Wiltshire, was made a baron. His descendant, Paul Sanford Methuen, the 3rd baron, was a distinguished soldier. Born Sept. 1, 1845, he joined the Scots Guards in 1864. He served in Ashanti, 1874, and the Egyptian War, 1882, commanded Methuen's Horse in Bechuanaland, 1884-85, and in the South African War, 1899-1902, commanded a division. Sent to relieve Kimberley, he

3rd Baron Methuen
British soldier
Russell

was defeated at Magersfontein, Dec. 12, 1899. He was taken prisoner in March, 1902. Lord Methuen's later appointments included the governorships of Natal and of Malta. He was made a field-marshal in 1911.

An ancestor, Sir Paul Methuen, was responsible for the treaty of 1703 between Great Britain and Portugal still called by his name. By it Great Britain gave advantages to Portuguese wines and Portugal gave advantages to British wool.

METHUSELAH. Son of Enoch and grandfather of Noah (Gen. 5). He is stated in the O.T. to have lived 969 years, the greatest age recorded among the patriarchs, but the Samaritan text gives it as only 720 years.

METHVEN. Village of Perthshire, Scotland. It is 8 m. W. of Perth on the L.M.S. Rly. The churchyard contains the tomb of Lord Lynedoch, the General Graham of the Peninsular War. In the battle of Methven, 1306, the English defeated Bruce. Pop. 1,772.

METHYL. Name given to the group of elements represented by the formula CH_3 . It is not known in the free state, but its derivatives are very numerous. See Carbonates.

METHYL ALCOHOL. Colourless liquid with an odour like that of ordinary alcohol (ethyl alcohol). On ignition it burns with a blue flame, and, like ethyl alcohol, possesses great solvent powers. In the crude state it is known as wood naphtha or spirit, because it is prepared on a large scale by the dry distillation of wood. Commercial wood spirit contains from 75 to 90 p.c. of methyl alcohol. This spirit is used as a solvent for making varnishes and french polish, and in the preparation of methylated spirit. The purified wood spirit is largely used in the manufacture of aniline dyes.

METHYLATED SPIRIT. This is alcohol which has been rendered unfit for use as a beverage by denaturising. The object of the process is to allow the sale of alcohol for manufacturing purposes free of the heavy duty charged on alcohol. There are two kinds: (1) mineralised methylated spirit, consisting of alcohol mixed with one-ninth of its bulk of wood naphtha and three-eighths of 1 p.c. of petroleum; and (2) industrial methylated spirit, containing only one-nineteenth of its bulk of wood naphtha.

METHYL SALICYLATE. Chief constituent of oil of wintergreen, used as a remedy for rheumatism. Methyl salicylate is also made artificially. See Wintergreen.

METIS (Gr. wisdom). In Greek mythology, one of the daughters of Oceanus, the first wife of Zeus. She was so wise and prudent that Zeus, fearing she might bring into the world a child destined to become wiser than himself, devoured her when she became pregnant, the result being that Athena was born from the head of Zeus.

METRIC SYSTEM. Connected system of weights and measures based upon an arbitrary unit, the metre. The metric system

aims at simplification, the various units are rationally connected, and the scale of numeration is the same for most units. This common scale involves merely the decimal system of notation. The fundamental unit, the metre, was selected as the ten-millionth part of a quadrant of the earth's circumference. Later investigations showed that this quadrant varies in length, so that the metre is defined as the distance between two marks upon a bar stored in the observatory at St. Cloud. The other units are derived from the metre. The unit of weight, the gram, equals the weight of 1 c.c. of pure water at its maximum density. The unit of capacity, the litre, equals the volume occupied by 1,000 c.c. of pure water of maximum density. Other units such as the are, for square measure, and stère, for cubic measure, are convenient re-namings of multiples of the primary units.

METRIC ABBREVIATIONS. K=kilo, H=hecto D=deca, M=myria (ten thousand), d=deci, c=centi, m=milli: m.=metre, c.c.=cubic centimetre, g.=gram, Kg.=kilogram, l.=litre, Hl.=hectolitre a=are, s=stère, t=tonne, q=quintal.

METRIC EQUIVALENTS. 1 a.=100 sq. m. 1 sq. Km.=100 Ha. 1 t.=10 q=100 Kg. 1 s.=1 cu.m.=1,000,000 c.c. 1 μ =1 mikron=0.000001 m. 1 γ =1 mikrogram=0.000001 g. 1 λ =1 mikrolitre=0.000001 l.

METRIC AND APPROXIMATE ENGLISH EQUIVALENTS.

1 m.=39.37 inches=3 $\frac{1}{4}$ ft
1 Kg.=2.2046 lb.
1 tonne=0.9342 tons.
1 Km.=0.62135 miles=5 furlongs.
1 sq. Km.=0.3862 sq. miles=247.17 acres.
1 Ha.=2.471 acres.
1 l.=0.2199 gallons=1 $\frac{1}{4}$ pints.
1 g.=15 $\frac{1}{2}$ grains.

METRONOME. Instrument for indicating the exact pace of music. It comprises an inverted pendulum, driven by clockwork,

Metronome. Military form of instrument for measuring musical time
Hawkes & Son

its speed of vibration being controlled by sliding a weight moved along the pendulum rod, which is graduated. Some early metronomes had arbitrary rates of time, but the minute is now adopted as the standard, so that the indication $\text{♩} = 88$ (for example) means that the pace is to be 88 minims to the minute, and so forth. Experiments in its construction date back to the 17th cent.

METROPOLIS. Chief or mother city of a country. London is the metropolis of England, and so the word metropolis is used for certain of its activities, e.g. Metropolitan Police, and Metropolitan Water Board. The Metropolitan Asylums Board was abolished in 1929, its duties being transferred to the London County Council. See London.

METROPOLITAN. Term for the chief bishop of a country or province. In the Greek Church a metropolitan is intermediate between a patriarch and archbishop, but in the R.C. Church is equivalent to an archbishop. In the Anglican communion he is generally the head of an ecclesiastical province. The metropolitans in England are the archbishops of Canterbury and York.

METROPOLITAN WATER BOARD. Municipal body established in 1902 to take over the task of supplying London with water. It provides water, largely from the Thames and the Lea, for nearly 7,500,000 persons who live on 574 sq. m. of land in the counties of London, Middlesex, Surrey, Kent, Essex and Hertford. Its offices are at 173, Rosebery Avenue, E.C.

METSU, GABRIEL (1630-1667). Dutch painter. Born at Leiden, he was a pupil of Gerard Douw, and in 1657 went to Amsterdam, where he died. At first he worked in the neat

and smooth manner of Douw, but about 1655 he came under Rembrandt's influence. Later he reverted to a more minute and finished manner. Examples of his work, scenes of domestic life, are in the National Gallery and Wallace Collection, London.

METTERNICH, PRINCE (1773-1859) Austrian diplomatist, in full Clemens Lothar Wenzel Metternich. He was born at Coblenz, May 15, 1773, and entered the Austrian diplomatic service in 1794. He was Austrian minister at a succession of European courts between 1801-7, and became the foreign minister in 1809. To Metternich more than to any other man was due the victory of the reaction after 1815, the suppression

Prince Metternich, Austrian diplomatist

of popular, constitutionalist, or nationalist movements in every quarter, the domination exercised over Europe by the Holy Alliance, and the falling away of the tsar from his own liberal ideas. In 1848-49 he fell from power, and he died at Vienna, June 11, 1859.

METZ. Town of France, formerly the capital of Lorraine, now the capital of the dept. of Moselle. It lies on the river Moselle, here joined by the Seille, 31 m. by rly. N. of Nancy.

A rly. junction of importance, Metz is chiefly noted as a fortress and military centre, and is surrounded by a double ring of detached forts. There is considerable river traffic, and the town is a centre of trade in agricultural produce, fruit, and wine. The older streets are narrow and winding, but the parts built after 1871 are broad thoroughfares with houses often of characteristically German design. The cathedral is a Gothic building begun in the 14th century, with fine stained glass. The Esplanade, with its fine trees, is a feature. Since 1918 all the streets have been renamed, many of them bearing the names of Allied generals and statesmen.

Metz was incorporated in France in 1648, and was later fortified by Vauban. In 1870 Bazaine surrendered it to the Prussians, and by the treaty of Frankfurt (1871) it passed to Germany, becoming the chief German bulwark on the W. frontier. It was restored to France in 1919. Pop. 69,624.

MEUNIER, CONSTANTIN (1831-1905). Belgian sculptor and painter. Born at Etterbeek, Brussels, April 12, 1831, he first appeared at the Brussels Salon in 1851 with a piece of sculpture, *Guirlande*. For a time he abandoned sculpture and painted scenes from the life of the Trappists, and also of peasant life and pictures of workers in Spain. He returned to sculpture and devoted himself to portraying scenes from the life of the workers in the coal mines, having his studio in Louvain in the heart of the Belgian black country. His chief works include pieces in the Museum of Decorative Arts, Brussels; and *Au Pays Noir* in the Luxembourg Museum. He died April 4, 1905.

MEUSE. River of Europe called by the Dutch the Maas. It rises about 16 m. N.E. of Langres, Haute-Marne, flows N. through the depts. of Vosges, Meuse, and Ardennes, and passes into Belgium just beyond Givet. At Namur it turns N.E., and it enters Dutch territory just S of Maastricht.

The river then flows N. and W. until it joins the Waal, a branch of the lower Rhine, near Gorkum, where it becomes the Merwede, and, after passing the marshy tract known as the Biesbosch enters the North Sea by several mouths. Among its tributaries are the Sambre, Semoy, Lesse, Ourthe, and Roer, and among the towns on its banks are Verdun, Mézières, Dinant, Namur, Huy, Liège, Maestricht, and Venlo. Navigable up to a point near Verdun, the Meuse is joined by several canals. Its total length is 575 m. Fighting took place along the Meuse between the French and the Germans in Aug., 1914.

Meuse is also the name of a department of France. On the frontiers of Belgium, it is watered by the Meuse. Bar-le-Duc is the capital and Verdun is in the department.

MEXBOROUGH. Urban dist. and market town of Yorkshire (W.R.). It stands on the Don, 5 m. from Rotherham and 11 m. from Sheffield, with stations on the L.N.E. and L.M.S. Rlys. The chief industries are iron-works and the making of pottery and glass, while around are coal mines. Market days, Mon. and Sat. Pop. 15,410.

The Irish title of earl of Mexborough has been borne since 1766 by the family of Savile. The family estates are in Yorkshire, and the earl's eldest son is called Viscount Pollington.

Metz Cathedral, part of which dates from the 13th century

MEXICO. Republic of North America, occupying the southern extension of the continent toward Central America. Bounded N. by the United States, and S.E. by British Honduras and Guatemala, it has a coastline of over 1,500 m. on the Atlantic (Gulf of Mexico), and of over 2,000 m. on the Pacific side, the length being enhanced on the one side by the hammer-shaped peninsula of Yucatan in the S.E., and on the other by the narrower, longer peninsula of Lower California in the N.W.

The capital is Mexico City. Other important towns include Guadalajara, Puebla, Monterey, San Luis Potosi, and Leon. The chief Atlantic

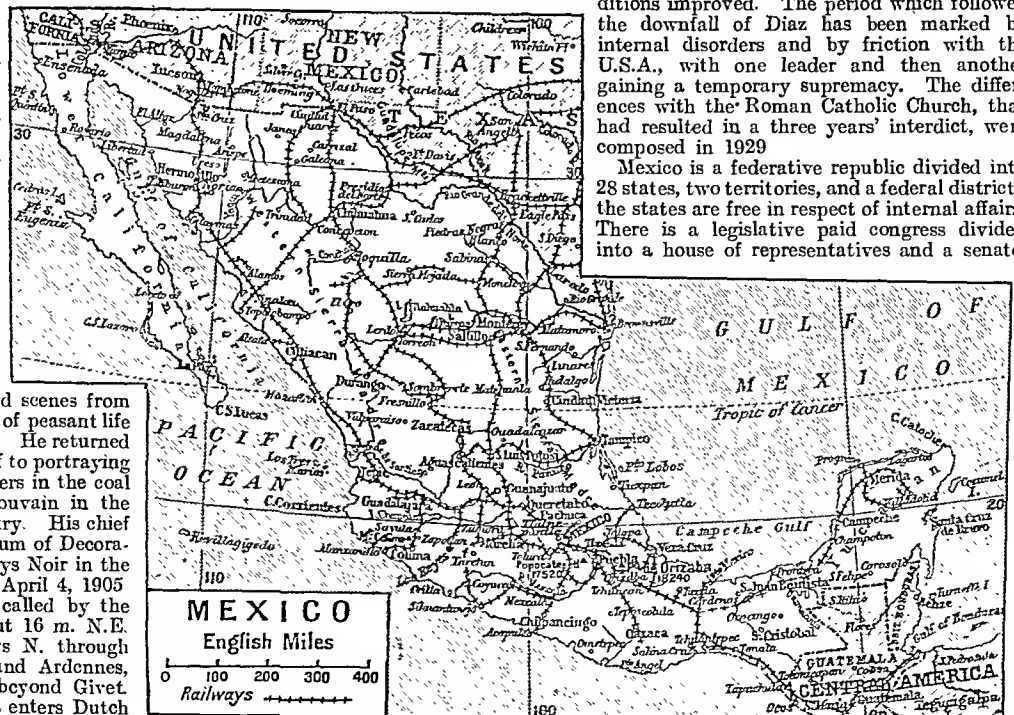

ports are Tampico, Vera Cruz, Puerto Mexico, and Progreso. The chief Pacific ports are Salina Cruz, Acapulco, Manzanillo, and Mazatlan. The area is 767,000 sq. m. The population is somewhere about 15,000,000. Perhaps a sixth, or less, are Creoles; a full half are mestizos or half-castes. The Indians are indigenous.

The most important food crop is maize. The country is not, as a rule, self-sufficing in either maize or wheat. The frijol and other beans are grown and eaten; oranges, bananas, vines, agaves, from which the beverages pulque and mezcal are distilled, sugar and coffee are cultivated for home consumption and export. Fibre plants are specially important; among these is the henequen or sisal hemp of Yucatan. Cotton is grown in central Mexico; the guayule and other wild plants yield rubber, which is also cultivated. Among vegetable gums, the chicle is the basis of chewing gum. The forests yield mahogany, rosewood, logwood, sandalwood, and ebony. Cattle ranching is an important occupation.

The mineral wealth is immense. Silver, gold, copper, iron, lead, and zinc are the most important metals, and coal and salt are found. The oil fields are among the most important in the world. There are a few large metallurgical works. The total mileage of rlys. is somewhat over 15,000. There are some 25 wireless stations.

HISTORY. In the two centuries before the Spanish conquest, the Aztecs established their rule over a great part of Mexico. In the reign of Montezuma II (q.v.) Mexico was invaded by the Spaniards under Cortes (q.v.), and conquered in 1519-21. For three centuries it was governed by Spain. In 1821 Iturbide declared himself emperor, but in 1824 a republic was established. Napoleon III had a vision of a Franco-American empire, and the French took Mexico City in 1863, and installed a provisional government which elected Maximilian (q.v.), brother of the Austrian emperor, as emperor. On the fall of the empire in 1867 a republic was again set up, which has lasted to the present day. In 1876 Diaz (q.v.) was elected president, a position he held till 1911. He became, after his re-election in 1884, a dictator. Under his rule the finances were rehabilitated, guerrilla warfare was put down, and economic conditions improved. The period which followed the downfall of Diaz has been marked by internal disorders and by friction with the U.S.A., with one leader and then another gaining a temporary supremacy. The differences with the Roman Catholic Church, that had resulted in a three years' interdict, were composed in 1929.

Mexico is a federative republic divided into 28 states, two territories, and a federal district: the states are free in respect of internal affairs. There is a legislative paid congress divided into a house of representatives and a senate.

Railways

Mexico. Map of the southern republic of North America, showing railway connections with the U.S.A.

both elected. The federal executive is vested in an elected president. Each state has a republican form of government, and is under an elected governor. *See* Aztec; Maya; consult also *History of the Conquest of Mexico*, 3 vols., W. H. Prescott, rev. ed. 1903.

MEXICO CITY. City of N. America, capital of the republic of Mexico. It lies within the federal dist. on the plateau of Anahuac, at an alt. of 7,350 ft., 290 m. by rly. from Acapulco on the Pacific Ocean, and 263 m. from Vera Cruz on the Gulf of Mexico. It is the chief business and distributing centre of the country. The manufactures include textiles, cigarettes, boots and shoes, flour, chocolate, furniture, pianos, glass, soap, etc. The cathedral, begun in 1572, occupies the site of the temple of Huitzilopochtli, the war-god of the Aztecs. The Plaza de la Constitución, or Plaza de Armas, or Plaza Mayor, is the centre of the city; it covers 14 acres, and the park and promenade, the Alameda, covers 40 acres. Many of the houses have terraced roofs and inner courts, and the older quarters maintain the appearance of a Spanish city. Pop. 906,063.

The Gulf of Mexico is a gulf or sea forming a westward extension of the Atlantic Ocean. Almost entirely enclosed by land, it has the U.S.A. on the N., Mexico on the W. and S. It has a greatest length from E. to W. of 1,150 m. and a greatest breadth N. to S. of 680 m.

MEYER, FREDERICK BROTHERTON (1847-1929) British Nonconformist divine. Born in London, April 8, 1847, he studied for the Baptist ministry at Regent's Park College. After holding charges in Liverpool and York he became minister of Victoria Road Church, Leicester, in 1874, where his ministry was so successful that a special building, known as Melbourne Hall, was erected for him in 1878. Minister of Regent's Park Chapel, London, 1888-92, he was at Christ Church, Westminster Bridge Road, 1892-1909. In 1909 he returned to Regent's Park Chapel, and held the pastorate until 1915, when he returned to Christ Church. Meyer, who wrote many theological works, retired from the active ministry in 1920, and died Mar. 28, 1929.

MEYERBEER, JAKOB (1791-1864). German composer. Born in Berlin, Sept. 5, 1791, the son of a Jewish banker, Herz Beer, his name was originally Jakob Liebmann Beer. After becoming one of the most brilliant pianists of the day he turned to composition. His works include the operas *Robert the Devil*, *The Huguenots*, and *The Prophet*. He died May 2, 1864. Pron. Myer-bare.

MEYNELL. English hunt. It hunts a district in Derbyshire and Staffordshire. Sudbury is about the centre, while Burton-on-Trent, Tutbury, and Uttoxeter are in the area. The hounds belong to the members.

MEYNELL, ALICE CHRISTIANA (1850-1922). British poet. Daughter of T. J. Thompson, and sister of Lady Butler, the battle painter, she was educated by her father, often in Italy, while Ruskin and Henley encouraged her literary ambitions. She married

Wilfrid Meynell in 1877. She wrote on John Ruskin, 1900, selected the verses of John B. Tabb, 1906, and embodied the record of her

Mexico. The cathedral, founded in 1572. Above, National Palace in the Plaza Mayor. It houses a museum of Aztec relics

finished taste in *The Flower of the Mind* a general anthology of English verse, 1897, besides writing prefaces and essays. Her own poems were collected in 1913. She died Nov. 27, 1922. A Memoir by her daughter, Viola Meynell, appeared in 1929.

MÉZIÈRES. Town of France, capital of the dept. of the Ardennes. It stands on both banks of the Meuse, 47 m. N.E. of Reims, and with Charleville (q.v.) on the left bank forms the twin town of Mézières-Charleville. It was captured by the Prussians in 1815 and 1871, and in the Great War the Germans captured it in Aug., 1914, and established a headquarters there. Mézières has been adopted by Manchester. Pop. 9,873.

A village of this name is in the dept. of Somme, 15 m. S.E. of Amiens. Evacuated by the British in March, 1918, it fell to the Germans, and it was recaptured by the Canadians, Aug., 1918.

MEZZOTINT. Process of engraving. A copper or steel plate is taken and the "ground" made thereon by means of a "cradle" or rocking tool, which raises a burr all over. This, if inked and printed, would give a uniform black. To obtain the picture, the high lights are scraped away by a scraper and then burnished with a burnisher, the middle lights being treated in the same way, though less drastically, and the darkest shadows left intact. Introduced into England in 1660, Mezzotint reached the zenith of perfection towards the end of the 18th century. On the Continent it never really took root. It became an art of first-class importance with the rise to fame of Reynolds, Gainsborough, Romney, and other English masters, whose manner lent itself specially to reproduction in this medium. The later introduction of steel-faced plates hastened the abandonment of pure mezzotint for a mixed style of mezzotint and line and stipple engraving. *See* Engraving; Etching.

MHO. In electricity, the unit of conductance or electric conductivity. It is the reciprocal of resistance, the term mho being ohm written backwards.

Alice Meynell, British poet
Russell

MIAMI. City and winter resort of Florida, U.S.A., on the N. bank of the Miami river. Great damage was caused and many lives lost by a hurricane, Sept., 1926. Pop. 131,286.

MICA. In mineralogy, a group of minerals characterised by ready cleavage into thin plates. Muscovite, common mica, or tale, is a colourless mixture of potassium and aluminium silicate, widely used for lamp

chimneys and the doors of stoves on account of its transparency and resistance to changes of heat. It is also employed for insulating purposes. Paragonite is a sodium and aluminium silicate, yellow to green in colour; lepidolite, a rose-coloured potassium, lithium, and aluminium silicate; biotite, a dark-green, brown, and black magnesium iron silicate occurring in many crystalline rocks; and lepidomelane, a black iron mica. Micaceous minerals are mined extensively in India and the U.S.A.

MICA SCHIST. Name given to a metamorphic rock having a schistose or foliated structure, and composed chiefly of mica and quartz, arranged in alternate irregular bands. The rock cleaves easily along the mica bands. Garnet, tourmaline, etc., frequently occur in the rock, which is widely scattered.

MICAH. One of the minor prophets. A native of Moresheth, near Gath, and a younger contemporary with Isaiah, he prophesied in the reigns of Jotham, Ahaz, and Hezekiah. Of his prophecies the earlier chapters denounce oppression and drunkenness and predict the ruin of the nations. Then follow Messianic predictions of restoration and future glory. The closing chapters deal with the controversy between God and His people.

MICHAEL (Heb. Who is like God?) Name given to one of the angels in the books of Daniel and Revelation. In Dan. 12, 1, he is described as the great prince which standeth for the people. He is thus the champion of the Israelites against the prince-angels of the Persians and the Greeks. In Rev. 12, 7, he is the victorious leader of the good angels (the Archangel) against the Dragon (the old serpent, he that is called the Devil and Satan) and his angels. *See* Angel; Archangel; Michaelmas.

MICHAEL (b. 1921). King of Rumania. The son of Charles or Carol and Helen, a princess of Greece, he was born Oct. 25, 1921. When his grandfather, Ferdinand, died, July 21, 1927, Michael was proclaimed king, as his father had renounced the succession and left the country. He reigned, guided by a council of regency, until June, 1930, when Carol returned and was accepted as king.

MICHAELMAS. Feast of S. Michael and All Angels, Sept. 29. It was instituted in 487. In England it is a quarter day. In the United Kingdom magistrates are usually appointed at or about Michaelmas. Until 1873 the first term of the legal year was Michaelmas term.

MICHELANGELO (1475-1564). Italian artist. Born March 6, 1475, at Caprese, the son of Ludovico Buonarroti, he was apprenticed

Michelangelo, Italian artist
Capitoline Gallery, Rome

to the painter Ghirlandaio, from whom he soon drew the famous complaint, "This boy knows more than I do." Catching the eye of Lorenzo de' Medici with his first sculpture, the lad was forthwith given rooms in the palace. After Lorenzo's death in 1492 he went to Bologna, but returned in 1495 to Florence.

Called to Rome in 1496 by a cardinal who had bought his *Sleeping Cupid* as an antique, the young sculptor was soon at work on the superb group of his *Pietà*; and when at 26 he again entered Florence, he was hailed as the first sculptor of his age. Finding a large discarded block of marble, he wrought out of it his masterpiece the colossal *David* (*see* illus. p. 489). At this time he painted the *Holy Family*, now in the Uffizi Gallery, Florence.

In 1505 he was summoned to Rome by Pope Julius II, who ordered a magnificent

monument to himself. Michelangelo set to work, but tricked by the pope over money, he left in a rage for Florence. Reconciled to the pope in 1503, he returned to Rome to finish the great sculptures for the Julian tomb. Instead he was given the task of painting the Sistine chapel. He completed this stupendous work, practically unaided, on Nov. 1, 1512.

In 1527 Florence shook off the yoke of the Medici, and Michelangelo, now 52, flung himself into the war of liberty. But after the fall of the city Michelangelo resumed many unfinished commissions, including the Tomb of Giuliano and Lorenzo de' Medici in 1534. In that year he went again to Rome, where the new pope, Paul III, compelled him to the painting of the vast Last Judgment. In 1545, at 70, Michelangelo completed his much modified design of the huge Julian tomb. The following year, Pope Paul III made him architect to complete the great church of S. Peter. He died Feb. 18, 1564.

MICHIGAN. Lake of the U.S.A., the second largest of the five Great Lakes of North America. It is 320 m. long, has a mean breadth of 65 m., and covers an area of 22,400 sq. m. Communication with Lake Huron is provided by the Strait of Mackinac and with the Mississippi river by the Chicago Drainage Canal. Chicago, Milwaukee, Manistee, and Sheboygan are on its shores.

MICHIGAN. Northern state of the U.S.A., known as the Peninsula State, from its division by Lake Michigan into two peninsulas. The N. peninsula is traversed by low mountains, and is rich in minerals; the S. peninsula is hilly in the N., with a prairie expanse towards the S. Thousands of small lakes break the surface, while the Muskegon, Grand, Kalamazoo, and many other rivers supply water-power. Maize, oats, wheat, potatoes, hay, and sugar beets are extensively cultivated, and iron and copper mined; silver, salt, coal, and cement are also worked. The state university, at Ann Arbor, the State Agricultural College, at Lansing, and the College of Mines at Houghton, are among numerous educational institutions. Besides 8,397 m. of steam and 944 m. of electric railroad, the St. Mary's Falls Ship Canal ('Soo' canal) is available for transport. Lansing is the capital, and Detroit the chief city. The area is 57,980 sq. m. Pop. 4,600,000.

MICKIEWICZ, ADAM (1798-1855). Polish poet. Born near Novogrodek, Lithuania, Dec. 24, 1798, he was arrested in 1824 as a political suspect, and banished to the interior of Russia. He wrote a series of sonnets on the Crimea, which he visited in 1825, and composed epics, which celebrate the struggle of the Lithuanians against the Teutonic Knights. Permitted in 1829 to travel abroad, Mickiewicz went to Rome, where he wrote the epic Pan Tadeusz, his finest work, published in 1834 (Eng. trans. 1886). Mickiewicz was in Paris as professor of Slavonic literatures at the Collège de France, 1840-44, but was dismissed for political propaganda in his lectures. He died in Constantinople, Nov. 26, 1855. Pron. Misk-yevitch.

MICROMETER. Instrument for making accurate minute linear measurements. The most common form is the micrometer screw, which depends upon the fact that if a screw is completely rotated, its point will move through a distance equivalent to that between two consecutive threads. By making the pitch small and by attaching to its base a graduated head of comparatively large diameter it is possible to read a fraction of a rotation and thus measure with great accuracy

Micrometer. Plain screw micrometer; a, straight edge; b, divided head; c, end of screw; d, stop between which and e the object being measured is held

By courtesy of Percival Marshall & Co.

the distance moved over by the point of the screw. A vernier is usually provided.

In a telescope the micrometer is attached to a framework of wires fitted over the eyepiece. The micrometer screw alters the position of movable wires with regard to a central one and facilitates the measurement of small angular distances among neighbouring stars.

MICRONESIAN. Term denoting the inhabitants of the diminutive islands N. of Melanesia in the W. Pacific. First occupied by a Papuan, then by an Indonesian immigration, this group was afterwards affected by other racial and cultural influences, especially Malayan, Japanese, and Samoan.

MICROPHONE. Instrument for the intensification of sound. The contact microphone, invented in 1878 by Hughes, depends upon the fact that, if there are loose contacts in an electric circuit, the resistance of the circuit varied as sound waves cause the contacts to vibrate. In a common type a funnel-shaped mouth-piece concentrates the sound waves on to a thin disk of carbon. The surface of a second carbon plate is cut into small pyramids, and the space between the two plates is filled with carbon granules. The vibration of the first disk presses and releases the carbon granules alternately, by so doing causing variation of electrical resistance.

Micophone. Type of contact microphone used as a transmitter in telephone apparatus

In the electrodynamic microphone a light flat coil of wire is suspended in a magnetic field and forms the diaphragm. As it moves in response to the sound waves, an electric current is produced in the coil and, suitably amplified, is caused to activate the transmitter. The electrostatic or condenser microphone comprises a thin metal diaphragm stretched in front of a heavy metal backplate, from which it is separated by a narrow air space. This arrangement constitutes a condenser, and the vibration of the diaphragm causes variations of capacity between diaphragm and backplate. These are changed into current variations and then amplified. See Amplifier; Telephone; Wireless Telegraphy.

Microphone. Reisz carbon microphone, as used in broadcasting studios. Courtesy of British Broadcasting Corporation

MICROSCOPE (Gr. mikros, small; skopein, to look at). Optical instrument for the examination and magnification of small objects. In its simplest form, that of a single lens, it is very ancient, but the high-powered compound microscope is comparatively modern invention. The single lens gave a coloured and distorted image, and it was not until

the invention of the achromatic lens by Chester Moor Hall, 1729, and John Dollond, 1752, that any great advance was made.

The researches from 1873-81 of Professor E. Abbe, combined with the skill of the German glass-maker Dr. Schott, brought about a great increase in the powers of the microscope.

A simple form of microscope consists of a magnifying lens at one end of a tube and another lens at the other end, serving as an eye-piece. In modern microscopes the two simple lenses are replaced by two complicated systems of lenses. The system nearest the object being examined is called the objective, and that nearest the eye the eyepiece. The objective is the more important part, its function being to collect the rays of light from the object and bring them to the focal image. By the use of quartz lenses it became possible to construct a microscope to enable objects to be examined that are too small to be viewed by ordinary light.

The Royal Microscopical Society was founded in 1839. It publishes a quarterly journal and has its headquarters at 20, Hanover Square, London, W.

MIDAS. Legendary king of Phrygia. Having done a favour to Silenus, he asked that whatever he touched should be turned into gold. Finding that even his food turned to gold before it reached his lips, he asked Bacchus to revoke the gift. By command of the god he bathed in the springs of the river Pactolus, and the helpful power left him. Pron. My-das.

MIDDELBURG. Town of the Netherlands. Capital of the prov. of Zeeland, it stands 4 m. by rly. N.N.E. of Flushing. The town contains many old houses, and is encircled by a strip of water known as the Vest. The Gothic Stadhuis, with a tower 180 ft. high, dates from the early 16th century. The abbey of S. Nicholas, founded in 1106, used for administrative purposes, has cloisters of the 16th century, and contains interesting tapestries. The new church, formerly the abbey church, has a lofty tower, rebuilt in 1718, with a fine carillon. Pop. 19,020.

MIDDELBURG. Town in the Transvaal, S. Africa. It is 95 m. by rly. E. of Pretoria. Near are extensive coal mines. It is a trading centre with rly. connexion to Pretoria, Johannesburg, and Lourenço Marques. Pop. 2,274. There is another Middelburg, a town in Cape Province. Pop. 2,694 whites.

MIDDLE AGES. Name given to the ten or eleven centuries intervening between ancient and modern times. Definite dates for the beginning and the end of the Middle Ages can only be assigned arbitrarily; those most in favour are the sack of Rome by Alaric the Goth, 410, or the deposition of the last Roman Emperor in Italy, Romulus Augustulus, 476, and the capture of Constantinople by the Turks, 1453, or the discovery of America by Columbus, 1492. The essential facts are that

early in the fifth century the old Roman civilization of Western Europe was submerged by the barbarian flood of Teutonic invasion; a new civilization gradually emerged in a new Europe; and then the new Europe awoke gradually to fresh intellectual ideas, and to the existence of a whole new world outside itself. There are two main periods, roughly known as the Dark Ages and the Age of Chivalry.

MIDDLESBROUGH. County and mun. borough, seaport, and market town of Yorkshire (N.R.). It stands on the S. side of the

Middlesbrough, Transporter bridge, looking towards the furnaces

man museum, and Roman Catholic cathedral. The commercial centre of the coal and ironstone mines of the Cleveland district, Middlesbrough has foundries, furnaces, and other works for the production of iron and steel on an enormous scale. The river forms a harbour protected by two breakwaters; in it are modern and capacious docks. Shipbuilding is another industry. Two members are returned to Parliament. Market day, Sat. Pop. 131,103.

MIDDLESEX. County of England. Wholly inland, its area is 233 sq. m. On the S. the Thames separates it from Surrey, as on

the E. the Lea separates it from Essex. Other rivers are the Crane, Colne, and Brent. The surface is fairly level, although there is a range of hills in the N., and the soil is fertile. Brentford is the county town, but much of the business is done in London. Save for a small and decreasing rural area in the W., it is covered with towns and urban districts, suburbs of London. These include the boroughs of Acton, Ealing, Hornsey, and Twickenham, and the populous urban districts of

Willesden, Edmonton, Chiswick, Enfield, Finchley, and Tottenham. In the county, too, are Hampton, Harrow, Staines, Southall, Teddington, Wembley, and Kenton. It sends ten members to Parliament, and is in the diocese of London, except for a small portion in that of Oxford. Pop. 1,253,002.

The Middlesex Hospital is a London Hospital founded in 1745. Situated in Mortimer Street, London, it has over 400 beds. A cancer wing was opened in 1900. There is an excellent medical school. In 1926 the institute of bio-chemistry was opened here. The hospital was being rebuilt in 1930.

MIDDLESEX REGIMENT. Regiment of the British army. Officially known as The Middlesex Regiment (Duke of Cambridge's

Own), it is an amalgamation of the 57th and 77th Foot, raised in 1755 and 1787 respectively. For a number of years the men served as marines. Its proudest fighting records were gained in the Peninsular War, when among other feats the valour of the regiment in dying face to the foe at Albuera earned it its famous title of Die-Hards. Further battle honours were gained during the Crimean War and in the New Zealand War. During the South African War the Middlesex was specially mentioned for gallantry at Spion Kop. Before the Great War this was one of the few regiments which had four regular battalions. Both its regular and auxiliary battalions did splendid service during the Great War. The regimental depot is at Mill Hill.

MIDDLETON. Borough of Lancashire, England. It is 6 m. N. of Manchester, on the L.M.S. Rly. It received a charter for a weekly market in 1791. There are large silk and cotton factories, calico printing works, iron foundries, chemical works, and extensive collieries in the neighbourhood. Middleton and Prestwich form a co. division to send one member to Parliament. Pop. 28,290.

Thomas Middleton, English dramatist After J. Thurston

Tees, with a station on the L.N.E. Rly., 16 m. from Appleby. Market day, Tues. Pop. 2,000.

The Scottish title of earl of Middleton was borne from 1656 to 1695 by the Middleton family. Two earls won fame by serving Charles II and James II.

MIDDLETON, THOMAS (c. 1570-1627). English dramatist. Born in London of a good family, he was a member of Gray's Inn, and wrote some satirical tracts. About 1600 he turned his attention to the stage, composing 15 plays independently, and seven in collaboration with Dekker, Rowley, and others, and became city chronologer in 1620. His work is

marked by coarseness, pointed dialogue, subtle satire, and penetrating wit. Of his comedies of London manners, *A Trick to Catch the Old One* is the most notable. His best independent tragedy is *Women Beware Women*.

MIDDLEWICH. Market town and urban dist. of Cheshire. It is 6 m. from Northwich, near the river Dane, and is served by the L.M.S. Rly. and the Trent and Mersey canal. The chief building is the old church of S. Michael, and the chief industry the manufacture of salt, which is extracted from the brine springs here. Chemicals are also made. Market day, Tues. Pop. 5,900.

MIDGE. Name applied vaguely to many dipterous insects resembling small gnats, but correctly restricted to the family Chironomidae.

Middlesex Regimental badge

They may be seen on summer evenings in dense swarms, and are often mistaken for gnats. The majority lack the skin-piercing proboscis of the gnat, but one genus has lance-like jaws capable of drawing blood.

MIDHURST. Town of Sussex. It stands on the Rother, 12 m. from Chichester, with a station on the S.R. The church is a Perpendicular building. There is a 17th cent. grammar school, and the Spread Eagle inn dates in part from the 15th cent. About 4 m. N. is the King Edward VII sanatorium for consumptives, opened in 1905. Near are the ruins of Cowdray Castle, now the property of Viscount Cowdray. Pop. 1,890.

MIDI. District of France. Without any definite area, it is generally regarded as the region between the Bay of Biscay and the Mediterranean. Tonlouse is its capital. It was originally the Middle Land between France and Spain.

The canal du Midi runs from Tonlouse to La Nouvelle, near Narbonne, on the Étang de Thau. Known also as the canal du Languedoc, it connects with the canalised Garonne, and thus unites the Mediterranean with the Atlantic. In the 148 m. of its length there are 100 locks, and among towns served by it are Toulouse, Carcassonne, and Narbonne.

Midland Junction. Town of Western Australia. A rly. junction 10 m. N. of Perth, it has a pop. of 3,900.

MIDDLETON or **MIDDLETON.** Urban dist. of Co. Cork, Irish Free State. It stands on the Owencurra, which enters Cork harbour just below the town, 13 m. from Cork with a station on the G.S. Rlys. There is a grammar school founded in 1709. Pop. 2,732.

MIDDLETON, ST. JOHN BRODRICK, 1st EARL OF (b. 1856) British politician. Born Dec. 14, 1856, the eldest son of the 8th Viscount Middleton (1830-1907), he became M.P. for West Surrey in 1880. In 1907 he succeeded to the peerage. Brodrick began his official career as a Conservative politician in 1886 by being made financial secretary to the war office. In 1895 he was made under-secretary of state for war; in 1898 under-secretary for foreign affairs, and in 1900 secretary for war. In 1903 he became secretary of state for India, and he left office in 1905. In 1920 he was made an earl.

The Irish title of Viscount Middleton was given in 1717 to Alan Brodrick (d. 1728). The family seat is Peper Harow, Godalming. The earl's eldest son is called Viscount Dunsford.

MIDLOTHIAN or **EDINBURGSHIRE.** County of Scotland. It has a coastline of 12 m. on the Firth of Forth. Its area is 370 sq. m., this including the island of Cramond. The area is hilly, save on the coast; herein are the Pentland and Moorfoot Hills, with several peaks over 1,500 ft. high, as well as Arthur's Seat and other heights around Edinburgh (q.v.). The chief rivers are the Esk, Water of Leith, Almond, and Gala. Edinburgh is the capital. In the county, too, are Leith, now part of Edinburgh, Dalkeith, Musselburgh, Mid-Calder, and Penicuik, as well as such picturesque spots as Roslin, Hawthornden, and Newbattle. The county is served by the L.N.E. and L.M.S. Rlys. Apart from Edinburgh it sends, with Peeblesshire, two members to Parliament. Pop. 513,800.

The earl of Rosebery is also earl of Midlothian. See map, p. 959.

MIDRASH. Ancient Hebrew commentary on the O.T., consisting of a vast number of comments by various authors, mixed with

Middlesex. Map of the county north of the Thames

1st Earl of Middleton, British politician Russell

tales and folklore. The term is also applied to the tales in the O.T. illustrating religious truths, such as the books of Ruth and Jonah.

MIDSHIPMAN. In the British navy, a junior officer between the ranks of naval cadet and sub-lieutenant. The name is derived from the fact that the quarters of the "young gentlemen" qualifying for commissions were situated amidships on the lower deck. A naval cadet begins his training between the ages of 13 and 14, and after passing the courses in the prescribed training colleges becomes a midshipman and goes to sea. In addition to pursuing his studies under a naval instructor, the midshipman, or "snotty," takes part in the daily routine of the ship. Midshipmen mess in the gun room. Their badge is a white tab on the collar of the jacket, and for side arms they carry a dirk instead of a sword. See Naval Cadet.

Midshipman's uniform, British Navy

MIDSOMER NORTON. Urban dist. of Somerset. It is 12 m. from Bath on the G.W. Rly. and the little river Somer. The chief building is the Perpendicular church of S. John the Baptist, rebuilt in the 19th century. The small Somerset coalfield is in the neighbourhood. Pop. 7,770.

MIDSUMMER DAY. June 24, popularly the middle day of summer. Astronomically the period of the summer solstice (about June 21) is the beginning of summer. Midsummer Day is the feast of the Nativity of S. John the Baptist, and is an English quarter day. The term midsummer madness may refer to the boisterous festivities of Midsummer Eve, or to the supposed effect of the midsummer moon.

Midsummer man is the plant orpine (*Sedum telephium*), used by girls on midsummer eve as a test of their lovers' fidelity.

MIDWIFE. Woman who assists women during childbirth. In England and Wales, under the Midwives Acts of 1902 and 1908, no woman is allowed to practise midwifery for gain unless certified as a midwife. The central midwives board is a body set up in 1905 to control the examination and registration of midwives in England and Wales. The offices are 1, Queen Anne's Gate Buildings, London, S.W. No woman can now be certified unless she has followed a prescribed course of study and passed certain examinations.

MIEREVELT, MICHEL JANSZ VAN (1567-1651). Dutch painter. Born at Delft, May 1, 1567, he studied there and at Utrecht, and became painter to the prince of Orange. He was famed for his numerous portraits, among which are those of Grotius, Gustavus Adolphus of Sweden, Huygens, Coligny, the duke of Buckingham, and William the Silent, and he left also some still life and genre paintings. One of his portraits is in the National Gallery, London. He died at Delft, July 27, 1651.

MIERIS, FRANS VAN, THE ELDER (1635-1681). Dutch painter. Born at Leiden, April 16, 1635, he studied at first under a glass painter, Abraham Toorenvliet, then under van den Tempel, and later under Gerard Douw, and became a member of the Leiden Guild, 1658. He painted scenes of better class Dutch life. He died March 12, 1681. Most continental galleries possess examples of his work. His sons Jan and Willem and his grandson Frans were also painters.

MIGNONETTE (*Rosa odorata*). Perennial herb of the order Rosaceae. Introduced to British gardens from Egypt in 1752, it has become popular owing to its fragrant flowers. The stem branches from its base, and the plant becomes a rather diffuse clump, bearing alternate lance-shaped leaves, simple or three-lobed. The flowers are borne in dense pyramidal racemes at the ends of the shoots. The petals are divided into slender segments.

MIGRAINE, MEGRIN, OR HEMICRANIA (Gr. hemi, half; kranion, skull). Severe headache occurring in paroxysms. Heredity plays an important part in causing the disorder, and other factors are dyspepsia, anxiety, and reflex strain, such as may be caused by an error of refraction. Disturbances of vision, numbness, and tingling of the tongue, face, and hands may precede the attack, and sometimes cramps in the muscles of the affected side and nausea and vomiting occur. The symptoms, sometimes including headache spread over the whole head, may last from a day to three days. Treatment consists in avoiding excitement or overwork, and in moderation in diet.

MIKADO. Title used by Europeans, rarely by Japanese, for the emperor of Japan. The word means exalted gate. According to Japanese official chronology Jimmu, the first emperor, ascended the throne 660 B.C. and all subsequent emperors trace descent from him. Seven of the mikados were women.

Milan Cathedral from the Piazza del Duomo. It is remarkable for the number and beauty of its pinnacles and the delicate tracery of the whole structure

The Mikado is the name of a comic opera by W. S. Gilbert, with music by Arthur Sullivan. It was produced at the Savoy Theatre, London, March 14, 1885, where it had a run of 672 performances.

MILAN (Milano). City of Italy. The ancient Mediolanum, it stands on the river Olona, 93 m. by rly. E.N.E. of Turin. Architecturally, Milan's principal glory is the magnificent cathedral dedicated to the Virgin. Faced with white marble, its many decorations make it one of the most sumptuous churches in the world. The roof has over 4,000 marble statues and many pinnacles. The church of S. Ambrose is a Roman basilica, practically rebuilt in the 12th century, modernised and restored. Its lofty brick campanile is one of the earliest in Italy. The monastery adjoining the church of S. Maria delle Grazie (1463) contains Leonardo da Vinci's painting *The Last Supper*. There are many other old churches, museums, picture galleries, hospitals, academy, library, observatory, monuments, scientific, musical, artistic, educational, and philanthropic institutions. The celebrated Scala Theatre (1778) seats 3,600 spectators.

Prominent among the many fine palaces is the Palazzo della Ragione in the centre of the medieval city, built of brick, 1223-38. Near it is the beautiful Loggia degli Osii, 1316, in black and white marble. Milan is rich in works of art. Brera palace, 1651, houses one of the finest collections of paintings in Italy; its library contains 300,000 volumes and about 60,000 coins. The castle contains an archaeological collection. The city is a great industrial centre. Pop. 961,979.

DUCHY OF MILAN. The title of duke of Milan was first granted by the emperor Wenceslaus to Gian Galeazzo Visconti (q.v.) in 1385. In 1450 the duchy was seized by Francesco Sforza, and his family kept it until 1535. It was a Spanish possession from then until 1714, when it was given to Austria. In 1859 it was united with the new kingdom of Italy.

MILDENHALL. Market town of Suffolk. It stands on the Lark, 12 m. from Bury St. Edmunds and 76 m. from London, with a station on the L.N.E. Rly. The chief building is S. Andrew's Church, mainly Perpendicular. There is a market cross of the 15th and a manor house of the 17th cent. It is an agricultural centre. Market day, Fri. Pop. 3,370

Midlothian. Map of the Scottish county south of the Firth. See page 953

MILDEW. Popular term loosely applied to such diverse fungi as moulds, rusts, cluster-cups, and powdery mildews, but properly restricted to the last named. These are external blights of the order Erysiphaceae, whose mycelial threads form a cobweb-like patch on the surface of leaves and shoots, whilst their suckers attack the superficial cells. The mealy appearance of the white patches on the leaves and stems of the rose is due to the presence of multitudes of microscopic summer spores. In the autumn the same patches will be found to be studded by large black dots which remain until the spring, when the integument breaks up and releases the contained spores. See Fungus; Rust.

Roman milestone

MILE. Measure of distance. As first used by the Romans it was approximately 1,614 yards. The British statute mile is 1,760 yards, and was legalised in 1593. The length varies considerably in different countries. The old Scottish mile was 1,984 yards; the Irish 2,240 yards; the old London mile 1,660 yards, etc. The old English mile consisted of ten furlongs instead of eight, and a mile, equalling a little over $1\frac{1}{2}$ present-day miles, was used till the 16th century. The geographical mile, or nautical mile, is 2,026 $\frac{2}{3}$ yards.

Milestone, Clapham Common, London

MILESTONE. Stone set up to mark distances along roads. Inscribed pillars erected at equal distance of 1,000 paces—5,000 Roman ft., equivalent to 4,880 English ft. or 1,617 yds.—and marking the distance from the gate at which the road emerged from Rome, were a regular feature of the military roads which were constructed by the Romans.

MILE END. District of E. London. Once a hamlet of Stepney parish, it now forms the central and N.E. parts of Stepney bor. Through it runs the Mile End Road, probably the broadest thoroughfare in London, connecting Whitechapel Road and Bow Road. Part of the district between Commercial Road East and Mile End Road is known as Mile End Old Town. Notable buildings include Trinity Hospital, the People's Palace and the East London College. See Stepney.

MILES. EUSTACE HAMILTON (b. 1868). British athlete and food reformer. Born at Hampstead, Sept. 22, 1868, in America in 1900 he won the amateur championships at tennis, racquets, and squash-tennis. He won the English Amateur Racquets Championship in 1902 (singles and doubles), 1904-6 (doubles), was amateur tennis champion 1898-1903, 1905-6, and 1909-10, and won the gold prize 1897-99, 1901-6, and 1908-12. He was amateur champion of the world at racquets, 1902, and at tennis 1898-1903 and 1905. Eustace Miles wrote many works on sport, history, food reform, etc., and opened a restaurant in London.

MILETUS. Ancient city of Asia Minor. Standing on the Gulf of Latmos, near the mouth of the Maeander, it was the chief town of the Ionian colonies of Greece. A great commercial city, it was famous for its woollen goods, traded with the whole Mediterranean coast, and established many colonies on the Propontis and Euxine, as well as Naukratis, in Egypt. Taken by Croesus, and in 557 B.C. by the Persians, it headed the great Ionian

revolt against Persia, but was destroyed on its suppression in 494 B.C. Taken by Alexander, it passed to the kingdom of Pergamum and finally to Rome. The birthplace of Thales and other Greek writers, it is poorly represented by the modern Palatia.

MILFORD or MILFORD HAVEN. Seaport and urban dist. of Pembrokeshire. It stands on the N. side of Milford Haven, 9 m. from Haverfordwest, and has a station on the G.W. Ry. Milford owes its origin to R. F. Greville, who, in 1790, planned a port here as a centre for the trade with Ireland. Soon afterwards the government established a dockyard here, but in 1814 this was transferred to a spot on the S. side of the haven, which was named Pembroke Dock. It has good dock accommodation, and from here vessels go to Ireland and elsewhere. Pop. 8,000.

MILFORD HAVEN. Opening of the Atlantic Ocean. On the coast of Pembrokeshire, it is regarded as the finest natural harbour in England and Wales. It extends inland for 17 m., being from one to two miles broad. Milford is on the N. side, and on an inlet on the S. is Pembroke Dock.

MILFORD HAVEN, MARQUESS OF. Title granted to Louis Alexander, prince of Battenberg, who adopted the surname of Mountbatten, in 1917. Son of Prince Alexander of Hesse, he was born May 24, 1854. Naturalised as a British subject, he entered the navy in 1868. He was commander-in-chief of the Atlantic Fleet, 1908-10; second sea lord, 1911-12; and first lord, 1912-14. He died Sept. 11, 1921, and was succeeded by his eldest son, George Louis (b. 1892) who till then was known as the Earl of Medina. See Battenberg.

1st Marquess of Milford Haven
Russell

MILITARY CROSS. British military decoration. Instituted in 1915 to reward conspicuous service of captains, commissioned officers of a lower grade, warrant officers, and Indian and colonial military forces, it was awarded as from Aug. 1, 1913, for "services in action" only. The badge is a silver cross, bearing the imperial crown on each arm with the letters G.R.I. in the centre. The ribbon of the decoration, white, purple, and white, is worn on the left breast immediately following the V.C. before decorations and medals, but after all orders. See Medal.

Military Cross and ribbon

MILITARY KNIGHTS OF WINDSOR. Body of retired military officers forming part of the Order of the Garter. The number has varied, but in 1919 it was decided to fix it at 13. The knights, who are appointed by the sovereign, have apartments in the precincts of Windsor Castle and receive a small stipend. They are under a governor who holds the rank of major-general. They are the oldest military brotherhood in existence, and the only military body in England entitled to wear the national badge of St. George.

MILITARY MEDAL. British military decoration. Instituted in 1916, it is conferred on non-commissioned officers and men and women "for individual or associated acts of bravery on the recommendation of a commander-in-chief on the field." During the Great War a number of nurses were awarded the military medal for conspicuous devotion to duty during German air raids. The ribbon is dark blue with three white and two crimson stripes. See Medal.

MILITIA. Bodies of civilians trained and occasionally exercised for home defence alone. At the end of the 19th century the militia of the United Kingdom resembled the volunteers of Great Britain in being civilians who of their own free will joined a training corps which should be available for defence against an invader, but could not be sent overseas. Recruits were trained continuously for three months and afterwards annually for one month. In 1908, when the territorial force was created, this militia disappeared. The Channel Islands, however, Malta, and Bermuda retained this title for their defence forces. Canada describes her army as militia, and the war minister is called the minister of militia and defence, and is assisted by a militia council. See Army.

MILK. Liquid secreted in the udder of the female animal. The milk of the cow plays a very important part in human life, especially as it is the source of butter and cheese. It is a natural emulsion, consisting of minute fat globules suspended in liquid. The average percentage composition of whole cow's milk is as follows: water, 87.10; albuminoids (casein, albumin), 3.50; milk-sugar (lactose), 4.75; butter fat, 3.90; ash, 0.75. In skim milk 90.0 is water, and in whey 93.4 p.c. Separated milk resembles skim milk, except that practically all the fat has been removed.

Milk is a particularly good medium for the growth of all sorts of germs (bacteria), not only those which are essential to good butter and cheese making, but also some which are inimical to these, and others again that transmit disease, such as cholera, typhoid fever, and tuberculosis. All germs can be destroyed by exposing the milk to a high enough temperature to cause sterilisation, but a better plan is pasteurisation, by which disease germs are destroyed and those which interfere with butter or cheese making are kept in check. Condensed milk is milk from which most of the water has been removed by evaporation at a comparatively low temperature and in a partial vacuum. See Dairy; Lactometer.

MILKWORT (Polygala vulgaris) or ROGATION FLOWER. Perennial herb of the order Polygalaceae. A native of Europe (including Britain), N. Asia, and N. Africa, it has short, wiry stems and leathery, oblong leaves. Its flowers are white, pink, blue, or purple. It grows among grass in meadows and on heaths, and cows which ate it were formerly supposed to yield more milk.

Milkwort. Flowering stems of the meadow herb

MILKY WAY. In astronomy, the luminous band which appears to stretch across the sky at night (see illus. p. 447). To the naked eye appearing a vast zone-shaped nebula, it appears through a telescope to consist of innumerable stars.

Military Medal and ribbon

For over two-thirds of its circuit in the skies it preserves an appearance of unity, but near Alpha Centauri it is broken by a great fissure into two branches, one faint and the other bright, which rejoin in the neighbourhood of Eta Cygni. The milky way is not a uniform starry stream. The bright spaces are commonly surrounded and set off by dark winding channels.

It has been calculated that the light from the Milky Way in most of its sections takes 3,200 years to reach the earth. See *Constellation*; Stars.

MILL, JAMES (1773-1836) British philosopher. Born near Montrose, April 6, 1773, he came to London, and embarked upon a literary career. His *History of India*, published 1817-18, led to his appointment as assistant examiner, and afterwards head of the examiners' office, of the E. India Company, a position he held till his death, on June 23, 1836.

In his *Analysis of the Phenomena of the Human Mind* he reduces all psychological reality to one fact—sensation, and all its laws to one—the law of inseparable association, the factors of which are liveliness of impression, repetition, and interest. Mill is regarded as the founder of philosophical radicalism.

MILL, JOHN STUART (1806-73) British philosopher and economist. The son of James Mill, he was born in London, May 20, 1806.

John Stuart Mill,
British philosopher

From 1820-58 he was employed in the East India Office, and retired on a pension when the company came to an end. From 1865-68 he was M.P. for Westminster. He died at Avignon, May 8, 1873.

From an early age Mill was engaged in literary work, writing books and contributing to reviews. His *System of Logic*, 1843, is an elaborate exposition of the theory and methods of induction. His metaphysical standpoint is set forth in his *Examination of Sir Walter Hamilton's Philosophy*, 1865. In ethics he is an altruistic utilitarian. His *Principles of Political Economy*, 1848, the object of which was to systematise and complete the theories of Adam Smith and Ricardo, is still considered indispensable for the study of the subject. In politics he belonged to the advanced radical party. His essay *On Liberty*, 1859, represents his mature political views. He was a warm defender of the rights of the working classes and an advocate of women's suffrage. Consult *Lives*, A. Bain, 1882; W. L. Courtney, 1889.

MILLAIS, SIR JOHN EVERETT (1829-96) British painter. Born at Southampton, June 8, 1829, he came of a Jersey family. In 1838 he was sent to Sass's drawing school in Bloomsbury, and later to the R.A. schools. Shortly after 1848, with Holman Hunt and Rossetti, he started the Pre-Raphaelite Brotherhood.

His first important pictures were the *Banquet Scene* from Keats' *Isabella*, or the *Pot of Basil*, exhibited in 1849, followed in 1850 by *Christ in the House of His Parents*, better known as *The Carpenter's Shop*. Perhaps his two best pictures exhibited under Pre-Raphaelite influence were *Autumn Leaves*, 1856, and *The Blind Girl*, one of his greatest works. *Sir Isumbras at the Ford*, exhibited in 1857, marked a departure in style which evoked a protest from Ruskin. Its successors, *The Vale of Rest* and *Apple Blossoms*, clearly showed the emancipation of Millais from his early mannerisms. In the sixties he was largely concerned with book illustration. Among his finest portraits must be mentioned those of the Marquess of Hartington, Lord Tennyson, Cardinal Newman, Sir James Paget, Gladstone, Du Maurier, and Mrs. Jopling.

Millais was created a baronet in 1885, and succeeded Lord Leighton as president of the R.A. in Jan., 1896. He died Aug. 13, 1896. See illus. pp. 123, 362

Self-portrait, Uffizi
Gallery, Florence

MILLARD, EVELYN (b. 1873) British actress. Born in Kensington, Sept. 18, 1873, the daughter of John Millard, who taught elocution at the Royal Academy and the Royal College of Music, she made her first appearance at The Haymarket in 1891. After studying with Sarah Thorne she played important rôles under the management of George Alexander, Beerholm Tree, and Lewis Waller. She was in management on her own account in 1903-10.

MILLBANK. District of S.W. London, in the city of Westminster. While the name applies strictly to the thoroughfare on the left bank of the Thames between Great College Street and Grosvenor Road, it is also given to much of the area between Great College Street and Vauxhall Bridge Road. On the river bank, originally built to act as one side of the mill-race serving the mill of the abbot of Westminster, are the Victoria Tower Gardens. Among important buildings are the Tate Gallery and the Royal Army Medical College (q.v.). In 1928 a large building for Imperial Chemical Industries was opened here. In Jan., 1928, the Thames burst its banks here, causing damage, since when the embankment has been strengthened.

Millbank Penitentiary, built in 1812-22, was modelled by Sir Robert Smirke on Jeremy Bentham's Panopticon. It resembled a wheel. It was pulled down in 1903.

MILLER, HUGH (1802-56) Scottish geologist and writer. Born at Cromarty, Oct. 10, 1802, he was apprenticed as a mason and quarryman. In 1834 he became accountant in a bank at Cromarty and next year published *Scenes and Legends of the North of Scotland*. In 1839 a letter published in Edinburgh on the Auchtermarder case brought him into prominence with the Evangelical party in Scotland, who appointed him editor of their journal, *The Witness*, first issued on Jan. 15, 1840. Owing to temporary insanity due to overwork, Miller shot himself, Dec. 23, 1856.

In addition to being one of the recognized leaders of the Free Church of Scotland, founded 1843, Miller was widely known as an advocate of education, franchise, and other reforms. But his reputation rests on his popular works on geology, *The Old Red Sandstone*, 1841, and *Footprints of the Creator*, 1847.

MILLERAND, ALEXANDRE (b. 1859) French statesman. Born in Paris, Feb. 10, 1859, he studied law, and was admitted to the bar in 1881. Elected deputy for Paris in Dec., 1885, he quickly acquired a leading position in the Radical-Socialist party. He became parliamentary leader of the Socialist party and editor of *La Petite République*, the party organ, vacating that position in 1896 to become managing director of *La Lanterne*. As minister of public works, 1909-10, he organized the state railway system. Minister of war, 1912-13, and again 1914-15, on the conclusion of the armistice with Germany in 1918 he was appointed commissioner-general for Alsace-Lorraine.

Millerand succeeded Clemenceau as premier in Jan., 1920, after Deschanel's election to the presidency of the republic, also undertaking the office of foreign secretary. He was called upon to act in very critical circumstances, as, for example, the German reparations

Hugh Miller,
Scottish geologist

French statesman
Henri Manuel

question, the future of Central Europe, and the settlement of internal affairs in France. In Sept. of the same year he was elected president, but he resigned in 1924 as the result of an adverse vote in the Chamber. His publications include *Socialism, réformiste en France*, 1903; and *La Guerre libératrice*, 1918.

MILLET. General term for a number of grasses grown either for fodder or for their seeds (grain), which constitute important sources of food. Among the latter are kurrakan, or ragi, extensively grown in India, Ceylon, and Africa. The common millet is *P. miliaceum*; the little millet is *P. miliare*; the Italian millet, *Setaria italica*, has been in general cultivation in Asia from very remote times. Indian millet, Kaffir-, or guinea-corn, is *Sorghum vulgare*, whose grain is known as durra. The fodder millets are Guinea-grass, Mauritius-grass, barnyard-grass.

MILLET, JEAN FRANÇOIS (1814-75) French painter. Born at Gruchy, near Cherbourg, Oct. 4, 1814, the son of Normandy peasants.

He went to Paris with a scholarship, 1836, and entered Delaroche's studio, where Diaz and Rousseau were also students. He commenced by painting elegant pictures and nudes, but in 1849 he settled at Barbizon as a painter of pictures of peasant life, for the naturalistic but dignified and sympathetic treatment of which he has few equals. The *Sowers* was exhibited in 1851; *The Gleaners*, 1857; *The Angelus*, and *Death and the Woodcutter*, 1859; *The Man with the Hoe*, 1863. He died Jan. 20, 1875.

MILL HILL. District of Greater London. Between Edgware and Totteridge, and once a hamlet of Hendon, it is $8\frac{1}{2}$ m. from London by the L.N.E. Rly. and 9 m. by the L.M.S. Rly.

Mill Hill School is a public school founded in 1807 as a school for the sons of Nonconformists, but reconstructed on broader lines in 1869. It has accommodation for about 500 boys. The school is divided into upper, middle, and lower. The war memorial is a fine Gate of Honour.

MILLING. Process of grinding grain, especially wheat, into flour, carried out almost entirely by automatic systems based upon the employment of chilled-iron rolls. The grain is first cleaned and prepared in the screen house, where numerous appliances secure the separation of stones and other impurities, the removal of foreign seeds such as barley and cockle, and the scouring, washing, and conditioning of the grain. After the cleaned grain reaches the blending bins the operation of milling begins. Rolling mills are of two kinds. Break rolls extract the endosperm or floury parts from the bran; reduction rolls grind the floury parts by successive stages until they pass through the flour silk in the final form. See *Flour*; *Wheat*.

MILLPEDE. Order of arthropods, which with the centipedes form the zoological class Myriapoda (many-footed). They have long, rounded, and segmented bodies, with a hard chitinous covering, and usually two pairs of legs on each segment. They differ from the centipedes in being vegetarian, and they lack the poison claws. Great Britain has several species, which may be found lurking under stones in the daytime and rolling themselves into a coil when disturbed. They do little harm to crops except when they become numerous, when they are best checked by dressings of lime and soot. See *Myriapoda*.

MILLOM. Urban dist. and market town of Cumberland. It stands on the W. side of the estuary of the Duddon, 9 m. from Barrow-in-Furness, on the L.M.S. Rly. The church of Holy Trinity is partly Norman. Milloom grew

J. F. Millet,
French painter
Self-portrait in
crayon, 1846-47

up around a castle built about 1100; this was long the residence of the Huddleston family; it is now a ruin. Millom owes its modern growth to the development of the Furness coal and iron field. Iron ore is mined, and there are large furnaces and ironworks. Market day, Sat. Pop. 8,709.

MILLPORT. Burgh and watering place of Buteshire, Scotland. It stands on the S. side of the island of Great Cumbrae. The chief building is the cathedral. Pop. 5,834

MILLSTONE. Wheel or circular mass of rock used for grinding grain. The best rocks for the purpose are the burr stones of France, being hard and porous. They are found in the Tertiary of the Paris basin, and large millstones are usually huilt up. The German millstones are a basaltic lava found near Cologne. Millstones are being superseded by steel rollers in the manufacture of flour.

MILLSTONE GRIT. In geology, name given to a hard siliceous conglomerate rock. The rocks rest upon the carboniferous limestones and are therefore usually associated with coal measures. Millstone grit is valuable for building purposes and for grindstones.

MILLWALL. District of London. It is in the Isle of Dogs, forms the S.W. part of the met. hor. of Poplar, and has Limehouse Reach on the W., Cubitt Town E., the West India Docks N., and Millwall Dock S. The last named has an area of 231 acres, and is the chief centre of the grain trade in London. The name is derived from seven windmills, which stood on the wall huilt here to keep the Thames from overflowing at high tide.

MILMAN, HENRY HART (1791-1868). British historian and divine. Born in London, Nov. 10, 1791, the son of the court physician, Sir Francis Milman, Bart., he was ordained in 1816, holding for a short time a living at Reading. From 1821-30 he was professor of poetry at Oxford. In 1835 he was appointed canon of Westminster and rector of S. Margaret's, and in 1849 he became dean of S. Paul's, a position which he held until his death, Sept. 24, 1868.

H. H. Milman,
British historian

As an historian Milman wrote a History of the Jews, 1829, and a History of Christianity under the Empire, 1840, but his great work was his History of Latin Christianity, 1854-56. He edited what was long the standard edition of the Decline and Fall, and wrote a Life of Gibbon, 1839.

MILNE, ALAN ALEXANDER (b. 1882). British humorist. Born Jan. 18, 1882, Milne joined the staff of Punch, being assistant editor, 1906-14. His verses in When We Were Very Young and other volumes made him and his son, Christopher Robin, very popular with children. He published some volumes of sketches, and several of his comedies have been very successful on the stage, notably Mr. Pim Passes By, The Great Broxopp, The Dover Road, and The Truth about Blayds. In 1927 he produced The Ivory Door, in 1928 The Fourth Wall, and in 1930 Michael and Mary.

MILNE, SIR ARCHIBALD BERKELEY (b. 1855). British sailor. Born June 2, 1855, son of Admiral of the Fleet Sir Alexander Milne,

Bart., he entered the navy in 1869. He was attached to the naval brigade in the Zulu War, 1878-79. Second in command, Atlantic Fleet, 1905-6, and commander of the 2nd division, Home Fleet, 1908-10, he was commander-in-chief in the Mediterranean, June, 1912-Aug., 1914, when he became commander-in-chief at the Nore. His book, The Flight of the Goeben and Breslau, 1921, was a defence against criticism levelled at him in 1914 in connexion with the escape of these ships.

MILNE, SIR GEORGE FRANCIS (h. 1866). British soldier. Born Nov. 5, 1866, he entered the Royal Artillery in 1885, and first saw

Millstone used by women in Palestine for grinding corn by hand. This form is of great antiquity

active service in the Sudan in 1898. In 1913 he was placed in charge of the artillery of the 4th division, and he went to France in Aug., 1914. In Jan., 1915, he commanded an infantry brigade and in February a division. For some months he was chief staff officer to the Second Army, but in May, 1916, took command of the British contingent in Salonica. Under the supreme direction of the French commander-in-chief, Milne was responsible for the defensive operations against the Bulgarians in 1917, and in 1918 for the offensive ones that ended with Bulgaria's capitulation. He then commanded the army of the Black Sea, retiring in Sept., 1920. From 1926 to 1929 he was chief of the imperial general staff. Milne was knighted in 1918, and in 1920 became a full general. In 1928 he was made a field marshal.

MILNER, ALFRED MILNER, 1ST VISCOUNT (1854-1925). British administrator and statesman. Born of English parents at Bonn,

Lord Milner,
British statesman
Russell

March 23, 1854, he became a barrister, but for a time was on the staff of The Pall Mall Gazette. His public career began with the post of private secretary to G. J. Goschen. This led to his appointment as under-secretary for finance in Egypt, 1889-92, and chairman of the board of inland revenue, 1892-97. He was created K.C.B. in 1895, and in 1897 became governor of the Cape of Good Hope. He remained at his post during the South African War, took part in the peace negotiations, and was governor of the Transvaal and Orange River Colonies until 1905.

Milner, who had been made a baron in 1901 and a viscount in 1902, remained in retirement for some years, but in 1916 his former opponent, Lloyd George, chose him as one of the members of the small War Cabinet. After the armistice Milner was appointed secretary for war. He was colonial secretary, 1919-21, when he headed a mission to Egypt. He died May 13, 1925. His writings include England in Egypt, 1892.

MILNGAVIE. Burgh of Dumbartonshire, Scotland. It stands on Allander Water, 6 m. N.N.W. of Glasgow on the L.N.E. Rly. The industries include calico printing and bleaching. Pop. 4,434. Pron. Millguy.

Milnrow. Urban dist. of Lancashire. It is 2 m. from Rochdale, on the L.M.S. Rly. There are coal mines near. Pop. 8,509

MILLO or **MELOS.** Island of Greece, in the Cyclades (q.v.). It is 14 m. long by 8 m. wide, having an area of 60 sq. m., and is of volcanic origin. A long inlet on the N.W. affords one of the best natural harbours in the Levant. Plaka is the capital. On the site of ancient Melos were found the statue of Poseidon, now in the Athens Museum, the Asclepius, in the British Museum, the Venus de Milo, in the Louvre, and other works of ancient art. Pop. 5,400. Pron. Meelo.

Sir G. F. Milne,
British soldier
Russell

MILLO. Famous athlete of ancient times, belonging to Crotona, S. Italy. He gained many victories at the Olympic and other games. In 511 B.C. he was general of the army which defeated the Sybarites. Pron. Mylo.

MILREIS or **MILREAS** (Port. milreis, a thousand reis). Obsolete Portuguese gold coin nominally worth 4s. 5d. It has been superseded by the esudo (q.v.). The Brazilian milreis is a silver coin which fluctuates in value.

MILTIADES. Athenian soldier. A son of Cimon (q.v.), he succeeded his brother Stesagoras as tyrant of the Thracian Chersonese. Miltiades subsequently incurred the hostility of Darius, who then made war on Greece. Miltiades sought refuge in Athens. He was chosen one of the ten generals, and under his charge the Greeks won the battle of Marathon, 490 B.C. Entrusted subsequently with a force of 70 ships to carry on the war against the Persians, Miltiades attacked the island of Paros. The enterprise failed. He was condemned to pay a fine, and, being unable to find the large sum required, he was thrown into prison, where he died. Pron. Mil-ti-adeez.

MILTON. Urban dist. of Kent, in full, Milton Regis. It stands on Milton creek, an opening of the Swale, 10 m. from Chatham, having with Sittingbourne a station on the Southern Rly. Paper is made, and the place is noted for oysters. Pop. 7,481.

There are several places of this name in Great Britain. One is part of Gravesend. Milton, on Christchurch Bay, 6 m. from Lymington, is a small watering place.

MILTON, JOHN (1608-74). English poet and prose-writer. He was born in Bread Street, Chapside, London, Dec. 9, 1608, the son of a scrivener. On leaving Christ's College, Cambridge, he retired to his father's country house at Horton, Buckinghamshire, where he spent six years, 1632-38, and wrote, among other things, the companion idylls, L'Allegro and Il Penseroso, 1633; the masque Comus, 1634; and Lycidas, 1637, an elegy on the death of his college friend, Edward King.

Of his prose works, Doctrine and Discipline of Divorce appeared in 1643-45; Tractate on Education in 1644, the same year as his vindication of the liberty of the press, Areopagitica. Immediately after the execution of Charles I he published his Tenure of Kings and Magistrates, and was appointed Latin secretary to the committee for foreign affairs. His Defensio pro Populo Anglicano appeared in 1651. In 1654 he became blind.

In 1643 Milton married Mary Powell, the daughter of an Oxfordshire royalist, but the union was unhappy. His wife died in 1653, and in 1656 he married Catherine Woodcock, who

Milreis. Obverse and reverse of obsolete Portuguese gold coin; $\frac{1}{2}$ actual size. See above

died in 1658. Two years later he was involved in the disaster of the Restoration, which drove him into obscurity and left him an impoverished man. He now turned to the poetic work which he had planned many years before. *Paradise Lost* was published in 1667; *Paradise Regained* and *Samson Agonistes* in 1671. In 1663 he took as his third wife Elizabeth Minshull. Milton died in his house in Artillery Walk, Bunhill Fields, London, Nov 8, 1674, and was buried in S. Giles's, Cripplegate. See Chalfont St. Giles; consult also *Life*, 6 vols., D. Masson, 1859-80.

John Milton, British poet and prose-writer
From the engraving by W. Faithorne, Nat. Port. Gallery

buried in S. Giles's, Cripplegate. See Chalfont St. Giles; consult also *Life*, 6 vols., D. Masson, 1859-80.

MILTON ABBEY. Name of a mansion and a church in Dorsetshire. About 7 m. from Blandford, the mansion occupies the site of a 10th century Benedictine abbey and of the ancient village of Milton or Middleton. In 1752 the property was bought by the earl of Dorchester, who destroyed the town, transferring the inhabitants to the present Milton Abbas, pulled down the monastic buildings, except the abbey church and the monks' refectory, and built the existing mansion. The abbey church is a superb structure, containing a 15th century altar screen and some ancient paintings and fine sculptures.

MILWAUKEE. City and port of entry of Wisconsin, U.S.A. The largest city of the state, it stands on the W. shore of Lake Michigan, 85 m. N. of Chicago, and is served by the Chicago and North-Western and other rlys. The river Milwaukee and its tributaries the Menominee and Kinnickinnic, which intersect the city, are navigable by large ships. There is a fine harbour. An important wholesale and distributing centre, Milwaukee trades largely in coal, lumber, flour, grain, and manufactured products. Its manufactures include iron, steel, and leather products, boots and shoes, machine-shop products, electrical machinery and appliances, and hosiery. Formerly it was noted for beer. Pop. 509,192.

MIMOSA. Large genus of herbs, shrubs, and trees of the natural order Leguminosae, chiefly natives of America. The leaves are twice divided into small leaflets, and are often sensitive, folding up at a touch, or under atmospheric changes. The small yellow flowers are closely packed in round heads or cylindrical spikes. The mimosas are confused with the Australian wattles (*Acacia*), but no species of mimosa is a native of Australia.

Mimosa. Flowers and leaves of the American shrub

MIN. Egyptian deity, eventually absorbed by Ammon. Perhaps introduced from Punt, he was the god of fields and the desert routes, especially worshipped at Coptos and at Akhmim, whose Greek name Panopolis is due to his identification with Pan. Petrie's Coptos excavations in 1894 revealed three limestone colossi of the god.

MINARET. Term used for a slender tower of moderate height, with one or more balconies, from which Mahomedan priests summon the people to prayer at certain hours.

MINCH. Name for parts of the Channel E. of the Outer Hebrides. The Minch, in the N., varies from 20 to 45 m. in width; the Little Minch, W. of Skye, is from 15 to 20 m. wide.

MINCHINHAMPTON. Town of Gloucestershire. It is 4 m. from Stroud, near the Thames and Severn canal. The chief industry is the making of woollens, and there is a golf course. From Minchinhampton Common, 660 ft. high, a fine view of the Cotswolds is obtained. Pop. 3,200.

MINCING LANE. London thoroughfare. Between Rood Lane and Mark Lane, it connects Great Tower Street with Fenchurch Street, E.C., and is a centre of the tea and rubber trades. Here is the hall of the Clothworkers' Company (q.v.).

MINCIO. River of N. Italy. Issuing from the S. end of Lake Garda, it joins the Po 10 m. S.E. of Mantua, after a course of 116 m. Near its banks several battles were fought: Solferino, 1859; and Custoza, 1848 and 1866. Pron. Meenecho.

MIND. In general, the opposite of matter, more particularly, the thinking part of us, the cognitive faculty which is mainly concerned with intellectual processes. According to the modern definition, mind is a collective term, denoting the sum-total of all our mental processes, which are themselves only different functions of the nervous system, especially of the brain.

In regard to the relation between mind and body (matter) there are three principal hypotheses. Dualism regards the mind as a substance existing side by side with, and independently of, the body. Materialism regards mental phenomena as mere bodily functions, like the digestion of food. Idealism sees in bodies and external phenomena only the manifestations of intellectual beings; mind is the reality, all else is derived from it, or is mere appearance. See Metaphysics.

MINDEN. City of Westphalia, Germany. It stands on the Weser, 44 m. from Hanover. The cathedral was begun in the 11th century. Other old buildings are S. Martin's church and the town hall. Made the seat of a bishop in the 8th century, Minden was a prosperous town in the Middle Ages, and was a member of the Hanseatic League. Pop. 27,139.

The battle of Minden was fought, Aug. 1, 1759, between a British and Hanoverian allied army, commanded by Ferdinand of Brunswick, and the French. The latter, commanded by Contades, were defeated.

MINE. Charge of explosive in a case, used in naval and in land warfare. In the Great War mines were used on an enormous scale by both sides. The naval mines were metal cases containing from 50 to 450 lb. of high explosive, anchored on the bottom and moored to the anchor by a cable so adjusted that the mine automatically "took up" the intended depth of from 20 to 30 ft. below the surface. The mines in a field were laid at distances of about 40 or 50 ft. apart. Detonation of the mine was caused by the ship's hull striking a horn in the mine. Certain types were fitted with "antennae," or thin cables of copper wire reaching to within a few feet of the surface, contact with which, even when the mine was laid very deep, produced instant explosion.

Land mines were employed to some extent in the Great War, particularly for defence against tanks. They consisted of heavy charges of high explosives buried in the ground, and so arranged

that the passage of a weight over them caused an explosion.

A mine field is an area of navigable water strewn with mines to prevent the passage of vessels not provided with a plan of the safe channels. Mine fields may be laid to operate against surface vessels or against submarines submerged. Submarines are largely employed for mine-laying, a special type of craft having been evolved for the purpose. See Mining.

MINEHEAD. Urban dist. and market town of Somerset. It stands on the S. side of the Bristol Channel, 25 m. from Taunton, on the G.W. Rly. S. Michael's church, a 14th century building, has a fine rood loft. The older part of the town is built on the side of North Hill, a bold eminence which protects the lower and newer part. Minehead is a hunting centre and a popular watering place, from which Exmoor, Lynton, and other beauty spots in Somerset and Devon can be reached. Market day, third Mon. Pop. 6,013.

Mineralogy. 1. Marcasite, showing internal radial structure. 2. Hopper-shaped crystals of salt. 3. Haematite, with nodular exterior and crystalline internal structure. 4. Dendritic pyrolusite. 5. Olivine crystal. 6. Pyrite. 7. Octahedral crystals of Magnetite in Schist. 8. Crystals of Fluorspar. 9. Quartz crystals

From specimens in S. Kensington Museum and in the Museum of Practical Geology

MINERALOGY. The science of minerals. A mineral may be strictly defined as an inorganic substance with a constant chemical composition, or a composition that varies only by the partial substitution of one element for another under recognized chemical laws. The phenomenon of crystallisation distinguishes a mineral from a rock, and excludes such substances as oils, coal, and slate. Natural alloys are regarded as minerals, as also are the constituents of a mineral occurring in their proper proportions, but in an uncrystalline or amorphous state.

The proper classification of minerals dates only from the last half of the 18th century. The most important character is chemical composition, and other characters depend very largely upon this. The same chemical molecules may group themselves variously, and may produce a series of crystals not related to one another under the fundamental law of crystallography. Commonly this difference of structure is accompanied by a difference in specific gravity and in hardness. Measurement of the angles of crystals (gonimetry) has shown that differences of chemical

Minaret or tower of Mahomedan mosque

constitution involve differences of crystalline form. Many crystalline minerals possess regular planes along which they fracture, a property styled cleavage. Such planes are related to the crystalline structure.

The hardness of a mineral is roughly stated by comparison with that of certain well-known minerals, e.g. the following, arranged in ascending order: 1, talc; 2, gypsum; 3, calcite; 4, fluor-spar; 5, apatite; 6, orthoclase feldspar; 7, quartz; 8, topaz; 9, corundum; 10, diamond. The optical characters of minerals are intimately related to the symmetry of their crystalline structure. This symmetry is sufficient in the cubic system to render minerals of that system optically isotropic, that is, equally affecting light rays whatever their direction in the crystal. Such minerals possess single refraction. The transparency of large masses of calcite (q.v.) long ago called attention to the double refraction of light by minerals of other systems.

The modes of occurrence of minerals are often suggestive of their modes of origin. A mineral body is often a true replacement of the rock in which it occurs, and its concentration has been accompanied by an outward diffusion of the substance originally on the spot. Certain types of minerals occur together with great frequency. Though the number of names given to minerals is in the neighbourhood of 5,000, due to the erroneous naming of varieties, the number of minerals known is about a thousand. See Crystal; Geology; Rocks; and under names of specific minerals.

Minerva. Antique statue in the Vatican Palace, Rome

MINERALOGICAL SOCIETY. Society established for the study of mineralogy and kindred subjects. Founded in 1876, it was later united with the Crystallogical Society.

MINERVA. In classical mythology, the Italian goddess whom the Romans identified with the Greek Athena. One of the chief Roman deities, she was worshipped in the Capitoline temple at Rome. She was the goddess of wisdom, and the patroness of all the arts and

crafts. After her identification with Athena she became the goddess of war. A festival was held in her honour at Rome from the 19th to the 23rd day of March. See Athena.

MINIATURE (Lat. *minium*). A painting or portrait small enough to be carried on the person or held in the hand. The name is derived from *minium*, the red lead used in illuminating the capitals in old MSS. Early miniatures were painted on vellum, parchment, or chicken skin, stretched on cardboard, then on cardhoard and, in the 17th century, on copper or silver, slate, lapis lazuli, and marble.

Some of the finest miniatures were executed by Samuel Cooper (1609-72). Walpole's phrase that a miniature by Cooper is like a life-sized Van Dyck seen through the small end of a telescope is by no means lacking in truth. Richard Cosway (1740-1821) was another great artist. One of the greatest miniature painters in France, Hay (1739-93), was a Swede. French miniature art attained its

zenith with Isabeau (1767-1855) and Augustin (1759-1832). The art has revived in recent years, notably in the work of J. W. Von Rehling Qvistgaard, a Dane. The leader in England is Allyn Williams.

Minim. Small unit of liquid measurement in apothecaries' or wine measure. It is equal to one drop, and is denoted by the symbol ℥ .

MINIM. Musical note consisting of an open oval head with a stem, P . Its time-value is one half of a semibreve (C) or two crotchets (Q).

MINING. In its widest sense, the art of prospecting for and extracting mineral substances of intrinsic value (iron ore, coal, gold, silver, copper, tin, precious stones) from the earth and rendering them marketable.

Until about 1870 mining was practically confined to rich deposits, or such as could be worked on a small scale with a minimum of expense. Modern mining includes the working of low-grade or poorer deposits, utilising mechanical means to the utmost in order to reduce working costs. It has to consider the problems of shaft sinking, the methods of laying out a mine to working advantage, transportation, ventilation and drainage, all questions relating to the health and safety of miners, lighting, the prevention of explosions, and preparing the minerals for the market.

The methods adopted depend upon the nature of the deposits it is intended to work. Where deposits occur either outcropping to the day, or under a relatively shallow cover, mechanical excavators and steam navvies are used. Auriferous alluvials, tin-bearing gravels, etc., are got by disintegrating and washing down the deposits by directing powerful jets of water against the face of the rock, or by dredging. Where large quantities of mineral have to be carried over quite considerable distances mechanical haulage is used. In mines working hedged deposits, like coal and ironstone mines, the methods usually adopted are those of rope haulage. Other methods of underground transport are electric locomotives, compressed air locomotives, and so-called fireless locomotives, in which steam under reduced pressure is employed. The work of bringing the mineral to the surface is performed by winding engines, which are often electrically driven. See Coal.

The Institution of Mining and Metallurgy was founded in 1892. It devotes attention to both practical and research work. Its offices are at 225, City Road, London, E.C.1.

SCHOOL OF MINES. The school of mines founded in London in 1851 now forms part of the Imperial College of Science and Technology at S. Kensington. There are famous schools of mining at Camborne, Johannes-

burg, and Chemnitz, while it is a subject of study at Leeds, Durham, and other universities, colleges, and technical institutes.

MINION. In printing, a type one size larger than nonpareil and one size smaller than brevier. It is also known as 7-point. About 10 lines make an inch in depth.

This line is set in Minion.

MINIUM or **RED LEAD.** Name given to a scarlet crystalline compound of lead. It is chiefly lead orthoplumbate, $2\text{PbO} \cdot \text{PbO}_2$, and is made by heating massicot, or native lead monoxide, in a reverberatory furnace. Minium when itself heated changes to violet and then black, but becomes scarlet again on cooling. Ignited, it becomes lead monoxide. It is used in the preparation of flint glass and as a paint. See Lead.

MINK. Name given to three closely related species of carnivorous mammals of the weasel (*Mustela*) tribe. They have soft glossy fur, a bushy tail, and a disagreeable odour. Their colour ranges from yellowish to chocolate brown, and the chin is white. The

Mink. Specimen of the European species, *Futorius lutreola*

fur is highly valued, especially of the Alaskan specimens, and incessant trapping has made the animals scarce.

MINNEAPOLIS. City of Minnesota, U.S.A., the co. seat of Hennepin co. On the Mississippi river, the city is in a lake district which attracts many visitors. Among its buildings are two cathedrals, the university

Mining. Pictorial diagram illustrating sectional view of the shafts of a coal mine, showing system of draining and pumping water, of ventilating the mine, and of working the tunnels

of Minnesota, and the Minneapolis School of Fine Arts. Minnebaba Park covers nearly 3,800 acres, and contains the falls familiarised by Longfellow's Hiawatha. Minneapolis is the largest flour milling centre in the world, and one of the foremost in the lumber industry. Machinery, foodstuffs, linseed oil and meal and clothing are also important manufactures while the volume of its wheat trade is unequalled. Power for its factories is provided by the Falls of St. Anthony. Pop. 400,000.

MINNESINGER (Ger. minne, love). Name given to a class of German lyric poets who flourished from about 1150 till about 1350. Like the Provençal troubadours (q.v.), mainly of knightly or noble birth, they formed a school of artificial and courtly lyric, but differed from the troubadours in their more reverent treatment of love. They composed the musical accompaniment to their songs.

MINNESOTA. Northern state of the U.S.A.. W of Lake Superior. It has about 10,000 lakes, including Red Lake (345 sq. m.) and Lake Itasca, from which the Mississippi river takes its rise. Besides the Mississippi, the chief rivers are the Minnesota, Red, and St. Croix, all utilised to supply water-power. The state university ranks amongst the highest in the U.S.A. The capital is St. Paul and the largest town Minneapolis. The mineral wealth is considerable, granite and limestone being worked, and there are enormous deposits of iron ore. The area of the state is 84,682 sq. m. Pop. 2,390,000.

The Minnesota river flows from Big Stone lake on the South Dakota border to the Mississippi at Minneapolis. Its length is 450 m.

MINNOW (*Leuciscus phoxinus*). Small fresh-water fish, common in European rivers. Belonging to the same genus as the roach and dace, it is distinguished from them by the broken line which runs along each side of the body. It is largely used as bait.

Minnow. Small fresh-water fish common in British rivers

Minoan. Alternative name for a pre-Hellenic civilization, also called Aegean or Mediterranean. See Aegean; Crete.

Minor. In law, a person under 21 years of age. In English law the term infant is used in this sense. See Infant.

MINOR (Lat. smaller). In music, a term applied to those intervals of the 2nd, 3rd, 6th, and 7th, which are less by a semitone than the corresponding major intervals.

MINORCA (Sp. Menorca). Second largest of the Balearic Isles. Cereals, wine, oil, oranges, lemons, figs, almonds, and flax are grown; iron, copper, lead, slate, marble, alabaster, etc., mined. A good road, built by the British, who held the island in 1708-56 and 1762-82, runs from Ciudadela to Port Mahon. The island is rich in stalactite caves, megalithic remains and ancient towers (talayotes). Its area is about 290 sq. m. Pop. 42,147.

MINORCA FOWL. This is a breed of domestic poultry supposed to have originated in Minorca. In reality they appear to be a red-faced variety of the white-faced Black Spanish breed. Though champion layers of large eggs, they cannot be prevailed upon to sit.

MINORITES. Name adopted by the early Franciscan friars as an indication of humility. The female branch, founded by S. Clare about 1212, took the name of Minoresses, but are now known as Poor Clares.

MINOS. In Greek legend, king and law-giver of Crete. He was the son of Zeus by

Europa, and husband of Pasiphaë, daughter of Helios, who brought forth the Minotaur. By some accounts represented as a monster of cruelty, he is by others described as an able monarch, who made Crete a great maritime power, cleared the seas of pirates, and by wise legislation promoted the welfare of his subjects. After death Minos was made one of the judges of the dead in Hades. Pron. Mynos.

MINOTAUR. In Greek mythology, a monster with the head of a bull and the body of a man. The offspring of Pasiphaë, wife of Minos, and a bull sent to Minos from Poseidon, it was kept in a labyrinth, and a yearly tribute of seven youths and seven maidens from Athens was given it to devour. It was slain by Theseus.

MINSK. Capital of White Russia (Byelorussia). It stands on the Svisloch, a tributary of the Beresina, 275 m. N.E. of Warsaw. Considerable trade is done in flax, hemp, corn, timber, and leather. The Soviet government founded a university here. Fighting took place here in the Great War. Pop. 118,000.

MINSTER OR **MINSTER-IN-SHEPPEY.** Village and pleasure resort of Kent. It is on the island of Sheppey, 3½ m. from Sheerness, with which it is connected by a light rly. S. Mary's Church, part of which is Saxon, is a fine building. Oysters are cultivated. Pop. 3,059.

MINSTER OR **MINSTER-IN-THAXET.** Village of Kent. It is 4 m. from Ramsgate, on the S.R. S. Mary's Church has beautiful Norman and Early English work. Pop. 2,915.

MINSTER LOVELL. Village of Oxfordshire, on the Windrush, between Witney and Akeman Street. The ruined moated manor house is said to have been built by William 11th Baron Lovel, whose descendant, Francis, a Yorkist, is said to have died of starvation in a secret chamber while hiding after the battle of Stoke in 1487. The 15th century Perpendicular church was once associated with the French abbey of Ivry.

MINSTREL (old Fr. menestrel, one who ministers). Singer or performer on a musical instrument, or both, in the Middle Ages. Corresponding with the Anglo-Saxon scop or gleeman, of whom Widsith was a type, the minstrel proper, or jongleur, came to England at the Norman conquest. Minstrels were largely the retainers of noble families.

MINSTRELS' GALLERY. In medieval times this was a gallery or balcony projecting into the hall, for the use of the minstrels attached to the household. A good example remains at Exeter Cathedral.

MINT (*Mentha*). Genus of perennial herbs of the order Labiatae widely distributed outside the tropics.

Minorca Fowl, a valuable breed for laying
C. Reid

They have creeping root-stocks, square stems and branches, pungent aromatic leaves, and purplish flowers. Of the ten species recognized as natives of Britain the most important are peppermint (*M. piperita*), yielding the essential oil of the same name; penny-

royal (*M. pulegium*); spearmint or lamb-mint (*M. spicata*), used for making mint sauce and yielding oil of spearmint. Menthol (q.v.) is obtained from the Japanese peppermint (*M. arvensis* var. *piperascens*).

MINT (Lat. moneta). Government office where money is coined. The British mint dates from Anglo-Saxon times; as now constituted, from 1817. The existing building on Tower Hill, London, was erected in 1810. The ancient office of master, or warden, was in 1870 combined with that of the chancellor of the exchequer; its real head is the deputy master, a civil servant. It has branches at Melbourne, Perth, Ottawa, and Pretoria. Sample coins are collected in a "pyx" or box, and annually weighed and assayed by the Goldsmiths' Company—the test being known as the trial of the pyx (q.v.). The crown alone has, through Parliament, the prerogative of coinage.

Minotaur being slain by Theseus, sculptured group by C. Ramey
Louvre, Paris

MINTO, GILBERT ELLIOT, 1ST EARL OR (1751-1814). British administrator. The eldest son of Sir Gilbert Elliot, third baronet, of Minto, Roxburghshire, he entered parliament in 1776 and helped Edmund Burke in framing the case against Warren Hastings and Sir Elijah Impey. He was in turn governor of Corsica and British minister in Vienna. In 1806 he was made governor-general of India, where he extended the British power. He was made an earl on his retirement in 1813, and died June 21, 1814.

4th Earl of Minto, British administrator

MINTO, GILBERT JOHN ELLIOT-MURRAY-KYNNMOUND, 4TH EARL OF (1847-1914). British administrator. Born July 9, 1847, son of the third earl, whom he succeeded in 1891, he was educated at Eton and Cambridge, and served in the Scots Guards, 1867-70. He was military secretary to Lord Lansdowne in Canada, 1883-85; governor-general of Canada, 1898-1904; and viceroy of India, 1905-10. He died March 4, 1914, and was succeeded by his son, Victor Gilbert (b. 1891).

MINTON WARE. Soft and hard paste porcelain ware made by Thomas and Herbert Minton at Stoke-upon-Trent. The Mintons were making semi-transparent china in 1790. In 1825 they made a white-bodied earthenware with printed design and a new borax glaze. Later they produced both soft and hard paste porcelain, artistic in design and decoration. Parian ware, encaustic tiles, majolica, Palissy ware, and della Robbia plaques and panels, all remarkable for the excellence of body, design, and colouring, were also made by the Mintons.

Minton Ware. Vase, about 1860, from Herbert Allen Collection
Vict. & Albert Mus.

Mint. Flowers and leaves of water mint

MINUET (Fr. menuet). Dance for two persons in three-four time. It originated in Poitou, was a favourite at the court of Louis XIV, and was introduced in England at the court of Charles II. As a musical composition the minuet occurs in the suites of Bach and Handel and in the symphonies of Haydn.

MINUTES. Business term for a summary of the proceedings of the meetings of a company, committee, or other body of men acting in a joint capacity. The record is kept in a minute book by the secretary. By the Company Acts, limited companies must keep minutes both of their general meetings and those of their board of directors. Treasury minute is the name given to an official memorandum issued from the Treasury.

MIOCENE. In geology, name given to an epoch of time between the Oligocene and Pliocene periods. The rocks of the Miocene period are chiefly unconsolidated clays and sands, limestones, and conglomerates, and are found in France, Belgium, Switzerland, Austria, and the Mediterranean and America, but are absent from Great Britain. The animals of this epoch included the mastodon, dinotherium, rhinoceros, the three-toed protohippus, and the hippotherium. See Geology.

MIQUELON, GREAT AND LITTLE. Islands off the S. coast of Newfoundland, forming, with the St. Pierre group, the only French North American colony. The islands are connected by a strip of sand $5\frac{1}{2}$ m. long, and the chief industry is cod-fishing. St. Pierre is the capital. The total area is 93 sq. m., and the pop. nearly 4,000.

MIRABEAU, GABRIEL HONORÉ RIQUETI, COMTE DE (1749-91). French statesman. He was born at Bignon, Provence, March 9, 1749, and as a young man distinguished himself as a reckless rebel against all social and moral conventions. When the States-General met on May 5, 1789, the third estate under his leadership refused to allow itself to be adjourned. But there were few round him who could grasp the ideal for which he was striving—a strong constitutional

Comte de Mirabeau, French statesman. After Condorcet, in Versailles Museum.

government, free alike from the incubus of aristocratic privileges and from the anarchy of uneducated democracy. Early in 1790 he was still hoping that a new assembly might become the instrument of his aims; but the strain of the gigantic task which, almost unaided, he had taken upon his shoulders was too great for him, and on April 2, 1791, he died.

Mirabeau's younger brother, André Boniface Louis Riqueti Mirabeau (1754-92), became a writer and served in America during the independence. In 1789 he was a member of the States-General, and there he was a bitter helper of his brother and of reform generally. A heavy drinker, he was called tonneau Mirabeau. Pron. Meerabo.

MIRABEAU, VICTOR RIQUETI, MARQUIS PERTUIS (1715-84). French economist. Born at Pertuis (Vaucluse) Oct. 5, 1715, he was notable for his essays on the theory of the market. He wrote the popular *L'Ami des Hommes*, in which he suffered from the impôt, 1760, for which he was sentenced to a short term of imprisonment; *Les Économies*, 1762; and *La Science*, 1774. A man of extraordinary tastes and famed as a political writer, he was notorious for his quarrels with his wife, Marie de Vassan, and with his son Gabriel Honoré. He died at Argenteuil on July 13, 1789.

MIRACLE (Lat. miraculum, a marvel). Event transcending the laws of nature, as these are known to man. A miracle need not be contrary to the natural order, but simply inexplicable by that order in so far as we have knowledge of it; and some theologians have maintained that it may be an occasional manifestation in that natural order of a vaster and greater order, which as a whole is now inaccessible to our senses or our reason.

Apart from the records of miracles, the Gospels give the impression of writings in which truth of fact as well as truth of thought and life is valued, and in which the intention to record only the truth is honestly carried out.

MIRACLE PLAY. Type of medieval religious drama, usually drawn from the legends of the saints. They were usually acted—at first in Latin—by young clerics, boys, and even girls, on the eve of a saint's day. The earliest on record in England was a play of St. Catherine, written by Geffrei, a Norman schoolmaster at Dunstable, about 1100. There are but scanty remains of English plays of this type—the Christmas play of St. George, still acted by boys in English villages, is a degenerate survival—but many French examples are extant. There are also German and Italian miracle plays.

MIRAGE. Optical illusion produced by reflection and refraction when successive layers of air have different temperatures, and, in consequence, different densities. The most perfect mirages are seen in deserts and on the sea. In the former, plains often look like lakes, whilst on the sea inverted images of ships are frequently seen. The phenomenon is explained by the bending of the light rays in passing from one medium into another of different density. Thus abnormalities of visibility arise, and mirages are seen.

MIRAMICHI. River of New Brunswick, Canada. It rises near the centre of the prov. and flows to Miramichi Bay. Its chief tributaries are Little South West Miramichi, North West Miramichi, and Cain. All are noted for their salmon fisheries. Length 220 m. Miramichi Bay is an indentation on the coast of New Brunswick. It is one of the largest arms of the Gulf of St. Lawrence. Fox, Passage, and Neguac, three long narrow islands, form an almost perfect barrier in a curve across its mouth.

MIRANDOLA, GIOVANNI PICO DELLA (1463-94). Italian humanist and philosopher. Born Feb. 24, 1463, member of the Pico family, which owned an estate at Mirandola, he is said to have been master of 20 languages. He endeavoured to reconcile Platonism with Aristotelianism and Christianity. He died in Florence, Nov. 17, 1494.

MIRDITES. Tribe of N. Albania. They number about 25,000 and inhabit the mountainous region S.E. of Scutari, with their chief centre at Oroshi. Their territory is called Mirdita. Backward in culture and in religion Roman Catholic, they have always opposed Turkish and other attempts to absorb them. They have hereditary chiefs known as capidans, who are descended from the house of John Marco.

MIRFIELD. Urban dist. and market town of Yorkshire (W.R.). It stands on the Calder, 5 m. from Huddersfield, is served by the L.M.S. Rly., and manufactures woollen and cotton goods, while occupation is also found in the surrounding coal mines. Market day, Tues. Pop. 12,131.

THE MIRFIELD COMMUNITY. This is an Anglican order for priests, its full name being the Community of the Resurrection. Founded in 1892 at Pusey House, by Charles Gore, the community removed to Radley in 1893, and in 1898 to Mirfield. It maintains a theological

college, also a hostel at Leeds University. There are branches in Johannesburg and London.

MIRROR. A looking-glass or any polished reflecting surface. Mirrors of polished bronze were used by the Egyptians, Greeks, and Romans. Silver, steel, and aluminium have been employed. Glass was first used in Venice about 1300. A sheet of tinfoil was placed on the glass, and over this a coating of quicksilver, which formed an adhesive amalgam. The modern method, introduced by Liebig in 1830, is to precipitate an ammoniacal solution of silver salt, to which tartaric acid and sugar candy are added, on glass, and finish off with a coat of paint and varnish. Mirrors were first made in England in 1673.

Mirror. Egyptian bronze mirror. British Museum.

MISDEMEANOUR. In English law, a crime punishable on indictment which is not a felony. There is no distinction of principle. Larceny is a felony, while perjury is only a misdemeanour; but a conviction for a misdemeanour never involved forfeiture of land or goods, as a conviction for felony did.

MISERERE. The Latin title and first word of Psalm 51 (Eng. Have mercy), one of the seven penitential psalms (in the Vulgate, Ps. 50).

In ecclesiastical architecture the name miserere is given to a hinged seat of a stall in church. It was introduced for the benefit of aged ecclesiastics. The under-bracket is often finely carved, as in the misereres of Henry VII's chapel, Westminster Abbey.

MISHMI. Aboriginal hill tribe living in the N.E. corner of the Brahmaputra valley, Assam. They may represent an ancient offshoot from the Miao of S. China, and are remarkable for their peculiar religion and customs.

MISHNA (Heb. teaching). Jewish code embodying the oral law. It was compiled and edited by Rabbi Jehudah el Nasi, c. A.D. 200. Divided into six parts, the Mishna, long handed down orally, is written in late Hebrew. Further commentaries were embodied in the Gemara, and the two works form the Talmud. The Mishna was first printed in 1492, and has been translated into most modern languages. See Talmud.

MISREPRESENTATION. In English law, a false statement of fact. A transaction, such as a sale induced by a misrepresentation of a material fact, can be repudiated by the party deceived if he repudiates it as soon as he discovers the falsity of the statement, and if it is possible to put the parties in the same position as before. No action will lie for damages for misrepresentation unless the statement was either made fraudulently, with knowledge of its falsity, or was a warranty.

MISSAL or Mass Book. Office book of the Roman Catholic Church. It contains the service for Mass throughout the year. Revised and printed under Pius V, when the Council of Trent, 1570, ordered its use in all churches

Mishmi. Chieftain of the tribe.

that could not claim uses of their own of 200 years' standing, it was again revised in 1604 and 1634. The first mention of a missal is found in the 8th century. There are various missals for different rites or uses, Ambrosian, Sarum, Hereford, Lincoln, York, Bangor, etc.

MISSIL THRUSH OR **MISTLE THRUSH** (*Turdus viscivorus*). Largest of the British song-birds. Nearly related to the song thrush, it is most abundant in Ireland. Its song is most notable in the winter, hence its local name of the storm-cock. It nests in trees early in the spring, and two or even three broods are

Missil Thrush, a common song-bird of the British hedgerows

reared in the season. It feeds on worms, grubs, snails, insects, and the berries of many plants, particularly the mistletoe, whence its name.

MISSENDEN, GREAT AND LITTLE. Two villages of Buckinghamshire. They lie 9 m. S. by E. of Aylesbury, on the Met. and L.N.E. Rlys. Pop., Gt. 2,600, Lit. 1,300.

MISSIONS (Lat. mittere, to send). Bodies of men and women sent by religious organizations to work among the unconverted. Christian missions began in the Apostolic age and were continued till about 1100. S. Patrick was sent to Ireland in 440, S. Augustine to Britain in 597, S. Boniface to Germany in 715. The Crusades tended to replace missions by attempts to convert the heathen and Moslems by the sword. In the latter part of the 15th century missionaries, mainly Franciscans and Dominicans, accompanied the Spanish and Portuguese expeditions. The 18th century witnessed a slackening in missionary effort; but since that date there has been a great development. The following figures, the latest available, show approximately the number of baptized Christians in the principal fields:

	Protestants	Roman Catholics
Japan and Korea ..	355,462	187,450
China ..	536,597	2,244,366
India and Ceylon ..	2,001,973	4,162,555
Dutch East Indies ..	751,658	104,675
Africa and Madagascar	1,812,582	1,888,530

Christian missionaries have been mainly responsible for reducing to writing the numerous languages of Africa and other parts of the world, and for the preparation of dictionaries, grammars, school-books, and literature in these languages. The Bible has been translated into nearly all languages. More than 3,000,000 persons receive treatment annually in mission hospitals and dispensaries.

MISSISSIPPI. River of the U.S.A. It rises in Little Elk Lake, but Lake Itasca, Minnesota, 1,680 ft. alt., is generally regarded as its source, and pursues a circuitous course to the Gulf of Mexico. Its length is about 2,486 m., but including its longest tributary, the Missouri, it measures 5,431 m. At its junction with the Missouri its breadth is 5,000 ft., and below New Orleans 2,475 ft. Of its tributaries the more important are the Minnesota, Des Moines, Missouri, Arkansas, and Red from the W., and the Wisconsin, Illinois, Ohio, and Big Black from the E. Among the towns on its banks are Minneapolis, St. Paul, Dubuque, Moline, Rock Island, Burlington, Quincy, St. Louis, Memphis, Vicksburg, and New Orleans.

In 1927 inundations covered over 1,000,000 acres of the most productive land in the U.S.A.,

caused damage estimated at £80,000,000, and rendered 600,000 persons homeless.

MISSISSIPPI. State of the U.S.A. It has a coastline of 85 m. on the Gulf of Mexico. Its area is 46,865 sq. m., of which 500 are water. The chief rivers are the Mississippi, Pearl, Tombigbee, Yazoo, and Pascagoula.

A great amount of cotton is grown, and much maize. Cattle, sheep, and pigs are reared; the sugar cane is grown, and much land is under fruit. The forest wealth is great. Dairying is increasing in importance. There are some fisheries. Jackson is the capital. There is a State university. Of the population of 1,790,618 more than half are negroes. As part of Louisiana, Mississippi was first settled by French colonists. It sends two senators and eight representatives to Congress.

In geology a group of limestone rocks well developed in the Mississippi Basin is called the Mississippian. The group forms a sub-division of the carboniferous system.

MISSISSIPPI SCHEME. Financial enterprise devised to restore the shaken credit of France. In 1715, when Philip of Orleans became regent, John Law (q.v.) started a bank, and in 1717 formed a company to trade in the vast region around the Mississippi, which he called Louisiana. Having turned his bank into a national institution with the guarantee of the state behind its notes, Law amalgamated with his own two other trading companies and took over the national debt. The shares rose rapidly, and in 1719 were selling at forty times their face value. By July, 1720, the bubble had burst. The government took back the national debt, but speculators had suffered enormous losses.

MISSOLOGHI, MESOLOGHI, OR MESOLONGION. Town of Greece. Situated on a swampy plain N. of the Gulf of Patras, it has a trade in currants, valonia, and local products. Byron died here on April 19, 1824, and a monument was erected in 1881. Pop. 9,270.

MISSOURI (Mud River). River of the U.S.A. It is formed by the junction of the Madison, Jefferson, and Gallatin rivers, which have their sources in the Rocky Mountains and unite at Gallatin City in Montana. It joins the Mississippi about 20 m. above St. Louis and is 2,945 m. long. Its chief tributaries are the Milk and Yellowstone in Montana, the James and White in South Dakota, the Nebraska or Platte in Nebraska, and the Kansas in Kansas. On its banks are Omaha, Atchison, Leavenworth, Kansas City, and Jefferson City.

MISSOURI. Central state of the U.S.A. Its area is 69,420 sq. m., of which nearly 700 are water. Bisected by the Missouri river, it yields rich crops of maize, wheat, oats, potatoes, cotton, tobacco, and flax. The Missouri mule is famous. Missouri is the largest zinc- and lead-producing state of the Union, has more than 14,000 sq. m. of coalfields and a considerable output of iron ore and other minerals. The capital is Jefferson City, but the state contains three cities much more populous, St. Louis, Kansas City, and St. Joseph. Missouri was part of Louisiana, and was settled by the French. Admitted to the Union in 1821, it sends two senators and 16 representatives to Congress. Pop. 3,523,000.

MISSOURI COMPROMISE. This was an arrangement made in 1820 by which Missouri was admitted as a state of the American Union. The state constitution recognized slavery, a fact which aroused a vehement agitation against it in the North. Ultimately slavery was prohibited in the whole of the Louisiana Purchase N. of lat. 36° 30', except that part of it forming the territory of Missouri. The compromise was repealed in 1854.

MISTLETOE (*Viscum album*). Evergreen semi-parasitic shrub of the order Loranthaceae.

Native of Europe and N. Asia, its stems vary in length from a foot to four feet, and the bark is yellow-green. The berries are white, with a single seed invested by glutinous pulp. The berries are eaten by birds, and the seeds become attached to the branches of trees by their agency. On germination the embryo pierces the bark and penetrates to the wood. Of its hosts the chief are black poplar and apple in England and the plains of France; but in Dauphiné and the Rhine valley it is most abundant on Scots pine. American mistletoe forms a distinct genus. The mistletoe was revered by the Druids, is prominent in European folklore, and is a feature of Christmas decorations.

Mistletoe. Sprays of leaves and berries

Mistral. Cold, dry N.W. wind experienced chiefly in winter along the French Riviera.

MISTRAL, FRÉDÉRIC (1830-1914). Provençal poet. The son of a peasant, he was born Sept. 8, 1830, at Maillane, Bouches-du-Rhône. His rustic epic, *Mirèio*, 1859, gained the poetry prize of the French Academy and the Cross of the Legion of Honour, and gave wide recognition to the movement for reviving Provençal language and literature. It was followed by other notable works in the Provençal language. In 1904 Mistral received half of the Nobel prize for literature, and devoted it to the purchase of a palace in Arles to house the Félibrean Museum. He died March 25, 1914.

MITCHAM. Urban district of Surrey. It is 10 m. S. of London on the S. Rly. The industries of Mitcham include laundries and the manufacture of sweets, paper, etc., also market gardening and the growing of lavender and other herbs for scents. The charter fair held annually on Aug. 12 (on the old green for the last time in 1923) has been in existence from ancient times. The common covers 480 acres. Pop. 35,118.

MITCHELL, SIR PETER CHALMERS (b. 1864). British zoologist. Born at Dunfermline, Nov. 23, 1864, he was educated at Oxford, where he became demonstrator in anatomy. In 1903, having been a lecturer in biology in London, he was appointed secretary of the Zoological Society. He retained this post for nearly 30 years and was responsible for many improvements in the Gardens in Regent's Park. In 1906 he was made an F.R.S., and in 1929 he was knighted. His writings include *The Childhood of Animals*, 1912; *Evolution and the War*, 1915.

MITCHELSTOWN. Town of co. Cork, Irish Free State. It is 11 m. N. of Fermoy on the G.S. Rlys. There are stalactite caves about 6½ m. N.E. of the town. Serious rioting occurred here in 1887. Pop. 2,146.

MITE. Small creature belonging to the class Arachnida and order Acarina. Most of them are very small, and some resemble miniature spiders. Many are parasitic on animals and plants, and some are the cause

or vehicle of serious disease. Itch and mange are caused by mites that attack the skin. One species, the harvest bug (see illus. p. 709), bores, during its larval stage, into the human skin, causing great irritation. A red mite is

a parasitic pest of poultry and cage birds. Another mite, the so-called red spider, invades hop gardens and does much damage in green-houses. Others infest cheese, flour, etc.

MITTFORD, MARY RUSSELL (1787-1855). British novelist and dramatist. She was born at Alresford in Hampshire, Dec. 16, 1787, the daughter of a doctor. Her tragedies, *Julian*, 1823; *The Foscari*, 1826; *Rienzi*, 1828; and *Charles I*, 1834, met with tolerable success. Her fame rests more surely on her sketches of country life and character in *Our Village*, 1819. In 1852 appeared *Recollections of a Literary Life*. Mary Mitford died at Swallowfield, near Reading, Jan. 10, 1855.

Mary R. Mitford,
British novelist

MITHRADATES OR MITHRIDATES (131-63 B.C.). King of Pontus from 120 B.C. Surnamed Eupates and known as Mithradates the Great, he conquered the tribes as far as the Crimea and parts of Armenia, and eventually overran the whole of the Roman prov. of Asia. Sulla signally defeated him at Chacrona and Orchomenos in 86, while another Roman army under Fimbria defeated him in Asia, and Mithradates was forced to conclude peace. Fighting was renewed again in 83-82 and 74-63. In the meantime Mithradates recovered the greater portion of Pontus. Finally Pompey drove Mithradates into the Crimea, where, at his own request, an attendant put him to death.

MITRAILLEUSE (Fr. mitraille, grape shot). French name for machine guns in general. The original Montigny mitrailleuse, taken up by the French in 1869 and introduced in the army for the Franco-Prussian War, 1870-71, consisted of 25 rifle barrels mounted inside a casing resembling the barrel of a field-gun. The breech-block, provided with firing mechanism and strikers for the 25 cartridges, slid backwards and forwards in the barrel casing when a "loading lever" was actuated by hand. The cartridges were carried in metal plates, having 25 holes drilled through them corresponding to the arrangement of the barrels. By revolving a crank handle the cartridges were fired successively, one complete revolution of the crank firing all 25 in approximately one second. See Machine Gun.

MITRE. Head-dress of bishops and certain abbots of the Western Church, and occasionally of other ecclesiastics. In its early forms the mitre, which came into use about the 10th century, was low and simple. In the 14th century it increased in height. In the Church of England mitres fell into gradual disuse after the Reformation, disappearing in the 18th century, but were revived by some Anglican bishops after 1855.

MITRE. In building and joinery, the line formed by the intersection or juncture of two similar blocks or mouldings, the meeting ends of the blocks being equally bevelled.

MITRE, BARTOLOMÉ (1821-1906) Argentine soldier, statesman, and man of letters. Born at Buenos Aires, June 26, 1821, he began his public life as journalist in 1838 at Montevideo. After varied experiences in Bolivia, Peru, and Chile he returned to Argentina and took part in

Mitre. 1. Gothic. 2. Roman, with bands detached; 3. Anglican mitre.

the successful revolt against Rosas when Buenos Aires became an independent province. He was successively commander-in-chief minister of war, and minister of government and foreign relations. President 1862-68, he died Jan. 18, 1906. Founder of *La Nacion* he was author of *Historia de Belgrano y de la Independencia Argentina*, 1859, and *Historia de San Martin y de la Emancipación Sud-Americana*, 1889-90.

MITYLENE OR MYTILENE Greek island in the Aegean Sea, also called Lesbos. Its area is 675 sq. m. It is mountainous, with two excellent harbours, the soil is fertile, and corn, olives, and vines are cultivated. In the 14th century John Palaeologus bestowed it upon a Genoese nobleman, whose descendants held it until its conquest by the Turks in 1462. In 1913 it was restored to Greece. The chief town is Mitylene, on the E. coast. Pop., island 161,557; town, 27,870. Pron. Mitti-lénē.

MIZPAH OR MIZPEH (Heb. a watch-tower) Ancient name of several high-lying places in Palestine. One has been identified with Nebi Samwil, a mt. 2,935 ft. in alt., 4 m. N.W. of Jerusalem. This owes its present name ("Prophet Samuel") to a Moslem tradition which makes it the burial-place of Samuel (cf. I Sam. 7, 6, 16). Its Moslem mosque, formerly a Crusaders' church, contains a cenotaph which the Moslems revere as the tomb of the prophet. In 1928 some remarkable Israelite remains were unearthed during excavations by an expedition of the Pacific School of the University of California.

MNEMONICS (Gr. mnemonikē, art of memory) Art of improving the memory, especially by artificial aids and methods. Nearly all such methods depend on the association of ideas, and are chiefly based on the principles of localisation and analogy. The former (topology) associates what is to be learnt with the picture of a building or place well known to the learner; the latter establishes an analogy in the case of things or words between them and some familiar object. Attention is now directed rather to the psychological side of the question. The art of memory was regularly cultivated in the Greco-Roman schools.

MOA. Native name for the *Dinornis*, a genus of extinct flightless birds of New Zealand. About 20 species have been identified from remains found in Holocene deposits, the largest standing nearly 12 ft. high, and the smallest being about as large as a turkey. Although they were unable to fly, they could run with great speed.

MOABITES. Ancient Semitic people related to the Hebrews. According to Gen. 19 they were descended from Moab. They were frequently at war with Israel and Judah, and were conquered by David. Solomon took Moabite wives, and introduced the worship of their god Chemosh into Jerusalem. The Moabites recovered their independence, and Mesha, who set up the Moabite stone, won victories over Israel. Moab disappeared after the Babylonian conquest.

MOABITE STONE. This stone is a black basalt slab from Dibon, Moab. Discovered by Klein, 1868, and shattered by its Beduin custodians, it was recovered and reconstructed for the Louvre from paper squeezes (secured by Clermont-Ganneau) covering 34 lines of primitive Hebrew script in the Moabite dialect of about 850 B.C. This inscription narrates Israel's conflict with Mesha.

MOAT. Large trench round a fortified place for defensive purposes. Medieval castles were frequently provided with two moats, usually filled with water, an inner one encircling the keep and an outer the precincts. By means of a moat the height of a battlement was very considerably increased. Bodiam Castle (q.v.), in Sussex, is a perfect example of a moated fortress. The moat of the Tower of London still exists, although it was drained in 1843. Another fine example is that of Ightham Mote, in Kent, an ancient moated manor house.

MOBILE. City and seaport of Alabama, U.S.A., the co. seat of Mobile co. It is 135 m. E.N.E. of New Orleans at the mouth of the Mobile river. It has a fine Gothic cathedral and several important educational institutions. Cotton, timber, resin, flour, cereals, coal, cotton-seed oil, and provisions are exported. Industries include saw-milling, shipbuilding, and the manufacture of cotton, veneers, and machine-shop products. There are important fisheries. Large harbour and dock improvements have been undertaken. The original city was founded in 1702 by the French; the present city, farther S., being built nine years later. Practically all Alabama's foreign commerce passes through it. Pop. 65,000.

MOCCASIN OR MOCCASSIN. Shoe worn by the N. American Indians. They are usually made of raw hide, with uppers of soft deer skin, and are often embroidered with beadwork or decorated with porcupine quills.

MOCCASIN (Natrix). Name of a snake. Found in North America, it is quite harmless. It is related to the garter snake and also to the tessellated snake of Europe.

Mocha or MOKHA. Port in the Yemen, S.W. Arabia. It was formerly the centre of an immense trade in coffee. Pop. 2,000.

MOCKING BIRD (Mimus polyglottus). Common bird of the southern U.S.A. and the W. Indies. Nearly related to the thrush, it imitates the notes of other birds. It has a long tail, short wings, and white underpart. The wings and tail are black, marked with white. See Catbird.

MODDER. River of S. Africa. Rising near Dewetsdorp, about 40 m. S.E. of Bloemfontein, it flows through the Orange Free State and, entering Bechuanaland, discharges, after a course of 186 m., into the Vaal. The battle of Modder River (Nov. 23, 1899) was fought by Lord Methuen in his attempt to relieve Kimberley in the S. African war. After an initial repulse the British forced their way across the river.

MODE. In music, the predecessor of the modern scale. The modern major scale is identical with the Ionian, which began on C. The Dorian began on D; the Phrygian on E; the Lydian on F; the Mixolydian on G; the Aolian on A, like the present descending melodic minor scale; and the Locrian on B.

MODEL PARLIAMENT. Name given to the Parliament summoned by Edward I in Nov., 1295. It formed the model of later Parliaments. See England; Parliament.

Mocking Bird. Cuban specimen of the American bird

Moa. Reconstruction of extinct wingless bird of New Zealand

Mitre in joinery. Common form

MODENA. City of Italy, the capital of the prov. of Modena. It is 23 m. by rly. N.W. of Bologna. The splendid Romanesque cathedral, begun in 1099, has a lofty campanile and many carvings and statues. The church of S. Agostino has memorials of the Este family. The ducal palace is used for public purposes. Among other buildings are the university, founded in 1683; a library containing 140,000 vols. and several thousand MSS.; a town hall, dating in part from 1194, and museums and art galleries. There are several fine open spaces. The manufactures include silks, woollens, linens, hats, and leather and iron ware, and there is trade in cattle, cereals, wine, fruit, and liquors. Pop. 91,400.

THE DUCHY OF MODENA. This dates from 1452, and was ruled by members of the Este family. During the Napoleonic wars it became part of the Cisalpine republic. In 1814 it was given to Ferdinand, a member of the Hapsburg family, who had married Maria Beatrice, the heiress of the house of Este, and he and his son reigned until the latter was driven out in 1859. See Este.

MODERATOR (Lat. moderari, to control). An academic or eccles. official. At Oxford moderators are the examiners at the first public examination for degrees (moderation, or abbreviated into mods.). At Cambridge they superintend the examinations for the mathematical tripos. At Dublin they are the candidates for B.A. degree who take first and second place in honours. The word is applied to presiding officers at meetings and courts of the Presbyterian Church. There are also moderators in the Congregational Church of England and Wales.

MODERNISM. A school of thought in the Church of Rome. The term is associated with an effort to adjust dogmatic theology to modern discovery and to bring the Church into intellectual touch with the spirit of the age. It has been consistently and emphatically condemned by the pope, notably in the encyclical Pascendi of Pius X in 1907. The reasons given for this condemnation are that Modernism divorces faith and knowledge, undermines the authoritative definitions of the faith, and opens the door to every kind of error both in faith and morals. Prominent Modernist leaders include A. Houtin, A. F. Loisy, Baron von Hügel, and George Tyrrell.

MODJESKA, HELENA (1844-1909). Polish actress. Born at Cracow, Oct. 12, 1844, the daughter of a musician, she married, 1861, an impresario, G. S. Modrzejewski (d. 1865), and, 1868, Count Bozenta Chlapowski, with whom in 1876 she went to America. Famous in her rendering of Shakespearean and other heroines of tragedy, in 1877 she appeared at San Francisco, in Adrienne Lecouvreur, for the first time acting in English. In Great Britain she made her particular success as Mary Stuart, Lady Macbeth, and La Dame aux Camélias. She died at Bay City, California, April 9, 1909.

Helena Modjeska,
Polish actress

MODULATION. In music, a change of key, or the passing from one scale of tonality to another. When the modulations are to related keys, they are called natural modulations; when suddenly made to a more distant key, extraneous. Chromatic modulation is when the change is effected by chromatic chords. Enharmonic modulation includes a chromatic or extraneous change, together with a substitution of notes.

In wireless telephony modulation means the varying of the amplitude of the high-frequency oscillations which constitute the carrier wave.

When speech or music causes the diaphragm of the transmitting microphone to vibrate, the oscillations are broken up into groups of a pattern corresponding in frequency to the sounds affecting the microphone. When rectified such audio-frequency wave-groups are receivable in a telephone or loud speaker.

MOFFAT. Police burgh and spa of Dumfriesshire. It stands on the Annan, 21 m. from Dumfries, on the L.M.S. Rly. There are a mineral spring and a hydropathic establishment. Pop. 2,426.

MOFFAT, GRAHAM (b. 1866). Scottish actor and dramatist. Born in Glasgow, Feb. 21, 1866, he was educated at Rosemount Academy, Glasgow. He first played in London in 1911, and on July 4 produced his Scottish comedy of Bunty Pulls the Strings, which ran for over 600 performances. He has played in other of his own plays, e.g. Till the Bells Ring, 1908, The Concealed Bed, 1909, A Scrape o' the Pen, 1911, and Don't Tell, 1920.

MOFFAT, ROBERT (1795-1883). Scottish missionary. Born at Ormiston, Haddingtonshire, Dec. 21, 1795, he began life as a gardener. Offering his services to the London Missionary Society, he did splendid work in Africa, 1816-70. He translated the Bible into Bechuana language, and wrote Missionary Labours and Scenes in S. Africa, 1842. In 1819 he married Mary Smith (1795-1870), who was as devoted to the work as he was himself, and their daughter married David Livingstone. Moffat died at Leigh, Kent, Aug. 9, 1883.

Robert Moffat,
Scottish missionary

Mogador or **Es SUEIRA.** Seaport of Morocco. It has a good harbour and a considerable trade. Pop. 18,400.

MOGUL (Arab. mughal, Mongol). Name applied to the empire founded c. 1526 by Bahar, the Mahomedan conqueror of India. It fell to pieces after the death of Aurungzebe (1707), and in 1858 finally ceased to exist. The term is applied to high-class playing-cards. The emperor of Delhi was known as the Great Mogul. See Akbar; Aurungzebe; Bahar.

MOHAIR (Arab. mukhayyar, choice, select). Fleecy of the Angora goat. Mohair has been imported from Turkey since the 17th century, and mohair spinning has been carried on in Bradford, Yorkshire, since 1848. The better qualities are taken for dress goods; others are made into plushes, braids, astraklans, and heavy cloths. Turkey mohair normally commands the best prices, but mohair of fine quality comes from S. Africa.

MOHAMMED. Name, a variant of Mahomet, of six sultans of Turkey. Mohammed I reigned 1413-21; Mohammed III, 1595-1603; Mohammed IV, 1648-87; and Mohammed VI, 1918-22.

MOHAMMED II (1430-81). Sultan of Turkey, known as Mohammed the Conqueror (El Fâtih). Son of Murad II, he was born at Adrianople, and succeeded his father in 1451. In 1453, at the head of over 150,000 men and a fleet of 400 vessels, he captured Constantinople. Making Constantinople his capital, he subdued Serbia in 1459; made himself master of the Morea, 1460; of Trebizond, 1461; of Lesbos, 1462, and of Wallachia and Bosnia, 1463. In 1472 he overcame the Persian forces in Cappadocia, and took Caffa in the Crimea from the Genoese in 1475. In 1478 he forced Venice to sign peace and surrender Skutari in Albania, and in 1480 he attacked the Neapolitans and captured Otranto. Shortly afterwards he died at Gebze, and was succeeded by Bayazid II.

MOHAMMED V or **MEHMED RESHAD** (1844-1918). Sultan of Turkey. Born Nov. 3, 1844, younger brother of Abdul Hamid II, whom he succeeded in 1909, he lived in dull and isolated obscurity most of his life, the real power being in the hands of the Young Turk party, headed by Enver Pasha, Talaat Bey, and others. He is believed to have been by no means willing to side with Germany in the Great War, and for a while did what he could to avoid a rupture with the Allies, but was overruled. He died July 3, 1918, and was succeeded by his brother Mohammed VI (b. Jan. 12, 1861), who was deposed Nov., 1922, and died at San Remo, May 15, 1926.

Mohammed V,
Sultan of Turkey

MOHAWKS (Narraganset, man-eaters). North American Indian tribe of Iroquoian stock. Formerly one of the Six Nations, located between the St. Lawrence and the Catskills, they migrated to Canada, and they number about 5,000.

The name was given to a London fraternity of dissolute young men of fashion in the early 18th century. A royal proclamation was issued against them, March 18, 1712.

MOHICANS. Name popularly applied to a N. American Indian tribe, officially called Mahicans. An allied tribe are called Mohegans (wolf). Of Algonquian stock, the former moved from the Hudson valley into Pennsylvania, the latter northward into New England. Both are now extinct.

MOHMAND. Pathan tribe of the Indo-Afghan frontier. They are Iranian Aryans, speaking a N. Pushtu dialect. The British campaign of 1897 secured their submission. Though assured by treaty of their full Afghan privileges, they gave much trouble during the Great War.

The Mohmand country is a section of the North-West Frontier Province. It lies N. of the Khyber Pass and the Kabul river. A region of rugged barren hills, it affords an alternative route to that of the Khyber Pass.

MOHUN, BARON. Irish title borne from 1628 to 1712 by the family of Mohun. John Mohun (c. 1592-1640) was the first holder. The last, Charles Mohun (c. 1675-1712), in 1692 helped Richard Hill in an attempt to carry off the actress, Mrs. Bracegirdle, and in a scuffle William Mountfort, the actor, was killed. Mohun was tried and acquitted. In 1699 he was similarly relieved from a charge of murder. On Nov. 15, 1712, he fought a duel in Hyde Park with the 4th duke of Hamilton and both were killed, an incident immortalised in Thackeray's Henry Esmond. Pron. Moon.

MOIDORE (Port. moeda d'ouro, money of gold). Obsolete Portuguese gold coin valued at 4,800 reis, or a little over a guinea nominally, it was not minted after 1732.

MOIR, DAVID MACBETH (1798-1851). Scottish physician and humorist. He was born at Musselburgh, Jan. 5, 1798, and spent his life there. Over the signature Delta he contributed much verse to Blackwood's Magazine, and is remembered chiefly by his Autobiography of Mansie Wauch, a diverting picture of humble Scottish life in the style of his more famous contemporary Galt. Moir died July 6, 1851.

MOLASSES. By-product in sugar refining, the uncrystallisable part of the sugar. It is a thick, brownish-yellow liquid useful as a food. Rum is produced by fermenting molasses. See Rum; Sugar.

MOLD. Urban dist. and market and co. town of Flintshire, Wales. It is 13 m. from Chester on the L.M.S. Rly., and is in the

centre of important lead and coal mines. There are manufactures of bricks, tiles, nails, beer, etc., and also works for making tinplate. The town had a castle in the Middle Ages. Market days, Wed. and Sat. Pop. 5,000.

MOLDAU or **VLTAVA**. River of Czechoslovakia. It rises in the Bohemian Forest, near the Austrian frontier, and flows 265 m. to join the Elbe (Labe) at Melnik, through Prague and Budejovice (Budweis), to which it is navigable. From Budejovice a canal leads to the Danube.

MOLDAVIA. District of Rumania. Wallachia, Transylvania, and the Bukovina bound it on the W., and Bessarabia on the E. The Carpathians on the W. are its most striking natural feature. Its chief river is the Sereth (Siret). Important towns are Jassy, Botosani, and Bacau. Its area is about 14,700 sq. m. Pop. 2,233,556.

In the 13th and 14th centuries Moldavia, which takes its name from the Moldava, a tributary of the Sereth, was an independent state, but it was conquered by the Turks in 1511, and farmed out by them to the Greek Phanariote princes. The union of Moldavia and Wallachia under the name of Rumania was proclaimed at Jassy and Bukarest, Dec. 23, 1861. Moldavia was successfully held against Austro-German forces in 1916-17.

MOLDAVIA. Autonomous socialist soviet republic. It consists of some 3,200 sq. m. along the left bank of the Dniester. Agriculture is the chief industry. The capital is Balta. It dates from 1924. Pop. 572,000.

Mole. Pigmented spot on the skin, usually raised and covered with hair.

MOLE. Name given to a widely distributed family of insectivorous mammals (Talpidae). The European mole (*Talpa europaea*), common in Great Britain, is about 6 ins. long and covered with velvety greyish black fur. The mole, which has very small eyes and powerful claws, lives mostly underground, and feeds on worms, grubs, and insects. The small heaps on the grass are the mould cast out in the course of burrowing, whence its popular name, mould-warp (earth-caster). Its hill or nursery is usually constructed in an open field, near a water supply. It consists of a central chamber a few inches below the surface, often with galleries and tunnels.

Mole. River of England. It rises in Balcombe forest, N. Sussex, and flows 30 m. through Surrey to the Thames near Molesey.

MOLE CRICKET (*Gryllotalpa vulgaris*). Orthopterous (straight-winged) insect, common in Central and S. Europe. A member of the cricket tribe, it lives underground, and preys upon worms, insects, and vegetation. It is nearly 2 ins. long, yellowish-brown in colour, and covered with fine, downy hair.

MOLECULE. Smallest particle of matter that can exist independently whilst retaining the distinctive properties of the original substance. The term was first applied by Avogadro in 1811 to distinguish the smallest unit of matter with which physical phenomena are concerned, from the atom. Some molecules contain only one atom, others are composed of several atoms. While not divisible by the mechanical or physical changes of the substance, molecules are readily broken up by chemical reactions or by an electric current. When such a division occurs there is always a

readjustment. The molecular theory of matter supposes that matter is not a continuous structure, but is discrete, i.e. made up of distinct minute particles or molecules.

Molecules, it is assumed, are in a state of perpetual motion, this taking different forms according to whether the matter is gaseous, liquid, or solid. Lord Kelvin gave an idea of the size of molecules by stating that if a drop of water, the size of a pea, were magnified up to the size of the earth, each constituent molecule being enlarged in the same proportion, the molecules would appear somewhat smaller than cricket balls. See Atom.

MOLE RAT (*Spalax*). Genus of burrowing rodents, related to the rats, but resembling moles in appearance. They are blind, their eyes being beneath the skin. They feed on roots and bulbs. The typical species (*S. typhlus*) is found throughout S.E. Europe, Asia Minor, Persia, and Lower Egypt.

MOLESEY or **MOULSEY**. Two districts in Surrey, East and West, forming an urban district. They stand on the right bank of the Thames, 2 m. from Kingston on the S.R. A regatta is held here yearly. Near by the river Mole enters the Thames. Pop. 8,000.

MOLE SHREW. Small burrowing mammal of the Blarina genus found in N. America and Japan. It resembles the common mole, but is much smaller. It feeds upon small worms and insects.

MOLIERE, pseudonym of Jean Baptiste Poquelin (1622-73). French dramatist. Born in Paris in Jan., 1622, he was destined for his father's business, that of an upholsterer, but at the age of twenty-one he founded with some friends a theatrical company, L'illustre Théâtre, which played unsuccessfully at Paris for two years. They then tried their fortunes in the provinces, and after five years of struggle achieved a considerable reputation. In 1658 they returned to Paris, and two years later were established in the theatre of the Palais Royal.

In 1659 Molière made his début in social comedy with *Les Précieuses Ridicules*, and in 1662 he produced his first great comedy, *L'École des Femmes*. Molière's principal plays besides the two already mentioned are *Le Tartuffe*, 1664; *Don Juan*, 1665; *Le Misanthrope*, 1666; *L'Avare*, 1668; *Le 1670. Les Femmes savantes*, 1672; and *Le Malade imaginaire*, 1673. Slighter, but of excellent quality, are *L'École des Maris*, 1661; *Le Mariage forcé*, 1664; *L'Amour médecin*, 1665; *Le Médecin malgré lui*, 1666; *Le Sicilien*, 1667; and the remarkable *Critique de l'École des Femmes*, 1663. Molière died in Paris, Feb. 17, 1673. See France.

MOLLUSC. Name given to any of the mollusca (Lat. molluscus, softish), the animal phylum, or sub-kingdom, which includes the "shell-fish," the snails and slugs, and the cuttles. Molluscs may be described as soft, cold-blooded animals, with unsegmented and

limbless body, possessing no internal bony skeleton and no cartilaginous tissues—except in the cephalopods—and in the majority of cases secreting a shell either external or internal. Except in the bivalves (q.v.), most of them possess a head provided with a mouth containing the characteristic radula or tooth ribbon. In nearly all the families a foot or locomotive organ is present. Another characteristic feature is the mantle or fold of skin,

Mollusc. Anatomy of common oyster: a, hinge line; b and c, adductor muscle; d, attachment of gills to mantle; e, e, edge of valve where mantle is attached to shell; f, fringed edge of mantle; g, gills; i, liver; m, mouth; v, vent

which may either cover both sides of the body, as in the bivalves, or part of the back only, as in the univalves. The shell is secreted by the mantle. Molluscan shells take the most varied forms. They are double, like a closed book, in the bivalves; usually spiral in the gastropods, as the snail and the whelk; elongated and tubular in the elephant tusk shells; composed of a series of plates in the chitons or "coat-of-mail shells"; concealed by the mantle in the slugs; or quite internal, as the so-called "bone" of the cuttles. Molluscs are widely distributed. The majority are marine, but many inhabit fresh water, and others are terrestrial. They are all very sensitive to touch, notably along the edge of the mantle. The tentacles on the head appear to have a tactile purpose, and the foot is extremely sensitive. Most of the species, except the bivalves, have eyes on their head, either upon or closely associated with the tentacles or horns.

Reproduction is sexual; though hermaphroditism occurs, self-fertilisation appears to be rare. The young are produced from eggs, usually hatched exterior to the body of the parent; but in the bivalves and some gastropods they are retained within the body or the shell of the parent till after hatching. The mollusca are grouped into four classes: Gastropoda, Scaphopoda, Pelecypoda, Cephalopoda. See the articles bearing these titles.

MOLOCH. Canaanite fire god, a Semitic word meaning king. This Septuagint spelling represents the Hebrew Molech, whose worship, notably under Ahaz and Manasseh, involved child-sacrifice and pyre-burning (2 Kings 23). These were sacrifices to Jahveh, and the rites survived among the Jews until a late period, as is proved by references to them by Ezekiel and Jeremiah.

MOLOKAI. One of the Hawaiian Islands, Pacific Ocean. The leper settlement, the scene of the labours of Father Damien (q.v.), is in the middle of the N. coast. The people live mainly on a narrow fertile strip along the S. coast. The mountains rise to 3,000 ft. Area, 261 sq. m. Pop. 2,500.

MOLTKE, HELMUTH KARL BERNHARD, COUNT VON (1800-91). German soldier. Born in Meeklenburg, Oct. 26, 1800, he entered the Danish army in 1819, but transferred his services to Prussia in 1822. During the years of peace he lectured, surveyed, studied, and wrote, and so prepared himself for a post on

Count von Moltke. German soldier

Mole Rat. Specimen of the South European rodent resembling a mole

Mole. Specimen of the common European variety

J. B. P. Molière. French dramatist. Portrait of Lebrun's school

the general staff in Berlin which he secured in 1832. In 1835 he went to Turkey, where he saw active service with the Turkish army in Syria. In 1840 he returned to Berlin, and in 1845 was made chief of the staff of an army corps. In 1855 he became adjutant to the crown prince, and in 1858 chief of the general staff.

Owing to years of patient study, Moltke was peculiarly well qualified for his new position. He gave to the work of the general staff an importance it had never enjoyed before, and his influence on war has been enormous. He organized the campaign which crushed Denmark in 1864, a comparatively easy task, and the one that reduced Austria to impotence in 1866. His brain, too, conceived the plans by which the French armies were so rapidly and unexpectedly defeated in 1870. In 1871 Moltke was elected to the Reichstag. In 1888 he resigned his office, and he died in Berlin, April 24, 1891. His wife was an English lady, Mary Burt.

MOLTKE, HELMUTH JOHANNES LUDWIG VON (1848-1916). German soldier. Son of Adolf von Moltke, and nephew of the great von Moltke, he was born May 23, 1848. He entered the army and served through the Franco-Prussian War. In 1906 he became general of infantry and chief of the general staff. He was the real generalissimo of the German army when the Great War broke out, and held that position till Oct., 1914, when, owing to the failure to capture Paris, he was superseded. He died June 18, 1916.

Helmuth von Moltke, German soldier

MOLTON, SOUTH. Borough and market town of Devonshire. It stands on the Mole, 12 m. from Barnstaple, on the G.W. Rly. The fine Perpendicular church of S. Mary, Magdalene has an old pulpit. The town is an agricultural centre, and its industries include flour-milling. Market day, Thurs. Pop. 2,848.

North Molton is a village 3 m. to the N.E.

MOLUCCAS OR SPICE ISLANDS. East Indian islands forming part of the Dutch East Indies. They include Gilolo or Halmahera, Ternate, Tidore, Bachian, Buru, Ceram, Amboyna, and the Banda Islands. The islands cover 190,860 sq. m. Pop. 839,459.

The Spice Islands were known by repute long before European ships reached the East Indies, and their products were greatly desired during the Middle Ages, when seasoning was required to make winter meat palatable. In 1613 the Dutch acquired them, and hold them now. See Amboyna; Ceram.

MOLYBDENUM. One of the metallic elements, chemical symbol, Mo; atomic weight, 96; atomic number, 42; specific gravity, 8.6; melting point about 1,900° C. It is silver white in colour, with a strong metallic lustre. While a rare metal, it is widely distributed. It is in demand for use in the preparation of alloy tool steel.

MOMBASA. Port of Kenya Colony, E. Africa. It lies on a coral island connected with the mainland by rly. Mombasa Harbour, on the N.E. of the island, is mainly used by small steamers and native craft; Kilindini harbour, used by larger vessels, is at the S.W. end. Mombasa is the coastal terminus of the Kenya and Uganda Rly. It was at one time the capital of the Portuguese empire in E. Africa. Pop. 39,824, of whom 869 are Europeans.

MOMMSEN, THEODOR (1817-1903). German historian and scholar. Born at Garding in Slesvig, Nov. 30, 1817, he specialised in the study of antiquities, and spent three years in

Italy studying inscriptions. The results of his work brought him wide recognition, and in 1848 he was appointed professor of civil law at Leipzig, and later, professor of ancient history at Berlin. His Roman History appeared between 1854-56. He also undertook the task of editing the Corpus Inscriptionum for the Berlin Academy. Other notable works were one on Roman coinage, and two dealing with Roman law. In 1884 appeared his Roman Provinces, the most valuable of all his contributions towards the elucidation of ancient history. From 1873-82 he was a member of the Prussian Parliament. He died Nov. 1, 1903.

Theodor Mommsen, German historian

MOMUS. In Greek mythology, the god of jest and mockery. His sarcasm and criticisms became so obnoxious to the other gods that he was expelled from heaven. He was the son of Night.

Mona. Name by which the island of Anglesey (q.v.) was known to the Romans. The name was also applied to the Isle of Man.

MONACO. Principality of S. Europe. Except for the short coastline on the Mediterranean, this state of 8 sq. m. is entirely bounded by the French dept. of Alpes Maritimes. The revenue is mainly derived from the gaming tables. Pop. 24,927 in the towns of Monaco (pop. 2,085), La Condamine, and Monte Carlo.

The family of Grimaldi secured Monaco in 968, and when, in 1715, the male line failed, it passed to a daughter and her husband. Since 1861 it has been under the protection of France. The ruler, Prince Louis II, gave it a constitution in 1911, but in 1923 there was trouble between the prince and the representatives of the people. See Monte Carlo.

MONAGHAN. County of the Irish Free State in the prov. of Ulster. Its area is 499

sq. m. The surface is undulating, with hills in the south and east, and in parts boggy. The chief rivers are the Blackwater, along the N.E. boundary, and the Finn, and there are many small lakes. Oats, flax and potatoes are grown; cattle, sheep, pigs, and poultry are reared. Coal, limestone, and gypsum are mined on a small scale. The G.N. of Ireland Rly. and the Ulster canal serve the county. Monaghan is the county town; other places are Clones, Carrickmacross, Castleblayney, and Ballybay. Pop. 65,131.

MONAGHAN. Urban dist. of co. Monaghan, Irish Free State; also the county town. It is on the G.N. of I. Rly. and the Ulster canal, being 52 m. from Dublin. The town has a trade in agricultural produce. Pop. 4,636.

MONA LISA. Name given to a half-length portrait by Leonardo da Vinci (q.v.) in the Louvre, Paris. The subject was a Florentine lady, Lisa di Anton Maria di Noldo Gherardini, who married Francesco di Bartolommeo del Giocondo in 1495. From her

married name the picture is often known as La Gioconda or La Joconde. In Aug., 1911, it was stolen from the Louvre, but was discovered in Florence and restored in Dec., 1913.

MONARCH. Large red and black butterfly. Its home is in the United States, and in the summer it enters Canada, but it has not settled on the other side of the Atlantic. Its name is Anosia archippus.

MONARCHIANISM. Name given to a heresy propounded in the 2nd and 3rd centuries by certain Christians who, under cover of upholding the monarchia or original oneness of God, opposed the orthodox doctrine of the Trinity. This heresy was denounced by Justin Martyr (c. 100-165).

MONASH, SIR JOHN (b. 1865). Australian soldier. Born at Melbourne, June 27, 1865, he began to practise as a civil engineer in 1884. He entered the Australian forces in

Sir John Monash, Australian soldier
Bossano, Ltd.

1887, and rose to the rank of colonel. When the Great War began, Monash was first of all chief censor. In command of the 4th brigade he went to Gallipoli, and remained there until the evacuation. In France he commanded the 3rd Australian division, and on June 1, 1918, he took command of the Australian Corps, and retained it until the armistice, when he became director-general of demobilisation for Australia. He was knighted in 1918. In 1920 he published *The Australian Victories in France in 1918*.

MONASTERBOICE. Village of eo. Louth, Irish Free State, 5 m. N.W. of Drogheda. Its remains include two churches, a round tower 110 ft. high, and three fine crosses.

MONASTICISM (Gr. monastikos, living alone). System under which persons live

who have abandoned the world for a life of religious seclusion. It is more ancient than Christianity, and perhaps is prehistoric. The monastic ideal spread from the East to Western Europe, where it found a legislative genius in Saint Benedict (c. 480-543), whose rule either superseded or modified all others.

Throughout the Dark Ages the monks did indirectly work of great value as missionaries, sacrificing their ideal of seclusion to the necessities of their fellow-men. The 11th and 12th centuries saw a considerable revival of learning and civilization in Europe; and the monastic system was found to need a good deal of reform. Between 1020 and 1120 eight new and stricter orders were founded. Of these the most important were the Carthusian, Præmonstratensian, and Cistercian, but by the end of the century the reform had spent most of its force. Then came the great revivals associated with the names of S. Francis (d. 1226) and S. Dominic (d. 1221).

Monaghan, Ulster. Map of the pastoral county of the Irish Free State

The Franciscan revival contributed greatly to the advancement of learning, and from about 1230 onwards the friars became for a century the most active and successful of university teachers. This was the last of the great reforms of the Middle Ages, though much was done at different places to avert decay. The necessity for the dissolution of the monasteries in England by Henry VIII can be inferred from monastic records themselves.

In the 19th century the monks were expelled from France and other countries. The orders, however, survived and many new houses were founded. See Abbey; Benedictines; Cistercians; Franciscans, etc.

MONASTIR or BITOLJ. Town of Yugoslavia, 130 m. N.W. of Salonica, with which it is joined by rail. It was the capital of a vilayet of the same name while Macedonia was under Turkish rule, and was of importance both militarily and commercially. It was a Turkish depot, had manufactures of leather and carpets, and exported grain. It was allotted to Serbia by the treaty of Bukarest, 1913. During the Great War it was taken by the Bulgarians in Dec., 1915, and regained by the Allies Nov. 19, 1916. Pop. 39,000.

MONBODDO, JAMES BURNETT, LORD (1714-99). Scottish lawyer. Born at Monboddoo, Kincardineshire, he was called to the bar, rapidly acquired distinction, and in 1767 became a lord of session. Far in advance of his age, he studied the origins of mankind from a new standpoint, and enunciated his views boldly in *The Origin and Progress of Language*, 1773, and *Ancient Metaphysics*, 1779-99. Lord Monboddoo died May 26, 1799. He is most generally remembered from Boswell's frequent references to his theories of human origin and Dr. Johnson's comments.

MONCTON. City and port of entry of New Brunswick, Canada. It stands on the Petitcodiac river, 89 m. from St. John. The C.N. Ry. have workshops here, and there are lumber mills. Pop. 17,488.

MOND, Ludwig (1839-1909). German chemist. Born at Cassel, Germany, March 7, 1839, he came to England in 1862 to introduce a process for the recovery of sulphur from alkali waste, and in 1873, in partnership with Sir John Brunner, erected works near Northwich for the manufacture of soda. Mond also invented a cheap source of power from small coal, and discovered a method of recovering nickel from low-grade ores. In 1896 he founded the Davy-Faraday Research Laboratory in connexion with the Royal Institution, London. He became naturalised and died in London, Dec. 11, 1909. His son, Alfred Moritz, became baron Melehet (q.v.) in 1928.

MONET, CLAUDE OSCAR (1840-1926). French painter. Born at Havre, Nov. 14, 1840, he was greatly influenced by Manet's new method of painting in bright colours laid on in separate tones. He adopted the method, and was joined by Pissarro, Sisley, Renoir, etc., the group becoming known as the Impressionists. Monet was the real founder of Impressionism. Among his first pictures were *Déjeuner sur l'Herbe*, 1866; *Déjeuner*

Claude O. Monet,
French painter

dans un intérieur, 1868; and figure pictures, *Camille*, 1866; and *La Japonaise*. He went to live by the Seine, and painted the river in all its moods, and later painted many pictures of the Thames, and of the sea and rocks on the Mediterranean coast. He painted series of pictures of one subject under varying effects of light and atmosphere, the first being *The Haystacks*, 1890-91, and the second *The Façade of Rouen Cathedral*. He died Dec. 5, 1926. See Impressionism.

MONEY. Device for facilitating the exchange of goods and services. As long as money is confined to coined pieces of metal, its volume depends entirely on the supply of those metals, and thus we find that variations in the supply of the precious metals have caused great variations in the general level of prices, with far-reaching economic effects. If the supply of money cannot be increased as fast as the production of other goods, the buying power of money rises and the prices of other goods fall, and this fall in prices has a depressing effect upon industry.

Coined money, however, has long ceased to be the sole commodity used for the purpose of exchange, having been superseded, except for small retail transactions, by notes issued by banks or governments, and in countries at a high state of economic civilization by cheques drawn on banks. But these credit instruments, as they are called, only won the essential quality of acceptability by being at all times and without question convertible on demand into gold, which had in the meantime gained undisputed supremacy over silver as the metal of universal acceptability.

MONEY BILL. This is any proposal put before Parliament which involves the expenditure of public money. The rules and procedure for the passage of such measures into law differ from those of ordinary bills thus: (1) They must be introduced by a minister of the crown; (2) They can only originate in the House of Commons; (3) By the Parliament Act the House of Lords was deprived of the right of rejecting money bills.

MONEYLENDER. One who lends money, but especially one who does so for a livelihood. In the United Kingdom, as in other countries, special legislation has been found necessary for the protection of the public against moneylenders. By the Moneylenders Act of 1900 a moneylender is defined as a person whose business is that of lending money, or "who advertises or announces himself or holds himself out in any way as carrying on that business." Pawnbrokers, bankers, insurance companies, friendly societies, building societies, loan societies, and persons or corporations who lend money merely incidentally for business purposes are expressly excepted.

A moneylender must be registered at Somerset House, London, or the offices of the controller of stamps in Edinburgh, for Scotland. If a moneylender lends money without being registered, or if he carries on his business from an unregistered address, he cannot sue for the debt. He must take out an annual licence at the cost of £15.

An Act of 1927 placed restrictions upon the advertisements sent out by moneylenders.

MONEYWORT or CREEPING JENNY (*Lysimachia nummularia*). Perennial creeping herb of the order Primulaceae, native of Europe. Its prostrate stems creep to a length of about 2 ft., and bear roundish heart-shaped leaves in pairs, and cup-shaped, solitary yellow flowers. A species often confused with it is the yellow pimpernel, with shorter stems, yellow-green larger leaves, and smaller flowers.

MONGOL. Name denoting a racial stock

in Mongolia, with offshoots in Manchuria and Chinese Turkistan. Estimated (1923) at 1,800,000, they form, with the Turkic and Tungus stocks, the round-headed Altaian branch of the straight-haired yellow race. The coarse, black hair is scanty except on the scalp. The characteristic Mongolian fold of skin over the inner angle of the eyelids, and the lifted outer angle, produce the well-known slant-eyed effect.

In various forms—Mongoloid, Mongoloid—the term also designates the whole yellow race, one of the three primary divisions of mankind.

MONGOLIA. Outlying region of N. China, surrounding the desert of Gobi. It forms an intermediate region between the high plateau of Tibet and the Arctic lowland of Siberia. In winter the cold is intense; in summer the slight rains produce pasture and fodder shrubs for the sheep, goats, horses, and camels of the nomadic inhabitants, Mongols and Kalmuks. The Irtysh and Selenga are the chief rivers. The principal centres include Urga (Ulan Bator Hoto), Uliassutai, and Kobdo. The chief exports are skins, hides, furs, horns, and wool. Gold, copper, silver, iron, and tin occur.

Inner Mongolia, between the Gobi, China proper, and Manchuria, is still part of China. Outer Mongolia became a republic in 1924. Since 1923 the Mongol-Buriat Republic has been an autonomous republic of the Soviet Union. In 1929 another independent republic was declared in the district of Barga, with its capital at Hailar. Its area is about 1,360,000 sq. m. Pop. between 3,000,000 and 5,000,000.

Mongoose. Grey mongoose of India, a species that makes war upon snakes.
W. S. Burridge, F.Z.S.

MONGOOSE (*Herpestes griseus*). Small carnivorous mammal of the family Viverridae, which includes the civet-cats, and is restricted to the Old World. More closely allied to the iehneumon, the Indian mongoose is a smaller animal with greyish fur and long, bushy tail. It displays great prowess in destroying snakes. See Civet.

MONICA (332-387). Saint and mother of S. Augustine of Hippo. She was married at an early age to Patricius, who became converted through her good example. S. Augustine (q.v.) attributed his conversion to her prayers.

MONIFIETH. Burgh of Angus (Forfarshire), Scotland. It stands on the N. side of the Firth of Tay, 6 m. from Dundee, on the L.N.E.R. The industries include jute mills and machinery works. Pop. 3,225.

MONITOR (*Varanus*). Genus of large lizards of the family Varanidae. Including about 30 species, they are found in Africa, Southern Asia, Australasia, and Oceania. Distinguished from other lizards by their long forked tongue, they are long in the body, have no dorsal crest, are thickly covered with small scales, and some attain a length of over 6 ft. See Lizard.

Monitor. Specimen of Desert Monitor, *Varanus griseus*

MONITOR. Armoured vessel of slow speed, light draught, and low freeboard, designed to operate in shallow waters. Her sides have great, anti-curving hulges upon them for the purpose of resisting torpedo attack. Monitors carry only one or two large guns. The first was built by John Ericsson and used in the American Civil War. In the Great War monitors were employed on the Belgian coast in 1914 and 1918. As the war proceeded more powerful monitors were built, until vessels of this kind were capable of mounting an 18-in. gun. See illus. p. 569.

Monitor employed by the British Navy. H.M.S. General Wolfe, carrying an 18-in. gun
Abrahams, Devonport

Monk, GEORGE. Name of the British soldier who was created duke of Albemarle (q.v.).

MONKEY. Popular name for all mammals of the order Primates, with the exception of man and the anthropoid apes. Monkeys generally are distinguished by their smaller size and the shape of the molar teeth, while individual groups have tails, naked callosities on the buttocks and cheek pouches. It is usual to divide the monkeys into two great families, the Cercopitheciidae of the Old World and the Cebidae of the New. In all the American species the nostrils are more widely separated and more laterally situated than in the Old World monkeys; the former have four more teeth, and none of them have the cheek pouches and the callosities on the buttocks that many of the latter possess. Many of them have prehensile tails, which is not the case with any Old World species.

Monkeys occur throughout Africa, Asia, and the hotter parts of the American continent. In Europe they still linger on the Rock of Gibraltar, but were formerly much more widely distributed. Generally arboreal in habit, they are usually found in small companies under the leadership of old males. With the exception of a few of the larger species, monkeys are timid and inoffensive in disposition. As pets, monkeys have long been popular on account of their amusing antics; See Animal; Ape; Baboon; Capuchin; Colobus; Douroucouli; Lemur; Primates.

Monkey Bread. Name given to the fruit of the baobab (q.v.).

MONKEY FLOWER (*Mimulus langedorfi*). Perennial riverside herb of the order Scrophulariaceae. Native of N. America, it has oval-oblong, coarsely-toothed leaves, and large yellow tubulate flowers. Some varieties are richly spotted, or blotched with crimson, maroon, or purple. *M. moschatus*, a much smaller, more delicate plant, is the familiar musk of window gardens.

Monkey Nut. Variant name of the annual herb, ground nut (q.v.).

MONKEY POT (*Lecythis ollaria*). Large tree of the order Myrtaceae, native of tropical America. It has alternate, leathery leaves, and large six-petaled flowers. The fruit is a hard, woody capsule with a distinct lid, and of sufficient size to be used as a water vessel by the natives. When the large, bitter, hard-shelled seeds are ripe the lid falls off to allow

their escape. The bark consists of many thin layers of a papery material, which the Indians separate and use for cigarette wrappers.

Monkey Puzzle Tree. Popular name for the Chile pine. See Chile Pine.

MONKLAND CANAL. Waterway of Scotland. It runs from Port Dundas on the Clyde in Glasgow to the N. Calder river at the Calderbank, passing through Coatbridge. Part of the Forth and Clyde navigation, and 13 m. long, it was cut to carry the coal of the Lanarkshire coalfield. It belongs to the L.M.S. Rly. The name is that of two parishes in Lanarkshire, New and Old, in the coal-mining area. In the Middle Ages the land here belonged to the monks of Newbattle.

MONKSHOOD (*Aconitum napellus*). Perennial herb of the order Ranunculaceae. A native of Europe and Asia, it has a black, spindle-shaped root-stock, and the alternate leaves are cut into sharply-toothed lobes. The large, hood-shaped, dark blue flowers are clustered closely round the upper part of the stem. The whole plant is poisonous, and from its root is obtained the drug aconitine. See Aconite.

MONKWEAR-MOUTH. District of Sunderland. It stands on the N. side of the Wear, on the L.N.E.R. A bridge over the river connects it with Sunderland. In the 7th century Benedict Biscop founded a Benedictine monastery here. The church of S. Peter stands on the site, and comprises remains of the monastic church. See Sunderland.

MONMOUTH. City, borough, market town, and the county town of Monmouthshire. It stands at the junction of the Monnow and Wye, 19 m. from Hereford, with stations on the G.W. Rly. Troy, on the other side of the Monnow, is part of the borough. The grammar school was founded in the 17th century. There are statues of Henry V and of the Hon. C. S. Rolls. Little remains of the castle, in which Henry V was born. Monnow bridge is still protected by a gateway. Monmouth has been the seat of a bishop since 1921. Near is a racecourse. Market days, Mon. and Fri. Pop. 5,110.

Monkey Pot, leaves and fruit. Inset, seed, which has a hard shell

The common Monkshood (*Aconite*)

MONMOUTH. British armoured cruiser. She was launched in Nov., 1901, and first commissioned Dec., 1903. Her length was 449 ft.; beam, 66 ft.; displacement, 9,800 tons. H.p. and speed were respectively 22,000 and 22 knots, the armament consisting of fourteen 6-in. guns. Attached at the outbreak of the Great War to the squadron under Sir C. Cradock, she was lost with all hands in the fight with the German force off Coronel (q.v.), Nov. 1, 1914.

MONMOUTH, JAMES SCOTT, DUKE OF (1649-85). Scottish prince. The son of Charles II by Lucy Walters, he was born at Rotterdam, April 9 1649, during his father's exile. In 1663 he was made duke of Monmouth, and married Anne Scott, countess of Buccleuch. When the question of the succession to the throne became urgent, Monmouth was taken up by Shaftesbury and those who desired to exclude James, duke of York. In 1683 he took refuge in Holland, where he was when Charles died and James became king. He then landed at Lyme Regis

James Scott, Duke of Monmouth

Monmouthshire. Map of the English county on the border of South Wales

and was greeted as king in the western counties. He attacked the royal troops at Sedgemoor without success, July 6, 1685, took flight, was captured at Ringwood, and beheaded in London, July 15, 1685. Monmouth left two sons: James, earl of Dalkeith, the ancestor of the dukes of Buccleuch; and Henry, earl of Deloraine.

MONMOUTHSHIRE. County of England, although for many purposes regarded as part of Wales. In the W. it is bordered by Wales and has a coastline on the Severn estuary of 21 m. The surface is generally hilly. The chief rivers are the Wye, Usk, Ebbw, Rhyrnyne, and Monnow. Monmouth is the county town, others including Newport, Chepstow, Abergavenny, Tredegar, and Ebbw Vale. The chief industry is coal mining, the S. Wales coalfield stretching into the county. Wheat, rye, and other crops are grown, but

much land is given up to sheep. The county contains some magnificent scenery. It is served by the G.W. and L.M.S. Rlys. and by canals. Its area is 546 sq. m. Pop. 450,794.

The Monmouthshire Regiment was established when the territorial force was organized in 1907. It consists of territorial or volunteer battalions only and in 1914 there were three of these. All were mobilised in August and went to France early in 1915.

MONOLITH (Gr. monos, single; lithos, stone). Stone block, usually monumental and of large dimensions. It may be an unhewn menhir; the capstone or support of a megalithic monument; a heven obelisk; a sarcophagus; a sculptured temple, or a statue. See illus. p. 419.

MONOPLANE. In aeronautics, name given to a type of aeroplane which has only one set of main supporting surfaces. Many of the earliest aeroplanes were monoplanes, e.g. that of Louis Blériot, which flew the English Channel, July 25, 1909. Some of the largest modern aeroplanes are of monoplane type, and the seaplane on which the 1929 Schneider trophy was won for Great Britain was a monoplane. See Aeroplane, and plate facing p. 28.

MONORAIL. System of transport in which a single rail is used to support the weight of a carriage or truck. Such systems have been adopted for the transport of ore from mines, the trucks being balanced in pairs, one on each side of the rail, which is attached to A-shaped supports. There is a passenger monorail line from Barmen to Elberfeld, the carriages being suspended from the rail. In the monorail system invented by Louis Brennan in about 1907 the car is supported on a single rail laid on the ground. It is kept in equilibrium by a gyroscope with flywheels moving at a high speed. See Gyroscope.

MONOTHEISM (Gr. monos, single; theos, god). System of religious thought and practice which admits only one God. It is thus opposed to polytheism, and to henotheism, which worships only one God, but admits that others may exist.

MONOTYPE. Machine used by printers for setting up words from MS. into single letters of movable type. Invented about 1837 by Talbot Lanston, an American lawyer, in 1901 it was commercially used in England, and The Times adopted it in 1909. Its product is akin to that of the hand compositor, each letter cast in a line being a distinct and separate unit. Two distinct operations are involved and two distinct machines are employed: (1) a keyboard, like a typewriter, for perforating a roll of paper; and (2) a machine casting the single letters of type and automatically assembling them into words. The depression of a key by the operator perforates a hole in a reel of paper, each hole representing a space or a letter. See Compositor; Linotype; Printing.

MONRO, SIR CHARLES CARMICHAEL (1860-1929). British soldier. Born June 15, 1860, he entered the West Surrey Regiment in 1879. He was in charge of the London division of Territorials, 1912-14, and when the Great War began he took the 2nd Division to the front. In 1915 he was given command of the 1st Corps, and when the Third Army was formed was placed at its head. Soon afterwards he succeeded Sir Ian Hamilton as commander-in-chief in Gallipoli, and superintended the evacuation. He was commander-in-chief in India 1916-20. In 1915 Monro was knighted. He was governor of Gibraltar 1923-28, and died Dec. 7, 1929.

MONROE, JAMES (1758-1831). American statesman. Born in Virginia, April 28, 1758, he fought in the War of Independence. In 1782 he entered the legislature of Virginia. In 1790 he entered the Senate, where he joined

the party hostile to Washington. In 1794 Monroe went to France as minister, but was recalled two years later. From 1799 to 1802 he was governor of Virginia, after which he went to France and Spain

James Monroe,
American statesman

to endeavour to bring about the purchase of Louisiana and Florida. From 1803-7 he was minister to Great Britain. In 1811 Monroe became again governor of Virginia, and in 1812 secretary of state under Madison, being also secretary of war during the latter part of the war with

Britain. In 1816 he was elected president, and he filled the office for eight years. He died in New York, July 4, 1831.

THE MONROE DOCTRINE. This was a principle of international policy held by the U.S.A., the root idea of which is America for the Americans. The two essential points are the following: (1) "The American Continents . . . are henceforth not to be considered as subjects for future colonisation by any European power." (2) "We should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety." The doctrine, which does not seek to prevent European powers from enforcing just claims under international law, was reaffirmed by Polk in 1845 and 1848.

MONROVIA. Capital of the republic of Liberia, W. Africa. It is a port of entry with a trade in palm nuts and dye woods. Pop. (with Krutown) 10,000.

MONS (Flemish, Bergen). Town of Belgium. It stands on the river Trouille, 38 m. by rly. S.W. of Brussels, on a hill in the coal district of the Borinage. A rly. and military centre, it has various industries, e.g. textiles, lace, oils, soap, and sugar.

The Gothic church of S. Waudru was begun about the middle of the 15th century. The town hall dates from 1458. Mons has stood many sieges. It was in German occupation from Aug. 23, 1914, until its recapture by Canadian troops, Nov. 11, 1918. Pop. 27,969.

THE BATTLE OF MONS. On Aug. 22, 1914, the British expeditionary force of 65,000 men and 250 guns, under Sir J. French, reached a front which ran from a point E. of Mons to Condé. They entrenched and remained on the defensive until French progress in other directions gave the signal for a general advance. At daybreak of Aug. 23 German artillery began to shell the exposed loop on the canal N.E. of Mons; at 8 a.m. German infantry advanced in this quarter, and developed a turning movement against the British right.

Sir J. French, learning that at least four German corps (160,000 men) were attacking him or turning him, and that the French 5th army was in retreat, ordered an immediate retirement of the British to his second position, which had been prepared a little to the

S., and this was carried out at dawn. The British loss may be provisionally estimated at 4,000 or 5,000; the German at double that figure.

The 1914 Star, given for services in France and Belgium between Aug. 5 and Nov. 22-23, 1914, is popularly known as the Mons Star See Medal.

MONSERRAT. Mountain and monastery of Spain. It is 21 m. from Barcelona, and the highest point of the mountain mass is over 4,000 feet high. On one peak a monastery was built in the 8th century. Its chapel contained an image of the virgin which was said to work miracles. This attracted thousands of pilgrims, and the monastery became one of the most famous and wealthy in the country.

MONSOON (Ital. monzone; Arah. mau-sim, season). Name of a rain-bearing wind which blows over the Indian Ocean from May to Sept. Most of India receives from 60 to 90 p.c. of the total annual rainfall during the period of the monsoon; the fall at a given place varies from year to year, and the comparative failure of the periodical downpour means famine and plague. See Wind.

MONSTRANCE (Lat. monstrare, to show). Sacred vessel of the R.C. Church, in which the Host is presented for adoration, carried in procession, and used in Benediction. It consists of a glass or crystal receptacle, in which the Host is placed. This is mounted in a gilded frame, and supported by a stem and foot.

MONTAGNA, BARTOLOMEO (c. 1450-1523). Italian painter. Born at Orzinuovi, near Brescia, his earliest known picture still extant is The Virgin and Child, 1487, at Bergamo. His Madonna and Child, in the National Gallery, was formerly ascribed to Bellini. Other important paintings are the San Michele altar-piece, 1499, The Presentation in the Temple, and frescoes at Vicenza. At Verona he painted the frescoes in the chapel of S. Biagio. He died Oct. 11, 1523.

MONTAGU, CHARLES EDWARD (1867-1928). British author and journalist. Born Jan. 1, 1867, in 1890 he joined the staff of The Manchester Guardian, and for 35 years helped to give that paper its distinctive character. Although over military age in 1914, he served in the Great War, first as a private and then, after having been wounded, as a press officer. In 1911 he wrote a novel, A Hind Let Loose, and published Dramatic Values. His other books include The Morning's War, 1913; Fiery Particles (short stories): Disenchantment, 1922; Rough Justice, 1926; and Right Off the Map, 1927. Montagu retired in 1925, and died May 28, 1928. Consult C. E. Montagu: A Memoir, O. Elton, 1929.

MONTAGU, ELIZABETH (1720-1800). English writer. Daughter of Matthew Robinson, she was born at York, Oct. 2, 1720. In 1742 she married Edward Montagu, son of the earl of Sandwich, and from about 1750 onwards her salons, first in Hill Street, later at Montagu House, Portman Square, were centres of social-intellectual life in London. An occasional writer, she made a spirited reply to Voltaire in her Essay on the Writings and Genius of Shakespeare, 1769. She died Aug. 25, 1800.

MONTAGU, LADY MARY WORTLEY (1689-1762). English poet and letter writer. Born at Thoresby, Nottinghamshire, in 1712 she

Monstrance,
Gothic pattern

Mons. The Hôtel de Ville,
a building which dates from 1458

married Edward Wortley Montagu (d. 1761), whom she accompanied to Constantinople in 1716. On their return

Lady Mary Wortley Montagu, English letter-writer

to England they were persuaded by Pope to settle at Twickenham, but the friendship between Lady Mary and the poet gradually cooled, and ultimately ended in a quarrel. She died Aug. 21, 1762. Her gift for satirical verse was shown in her *Town Eclogues*, 1716, but it is as a letter writer that she excels. Her *Letters* were first published in 1777.

MONTAGU OF BEAULIEU, JOHN WALTER EDWARD DOUGLAS-SCOTT-MONTAGU, 2ND BARON (1866-1929). Born June 10, 1866, he was Conservative M.P. for the New Forest div. of Hants, 1892-1905, when he succeeded to the peerage. A great sportsman and traveller, he represented *The Times* during the Matabele War. He became known as an expert on motoring, aviation, and all transport questions. From 1915-19 he was adviser on mechanical transport to the Indian government. He died March 30, 1929.

MONTAIGNE, MICHEL D'ÉYQUEM, SIEUR DE (1533-92). French essayist. Born Feb. 28, 1533, at the Château de Montaigne, near Bordeaux, in Périgord, he went to the college of Guienne, and studied law, probably at Toulouse. He became a magistrate and attended the court of Francis II. Shortly after his marriage Montaigne succeeded to the family estates. A sufferer from stone, he sought recovery by a visit to the baths of Lucca, and in 1580-81 travelled to Italy by way of Switzerland and Germany. Recalled from travel by his election as mayor of Bordeaux, he was re-elected and retained office until 1585. He died Sept. 13, 1592.

Michel de Montaigne, French essayist. Contemporary portrait, French school, Musée Condé

Montaigne's first literary work was a translation of the *Theologia Naturalis* of Raimond Sebond, 1568; it served as the text of one of his essays, the first two books of which appeared in 1580; a second edition came out in 1682, a third in 1587, and a fourth, with book three, in 1588. Montaigne's *Journal de Voyage*, written in part by a secretary and in part by himself, was discovered in MS. at the Château de Montaigne in 1769-70 and first printed in 1774.

MONTALEMBERT, CHARLES FORBES DE TRYON, COMTE DE (1810-70). French politician and man of letters. Born in London, son of an émigré, he returned to France on the Restoration, and became known as the founder, with Lamennais, of the journal *L'Avenir*, 1830, and a champion of the cause of religious liberty. He died March 13, 1870. His writings include *Vie de S. Elisabeth de Hongrie*, 1836 (Eng. trans. 1904); *Des Intérêts Catholiques au XIX^e Siècle*, 1852; *Les Moines d'Occident depuis S. Benoît jusqu'à S. Bernard*, Eng. trans. 1896.

MONTANA. State of the U.S.A. The W. portion is traversed by the Rocky Mts., whence the surface descends E. to a rolling plain, interspersed with valleys. The headwaters of the Missouri and Columbia rivers rise in Montana, and the Yellowstone and other Missouri affluents help to drain the state. The mineral resources include copper, coal, lead, silver, and petroleum. The state university is at Missoula. There are some 6,000 m. of rlys. Helena is the capital. Area, 147,182 sq. mi.; pop. 540,300.

MONTARGIS. Town of France. It stands on the river Loing, here met by the Vernisson, 47 m. by rly. E. of Orléans. It is a rly. junction and the meeting-place of the canals of the Loing, Orléans, and Briare. In the 14th century Aubrey de Montdidier was murdered in the forest near this town by Robert Macaire. His dog hunted down the murderer, and Charles V ordered Macaire to fight the animal, which dragged him down and made him confess. Pop. 12,564.

MONT BLANC (Fr. white mountain). Loftiest peak of the Alps, on the Franco-Italian frontier. The summit is 15,781 ft. high. The main mass runs N.E. between Little and Great St. Bernard Mts., and the principal peaks are the Dôme du Goûter (14,210 ft.), Aiguille du Midi (12,608 ft.), Grandes Jorasses (13,797 ft.), Aiguille Verte (13,540 ft.), Aiguille du Dru (12,320 ft.), and Aiguille d'Argentière (12,820 ft.). Mont Blanc was first ascended in 1786 by Dr. Paccard and his guide, Balmat. It is now easily accessible from Chamonix (q.v.). See Alps; Crevasse; Glacier; Mountaineering.

MONTCALEM, LOUIS JOSEPH, MARQUIS DE (1712-59). French soldier. Born near Nîmes, Feb. 29, 1712, he joined the army when quite young, and was appointed in 1756 to the command of the French forces in Canada. At first he was successful, but then the tide turned. The French lost Louisbourg and Fort Duquesne, and Montcalm, forced to retire to Quebec, prepared to defend it against the British under Gen. Wolfe, who led an army of 5,000 men up to the Plains of Abraham, where on Sept. 13, 1759, the French were defeated and Montcalm was mortally wounded.

Marquis de Montcalm, French soldier

MONTÉ CARLO. Town of the principality of Monaco (q.v.). It lies on the N. shore of the Bay of Monaco, adjoining the town of Monaco, and 150 m. by rly. E.N.E. of Marseilles. One of the most frequented resorts of the Riviera, it has an excellent climate, and is noted for the gaming rooms in its large casino, built in 1878. The latter is a palatial structure, adorned with beautiful statuary and paintings, and contains a theatre, reading room, etc. A rly. runs to La Turbie, a mt. village 2 m. to the N.W. Pop. 11,055.

Monte Carlo. The casino, containing the famous gaming rooms

MONTÉ CASSINO. Monastery near Cassino, Italy. Situated on a hill, 1,703 ft. high, about 45 m. N.W. of Naples, it was founded by S. Benedict in 529, on the site of a temple of Apollo, and was the first monastery of the Benedictine order. Destroyed and rebuilt several times, the existing buildings date from 1637-1727. Since 1886 a national monument, it is an educational centre of importance. The fine library contains more than 10,000 volumes and many rare MSS.

MONTÉ CRISTO. Island of the Tuscan Archipelago, N.W. Italy. The ancient Oglasa, it lies 26 m. S. of Elba, has an area of 6 sq. m. and an alt. of 2,120 ft. It contains the ruins of a monastery, destroyed by Corsairs in the 16th century. It is known from the title of the famous romance by Alexandre Dumas the elder (assisted by A. Maquet), 1845.

MONTENEGRO (Serb. Crna Gora, black mountain). Former kingdom of Central Europe, now part of Yugoslavia. It lies between Herzegovina and Albania, and drops steeply to the narrow Dalmatian coast strip; inland it descends almost equally abruptly

to the plains of Serbia. The towns include Cetinje, the former capital, and Podgoritza (Podgorica). The area is 3,733 sq. m. Pop. 199,857.

After the great Serbian defeat at Kossovo (Kosovo Polje), 1389, the Montenegrins established themselves within their mountain fastnesses under a Serbian dynasty. In 1851 Danilo I became gospodar or prince, a title recognized by France and Russia at the Congress of Paris in 1856. By the Berlin Treaty, 1878, the independence of the principality was formally recognized. A constitution was adopted in 1905 and the first Skupshtina, or National Assembly, met in 1906. In 1910 Nicholas I assumed the title of king. A national assembly was elected and met at Podgoritza on Nov. 24, 1918. Within two days Nicholas was deposed, and it was decided to unite with Yugoslavia. See Yugoslavia.

MONTÉREY OR MONTERREY. City of Mexico. Situated in a range of the Sierra Madre, amid orchards and gardens, it is 1,625 ft. above sea level, 165 m. W. of Matamoros. There are foundries, steel works, saw and flour mills, large smelters, and ice factories. Agriculture and silver mining are engaged in. Pop. 88,458.

The city of Monterey, in California, U.S.A., is a seaside resort on Monterey Bay, 125 m. from San Francisco. The town owes its origin to a mission founded by the Franciscans in 1770. It was for some years the capital of the Mexican prov. of California. As "the old Pacific capital," Monterey is described by R. L. Stevenson in *Across the Plains*. In 1853 it was made a city. Pop. 5,479.

MONTÉ ROSA. Mountain mass of the Pennine Alps on the Italo-Swiss border. It lies between the canton of Valais and Piedmont, 50 m. E. of Mont Blanc. Alt. 15,217 ft. It was first ascended in 1855 by G. and C. Smyth, and their companions. See Alps.

MONTESPAN, FRANÇOISE ATHÉNAÏS DE ROCHECHOUART, MARQUISE DE (1641-1707). French courtier, mistress of Louis XIV. Born at Tonnay-Charente, near Rochefort, she was

the daughter of the duke of Mortemart. In 1663 she married Louis, marquis of Montespan. A woman of great beauty, in 1667 she became the king's mistress, the children of the union being made legitimate by the king in 1673, and a separation from her husband being pronounced in 1674. After 1675 the liaison weakened, though the marquise, displaced now by Madame de Maintenon, remained at court until 1691, when she left Versailles for a religious life. She died May 27, 1707.

Marquise de Montespan, French court lady

MONTESQUIEU, CHARLES LOUIS DE SECONDAT, BARON DE (1689-1755). French writer. Born in Gascony, Jan. 18, 1689. Montesquieu was trained for the law, and succeeded his uncle as the holder of a high legal office in the parlement of Bordeaux in 1716. There he remained until 1726, when he resigned his position and went to live in Paris,

being admitted to the Academy. After a prolonged tour in Europe, he settled down to literary work at his château of La Brède, near Bordeaux, ordering his estates and outer life on the model of an English landowner. He died there Feb. 10, 1755.

Baron de Montesquieu
French writer

des Lois, first published at Geneva in 1749

MONTESSORI, MARIA (b. 1870) Italian educationist. Studying at the university of Rome, she took a medical degree in 1894, and acted as assistant doctor to a psychiatric clinic for mentally deficient children. From this and her experience, 1898-1900, as head of a state institute for the education of such children she learned much that went to form her own system of education. She published several works on her methods, and lectured in England in 1920. In 1922 she was appointed an inspector of schools in Italy.

Maria Montessori,
Italian educationist

MONTESSORI METHOD. Method of teaching young children. It was developed by Madame Montessori in Rome, and since widely applied by advanced educationists. She evolved methods which had astounding results with the mentally deficient, and were even more successful with normal infants. The method demands careful observation of the child's physical condition by monthly measurements; special furniture adapted to give the child the completest possible freedom of movement, and to enable him to be independent; discipline based on full liberty for the child; and finally the abolition of prizes and punishments. In England there is a Montessori Fellowship at 4, Graham Road, London, E.S.

MONTEVERDE, CLAUDIO (1567-1643) Italian composer. Born at Cremona, he became as a boy a violinist in the service of the duke of Mantua. In 1602 he was made master of the chapel there. He was music master at S. Mark's, Venice, from 1613 until his death, Nov. 29, 1643. His operas, Arianna and Orfeo, mark important advances in the development of opera, and the harmonic style which he invented he outlined in a book, and defended in controversies with rival musicians.

MONTEVIDEO. City of Uruguay, the capital of the republic. It is 68 m. E. of Buenos Aires. It originally occupied a small peninsula

Montevideo, Uruguay. Facade of the cathedral, completed in 1905

between the Río de la Plata and a bay, of which it formed the S. extremity. The city has spread some miles inland in an easterly direction, and now lines the bay on its three sides.

Montevideo is the principal seaport of the country

and the terminus of several railway lines. One of the best built cities in the western hemisphere, it is the seat of an archbishopric, and has a cathedral and a university. The harbour has been deepened and otherwise improved. Beef, hides, and other animal products are exported, and there are meat packing plants. Pop. 458,784. See Uruguay.

MONTEZ, LOLA (1818-61). Stage name of the Irish dancer, Marie Dolores Eliza Rosanna Gilhert. Born at Limerick, she made her début as a "Spanish dancer" in London in 1843 and subsequently toured Europe and Russia. In 1847 she became the mistress of Louis I of Bavaria, was created by him countess of Landsfeld, and began to meddle in politics. Banished by her political opponents, she returned to England and later appeared on the American stage. She was married three times. Her later years were devoted to charitable work in New York, where she died Jan. 17, 1861.

Lola Montez,
Irish dancer

MONTEZUMA. Name of two Aztec rulers of Mexico. Montezuma I (c. 1390-c. 1469), began to reign in 1437. He extended his dominions to the Pacific and the Gulf of Mexico, crushed the Tlascalans, annexed Chaleo, and enlarged Tenochtitlan, his capital, on the site of which Mexico City is built.

Montezuma II (1469-1520) was the last Aztec ruler of Mexico. Distinguished as warrior and legislator, he extended his conquests to Honduras and Nicaragua, but his arrogance and despotism alienated his subjects and he was killed while a prisoner in Spanish hands.

MONTFERRAT. Former duchy of Italy. It was situated between the republic of Genoa, the river Po, and the Maritime Alps. Ruled by its own margraves, the duchy consisted of upper and lower Montferrat, Casale being the capital. The reigning family, who claimed the throne of Piedmont, ended with John I, whose nephew, son of the Empress Irene of Constantinople, succeeded to the estates, and was the first of the Montferrat-Palaologus house. On the extinction of this family, in 1533, the duchy passed through the Gonzagas of Mantua to Savoy.

MONTFORT, SIMON DE (c. 1208-65).

English statesman. A younger son of Simon de Montfort, count of Toulouse and earl of Leicester, he inherited the English earldom in 1232, and six years later married a younger sister of Henry III. Montfort took a leading position among the barons who were opposed to the king, and in 1259 they forced Henry to accept the provisions of Oxford, which placed the government of the country in the hands of a baronial committee, in each of which Montfort was predominant. In 1261 Henry renounced the provisions. The dispute was referred to the arbitration of Louis IX of France,

who gave his award, the Mise of Amiens (q.v.), against the barons, Jan. 23, 1264. Montfort took up arms, routed and captured the king at Lewes, May 13, and for a year was in effect dictator. In Jan., 1265, he summoned what is often called the first parliament. Now, however, those barons who were jealous of Montfort's power made common cause with the king, and Montfort was defeated and killed at Evesham, Aug. 4, 1265.

MONTGOLFIER, JOSEPH MICHEL (1740-1810). French inventor. Born at Vidalon-lez Annonay, he became interested in aeronautics, and with his brother, Jacques Etienne (1745-99), studied the possibilities of making balloons. Their crude experiments, 1782-83, led to the invention of the modern hydrogen balloon. They were honoured by Louis XVI, and Joseph was appointed to various offices by Napoleon. They wrote on aeronautics. See Aeronautics; Balloon.

Montgolfier Brothers.
French inventors.
From a plaque

MONTGOMERY. Borough, market town and county town of Montgomeryshire, Wales. It stands near the Severn, 7 m. from Welsh pool on the G.W. Rly. The name is that of a Norman family, one of whom built a castle here about 1100. There are ruins of the castle, which was destroyed during the Civil War. The church is mainly of the 14th century. Market day, Thurs. Pop. 954.

MONTGOMERYSHIRE. Inland county of N. Wales. Its area is 797 sq. m. Almost entirely surrounded by mountains, it is itself a hilly region. The Plynlimon range is in the S.W., and elsewhere on the borders are the Bervryn, Breidden, and Kerry Hills. The Severn and Wye rise in the county. Oats are grown, sheep and ponies are reared. The chief town is Montgomery, but Welshpool, Llanidloes, and Llanfyllin are larger. The G.W. Rly. and the Montgomeryshire canal serve the county. Pop. 51,263.

MONTMARTRE. Arrondissement of Paris. It lies to the N. on a hill rising to the summit crowned by the basilica of the Sacré Coeur, begun in 1875. The once famous Abbaye des Dames de Montmartre was founded in 1133. It was in Montmartre that the insurrection of the Commune broke out,

Montgomeryshire. Map of the inland and pastoral county of North Wales

Feb., 1871. The district is thickly populated, has many steep and narrow streets, and is noted for its night life. See Paris.

MONTMORENCY. River of Quebec, Canada. A tributary of the St. Lawrence, it rises in the province and, flowing almost due S. for about 80 m., falls into the larger river near Quebec. It is noted for the falls near the mouth, which are used for supplying Quebec with electric power. The river is associated with Wolfe's attempt on Quebec in 1759.

MONTPELLIER. Town of France. It is 31 m. by rly. S.W. of Nîmes and is the junction of several rly. lines. The university is noted for its faculty of medicine. The cathedral is a 14th century foundation. The Musée Fabre contains a collection of paintings of the French and Dutch schools. There are distilleries, printing works, and other industries. Pop. 82,819.

MONTPEISIER, ANNE MARIE LOUISE D'ORLÉANS, DUCHESSE DE (1627-93). Born in Paris, May 29, 1627, she was a daughter of Gaston d'Orléans, the brother of Louis XIII, and hoped to become queen of France by marrying her cousin Louis XIV. During the Fronde La Grande Mademoiselle sided with the princes, and took a spirited personal part in the capture of Orléans. In Paris she took command at the Bastille, and in the Faubourg St. Antoine fighting, July 2, 1652, fired on the royal troops. After the collapse she retired to her estates of St. Fargeau until 1657. In 1681 she married Antonin, duke of Lauzun (1632-1723). She died in Paris, leaving Memoirs, not published until 1729, which cover the period 1630-88.

MONTREAL. Largest city and commercial capital of Canada, in the prov. of Quebec. It stands on an island in the St. Lawrence, 180 m. from Quebec, 420 m. from New York, and 620 m. from the sea. Pop. 989,835.

The city is built on a series of terraces on the slopes of Mount Royal. To the E. is the French quarter, the English-speaking inhabitants occupying the W. streets and the adjoining municipality of Westmount. Among ecclesiastical buildings are the Roman Catholic cathedral of St. James; Christ Church, the Anglican cathedral, and the quaint Bonsecours church with its aerial chapel, S. Sulpice. The city is the seat of McGill University and of the University of Montreal (formerly Laval University). Magnificent business premises, among them the Bank of Montreal, abound. The Canadian evening newspaper, The Montreal Star, has been closely identified with all patriotic movements.

Montreal is a great railway centre, and here the Canadian Pacific and the National systems have their headquarters. Shipping is Montreal's principal industry, and the harbour has seven miles of deep water frontage. There are flour mills, the shops of the C.P.R. and various manufactures. It is an important banking centre. Its industries obtain ample electrical power from the Shawinigan Falls and the Lachine Rapids. In 1928 it was decided to build in the east of the city an air port. An air port already existed at St. Hubert. In 1930 a new bridge spanning the St. Lawrence from St. Helen's Island to the S. shore was opened.

MONTREUIL. Town of France. It is on the river Canche, 8 m. from its mouth

and 20 m. S.S.E. of Boulogne. Its ancient ramparts still survive. The church of S. Sauve dates from the 12th century. Once on the sea, as indicated by its official name Montreuil-sur-Mer, it was long a posting-stage on the Calais-Paris highway, being referred to in Sterne's *A Sentimental Journey*. From March, 1916, to April, 1919, it was the British G.H.Q. in the Great War, Earl Haig having his headquarters at the Château de Beaurépaires, 3½ m. to the S.E. Pop. 2,769.

MONTREUX. Series of lakeside villages of Switzerland, in the canton of Vaud. On the N.E. shore of Lake Geneva, about 50 m. N.E. of Geneva, they extend from Clarens to Veytaux, including also Vernex, Les Planches, Glion, and Territet. The central point is the town of Montreux-Vernex. Montreux is a tourist resort. Pop. 18,675.

MONTROSE. Burgh and seaport of Angus (Forfarshire), Scotland. It stands at the mouth of the South Esk, the river here forming an estuary and an enclosed stretch of water known as Montrose basin. It is served by the L.M.S. and L.N.E. Rlys., being 31 m. from Dundee and 34 m. from Aberdeen. Industries include fishing, shipping, flax spinning and the making of linen, rope, etc., also shipbuilding. There are fine golf courses. Pop. 10,979.

MONTROSE, JAMES GRAHAM, 1ST MARQUESS OF (1612-50). Scottish soldier.

He succeeded his father as 5th earl of Montrose, Nov. 14, 1626, and in 1637 took an active part in drawing up the National Covenant, but soon found himself in antagonism to Argyll and other leaders, and became in Scotland the foremost champion of the crown. In 1644, at the head of a small force, Montrose conducted in the Highlands a brilliant series of campaigns against the Covenanters, being

1st Marquess of Montrose, Scottish soldier
After Dobson

victorious at Tippermuir, Sept. 1, 1644, Inverlochy, Feb. 2, 1645, and Kilsyth, Aug. 15. He was, however, defeated at Philiphaugh, Sept. 13. Montrose escaped abroad; but in 1649, after the execution of Charles I, he resolved on one more effort on behalf of Charles II. In April, 1650, he landed in Caithness, but his small force was dispersed at Invercharron, April 27, and he himself was captured and hanged in the High Street, Edinburgh, May 21, 1650.

The title of earl of Montrose which James Graham inherited dates from 1505. He was made a marquess in 1644, and in 1707 his descendant James, the 4th marquess, was made a duke. The duke's seat is Buchanan Castle, near Glasgow, and his eldest son is called the marquess of Graham.

MONT ST. MICHEL. Village of France, in the dept of Manche. It is built on a steep granite rock about 160 ft. high, in the Bay of St. Michel,

Mont St. Michel. Benedictine monastery crowning the granite rock

about ½ m. from the mainland, to which a raised causeway runs. On top of the rock stands the old Benedictine Abbey, founded by S. Aubert of Avranches in 708, which became a favourite place of pilgrimage and a notable centre

of learning. Monks from the abbey of S. Maur replaced the Benedictines in 1022. The buildings became state property at the Revolution. It is under the care of the Commission des Monuments Historiques. The church, begun in the 11th century, has a 15th century Gothic choir.

MONTSERRAT. Estate at Cintra, Portugal. At one time it belonged to the family of Castro, who had a palace here. Later Beckford and Byron lived here. It was bought in 1856 by Sir Francis Cook, who restored the palace in the Moorish style and laid out the gardens, which became among the most beautiful in Europe. Cook was made Viscount Montserrat. The palace, which contains one of the richest private museums in the world, was sold in 1928.

MONUMENT. Any considerable work of architecture or sculpture designed to commemorate an act or person important in national or local history.

In Great Britain the Ancient Monuments Protection Act, 1882, constitutes the commissioners of works guardians of a certain number of public monuments, with power to add to the number. Private owners of these monuments retain all rights, but must not destroy or deface them.

The fluted column in London known as The Monument was completed in 1677, from the design of Sir Christopher Wren, to commemorate the Great Fire of London, 1666. It stands in Fish Street Hill, a little more than 100 ft. from the site of the house in Pudding Lane where the fire is said to have originated, and is 202 ft. in height. The column contains a spiral stairway of 345 steps of black marble. See London.

Monument, London. Great Fire memorial

MOODY, DWIGHT LYMAN (1837-99). American revivalist. Born at Northfield, Mass., Feb. 5, 1837, he took charge of a Y.M.C.A., and, after 1840, in company with Ira D. Sankey (1840-1908) travelled throughout America and Great Britain, holding revival services. His later years were devoted to the founding and organizing of a training institution for lay preachers at Northfield. He published several volumes of sermons and addresses, and was associated with his colleague in the compilation of *Sacred Songs and Solos*, 1873. He died Dec. 22, 1899.

MOODY, FANNY (b. 1866). British vocalist. Born at Redruth, Cornwall, Nov. 23, 1866, she studied in London. Her début was made at Liverpool, where she sang soprano with the Carl Rosa Company in 1887. She

quickly became popular, and was for four years prima-donna at Covent Garden, in addition singing for many choral societies in Great Britain, America, and elsewhere. In 1890 she married Southcoote Mansergh, known professionally as Charles Manners, and in 1897 they founded the Moody Manners Opera Co.

Moon. Northern section showing areas, termed seas, of solid lava, and some of the volcanic craters. Photograph taken at Mount Wilson Observatory

MOON. Satellite of the earth, round which it revolves in 27.32 days in a nearly circular orbit, at an average distance of 233,800 m., the greatest and least values being 253,000 m. and 221,000 m. Its diameter is 2,160 m., and it shines by reflecting the sunlight. It rotates on its own axis in the same time as that of its revolution round the earth, so always turning the same face to the earth.

When nearly between the earth and the sun the moon's dark side is towards us, and it is usually invisible; this is called new moon; when 90° distant from the sun, we see half the sunlit hemisphere; this occurs at first and last quarter. The full moon is opposite to the sun, and appears fully illuminated. The interval between two new moons, a lunation, is 29.53 days; longer than the revolution, since the sun has advanced during the 27.32 days, and the moon requires 2 days more to overtake it. The moon plays the chief part in causing the tides, producing by its attraction a deformation in the surface of the ocean. Since the moon's meridian passage gets later by about 50 minutes each day, the tides get later by about the same amount. To the naked eye the surface of the moon shows a number of grey spots; these were called "seas" by early observers, and the name remains, though they are merely plains, covered with some dark material. The volcanic craters are numerous, the larger being fully 60 m. across. See Astronomy; Earth; Eclipse; Sun.

MOONSTONE. Semi-precious stone. It is a translucent, colourless felspar, mostly orthoclase, which is usually cut en cabochon, but also faceted. It reflects a bluish milky light, hence its name. It is also known as fish's eye, wolf's eye, and water opal. See Gem.

MOONWORT (*Botrychium lunaria*) Fern of the order Ophioglossaceae. A native of temperate and cold regions, it has a small tuberous root-stock and fleshy roots. It produces a single annual frond, which is divided, one branch bearing a double row of half-moon-shaped leaflets, the other branch having secondary branches which bear rows of leathery spore capsules. Formerly it was believed to have the magic power of loosening locks, bolts, etc.

MOORE, GEORGE (h. 1852). Irish author. The eldest son of George Henry Moore, M.P., of Moore Hall, co. Mayo, his earliest published works were volumes of verse, *The Flowers of Passion*, 1877; and *Pagan Poems*, 1881. As a novelist he began with *A Mummer's Wife*, 1885, which, like *Esther Waters*, 1894, was a work of the realistic type. Later works include *The Brook Kerith*, 1916, dealing with the life of Christ. In 1911 Moore wrote his reminiscences in the form of a trilogy. In 1921 appeared his version of *Heloise and Abelard*; in 1922 *In Single Striptness*, in 1926 *Ulrich and Soracha*, and in 1927 his play, *The Making of an Immortal*.

MOORE, SIR JOHN (1761-1809). British soldier. Born in Glasgow, Nov. 13, 1761, he entered the 51st Foot in 1776, and by 1802 his reputation as a soldier stood very high. Having been knighted, he was, in 1803, chosen to command the troops at Shorncliffe, and here he trained some of the best regiments of the service. In 1806 Moore was sent to the Mediterranean, and in 1808 he was ordered to Portugal, and was soon in command of the British troops there. Events made it necessary for him to fall back to Corunna, where his men turned and fought the French, Jan. 16, 1809. Moore was mortally wounded and died on the 17th. The circumstances of his burial are known through Rev. C. Wolfe's poem. For six years, 1784-90, Moore was a Scottish M.P.

Sir John Moore, British soldier After Lawrence

MOORE, MARY. British actress, known in private life as Lady Wyndham. Born in London, she appeared at Bradford in 1835 under the management of Charles Wyndham, with whom she remained for the rest of her career and whom she married as her second husband in 1916. She accompanied him on his American tours, and was his partner in the Criterion, New, and Wyndham's theatres. After his death she continued in the management of these theatres, and in 1924 started Wyndham Theatres, Ltd.

MOORE, THOMAS (1779-1852). Irish poet. Born in Dublin, May 28, 1779, he came to London in 1799, where his engaging personality and unusual gifts quickly procured for him a large circle of distinguished friends. A volume entitled *Poetical Works of the Late Thomas Moore* appeared in 1801. In 1803 he was appointed registrar of the Admiralty Court, Bermuda, but returned to England after a year, leaving a deputy in charge. In 1806 appeared his *Odes and Epistles*, which included the *Canadian Boat Song*.

In 1807 the publication began of the *Irish Melodies*, with music by Sir John Stevenson, upon which Moore's fame largely rests. *Lalla Rookie*, another great success, followed, and then Moore spent some time in writing his *Life of Byron*, who had been one of his intimate friends. This was published in 1830. He also wrote biographies of Sheridan, 1825; and Lord Edward Fitzgerald, 1831. His later days were passed at Slopton, Wiltshire, and he died Feb. 25, 1852.

Moonwort, the two branches of frond

MOORFIELDS. London thoroughfare between Finsbury Pavement and Moor Lane, E.C., and opening N. out of Fore Street, its name is all that is left of an area once fenland and known as Finsbury Fields. Botblem hospital stood here from 1676 until its removal in 1815 to Lambeth. The old fields are covered by Finsbury Circus and Square.

MOORGATE STREET. London thoroughfare. Running N. from Lothbury to London Wall and Finsbury Pavement, it was named from a postern gate in the old city wall which opened into Moorfields. The gate was taken down in 1762. This street, with Finsbury Pavement, became Moorgate in 1922.

MOORING MAST. Device for anchoring an airship. It consists of a tall steel mast, to which an airship is fastened by the bow, enabling it to swing in any direction with the wind. Such masts are constructed with lifts to serve as means to hoard and load the airship. See Airship.

MOOR PARK. Name of two English parks. One is 1 m. from Rickmansworth, Hertfordshire; the other on the banks of the Wey, 2 m. from Farnham, Surrey. The first-named, enclosed about 1460, was bought by Lord Leverhulme, 1919, and turned into a residential district.

The house and land in Surrey was formerly known as Compton Hall, its name being altered to Moor Park, after the place in Hertfordshire, when bought by Sir William Temple about 1682. Here Jonathan Swift, when living there as Sir William's secretary, wrote *The Battle of the Books* and *Tale of a Tub*, and first met Esther Johnson (Stella).

MOORS. Name in popular usage for the Moslem population of mixed Berber and Arab descent in N.W. Africa. The Mauri of the Mauretanian kingdom of Roman writers were Berbers. The Arab irruption of the 8th century which led to the invasion of Spain resulted in some racial blending, and the subsequent return to Morocco of Hispanified Saracens (Moriscos) brought in an Andalusian element. The Arabic-speaking Moor is thus the resultant of many forces, social and ethnic. The name was extended by Portuguese adventurers to Arabian settlers in India. See Morocco; Spain.

Moorish architecture is the term applied to the Hispano-Moresque style developed by the Moorish conquerors of Spain. See Mahomedan Art and Architecture.

MOOSE (*Alces machlis*). Largest living member of the deer family, distinguished by its size, long pendant muzzle, and broadly palmated antlers. It occurs under the name of elk in Europe; but the name moose is restricted to the American variety, which ranges N. of the Ohio River to the borders of the Arctic regions. Alaska is now its chief home. A fine male stands nearly 7 ft. high, and weighs over 1,000 lb. In the summer it visits the swampy ground near lakes, but in winter resorts to the higher ground. Notwithstanding its great size and clumsy appearance, the moose travels at great speed and with curious noiselessness through the densest forests. It is mainly hunted for sport, but its flesh makes good venison, and its hide is converted into leather. See Deer; Elk.

Moose. Specimen of the great Alaskan moose Amer. Mus. Nat. Hist.

MOOSE JAW. City of Saskatchewan, Canada. It stands on Moose Jaw river, 400 m. W. of Winnipeg, and 398 from Calgary, and is served by the C.P. and C.N. Rlys. It is a railway and agricultural centre. Pop. 19,039.

MOOT. Literally a meeting, the word being akin to meet. It was used among the Anglo-Saxons for meetings of freemen, and so we hear of folkmoots, shiremoots, and the like, while Witanagemot is another compound. It survives here and there in English in the moot hall. See illus. under Aldeburgh.

MOPLA OR MAPPILLA. Mahomedan community, mostly in the Malabar district of the Madras prov., S. India. Numbering over a million, they nominally descend from 7th century Arab immigrants who married Dravidian women. In August, 1921, a serious rebellion of the Moplas broke out in Malabar state. The rebels destroyed railways and looted villages. Several towns, including Calicut, were invested and over 1,000 lives lost.

MOPSUS. In Greek legend, the name of two famous soothsayers. (1) The son of Manto, the daughter of Tiresias and Apollo. Having built the city of Mallos in Cilicia, together with Amphiloehus, a quarrel arose concerning the possession of it, in which both were slain. (2) One of the Lapithae. Son of Apollo and one of the nymphs, he took part in the voyage of the Argonauts, for whom he acted as seer.

MORALITY OR MORAL PLAY. Early form of the drama, which most probably developed out of the earlier mystery and miracle plays.

It is believed to have grown into popularity in the first half of the 15th century. The morality differed from the miracle play in that it was not concerned with the presenting of an established Biblical story with named characters, but was rather a play enforcing a moral truth or lesson by means of personified abstractions. Everyman, which allegorises life and death. Mankind, Youth, Lusty Juvenatus, Nature of the Four Elements, Hickscorner, and Magnificence, by Skelton, are notable examples. See Drama; Mystery.

MORAR. Loch or lake of Inverness-shire, Scotland. It is 12 m. long and 1 m. wide. In the W. of the county, its waters are carried to the sea by a short stream, the Morar. The district around is known as Morar.

MORATORIUM (Lat. mora, delay). Literally, postponement, a period in which no business engagements can be completed, or debts or other liabilities enforced. In times when a financial panic is feared, a government will sometimes declare a moratorium for a certain number of days, thus giving public confidence a chance to recover. On the outbreak of the Great War in August, 1914, a royal proclamation declared a moratorium of a month for all bills of exchange, while a Postponement of Payments Act gave the government power to declare a general moratorium if the occasion demanded.

MORAVIA. Central portion of the republic of Czechoslovakia, formerly a crown land of Austria. Physically it is separated from the

rest of the republic. Bohemia, on the W., is a plateau which slopes to the mouth of the Elbe (Labe) and away from Moravia; Slovakia, to the E., lies within the sweep of the Carpathians. The March (Morava) is the chief river, for the Oder and the Vistula merely begin within the province. A quarter of the country is forested. In the S. maize, fruit, and vines; in the centre, wheat, barley, and sugar beet; and in the N., rye, oats, flax, and potatoes are the staple agricultural products. Cattle, horses, goats, and merino sheep are numerous. Important towns are Brno (Brünn), Mährisch Ostrau, and Olmütz. The area is 8,616 sq. m. Pop. 2,840,167.

Early in the 17th century Moravia came under Hapsburg control. In 1849 it was separated from Bohemia, and made a separate province of Austria. In 1918 it became part of Czechoslovakia. See Czechoslovakia.

MORAVIANS OR MORAVIAN BRETHREN. Protestant sect, also known as the Unitas Fratrum or Bohemian Brethren. Its descent is claimed from a division of the Hussites at Prague about 1450. In 1722 a few families fled from Moravia to Saxony under the leadership of a carpenter named Christian David, and united with a Lutheran community at Berthelsdorf. The community definitely separated from Lutheranism in 1727, when the title Moravian Brethren was revived. The sect is said to number about 100,000 adherents; and it had in 1930 in the United Kingdom 42 congregations and 3,481 communicants. It has long been famed for its missionary zeal.

MORAY. Maritime co. of Scotland, also known as Elginshire. Its area is 477 sq. m., and it has a coastline of 33 m. on the Moray Firth. The co. is mountainous in the S., where are the Cromdale Hills, but becomes less so as the low district along the coast is approached. The chief rivers are the Spey, Findhorn, Lossie, and Divie, and there are several small lakes. There are valuable fisheries. The co. is served by the L.M.S. and L.N.E. Rlys. The chief places are Elgin, the co. town, Lossie mouth, Forres, Rothes, Burghead, and Grantown-on-Spey. In 1920 the name of the co. was formally changed from Elgin to Moray. There is an episcopal bishop of Moray. Pop. 41,558.

Moray was the name of one of the ancient provinces of Scotland. It included roughly the modern counties of Moray, Nairn, and Banff, and part of Inverness.

Moray Firth extends inland for nearly 40 m. and has a breadth from Tarbat Ness to Burghead of 16 m.

The earldom of Moray or Murray, one of the seven old Scottish earldoms, and dating from the 14th century, has been held since 1561 by the family of Stewart. The title passed from James Stewart, the first earl, to his daughter's husband, another James Stuart, and to his descendants until the present day. The earl's eldest son is known as Viscount Doune. Pron. Murry.

MORAY, JAMES STEWART, EARL OF (c. 1530-70) Scottish noble. An illegitimate son of James V, his mother was Margaret

Erskine. He became prominent in Scotland soon after the accession of his half-sister Mary to the throne. A supporter of the reformed

Earl of Moray,
Scottish noble

teaching, he joined the lords of the congregation in opposing the queen mother. For a time after Mary returned from France, Moray had great influence with her, but a breach came over the marriage with Darnley. Moray was exiled, and he was still away when, on Mary's abdication in 1567, he was chosen regent. He was responsible for her defeat at Langside, and he ruled the country, on the whole successfully, until shot as he rode through Linlithgow, Jan. 21, 1570.

MORDANT. Substance used in dyeing to fix the colouring matters in the fibre of textiles. Either before or after using the dye the fabric is saturated with the mordant, which acts by forming an insoluble compound within the fibres, rendering the colouring matter permanent as regards washing. There are two main classes of mordants: (1) basic, used where acid colouring principles are concerned; and (2) acid, employed for fixing basic colouring matters on cotton. The chief basic mordants are the metallic salts of aluminium, iron, tin, and chromium. See Dyes.

Mordecai. Character in the O.T. book of Esther. He discovered Haman's plot to exterminate the Jews. See Esther; Haman.

MORDEN. Urban district, with Merton, of Surrey. It is 10 miles from London, and has stations on the Southern Rly. and the City and South London tube. Pop. 24,829.

MORE, SIR ANTHONY (c. 1512-c. 1576). Dutch portrait painter. Anthonis More, also called Antonio Moro, was born at Utrecht, was a pupil of Jan van Scorel, and was influenced by Joost van Cleef. In 1552 he became court painter to Philip II of Spain. He was in England 1553-54, when he painted a portrait of Queen Mary and was knighted. He died at Antwerp. His chief works are Five Members of the Order of S. John of Jerusalem, 1541; Two Canons of Utrecht, 1544; Maximilian of Bohemia and Mary of Austria, 1552; and Sir T. Gresham, in the Nat. Portrait Gall., London.

MORE, HANNAH (1745-1833). British author. Born Feb. 2, 1745, at Stapleton, Gloucestershire, her first considerable work was a pastoral drama, The Search after Happiness, 1762. Coming to London in 1774, she became intimate with Garrick, Johnson, Burke, and other literary lights. Garrick produced two of her tragedies, Percy, 1777, and The Fatal Falsehood, 1779. She spent her later years in retirement at Cowslip Green, near Bristol, where she wrote Colebels in Search of a Wife, 1809. She died Sept. 7, 1833.

MORE, SIR THOMAS (1478-1535). English statesman and author. He was born in Milk Street, Cheapside, Feb. 7, 1478. In 1492-94 he was at Oxford, where, filled with enthusiasm for the new learning, he studied Greek, Latin, French, theology, and music, and began his lifelong friendship with John Colet. In London began his friendship with Erasmus, and in 1501 he was called to the bar. He became a bencher of Lincoln's Inn, 1509, and reader, 1511 and 1516. While an envoy in Flanders, 1515, he planned his fascinating Utopia, 1516.

Having been elected an M.P. in 1504, More was appointed speaker of the House of

Morayshire. Map of the maritime county of Scotland

Hannah More,
British author

Engraving by Heath

Commons in 1523, and staunchly defended the privilege of the House against Wolsey, whom he succeeded as lord chancellor in 1529. Conscience compelled him to resign the chancellorship in 1532, when Henry VIII claimed to be the one supreme head of the Church of England. Committed to the Tower, April 17, 1534, and indicted for high treason in Westminster Hall, July 1, 1535, he was executed on July 6, 1535. In addition to the Utopia, he is the reputed author of a

Sir Thomas More,

After Holbein

Life of Richard III; he also wrote a tractate on The Four Last Things, and while imprisoned in the Tower his Dialogue of Comfort.

MOREA, THE (perhaps from Slav. more, the sea, or Gr. moron, mulberry, from its resemblance in shape to a mulberry leaf). Medieval and modern name for the Peloponnesus, the S. portion of Greece. See Greece.

MOREAU, JEAN VICTOR MARIE (1763-1813). French soldier. Born Aug. 11, 1763, at Morlaix, in 1790 he joined the revolutionary army and in 1793 was made a general. In 1797, suspected as a traitor, he lost his command, but in 1799 he was given a high position with the army in Italy, where he conducted a masterly retreat. In 1800 Moreau assisted Bonaparte to overthrow the Directory. He then led an army against the Austrians, ending a successful campaign with the victory at Hohenlinden. After this he was accused of plotting against Napoleon and was banished. In 1812 he joined the Allied service, and was mortally wounded at the battle of Dresden, Aug. 27, 1813. He died Sept. 2.

MORECAMBE. Borough and watering place of Lancashire. It stands on Morecambe Bay, 3 m. from Lancaster, on the L.M.S. Rly. The town has a fine promenade, and the attractions include bathing, sailing, boating, and fishing. In 1923 the urban district of Heysham was united with Morecambe. Pop. 22,478.

MOREE. Township of New South Wales, Australia. On the Gwydir river, it is 413 m. by rly. N.N.W. of Sydney. It has a state experimental farm. Pop. 3,100.

MOREL (*Morchella esculenta*). Edible fungus of the order Ascomycetes, a native of temperate regions. It has a short, white, tapering stem and a swollen head, whose surface is broken into a network of ribs enclosing deep polygonal pits, varying in colour from yellowish, through brown, to olive. Both stem and head are hollow. There are several allied species, equally good as food.

MORESNET. Village and dist. of Belgium. It is 4 m. S.W. of Aix-la-Chapelle, and contains rich zinc deposits, worked by a Belgian company. From 1816-1919 Moresnet was a neutral state, until 1841 under joint Belgian and Prussian administration, and from 1841 onwards under its own burgo-master and council, the inhabitants making choice of Belgian or German legal rights and military service. The village of Neutral-Moresnet, or Kalmis, was the centre of the state. In 1919 Moresnet was incorporated with Belgium. Pop. 3,000. Pron. Mor-ay-nay.

Moreton Bay. Harbour of Queensland. It measures 49 m. by 17 m., and is enclosed by the islands of Moreton and Stradbroke.

MORGAN, SM HENRY (c. 1635-88). Welsh buccaneer. He belonged to a Glamorganshire family, and, according to tradition, was kidnapped as a youth in Bristol, and sold in Barbados. Later he got to Jamaica, joined the

huccaneers, and rapidly rose to leadership. He took part in many daring exploits against the Spaniards in Panama, Cuba, and elsewhere. In 1672 he was sent back to England in disgrace, but won the favour of Charles II, was knighted, and returned to the West Indies as lieutenant-governor of Jamaica, where he died in Aug., 1688.

MORGAN, JOHN PIERPONT (1837-1913). American financier. Born at Hartford, Conn., April 17, 1837, he joined the banking firm of Duncan Sherman in 1857. From 1864-71 he was a partner in Dahney, Morgan & Co., and in the latter year of Drexel, Morgan—later known as J. P. Morgan & Co. Under him the firm carried through enormous transactions, in the railway, shipping, steel, and other industries. Morgan gave princely donations to Harvard, Yale, and other educational institutions, also to hospitals, churches, etc. In his day he was the world's greatest art collector, and owned priceless pictures, china, and books. He died in Rome, March 31, 1913.

His son, John Pierpont Morgan, Jr. (b. 1867), succeeded him as head of the firm, and inherited his art treasures and other wealth.

MORGANATIC MARRIAGE. Union of a member of a royal or princely family with one of lower rank. The marriage, which was usual in Europe, especially among Teutonic peoples, is binding and the children are legitimate; but they are debarred from succeeding to their father's titles and inheritance, and occupy a position assigned to them by the morganatic contract. In Great Britain morganatic marriage, as such, is not recognized.

MORGUE, THE. Building in Paris. It was situated behind Notre-Dame, and in it the corpses of unknown persons, mainly those recovered from the Seine, were exposed on marble slabs, pending identification. The building, which was erected in 1864, was pulled down in 1924, and a new mortuary erected on the river-side at the Quai de la Rapin. The site of the Morgue is now a public garden.

MORHANGE or **MÖRCHINGEN**. Town of Lorraine, France, until 1918 part of Germany. It is 20 m. S.E. of Metz, and has a 12th cent. church. Pop. 2,598.

Morhange gives its name to a battle fought between the French and Germans, Aug. 20-25, 1914. It ended in a French defeat, their armies being compelled to fall back on Nancy.

MORISCOS. Name given to the Moors in Spain after their conquest in 1492. After various measures of persecution and restriction of rights, they were finally expelled from Spain under Philip III in 1609-10, with the exception of those who had become Christians, and of the children under four, who were retained and baptized. See Moors.

MORLAND, GEORGE (1763-1804). British painter. Born in London, June 26, 1763, he exhibited many pictures at the R.A. from 1773 to 1804, and at the Society of Artists, 1777-82, almost wholly subjects of a domestic nature and country scenes with animals. He painted with great facility, but his loose mode of life involved him in constant financial difficulties, and he died in a sponging-house in London, Oct. 27, 1804. His masterpiece, The Inside of a Stable, painted in 1791, is in the National Gallery, London.

George Morland,
British painter

MORLEY. Borough and market town of Yorkshire (W.R.). It is 4 m. from Leeds, on the L.M.S. and L.N.E. Rlys. The industries include the manufacture of woollen goods. The earl of Oxford and Asquith was born here. Market day, Sat. Pop. 23,935.

MORLEY, CHRISTOPHER DARLINGTON (b. 1890). American author. Born at Haverford, Pennsylvania, May 5, 1890, he took up journalism in New York. As a novelist he began with The Eighth Sin, 1912, but his most popular book is probably Thunder on the Left 1915, which made his name known in Great Britain. In 1919 he published The Haunted Book Shop, and in 1924 One Act Plays. In 1928, Thunder on the Left, dramatised by Richard Pryce, was presented in London.

MORLEY, JOHN MORLEY, 1ST VISCOUNT (1838-1923). British statesman and man of letters. Born Dec. 28, 1838. Morley was called

to the bar but never practised. From 1867 to 1883 he was editor of The Fortnightly Review; from 1868-70 he edited The Morning Star, and from 1880-83. The Pall Mall Gazette, then a Liberal organ. Morley entered politics as M.P. for Newcastle-upon-Tyne in 1883. Three years later he was a member of the cabinet as chief secretary for Ireland, and he continued until 1914 to hold cabinet rank whenever the Liberals were in power, being again Irish secretary, 1892-95, secretary of state for India, 1905-10, and lord president of the council, 1910-14. From 1896-1908, when he was created Viscount Morley of Blackburn, he represented Montrose Burghs in Parliament.

Morley's first book, a study of Burke, had been published in 1867. In the 'seventies appeared volumes on several great literary Frenchmen, such as Voltaire, 1872, Rousseau, 1873, and Diderot, 1878. His essay, On Compromise, 1874, won for him a place among English philosophers. In 1881 he produced a Life of Cobden, and from 1895 he was engaged on the Life of Gladstone, published in 1903. In 1902 Andrew Carnegie presented to him the valuable library he had bought from Lord Acton's executors, and this Morley handed over to Cambridge, Acton's own university. He was one of the original holders of the Order of Merit. In 1917 he published a volume of Recollections. He died Sept. 23, 1923, when the title became extinct.

MORMONS. Usual designation of a religious sect founded in the United States under the title of The Church of Jesus Christ of Latter Day Saints. The origins of the Mormon religion are to be found in the life of Joseph Smith, upon whose alleged revelation their tenets are based. Having produced the Book of Mormon and communicated his revelations to his friends, in 1830 he formally organized the Church of which he was the presiding elder.

All this while missionaries had been busy in Europe, especially in England, and the stream of immigrants steadily increased. In the midst of this prosperity, however, Joseph

Mormon Temple at Salt Lake City;
in front, statue of Brigham Young

Lord Morley,
British statesman
Haines

Smith received his revelation on polygamy, 1843, which he declared was lawful for the saints. The indignation of the Gentiles, as the Mormons called their neighbours, was intense, and they resolved to drive the Mormons out by force. In the commotion which ensued Joseph Smith and his brother Hyrum, who were in gaol on a charge of treason, were dragged out and shot in 1844. Brigham Young was elected president.

In 1846, under Young's guidance, the whole Church began the migration westward, and in July, 1847, the first party reached the Great Salt Lake, Utah, near which they decided to build their city. Crops were planted, houses were built, another temple erected, and over all Brigham Young ruled with a rod of iron.

THE REORGANIZED MORMONS. After the death of Joseph Smith in 1844 a number of the Mormons established the Reorganized Church of Jesus Christ of Latter

Day Saints, 1851-52. Repudiating the later doctrines of polygamy and baptism for the dead, they held to the original tenets. Joseph Smith's eldest son, Joseph Smith, joined them and became their president. On his death in 1914 his son, Frederick M. Smith, succeeded. The headquarters are in Independence, Missouri, U.S.A.

MORNING GLORY (*Ipomoea purpurea*). Major convolvulus of the seedsmen. A twining, climbing herb of the order Convolvulaceae, it is a native of tropical America. The leaves are heart-shaped, alternate, the flowers large and funnel-shaped. See Convolvulus.

MORNINGTON. Village of co. Meath, Irish Free State. It stands on the Boyne, 2 m. from Drogheda. From it the family of Wesley, or Wellesley, to which the duke of Wellington belongs, took the title of earl.

Mornington is the name of the largest of the Wellesley Islands, Queensland. It is situated at the S. end of the gulf of Carpentaria. Another Mornington is a watering place of Victoria. A third is a suburb of Dunedin.

MOROCCO. Country of Africa. It lies W. of Algeria, with a coastline along the Mediterranean Sea and the Atlantic Ocean. It is divided into three parts, a French zone, a Spanish zone, and, round Tangier, an international zone. It is ruled by a sultan under the protection of France. The area of the whole country is 218,500 sq. m. Pop. 5,300,000.

The sultan's capitals are Fez, Marrakesh (q.v.), sometimes known as Morocco City, and Rabat. Rabat is the chief seat of government and contains the main residence of the resident-general. Tetuan is the capital of the Spanish zone.

Railways connect Marrakesh with Casablanca, Rabat, Meknes, Fez, and Ujda (Oudjda), beyond which a short extension of 9 m. makes a junction with the rly. system of Algeria. A line also connects Ceuta with Tetuan. Roads connect the large towns.

In the 19th century French penetration of the country led to the conference of Madrid in 1880, when the powers drew up a code defining the status and rights of foreigners. Spanish fears were pacified by the establishment of the Spanish zone, but Germany intervened in 1905 and prevented the acceptance by the sultan of the reforms proposed by France; this led to the Algeiras Conference, 1906, where the way for French control of Morocco was opened. In 1911 the German warship Panther appeared at Agadir and precipitated a crisis, as a consequence of which France purchased the right to protect Morocco by concessions of territory elsewhere.

The sultanate of Morocco was then an independent state. In 1912, however, the sultan accepted the protectorate of France, and by the Franco-Spanish treaty of the same year the country was divided into three areas with different administrations. Tangier and dist., about 140 sq. m. in area with 60,000 inhabitants, was made a special zone; the northern coast area, about 11,000 sq. m. in extent, became a Spanish zone, controlled by a Spanish high commissioner. The remainder was left to the sultan controlled by a French resident-general.

For some years there was a good deal of fighting in the Spanish zone, but in 1925 the French and Spaniards took concerted action to pacify the country. In 1926 the rebel leader Abdel Krim surrendered, and the war came to an end. In Nov., 1927, the sultan died and was succeeded by his son.

MORONI, GIAMBATTISTA (c. 1520-78). Italian painter. Born at Bondono, near Bergamo, he studied under Il Moretto at Brescia and was influenced by Lorenzo Lotto. He died at Bergamo, Feb. 5, 1578. His portraits attained a very high level and had some influence on Van Dyck. The most notable are the Portrait of a Tailor and the Portrait of a Lawyer, both in the National Gallery, London, which possess other examples of his work.

MORPETH. Borough and market town of Northumberland. It stands on the Wansbeck, 17 m. from Newcastle, and has a station on the L.N.E. Rly. The church of S. Mary dates from the 14th century, and the grammar school from the 16th. Of the castle only the gateway survives. There is a town hall, a gaol, and, in the main street, a clock tower. The industries include brewing, malting, and tanning, and the making of bricks and tiles, while in the neighbourhood are extensive collieries. It is a rly. junction. An important cattle fair is held. Market day, Wed. Pop. 7,580.

MORPHIA or **MORPHINE.** Alkaloid contained in opium, of which it is the active principle. It is used in medicine, and is also given to relieve pain or to induce sleep. The habit of taking morphia to relieve insomnia is a dangerous one, and excessive doses produce poisoning and death. Emetics, movement, and artificial respiration are serviceable antidotes to morphia poisoning. Under the Dangerous Drugs Act, 1920, the import and export of morphia were prohibited except under licence of the home office. See Opium.

MORPHOLOGY (Gr. *morphē*, form). Science of the form and structure of animals and plants. It is the corollary of physiology, which deals with habit and function. The term was first used by Goethe, in 1817. See Anatomy; Biology; Zoology.

MORPHY, PAUL CHARLES (1837-84). American chess player. Born in New Orleans, June 22, 1837, he became a lawyer, but before this he had made a reputation as a chess player. In 1857 he won the first prize at the American chess congress, and for the next two or three years he was in Europe. In 1864 he returned to the U.S.A., but his brain gave way, and he died July 10, 1884.

MORRIS, THOMAS (1821-1908). Scottish golfer. Born at St. Andrews, June 16, 1821, he began to play golf at six years of age. In 1851 he took over the links at Prestwick and superintended the laying out of this course. He won the Open Championship in 1861, 1862, 1864, and 1867. In 1863 he was made custodian of the Royal and Ancient Golf Club at St. Andrews. On the occasion of his 75th birthday a subscription was raised to buy him an annuity, which resulted in £1,250 being subscribed. He retired in Sept., 1903, and died May 24, 1908.

His son, Thomas Morris, junior, born at Prestwick 1851, won the open championship

belt outright by winning it thrice in succession, 1868-70, and won the open championship again in 1872. He died Dec. 25, 1875.

MORRIS, WILLIAM (1834-96). British poet. He was born March 24, 1834, at Walthamstow, and was educated at Marlborough College, from where he went to Exeter College, Oxford. Becoming possessed of an income of £900 a year on coming of age, Morris chose art as his career instead of the Church. After his literary venture, *The Oxford and Cambridge Magazine*, he came up to London and articulated himself to an architect. In April, 1859, Morris married Jane Burden, built a house at Bexley Heath and founded the firm of Morris & Co. for the provision of artistic furnishings for the home. There he remained until 1865, when he returned to London.

Morris was now able to devote his time to poetry, and composed his epic, *The Life and Death of Jason*, 1867, *The Earthly Paradise*, a series of tales from Greek and medieval sources, 1868-70, and *Love is Enough*, 1872, and was soon in the front rank of the great poets of his generation. In 1871 Morris, with Rossetti, took the old house called Kelmscott Manor House. In 1878 he went to live at Hammersmith Mall, and there he set up the Kelmscott Press. He died Oct. 3, 1896. Of Morris's prose romances, the best-known are *The Dream of John Ball*, 1888, and *News from Nowhere*, 1891.

MORRIS, SIR WILLIAM RICHARD (b. 1878). British manufacturer. Born and educated at Cowley, near Oxford, he started business in that city as a cycle repairer about 1900. Later, when motor cycles appeared, he turned his attention to them and opened a garage. In 1913 he designed his first motor car, and after the Great War began to make cars at Cowley. He soon built up an enormous business. He also controlled a number of associated concerns, and in 1926 turned his business, which employs about 15,000 workers, into a public company. In 1927 Morris bought the business of Wolseley Motors, Ltd., and in 1929 he was made a baronet. In 1929 he gave large sums of money to the hospital at Oxford.

Morris Dance. Boy riding a hobby horse and a revival of the ancient sword dance

MORRIS DANCE (Span. *morisco*, Moorish). Popular dance. In Tudor times it was established in England as a festival dance, especially on May day. Stock characters figuring in the dance around the maypole were Maid Marian, frequently impersonated by a man, her paramour, her jester, Friar Tuck, a gentleman, clown, Bavarian or fool, hobby-horse, and foreigners, perhaps Moriscos or Moors. The music used for Morris dancing differs in various parts of England, and there seems to be a good deal of freedom in using old popular song tunes.

MORRISON, GEORGE ERNEST (1862-1920). British journalist. Born at Geelong, Victoria, he was educated at Melbourne University. In 1882 he shipped as an ordinary seaman to the South Sea Islands to investigate the traffic in

William Morris
British poet
Emery Walker

Morning Glory. Spray of foliage and flower

natives, writing a series of articles on this evil to *The Melbourne Age*. Then he journeyed to New Guinea. In 1897 Morrison proceeded to Peking as resident correspondent for *The Times*, and in 1900 took an active part in the defence of the legations during the Boxer rising. In 1907 and 1910 he made long journeys across China. In 1912 he became political adviser to the first president of the Chinese republic. He died at Sidmouth, May 30, 1920.

MORRISON, HENRI STANLEY (b. 1888). British politician. Born Jan. 3, 1888, he became a shop assistant, then a telephone operator, and later worked in a newspaper office. He soon became a prominent member of the Labour Party, and was elected to the London County Council for E. Woolwich. He became leader of the Labour Party there and secretary of the London Labour Party. In 1923-24 he was chosen M.P. for S. Hackney. In 1929, having lost his seat in 1924, Morrison was again elected M.P. for S. Hackney and was made minister of transport in the Labour Government. As such he was responsible for the important Road Act of 1930. In 1920-21 he was mayor of Hackney, and in 1928-29 chairman of the National Labour Party.

MORRISTON. River of Ross-shire and Inverness-shire, Scotland. It rises near Loch Cluny and falls into Loch Ness at Invermorriston in Inverness-shire. Its length is 19 m. Morriston is also the name of an industrial suburb of Swansea (q.v.). It has a station on the G.W. Rly.

MORROW, GEORGE (b. 1869). Irish artist and illustrator. Born in Belfast, he studied in that city, London, and Paris. He was principally known as a contributor to *Punch*, in which journal some of his most humorous skits on contemporary life appeared. He also worked for many other magazines in various veins of sentiment, and illustrated books of many types. In 1928 he published *Some More*.

MORSE, SAMUEL FINLEY BREESE (1791-1872). American inventor. Born April 27, 1791, he studied art in England, exhibiting at the R.A. in 1813. Two years later he returned to New York and settled down as a portrait painter.

S. F. B. Morse,
American inventor

Interested also in science, Morse experimented in the phenomena of electricity, and conceived the possibility of using it as a means of communication, with the result that in 1835 he produced a telegraph at New York university, half a mile in length. In 1843 Congress voted money for a line from Washington to Baltimore, and the following year the first telegraph message, reading: "What hath God wrought?" was dispatched from the capital, May 24, 1844. He died at New York, April 2, 1872.

MORSE CODE. System of signals for the telegraphic transmission of alphabetic letters, numerals, punctuation marks, and conventional phrases. The original code, devised in 1837 in collaboration with Alfred Vail, was introduced by S. F. B. Morse for use with his self-recording telegraph. A

revised code, issued in 1844, and now distinguished as the American Morse, is still in local use within the U.S.A. and Canada.

MORTAR. Ordinary mortar for brick building consists of freshly burnt lime and clean sharp sand or grit, without earthy matter, and mixed with clean water, in the proportions of one part of lime to three parts of sand or grit. For fine-jointed, ashlar masonry, mason's putty, formed of slaked lime and water, is often used. Cement mortar consists of one part Portland cement to two parts sand, or equal parts of cement and sand.

MORTAR. Smooth-bored and muzzle-loading cannon, designed to throw shot or shell short distances at high angles of elevation. The older mortars were made of thick metal, had very short barrels, and were mounted on strong frames called mortar beds. The range was altered by varying the charge. The term mortar came into use again in 1914, when the Germans used a 21 cm. piece (8.27 in.). They had also a 28 cm. (11.2 in.) piece which was called a mortar, though the correct designation of both weapons is howitzer (q.v.). The British used the Stokes gun, a type of trench mortar.

MORTGAGE. In English law, the creation in England of an interest which is to cease when a certain sum of money is paid on a certain date. When the owner of land wishes to borrow money on the security of his land, he usually does so by way of mortgage. The borrower (mortgagor) may either execute a deed charging his estate by way of legal mortgage, or may grant to the lender (mortgagee) a lease for a long term of years, with a provision that the lease shall cease when the money lent is repaid with interest. At common law, if he did not repay on the given date the mortgagee became the absolute owner of the property. But the court of equity interfered, and would, even after six months had elapsed, allow the borrower to repay the principal, interest, and costs, and compel the mortgagee to reconvey the property.

A mortgagee who wants his money must give three months' notice. If the money is not repaid, the mortgagee can either (1) sell the property and repay himself, handing over the balance to the mortgagor; or (2) foreclose, that is obtain an order from the court that unless the mortgagor pays up within a fixed time he shall lose all rights to redeem, so that the land, etc., becomes the absolute property of the mortgagee. See *Building Society*.

MORTLAKE. District of Surrey. It stands on the Thames, 1½ m. E. by N. of Richmond, with a station on the Southern Rly. The chief building is S. Mary's Church. A noted boating resort and the finishing point of the Oxford and Cambridge boat-race, Mortlake was at one time celebrated for its tapestries, a factory, said to be the first in England, having been set up here in 1616.

An enamelled delft and stoneware was manufactured at Mortlake between 1764 and 1820.

MORTMAIN (Fr. mort, dead; main, hand). Term used for land that cannot be alienated owing to the fact that it is in a dead hand.

paid the dues, the medieval equivalent of the modern death duties. Consequently, in 1279, a law called the statute of mortmain prohibited "any person whatsoever, religious or other, to buy or sell, or under colour of any gift, term, or other title, to receive from anyone any lands or tenements in such a way that such lands and tenements should come into mortmain." Under the Mortmain and Charitable Uses Act, 1888, no land or interest in land may be acquired by a corporation except under specific licence from the crown or by virtue of some statute.

MORTUARY. In the modern meaning of the word a place for the reception of dead bodies pending burial. In Great Britain and Ireland, under various Public Health Acts, local authorities can be required by the local government board to provide mortuaries where dead bodies can be received for purposes of identification, inquest, or post-mortem examination.

MOSAIC. Term applied (1) to the tessellated work in ancient Roman pavements, and (2) to classical and medieval decorations executed with inlaid cubes of various stones, metals, and glass. Mosaic was derived from Hellenistic art. Its principal use in Roman times was to imitate coloured woollen carpets spread on pavements. In the Constantinian period inlaid marbles of various sizes and fragments of marble and hard stone, put together so as to form a geometrical design, were largely employed for mural decoration. As the technique was enriched by the addition of glass and enamel, the art took the place of pictorial fresco decoration.

Fine interior mosaics of the 4th and 5th centuries are preserved in S. Maria Maggiore and the baptistry of S. John Lateran at Rome and in the churches of Ravenna. Those of S. Mark's, Venice, are notable. The remains of fine medieval mosaics are to be seen on the shrine of the Confessor, Westminster Abbey. In all Byzantine architecture (q.v.) mosaic is the recognized decoration for walls, ceilings, or pavements. The modern practice of it is somewhat restricted, though there are fine examples in the dome of S. Paul's Cathedral, and in the chapels of Westminster Cathedral.

MOSCHELES, FELIX STONE (1833-1917). British painter. Born in London, Feb. 8, 1833, he studied in Leipzig, Paris, and Antwerp, and then settled in London, where he enjoyed a wide reputation as a portrait painter. Among his subject-pictures were *Grief*, 1878; *Spanish Song*, 1879; *Little Mozart's own Choir*, 1882; and *The Isle's Enchantress*. Moscheles was well-known as an advocate of international arbitration. He died Dec. 20, 1917. He wrote two autobiographical works, *In Bohemia with Du Maurier*, and edited Mendelssohn's letters to his parents.

His father, Ignaz Moscheles, (1794-1870), born at Prague of Jewish parents, became famous as a piano teacher and pianist in London. In 1846 he settled in Leipzig as professor at the new conservatoire.

MOSCOW (Russ. Moskva). Ancient capital of Russia and crowning place of the tsars, now capital of the Russian Socialist Federated Soviet Republic. It lies on seven hills, 500-850 ft. in alt., on the river Moskva, 400 m. S.E. of Leningrad.

The city is irregularly built, and with its numerous domes and cupolas has a picturesque appearance. The Kremlin, or citadel, in the centre of the city, is the dominating feature. This ancient residence of the tsars—now the headquarters of the Soviet Government—with its five gates and 18 towers, built originally of wood, was one of the few places which escaped the great fire of 1812. The walls were erected by Ivan III. In the cathedral of the Assumption, or Uspenski cathedral, originally

Morse Code. Alphabet, numerals, and punctuation symbols used in the United Kingdom

In England in early times a great deal of land was given by the kings to religious corporations, the result being that the land in question never

Moscow. 1. The Kremlin from the south-west; in the centre is the great palace, with the walls of the Kremlin behind. 2. Lenin's tomb in Red Square

the burial place of the patriarchs, the tsars were crowned and proclaimed by the ringing of the great bell, Ivan Veliky, or Big John. The bellry was begun by Feodor Ivanovitch and completed by Boris Gudunov in 1600. The famous Tsar Kolokol, or king of bells, cast in 1735 and cracked in the foundry, stands on a pedestal opposite Ivan Veliky.

Moscow, which has been called the Holy City and Little Mother, is a city of churches, many of which are richly coloured and have gilded domes. The cathedral of the Archangel Michael was completed in 1508. The cathedral of the Annunciation has nine domes, each surmounted by a golden cross. The cathedral of S. Basil was begun by Ivan the Terrible in 1554 to commemorate the conquest of Kazan. It has 12 multicoloured domes.

After the revolution, 1917, many plants and factories closed down, but gradually industry and trade rallied. An important centre of rly. and water traffic, Moscow is the financial centre of Soviet Russia.

The city was built on the site of the Kremlin. It did not attain importance until 1325, when the metropolitan Peter made it the religious capital. It became the capital of the empire in the reign of Ivan III, 1462-1505, and so remained until 1703. In 1918 the Soviet government transferred the seat of government from Leningrad to Moscow. Pop. 2,025,947. See Kremlin.

MOSELLE or **MOSEL**. River of France and Germany. It rises in the S. Vosges, and flows in a N.W. direction into Lorraine. At Toul it turns N. and passes into Germany, following a winding course until it reaches the Rhine at Coblenz. Its length is 320 m. On its banks are Épinal, Metz, Pont-à-Mousson, Thionville, and Trèves.

Moselle, a delicate aromatic wine, is so called because it is made from grapes grown in the lower valley of the Moselle.

MOSES. Hebrew law-giver and leader of the Israelites from Egypt. Son of Amram, a Levite, and Jochebed, and younger brother of Miriam and Aaron, he was adopted by Pharaoh's daughter. According to the Biblical narrative (Exodus—Deut.), after slaying an Egyptian taskmaster who had ill-treated an Israelite, he fled to Midian. At Mt. Horeb he received a Divine command to return to Egypt, from which he later led the Israelites to the confines of Canaan, receiving the Decalogue from Jahveh, at Mt. Sinai. After glimpsing the Promised Land from Pisgah, he died at the age of 120 years, leaving two

sons, Gershom and Eliezer. By a late Jewish tradition, Moses was thought to be sole author of the Pentateuch, a work now usually regarded as the product of several compilers from older documents. See Aaron; Pentateuch.

MOSLEY, SIR OSWALD ERNALD (b. 1896). British politician. Born Nov. 16, 1896, he was a son of Sir Oswald Mosley, Bart. Educated at Winchester and Sandhurst, Mosley entered the 16th Lancers and served in France during the Great War. In 1918 he was elected Unionist M.P. for the Harrow division, and he retained the seat until 1924, when he joined the Labour party. In 1926 and 1929 he was chosen M.P. for Smethwick, and in 1928 he succeeded to the family baronetcy. In 1920 Mosley married a daughter of the Marquess Curzon, Lady Cynthia, who in 1929 was elected Labour M.P. for Stoke. In 1929 he was made chancellor of the duchy, but he resigned in May, 1930, because he disagreed with the Government's unemployment policy.

MOSQUE (Arabic, masjid). Mahomedan place of worship. Noteworthy examples are at Cairo, Mecca, Medina, Jerusalem, Damascus, and in various cities of India. In England there is a mosque at Woking, Surrey. Mosques generally have a central dome, minarets, and a court provided with a tank for ceremonial ablutions. Within is a pulpit, a lectern, a niche indicating the direction of Mecca, and carpets, but no seats. See Cairo; Damascus; Delhi; Ispahan; etc.

MOSQUITO (Span. little fly). Fly of the family Culicidae. Found in all hot and temperate climates, mosquitoes are one of the

position to be conveyed into the blood of a person attacked. Other species of mosquito are the vehicles of yellow fever and filariasis. Hence the battle with these diseases involves the destruction of the mosquito, best effected by destroying its breeding places. See Gnat; Insect; Malaria; Yellow Fever.

MOSQUITO COAST or **LA MOSQUITIA**. Maritime region of Central America. It embraces the E. corner of Honduras and the E. coast of Nicaragua, though the term is usually restricted to that part of the seaboard of Nicaragua between the rivers Wawa and Rama. The region, long a matter of diplomatic controversy, was incorporated in Nicaragua in 1894.

MOSS (Muscineae). One of the two classes of Bryophyta, the other class being the Hepaticae or liverworts. Like the Thallophytes (algae, fungi, diatoms, etc.), their structure is entirely cellular, there being neither vessels nor woody tissue, though they have conducting cells which to some extent serve the purpose of vessels. The stems are clothed with apparent leaves, though these are not homologous with the leaves of flowering plants. Mosses are reproduced by spores, contained in an urn-like capsule produced by a sexual process. We have thus an alternation of generations as in the ferns, but with the difference that the asexual generation (spore capsule) grows on the sexual. The sexual elements are contained in what are popularly styled the "flowers" of the moss—technically the perichaete. This is formed at the apex of the stem, and consists of more crowded whorls of "leaves" enclosing either the male or the female elements, or both in the same flower.

Mosses are ubiquitous, growing almost anywhere, even on the bare rock and the brick wall, preparing the way for higher vegetation by forming a humus of their dead bodies and the minute particles of organic matter which every tuft of moss collects from the air. See Bog Moss; Botany.

MOSSEL BAY. Seaport of Cape Province, South Africa. It lies 318 m. by rly. E. of Cape Town, almost midway between that city and Port Elizabeth. It is a port of call, has a large general and forwarding trade, and is a popular summer resort. White pop. 2,649.

MOSSLEY. Borough and market town of Lancashire. It stands on the Tame, 10 m. N.E. of Manchester, on the L.M.S. Rly. It is also served by the Huddersfield canal. The industries include cotton and woollen mills, also engineering works. Near are British remains known as Bucton Castle. Market day, Thurs. Pop. 12,705. Mossley Hill is a suburb of Liverpool, with a station on the L.M.S. Rly.

MOSUL. City of Iraq, capital of a vilayet of the same name. It stands on the Tigris, about 220 m. N. of Bagdad. Opposite it, on the E. side of the river, are the vast mounds which are the remains of Nineveh. It was once famous for its muslin, the name being derived from that of the town. Before and during the Great War Mosul was the headquarters of a Turkish army corps, and after the armistice was occupied by the British. Pop. 60,000.

The claim of Turkey to the vilayet of Mosul was the subject of a conference held at Constantinople in May-June, 1924, between Great Britain and Turkey. This conference proved abortive, and the question was referred to the League of Nations, which decided that Mosul should be part of Iraq, and in 1926 the boundary was fixed accordingly. A neutral zone was established for 50 miles on each side. See Mesopotamia.

MOTH. Popular name for an insect of the second division (Heterocera) of the order Lepidoptera; the first division (Rhopalocera)

Mosquito. Stages in development. 1. Egg-rafts and half-grown mosquito larvae diving. 2. Full-grown larva breathing at surface of water. 3. Pupa emerging from water. 4. Mosquito fully emerged and in readiness for flight.

voist pests of the tropics. Great Britain possesses about 20 species, usually called gnats, some of which attack man as vigorously as their tropical relatives. The larval stage is passed in the water. All the family are provided with horny boring apparatus, but it is only the female that sucks blood. One genus, Anopheles, is the vehicle of malaria. The malarial parasite is conveyed to the female gnat when she sucks the blood of an infected person. After undergoing various stages of development the parasite finds its way to the salivary glands of the insect and is then in a

consisting of the butterflies. There is no real distinction between the two divisions, and the separation of the two groups is more convenient for purposes of classification than scientifically correct. Structurally, moths agree with butterflies, and the development of the individual exhibits the same four well-marked stages of egg, caterpillar (see illus. p. 373), chrysalis (see illus. p. 409), and winged adult. All butterflies are active in sunshine, and most moths fly either at twilight (crepuscular) or during the hours of darkness (nocturnal); but there is no strict uniformity.

There are two features in which moths differ from butterflies; in the latter the antennae have knobbed tips; but in most moths the antennae are either thread-like or feathered. A butterfly's wings all work independently, but in the majority of moths the fore and hind wings are united in flight by a bristle on the hind wing fitting into a catch on the fore wing. In the matter of size there is great diversity, for the atlas moth of India may be only a fraction less than a foot across the outspread wings, whilst large numbers are smaller than the tiny clothes moth. See Butterfly, Clearwing Moth; Eggar Moth; Emperor Moth; Goat Moth; Ghost Moth; Hawk Moth; Insect.

MOTHER-OF-PEARL. Inner coating of shells of many bivalve molluscs, including pearl oysters. It possesses some resemblance to pearls, and has much the same composition. Mother-of-pearl is largely used in thin sheets to decorate articles of ornament and for the toilet, knife handles, and jewelry. See Pearl.

MOTHER OF THOUSANDS. Popular name applied equally to *Saxifraga sarmientosa* and *Linaria cymbalaria*. The first named, also known as creeping sailor and wandering Jew, is a native of China and Japan, with roundish, lobed leaves. *Linaria cymbalaria* is a much smaller plant, native of Europe, rooting in the crevices of rocks and old walls.

MOTHERWELL. Burgh, with Wishaw, of Lanarkshire, Scotland. The two burghs were amalgamated in 1920. Motherwell lies near the river Clyde, 13 m. from Glasgow on the L.M.S. Rly. It owes its growth to its situation on the great coalfield; in addition to the collieries there are engineering works. Pop. 66,213.

MOTHERWORT (*Leonurus cardiaca*). Perennial herb of the order Labiatae. A native of Europe and N and W Asia, it has a stout root-stock and erect, four-angled, leafy stems. The opposite leaves are deeply cut into five or seven lobes, and the rosy-pink flowers are arranged in a series of whorls.

MOTION (Lat. *motio*). In mechanics, change of position of a body. It is governed by three laws first enunciated by Newton. They define the effect of external force on

the motions of bodies, and may be stated as follows: (1) Every body continues in its state of rest or of uniform motion in a straight line unless it is compelled by an impressed force to change that state. (2) Change of motion is proportional to the impressed force and takes place in the direction of the straight line in which the force acts. (3) To every action there is always an equal and opposite reaction. See Dynamics; Energy; Relativity.

MOTLEY, JOHN LOTHROP (1814-77). American historian. Born at Dorchester, Mass., April 15, 1814, he began his literary career with a novel, *Morton's Hope*, followed by articles in *The North American Review*, and by another novel, *Merry Mount*, 1849. In 1856 his *Rise of the Dutch Republic* appeared in London in three volumes, and at once made him famous. It was followed by the *History of the United Netherlands, 1860-68*. In 1861 he went to Vienna as ambassador, and from 1869-70 he was ambassador in London. He was in England when he died, May 29, 1877.

MOTOR. In machinery, a motor is a prime mover, e.g. a steam engine, electric motor, etc. In anatomy and physiology, the word is used as designating or pertaining to particular nerve fibres.

The modern electric motor is an inverted dynamo. Electric motors are of two main classes, those using direct, and those using alternating current; while they are also distinguished as shunt wound, series wound, and compound wound; single-phase, two-phase, and three-phase; open, partly closed, and enclosed. A third type, the motor generator or rotary transformer, is employed where it is necessary to change the current as originally generated by the dynamo, e.g. alternating into continuous, or to change one voltage into a different strength. See Dynamo.

MOTOR BOAT. Small vessel propelled by internal combustion engines or electric motors, as distinct from steam driven vessels. Small open pleasure boats of all kinds and lifeboats generally prefer four-stroke petrol engines, as these are ready for action at a moment's notice. Powers range from four h.p. for motor dinghies up to several hundred h.p. for racing craft. Light craft are propelled by an outboard petrol motor fixed at the stern. For decked-in boats, engines burning paraffin or heavy fuel oils are more used. Heavy fuel marine motors are being widely adopted for coasting vessels. The motor boat speed record is 98.76 m.p.h., achieved by Sir H. Segrave on June 13, 1930, when his boat capsize, Segrave receiving fatal injuries.

The name motor ship is given to a larger vessel equipped with internal combustion engines. In June, 1930, the White Star liner *Britannic*, one of the largest, sailed on her maiden voyage to New York. See Ship.

MOTOR CAR. The first self-propelled road vehicle was probably a primitive three-wheeled steam car built by Nicholas Cugnot in 1768-70. Richard Trevithick's steam vehicle travelled from Camborne to Plymouth in 1802, attaining 9 m. per hour on the level, and by 1836 the steam road carriage had become important enough to rouse the opposition of railway and stage coach companies.

With the invention of the petrol gas motor by Daimler in 1884 a new trend was given to the design of self-propelled road vehicles. In 1894 the editor of *Le Petit Journal* organized a motor race from Paris to Rouen, and although a steam car came in first, the chief prize went to a petrol-driven car. In a race held the following year the steam cars were hopelessly beaten. To-day the petrol engine is used by the majority of motor vehicles, though the steam engine is employed for many heavy wagons and lorries. A type of engine using heavy oil is being developed for motor cars, the ratio of weight to h.p., hitherto the chief drawback, having been reduced to a great extent.

SPEED RECORDS. In 1907 S. F. Edge travelled 1,581 m. 1,310 yds. in 24 hrs. at Brooklands. Later, Mulford, at New York, increased the distance to 1,819 m. On March 11, 1929, at Daytona, Sir Henry Segrave covered a mile in 15.55 seconds, his speed being 231.36 m.p.h. On the same occasion he did the kilometre in 9.665 seconds, representing a speed of 231.44 m.p.h.

MECHANISM. The petrol car is made up of chassis and body. The chassis is a metal framework which supports the body, engine with its controls, wheels, axles, brakes, transmission gear, etc. The body varies according to the passenger accommodation and the requirements of the purchaser. The engine is attached to the front part of the frame, or to a sub-frame and is connected to the transmission gear by a friction clutch, operated by a pedal. A change speed gear box permits the gearing down of the engine to be varied, and enables the motion to be reversed. A self-acting gear box, fitted to many cars, enables the driver to pre-select the desired gear by moving a small lever on the steering wheel. When thereafter, a pedal is depressed the gear is shifted automatically. Automatic gear boxes are operated by the engine mechanically, or by a vacuum. The drive from gear box to road wheels is by chain in many commercial vehicles. In other vehicles the direct axle drive is more usual, the gear box shaft being connected with a long propeller shaft, which turns through a differential gear, the two live axles to which the driving wheels are keyed. The differential gear allows the wheels to revolve at different speeds when the car is on a curve.

The steering wheel is mounted on a column having at its lower end a worm which engages with a toothed quadrant. The latter turns a short shaft connected by levers with the front wheels. Two independent sets of brakes are fitted, generally a hand brake, controlled by a hand lever, and pedal-operated internal expanding brakes pressing on drums attached to the driving wheels. Four-wheel brakes are common, acting on all wheels simultaneously, generally through a servo-mechanism brought into operation by depressing a pedal.

The petrol engine is dealt with in the article on the internal combustion engine. Electric cars are driven by motors connected to the road wheels through a propeller shaft and differential gear, or by motors mounted on the axles. Current for electric cars is supplied by storage batteries.

MOTOR CYCLE. Broadly defined as any power-driven two or three wheeled vehicle. The definition includes certain types of three-wheeled cars, but the motor cycle proper is a

Motor Car. Overhead view of typical modern light car chassis with the principal parts designated. Courtesy of "The Autocar"

two-wheeled power-driven vehicle, which may or may not have attached to it a sidecar for the carrying of passengers, etc. Nearly all such machines are driven by one, two, three or four cylinder internal combustion engines, the power being transmitted by means of a belt or chain, or the machine is shaft driven. In 1928 the number of motor cycles registered in Great Britain was 691,000.

Motor Cycle. Modern single cylinder machine with principal parts designated
Courtesy of "The Motor Cycle"

MOTOR LICENCE. Every motor vehicle must be provided with registration letters and numbers and carry a licence card. In motor cycles the card must be fixed in a prominent position on the near side of the machine or sidecar. In cars it may be placed on or within 2 inches of the windscreen, facing to the front, or else on the near side of the car facing to that side.

In the case of motor cycles the registration letters and numbers must be shown on plates displayed at front and rear of the machine, both plates being illuminated. By an order of the Ministry of Transport made in 1930, larger rear number plates became necessary. The letters and figures must be $2\frac{1}{2}$ inches high, occupy a space of $1\frac{1}{2}$ inches, and be distant $\frac{1}{8}$ inch from each other. On identification plates for motor cars the letters must be $3\frac{1}{2}$ inches high, and every part of every letter or figure must be $\frac{1}{8}$ inch broad. Only the rear plate of a car need be illuminated. The licence for motor cycles not exceeding 200 lb. in weight is £1 10s., and exceeding 200 lb., £3, with an extra fee of £1 for a sidecar or trailer. Motor drivers must have a driving licence, which costs 5s. The minimum age is 17, except for motor cyclists, when it is 16.

All private motor cars are taxed at a flat rate of £1 for every horse power, per annum with a minimum of £6, and electric cars at a fixed sum of £6. Commercial vehicles are taxed according to type. Motor coaches, motor omnibuses, and similar vehicles pay according to the seating accommodation. Vehicles used for carrying goods are charged according to their weight when unladen.

An important Act passed in 1930 made certain changes in the law about motor vehicles. Among these were the abolition of the speed limit, the infliction of severe penalties for dangerous and negligent driving, and compulsory insurance against third party risks.

MOTTRAM, RALPH HALE (b. 1883). British novelist. Born at Norwich, Oct. 30, 1883, he entered a bank there. In 1914 he joined the army and served on the western front until 1919. In 1924 he made his name known as the author of a novel dealing with the war called *The Spanish Farm*. This appeared in three parts, the second and third being *Sixty-four*, *Ninety-four*; and *The Crime at Vandelynden's*. Other novels followed: in 1927 *Our Mr Dorrner*; in 1928 *The English Miss*; in 1929 *The Boroughmonger*; and in 1930 *Europa's Beast*. In 1930 he wrote *A History of Financial Speculation*.

MOUFFLON OR **MOUFLOX** Species of European wild sheep, *Ovis Musimon*, found

only in Corsica and Sardinia. It is about 28 ins. high at the withers, and the wool of the upper parts is reddish brown, with white on the underparts. The curved horns in the male sometimes reach 3 ft. in length. The animals are found in flocks on the highest peaks of the hills, and are very difficult to approach.

MOULD (*Hyphomycetaceae*). Division of fungi consisting of small, mostly gregarious and superficial plants, either saprophytes or parasites. They form velvety patches on decaying animal or vegetable substances. The plants consist of delicate threads, a single row of cells placed end to end and ending in minute spores, which are always free and not enclosed in capsules. Many forms previously ranked as distinct species are now found to be developmental stages of higher fungi.

MOULDING. In architecture and joinery, the surface formed on any piece of stone, timber, or other material by casting or cutting according to a continuous pattern: by extension, the piece of material so moulded. The mouldings in Greek architecture have been elaborately classified as the ovolo, ogce, cyma recta, torus, scotia or trochilus, cavetto, astragal, and fillet or annulet. Roman and Renaissance forms of moulding were based on the Greek, and certain classic mouldings were adopted by the Gothic architects, who used mouldings of every description lavishly. Early English mouldings, which include the roll, fillet, and dog tooth, are generally of finer workmanship than those of later date. Perpendicular work is flatter and harder. See *Architecture*; *Beading*.

MOULIN ROUGE, LE (Fr. the red mill). Parisian place of amusement. Situated in the Boulevard de Clichy, it was opened Oct. 5, 1889, and destroyed by fire Feb. 28, 1915. It owes its name to the windmill above the entrance, the sails of which were illuminated by red lights. It was rebuilt after the Great War, and in 1929 it was converted into a cinema.

MOULMEIN OR **MAULMAIN.** Seaport of Burma. It is situated near the mouth of the Salween, sheltered by Bilu Island from the gulf of Martaban, but is rainy during the monsoon. It has connexion by rly. with Pegu and Rangoon, and exports large quantities of teak and rice. Pop. 61,301.

MOULTON, JOHN FLETCHER MOULTON, 1ST BARON (1844-1921). British lawyer and scientist. Born at Madeley, Nov. 18, 1844, the son of the Rev. J. F. Moulton, a Wesleyan minister, he went to Cambridge, where he was senior wrangler in 1868. Called to the bar in 1874, Moulton soon became known as an authority on patent law, and was made a Q.C. in 1885. He was Liberal M.P. for Clap-

ham in 1885-86, and from 1898-1906 for the Launceston division, retiring on being made a judge of the court of appeal in 1912. He was given a life peerage and made a lord of appeal. During the Great War he was chairman of the committee on high explosives. In 1919 he became chairman of the British Dye-stuffs Corporation. He died March 9, 1921. His life was written by his son, Hugh Fletcher Moulton (b. 1876). M.P. for Salisbury, 1923-24.

Mouflon. Ewe and lamb of the Corsican wild sheep

MOUND BIRD. Popular name for the megapodes. This is a family of game birds that deposit their eggs in mounds of decaying vegetable matter, where they are hatched by the combined heat of the sun and of the decomposition of their surroundings. There are about 15 species, found mainly in Australasia and the Pacific islands, of which the Brush turkey is a well-known example.

MOUNET-SULLY, JEAN (1841-1916) French actor. Born at Bergerac, Feb. 27, 1841, he made his first appearance as King Lear at the Odéon in 1868. Having served during the Franco-Prussian War, he reappeared in 1872 as Oreste in Racine's *Andromaque*, at the Comédie Française, where he remained the principal actor. He was regarded as one of the greatest tragedians of the 19th century. He died March 1, 1916.

His younger brother, Paul Mounet (d. 1922) was also an actor.

MOUNTAIN. Term used somewhat loosely to describe an elevated portion of the earth's crust. Altitude alone does not justify the application of the term to high ground, for an isolated elevation of less than 1,000 ft. frequently receives the designation, although it is usual to describe a ridge of this moderate elevation by the term hills. See *Alps*; *Andes*; *Himalaya*, etc.

MOUNTAIN, THE (Fr. La Montagne). Name given to one of the political parties that arose in France during the Revolution. They first appeared, an offshoot of the Jacobins, in

Mountain. Diagram illustrating relative heights of the world's chief mountains

the national convention, 1792, the name being due to the fact that, about 100 strong, they sat on benches raised above those occupied by other groups. Its members included Marat, Danton, and Robespierre. Their chief opponents were the Girondins, who were overthrown in 1793. The Mountain was responsible for the Reign of Terror. See French Revolution.

Mountain Ash. Alternative name for the small tree usually known as the rowan (q.v.).

MOUNTAIN ASH. Urban dist. of Glamorganshire. It is 18 m. from Cardiff, and stands on the Cynon, a tributary of the Taff. It is served by the G.W. Rly. The urban district includes several mining villages, among them Mountain Ash itself, Abercynon, and Cwmpennar, that became populous with the development of the coal mines in the 19th century. Pop. 43,292.

MOUNTAINEERING. Sport of climbing mountains. Early mountaineering expeditions were for the most part sporadic outbursts of individual enterprise, of which perhaps the most notable is a considerable ascent in the Moote Rosa region, because connected with the name of Leonardo da Vinci.

During the first fifty years of the 19th century several notable peaks had been conquered, and the ascent of Mt. Blanc became finally popularised by Albert Smith's ascent in 1851 and its advertisement. Then, with the climbing of the Wetterhorn by Alfred Wills, in 1854, came the birth of modern mountaineering, mountain climbing for the love of the sport. This was at first confined to the Alps, the Alpine Club being founded in 1857. From about 1870 mountaineering enterprise, aided by the spread of civilization and the increased facility of travel, has extended to the most remote of the world's high lands. Some of the most notable of these exploits have been: in Europe, the opening of a new playground in Norway, and several ascents in the Caucasus; in Asia, the exploration of the Karakoram range, and other Himalayan expeditions, notably the assaults on Mt. Everest in 1922 and 1924 and visits to the distant Altai: in America there have been numerous ascents in the Rockies from end to end, and also in the northern and southern Andes; in Africa, Kenya, Kilimanjaro, and Ruwenzori have been conquered, and excellent work has been accomplished in New Zealand and Japan. See Everest; Karakoram; etc.

Mountain laurel in full foliage

MOUNTAIN LAUREL (*Umbellularia californica*). Californian sassafras, or spice bush. A tall evergreen tree of the order Laurinaeae, and a native of California, its alternate, lance-shaped leaves emit a strong odour like camphor. The greenish-yellow flowers are clustered in umbels. The name mountain laurel is sometimes applied to *Kalmia latifolia*.

MOUNTBATTEN. Name taken in 1917 by the English members of the family of Battenberg, i.e. the descendants of Prince and Princess Henry of Battenberg, and of Prince Louis of Battenberg, created marquis of Milford Haven (q.v.). See Battenberg.

MOUNT GAMBIER. Town in S. Australia. It is situated near the Victorian border, 305 m. by rly. S.E. of Adelaide. Its volcanic soil makes it a rich grain producer. Pop. 3,952.

Mt. Gambier is an extinct volcano of which much of the original crater cone has collapsed, leaving its S. portion as the present summit. Valley, Blue, Crater, and Leg of Mutton lakes have formed with the hollows; Blue Lake, about 250 ft. deep, is at the foot of vertical cliffs 250 ft. high.

MOUNT GRACE. Ruin about 3½ m. from Northallerton, Yorkshire. It is the remains of a Carthusian priory, regarded as the most perfect of its kind in England. The priory was founded in 1397 and dissolved under Henry VIII.

MOUNTJOY, CHARLES BLOUNT, 5TH BARON (1563-1606). English administrator. Son of James, 6th Baron Mountjoy, he was M.P. for Beeralston, Devonshire, in 1586, and took part in the campaigns in the Netherlands and Brittany, 1586-93. He succeeded the earl of Essex as lord deputy in Ireland, in 1599. He suppressed an insurrection in 1601, and after Elizabeth's death received the submisson of Tyrone. In April, 1603, he put down risings in Cork and the S.E. counties, leaving Ireland in the same year. He was then made earl of Devonshire. The circumstances of his marriage, in 1605, with Lady Penelope Rich, who had long been his mistress, caused considerable scandal. Mountjoy died in London, April 3, 1606.

MOUNT-MELLERAY. Trappist monastery in co. Waterford, Irish Free State. It lies on rising ground, 650 ft. above sea level, about 4 m. N. of Cappoquin, and was founded in 1830, the once wild and bleak mt. slopes having been converted into luxuriant woodland, fertile pastures, and vegetable gardens. The buildings include a chapel, a guest house, and schools. See Trappists.

MOUNTMELICK. Town of Leix (Queen's co.), Irish Free State. It stands on a small stream called the Owenass, with a station on the G. S. Rlys, 6 m. from Maryborough and 50 from Dublin. It is also served by the Grand Canal. It has a trade in agricultural produce. The Society of Friends established a school here in 1796. Pop. 2,279.

MOUNT MORGAN. Town in Queensland. It is 24 m. by rly. S.W. of Rockhampton, and is practically maintained by the mine of this name, which has produced a great deal of gold and copper. Pop. 4,500.

MOUNTS BAY. Inlet on the S. coast of Cornwall. It is a pilchard fishing station, and contains St. Michael's Mount. The bay measures 21 m. across, with Penzance on the W. shore. See Cornwall.

Mouse. 1. House mouse, *Mus musculus*. 2. Harvest mice, *Micromys minutus*. 3. Field mouse, *Mus sylvaticus*

MOUNTSOREL. Town of Leicestershire. It stands on the Soar, 4 m. from Loughborough and 7 from Leicester. The station is Sileby, on the L.M.S. Rly. In the vicinity are extensive granite quarries. The chief buildings are two churches. Pop. 2,596.

MOUNT STEPHEN, GEORGE STEPHEN, 1ST BARON (1829-1921). Canadian financier. Born June 5, 1829, son of William Stephen, of Drifftown, Banffshire, he emigrated to Canada in 1850, and became a cloth manufacturer at

Montreal, ultimately controlling other business undertakings, and becoming president of the St. Paul, Minneapolis and Manitoba Rly., and of the Bank of Montreal. About 1880 he began his association with his cousin, Donald Smith, afterwards Lord Strathcona, and the two carried to completion the C.P.R. Stephen was the first president of the line, resigning his post in 1888. In 1886 he was made a baronet, and in 1891 a baron. He died Nov. 30, 1921, when his title became extinct.

1st Baron Mount Stephen, Canadian financier Russell

MOUNT VERNON. Village of Virginia, U.S.A. Standing on the Potomac river, 15 m. S. of Washington, it was the home of George Washington.

The house in which he resided is a wooden two-storey building occupying an elevated position overlooking the river. It is now public property. A little distance away, on the edge of a wooded ravine, is the tomb containing the remains of George Washington.

Mount Vernon, Virginia. House in which George Washington lived

MOURNE. Mt. range of Northern Ireland. In the S. of co. Down, it extends for 40 m. in a S.W. to N.E. direction. Slieve Donard, the culminating summit, attains 2,796 ft.

MOUSA (Norse, moory isle). Uninhabited islet off the S.E. coast of Mainland, Shetland. Upon a rocky promontory facing the sound, 13 m. S. of Lerwick, stands a broch, the most perfectly preserved of the so-called Pictish towers of Scotland, and scheduled under the Ancient Monuments Protection Acts.

MOUSE. Name popularly applied to many small rodents, but correctly only to the smaller species of the genera *mus*, *apodemus*, and *micromys*. Three species occur in Great Britain, the house mouse, the harvest mouse, and the long-tailed field mouse. The first (*Mus musculus*) is brown in colour, with large ears and long tail, measuring altogether from 4 to 5 ins. in length. The harvest mouse (*Micromys minutus*) is confined in Britain to England and the S. and E. of Scotland. One of the smallest of British mammals and the only one with a prehensile tail, it is bright orange brown on the upper parts and white below. It constructs a nest among the stems of standing corn.

The long-tailed field mouse swarms in the fields, and is one of the most prolific of mammals. It resembles the house mouse, but has a longer tail. See Shrew; Vole.

MOUSEHOLD. Heath or open space, near Norwich. Within the city boundaries, it overlooks it on the N.E. Here in 1540 the insurgents, under Robert Ket, encamped. Cromie has immortalised it in several of his paintings, while it figures in Borrow's writings. The heath is public property.

MOUSTERIAN. Closing period of the lower palaeolithic age in Europe. After the Achenian period the climate varied—the bison, musk-ox, steppe horse, reindeer, and Arctic fox are found—and systematic cave life began. The institution of ceremonial burial identifies the race, especially at Châpelle-aux-Saints in Corrèze and Le Moustier in Dordogne, whence the name. Stations existed from Crayford in the Thames valley eastward to Asia Minor and the Nile valley. See p. 98.

MOVILLE. Town of co. Donegal, Irish Free State. It stands on the W. side of Lough Foyle, 19 m. from Londonderry. It is a port of call and is a pleasure resort. Pop. 941.

Another Moville is in co. Down, Northern Ireland, near Newtownards. Here are remains of the abbey founded by S. Finian.

MOWBRAY, BARON. English title dating from 1283. John, the 4th baron Mowbray, married a wealthy heiress, and their younger son, Thomas, who became the 6th baron, was made earl of Nottingham and duke of Norfolk in 1397. The male line of the Mowbrays died out in 1476, and the estates were divided between the Howards and the Berkeleys. The barony was then in abeyance until 1877, when it was revived for Albert John Stourton, baron Stourton. See Norfolk.

MOYNIHAN, BERKLEY GEORGE ANDREW MOYNIHAN, 1ST BARON (b. 1865). British surgeon. Born at Malta, Oct. 2, 1865, a son of Capt. Andrew Moynihan, V.C., he was educated at the Royal Naval School, and took his medical degrees at London University, studying medicine also at Leeds and Berlin. He practised in Leeds, where he was appointed professor of clinical surgery in the university. Knighted in 1912, he served throughout the Great War with the R.A.M.C., reaching the rank of major general. He has written books on surgery. In 1929 he was made a baron.

Lord Moynihan,
British surgeon
Russell

MOZAMBIQUE. Portuguese colony in East Africa, also known as Portuguese East Africa. It is bounded N by Tanganyika Territory, W. by Lake Nyasa, the Nyasaland Protectorate, Rhodesia and the Transvaal, S. by Natal, and E. by the Indian Ocean. The colony stretches along the coast from Cape Delgado to Delagoa Bay. In 1919 the so-called Kionga Triangle, S. of the Rovuma river, formerly part of German East Africa, was added to Mozambique. From the coastal swamps the land rises gradually to forested hills and the African plateau. Its area is 293,436 sq. m. Pop. 3,800,000.

The colony is divided into two sections—the prov. of Mozambique, administered by the State, and the territory of Manica and Sofala, under the control of the Mozambique Company.

The whole country is extremely rich in tropical products and mineral wealth, and is capable of great economic development. The products include sugar, cotton, copra, rubber, vegetable oils, wax, and ivory. Gold, copper, and silver are among the minerals found. Railway construction is being systematically developed. Among important lines are those from Lourenço Marques to the Transvaal, and from Beira to Rhodesia and the north. Commercial centres include Mozambique, Quilimane, Beira, the chief port and capital of the Mozambique Company's territory, Sofala, Inhambane, and Lourenço Marques.

MOZART, WOLFGANG AMADEUS (CHRYSOSTOM (1756-91). Austrian composer. Born at Salzburg, Jan. 27, 1756, Mozart early displayed musical powers of a remarkable character, and was taken by his father, Leopold Mozart, on several concert tours in Europe.

After his return to Salzburg in 1766 Mozart devoted himself largely to composition, his works including instrumental music, church music, and operas; he also made several short tours in Italy, where some of his operas were produced. For a time he was in the service of the archbishop of Salzburg, but in 1781 he settled in Vienna, where he married. Mozart's operas had already achieved considerable success, but the production of *Idomeneo* at Munich in 1781 definitely placed him in the front rank of opera composers. Then followed his greatest operas, *Le Nozze di Figaro*, 1786; *Don Giovanni*, 1787; and *Die Zauberflöte*, 1791. His last composition was the unfinished Requiem. He died in Vienna, Dec. 5, 1791.

Mozart's musical compositions number 624, and are distinguished by spontaneous and beautiful melodies.

W. A. C. Mozart,
Austrian composer
After J. Lange

MUCILAGE. Aqueous solution of gum. The word properly describes the sticky, viscous liquid rather than that which is clear and transparent. Tragacanth exuded from *Astragalus gummifer*, imported from Smyrna, is the thickest kind, absorbing 50 times its own weight in water when melting, but it is a weak adhesive, and is used chiefly in thickening colours for calico printing, for making pills and ointment, etc. Mucilage is a constituent of many trees and plants. It is also obtained from gluc, gelatin, and dextrin. See Gum.

MUCKROSS ABBEY (Irish, Mucros, peninsula of the pigs). Ruins of a monastery for conventional Franciscans founded in 1440 in co. Kerry, Irish Free State. On the site of an earlier building, and known also as Irrelagh, the abbey was occupied until 1589. It was several times restored, but finally destroyed in 1652. The ruins, with the adjacent house and park, were purchased in 1899 by Lord Ardilaun. See Killarney.

MUCOUS MEMBRANE. Membrane composed of epithelium on a basement layer. It contains mucous glands, and lines the cavities and canals of the body which communicate with the external surface, such as the alimentary canal and bladder. The secretions of mucous membranes are known as mucus.

MUDAR (*Calotropis gigantea*). Evergreen shrub of the order Asclepiadaceae, native of India. The large, opposite leaves are broad

Mudar. Leaves and flowers
of the evergreen shrub

and wedge-shaped. The handsome rose and purple flowers are clustered in umbels. A smaller species (*C. procera*), native of Persia, has white flowers, with a purple spot on each petal. Both plants yield an acrid, milky juice, used, as is the bark of the roots, as a remedy for skin diseases; the inner bark of the younger branches provides a valuable fibre.

MUD FISH. Popular name applied to several species of fish constituting the families ceratodontidae and lepidosirenidae. The name is also given to the sub-class dipneusti or d'pnoi. See Bowfin; Lepidosiren.

MUDIE, CHARLES EDWARD (1818-90). English bookseller. Born in Chelsea, Oct. 18, 1818, in 1840 he started in business as a bookseller in Southampton Row, Bloomsbury,

London, and did also a little publishing, but a development came when he began to lend books on business lines. The idea caught on, and in 1852 he moved Mudie's select library, as he called it, into New Oxford Street. He died Oct. 28, 1890. The business, soon known in every part of the land, became a limited company in 1864. In 1930 the headquarters were moved to Kingsway, London, W.C.

MUDROS. Town and bay on the coast of the Greek island of Lemnos, in the Aegean Sea. During the Great War its port became the chief naval base for the Dardanelles operations, and was used as a military base for the campaign in Gallipoli. The armistice between the Allies and Turkey was signed here, Oct. 30, 1918.

MUEZZIN (Arab. mu'adhhdin, one who calls to prayer). Official in a mosque who proclaims the times of prayer. In the Mahomedan day there are five times for prayer—dawn, noon, 4 p.m., sunset, and midnight. The call is sounded from the minaret. Appointed by the imam of the mosque, the muezzin is, by virtue of his office entitled to a place in Paradise.

MUGWORT (*Artemisia vulgaris*). Perennial herb of the order Compositae, native of Europe, Asia, and N. Africa. It has erect, reddish, grooved, and branching stems. The alternate broad leaves are deeply cut into long-pointed segments, and the lower surface is white and silky. The small reddish-yellow flower-buds form slender sprays.

MUGWUMP. Political nickname. Derived from an American Indian word meaning great chief, it is applied in the U.S.A. to independent voters who do not support the programme of any party.

MUIRKIRK. Parish of Ayrshire, Scotland. It stands on the river Ayr, 26 m. from Ayr, and is served by the L.N.S. Rly. The chief industries are coal and ironstone mining and iron works, to the development of which the place owes its growth. Pop. 4,726.

MUKDEN or **MOUKDEN**. City of China, capital of Manchuria and of Liau-tung (Sheng King) province. Mukden is the cradle of the Manchu dynasty, which reigned over China for 268 years. The circuit of the town walls is 10 m., with an inner wall of 3 m. containing the palace and government buildings. The town was opened to foreign trade by agreement with the U.S.A. in 1903. It is served by the Peking-Mukden Rly., and by the South Manchuria Rly. Pop. 250,000.

BATTLE OF MUKDEN. This took place between the Russians and the Japanese, Feb. 20-March 10, 1905. Strengthened by the army that had just captured Port Arthur, Oyama proceeded to execute his plan for breaking the Russian front, which stretched for 60 m. and was defended by 300,000 men.

On Feb. 27 Oyama began to develop his full plan. The Russians fought well, and the Japanese losses during some days of constant fighting were terribly high, but the danger to the Russian communications made a retreat inevitable. This took the form of a series of rearguard actions, and soon the Russians became demoralised. Mukden was evacuated by March 10, and battle and pursuit were soon over. The Russians lost 26,500 killed and 40,000 prisoners; the Japanese lost 41,000 killed and wounded.

MULATTO (Sp. mulato, young mule). Half-breed, especially the offspring—and their descendants—of parents whereof one is of white, the other of a negro race. The hair is usually negroid, the colour intermediate. The offspring of a mulatto and a white is a quadroon (one-fourth black); of a quadroon and a white an octoroon (one-eighth black). See Negro.

MULBERRY (*Morus*) Trees and shrubs of the order Moraceae, natives of the N. temperate regions. There are ten species, all

Mulberry, the fruit

having heart-shaped leaves with toothed edges and inconspicuous greenish-white unisexual flowers, produced in spikes and wind-fertilised. The compound fruit, somewhat similar in form to that of the raspberry, is due to the coalescence of all the fruits from a spike of female flowers. The black or common mulberry (*M. nigra*), a native of the Orient, was introduced to Britain in 1548, and the white mulberry (*M. alba*), a native of China, in 1596. Both are grown for the leaves, which are used for silkworm culture.

MULE. Name strictly applying to a hybrid between a male ass and a mare. All the various members of the horse family, including asses, zebras, and quaggas, will interbreed, and in its broad sense the term mule is applied to all the resulting offspring. Almost all these hybrids are sterile, but a few cases of fertility among them have been recorded. In order to secure size, mules are usually bred from the Poitou and Spanish jack-asses, which are of exceptional height and are kept almost exclusively for this purpose. Mules are useful animals for draught and pack work, especially in mountainous and difficult country, being much harder than horses. The name is also given to a machine used for spinning. It was invented by Samuel Crompton and improved by Richard Roberts.

Mule. Specimen bred from a Catalonian jack-ass and an English mare. W. S. Derridge, F.Z.S.

MULHOUSE (Ger. *Mülhausen*). Town of France, in Alsace. It stands on the Ill, 56 m. S.W. of Strasbourg, and is a centre of the cotton manufacture. There is also a trade in wine and timber, which are sent along the Ill to the Rhine. The town has a medieval town hall, but few other memorials of its long history. Made a free city in 1198, it was long a little republic leagued with Switzerland, but in 1797 it was united with France. From 1871 to 1918 it was German. The French entered it during the Great War, but were soon driven out. Just outside Mulhouse is a town for working men built by J. H. Dollfus. Pop. 99,892.

MULL. Island of the Inner Hebrides, in Argyllshire. It is 7 m. W. of Oban and separated from the mainland by the firth of Lorne and the Sound of Mull. It has a mountainous surface (Ben More, 3,169 ft.) and a rugged coast, fringed on the W. with smaller islands. Tobermory is the chief town. The area is about 367 sq. m. Pop. 3,389.

MULLAH or **MOLLAH**. Mahomedan term for a teacher or scholar, particularly one learned in civil and ecclesiastical law. It is also applied to a mosque officer, and in India is the usual term for a Mahomedan school-master. The influence and fanaticism of the so-called mad Mullahs have caused serious disturbances in India and Somaliland. The raids by the leader of the rebel dervishes in the latter country caused punitive expeditions to be undertaken by the British, 1901-5. See Somaliland.

MULLEIN (*Verbascum thapsus*). Biennial herb of the order Scrophulariaceae, native of Europe and N. and W. Asia. The first year it forms a cluster of large, oval, lance-shaped, very woolly leaves from 1 ft. to 18 ins. long. The second year a stout, woolly, leafy stem 3 ft. high is sent up, ending in a long spike of yellow flowers. Formerly the wool from leaves and stem was utilised for lamp wicks. The common mullein is sometimes called Aaron's rod (q.v.).

MULLET. Name applied generally to the numerous species comprised in two unrelated genera of marine food fishes. The red mullets (*Mullus*), of which there are about 40 species, are represented in Great Britain by the common red mullet of the markets. Grey mullets (*Mugil*) include about 70 species, of which three occur in the British seas. They are found largely in the brackish water of river estuaries, and are important food fishes.

Mullet. Specimen of Red Mullet, *mullus barbatus*

MULLINGAR. County town of co. Westmeath, Irish Free State. It stands on the Brosna river and the Royal Canal, 50 m. from Dublin. It has a station on the Gt. Southern Rlys., on which system it is a junction. The buildings include the Roman Catholic cathedral for the diocese of Meath and those erected for county business. There is a trade in agricultural produce and a few manufactures, while important horse and cattle fairs are held. Pop. 5,293.

MULLION. In architecture, the vertical division between the lights of a window. It originated with the reduction in width of the solid pier or piers between coupled lancet windows, and is mainly a development of late Gothic building. The traditional mullion of the 15th century is a splayed or moulded shaft, but with the spreading of Renaissance influences this gave place to a rectangular shaft scrolled with a floriated or arabesque design, as seen in the Tudor mullion. In pure Renaissance work the mullion disappears. See illus. under Gothic Architecture.

MULLION. Village of Cornwall. It stands on Mount's Bay, 5 m. from Lizard Head and 7 m. from Helston. It has an old church, S. Melan's, in which are some interesting carved bench ends. Mullion Cove, or Porthmullion, is a fine cove, which can be reached by road from Helston. Pop. 951.

MULREADY, **WILLIAM** (1786-1863). British painter. Born at Ennis, April 1, 1786, he came to London in 1792, and entered the R.A. schools in 1800. He painted mainly genre pictures in the style of the Dutch masters, but later developed a more personal manner. He died July 7, 1863. Mulready designed the first penny postage envelope, issued in 1840, and illustrated books for children.

MUMBLES. District of Glamorganshire, Wales. The name is applied to the watering place of Oystermouth and the surrounding district, on the W. shore of Swansea Bay. Mumbles Head juts into the western end of the bay. It includes two small islands, on one of which is a lighthouse.

MUMBO JUMBO. Name of a spirit worshipped by the Mandingos of W. Africa. In a wider sense the term is applied to any object of irrational superstition.

MUMMY (*mumiya*, Arab. *bitumen*). Dead body embalmed with preservative substances in preparation for burial. The earliest attempt at mummification yet found came from a Hind-dynasty tomb at Sakkara; the earliest mummy enswathed in bandages smeared with resinous paste from a Vth-dynasty tomb at Medum. In the course of

centuries other substances were employed, including bitumen, caustic soda, balsams, spices, honey, and drugs. By the XXist dynasty, after 1100 B.C., the process involved incision of the left flank with a flint knife for removing the viscera, extraction of the brain, usually through the nostrils with bronze hooks, and stuffing of the cavities with packing materials. Each limb and digit was separately swathed in mummy-cloth, consisting of linen bandages sometimes fringed, and often inscribed. An outer sheet 8 ft. by 4 ft. lay over all. Mummification was applied also to sacred animals. In 1881 and 1898 there were recovered at Thebes hoards of royal mummies.

MUMPS or **EPIDEMIC PAROTITIS**. Acute infectious disease. The micro-organism responsible has not yet been isolated. It is most frequent in childhood and adolescence. The incubation period is from two to three weeks.

The onset is marked by fever, pain is felt below the ear, and within 48 hours there is marked swelling of the neck and cheek. After a week or ten days the swelling subsides and recovery is rapid, but risk remains of conveying the disease to others for several weeks longer. Treatment consists in keeping the patient in bed with light diet and attention to the bowels. Pain may be relieved by applying compresses.

MUNCHAUSEN or **MÜNCHHAUSEN**, **KARL FRIEDRICH HIERONYMUS, BARON VON** (1720-97). German adventurer. Born at Bodenwerder, in Hanover, May 11, 1720, he was engaged as a cavalry officer in Russian campaigns against the Turks, and died Feb. 22, 1797. A collection of the stories attributed to him was first published in English under the title of Baron Munchausen's Narrative of his Marvellous Travels and Campaigns in Russia, 1785. Later editions contain matter stolen from Lucian's True History and stories designed to ridicule Montgolfier's balloon ascents, Bruce's African explorations, and other events.

Mundesley. Watering place of Norfolk. It is 7 m. from Cromer, with a station on the L.M.S. and L.N.E. joint rly. Pop. 1,161.

Mungo (c. 518-603). Scottish saint, also known as S. Kentigern (q.v.). It comes from two Gaelic words meaning dear one.

MUNICH (Ger. *München*, from Lat. *Forum monachorum*, monks' market). City of Bavaria, capital of the republic. It stands on an elevated plain on the Isar, 25 m. N. of the Bavarian Alps. Brewing is the chief industry. There are iron foundries and machine shops, and manufactures of agricultural implements, leather ware, rubber goods, chemicals, and dyes and colours. Other industries are mainly in the applied arts.

Mummy. Embalmed bodies of adult and child, about 3,000 years old, from an Egyptian rock tomb

Among the numerous open spaces are the English Garden, the Königsplatz, and the Maximiliansplatz. The church of S. Peter dates from the 12th century. The cathedral, built 1468-88, is a Gothic building of brick with a lofty vaulted roof and twin towers

crowned by wooden cupolas, 318 ft. high. It contains a monument, erected in 1622, to the emperor Louis the Bavarian. Other notable churches are S. Michael's, 1583-97, and the basilica of S. Boniface, 1850.

The old town hall of the 14th century contains a fine hall; near is the new town hall, a large Gothic pile. Other important buildings are the courts of justice; the university, removed from Landshut in 1826; the national library, containing over 1,100,000 volumes and a rich collection of MSS.; and the national theatre. There is a technical high school.

Its rich art collections are the glory

of Munich. The Glyptothek or sculpture gallery contains the restored pediment groups from the temple of Aegina, the Apollo of Tenea, the Barberini Faun, and much Egyptian, Greek, Roman, and modern sculpture. The old

picture gallery is rich in Dutch and Flemish masters, especially Rubens. The new picture gallery and the Schack gallery contain collections of modern paintings. The Bavarian national museum is a storehouse of the arts of Germany from prehistoric to modern times. Pop. 680,704. See Bavaria; Eisner, Kurt; also illus. p. 23.

MUNITIONS, MINISTRY OF. British government department. It was established June 9, 1915, to expedite and control the production of munitions of war. It continued in existence until Mar. 31, 1921. The minister—the first appointed being D. Lloyd George—ranked as a secretary of state, was a member of the cabinet, and received a salary of £5,000.

MUNKACSY, MICHAEL (1844-1900). Hungarian painter. Born at Munkacsvo, his real name was Lieb, and his youth was spent in extreme poverty. He studied at the Art Society in Pest and later made his way to Vienna, Munich, and Düsseldorf, where he painted *The Last Days of a Condemned Prisoner*, which was greatly admired. In 1872 he settled in Paris, where his picture *Milton dictating Paradise Lost* won a medal in 1878. After a brilliant career he became insane and died at Emdenich, Germany, May 1, 1900. He is best known for his immense religious pictures, *Christ before Pilate*, and the *Crucifixion*, sold for more than £30,000 each, and by his *Eccc Homo*. Pron. Moonkachy.

MUNNINGS, ALFRED JOHN (b. 1878). British painter. Born in Suffolk, Oct. 8, 1878, he was educated at Framlingham College and then studied art at the Art School, Norwich, and in Paris. In 1898 he first exhibited at the Academy, and soon made a reputation as a painter of horses. Of his pictures *Epsom Downs: City and Suburban Day*, is in the Tate Gallery. Changing Horses received the gold medal of the Paris Salon. During the Great War Munnings was attached to the Canadian cavalry. He was elected A.R.A. in 1919 and R.A. in 1925.

MUNRO, NEIL (b. 1864). Scottish novelist. Born at Inveraray, June 3, 1864, he engaged in journalism, and attracted wide attention by his stories, *The Lost Pibroch*, 1896. Among his other tales and novels, which deal for the most part with Scottish life, especially in the West Highlands, are *John Splendid*, 1898; *Gilian, the Dreamer*, 1899; *Doom Castle*, 1901;

The Daft Days, 1907; *Fancy Farm*, 1910; and *The New Road*, 1914, a tale of General Wade's men after the '45. He became editor of *The Glasgow Evening News* in 1918.

Munich. Bavarian National Museum. Above, the Town Hall, built in Gothic style

dependent kings existed until the 12th century.

The Royal Munster Fusiliers, numbered the 101st and 104th of the line, was a regiment of the British army until disbanded in 1922. It originated in India, as a force in the service of the E. India Co.

MÜNSTER. Town of Westphalia, Prussia. It is 78 m. N.N.E. of Cologne on the Aa and the Dortmund-Ems canal. The 13th century cathedral, the 14th century Gothic churches of S. Lambert and Our Lady, and the 12th to 14th century church of S. Ludger are among the chief ecclesiastical buildings. The peace of Westphalia was signed in 1648 in the Friedenssaal (peace chamber) in the 14th century Gothic town hall. The castle was formerly the residence of the prince bishop. The town has some quaint gabled houses. The university was reorganized in 1902. Pop. 106,418.

MURANO. Island and town in the Venetian lagoon, Italy. It is 1½ m. N.E. of Venice, forming a suburb of that city. The island, 5 m. in circuit, once thickly populated, is now largely occupied by vineyards. It has a cathedral with richly inlaid pavement, and other churches with valuable pictures. The museum is rich in examples of glass work, for which Murano has been celebrated from the 13th century. Pop. 6,000.

MURAT, JOACHIM (1767-1815). French soldier. Born March 25, 1767, son of an innkeeper, he became a soldier in 1787. In 1795 he attracted the attention of Napoleon. Accompanying Napoleon to Italy and then to Egypt, he distinguished himself at the battle of the Pyramids, 1798, and was given command of the cavalry in the Syrian campaign, being largely responsible for the victory of Abukir. Returning to France, he was active in promoting the consulate, and in 1800 married Caroline Bonaparte, the consul's youngest sister.

During the next few years he saw much active service under Napoleon. In 1808 Murat was sent to Spain, but after two months was made king of Naples. He was given command of the cavalry in the campaign of 1812, where he took part in every action of importance. On Napoleon's escape from Elba he offered his service to his old master, and declared war on Austria. Marching N., he was severely defeated, and he fled to Naples, and thence to Cannes, where he organized an expedition against the Bourbons. With 200 men he landed in Calabria, at Pizzo, where he himself was taken prisoner. He was tried by court martial, and on Oct. 13, 1815, was shot.

MURCHISON. River of Western Australia. It rises in the Carnarvon Range and flows S.W.

to Cantheaume Bay. It gives its name to a goldfield and to a county.

MURCHISON, SIR RODERICK IMPEY (1792-1871). British geologist. Born at Tarradale, Ross-shire, Feb. 19, 1792, he entered the army and served in the Peninsular War. In 1826 he was elected F.R.S., and he carried out a number of geological tours. He re-classified the Palaeozoic rocks, and in 1835 suggested the name Silurian. In 1838 he published his famous work *The Silurian System*. In 1855 he was appointed director-general of geological survey, and was president of the Geographical Society for many years. He was knighted in 1846, made a K.C.B. in 1863, and a baronet in 1866. He died Oct. 22, 1871.

MURCIA (Arab. Medinat Mursiya). City of Spain, capital of the prov. of Murcia. It stands on the Segura river, 25 m. W. of the Mediterranean and 50 m. by rly. N.N.W. of Cartagena. In the centre of the beautiful Huerta (garden) of Murcia, the older parts are crowded, but the new are well built, with fine streets, avenues and squares. The cathedral dates from 1388. The bishop's palace is notable. Murcia is the seat of a university. Pop. 154,705. For a short time (1223-43) there was a Moorish kingdom of Murcia.

MURDER. In English law, the unlawful killing of any human being, with malice aforethought, either express or implied. Unlawful killing means killing without legal justification, as, for example, is possessed by a person who slays someone who is trying to kill him: by the public executioner: by a constable who slays a rioter.

Further, there is what is sometimes popularly called constructive murder, which happens when a man who has no intention to kill does kill when he is in process of doing another felonious act. Death must take place within a year and a day of the wounding for a murder charge to be brought in England. By English law the judge who tries an alleged murderer must, if there is a conviction, pronounce the legal sentence of death. See Homicide; Manslaughter.

MURGER, HENRI (1822-61). French novelist. Born in Paris, March 24, 1822, he was of German origin. In his youth he passed from one occupation to another, including journalism, until he became famous in 1848 with his *Scènes de la Vie de Bohème*. In this he describes with rich humour and poignant pathos the literary and artistic underworld of Paris, in which much of his own life was spent. He contributed to the *Revue des deux Mondes* and wrote other novels, including *Les Buveurs d'Eau* and *Le Sabot Rouge*, also poems and plays. His *Vie de Bohème* was dramatised with success. He died Jan. 28 1861.

MURILLO, BARTOLOMÉ ESTEBAN (1617-82). Spanish painter. Born at Seville, Dec. 31, 1617, he was related to the painter Juan del Castillo, to whose care and instruction he was committed. On Castillo's removal to Cadiz, Murillo was compelled to join the numerous street artists who hawked their wares at the weekly fair in Seville. Having obtained a little money, he went to Madrid, where he was kindly received by Velasquez. Having returned to Seville, he was commissioned by the friars of the Franciscan convent to paint a series of 11 pictures for their cloister, and began this work in 1646. A series of paintings esteemed among his most celebrated works was begun in 1671 for the church of the Hospital of La Caridad; and three years later he began a famous series

Joachim Murat, French soldier. After Gérard

B. E. Murillo, Spanish painter. Self-portrait in Earl Spencer's collection

for the Franciscan convent outside Seville. He died at Seville, April 3, 1682.

Murillo excelled in genre, and his realistic scenes from low life are preferred by many to his religious pictures, which are sometimes spoilt by false sentiment and lack of dignity. There are examples in the National Gallery, the Dulwich Gallery, and the Wallace Collection. See illus. p. 84.

MURMAN. Name of the N. coast of the Kola Peninsula. It stretches from the Kola Inlet, on the N.W., to the W. side of the mouth of the White Sea, Arctic Ocean, on the S.E., and is about 200 m. in length. The town of Murmansk, at the head of the Kola Inlet, came into existence in 1915 as the Arctic terminus of the Murman Rly., which reaches the Leningrad-Vologda Rly. about 75 m. E. of Leningrad. See Kola.

During the Great War the Allies and America determined in the spring of 1918 to protect and occupy part of the Murman Rly. Accordingly in Feb.-March, 1918, the British effected a naval landing at Murmansk, and at Pechenga, about 100 m. farther W. But it was not till June that British, French, and American troops, in considerable numbers, occupied the port of Murmansk and the adjacent country, including Alexandrovsk. During 1919 the Bolsheviks were repeatedly defeated. Having achieved its object, the British force was withdrawn from the Murman area towards the end of that year. See Archangel.

MURRAY. River of Australia. It rises in the Australian Alps and forms the boundary between New South Wales and Victoria for 1,200 of its total length of 1,250 m. It flows into S. Australia, debouching through the shallow Lake Alexandrina. The river Murray irrigation scheme supplies an area of about 400,000 acres. A weir at Torrumbarry raises the summer level of the river by 16 feet. The Hume reservoir, under construction at the junction of the Murray and Mitta rivers, will provide a total storage capacity of 2,000,000 acre-feet.

MURRAY, GEORGE GILBERT AIMÉ (b. 1806). British scholar. Born at Sydney, N.S.W., Jan. 2, 1806, in 1838 he became fellow of New College, Oxford. He was professor of Greek at Glasgow 1889-99, and in 1908 became regius professor of Greek at Oxford. Author of a History of Ancient Greek Literature, 1897; and Four Stages in Greek Religion, 1912, he is best known by his verse translations of Greek plays, produced for the most part at the Court Theatre, London, 1902-7. He is also a keen liberal and an advocate of the League of Nations. He wrote Liberalism and the Empire, 1900.

MURRAY, SIR JAMES AUGUSTUS HENRY (1837-1915). British lexicographer. Born at Denholm, Roxburghshire, he was a master at Mill Hill School 1870-85. Murray undertook the preparation of a dictionary on historical principles, founded mainly on the materials collected by the Philological Society, as stated on the title-page of the first volume, published in 1888. The work was begun at Mill Hill, but was continued at Oxford, where the Clarendon Press undertook its publication. He was knighted in 1908, and died at Oxford, July 26, 1915. In 1928 the completion of the Dictionary was celebrated. Consult Memoir, H. Bradley, 1919.

Sir J. A. H. Murray,
British lexicographer
Elliott & Fry

MURRAY, JOHN. Name of a firm of British publishers. It was established at 32, Fleet Street, London, in 1768, by John Mac-Murray (1745-93), who dropped his prefix. His son, John Murray II (1778-1843), was London agent for Constable, started The Quarterly

Review in 1809, transferred the business in 1812 to 50 and 50a, Albemarle Street, and published for Byron, Borrow, Crabbe, Jane Austen, and many others. John Murray III (1803-92) carried on the business, and on his death, April 2, 1892, was succeeded by John Murray IV (1851-1928), who was knighted in July, 1926. In 1917 the firm took over the business of Smith, Elder & Co. and The Cornhill Magazine.

MURRAY, SIR JOHN (1841-1914). British biologist and geographer. He was born at Coburg, Ontario, March 3, 1841, was chief naturalist to the Challenger Expedition, 1872-76, and editor of its scientific reports, and also took part in other expeditions. He was the author of a number of books and memoirs on marine biology, oceanography, and limnology. He died March 16, 1914.

MÜRREN. Pleasure resort of Switzerland, in the Bernese Oberland. It is perched on a mountain terrace below the Jungfrau, the Breithorn, the Bühlis Alp, and the Schiltborn, 3 m. S. of Lauterbrunnen.

MURRUMBIDGEE. River of New South Wales. It rises in the Australian Alps, flows N. through the Federal Territory to the artificial lake caused by the Burrinjuck dam, thence almost due W. to its junction with the Lachlan, and, later, S.W. to the Murray. It is 1,350 m. long. The Murrumbidgee irrigation system consists of the Burrinjuck dam, a movable diversion weir at Berrembed, about 240 m. below, together with canals, weirs, and distributing channels.

MUSCARINE. Poisonous alkaloid found in fly agaric (*Agaricus muscarius*) and the fungus *Amanita pantherina*. It has been prepared artificially by the oxidation of chlorine with nitric acid. The name is also applied to blue aniline dye.

MUSCAT, MOSKAT, or MASKAT. Capital and port of Oman, S.E. Arabia, on the S. shore of the Gulf of Oman. It is the residence of a British political agent and consul. It was occupied by the Portuguese from 1508 to the middle of the 17th century, becoming the capital of an independent state again under a native sultan in 1741. Pop., with the neighbouring town of Matrah, about 20,000.

MUSCATEL or MUSCADEL (Ital. moscato). Generic term for wine derived from the parent

vine of the same name. A highly alcoholised, sweet, rich wine, either white or red, it is distinguished by a strong musk flavour. Muscatel wine is made in France, Spain, Italy, Sicily, and elsewhere.

MUSCLE. Tissue possessing power of contraction, by which, in the higher animals, movements are performed. Muscles are divided into voluntary and involuntary muscles, according to whether they are controlled by the will or not. Voluntary muscles are attached to the

bones and are sometimes called skeletal. They consist of masses of fibres, each fibre being about 1 in. in length and 1/500th in. in diameter. Each fibre is surrounded by a sheath, called the sarcolemma, inside which is soft tissue possessing the power of contraction. When a muscle is stimulated by a nerve and contracts, the fibres become shorter and thicker. "Plain" muscle is composed of elongated cells about 1/600th of an in. long, each with an oval nucleus and covered with a delicate sheath.

Muscovy Duck. Tree-nesting duck, found naturally in Central and South America

Muscovite. In mineralogy, name given to a mineral of the mica group. It is one of the commonest varieties of mica (q.v.).

MUSCOVY. Old name for Russia. Derived from Moscow, and meaning the district around that city, it was generally used for Russia until well into the 18th century. See Russia.

MUSCOVY DUCK (*Cairina moschata*). Species of duck native to Central and S. America, but largely introduced elsewhere as an ornamental bird for lakes and parks. They live in the forest swamps, where they nest in the trees, and their food is almost entirely vegetable. The male is larger than the female.

MUSE or MUSAE. In Greek mythology, a divinity who presided over a liberal art. They were supposed to be daughters of Zeus and companions of Apollo. The muses were at first three in number, and nine in later legend.

Their names are: Clio, the muse of history, represented sitting with an open scroll; Euterpe, of lyric poetry, with a flute; Thalia, of comedy and pastoral poetry; Melpomene, of tragedy; Terpsichore, of dancing; Erato, of love songs; Polyhymnia, of sacred song; Urania, of astronomy; and Calliope, of epic poetry, represented with tablet and stylus.

MUSEUM (Gr. mouseion, the seat of the muses). Repository for the preservation and exhibition of objects of natural history, antiquity, science, and art, also applied to the collection itself. Museums are comparatively modern institutions, few going back to the 18th century. The oldest surviving museum established on a sound basis is the Ashmolean Museum at Oxford. Apart from this, the first great and typical museum was the British Museum, founded in 1753.

Museums can be classified in several ways. A very broad difference lies in the bodies maintaining them, as national museums, which are maintained by the state; provincial or municipal museums, maintained out of the rates; museums of a semi-public nature, maintained by universities, societies, and schools; private museums, sometimes open to the public, as the Wellcome Historical Medical Museum, 54, Wigmore St., London, W. Museums may also be classified according to the contents and the ideas underlying their arrangement. They are generally

Muscle. Diagrams showing the distribution of the principal muscles of the body and their mode of action

differentiated into art and science museums, and thence into many varieties. A distinct type of museum is that which illustrates and commemorates the life and work of a person, the museum building being usually the house of the person commemorated, as the Shakespeare museum at Stratford. See Alloway; Asbmole, E.; British Museum.

MUSHROOM (*Psalliota campestris*). Black-spored fungus of the order Agaricaceae. A native of Britain and the temperate portions of Europe, it occurs profusely in pastures where horses have grazed. What is known as the mushroom is only the spore-bearing organ or fruit of the fungus. The cap is white and silky, at first hemispheric, then flat, from 3 to 5 ins. across. The plates or gills, which are at first salmon-pink, become dark umber in colour as the spores ripen.

Mushroom. *Agaricus campestris*, or the common edible mushroom

It appears in nature from May to Dec., but, cultivated in specially prepared beds, it may be obtained at all seasons. The bed is impregnated by pressing in pieces of an old mushroom bed or of the so-called mushroom-spawn sold by nurserymen. These bricks are permeated by the mycelium in a dry and therefore resting condition. Poisoning from mushrooms is due either to these being in a decaying condition, or to the appearance of poisonous species in the bed whose spores were introduced with the manure. See *Agaric*; *Blewits*; *Fungus*.

MUSIC. Sounds in rhythmical, melodic, and harmonic form so combined as to affect the aesthetic emotions. The art of music was slowly evolved from the imitation upon instruments of rhythmic noises allied to vocal inflexions. In all instruments there are three essentials: (1) a force to cause, (2) the vibration of an elastic body, and (3) a resonator by means of which the vibrations are amplified and carried to the ear. In reed instruments, for instance, these are the player's breath, the reed, and the tube; in bowed instruments, the friction of the bow, the string, and the body of the instrument.

Vocal music was a development of speech inflexion with a more sustained tone. The problem of harmony was met by the introduction of polyphony, that is, voices used independently but in agreement—and from the 13th to the 16th centuries musicians were employed in finding effective ways of combining voices. This led to the era of the madrigal (16th to 17th centuries) and the zenith of the fugue form in the early 18th century. Meantime, instruments had been developing rapidly. Viols were perfect by 1550, wind instruments rather less so. The lyre, dulcimer, and harp classes came under mechanical control in the clavichord, spinet, and harpsichord types, with enormously enhanced possibilities. Broken chords, scale passages, and ornaments of all kinds were added to the plainer vocal outlines. Wind instruments gradually found their distinctive uses, the violin family supplanted the gentle viols, and so the orchestra was evolved, a process which can be traced through the scores of Lulli, Purcell, Handel, Bach, Haydn, Mozart, and Beethoven.

A new language for instrumental music was found in the 17th century in the forms of the dances which, combined in sets or suites, gave rise to the sonata form in its various manifestations. This has been the basis of nearly all serious instrumental music until recently. A great factor in this development was the invention of the pianoforte.

For two centuries (1670-1870) European music was dominated by two nationalities—Italian in opera and German in instrumental forms. To-day each country can educate

its own students, and the result is seen in the groups of young composers. The revival of folk-song has been a contributory cause. See *Counterpoint*; *Harmony*.

The Musicians' Company is one of the London livery companies. It originated from a society of minstrels, was first incorporated in 1473, and reconstituted in 1604. It has no hall; the offices are at 33, Walbrook, E.C.4.

MUSICAL BOX. Instrument producing music by mechanical means. Clockwork driven by a spring moves a cylinder from which pins project at proper positions, and strike the ends of steel vibrators tuned to the notes of the scale, the vibrators and the continuous steel plate from which they are cut, and which gives them resonance, forming a sort of graduated comb. Mechanical musical toys were made as early as the 15th century.

MUSIC HALL. Place of amusement licensed for the performance of music, dancing, and varied public entertainment. It is thus distinct from a theatre, primarily intended for the exhibition of stage plays. The first music hall of the modern type was the Canterbury in Westminster Bridge Road, opened 1849. Other famous London music halls were the Empire, Leicester Square, and the Oxford, Oxford Street. The former was opened as a cinema in 1928, after being rebuilt; the latter was pulled down and a restaurant built on the site.

MUSK (*Mimulus moschatus*). Perennial herb of the order Scrophulariaceae. A native of N. America, its juicy underground stems creep extensively in moist soil. The above-ground branches and the thin, opposite, oblong leaves are densely coated with soft clammy hairs which exhale the musky odour to which the name is due. Musk is a favourite pot plant. It requires frequent, copious waterings. Harrison's musk is a larger, cultivated form.

MUSK. Dried secretion from certain glands of the male musk deer. It is used both as a medicine and a perfume. As imported it forms soft, greasy lumps of a red-brown tint, giving out the characteristic strong, peculiar odour. In its natural condition it is probably the most enduring of all odours—so long as the substance remains, the odour suffers no diminution. When newly extracted from the deer, however, it is more repulsive than attractive.

MUSK DEER (*Moschus moschiferus*). Small species of deer found among the mountains of Central Asia. Usually found in pairs, never congregating in herds, it is about 20 ins high. Neither the male nor the female has antlers. The upper canine teeth of the male project as conspicuous tusks. It is much hunted for the valuable musk, secreted by an abdominal gland, and used as an ingredient in many perfumes.

Musk. Leaves and flowers of *Mimulus moschatus*

MUSKET. General term for any form of smoothbore firearm used by a foot soldier. Muskets may be muzzle-loaders or breech-loaders, fired by the percussion system or by a flint, or by the application of a match to powder in the pan. The official manual on shooting is still called musketry regulations.

In Great Britain a school of musketry was established at Hythe, Kent, in 1854. It is now a branch of the Small Arms School at Netheravon, and theoretic instruction is given in the use of the rifle, revolver, and bayonet.

MUSKOKA. Region of great natural beauty in the Lakes Peninsula, Ontario. It contains a river and lake of the same name. From 800 to 1,000 lakes are connected by hundreds of streams, all available for passage by canoe. The river rises in the S.W. corner of Algonquin National Park, and flows S. to Lake Simcoe, through the E. end of Lake Muskoka. The lake is 20 m. long. The region is a summer camping ground.

MUSK OX (*Ovibos moschatus*). Large ruminant mammal. Found in the Arctic regions, it is

placed by zoologists between the sheep and ox. Its flesh is tainted with a musky flavour. It is covered with long, thick, brownish hair, and the horns of the male are wide and flattened on the forehead. Its range is now confined to the extreme N. of America.

Musk Ox. *Ovibos moschatus*, the large North American ruminant
W. S. Berridge, F.Z.S.

MUSQUASH (*Fiber zibethicus*). North American rodent allied to the voles and beaver, found in Alaska and Canada. The head and body together measure about a foot. It affects the margins of lakes and large ponds, where in autumn it amasses great heaps of edible roots, reeds, and sedges, often plastered with mud on the exterior. Its burrows communicate with this store, which is gradually consumed from the centre during the winter. It possesses scent-glands with a strong musky odour. The musquash is trapped extensively for its fur.

Mussel. Duck mussel, *Anadonta anatina*

MUSSEL. Name popularly applied to many bivalve molluscs, both marine and fresh water, but more correctly to the common mussel, *Mytilus edulis*, of the markets. Abundant on the rocks around the British coasts, it is found in great clusters. Seven species of fresh-water mussels occur in Great Britain, one of them—the swan mussel—sometimes attaining a width of over 7 ins. One species is the pearl mussel, which occurs in the mountain streams of the N. and W. Its pearls, however, usually lack the lustre and beauty of the product of the pearl oyster. See *Mollusc*.

MUSSELBURGH. Burgh of Midlothian, Scotland. It stands on the firth of Forth, where the river Esk enters it. It is distant some 6 miles from Edinburgh, of which city it is now practically a suburb,

Musk Deer. Young female of the Central Asian species
W. S. Berridge, F.Z.S.

and is served by the L.N.E.R. Across the Esk is Fishermere, where there is a harbour for the fishing boats. The town has fine golf links. An annual race meeting is held. Pop 17,100. See Loretto School; Pinkie.

MUSSET, ALFRED DE (1810-57). French poet, novelist, and dramatist. Born in Paris, Dec. 11, 1810, he was admitted to the circle of romantics of whom Victor Hugo was the chief. Early in 1830 he published *Contes d'Espagne et d'Italie*, which met with a cordial reception; and the same year his first comedy was produced at the Odéon Theatre, but was not successful. With two short plays published in 1832 his importance as a dramatist was immediately recognized. Two tragi-comedies, *André del Sarto* and *Les Caprices de Marianne*, followed, in 1833, and towards the close of that year he set out with George Sand for Venice. After a few months together they separated, but for Musset this episode was followed by a period of literary activity, marked by the production of some of his finest work. In 1838 de Musset was appointed librarian at the home office in Paris. In 1845 he published his delightful proverb play, and in 1847 had a notable stage success with *Un Caprice*. He died May 2, 1857. See Sand, George.

Alfred de Musset,
French writer

MUSSOLINI, BENITO (b. 1883). Italian statesman. Born July 29, 1883, of humble parents, he became a teacher. In 1902 he went to Switzerland, where his activities as a socialist led to his expulsion in 1904. He then took to journalism, and in 1912 became editor of *Avanti!*, a socialist paper in Milan. In 1914 he urged Italy's participation in the Great War, and when this came about in 1915 he himself went on active service. In 1917 he was wounded.

Benito Mussolini,
Italian statesman
Henri Manuel

On the conclusion of the struggle Mussolini became very active. National conditions were bad and revolutionary ideas were gaining ground, tendencies which he sought to combat by founding, chiefly from among those who had served in the war, the movement called Fascism. This quickly became very strong, and in 1922 declared for a radical change in the methods of government. The result was that on Nov. 1, 1922, Mussolini was appointed prime minister. He took charge also of several departments and became practically dictator of the country. Attempts to overthrow him, even to kill him, failed, and in 1930 his hold on Italy seemed firmer than ever. He carried out a strong foreign policy, and spared no pains to foster home industries, but the price was the abolition of government by ordinary constitutional methods. In 1928 Mussolini published his *Autobiography*, an English translation by R. W. Child appearing.

MUSTANG (Span. *mestrenco*, a strayer). Name applied to the wild horse found on the prairies of Mexico and California. They are believed to be the descendants of horses introduced from Europe by the Spaniards in the 16th century.

MUSTARD (Brassicæ). Annual herbs of the order Cruciferae, natives of Europe, Asia, and N. Africa. There are three British species known as mustards—black mustard (*B. nigra*),

wild mustard or charlock (*B. arvensis*), and white mustard (*B. alba*). These are by some authors separated to constitute the genus *Sinapis*. They are bristly, branching plants from 1 ft. to 3 ft. in height, with variously lobed leaves and yellow flowers, and long, rounded seed pods. The mustard of commerce is a mixture of the seeds of black mustard and white mustard, ground and mixed with wheat flour and coloured with turmeric. In medicine mustard is prescribed as an emetic in cases of poisoning.

MUSWELL BROOK. Town of New South Wales, Australia. A road and rly. junction on the Hunter river, 75 m. by rly. from Newcastle, it is a centre for a rich vine-growing and wine-making district in the valley of the Hunter. Pop. 2,400.

MUSWELL HILL. District of London, in the county of Middlesex. It lies to the N. of Highgate and to the E. of Finchley. It has a station on the L.N.E.R., and in the district is the Alexandra Palace. See Alexandra Palace.

MUT. Egyptian goddess. Forming with her consort Amen-Ra and her son Khonsu the Theban triad, her chief temple lay S. of Karnak. Mistress of the sky, she appears in human form wearing a vulture head-dress and the double crown of Egypt.

MUTSU-HITO (1852-1912). Emperor of Japan. Born at Kyoto, Nov. 3, 1852, he succeeded his father, Osa-hito, in 1867. The country had just been opened up to foreigners, and among the conservative element there was considerable discontent. Mutsu-hito, however, favoured Western ideas. He abolished the shogunate, and in 1869 moved his capital from Kyoto to Yeddo, which he renamed Tokyo. Railways were introduced in 1872, the European calendar came into force, and the study of English became general. The victorious wars with China, 1894, and Russia, 1904-5, strengthened his power, which was consolidated in 1910 by his alliance with Great Britain. He died July 29, 1912. See Japan.

Mutsu-hito,
Emperor of Japan

MUTTON (late Lat. *munto*, sheep). Flesh of sheep. It contains less protein and more fat than beef. The breeds of sheep for mutton production include Lincoln, Leicester, Border Leicester, Scotch blackface, Shropshire, South Devon, and Welsh. Immense quantities of frozen and chilled mutton are imported into Great Britain, especially from New Zealand and Australia.

MUTTRA OR MATHURA. Dist. and town of India in the Agra division, United Provinces. The dist. grows wheat, barley, millet, and gram. The town is an ancient sacred city on the Jumna. The Mosque of Aurangzeb dates from 1660. Area, dist., 1,450 sq. m. Pop. dist., 619,138; town, 52,840.

Mustard. Foliage, flowers, and seed-pods of charlock

order to prevent them, when it becomes necessary, from eating or biting.

The muzzling order is a measure adopted by public authority in various countries to stamp out rabies (q.v.). Dogs are the principal victims, and experience has shown that the best means of extinguishing it is compulsory muzzling within large districts, and the quarantining of all imported dogs, or absolute exclusion.

Muzzle for dogs.
Pattern approved
by Ministry of
Agriculture

MWERU. Lake of Central Africa, W. of Lake Tanganyika. It is 68 m. long and has an average breadth of 24 m. The lake was discovered by Livingstone in 1867.

MYALL. An Australian tree. There are two kinds, one of which resembles the weeping willow. Its wood is much used for making tobacco pipes and handles for whips.

MYCENAE (Gr. *Mykenai*). Ancient Greek city of Argolis in Peloponnesus. It was the centre of the so-called Mycenaean civilization, and the residence and burial place of Agamemnon. In 468 B.C. it was destroyed.

In 1822 the remains of the Cyclopean ring-walls, with the famous Lion Gate, and of a domed building of beehive shape (the so-called Treasury House of Atreus, in reality a tomb), were investigated by French archaeologists. On the acropolis (citadel) Schliemann discovered rock-hewn graves containing gold and silver ornaments, arms, vases, and various utensils. They appear to have been the graves of members of the royal house. Later research brought to light the remains of a royal palace on the acropolis height. Remains of private houses yielded objects of pottery belonging to the late Mycenaean period—the period of the palace, Lion Gate, and domed tombs. See Aegean Civilization.

MYDDELTON, SIR HUGH (c. 1560-1631). English capitalist. Born at Gales Hill, Denbighshire, he came to London as a youth and became a goldsmith and banker in Basinghall Street. In 1609 he contracted with the corporation of London for making a river to supply the city with water from Ware. The New River, as it was called, was opened in 1613, and Myddelton was made a baronet. He died Dec. 10, 1631.

Mycenae. Famous Lion Gate as it is to-day. Over the lintel two heraldic lions guard a sacred pillar

MYELITIS (Gr. *myelos*, marrow). Inflammation of the spinal cord. Acute myelitis may be due to exposure to cold and wet, fracture or injury of the spine, or may be a complication of infectious diseases, such as typhus and smallpox. Paralysis rapidly develops, first in the legs, and in the arms if the upper part of the cord becomes involved. The muscles waste rapidly, and delirium and high fever terminate in death.

MYERS, FREDERIC WILLIAM HENRY (1843-1901). British man of letters. He was born Feb. 6, 1843, at Keswick, and after a brief

period as classical lecturer at Cambridge he became an inspector of schools. Of his poems *The Renewal of Youth*, 1882, is probably his finest effort. In later life he became interested in spiritualistic phenomena, and was an original member of the Society for Psychical Research. The results of his psychic studies are embodied in several publications, notably *Human Personality and its Survival of Bodily Death*, 1903. Myers died Jan. 17, 1901. Before his death he agreed to make every effort to communicate from beyond the grave, and it is claimed that several messages have been received. See *Psychical Research*.

F. W. H. Myers,
British man of letters
Elliott & Fry

MYNN, ALFRED (1807-61). English cricketer. Born at Goudhurst, Kent, Jan. 19, 1807, he joined the Harrietsham, Kent, cricket club in 1825. He played at Lord's in 1832, and became one of the chief cricketers in the country. As a fast round-arm bowler Mynn had no equal. He died Nov. 1, 1861.

MYNYDDISLWYN. Urban dist. of Monmouthshire. It is 8 m. S.W. of Pontypool, and stands on the coalfield, its industries including iron, tinplate, and chemical works. There are quarries in the neighbourhood. Pop. 14,898.

MYOPIA (Gr. *myops*, short-sighted). Short sight. It is an error of refraction most commonly due to abnormal elongation of the eyeball, with the result that parallel rays are brought to a focus in front of the retina, and vision is accordingly indistinct. See *Eye*.

MYRIAPODA. Sub-class of the arthropoda, which includes the centipedes and millipedes. They have long, segmented, cylindrical, or flattened bodies, and each segment is provided with paired limbs. There are a great number of species, distributed over the tropical and temperate regions. Great Britain has several species.

Myriapoda. Common millipede. It has two legs on each body segment
W. S. Berridge, F.Z.S.

MYRMIDONS. In Greek legend, the Thessalian tribe of which Achilles was king. Achilles brought them to Troy, and withdrew them from the fighting when he quarrelled with Agamemnon. Their unqualified devotion to Achilles has caused the term to be used for followers of unquestioning obedience.

MYROBALAN. Name given to the plum-like fruit of certain Indian trees of the genus *Terminalia* and order *Combretaceae*. The fruits are astringent, with bitter kernels. Gathered unripe, they are used in tanning, dyeing, and ink manufacture. Emblic myrobalans are the acid, fleshy fruits of *Phyllanthus emblica*, a tree of the order *Euphorbiaceae*. They are eaten raw, or as a sweetmeat.

MYROBALAN PLUM or **CHERRY PLUM** (*Prunus cerasifera*). Shrub of the natural order *Rosaceae*. Its native country is probably the Caucasus. The branches are not spiny; the leaves are elliptical, the flowers white, and the fruit round and red, with yellow flesh. It is much used for making hedges.

MYRON (5th century B.C.). Greek sculptor. Born at Eleutherae in Boeotia, he was a pupil of Ageladas of Argos. Specially known as a worker in bronze, he chose for his subjects athletes and animals. His chief characteristics

were truthfulness to nature, and active rather than passive representation. His most famous works were the *Discobolus*, *Ladas the Runner*, a *Satyr* (probably *Marsyas*), and a bronze cow. See *Discobolus*; *Greek Art*.

MYRRH. Gum resin obtained from the stem of *Balsamodendron* or *Commiphora myrrha*. Growing in Arabia and Abyssinia, it is used occasionally in medicine to excite the appetite and stimulate the flow of gastric juice. Tincture of myrrh is also used. Myrrh may be a useful constituent of mouth washes and gargles for a relaxed throat. The tree is small, with grey bark, from which the myrrh escapes in yellow oily drops.

Myrrh was used in the East as a perfume, and also for embalming. It was one of the gifts made by the magi to the child Jesus Christ.

MYRTLE (*Myrtus communis*). Evergreen shrub of the order *Myrtaceae*, native of W. Asia, but long naturalised in S. Europe, whence it was introduced to Britain in 1597. It grows to a height of 10 ft., has shining oval opposite leaves, and fragrant white flowers largely used in perfumery. The purple berries also are fragrant; they are sweet and have a strong aromatic flavour.

Myrtle. Foliage and flower spray of the evergreen shrub

Myrtle wreaths were used among the ancients to crown the victors in athletic games. See *Bog Myrtle*.

MYSORE. State of S. India. It is on the Deccan plateau, on the average 2,000 ft. high, with Bombay on the N.W., Coorg on the S.W., and the Madras Presidency elsewhere. High hills, called droogs, rise in isolation from the plain; a ridge across the middle of the state separates the drainage of the Kistna from that of the Cauvery. Much land is irrigated from the Cauvery. Crops include millet, pulse, and rice. Gold is mined, and also manganese. Bangalore is the largest town.

The British took over the administration in 1831, and set up a Hindu maharaja. The ruler has a salute of 21 guns. The area is 29,607 sq. m. Pop. 5,978,892.

Mysore city is situated near the Cauvery, 100 m. S.W. of Bangalore, with which it is connected by rly. It was the capital from early times until 1610. It was then superseded by Seringapatam until 1799, when the court again moved to Mysore. Pop. 83,951.

MYSTERY (Gr. *initiation*). Secret rite. The Greek word *mysteria* denoted rites performed in the presence of persons prepared by gradual initiation, under a bond of secrecy. Their chief centre was at Eleusis (q.v.). A second group spread from Thrace to Lemnos and Boeotian Thebes. These mysteries were concerned with the deified shades called *Cabiri*, and included the ritual slaying of an animal victim. A third group was concerned with Orpheus, and with his veneration Greece associated the refinements of melody and poetry. In these Orphic mysteries the idea of recurrent death and resurrection was symbolised. At the beginning of our era these mysteries were practised throughout the Greco-Roman world by the private members of secret societies, side by side with those of the Persian *Mithras*.

Religious mysteries are a special development of a social institution of widespread occurrence, and arose out of the emotional life of settled agricultural peoples. The main elements—purification, offering, procession, song, dance, drama, secret formula, and

mechanical accessories—are universal. They sometimes occur as modes of admission into general society.

Mystery play was the term given to a type of religious drama in medieval Europe. It was so called either as representing mysteries of the faith, or as being a ministry or craft. The medieval drama was evolved from religious ritual. By the 12th century the clergy and choirs performed dramas in French churches. Thence the dramas were transferred to the churchyards and to open spaces in towns, and when in 1210 the clergy were forbidden to act except in churches, the performances were given by laymen. See *Acting*; *Drama*; *Miracle Play*; *Oberammergau*.

MYSTICISM (Gr. *myein*, to close the eyes). Term used originally in connexion with the Greek mysteries; a mystic was one who had been initiated into the esoteric knowledge of divine things which the mysteries imparted to their converts. In its modern sense a mystic is one who claims the power of immediate approach to God.

The golden age of Christian mysticism falls within the period A.D. 1250-1500. It originated in a Pantheistic society which flourished in the 13th and 14th centuries known as "The Brethren of the Free Spirit." Out of this society came Meister Eckhart, 1260-1329, one of the most remarkable of the German mystics. Gradually, however, mysticism separated itself from Pantheism owing largely to the influence of John Ruysbroek, 1293-1381. But the most influential of the mystics was John Tauler (1290-1361), who brought mysticism into line with orthodox Christianity.

In the 16th century there was a powerful resurgence of mysticism in Roman Catholicism, particularly in Spain. In France mysticism found expression in the writings of Fénelon, Bossuet, Madame Guyon, and in Jansenism. Jacob Boehme was the first great Protestant mystic, and it was from his writings that William Law first introduced mysticism into the English church.

MYTENS, DANIEL (c. 1590-1642). Dutch painter. Born at The Hague, he came to London in 1618, and was made painter to Charles I, 1625. After Van Dyck's arrival he returned to Holland in 1630, and died in 1642. His best works include *Hudson, the Dwarf*, with a dog, in St. James's Palace, Charles Howard, Earl of Nottingham, at Hampton Court, Charles I and Henrietta Maria in Buckingham Palace, London.

MYTHOLOGY. Science which investigates the myths or sacred stories of the various peoples of the world. Of these stories some relate to the Creation, and to divine or superhuman beings, their genealogies, activities, and adventures, whether they are believed to have originated the world, or mankind, or a particular tribe, rank, or family, or to superintend or take part in its government, to be concerned in its well-being, to be hostile to it, or to lead a life of their own more or less apart from mortals. Other stories relate to saints or heroes who have championed mankind or conferred benefits, who have undergone sufferings, made discoveries or inventions, or moulded the earth or its inhabitants into their present form. Many stories are connected with the worship of the gods.

Myths take their rise very low down in culture. As culture advances, one incident after another becomes incredible to the growing intelligence, or repugnant to the more refined manners and morality of the community. Again, the myths deemed derogatory to the divinities are denounced as lies; or they are interpreted as parables. All these methods were tried in Greece.

The modern theory that myths are a disease of language, that seeks their explanation in questionable etymologies and blunders of

meaning, was put forward by German philologists in the 19th century and in England by Max Müller, who laid down "that the best solvent of the old riddles of mythology is to be found in an etymological analysis of the names of gods and goddesses, heroes and heroines." Accordingly, he set himself to investigate and interpret the names.

The time came when people could no longer accept the dogmatism of the philologists. Andrew Lang declared war in a number of essays, culminating in *Myth, Ritual and Religion*, 1887, and the anthropological method, which explains mythology by the universal characteristics of the mental condition of the lower culture, has been accepted by all serious students. Consult *Contributions to the Science of Mythology*, 2 vols., 1897.

N. Fourteenth letter of the English and Latin alphabets, one of the nasal consonants. In the combination ng it has a marked nasal sound in words like king, sing, to some extent comparable with the sound heard in the French *mon*, non. Otherwise it is pronounced as in can, neck. It is mute at the end of words after m, as in column, hymn, solemn. See Alphabet: Phonetics.

NAAS. Urban dist. of co. Kildare, Irish Free State. It stands on the Gt. Southern Rlys. and the Grand Canal, and near the Liffey, 20 m. from Dublin. It was represented in the Irish Parliament. Near is Punchestown (q.v.). Pop. 3,442. Pron. Nace.

NABOB. Title given to the great moguls, viceroys, and generally to native rulers and persons of rank in India. In the 18th century nabob was used in England of one who ostentatiously spent a fortune made in the East. It is a corruption of the Hindustani *nawab*.

NABOTH. Jezreelite who owned a vineyard adjoining the palace of Ahab (q.v.). When he refused to part with it, Jezebel secured it by causing Naboth and his sons to be executed on a false charge of blasphemy (1 Kings 21).

NAEVUS (Lat. birthmark) or **MOLE**. Lesion of the skin present at birth. The term is applied by pathologists to several abnormal conditions of the skin. *Naevus vascularis* is due to overgrowth of the blood vessels of the skin, and forms the condition known popularly as port-wine mark and strawberry mark. Small naevi are of very common occurrence. Naevi should be left alone unless they are increasing or cause disfigurement. Treatment by liquid air, solid carbon dioxide, or radium has been found effective.

Naevus pigmentosus is the pigmented mole. These moles may be single or scattered over the whole body, and may be as small as a pin's head or cover large areas. Sometimes they are covered with long hair.

NAGASAKI. Seaport of Japan. It stands on a fine natural harbour on the west side of Kyushu island, 3 m. from the open sea. It held the monopoly of European trade from the 16th century until 1859, when Japan was opened to foreign trade and towns more centrally situated superseded Nagasaki. The port has connexion by rly. and ocean liner with other Japanese ports. Pop. 189,000.

NAGOYA. City of Japan, in Honshu. It is in the S. of the fertile plain of Mino and Owari, and owes its importance to the Shogun stronghold built in 1610. S. of the city is Nagoya harbour, on the bay of Ise. Silk and cotton are important manufactures, and the city was a pioneer in the clock industry. Atsuta Jingu is the second greatest Shinto shrine in Japan. Almost half-way between Tokyo and Osaka, the city has rly. connexion with these centres. Pop. 768,558. See Japan.

NAGPUR. Capital of the Central Provinces, India. It occupies a central position between the Wardha and Wainganga rivers, in close relation to the great cotton growing area of the Deccan. The importance of the town increased when the direct line from Bombay to Calcutta was made through it. It has several important educational institutions, including a university and an agricultural college. Pop. 145,193.

NAGYVARAD. Town of Rumania, formerly in Hungary. At an earlier date known by the German name Grosswardein, it is also called Oradea. It is almost due E. of Budapest, 160 m. distant by rly., on the main line to Transylvania. Near by are warm springs which were known to the Romans. Pop. 68,081.

NAHUA. Collective name for American Indian tribes which dominated Anahuac, the Mexican tableland, at the time of the Spanish conquest. Their language was called Nahuatl. They dwelt in scattered pueblos, whose rivalry led to the formation of confederacies, whereof the Aztec finally secured the hegemony. See Aztec.

NAHUM. One of the minor prophets. A native of Elkiah, probably in Galilee, he flourished about the 7th cent. B.C. His book consists of predictions of the fall of Nineveh which took place 606 B.C. The reference to the capture of No-Amon (Thebes) by Ashurbanipal, king of Assyria, further shows that it must have been written after 666 B.C.

Naiad or **NALADE.** In Greek mythology, nymphs of rivers, brooks, springs, and fresh water generally. See Nymph.

NAIN. Ancient town in Galilee, 6 m. S.E. of Nazareth, situated on the summit of Little Hermon, or the hill of Moreh. It was the home of a youth whom Christ raised from the dead (Luke 7).

NAIRN. Burgh and watering place of Nairnshire, Scotland; also the county town. It stands where the Nairn falls into the Moray Firth, 15 m. from Inverness, and is served by the L.M.S. Rly. The attractions include good bathing and golf links. It has a good harbour, and the chief industry is fishing. Nairn, known then as Invernairn, was made a royal burgh in the 12th century. Pop. 4,474.

NAIRNE, CAROLINA, BARONESS (1766-1845). Scottish halland writer. Daughter of Laurence Oliphant, she was born at Gask, Perthshire, Aug. 16, 1766, and in 1806 married her second cousin, William, afterwards Baron Nairne (1757-1830). Her beauty and charm won for her the name of The Flower of Strathearn. She wrote nearly 100 songs, some of them adaptations of old favourites, as The Land o' the Leal, Call'er Herrin', and The Laird o' Cockpen. She died at Gask, Oct. 26, 1845.

NAIRNSHIRE. County of Scotland. It has about 10 m. of coastline on the Moray Firth, and the surface rises therefrom towards the S., attaining an alt. of 2,162 ft. in Carn Glas. Its area is 162 sq. m. The chief rivers are the Findhorn and the Nairn. The county is an agricultural area, but much of the land is only suitable for sheep. It is served by the L.M.S. Rly. Nairn is the county town, and in the shire are Cawdor and Kilravock, with their castles, and Auldearn. In 1891

detached portions of Nairnshire were absorbed in the counties of Ross, Inverness, and Moray. In early times Nairn was part of the district called Moray, and it has always had a close association with the shire of that name. It joins with Moray to send a member to Parliament. Pop. 8,790.

NAIROBI. Administrative capital of Kenya, E. Africa. Situated on an elevated plateau, alt. 5,450 ft., it is within easy reach of the Kikuyu highlands. Nairobi is on the Uganda Rly., 327 m. from Mombasa and 257 m. from Kisumu on Lake Victoria. There is a motor road from here across Uganda to Mongalla in the Sudan. In 1899 it was only a rly. settlement, but is now a flourishing centre. Pop. 32,864.

NAMAQUALAND. Country of S.W. Africa, usually called Great Namaqualand. Extending from the Orange River to Damara-land, it is mainly a sterile desert region, and was occupied by the Germans in 1885. In 1927-28 extensive finds of diamonds were made in the district.

Little Namaqualand is a district in the Cape Province. It lies S. of the Orange River, by which it is separated from Great Namaqualand. The Namas or Namaquas, who give their name to this district, are a branch of the Hottentots.

Namur, Belgium. Citadel and bridge over the Meuse, which connects the town with the suburb of Jambes

NAMUR (Flemish, Naemen). City of Belgium, capital of the prov. of Namur. It lies 35 m. by rly. S.E. of Brussels, at the confluence of the Sambre and Meuse, which is crossed by a fine bridge. The disused citadel stands between the two rivers. It is a railway junction. The 18th century cathedral of S. Aubain, in Renaissance style, on the site of an earlier building, contains the heart of Don John of Austria. The church of S. Loup is a good example of the Baroque style. The heltry was rebuilt in the 16th century. There are museums, and above the citadel is a fine park. Pop. 30,570.

In the 19th century Namur was fortified on modern lines by Brialmont, the city being encircled by a ring of detached forts.

These, however, were unable to resist the Germans when Belgium was invaded. Their attack began on Aug. 19th, 1914, and by the 25th the last of the forts had been captured. As the result of heavy fighting the German loss was about 12,000 men.

NANAIMO. Port of British Columbia, Canada, on Vancouver Island. Situated 73 m. from Victoria, it is a station on a branch of the C.P.R. with a good harbour, whence steamers go to Vancouver, Victoria, and elsewhere. Fishing and fish curing are carried on. The town was a post of the Hudson Bay Co. Pop. 9,088.

Nairnshire. Map of the Highland county south of Moray Firth

NANA SAHIB (fl. 1857). Leader in the Indian Mutiny, 1857-58. Born about 1821, he was the adopted son of the last peshwa Baji Rao. Incensed at the British refusal to continue the pension after his father's death, 1853, he fomented discontent in the disaffected parts of India. On the outbreak of the Mutiny he ordered the massacre at Cawnpore (q.v.), and, on its suppression, he fled to the Terai jungles of Nepal, where he is reported to have died.

NANCHANG. Capital of Kiangsi prov., China. It is situated on the Kan river, and was formerly on the Poyang Lake, which has since receded some 30 m. Nanchang is connected by railway with Kiukiang on the Yangtze. Pop. 300,000.

NANCY. City of France. The capital of the dept. of Meurthe-et-Moselle, it stands on the river Meurthe, 220 m. E. of Paris. It is divided into two parts, an old town and a new town. The new town was planned by Charles III, duke of Lorraine, about 1608, when Nancy was the capital of that duchy. The buildings include

the cathedral, dating from the 18th century, the palace of the dukes, used later for state purposes, and the town hall. The churches of S. Epvre, Notre Dame and the Cordeliers are

Nancy. 1. The cathedral. 2. Church of S. Epvre, and part of Place Stanislas in the foreground

notable. The Porte de la Craffe is a picturesque feature, and there is a citadel and some fine old houses. The Place Stanislas is the chief square; on it is an arch built in honour of Louis XIV. There is a university founded in 1572 and a school of forestry. The city is an important railway centre. Pop. 114,500.

There was some fierce fighting around Nancy in Aug. and Sept., 1914. The Germans attacked on Aug. 24th, but after an initial success they were beaten back, and by the 28th the first phase of the battle was over. The second phase began on Sept. 4. Again the Germans gained ground, but in the end this was recovered by the French. On the 12th the German retreat began.

NANKING. Capital of the republic of China. It is situated on the Yangtze, though the walled city lies away from the river, nearly 200 m. from the mouth. Its port is accessible to large steamers all the year round. The circuit of the walls is over 20 m.

The establishments include an arsenal, powder works, and a mint. There are a university, a naval college, and an agricultural experimental station, with a school of forestry. The town is connected by rly. with Shanghai, and Pukow, the port on the opposite bank of the Yangtze, is the terminus of the Tientsin-Pukow Rly. The town gave its name to Nankcen cloth.

Dating from the 5th or 6th cent. B.C., Nanking, the name of which means southern capital, was the capital of China for several periods between A.D. 222 and 501, and again from the accession of the Ming dynasty in 1368, until their removal to Peking in 1403. In 1928 the victorious Nationalists ordered

the capital to be removed from Peking to Nanking. Est. pop. 1,000,000.

NANSEN, FRIDTJOF (1861-1930). Norwegian explorer. Born near Christiania, Oct. 10, 1861. He went to Greenland in 1882 to obtain zoological specimens, and on his return was appointed curator of the natural history museum at Bergen. In 1888-89 he crossed Greenland from E. to W., publishing *The First Crossing of Greenland*, 1890. In 1893 he embarked on the *Fram* (q.v.) on a polar expedition, placed his vessel in the pack ice off the New Siberia Islands, and in 1895 made a dash for the pole, reaching 86° 14' N., the farthest point then reached. In 1895 he wrote *Farthest North* and was made professor of zoology at Christiania (Oslo). There he devoted his time to the study of oceanography, except for two years (1906-08) when he was Norwegian minister in London. After the Great War, during which he went on a mission to the United States, Nansen was in charge of the work of repatriating prisoners of war, and later he did a similar work for refugees in Europe and Asia Minor. In 1921 he undertook relief work in Russia. He died May 13, 1930.

Fridtjof Nansen, Norwegian explorer

NANSHAN. Mt. range of Asia. It comprises parallel ridges between the Gobi desert and the Tsaidam swamp on the N.E. boundary of Tibet. The range alt. 14,000-16,000 ft., has a general direction N.W. and S.E.

There is another range of the same name S. of the Yangtze, running parallel with the coast from Kwangsi to Chekiang prov. Its greatest alt. is 9,500 ft.

BATTLE OF NANSHAN. This was fought between the Russians and the Japanese, May 26, 1904. It was a decided Japanese victory, for they had captured many guns, and were in a position to begin the investment of Port Arthur. See Port Arthur.

NANTES. City of France. The capital of the dept. of Loire-Inférieure, 248 m. S.W. of Paris, it is built on several islands of the Loire, which is joined in the centre of the city by the Erdre. Though 35 m. from the sea, it is a great seaport, a shipbuilding centre, and a naval arsenal. Large steamers come up by the ship canal from St. Nazaire. There are over 11 bridges across the rivers, and the quays extend for 2 m., making handsome promenades. The city is almost entirely modern, the only old street being the Ruc de la Juiverie. The cathedral of S. Pierre (1434) has a fine nave. The castle of the dukes of Brittany, built in the 14th century, has massive towers and a moat. Pop. 184,509.

Nantes. The Exchange, containing the tribunal and chamber of commerce

Nanking, China. Avenue of giant statues, leading to the royal tombs of the Ming dynasty

EDICT OF NANTES. Law issued in 1598 by Henry IV of France, giving liberty of worship to the Huguenots. The edict was revoked by Louis XIV in Oct., 1685, after the Huguenots had been steadily losing their rights under it for some years.

NANTGARW. Village of Glamorgan-shire. In the valley of the Taff, it is 5 m. from Cardiff and gives its name to a variety of china. In 1811 Billingsley, the flower painter, opened a factory here. His Nantgarw pottery is unique, the fine body of even texture being more like glass than china. Pieces are comparatively rare. He decorated some with flowers, but most of his china was decorated by other potters.

NANTWICH. Urban dist. and market town of Cheshire. It stands on the Weaver, 161 m. from London and 4 m. from Crewe, and is served by the G.W. and L.M.S. Rlys. The chief building is the church of S. Mary and S. Nicholas. The town has some old houses. Nantwich is a hunting centre and has a spa. For long it was the centre of the salt industry. Market days Thur. and Sat. Pop. 7,286

NANTYGLO. District of Monmouthshire, England. It is 7 m. W.S.W. of Aber-gavenny, on the G.W.R., and has collieries and ironworks. It forms part of the urban dist. of Nantyglo and Blaenau. Pop. 16,453.

NAOMI. Character in the O.T. book of Ruth. Wife of Elimelech, of Bethlehem-Judah, she lost her husband and two sons in the land of Moab, whither the family had fled through famine. Returning to her native land, her sufferings caused her to say, Call me not Naomi (pleasant): call me Mara (hitter).

NAP OR NAPOLEON. Card game. It is played with a full pack, the cards bearing the same value as in whist. The dealer deals five cards to each player, usually three to five in number, the one on his left having first call. There are calls of two, misère (in which the caller undertakes to lose every trick), three, four, and five, the latter being known as "nap." The player calling the highest leads, and endeavours to make his tricks; he chooses his own trumps, the first card he plays indicating of which suit. If he makes all his tricks he receives a payment according to the number of his call; or, failing, has to pay each player in the same proportion. It is usual for the caller of "nap" when successful, to be paid double stakes.

NAPHTALI. Name of one of the ten northern tribes of Israel, and of its traditional ancestor, the sixth son of Jacob. He was Bilhah's second son. Gen. 30, 7, 8. The tribe was settled in fertile territory W. and N.W. of the Sea of Galilee, and was among the first to be led into captivity (2 Kings, 15; Isaiah, 9).

NAPHTHA. Strictly, liquid bitumen. Properly the term should be confined to, first, the pure and limpid oil yielded by certain wells of the Caspian, the specific gravity of which ranges between 0.700 and 0.850; and, secondly, to one of the products yielded in the distillation of crude petroleum. This latter naphtha, having a specific gravity of about 0.700, is much used for cleaning purposes, including the cleansing of oil wells themselves, for making oil-cloths, and illuminating gas. Naphtha is largely used as a solvent, and is burnt in flare lamps. Introduced into soap, naphtha undoubtedly assists its cleansing properties owing to its affinity for grease. See Petroleum.

NAPHTHALENE. White solid hydrocarbon, with a characteristic smell, one of the products of the dry distillation of coal. Naphthalene is employed for making products needed in the dyeing industry. It is used also for enriching water gas to make it luminous, and for increasing the luminosity of coal gas. Naphthalene is a powerful antiseptic, and preserves woollen goods and furs from moths.

NAPHTHOL, ALPHA AND BETA. Solid hydrocarbons, closely related to the phenols in their chemical properties. Both are powerful antiseptics, and are used as the starting-point in the manufacture of important aniline dyes. Their chemical formula is $C_{10}H_8O$.

NAPIER. Town and port of North Island, New Zealand. The capital of Hawke's Bay district, it has both rly. and steamer communication with Wellington (200 m.) and Auckland (372 m.). Pop. 19,060

NAPIER, BARON. Scottish title. The first holder was Sir Archibald Napier (1576-1645), 9th baron Merchiston, who gained celebrity in Scotland for his agricultural experiments. In 1623 he became a lord of session, and in 1627 was created baron Napier of Merchiston. His son, Archibald, the 3rd baron, died unmarried in 1683, when his nephew, Thomas Nicolson, succeeded to the title. The next holder was the 3rd lord's sister, Margaret, from whom it descended to her grandson Francis Scott, who took the name of Napier. The title is still held by his descendant, Baron Napier and Ettrick

NAPIER OF MAGDALA, ROBERT CORNELIUS NAPIER, 1ST BARON (1810-90). British soldier. Born at Colombo, Ceylon. Dec. 6, 1810, he

Baron Napier of Magdala, British soldier

entered the Bengal Engineers in 1826, and became chief engineer of the Punjab in 1849. His most notable military service was his conduct of the campaign in Abyssinia, 1868, which brought him a peerage. From 1870-76 Napier was commander-in-chief in India. He died Jan. 14, 1890.

NAPIER, JOHN (1550-1617). Scottish mathematician. Born at Merchiston Castle, near Edinburgh, his first mathematical work, *De Arte Logistica*, suggested that he had discovered a method of solving equations of the second and higher degrees. About 1594 he began to lay the foundations of logarithms, upon which he worked for the next twenty years. In connexion with them he suggested the present notation for decimals. His tables of logarithms were published in 1614. He died April 4, 1617.

NAPIER, SIR WILLIAM FRANCIS PATRICK (1785-1860). British soldier and historian. A son of George Napier, he was born Dec. 17, 1785. He entered the army in 1800, and in the 43rd regiment served at the siege of Copenhagen, 1807, before proceeding to Spain, where he was present at Corunna. In 1813-14 he was in command of his regiment, which formed part of the Light Brigade. Knighted in 1848, he was promoted general in 1859, and died Feb. 10, 1860. His *History of the Peninsular War* was begun in 1823, and the six volumes appeared between 1828 and 1840.

Napier's brother, Sir Charles James Napier (1782-1853), was also a soldier. He was at Corunna, and from 1841 to 1851 was in India, where he conquered Sind. He was then made governor of Sind, and from 1848-51 was commander-in-chief. He died Aug. 29, 1853.

NAPLES. City and port of Italy. Stretching along the N. side of the Bay of Naples, it is one of the most beautifully situated cities in Europe. The Museo Nazionale,

Naples. The city, with Vesuvius across the famous bay, viewed from the Castle of S. Elmo

formerly the seat of the university, houses the Farnese and other collections, including relics from the excavations at Pompeii, Herculaneum and elsewhere. The cathedral dates from 1272. There are interesting catacombs of the 1st century behind S. Gennaro.

Naples is an important manufacturing centre, making ships, motor cars, locomotives, glass, cotton, wool, gloves, perfumes, linen, and silk. The exports include wine, brandy, fruits, paper, hemp, and olive oil. The harbour is well protected and has good dock and warehouse accommodation. Pop. 966,423

THE KINGDOM OF NAPLES. Naples was also the capital of a kingdom which existed 1138-1860. It was conquered by Roger, king of Sicily, in 1130 and the two were henceforward united.

The Norman kingdom of Naples and Sicily, which included all S. Italy, passed through Constance, the Norman heiress, to the Hohenstaufen line and then to the Angevins. Alfonso V, king of Aragon and Sicily, seized the kingdom in 1435, and was acknowledged king of the Two Sicilies, as the kingdom was called, in 1443. Following a period of French rule, after the battle of the Garigliano, 1503, Naples became a Spanish province.

By the war of the Spanish Succession Naples passed to the Austrian Emperor, Charles VI, in 1713. But during the war of the Polish Succession, Don Carlos, second son of the Bourbon Philip of Spain, invaded the Two Sicilies, and in 1738 was recognized as king Charles III. Under the Spanish Bourbons, Naples remained in a state of medieval barbarism. Napoleon turned out the Bourbons in 1806, and made first his brother Joseph, and then his general, Joachim Murat, king of the Two Sicilies, 1808, but Murat was forced to flee, May, 1815, and the Bourbons were restored.

At length the emancipation of Italy put an end to Bourbon misgovernment, and the people of Naples and Sicily voted themselves a part of the Sardinian kingdom, Oct. 21, 1860.

NAPOLEON. French gold coin. It was first issued by the great emperor, hence its name. Its value was 20 francs, nominally 15s. 10d., and its weight 6.45 grammes. It is now obsolete.

NAPOLEON I. Emperor of the French. Born at Ajaccio, Aug. 15, 1769, the second surviving son of Charles and Letizia Bonaparte, Napoleon came of an Italian stock. Sent to school at Brienne, in 1785 he became lieutenant in an artillery regiment. Eponing the French republican cause, he came to the fore at the siege of royalist Toulon in Dec., 1793, and in Sept., 1795, helped to crush a royalist rising in Paris. Soon after he married Josephine de Beauharnais. His brilliant conduct of the Italian campaign (1796-97) caused France to acknowledge him as her greatest warrior.

The Directory at Paris urged him either to invade England or conquer the East. He chose the latter, and set sail for Egypt in May, 1798, with a large fleet. His scheme of a French Oriental empire was frustrated by Nelson at the battle of the Nile, Aug. 1, 1798, but Napoleon succeeded in evading the British cruisers and landed in the south of France on Oct. 9, 1799. Having overthrown the Directory, he and his friends constructed a strongly personal system in which he, as first consul, held all the executive and much legislative power. He healed the schism in the Church by what was known as the concordat of April 18, 1802, and restored the prestige of French arms by his brilliant passage of the Alps and the victory of Marengo. Britain came to terms in the treaty of Amiens, March 25, 1802.

An attempted royalist plot against his life, early in 1804, was cleverly countermanded by him and his police. In Aug., 1802, he had secured the consulate for life, with power to name his successor. On May 18, 1804, he became emperor of the French and was crowned in Notre Dame on Dec. 2. The last traces of the republican constitution soon vanished. These changes were due to his military triumphs in the war which broke out, first with England, in May, 1803, and with Austria and Russia in the summer of 1805. The struggle with Britain in 1803-5 was entirely naval, ending at Trafalgar.

The years between 1805 and 1815 were passed mainly in warfare. Having received the surrender of Mack and 70,000 Austrians at Ulm, Napoleon occupied Vienna, and gained his greatest victory at Austerlitz. He then bestowed the title of king on some of his German allies, declared the Holy Roman Empire at an end, and formed the confederation of the Rhine. Prussia rushed to arms in Sept., 1806, only to be utterly overthrown at Jena and Auerstädt, Oct. 14, 1806.

Master of Central and Western Europe, Napoleon now imposed his brother, Joseph, on the throne of Spain: Britain espoused the cause of the Portuguese and Spanish

patriots, and, in the campaigns of 1808-13, Wellington struggled bravely against the armies hurled at him by Napoleon. In 1812 Napoleon met with his great disaster in Russia. In succession Prussia and Austria rose up against him, and the campaign of 1813 resulted in his expulsion from Germany. Wellington made swift progress in the S., while in the E. the masses of the Allies closed in on Paris. They occupied Paris, and his own marshals and generals finally compelled him to abdicate in favour of his son, Napoleon II, who never reigned. The fallen emperor retired to Elba, whence he escaped in Feb., 1815, landed at Antibes, and in a few days entered Paris in triumph.

Napoleon I, Emperor of the French After the painting by H. Delaroche, 1837

But France was resolved to accept Napoleon only as a constitutional monarch, and the powers declared him an outlaw for disturbing the peace of Europe. After his defeat at Waterloo by the Allies, June 18, 1815, the emperor abdicated, and he was banished to St. Helena, where he died May 5, 1821. His remains now rest in the Invalides in Paris. His only son, known as the duke of Reichstadt, was the child of Napoleon's second wife, Marie Louise of Austria, whom he married in 1810 after he had divorced Josephine. See Austerlitz; Elba; Invalides; Jena; etc.

NAPOLÉON III (1808-73). Emperor of the French. Charles Louis Napoleon Bonaparte, born in Paris, April 20, 1808, was the third son of Louis Bonaparte. The death of the duke of Reichstadt in 1832 made him head of the Bonapartes. In 1838 he moved to London, and in 1840 risked a landing at Boulogne, but was arrested and sent to the fortress of Ham. Escaping from Ham in 1846, Louis Napoleon went to London, where he remained until the revolution of 1848. Elected a member of the republican assembly in June, he was elected president on Dec. 10, and in 1852 he made himself emperor of the French.

The following year Napoleon married Eugénie de Montijo. He joined England in the Crimean War, 1854-56: assisted Piedmont to turn the Austrians out of N. Italy in 1859, and gratified French ambition by obtaining Savoy and Nice. But between 1860 and 1870 he steadily lost ground, partly due to his failure to establish a Latin empire in Mexico. In July, 1870, he embarked on war with Prussia, but five weeks later came Sedan, his surrender to the Prussians, Sept. 2, and the end of the empire. Napoleon was taken to Wilhelmshöhe, where he remained until the end of the war, when he joined the empress and their son at Chislehurst. He died Jan. 9, 1873. See Farnborough.

His only son, Eugène Louis Jean Joseph Napoleon (1856-79), was known as the Prince Imperial. After his father's death in 1873 he was recognized leader of the Bonapartists. He joined the British expedition to Zululand, and was killed near Ulundi, June 1, 1879.

NARCISSUS. In Greek mythology, a beautiful youth, beloved of the nymph Echo, whose passion he could not return. Echo died of grief, and as a punishment the gods caused Narcissus to fall in love with his own reflection in a spring. This fruitless love made him pine away, until he was changed into the flower.

NARCISSUS. Small genus of bulbous herbs of the order Amaryllidaceae, natives of Europe, N. Africa, N. and W. Asia. One species only, the daffodil, is indigenous in Britain. The leaves spring directly from the bulb, and the flowers are borne on tall scapes, either singly, as in the daffodil, or forming an umbel, as in the polyanthus narcissus (*N. tazetta*). As all the species have been widely cultivated, there are a large number of garden variations.

Napoleon III, French emperor

Napoleon, Prince Imperial

Narcissus. Pheasant's-eye, N. poeticus

NARDOO (*Marsilea drummondii*). Aquatic flowerless herb of the order Marsileaceae, a native of Australia. One of the water-fern group, it has a creeping root-stock, and its fronds take the form of a long, erect stalk, with four leaflets at the summit, arranged crosswise and sensitive to light. The spore capsules are contained at first in hard shells known as sporocarps, which the aborigines pound into a kind of flour.

NARES, SIR GEORGE STRONG (1831-1915) British navigator. Entering the navy in 1845, he served in the *Resolute* during the search for Sir John Franklin, 1852-54. He commanded the *Challenger* during part of her famous cruise, but was recalled to take command of the Arctic expedition, 1875-76, for which service he was made a K.C.B. He was made rear-admiral in 1887, vice-admiral, 1892, and died Jan. 15, 1915. He was the author of several works on seamanship.

Sir George Nares, British navigator

NARES, OWEN RAMSAY (b. 1888) British actor. Born at Maiden Erlegh, Berkshire, Aug. 11, 1888, he made his first professional appearance at the Haymarket Theatre, London, in 1908. His progress was rapid, and among the plays in which he gained distinction as a clever actor were *Lady Windermere's Fan*, 1911, *Milestones*, 1912, *David Copperfield*, 1914, and *Peter Ibbetson*, 1915. He wrote *Myself and Some Others*, 1925.

NARSES (c. 474-568). General and administrator under the Roman emperor Justinian. A Persianian eunuch, he rose to high position at court, and for some time shared the command in Italy with Belisarius. His own military triumphs included a series of victories over the Goths, Alamanni, and Franks, as a result of which Italy was recovered as a province of the empire, governed by Narses himself from Ravenna.

NARTHEX. In early Christian architecture, the vestibule or porch of a basilica. It is within the main entrance at the opposite end to the altar and sanctuary. It was originally used to accommodate Christian converts who had not passed the stage of initiation. See Basilica; Cathedral.

NARWHAL (*Monodon monoceros*). Cetacean belonging to the porpoise group. It inhabits the Arctic Ocean, and is distinguished by the spirally grooved, tapering tusk of the male, often over 7 ft. long, the animal itself being from 12 ft. to 15 ft. in length. In other respects the narwhal has the general form of a small whale, and is found in small schools. Its oil and the fine ivory obtained from the tusk are valuable. See Whale.

NASEBY, BATTLE OF. Fought June 14, 1645, during the English Civil War. The king's army of 7,500 men was being followed by 13,000 parliamentarians under Fairfax and Cromwell from Daventry towards Leicester. At Broadmoor, just before entering Leicestershire, Charles decided to fight. He took up a position at Naseby, a village 7 m. from Market Harborough, and the battle began. While the royalist infantry pushed the enemy back, the day was turned by Cromwell's troopers, who, after routing the horse opposed to them, fell upon the flank of the infantry. These were thrown into confusion, and the king, followed by Rupert, was forced to retreat to

Leicester. The royalists lost about 1,000 killed and 5,000 prisoners. See Charles I; Civil War; Cromwell; Rupert.

NASH, PAUL (h. 1889). British artist. Born in Kensington, May 11, 1889, he became a pupil at the Slade school of art. At first a figure artist, he turned later to landscape. In the Great War he served in the Artists' Rifles, in the Hampshire Regiment, and as an official artist in France. In this capacity he became known by his vivid paintings and drawings of the front areas. His brother, John Nash, won recognition for his painting, woodcuts, etc.

NASH, RICHARD (1674-1762). English dandy known as Beau Nash. Born at Swansea, Oct. 18, 1674, he was for a brief time in the army, and then entered the Inner Temple, 1693. He, however, took to gambling and living by his wits. In 1705 he went to Bath, then beginning to be a fashionable resort, and soon set about organizing its social attractions. He died Feb. 3, 1762.

Richard Nash, 18th century dandy

NASHE OR NASH, THOMAS (1567-1601). English satirist and critic. Born at Lowestoft, he became a prominent figure in literary London. He took the anti-Puritan side in the Martin Marprelate controversy, engaged in a paper war with Gabriel Harvey, completed Marlowe's *Tragedy of Dido*, 1594, and was imprisoned in the Fleet on account of his suppressed comedy, *The Isle of Dogs*, 1597. His works have been edited by R. B. McKerrow, 4 vols., 1904-10.

NASHVILLE. City of Tennessee, U.S.A., the state capital. It stands on the Cumberland river, 185 m. S. by W. of Louisville, and is served by the Louisville and other rlys., and by steamers. An important educational centre, it is the seat of the Vanderbilt and Fisk universities, etc. Nashville is a flourishing industrial city, flour milling being especially important. In 1864 it was the scene of a fierce battle between the Tennessee army and the Federal forces, ending in a victory for the latter. Pop. 136,220.

NASMYTH, ALEXANDER (1758-1840). Scottish painter. Born at Edinburgh, Sept. 9, 1758, he studied in London and in Italy. Settling at Edinburgh, he tried portrait painting, but abandoned it for landscape. He was a member of the Society of Scottish Artists, an associate of the Royal Institution, and exhibited at the R.A., London. He died April 10, 1840. See Burns, Robert.

His son, Patrick, or Peter (1787-1831), also a painter, settled in London, exhibited from 1809 at the R.A., and was an original member of the Society of British Artists. He was acclaimed as the English Hobbema.

NASMYTH, JAMES (1808-90). British engineer. Born at Edinburgh, Aug. 19, 1808, he became an adept in making models of steam and other engines. In 1834 he opened a foundry in Manchester, and, in partnership with H. Gaskell, worked up a prosperous business. In 1842 he patented the steam hammer by which his name is best known. He invented mechanical appliances, and constructed a telescope to assist his astronomical studies. He died May 7, 1890.

James Nasmyth, British engineer

Narwhal. Male specimen with long, tapering tusk

NASSAU. District of Germany, now part of the Prussian prov. of Hesse-Nassau. From it the family of Orange-Nassau took the title of count and duke. It was an independent state until 1866. Nassau takes its name from the little town of Nassau on the Lahn, where the ruling family built their castle, but Wiesbaden was the capital. In 1866 the duke joined Austria in fighting against Prussia, and consequently lost his duchy. In 1890 the head of this family became grand duke of Luxembourg. See Netherlands; Orange.

NASSAU. City, seaport, and chief town of New Providence, and capital of the Bahama Islands, B.W.I. It stands on a declivity of the N.E. coast, has a sheltered harbour, and exports sponges, sisal hemp, fruits, and salt. Founded by the English in 1629, it was almost destroyed by the Spaniards and French in 1703, but rebuilt in 1718, and fortified in 1740. In the American Civil War it was the headquarters of the blockade runners. It is in regular steam communication with New York, and has a wireless station. Pop. 12,975

NASTURTUM OR RADICULA. Genus of cruciferous plants including the water cress. The nasturtium of our gardens is the tropaeolum, or Indian cress (q.v.).

NATAL. Province of the Union of South Africa. Bounded S.W. and W. by the Cape Province and Basutoland, N. by the Transvaal and Mozambique, N.W. by the Orange Free State, and E. by the Indian Ocean, it includes Zululand, annexed in 1897, together with the districts of Vryheid, Utrecht, and part of Wakkerstroom, transferred from the Transvaal in 1903. Pietermaritzburg is the capital, and Durban the largest town. The area is 35,284 sq. m. Pop. 1,429,398, of whom 136,838 are whites.

The country was discovered by Vasco da Gama on Christmas Day, 1497, and was therefore named Natal or Terra Natalis. In 1843 it became a British colony. In 1844 it was added to the Cape of Good Hope, but in 1856 was made a separate colony. In 1893 it was granted responsible government, and in 1910 it joined the Union of South Africa. See S. Africa; Zululand.

NATAL. British armoured cruiser. She was destroyed by an internal explosion in Cromarty Firth, Dec. 30, 1915. Originally planned to be of the Duke of Edinburgh (q.v.) class, she was altered during construction, 1904-5, and was of the same class as the Achilles, Cochrane, and Warrior, displacing 13,560 tons, with 16,000 h.p., giving a speed of 23 knots. She carried six 9-2 guns.

NATALIE (b. 1859). Queen of Serbia. Born at Florence, May 14, 1859, daughter of a Russian colonel, Kechko, and of Princess Pulcheria Sturdza, a Rumanian lady, she married on Oct. 17, 1875, King Milan of Serbia. Separated from her husband in 1888, she retired to Wiesbaden with her son, Alexander. Milan secured the abduction of the boy, and obtained a decree of divorce. After the murder of Alexander and Draga in 1903, Natalie lived in retirement.

Natalie, Queen of Serbia

NATCHEZ. North American Indian tribe of Muskogian stock. In the 17th century they occupied nine villages in Mississippi. Their complex sun-worship, head-flattening, use of mounds as foundations of dwellings and temples, advanced pottery, and skilful weaving of mulberry-bark cloth perpetuated the culture of the mound-builders. Early in the 18th century the Natchez and their allies entered upon a war with the French settlers,

who drove the tribe across the Mississippi into Louisiana and partly destroyed them in Jan., 1731. The few existing Natchez are found chiefly with the Cherokees.

NATHANAE. Disciple of Jesus Christ. Practically nothing is known of him save that he came from Cana of Galilee (John 21, 2), and was brought to the Master by Philip (John 1, 45). Some scholars think he is identical with Bartholomew.

NATIONAL ANTHEM. Musical composition with words, officially adopted for ceremonial use as an expression of patriotism and loyalty to a national cause.

Britain has the earliest and the best in God Save the King, appropriated by Prussia as the melody for Heil dir im Siegerkranz and also by Denmark for her revised version of God Save the King, 1902. In La Marseillaise (q.v.) France has an outstanding example, and Haydn's Hymn to the Emperor, 1796, and Ivor's God Save the Tsar, 1833, gave to the Austrian and Russian empires respectively national anthems worthy of their dignity. The U.S.A. have no accepted national anthem, but during the Great War The Star-Spangled Banner was generally used as an equivalent.

NATIONAL ASSEMBLY. Name given to the governing body of the Church of England. It was set up under the Enabling Act of 1919 to take the place of convocation, but with somewhat wider powers than the older body. The assembly consists of three houses. The house of bishops consists of the two archbishops and all the diocesan bishops; the house of clergy contains representatives of the clergy; the house of laity consists of representatives of the laity of the two provinces, Canterbury and York. The assembly has power to legislate for the Church of England, but provision is made for keeping a certain amount of parliamentary control over its acts. See Archbishop; Church of England; Convocation; Laity.

NATIONAL ASSEMBLY. Name taken by the body responsible for the opening stages of the French Revolution. Having drawn up a new constitution, which Louis accepted, the national assembly was dissolved Sept. 30, 1791.

In 1871, after the capitulation of Paris, a national assembly was chosen to treat with Germany for peace. It was responsible for the constitution at present in force. To-day the name is given to the Chamber of Deputies and the Senate, when they sit together for the election of a president, or some other special purpose.

In 1918, after the abdication of the Kaiser, it was decided to call a German national assembly to decide the future of the country. The members of this were elected by all men and women over twenty years of age, and it met at Weimar early in 1919.

NATIONAL DEBT. Term used for the money owing by a state. It takes various forms, war loans and consols in the United Kingdom and rentes in France, for instance, and is usually divided into permanent and temporary or floating debt. It does not include money borrowed by local authorities except when guaranteed by the state.

At the commencement of the Great War in 1914 the British national debt of a little less than £700,000,000 was £152,000,000 less than its total at the end of the war with Napoleon. This was chiefly in the form of consols. The amount of debt created in five years amounted

By courtesy of Novello & Co., Limited

God save our gracious King.
Long live our noble King.
God save the King!
Send him victorious,
Happy and glorious,
Long to reign over us,
God save the King!

Frustate their knavish tricks:
On Thee our hopes we fix:
God save us all!

Thy choicest gifts in store
On him be pleased to pour:
May he defend our laws,
And ever give us cause
To sing with heart and voice—
God save the King!

National Anthem, Music and words of the British National Anthem

In Jan., 1923, the British government accepted the terms for repayment of its debt to U.S.A. The total debt was \$856,000,000, plus interest unpaid for 2½ years, making approximately £900,000,000. The interest is at 3 p.c. for ten years, then 3½ p.c. The total annual payment by Britain is approximately £31,500,000 for 10 years, then £36,000,000 for another 52 years.

The National Debt is divided into the internal debt and the external debt. The internal debt is divided into the funded and the unfunded debt. The external debt consists chiefly of the amount owing to the United States.

Against her vast liabilities may be set the amounts owing to Great Britain by certain of the British Dominions, and by various countries in Europe, and also certain other assets, such as shares in the Suez Canal, valued at over £72,000,000, in the Anglo-Persian Oil Co., etc.

The amounts owing from foreign countries are:

	£
France	722,018,000
Italy	202,500,000
Yugoslavia	32,450,000
Rumania	29,950,000
Portugal	29,300,000
Greece	25,100,000
	<hr/>
	£1,034,318,000

In addition, about £31,000,000 is owing for relief loans and £934,000,000 by Russia.

The amount owing by the various parts of the Empire is £120,538,696, Australia and New Zealand being responsible for £110,000,000. With other assets of varying value this makes a grand total of £2,354,174,205.

To reduce the national debt an unknown donor, in 1928, gave £500,000, and the earl of

Incebae gave the balance of his daughter's (Hon. Elsie Mackay's) estate, amounting to £521,000, for the same purpose

National Gallery, London. Façade from Trafalgar Square; in the foreground, statue to General Gordon

NATIONAL GALLERY. Chief art collection in Great Britain. It is in London, and was begun by the purchase by the British government of the Angerstein collection of pictures in 1824. It was notably extended by the purchase, in 1871, of the Peel Collection, and later purchases and gifts have made it one of the most representative collections in Europe. The pictures are arranged according to schools of painting, and the collection is particularly rich in examples of the Flemish and Dutch schools, the Florentine, Venetian, and Umbrian schools being represented almost equally well. Among the Spaniards Murillo, Velasquez, and Goya, and among the Frenchmen Claude and Poussin are magnificently represented, while the British school is displayed from its beginnings. The existing gallery in Trafalgar Square was completed and opened in 1838, and reopened after enlargement in 1861. It is controlled by trustees and a director.

Another national gallery is the one, chiefly for British art, at Millbank, London, usually called the Tate Gallery. There is a Scottish national gallery in Edinburgh.

NATIONALIST. Name used for an Irish political party. This appeared in an organized form about 1870 under the leadership of Isaac Butt, and was strong in the British House of Commons after the general election of 1874, becoming still more so under the direction of C. S. Parnell. Its main object was to secure home rule for Ireland. With about 80 members, it exercised considerable influence in British politics. Split after Parnell's appearance in the divorce court in 1890, the party was reunited under J. E. Redmond, but it almost disappeared at the election of 1918, its place being taken by Sinn Féin. See Home Rule; Ireland; Parnell, C. S.; Sinn Féin.

NATIONAL MARK. Mark placed on certain articles of food to show that they are produced at home. The mark is applied by consent of the Minister of Agriculture under an act passed in 1928. Among the foodstuffs that can be marked are beef, eggs, flour, tomatoes, cucumbers, broccoli, and apples.

NATIONAL PORTRAIT GALLERY. Building in St. Martin's Place, London, W.C. It contains, paintings, sculptures, and drawings of men and women who have figured with distinction in the history of the United Kingdom. The gallery was founded by Act of Parliament, June 6, 1856, and after three earlier homes the collection was housed in the present building in 1896.

The Scottish National Portrait Gallery, Queen Street, Edinburgh, was opened in 1889. It is built in 14th century Gothic style.

NATIONAL TRUST. British society for preserving places of historic interest or natural beauty. Founded in 1895, it holds in trust for the nation Wicken Fen, Box Hill, Minchinhampton Common, land at Stonehenge, the Golden Valley, Hindhead, and estates in the Lake District and elsewhere. It has also the

care of 8,000 acres of Exmoor. The offices are at 7, Buckingham Palace Gardens, London, S.W.1.

NATIVE CURRANT (*Leptomeria bilardieri*). Shrub of the order Santalaceae, native of Australia. The numerous, slender branches are erect, and without leaves except near their extremities, where they are very small. The currant-like berries are acid and somewhat astringent, but they make a good preserve and a cooling, acid beverage.

NATIVITY. Name of several festivals in the Christian churches. That of Christ's Nativity, usually known as Christmas Day, has been celebrated since the 5th century on Dec. 25. Representations of Christ's Nativity occur often in carvings on early sarcophagi, ivory carvings of the 8th and 9th centuries, in MS. illuminations, stained glass, and wall-paintings. In astrology the word is used as a synonym for horoscope.

NATTERJACK (*Bufo calamita*). Running toad or golden back, a native of Europe, including Britain. It is of slighter build than the common toad. It progresses by walking or short runs, instead of hopping, and is found mostly in sandy situations, drier than those affected by the common toad. The male has an internal vocal sac which distends the throat when the natterjack utters his rattling note, which is somewhat suggestive of the call of the nightjar. See Toad.

NATURAL. Musical sign ♮ used to neutralise the effect of a sharp or flat. It probably derives its name from the key of C, which is known as the natural key, and has no sharps or flats. See Flat; Sharp.

NATURAL GAS. Name given to certain gases occurring in mineral deposits. By boring in search of oil many reservoirs of natural gas have been tapped, particularly in the U.S.A., and there are large supplies in Canada, especially in Ontario. In the U.S.A. it was first used in 1821, and it has been used at Pittsburg for iron smelting. See Fuel.

NATURALIZATION. Term used in law to denote the process whereby an alien becomes a subject. In Great Britain the home secretary may grant a certificate of naturaliza-

tion to any alien who applies for one, if the applicant satisfies the home secretary (a) that he has resided in British dominions for five years at least, of which the last year before the application must be in the United Kingdom, and four years within the preceding eight years in any part of the British dominions; or has been in the service of the crown for at least five years within the preceding eight years; (b) that he is of good character and has an adequate knowledge of the English language; (c) that he intends to reside in the British dominions or to continue in the service of the crown. The certificate has no effect until the applicant has taken the oath of allegiance. A woman who lost her British nationality by marrying an alien and whose husband is dead, or marriage dissolved, may apply without evidence of residence.

Canada, Australia, New Zealand, South Africa, and Newfoundland have power to issue Imperial certificates of naturalization to persons qualified, with slight modifications, under the above statute. See Alien.

NAUCRATIS. Ancient Greek colony in Lower Egypt. Situated on the Canopic arm of the Nile, it was founded by traders from Miletus in the 7th century. Under Aabmes II, c. 564 B.C., it monopolised Greek trade in Egypt. The site was identified by Flinders Petrie in 1885, and excavated by him and

by D. G. Hogarth in 1899. The chief building found was the Hellenion, a fortified store-house and sanctuary for Greek residents in Egypt.

NAURU. Island of the Pacific. It is 26 m S. of the Equator, midway between the Solomon and Marshall Islands. Its importance

Native Currant. Flower sprays. Inset, above, branch with leaves; below, fruit

is due to its rich deposits of phosphates. The island was annexed by Germany in 1888, but, having been taken by the Australian forces in 1914, is governed by the British under the League of Nations. Australia and New Zealand share with Great Britain in the administration. The first administrator was appointed by Australia, for five years. There is a wireless station. The area is about 8 sq. m. Pop. 2,614, including 134 Europeans.

NAUSICAA. Greek heroine mentioned in the Odyssey, 6. She was the daughter of Alcinous, king of the Phaeacians, and the shipwrecked Odysseus found her playing at ball with her maidens on the shore. Pitying his plight, she conducted him to her father, by whom he was entertained. See Odyssey.

NAUTCH GIRL (Hind. nāch, dance). Indian dancer. These girls are carefully chosen for their beauty when young to be priestesses to the god Rondzu. Apart from their dancing in the temples, they are hired to amuse guests by dancing and singing. The dance consists of posturing and slow steps, each part of the body being made to express emotion.

NAUTILUS. Genus of cephalopod molluscs, related to the cuttles, but having a spiral chambered shell. The nautilus lacks the tentacles of the cuttles, but has fringed lobes round the mouth. It crawls by means of its foot on the bed of the ocean like a snail, and feeds upon other molluscs and small crustaceans. It is also able to swim like the cuttles,

Nautilus. Chambered or Pearly Nautilus, *Nautilus pompilius*

by expelling water from its siphon. It is found in the Pacific Ocean, the living animal being rarely seen. There are probably only three living species, of which the pearly nautilus is the best known. The nautilus occupies the outermost chamber only. The Argonaut (q.v.) is often called the paper nautilus.

NAVAL CADET. Name given to boys training for commissions in the British navy. They are trained under a scheme inaugurated in 1903. Under this scheme the boys are all trained at the R.N. College, Dartmouth. To enter this they must apply to the Admiralty and go before a committee for an interview. The required number are then selected and sit for a qualifying examination. The age limits on entry are between 13½ and 13¾ years. The cadets spend nearly four years at the college, after which they go to sea for eight months. At the end of that period, if they have proved satisfactory, they become midshipmen. A certain number of cadets can enter the navy at a later age. These are chosen after a competitive examination for the executive, paymaster, or engineering branches. They must be between 17½ and 18½ years of age. See Midshipman.

NAVAL DIVISION. ROYAL. Body of volunteers raised by the British admiralty in the Great War. Each battalion was named after a famous admiral, e.g. Anson, Drake.

Hawke, Hood. The headquarters were at the Crystal Palace, London, where the men were trained. Popularly known as the R.N.D., a detachment was sent to Antwerp in Oct., 1914. Part of the force fought in Gallipoli in 1915, and later in France, where the division was ultimately disbanded and distributed among other units. As the R.N.D. it captured Beaucourt, Nov. 13-14, 1916, in the battle of the Ancre.

NAVAL RESERVE, ROYAL. British naval unit. It was established in 1859 to form a reserve from which to draw in the event of war, and consisted entirely of officers and men of the mercantile marine. They had to do at least one year's training aboard a warship, and also to undergo instruction in gunnery and torpedo schools. R.N.R. ratings are now enrolled for a term of five years, and the total period of any man's service in the reserve will not exceed

Naval Reserve,
officer's badge

five terms of five years each, the last term being for shore and harbour service only. The R.N.R. was mobilised on Aug. 3, 1914, and by Aug., 1917, the officers had increased from fewer than 2,000 to close upon 12,000. It served in almost every sea, and took part in mine-sweeping and in patrol duty. See Mercantile Marine; Navy.

NAVAN. Urban dist. of Meath, Irish Free State. Standing where the Blackwater falls into the Boyne, it is a junction on the Great Southern Rlys., 30 m. from Dublin. The town has a trade in agricultural produce and is a fishing centre. It sent two members to the Irish parliament until 1800. Pop. 3,625.

NAVARINO, BATTLE OF. Naval battle fought Oct. 20, 1827, during the Greek War of Liberation. The British, French, and Russian fleets, under the command of Sir Edward Codrington, engaged the Turkish and Egyptian fleets at very close quarters, with the result that the latter were almost completely destroyed and the Turks were obliged to abandon Greece. Navarino, now called Pylos, is a seaport in the Morea, with a fine harbour. See Pylos.

NAVARRÉ. Former kingdom of S.W. Europe. On the western borders of France and Spain, at the angle of the Bay of Biscay, it included the W. part of the Pyrenees, with a small part of Gascony and a considerable but varying area in Spain.

In the 15th century the crowns of Navarre and Aragon were united by the marriage of Blanche of Navarre to John of Aragon; on his death, in 1479, Navarre was claimed by Catherine of Foix, his grand-daughter. Catherine married Jean d'Albret, and retained French Navarre with the royal title, while in 1516 Ferdinand annexed Spanish Navarre, still a prov. of Spain. In 1620 French Navarre ceased to have the status of a kingdom.

NAVE (Lat. navis, a ship). In ecclesiastical architecture, the largest, i.e. the middle, section of a church divided by piers or columns into three parts. As such the nave includes the choir and the height of the clerestory, but when the choir is shut off from the body of the church, it is commonly excluded from the term nave. See Basilica; Cathedral; Choir.

NAVIGATION. Art of directing a ship from one position to another, and of determining its position at sea at any moment. A chart and a mariner's compass are required. Charts have the latitude and longitude and the true or magnetic north marked on them. The present position of a vessel and the one it is desired to reach are plotted on the chart,

which thus gives the course to be made good. To discover from the chart the course to be steered in order to arrive at any desired position, the mariner must know the position of his vessel.

In sight of land this is found by taking compass bearings of prominent objects. The position of these objects is shown on the chart. Three or more objects are selected, so that the compass bearings cut one another at a fairly large angle. Through each object on the chart is then drawn the observed compass bearing, and the point where these lines cut is the position at the time of observation.

When out of sight of land, the approximate position at any time can be found by calculating the number of nautical miles the vessel has travelled along the course from the last known position and then plotting this distance on the chart. Such an approximate position is called dead reckoning (D.R.). The exact position of a vessel when out of sight of land is obtained by observation of the heavenly bodies, such as stars or planets. The altitude of the heavenly body is measured by a sextant and the Greenwich time is noted at the instant the altitude is observed. The D.R. position is calculated at this moment.

NAVIGATION ACTS. Term applied to a number of enactments designed to regulate shipping to the advantage of British ships. Cromwell's Navigation Act of 1651 was the first comprehensive enactment. This act benefited English shipping, but it raised the price of imports and caused a war with the Dutch. The acts were repealed in 1849, and in 1854 the coastwise trade was thrown open.

NAVY (Lat. navis, ship). Term used for the collection of men and ships that form the force a country maintains for fighting at sea. Practically every country which has a sea-board has a navy, although a number of them are of little value as fighting units.

The events of the Great War, especially the disappearance of the German navy, altered materially the world's naval position. The United States claimed parity with Great Britain, and attempts were made at Washington in 1923 and London in 1930 to limit the size of navies.

Britain, the United States, and Japan came to an agreement, embodied in the London Naval Treaty (q.v.), with regard to the number of ships to be retained, built, and scrapped. The particulars are given in the table below.

Types	British Empire	United States	Japan
Battleships and battle cruisers	15 remaining 5 to be scrapped	15 remaining 3 to be scrapped	9 remaining 1 to be scrapped
Aircraft carriers	6 remaining 3 to be built	3 remaining 4 to be built	3 remaining 3 to be built
Cruisers	46 remaining 4 to be built	12 remaining 26 to be built	28 remaining 5 to be built
Destroyers	132 remaining 38 to be scrapped	143 remaining 80 to be scrapped	87 remaining 24 to be scrapped
Submarines	44 remaining 19 to be scrapped	55 remaining 24 to be scrapped	38 remaining 23 to be scrapped

In the above table the phrase to be built includes all ships not 100 per cent. complete in May, 1930. Obsolete ships, such as destroyers over 16 years old and submarines over 13 years old, are not included in ships to be scrapped.

BRITISH NAVY. The history of the British navy may be said to begin with the long ships of King Alfred, which marked a great advance upon their predecessors. The nearest approach to a permanent force was the organization of the Cinque Ports, where the barons kept their vessels at the disposal of the king in

return for the enjoyment of certain privileges. John made some beginning of a fixed organization by appointing a "keeper of the king's ships." The victory of Sluys, in 1340, marked the zenith of English sea power in medieval times. Admirals began to be appointed in Edward I's reign. Guns were mounted in the 14th century. In Tudor times ships were specially built for naval purposes. Henry VIII's great ship was an imposing vessel, carrying two lines of guns on her lower decks, and another on her half deck and fore-castle. Massive structures rose like fortalices at the bow and stern, and the latter had eight decks and five lines of guns.

The great explorations of the 15th and 16th centuries resulted in rapid development in shipbuilding, navigation, and organization. The defeat of the Spanish Armada in the fighting of many days in 1588, all the way up the Channel, was one of the decisive battles of the world. The reign of James I saw the division of the royal fleet into rates and the institution of squadrons, or groups of ships, for the defence of the narrow seas, by means of a summer guard and sometimes a winter guard. In 1637 came the Sovereign of the Seas, the first three-decker in the navy. The government of the navy had rested with the lord high admiral and a board of principal officers, but Buckingham had a council of commissioners, who supervised dockyard affairs and built two ships a year for five years.

The men of the Commonwealth imparted new vigour and earnestness to the navy. It gained rapidly in numbers and strength, becoming a permanently organized force in every department; the officers were trusted, and there was better pay, food, and clothing for the men. At the Restoration, when James, duke of York, became lord high admiral, a great impetus was given to the internal organization of the fleet and the strengthening of its administration. The navy was thenceforth directed by principal officers, who were men of experience actually bred to the sea. Their successors became the navy board, and existed long after the office of lord high admiral had been placed in commission in the board of admiralty. James II did much for the betterment of the naval service, and had an establishment of 173 vessels, including 9 first-rates, 11 second-rates, and 39 third-rates. They went over to William III, in whose reign the long struggle with France began. The navy was for a time supreme, and under its aegis the resources of the empire grew, and English trade spread on every sea.

The Seven Years' War found England not fully prepared. Corruption had not been uprooted, and only by a vigorous use of the press-gang, and the offering of bounties, could men be obtained. Nevertheless, Britain increased her territory at the expense of France. In the American War of Independence, however, she was beaten at sea.

During the wars with France which terminated at Waterloo, ships increased in numbers, and every available ship was made ready for sea. Jervis's great victory off Cape St. Vincent, and Duncan's destruction of the Dutch fleet at the Texel, both in 1797, put

an end to the schemes of invasion. After the peace of Amiens, March 25, 1802, the naval establishments were subjected to examination, with the object of putting an end to the corruption. Its efficiency was proved at Trafalgar. The introduction of steam brought about profound changes in the navy. There began a

long contest between the gun and the armour. The torpedo was invented, and gained year by year in range and destructive power. New classes of ships were introduced—torpedo-boats, destroyers, and submarines. The invention of the steam turbine imparted a fresh impetus to power. The progressive and fearless administration of Lord Fisher gave the navy ships mounting nothing but big guns, with an auxiliary or secondary armament for anti-torpedo purposes. Oil to a very great extent replaced coal as fuel. The practical and scientific training of officers and men progressed. After the Great War came a period such as has followed most wars—naval reductions, the sale or breaking-up of ships, and discussion of war lessons and types of ships.

The official handbook of the British Navy is known as the Navy List. It was issued in 1814, and is published monthly.

NAXOS. Island of the Cyclades group, in the Greek Archipelago. It covers about 175 sq. m. Mountainous, picturesque, and fertile, its culminating point is 3,300 ft. high. It is noted for its wine, and produces cereals, oil,

Nazareth. General view of the town in Galilee

forces in a naval engagement.

NAZARETH. Town in Galilee, on the slope of a hill half-way between the Lake of Galilee and the sea. Now known as En Nasira, it is famed as the early home of Christ. Nazareth was occupied by the British, Sept. 20, 1918. Pop. 7,424. See Palestine.

NAZARITES OR **NAZIRITES.** Word meaning separated, and applied to certain Jews. These devoted themselves to the service of God, abstained from wine, allowed their hair to grow long, and avoided contact with dead bodies. As a rule the vow was only temporary, usually taken for a month, at the termination of which certain sacrifices were offered, and the head was ceremonially shaved.

Naze, THE. Headland on the E. coast of Essex, 5 m. S. of Harwich.

NEAGH. Lough or lake of Northern Ireland. It is bordered by the counties of Antrim, Londonderry, Tyrone, Armagh, and Down, and measures 18 m. in length and 10 m. in breadth. Numerous rivers feed the lake, including the Blackwater and the Upper Bann, while the Lower Bann discharges its surplus waters into the Atlantic. Pron. Nay.

NEALE, EDWARD VANSITTART (1810-92). British cooperator. Born at Bath, April 2, 1810, he was called to the bar in 1837. In 1850 he joined the Society for Promoting Working Men's Associations, and used his wealth in opening the first cooperative store in London. In 1851 he founded the Central Co-operative Agency, precursor of the Co-operative Wholesale Society, which failed after a few months. He organized cooperative societies in other parts of the kingdom, and in 1869

E. V. Neale, British cooperator

promoted the annual cooperative congress, of which he became secretary, 1875-91. He died Sept. 16, 1892. See Cooperation.

NEANDERTHAL MAN. Palaeolithic race inhabiting Europe during the Mousterian period. It was first revealed by the discovery of a human burial in a grotto of the Neanderthal ravine near Düsseldorf in 1856. Its fossil remains have since been found in widely scattered caves and summer-camp stations, including the Ghar Dalam cave, Malta, 1918. See Anthropology; Man; Mousterian.

NEASDEN. District of Middlesex, practically a suburb of London. Neasden and Kingsbury is a station on the Metropolitan Rly., which has carriage works here.

NEATH. Borough, market town, and river port of Glamorganshire, Wales. It stands near the mouth of the river Neath, 8 m. from Swansea, and is served by the Great Western Rly. and by two canals. There is another station at Neath Abbey. The industries include copper smelting, tin-plate works, steel works, chemical factories, foundries, engineering works, etc. In the 12th century an abbey and castle were founded at Neath, and there are remains of both. Market days, Wed. and Sat. Pop. 34,700.

NEBO. God of the ancient Babylonians. The son and interpreter of Merodach, he was regarded as the writer of the first book and instructor of mankind in letters and science. There was a temple to him at Borsippa.

NEBO. Mountain in Moab, near the N. end of the Dead Sea, from which Moses viewed the promised land just before his death (Deut. 34). Its alternative name is Pisgah.

NEBRASKA. Central state of the U.S.A. Its area is 77,510 sq. m. The surface is an elevated plain sloping from an alt. of 5,000 ft. in the W. to about 1,000 ft. in the E. Part of the N. and N.W. is occupied by "bad lands" and sand-hills. The Platte (or Nebraska) and Niobrara rivers flow through the state to the Missouri, the natural boundary on the E. Agriculture has been developed by irrigation, and large crops of maize, wheat, oats, and potatoes are obtained. Higher education is provided by a state university and other institutions, and transport facilities by 6,500 m. of rlys. Lincoln is the capital, but Omaha is the most populous centre. Nebraska City (pop. 6,279), 53 m. S. of Omaha, occupies the site of old Fort Kearney. Pop. 1,408,000.

NEBUCHADREZZAR OR **NEBUCHAD-NEZZAR.** Name of three kings of Babylon. The most famous, Nebuchadrezzar II, son of Nabopolassar, reigned 604-561 B.C., invaded Judah thrice, taking Jerusalem and carrying many Jews into captivity, 586; captured Tyre after a siege of 12 years and invaded Egypt. He restored many temples and rebuilt Babylon, where Koldewey's excavations, 1899-1911, revealed his palace, temples, gates, and canals. See Babylon; Necho.

NEBULA. In astronomy, a celestial object which cannot be resolved by the telescope into a star, or group of stars, as distinct from comets. Nebulae were first catalogued by Messier in 1771. Afterwards the Herschels catalogued 5,000 of them, but since many so-called nebulae were later found to be star clusters it was believed all nebulae were assemblages of very distant stars. Spectroscopy disproved this assumption, when Huggins showed, in 1864, that the Draco nebula was a mass of incandescent gases. Since then, however, the application of the spectroscope, by revealing many differences in their spectra, has evoked the speculation that some nebulae may in fact be groups of stars outside the stellar universe. See Andromeda; Astronomy; Milky Way; Orion; Planet.

Nebula. Spiral nebula in Ursa Major, from a telescopic photograph by G. W. Ritchey

NEBULAR HYPOTHESIS. Theory to account for the origin of the planetary system. First suggested by Kant, in 1755, and placed on a more definite basis by Laplace, it postulates that the matter which now forms the sun, planets, and satellites existed once in the form of a globular gaseous mass extending from the sun's present position as a centre out to, or beyond, the orbit of Neptune. As this mass rotated it gradually flattened, its particles consolidated, and its speed of rotation increased. As a consequence some of the gaseous matter would be detached in the form of a ring. This ring would break up into separate globular masses which would ultimately coalesce in the largest of them and thus form the first, and outermost, planet, and so for other planets.

NECHO OR **NECHOR.** King of Egypt (610-594 B.C.). The Egyptian Nekau, he succeeded his father Psammetichus I, founder of the XXVIth dynasty. He reconquered Syria, defeating and slaying Josiah of Judah at Megiddo, 609 B.C. Nabopolassar, king of Babylon, sent his son Nebuchadrezzar to Syria, with the result that Necho was defeated at Carchemish 605 B.C. and lost the whole of his conquests in Syria and Palestine.

NECK. Part of the body which unites the head with the trunk. The neck supports the head by means of the cervical vertebrae. In front of the bony pillar lies the oesophagus, terminating above in the pharynx, and in front of these are the trachea and larynx. The thyroid gland is situated in the lower part of the neck. The carotid arteries pass up from the thorax to the head at the side of the neck, and the jugular veins pass downwards close to the carotid arteries. The most prominent muscles of the neck are the sterno-mastoids, one on each side, and the trapezii, which pass up from the back and are inserted into the occipital bone at the lower part of the back of the head.

NECKAR. River of S. Germany, a right bank tributary of the Rhine. Rising between the Black Forest and the Swabian Jura, it flows N.E. and N. through Württemberg and Baden, turning W. to join the Rhine at Mannheim (q.v.). Its length is about 250 m.

NECKER, JACQUES (1732-1804). French financier and statesman. Born at Geneva, Sept. 30, 1732, he became a banker in Paris. Director of the treasury, 1776, he was made director-general of finance in 1777. He published his *Compte Rendu*, 1781, and his treatise on French financial administration, 1784. Exiled from Paris, 1787, he was recalled as director-general in 1788, and was responsible for summoning the states-general and doubling the representation of the third estate. He died April 9, 1804.

His wife, Suzanne Curchod Necker (1739-94) had a brilliant salon, frequented by such men as Diderot. Famed also for her charities,

she founded, 1778, and for some years administered, the Hôpital Necker in Paris. She died in May, 1794. Her daughter, Anne Louise Germaine, became Madame de Staël (q.v.).

NECROMANCY (Gr. nekros, corpse; manteia, divination). Divination by pretended communication with the dead. The art is usually exercised by professional sorcerers, as in the familiar example of the witch of Endor, in 1 Sam 28, who professed to evoke the spirit of the prophet Samuel at the behest of Saul. Necromancy still prevails widely in primitive culture. In most instances offerings are made to the spirits to secure their goodwill and their aid in attaining the desired result. See Divination; Magic

NECROPOLIS (Gr. nekros, corpse; polis, city) Word meaning a city of the dead. It was anciently applied to an outlying part of Alexandria which was set apart for burial purposes, and is used in connexion with modern cemeteries, such as those at Woking, in Surrey, and at Glasgow.

NECROSIS. In pathology, the death of a limited portion of tissue. The term is often applied specifically to destruction of bone. Generally necrosis is caused by the failure of nutrition of any tissues. See Gangrene.

NECTAR. In Greek mythology, the drink of the gods, their food being ambrosia. It was supposed to confer immortality on those who drank it, and on that account was forbidden to mortals. See Ambrosia.

NECTARINE. Edible fruit, a smooth-skinned variety of the peach (q.v.). The method of cultivation and habit of both nectarine and peach are similar, but the fruit of the nectarine is more tender of skin than the peach, and therefore must not be touched by hand during development, or the ripened fruit will be bruised and spoiled.

Nectarine. Branch with foliage and ripe fruit

Needles, THE. Group of three chalk rocks off the W. end of the Isle of Wight. On the westernmost rock is a lighthouse.

NEEDWOOD. Forest in Staffordshire. A royal hunting ground, it lay between Stafford, Burton, and Lichfield, and was stocked with deer and wild cattle. Its area was greatly reduced in the 17th century, and in 1801 the rest was disafforested. Most of it is now under cultivation, but a little remains forest.

NEGLECTANCE. In law, the want of reasonable care or diligence in the performance of a duty. In order to found an action for damages for negligence, the plaintiff must show that the defendant owed some duty not to be negligent, and that, in consequence of his breach of that duty, actual damage has resulted to the plaintiff or his property.

The duty may be a contractual one, as where a solicitor is negligent in the conduct of an action for a client; or it may be a duty which the defendant owes to all the world, as where an action is brought in respect of personal injuries caused by the negligent driving of the driver of a vehicle. In certain cases, want of skill is negligence. Error of judgement is not negligence; nor is the lack of presence of mind in face of sudden danger.

NEGRO (Lat. niger, black). Name of the dark-skinned, woolly-haired races who inhabit W. Africa S. of the Sahara, and, farther E.,

the region S. of a line reaching the Indian Ocean near the river Tana. The negro is allied, zoologically, to the negroid, e.g. Melaneseans, to the pygmy, and to the negrito, e.g. Semang and Acta; except as regards hair, he comes nearer to the anthropoids than do the white races (see illus. p. 701).

As regards social organization, large areas may be governed by tribal chiefs; in other cases the chief's authority is limited to a single town, or even a quarter of a town. But on the Congo, the lower and middle Niger, in Dahomey, etc., powerful empires and kingdoms arose and flourished. African societies are in the main democratic, without well marked distinctions of rank, except in so far as slavery is practised. The negro is free to marry as many wives as he can purchase. Liberia (q.v.) is a negro republic of W. Africa.

NEGROES IN AMERICA. The negro population of the New World is between 20 and 30 millions, of which about 10,500,000 are in the U.S.A.

The negro problem in the U.S.A. became acute after the emancipation of the slaves. For a time the negro vote controlled most of the south, and much corruption and misgovernment followed. A Democratic reaction followed, and special legislation in some states practically disfranchised the negro. In the south the segregation of the negro in public conveyances, schools, places of amusement, and churches is enforced and inter-marriage prohibited. Statistics of crime show a percentage four times as great as that of the whites. The early attempts to solve the problem by repatriation having failed, effort is now concentrated on education.

With the exception of Cuba and Porto Rico, the West Indies have an overwhelming preponderance of negro inhabitants. In Barbados the negro is seen at his best, and is progressing steadily. In S. America, Brazil and Guiana have the largest negro admixture. There is no acute colour question, the negroes having crossed extensively with the whites. Unlike the negroes of N. America, who are of Mandingo and allied stocks, those of Brazil are to a great extent Bantu, their ancestors having been brought from Angola. See Africa; Bantu.

NEGUS. Warm beverage made of port wine and water, sweetened with sugar and flavoured with lemon, cloves, nutmeg, etc. The water, in the proportion of one-half to two-thirds, should first boil, and sherry may be substituted for port. It is named after its inventor, Col. Negus, master of the buckhounds, 1727.

NEHEMIAH. Reputed author of an O.T. book, closely related to the books of Ezra and Chronicles. It records the work in Jerusalem of a Jewish euphearer of Artaxerxes, who in 444 B.C. was appointed Persian governor of Judah. Nehemiah made two visits to Jerusalem, where he inspected the rebuilding of the walls and introduced various reforms.

NEILSON, JULIA (b. 1869). British actress. Born in London, June 12, 1869, she made her debut as Cynisca in Pygmalion and Galatea, at The Lyceum, London, March 21, 1888. At The Haymarket, 1889-94, she achieved success as Julie de Noirville in A Man's Shadow; Pauline in Called Back; Olga in the Red Lamp. Her other successes include Nell Gwyn in Sweet Nell of Old Drury; Lady Blakeney in The Scarlet Pimpernel; and several Shakespearean parts, among them Rosalind in As You Like It. Julia Neilson married the actor-manager Fred Terry (q.v.).

Julia Neilson. British actress Effort & Fry

NEJD. Country of Central Arabia, part of the Arab kingdom of Hejaz and Nejd. On the E. side of the Hejaz, and extending E. to include Hasa on the N.W. of the Persian Gulf, it is the modern representative of the empire of the Wahabis (q.v.). Its people are pure Arabs, and its capital is Riyadh. on the pilgrim road from the Persian Gulf to Mecca. The emir Ibn Saud expelled the Turks from Hasa in 1913, and was recognized as Vali in the following year. His independence dates from the downfall of Turkey during the Great War. In 1925 he completed the conquest of the Hejaz (q.v.) and was proclaimed king of the Hejaz in Mecca. The area is some 800,000 sq. m. Pop. about 1,275,000. See Arabia; Hejaz; Mecca.

NELSON. River of Canada. It carries the waters of Lake Winnipeg N.E. into Hudson Bay after a course of 390 m. Its main tributary is the Burntwood; owing to rapids it is navigable only for short distances. At its mouth stands Port Nelson. The name is sometimes applied to the same stream, otherwise called the Saskatchewan, before it enters Lake Winnipeg; the total length being 1,600 m. See Canada.

NELSON. Borough and market town of Lancashire. It is 3 m. from Burnley and 30 m. from Manchester, on the L.M.S. Rly. The industries include cotton and confectionery factories and engineering works. The chief buildings include the town hall, market hall, and technical school. There are several public parks and recreation grounds. A tramway service connects the town with Burnley, Colne, and other places in the vicinity. Market day, Wed. Pop. 39,841.

NELSON. Town of British Columbia. It stands on the west arm of Kootenay Lake, and is served by the C.P.R. and C.N.R., being 1,100 m. from Winnipeg. It is a centre for the mining, lumbering, and other activities of the neighbourhood, and has railway shops, saw mills, and works for making jam, cigars, etc. Pop. 7,000.

NELSON. Town of New Zealand. It lies on Tasman Bay, an indentation on the N. coast of South Island. Sheep rearing is the chief occupation, and the district yields fruit and hops. Pop. 12,250.

NELSON. British battleship. Completed in 1927, Nelson and her sister ship, Rodney, are the most powerful vessels in the British navy. Each cost over £7,000,000 to build. Nelson's principal armament is nine 16 in. guns; she also carries twelve 6 in. guns and six 4.7 anti-aircraft guns, as well as smaller ones. Her displacement is 35,000 tons and length 660 ft. See Battleship; Rodney.

NELSON, EARL. British title borne by the family of Nelson since 1805. Horatio Nelson's barony passed to his brother, the Rev. William Nelson, who, in recognition of Horatio's services, was made Viscount Merton and Earl Nelson in 1805. He, too, left no sons, and the titles passed to Thomas Bolton, a son of the admiral's sister, who took the name of Nelson and became the 2nd earl. Thomas Horatio Nelson, the 4th earl (b. 1857), succeeded in 1913. The family seat is Trafalgar House, near Salisbury, and the earl's eldest son is known as Viscount Merton.

NELSON, HORATIO NELSON, 1ST VISCOUNT (1758-1805). British admiral. Born Sept. 29, 1758, the sixth child of Edmund Nelson, rector of Burnham Thorpe, Norfolk, he entered the navy in 1770 as "captain's servant" in the ship of his uncle, Captain Suckling, served in the West Indies, in an Arctic expedition, and in the East Indies. He became captain in 1779; commanded the naval contingent against the Spanish fleet at San Juan de Nicaragua, 1780; joined Lord Hood's fleet at New York, 1782, and was employed in the West Indies, 1784-87. In 1787 Nelson

married Frances Herbert Nisbet. He commanded the Agamemnon in the Mediterranean fleet, in 1793, under Hood; was largely responsible for the capture of Bastia and Calvi in Corsica, in 1794, at which latter engagement he lost the sight of his right eye by a wound.

Present at the battle of St. Vincent, Feb. 14, 1797, he secured important results by disobeying orders. In Feb., 1797, he became a rear-admiral, and was knighted. On July 25, 1797, he failed in a night attack on Santa Cruz, Tenerife, and his right arm, shattered by grape, had to be amputated. Sent to intercept Napoleon, who had sailed from Toulon with a small fleet to invade Egypt, Nelson destroyed the fleet in Abukir Bay, Aug. 1, 1798. He was made Baron Nelson of the Nile, and given a pension of £2,000. In Sept., 1798, he went to Naples, was welcomed by Lady Hamilton, wife of the British minister there, and conveyed the king and court to Palermo, when the French took Naples in 1799. On the recovery of the city he was responsible for the execution of Caracciolo. Nelson was created duke of Bronte in 1800, and returned home with Lady Hamilton, and a daughter, Horatia, his only child, was born about Jan. 31, 1801. For his great victory of Copenhagen, in 1801, when he defeated the Danish ships and forced them to agree to an armistice, he was made a viscount. In Oct., 1801, he was allowed leave, and went to Merton Place, Surrey, which Lady Hamilton had bought.

In May 18, 1803, on the renewal of war with France, Nelson hoisted his flag in the Victory, to command the Mediterranean fleet, and a few weeks later began his watch of Toulon. On Oct. 21, 1805, was fought the battle of Trafalgar. Nelson drove the Victory into the enemy and was engaged by several ships. Conspicuous in his orders, he was mortally wounded by a marksman's bullet and carried below, where he died at 4.30 p.m. Nelson was given a state funeral in St. Paul's Cathedral, London, on Jan. 9, 1806. Horatia, his daughter, died in 1881, leaving many descendants of the family of Nelson-Ward. See Trafalgar.

NEMESIS. In Greek mythology, daughter of Night and one of the deities of the nether world. She was the goddess of vengeance, punishing the guilty, but at the same time rewarding virtue, and thus became the personification of respect for law and justice.

NEMI. Crater lake of Central Italy. It is in the Alban Hills, between Velletri and Albano, 20 m. S.E. of Rome. It is $3\frac{1}{2}$ m. in circuit, and covers 70 acres. It was called the Mirror of Diana, whose temple was in a neighbouring grove.

After the Great War the lake was excavated, and in 1929-30 was partly drained. The remains of two state galleys of the time of Caligula were recovered, as also were other Roman relics.

NEMOURS. Town of France. It is on the Loing, 10 m. S. of Fontainebleau. It was the chief town of a county, which in 1404 was made a duchy for the king of Navarre. This belonged in turn to the families of Bourbon, Armagnac, and Foix. After the death of Gaston de Foix, in 1512, the duchy passed under various rulers until, about 1670, it was given by Louis XIV to his brother Philip, duke of Orleans. The Orleans family held it until the Revolution. Pop. 5,074.

Horatio, Lord Nelson, as vice-admiral
After Hoppner

A later duke was Louis Charles (1814-96), a son of king Louis Philippe. He saw some service as a soldier, but took no part in public life after 1848. He died June 26, 1896.

NEN or **NENE.** River of England. It rises in Northamptonshire and flows S.E. to Northampton. Here it takes a N.E. direction past Wellingborough, Peter-Wisbech to the Wash, 3 m. below Sutton Bridge. It has canal communication with the central waterways of England. The Nen is navigable for small vessels. Its length is 90 m.

Nelson. The famous signal flown from the Victory before Trafalgar

borough, and which it enters 3 m. below Sutton Bridge. It has canal communication with the central waterways of England. The Nen is navigable for small vessels. Its length is 90 m.

NENAGH. Urban dist. of co. Tipperary, Irish Free State. It stands on the river Nenagh, 27 m. from Limerick, on the Great Southern Rlys. The keep of the castle, at one time the residence of the Butler family, still stands. Pop. 4,524.

NEODYMIUM. Rare earth metal of the cerium group. Its chemical symbol is Nd; atomic weight, 144.3; atomic number 60; specific gravity, 6.956; and melting point, 840°C. It was obtained in 1885 by Auer von Welsbach from didymium (q.v.), at that time thought to be an elementary substance. See Praseodymium: Rare Earth.

NEOLITHIC (Gr. neos, recent; lithos, stone). Term introduced by Lord Avebury to denote the later phase of the prehistoric stone-age civilization which preceded the use of metals. It is distinguished from the older or palaeolithic phase by the more advanced workmanship, especially the polishing and grinding of the cutting edges, as well as by the variety of form and use, displayed by implements wrought out of flint and other hard stones.

NEON. One of the gaseous elements. Its chemical symbol is Ne, atomic weight 20.2, and atomic number 10. It is present in the atmosphere in the proportion of about one part in 80,000. It occurs mixed with argon, and was discovered by Sir William Ramsay in 1898 when examining a large quantity of argon. Neon is recognized by its spectrum, which consists of a great number of red, orange, and yellow lines. Neon lamps, in which an electric discharge is passed through the gas, give out a brilliant orange-red light. See Element; Television.

NEO-PLATONISM. System of philosophy which attempted to replace the dualism of mind and matter by monism, and to solve

the problems of virtue and knowledge on a religious basis.

The keynote of the system is supposed direct intercourse with the absolute, divine being as the result of ecstatic visions. There are three cosmical principles: the One, absolute unity, which creates by emanation the Logos (word, reason), containing the ideas of things, which in turn produces the Soul, the principle of movement, which represents the ideas in the external world. Individual souls hover between reason and sense, ever striving to free themselves from the shackles of matter, and to return to the world of ideas, there to be absorbed and lost in God.

NEPAL. Independent kingdom of N. India. It lies N. of the plains among the Himalayas, and adjoins Tibet on the N. and Sikkim on the E. Dhaulagiri and Everest are within the state, which is drained by the upper waters of the Gogra, Gandak, and Kosi. The area is about 54,000 sq. m.

The government of Nepal is a military oligarchy, supported by an army of 45,000 men. There is a maharaja, but his power is nominal, all authority being in the hands of the prime minister, whose office is hereditary. Kathmandu, a town 75 m. from the frontier of India, is the capital. The people are chiefly Gurkhas (q.v.). Slavery was abolished in 1924. There is a British resident, but he takes no part in the internal affairs of the land. The first railway line in Nepal was opened in 1927. Pop. 5,600,000.

NEPHRITE. In geology, a variety of amphibole. White to dark green in colour, it is a calcium, magnesium, ferrous silicate, and has been highly valued as an ornamental stone in all countries and ages. The word jade is used to describe this mineral and jadeite, as they are extremely similar in appearance. Jadeite, however, is easily fusible, whereas nephrite is infusible.

NEPHRITIS. Inflammation of the kidney. It may be acute or chronic. Acute nephritis may be due to exposure to cold and wet, particularly after excessive indulgence in alcohol; poisoning by substances which irritate the kidneys, such as cantharides, turpentine, potassium chloride; and may occur in the course of various diseases, particularly scarlet fever. Shivering fits and rise of temperature may be the first signs. Dropsy occurs early, and may be first noticed as a puffiness of the face or swelling of the ankles.

The patient should be kept in bed, and the kidneys relieved of their functions as much as possible by stimulating the excretory activities of the skin and bowels. See Bright's Disease.

NEPTUNE. Planet supposed until 1930 to be the outermost of the solar system. It was first seen by Galle, who found it from particulars supplied by Leverrier on Sept. 23, 1846. It can only be seen by the telescope. The distance of Neptune from the sun is 2,794,000,000 m., and its period of revolution about the sun is 165 years. Its diameter has been calculated at about 31,225 m., and its mean density at 1.54. Its satellite revolves about the planet in a retrograde direction, or E. to W., in five days and twenty-one hours. There is spectroscopic evidence of an enveloping atmosphere of unknown gases, and also free hydrogen. See Planet; Pluto; Sun.

S. Philip Neri,
Italian priest

NERI, PHILIP (1515-95). Italian saint, founder of the Oratorians. Born at Florence, July 21, 1515, he went to Rome in 1533 and studied theology. He visited the sick, founded a hospital, established a Confraternity of the Holy Trinity, and delivered daily addresses

which attracted even princes and cardinals. In 1558 he formed a number of young men into the Congregation of the Oratory, an order of priests and laymen observing a common rule, but not under vows, their aim being to teach the ignorant and convert the worldly. He died May 25, 1595, and was canonised in 1622. See Oratorians.

NERO (37-68). Roman emperor. Originally named Lucius Domitius Ahenobarbus, he was the stepson of the emperor Claudius, by whom he was adopted in 50, thenceforth bearing the name of Nero. On the death of Claudius in 54, Nero was made emperor. For the five years of his minority the empire was well administered. Then Nero threw aside his tutors and ministers, and for nine years indulged in that orgy of tyranny which has made his name a byword. The horror grew till Galba, one of the provincial generals, led his troops upon Rome. The emperor fled, and when he heard the tramp of the approaching troops, died by his own hand, 68.

NERVA, MARCUS COCCERUS (32-98). Roman emperor. He was chosen emperor on the assassination of Domitian in 96, after whose tyranny his mild rule was a welcome relief. He took an oath that he would put no senator to death, and suppressed the worst of the informers who had disgraced the latter part of Domitian's reign. He adopted Trajan, and died Jan. 27, 98.

Marcus Nerva,
Roman emperor

NERVE. Cord-like structure composed of nerve fibres, i.e. long branches of nerve cells, termed neurons, which convey impulses from one part of the body to another. Nerves which convey impulses from nerve centres, such as the brain, are called efferent nerves, and those which carry impulses from the periphery to nerve centres are known as afferent nerves.

NERVOUS SYSTEM. System of nerve cells and nerve fibres which control or regulate the actions and functions of every part of the body. It consists of two main divisions, the cerebro-spinal system, comprising the brain and spinal cord, and the vegetative or autonomic, consisting of the sympathetic nervous system and certain other ganglia, i.e. aggregations of nerve cells and fibres. The cerebro-spinal system controls the movements of muscles and carries out actions consciously directed by the individual. The autonomic system regulates functions and actions which are not under voluntary control.

Diseases of the nervous system may be divided into two main classes: (1) Functional nervous disorders, in which

no pathological changes in the system can be detected. (2) Organic diseases associated with degeneration in the nerves or nerve cells following injury, chronic poisoning, or infection with micro-organisms. See Apoplexy; Brain; Ganglion; General Paralysis; Hysteria; Infantile Paralysis; Locomotor Ataxia; Meningitis; Myelitis; Neuralgia; Neurasthenia; Neuritis; Neurosis; Paralysis; Spinal Cord.

NESS. Lake and river of Inverness-shire, Scotland. The lake is 22 m. long and forms part of the Caledonian Canal. The rivers Morriston, Foyers and others fall into it, and its waters are carried to the North Sea by the river Ness, which is only 7 m. long.

NESSUS. In Greek mythology, one of the centaurs. Having attempted to carry off Deianira, the wife of Hercules, the latter shot him with a poisoned arrow. Nessus, when dying, gave Deianira his infected cloak, declaring that it would win back the love of her husband, should he prove unfaithful. The jealous wife sent Hercules the cloak, which he put on, and died in fearful agony. See Centaur; Hercules.

NESTON. Dist. of Cheshire, part of the urban dist. of Neston and Parkgate. It stands on the estuary of the Dee, 12 m. from Chester, and is served by the joint line of the G.W. and L.M.S. Rlys. The old church of S. Mary has some interesting memorials. Pop. 5,191

NESTOR. In Greek legend, king of Pylos. In spite of his years he took part in the Trojan War, and was one of the few Greek leaders to reach home safely after the fall of Troy. As a young man he had taken part in several adventures, including the expedition of the Argonauts and the hunt for the Calydonian boar. See Calydon.

NETBALL. Outdoor pastime. The ground is similar in shape to a hockey pitch.

Around the goals, which are fixed in the centre of the end lines, a semi-circle 16 ft. in radius, called the shooting circle, is drawn, and in the centre of the field a circle 4 ft. in diameter is marked, while the playing pitch is divided into three courts of equal size. The goals are single upright posts, each fitted with an iron ring, placed horizontally 10 ft. above the ground and projecting 6 ins. from the post. Attached to the ring is a net, open at the bottom, through which the ball has to be passed to score a goal. The ball is an association football. The positions are goal-scorer, attack, attacking centre, centre, defending centre, defence, and goal-keeper.

NETHERFIELD. District of Nottinghamshire. It is 2 m. from Nottingham, and is served by the L.M.S. and L.N.E. Rlys., many of the inhabitants being employed on the railways. Netherfield also possesses factories which are connected with the lace and hosiery trades. Pop. 6,400.

Netball. Try for a goal, the ball bouncing from rim of net

NETHERLANDS. Country of Europe. It is composed of eleven provinces—Friesland, N. Holland, S. Holland, Zeeland, Utrecht, Groningen, Drenthe, Overijssel, Gelderland, N. Brabant, and Limburg. Its area is 12,603 sq. m., or 15,760 inclusive of its waters. A strip of Zeeland territory lying S. of the Schelde gives the Netherlands sovereign rights to that river;—and her claim to extend these also to the Wielingen channel, W. of Flushing, was, in 1921, contested by Belgium. The Hague is the residence of the sovereign; other important towns include Amsterdam, the commercial capital, and Rotterdam. Pop. 7,730,577.

The surface is very flat and low, seldom exceeding 16 ft. above sea level, and is intersected by canals and rivers, of which the chief are the Rhine, Maas (Meuse), IJssel (Yssel), Waal and Schelde. In 1924 work was begun on draining a large area of the Zuider Zee. One third of the land is permanent pasture, and intensive methods are largely used in horticulture as well as in agriculture. The principal agricultural products are wheat, rye, barley, oats, flax, sugar beet and potatoes. Flowering bulbs are widely cultivated.

The Netherlands ranks high among colonial powers, its possessions having an area of about 788,000 sq. m. and a pop. of 51,881,862. They fall into two groups, East Indian and West Indian colonies. The E. Indian colonies comprise Java and Madura, Sumatra, the Rian-Lingga archipelago, Banca, Billiton, Dutch Borneo, Celebes, the Moluccas and Dutch New Guinea, the Timor archipelago, Bali and Lombok. The W. Indian colonies are Surinam or Dutch Guiana and Curaçao. The Netherlands colonial empire owes its origin to the Dutch East India Company, formed in 1602 and dissolved in 1798, when its possessions passed to the state.

The name Netherlands was common to the territory, the historical Low Countries, comprising present-day Holland and Belgium, until the declaration of independence by the northern provinces in 1581. At the close of the 16th century the Dutch gained the Moluccas, and, with them, the monopoly of the spice trade, and by the middle of the 17th century

Netherlands. Unmarried girls from Zeeland, in typical costume

Nervous System. Diagram of the network of nerves in the human body seen from the back

Netherlands. Map showing the waterways and canals, and the administrative divisions of Holland

owned more shipping than any other country in Europe. By the Congress of Vienna, 1815, Holland and Belgium were formed into a united kingdom of the Netherlands. This union was dissolved by the Belgian revolution of 1830, and the political relations between the northern and southern Netherlands were not finally adjusted until 1839, when Belgium became independent.

NETHERSOLE, Olga (b. 1870). British actress. Born in London, Jan. 18, 1870, she made her stage debut at the Theatre Royal, Brighton, in *Harvest*, March, 1887, and appeared in London at the Adelphi Theatre, June, 1888. She toured in Australia, 1890, and at the Théâtre Sarah Bernhardt, Paris, 1907, played in *La Dame aux Camélias* and *The Second Mrs. Tanqueray*. She toured in America, 1910-11, and again in 1913.

NETLEY. Village of Hampshire. It stands on the side of Southampton Water, 3 m. from Southampton, on the Southern Rly. Here are the extensive ruins of a Cistercian abbey, founded about 1239. The work of restoring it, begun in 1922, was completed in 1929. In 1856 a military hospital, the Royal Victoria, was begun at Netley. It was opened in 1863, and here candidates for the army medical service are trained. Pop. 1,396

NETTLE (*Urtica dioica*) Perennial herb of the order Urticales, a native of the temperate regions, S. Africa, and the A. des. The creeping root-stock sends out runners, soon forming a large colony. The oval or lance-shaped, opposite leaves are downy and well furnished with stinging hairs; the edges strongly toothed. The flowers are small and green, the males being in separate, looser clusters than the females. The dead-nettle (q.v.) is a different plant.

NETTLE RASH or *URTICARIA*. Affection of the skin which occurs in the form of wheals or raised patches, at first red and afterwards

white and bloodless in the centre, but red at the edges. It may be due to local irritation, such as stings of nettles, insects, jelly fish, etc.; to unsound food, particularly shellfish, tinned fish, and pork; to certain drugs such as copaiba; to intestinal parasites; or to indigestion, diabetes, jaundice, and other diseases.

NEUCHÂTEL (Ger. Neuenburg). Town of Switzerland, capital of the canton of Neuchâtel. It stands on the N.W. shore of Lake Neuchâtel, 27 m. by rly. W. of Berne. Fine quays with handsome modern buildings line the lake shore, this new quarter having several public gardens. The old town, to the W., contains a castle of the 12th century, with later additions: an abbey church, built in the 12th century; and a market hall, erected in 1570. Neuchâtel is noted

for its manufactures of watches, jewelry, and printed goods. Pop. 22,025. The lake of Neuchâtel is 24 m. long and covers over 92 sq. m. The canton of Neuchâtel is 312 sq. m. in extent.

NEURALGIA. Affection of the nerves. It may be a manifestation of a neurotic state, or due to debility, anaemia, exposure to cold, toxic influences, as in gout, diabetes, lead poisoning, malaria, etc., pressure on a nerve trunk from a tumour, or to reflex action from a source of irritation, such as a decayed tooth. The pain is usually very severe, and is described as stabbing, burning, or darting in character. The general health should be built up. Sufficient exercise in the open air and a generous diet are important. All sources of peripheral irritation, such as decayed teeth, should be looked for. Warmth applied to the affected part often relieves painful attacks. See Nervous System; Sciatica; Tic Douloureux.

NEURASTHENIA. Term used popularly to include all forms of neurotic disorder or neuroses (q.v.), but strictly one form of these disorders belonging to the group of the "actual" neuroses. Neurasthenia is essentially a form of nerve exhaustion, and may result from prolonged physical strain and hardship, or long-continued overwork, especially if associated with business or domestic worries. The most characteristic symptom is the extreme readiness with which the individual is fatigued by any kind of physical or mental effort.

NEURITIS. Inflammation of the trunk of a nerve. It may be localised in one nerve or may be multiple. Localised neuritis is most often due to exposure to cold, injury of a nerve, or extension of inflammation from adjacent inflamed tissue. There is pain in the course of a nerve, and the functions of the muscles supplied by the nerve are impaired. If the condition becomes chronic, there is ultimately extreme wasting of the muscles, with paralysis and possibly contractions.

Multiple neuritis may occur in the course of diphtheria and smallpox, may be due to poisoning by alcohol, lead, and other substances, or may arise in the course of beri-beri. Alcoholic neuritis is the most frequent form of multiple neuritis. Rest is an essential feature of treatment, while hot applications may be used to relieve pain. Strychnine, iodide of potassium, and salicylates have been recommended as internal medicines.

NEUROPTERA. Order of carnivorous insects. They have biting jaws, four stiff and unfoldable, net-veined wings, more or less transparent, and long antennae. The genus *Boreus* is wingless. They undergo complete metamorphosis in their development from the larva to the adult state. Familiar British examples are the alder-flies, the snake-flies, the lace-wings, and the scorpion-flies. Not one of them is injurious to man or his property.

NEUROSIS. Disorder of the mind not associated with any recognizable organic changes, and distinguished from insanity by the fact that it affects chiefly the emotions, and leaves the reasoning powers relatively unimpaired. Knowledge of these disorders is due mainly to the work of the Viennese physician, Sigmund Freud (q.v.).

Psychopathologists now classify neurotic disorders into the "actual" or "true" neuroses, which can be traced ultimately to some physical disturbance, and the psychoneuroses, which have a purely mental origin. The actual neuroses are three in number, namely neurasthenia, anxiety neurosis, and hypochondriasis. The psychoneuroses are hysteria, psychasthenia, and obsessional neurosis. These conditions are caused by a conflict between the conscious and subconscious parts of the mind. Treatment consists in investigating the patient's mind and ascertaining the fundamental nature of the conflict which, unknown to himself, is occurring. The process which is involved in this treatment is called psychoanalysis (q.v.).

NEUVE CHAPELLE. Village of France, in the dept. of Nord. It is 4 m. N. of La Bassée (q.v.) and 8½ m. S.W. of Armentières, lying slightly south of the Armentières-Béthune road. In Oct., 1927, a shrine in memory of the Indian soldiers who fell in the Great War was unveiled here by Lord Birkenhead. The village, which was practically destroyed in the war, has been adopted by Blackpool.

THE BATTLE OF MARCH, 1915. In Oct., 1914, the village was taken by the Germans, and in March, 1915, the British decided to open the campaign by an attack in force here. On March 10, after a preliminary bombardment, the assault was delivered by British and Indian troops. The village was captured, but a renewal of the attack on the 11th was attended with heavy loss. On March 12 German reserves arrived, but the British held the ground won on the 10th. The British losses were 12,811 killed, wounded and missing. The German losses, including 30 officers and 1,657 men taken prisoners, may have been almost as large. The shortage of ammunition in this battle had important political effects in England.

NEUVILLE, ALPHONSE MARIE DE (1836-85). French painter. He was born at St. Omer, May 31, 1836. In 1861 his Chasseurs of the Guards took a second-class medal at the Salon, and was followed by a series of military

Nettle. Foliage and flowers of common stinging nettle

pictures, the artist supporting himself meanwhile by making woodcuts for the illustrated press. His pictures of the incidents of the war of 1870-71 made him famous as a military artist. He died May 20, 1885.

NEVA. River of N.W. Russia. Rising in Lake Ladoga, it flows through Leningrad, and, dividing into several branches, discharges into the bay of Neva in the gulf of Finland. It is a commercial waterway, the final link in the communication between Leningrad and the White and Caspian Seas. Length 45 m.

NEVADA. Western state of the U.S.A. lying almost entirely within the Great Basin, its surface (mean alt. 3,750 ft.) is marked by numerous small mt. ranges and "sinks," or marshy tracts of land converted at times into large lakes. The principal river is the Humboldt, whose direction is followed by the Southern Pacific Rly. The minerals include gold, silver, copper, lead, iron, and tungsten. There is a university at Reno. Carson City is the capital, and Reno the largest city. Nevada was part of the territory taken from Mexico in 1848. It became a state of the U.S.A. in 1864. Its area is 110,690 sq. m. Pop. 77,407.

NEVERS. City of France. It stands where the Nièvre falls into the Loire, 32 m. from Bourges and 160 from Paris. The cathedral of S. Cyr was begun in the 11th

Nevers. East end of the cathedral of S. Cyr

century and finished about 1500. It was originally two buildings, and is Romanesque at one end and Gothic at the other. The church of S. Etienne is noteworthy. The castle in which the counts and dukes of Nevers lived is now the palais de justice and a museum. Of the city's fortifications a tower remains. Pop. 29,754.

NEVILL, LADY DOROTHY FANNY (1826-1913). British writer. She was born in London, April 1, 1826, daughter of Horatio Walpole, third earl of Orford (1783-1858). In 1847 she married her cousin Reginald Nevill (d. 1878), and became known as a hostess. She was author of *Mannington and the Walpoles*, earls of Orford, 1894; *Reminiscences*, 1906; *Leaves from the Note Books of Lady Dorothy Nevill*, 1907; *Under Five Reigns*, 1910; and *My Own Times*, 1912. She died March 24, 1913. Consult *Life and Letters of Lady Dorothy Nevill*, R. H. Nevill, 1919.

Lady Dorothy Nevill, British writer

NEVIN or **NEFYN.** Watering place of. Carnarvonshire, Wales. It is on Carnarvon Bay, 6 m. N.W. of Pwllheli. In 1284 Edward I held a tournament here to celebrate his Welsh triumphs. The possibilities of Nevin as the port for Irish traffic were considered before the final selection of Holyhead. Pop. 1,900.

NEVINSON, HENRY WOODD (b. 1857). British author and journalist. In 1897 he acted as correspondent for *The Daily Chronicle*

in Greece and Crete, and was afterwards in S. Africa. He was in Africa, 1904-5, investigating the slave trade in Portuguese territory, and in Russia in 1906. On the outbreak of the Great War, Nevinson was in Berlin, and for a time in France, after which he acted as war correspondent in Gallipoli, Salonica, and Egypt. A champion of social reform, women's suffrage, and all advanced movements, his works include *The Dardanelles Campaign*, 1918; and three autobiographical volumes. *Changes and Chances*, 1921, 1925, and 1928. His wife, Margaret Wynno Nevinson, is also a writer.

His son, Christopher Richard Wynne Nevinson (b. 1889), studied at the Slade School and in Paris, and in 1910 began to exhibit at the New English Art Club and the London Group, where his daring experiments in cubism attracted attention. He joined the British army in 1914, and was in the Mons retreat. Discharged in 1916, he was appointed an official artist with the British armies in 1917.

Nevis. Loch or arm of the Atlantic Ocean in the S.W. of the co. of Inverness. It is 14 m. long. See Ben Nevis.

NEW AMSTERDAM. Town of British Guiana. It stands near the mouth of the river Berbice, at its junction with the Canje, 65 m. by rly. S.E. of Georgetown. It was founded by the Dutch. Pop. 8,789. New Amsterdam is also the name originally given by the Dutch to the settlement on Manhattan Island, which became New York City.

NEWARK. Borough and market town of Nottinghamshire. It is on the Devon, near its union with the Trent, and is connected with the main course of that river by a canal. It is 19 m. from Nottingham and 120 from London, on the L.M.S. and L.N.E. Rlys. The chief building is the church of S. Mary Magdalene. The Beaumont Cross is a fine piece of 15th century work. The castle was the scene of King John's death in 1216. Newark holds an important corn market. Market day, Wed. Pop. 16,957.

NEWARK. City and port of entry of New Jersey, U.S.A. It stands on the Passaic river, 9 m. by rly. W. of New York. It has manufactures of electrical machinery and apparatus, jewelry, leather, chemicals, cutlery, boots, clothing, and glass. Pop. 414,524.

NEWBATTLE. Village of Midlothian Scotland. It is on the South Esk river, 1 m. S. of Dalkeith. Newbattle Abbey, a seat of the marquess of Lothian, occupies the site of an abbey, founded in 1140. Pop. 6,100.

NEWBOLT, SIR HENRY JOHN (b. 1862). British writer. Born June 6, 1862, in 1892 he published a novel, *Taken from the Enemy*, and in 1897 a slender volume of verse, *Admirals All*. The poems therein and his later verse, contained in *The Island Race*, deal mainly with the deeds of British seamen, an example being the popular *Drake's Drum*. From 1900-4 Newbolt edited *The Monthly Review*. His later work includes two novels, *The Old Country*, 1906, and *The New June*, 1909; while after the Great War came *Submarine and Anti-Submarine*, 1918; *A Naval History of the War*, 1920; *Studies*, Green and Gray, 1926; and *New Paths on Helicon*, 1927. In 1915 he was knighted, and in 1922 was made a companion of honour.

NEW BRIGHTON. Watering place of Cheshire, part of the county borough of Wallasey. It stands on the Mersey, 4 m. from Birkenhead, in the Wirral peninsula. It has a station on the L.M.S. Rly., and is connected by steamer with Liverpool and Birkenhead.

C. R. W. Nevinson, British painter

NEW BRITAIN. Island of the Bismarck Archipelago (q.v.). When in German occupation, it was called Neu Pommern. On the island is Rabaul, the capital of the group. Its area is 10,000 sq. m. Pop. 81,859.

NEW BRUNSWICK. Province of the Dominion of Canada. It is bounded N.W. by the prov. of Quebec, W. by the U.S.A., and elsewhere by the sea, except where the isthmus of Chignecto separates it from Nova Scotia. Grand Manan and Campobello islands lie off the coast. The rivers include the St. John and the Miramichi. Grand Lake is the largest of the lakes.

Much of New Brunswick is covered by forests, in which moose and caribou are found, and lumbering and the making of wood-pulp are important industries. Iron, coal, gypsum, oil, and other minerals are mined, and natural gas exists. There is a large fishing industry and ample water power. The prov. is served by the C.P.R. and the C.N. Rlys. St. John is the largest town, others being Fredericton (q.v.), the capital, and Moncton. The university of New Brunswick is at Fredericton. The area is 27,985 sq. m. Pop. 387,876. See Canada.

NEWBURGH. Burgh and seaport of Fifeshire, Scotland. It stands on the Firth of Tay, 11 m. from Perth, on the L.N.E.R. The industries include fishing and the manufacture of floorcloth, linen, etc. There is some shipping, and a small harbour. Pop. 2,078.

There is a city called Newburgh in New York State, U.S.A., 58 m. N. of New York city. Pop. 30,419.

NEWBURN. Urban dist. of Northumberland. It is on the Tyne, 6 m. from Newcastle, on the L.N.E.R. There are iron and steel

Newark, Nottinghamshire. The castle, dating from the 12th cent.

works, machine shops, and manufactures of tools and fireclay. There are coal mines in the vicinity. Pop. 20,950.

In Aug., 1640, there was a skirmish here. The Scots, invading England, reached Newburn. On the 28th, after

a cannonade, the English, much inferior in numbers, fled, and the Scots crossed the Tyne.

NEWBURY. Borough and market town of Berkshire. It stands on the Kennet and the Kennet and Avon canal, 17 m. from Reading, on the G.W. Rly. The church of S. Nicholas was rebuilt by John Smallwood or Winchcombe, called Jack of Newbury, a wealthy clothier of the town. The Cloth Hall is now a museum. Malting, brewing, and milling are carried on, and there is a racecourse. Market day, Thurs. Pop. 12,295. Newbury was the scene of battles in the Civil War, Sept. 20, 1643, and Oct. 27, 1644. In the first of which Falkland was killed.

NEW CALEDONIA. French island in the western Pacific Ocean. It is 1,077 m. E. of Sydney, and has an area of 8,548 sq. m. A fringing reef encircles the island, the inner lagoon being of great use for navigation. There are coffee, cotton, and rubber plantations. Pop. 47,605.

Discovered by Capt. Cook in 1774, the island became French in 1853. From 1864-95 it was a penal settlement, and the remaining convicts are now kept in the islet of Nou, opposite Noumea, the capital. Dependencies of the island comprise the Isle of Pines, Loyalty Islands, Hion Islands, Wallis archipelago, and Futuna and Alofi.

NEWCASTLE. Town of co. Limerick, Irish Free State. It is 24 m. from Limerick. Pop. 2,797. There are several other places of this name in Ireland.

NEWCASTLE. Watering place of co. Down, Northern Ireland. It stands on Dundrum Bay, 11 m. S.W. of Downpatrick and 36 m. from Belfast, and is served by the G.N. of Ireland and Belfast and County Down Rlys. Amid magnificent scenery, it is visited for bathing and golf. Pop. 2,600.

NEWCASTLE. Town of Australia, in New South Wales. It stands at the mouth of the Hunter river, 102 m. by rly. N.N.E. of Sydney, on a great coalfield. There are large iron and steel works. Pop. 103,180.

NEWCASTLE. Town of Natal, S. Africa. It is at the foot of the Drakensberg, 160 m. from Durban, with which it is connected by rail. It is the centre of a coal-mining district, and lies at an alt. of 3,890 ft. During the Boer War of 1880-81 it served as the British base, and here peace was signed. In the S. African War, 1899-1902, the Boers occupied it in their invasion of Natal in Oct., 1899. Pop. 4,274.

NEWCASTLE, DUKE OF. British title borne by the family of Pelham-Clinton. It is taken from Newcastle-under-Lyme. The first duke was the soldier William Cavendish (1592-1676). He led the royalist armies during the Civil War, and was created an earl in 1629 and a duke in 1665. His son Henry, the 2nd duke (d. 1691), left no sons, so the title became extinct, but in 1694 it was revived for Henry's son-in-law, John Holles, earl of Clare (d. 1711).

William Cavendish, 1st duke of Newcastle. After Van Dyck.

Holles left no sons, and his estates passed to a nephew, Thomas Pelham, who was made duke of Newcastle-upon-Tyne in 1715, and duke of Newcastle-under-Lyme in 1756. In 1724 he joined Walpole's cabinet, and continued to hold office, save during the winter of 1756-57, until 1762. On the death of his brother, Henry Pelham, he was first lord of the treasury, 1754-56. Under his second premiership, 1756-62, Pitt was his war minister. When he died in 1768 his earlier dukedom became extinct, but the newer one passed to a nephew, Henry Fiennes Clinton, 9th earl of Lincoln, whose descendants still hold it. Henry, the 5th duke (1811-64), sat in the House of Commons as earl of Lincoln, 1832-51. The 8th duke, till then known as Lord Francis Hope, succeeded in 1928. The duke's seat is Clumber, Nottinghamshire. His eldest son is called the earl of Lincoln.

NEWCASTLE - UNDER-LYME. Borough and market town of Staffordshire. It stands on Lyme Brook, 16 m. from Stafford, on the L.M.S. Railway. In the vicinity are collieries and potteries, while other industries include the making of clothes and paper, brewing, and malting. In the 12th century a castle was built here, and as it was near the forest of Lyme the name arose. Market days, Mon. and Sat. Pop. 20,418.

NEWCASTLE-UPON-TYNE. River port, city, and co. of a city in the county of Northumberland. It is the centre of a large coal-mining, shipbuilding, industrial, and agricultural area, and stands 8 m. from the sea, on the left bank of the Tyne. To facilitate shipping, etc., the Tyne Commission undertook from 1861 onwards its great work of deepening and improving the river. Newcastle's industries, apart from coal and shipbuilding, include engineering works, electrical works, and the manufacture of chemicals and alloys. The city and district are served by the L.N.E.R. Seven bridges cross the river.

Open spaces and parks include Town Moor and Jesmond Dene.

S. Nicholas' church, the cathedral since 1882, dates from 1350, and the lantern tower from 1430. S. Andrew's and S. John's contain parts dating from the 12th century. Other conspicuous churches are All Saints' and S. Mary's (R.C.) cathedral. The Great Tower, or keep, of the castle dates from 1172-77, and the Black Gate from 1247. The university of Durham is represented by the College of Medicine and by Armstrong College. Newcastle adopted Arras in 1920. The chief magistrate is styled lord mayor. Pop. 278,409. See Armstrong, Baron; Jesmond; Tyne.

NEWCHWANG or YINGKOU. Treaty port of Manchuria. It was opened to foreign trade in 1858. Though formerly on the Gulf of Liaotung, Newchwang is now situated on the Liaohu, about 30 m. upstream. It is connected with the S. Manchuria Rly., linking Mukden and Dairen, and with the Peking-Mukden Rly. Newchwang is icebound for three months in the year. Its commercial position has been challenged by the opening of Antung and the development of Dairen. Pop. 65,600.

NEW CROSS. Dist. of S.E. London. In the bor. of Deptford, it has stations on the Southern and Metropolitan Rlys. New Cross is a populous area between Peckham on the W. and Greenwich on the E. New Cross Road connects the Old Kent Road with Queen's Road, Peckham, and Deptford Broadway. On the Lewisham High Road is the Goldsmiths' College. See Goldsmith.

NEW CUT. London thoroughfare. Connecting Lambeth Lower Marsh and Waterloo Road with Great Charlotte Street and Blackfriars Road, S.E., it is notable for its brokers' shops, street stalls, and Sunday trading. At the Waterloo Road corner is the Royal Victoria Hall (the Old Vic), formerly the Royal Coburg Theatre. See Victoria Hall.

NEWDIGATE, SIR ROGER (1719-1806). English antiquary. Born at Arbury, Warwickshire, May 30, 1719, he was M.P. for Middlesex, 1741-47, and for Oxford University, 1750-80.

Sketching in early youth old French and Italian architecture, he afterwards travelled in quest of marbles and other antiquities. He presented some to University College, Oxford, and to the Radcliffe library, besides contributing £2,000

Newcastle-upon-Tyne. New bridge opened in 1928, with the swing and King Edward VII bridges beyond. Above, the 12th century castle keep

for transferring to Oxford the Arundel marbles, now in the University galleries there. He died Nov. 23, 1806.

Sir R. Newdigate, English antiquary. After Romney.

The Newdigate Prize was founded by him in 1806 as an award for the best poem on a given subject by an undergraduate of the university of Oxford.

NEW ENGLAND. Name given to certain N.E. states in the U.S.A. formerly belonging to Britain. They are Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, and their inhabitants, descended from Scottish Presbyterians and English Puritans, are familiarly styled Yankees. The Plymouth Colony was established in 1620 in Massachusetts, and in 1643 a confederacy known as the United Colonies of New England was formed. See Pilgrim Fathers; also the articles on the separate states.

NEWENT. Market town of Gloucestershire. It is 10 m. from Gloucester, on the G.W. Rly. The church, an old foundation, has been largely rebuilt, but contains old monuments. Market day, alternate Thurs. Pop. 2,325.

NEW FOREST. Woodland district of Hampshire. It lies in the S.W. of the county between Southampton Water and the Avon, and has an area of about 144 sq. m. Herein are Lyndhurst, Brookenhurst, Ringwood, and Minstead. It contains the ruins of Beaulieu Abbey, the Rufus Stone, and other subjects of interest, and is watered by the Beaulieu river and other streams. The chief trees are oak and beech. There are a few deer left in the forest, which has also a peculiar breed of ponies.

Part of the land is the property of the crown, and to look after it there are a surveyor, verderers, and other officials. See Hampshire.

NEWFOUNDLAND. Dominion of the British Empire. It consists of Newfoundland proper, a large island in the N. Atlantic, off the continent of N. America, together with Labrador (q.v.) in 1927 the Labrador boundary dispute between Canada and Newfoundland was decided by the privy council in favour of the latter, and some 110,000 sq. m. (Labrador) were given to Newfoundland. The area of Newfoundland proper is 42,734 sq. m. The capital is St. John's, other towns including Harbour Grace, Bonaville, and Grand Falls. Pop. 264,089.

The coast of Newfoundland is very rugged, especially on the S.W. Fishing is the chief occupation, cod being the principal catch, and the seal fishery is valuable. There are important pulp and paper mills at Grand Falls and elsewhere. The mineral resources are considerable, the chief deposits being of iron, copper, silver, and lead ores. Coal is found. There are over 1,000 m. of rly. The governor is assisted by an executive council, a legislative council, and an elected house of assembly.

Newfoundland was discovered by John Cabot in 1497, and was soon visited by the Portuguese, Spanish, and French for its fisheries. In 1583 Sir Humphrey Gilbert formally annexed Newfoundland to England. The English made several attempts to colonise the island, but in 1697, under the treaty of Ryswick, the French were left in possession of a considerable settlement on the S.W. coast. In 1713 the island was ceded by France to England, but certain fishing rights were retained, out of which innumerable disputes arose, which were not finally settled until 1904.

Newfoundland Arms

Newfoundland. Map of the self-governing British dominion. Inset, the Labrador coast, its dependency

The Newfoundland Regiment is a unit raised for service in the Great War. Formed in Aug., 1914, after a period of training it went to England, thence to Gallipoli, in 1915, and later fought in France, in Feb., 1918.

NEWFOUNDLAND DOG. Large, handsome and intelligent breed of dog. First introduced to Britain from Newfoundland in the 18th century, the conservation of its good points by breeders is looked after by the Newfoundland Club, which favours a dog wholly black, save for a patch of white, perhaps, on the chest and toes. The average height at shoulders is 27 ins. for a dog, and 25 ins. for a bitch. The tail, which reaches below the hocks, is thick, covered with long hair, and slightly curved at the tip. Ears and eyes are small, the latter of dark brown colour. The lesser Newfoundland or Labrador dog is all black.

Newfoundland dog. Champion Gipsy, a prize specimen of the breed

NEWGATE. Former gaol in the city of London. There was a prison here in the 13th century or earlier, and a new one was begun in 1420. This was burnt down in 1666, rebuilt upon the same lines, and again rebuilt 1778-80, only to be partly destroyed by fire during the Gordon Riots, 1780. Reconstructed in 1837, the gaol ceased to be a place of detention in 1880. In 1903-4 it was demolished, its site being now occupied by the Central Criminal Court. See Central Criminal Court.

NEW GLASGOW. Town of Nova Scotia, Canada. It stands on the East River, 105 m. from Halifax, and 3 m. from the coast at Pictou Harbour. There are coal mines in the neighbourhood, and the industries include iron and steel works. Pop. 8,974.

NEW GUINEA. Island of the Pacific Ocean, in the East Indian Archipelago. The fauna and flora are distinctly Australian in type, but the natives are akin to the Melanesians of the neighbouring South Sea Islands. The climate is warm. Its area is 319,732 sq. m.

Politically the island is Dutch in the W. and British in the E. The Dutch section is administered with the Moluccas. The British section is Australian, the S.E. being the Territory of Papua and the N.E. the Territory of New Guinea, the former German New Guinea, which in 1920 was handed over by the League of Nations to Australia, which governs it under a mandate. The chief town of Papua is Port Moresby. The area is 90,540 sq. m. Pop. about 275,000 Papuans and 1,500 Europeans. Of the Territory of New Guinea, Madang is the chief town. The seat of administration is Rabaul, in New Britain. The area is 68,500 sq. m. Pop. about 237,000 natives.

Dutch New Guinea comprises more than half the island. The interior has not been fully explored, but mountains have been named and the lower courses of some of the rivers are known. Coal has been found, copra is exported, and gum dammar is collected in the forests. The area is 160,692 sq. m. Pop. 195,460. See Oceania: Papua.

NEW HAMPSHIRE. State of the U.S.A. It has a small stretch of coast on the Atlantic, and its area is 9,340 sq. m. Its uneven surface rises to over 6,000 ft. in Mt. Washington, one of several peaks of the White Mts. which exceed 5,000 ft. The chief rivers are the Merrimac, Androscoggin, Connecticut, and Piscataqua; and there are many small and picturesque lakes. More than 75 p.e. of the surface is covered with forest. Hay, maize, potatoes, and oats are cultivated. Upwards of 1,800 m. of rlys serve the state. Concord is the capital, and other cities are Manchester, Nashua, Dover, and Portsmouth. Pop. 456,000.

NEWHAVEN. Seaport and urban dist. of Sussex. It stands at the mouth of the Ouse, 8 m. E. of Brighton and 56 from London, on the Southern Rly. S. Michael's Church has a Norman tower and chancel of the 12th century. Newhaven has a good harbour, and from here steamers go regularly to Dieppe and other ports. There is also a coasting trade, while shipbuilding is an industry. Pop. 6,436.

NEWHAVEN. Seaport of Midlothian, Scotland, since 1920 included in the city of Edinburgh. It stands on the S. side of the Firth of Forth, 2 m. from Edinburgh, with a station on the L.M.S. Rly.

NEW HAVEN. City and seaport of Connecticut, U.S.A. It stands at the head of New Haven Bay, near Long Island Sound, 70 m. N.E. of New York, on the New York, New Haven and Hartford Rly., and is the

seat of Yale University. The manufactures include iron and steel goods, rubber articles, clocks, and cutlery. The city is a busy distributing centre, and carries on a large coasting trade. Pop. 189,683.

NEW HEBRIDES. Group of islands in the Pacific Ocean. They lie between Santa Cruz Islands on the N. and the Loyalty Islands on the S., the Fiji Islands being on the E., and the Coral Sea on the W. They are administered by British and French officials under the Anglo-French Convention of 1906. Wooded or covered with luxuriant vegetation, they produce copra, bananas, sago, rubber, tortoiseshell, sandalwood, and coffee. The total area is about 5,000 sq. m., and the pop., chiefly Melanesian, is estimated at 60,000.

NEW JERSEY. State of the U.S.A. With an area of 8,224 sq. m., of which 710 are water, it

has a coastline on the Atlantic. The surface in the N. is crossed by the Appalachians, the centre is generally level, and the S. slopes towards a marshy coast, and is largely a pine-wood region. The coast is "barred" by shaly islands, forming summer resorts, separated from the mainland by lagoons. The Delaware is the principal river. Agriculture, market gardening, fruit growing, and forestry are followed. There are valuable fisheries. Mineral products include zinc and clay products. The chief industries are petroleum-refining, copper smelting, and the manufacture of textiles. Besides 3,742 m. of steam and electric railways, there are 175 m. of canal. Important cities include Newark, Jersey City, Patterson, and the capital, Trenton. Pop. 3,821,000.

NEWLYN. Watery place of Cornwall. It stands on Mount's Bay, 2 m. S.W. of Penzance. Its situation has made it a resort of artists, but it is also a fishing centre, with a good harbour.

NEWLYN SCHOOL. This school of artists was formed about 1880. The aim was to encourage work in the open air, the equable climate and grey atmosphere of the place offering facilities for study of the model in diffused daylight.

NEWMAINS. Colliery and ironworking centre of Lanarkshire, Scotland. It stands on the canal 2 m. N.W. of Wishaw, with a station on the L.M.S. Rly. Pop. 6,718.

NEWMAN, JOHN HENRY (1801-90). British theologian. He was born in London, Feb. 21, 1801, and educated at Trinity College, Oxford, becoming in 1822

a fellow of Oriel. In 1828 he became vicar of S. Mary's, Oxford, and in 1841 he published Tract XC. This roused a storm of indignation, and in the following year he retired to Littlemore and resigned the living of S. Mary's. In 1845 Newman was received into the Roman Church, and went a year later to Rome, where he was ordained priest. Returning to England in 1847, he settled at Edgbaston, where he founded a congregation of the Oratory. A controversy with Charles Kingsley resulted in his autobiographical Apologia pro Vita Sua, 1864. In 1879 he was made cardinal. He lived in retirement at Birmingham until his death, Aug. 11, 1890. His hymn Lead, Kindly Light, and his poem The Dream of Gerontius have achieved wide popularity. See Oxford Movement.

John Henry Newman, British theologian

Newman's brother, Frederick William Newman (1805-97), was professor of Latin at University College, London, from 1846-1860. He died Oct. 7, 1897. His works include Phases of Faith, 1850.

Newgate, London. The old gaol, from a print of 1800. Above, New Gate, a 17th century view of the City gate which once served as a prison

NEWMARKET. Urban dist. and market town of Cambridgeshire and Suffolk, the headquarters of horse racing in England. It is 13 m. from Cambridge, with a station on the L.N.E.R. The racecourse on Newmarket Heath contains ten courses, the longest of which is 4 m. It is traversed by the Devil's Dyke. Around are numerous training establishments. The Jockey Club has its headquarters here. The church of S. Mary is an old Gothic building restored. Market day, Tues. Pop. 9,753. See Horse Racing.

NEW MEXICO. State of the U.S.A. The surface is crossed by many detached ranges of the Rocky Mountain system, except in the S.E. where it is a barren plain. The Rio Grande flows N. to S., and cuts the state into two unequal portions, and further E the Rio Pecos, an affluent of the Grande, follows a similar course. Except in the river valleys, agriculture depends on irrigation. Two senators and one representative are sent to Congress. The capital is Santa Fé. The territory was formed from districts ceded by Mexico in 1848 and others purchased in 1853, and ceded by Texas. It was admitted to the Union in 1911. Its area is 122,634 sq. m. Pop. 396,000.

New Orleans, Louisiana. Lafayette Square, with S. Patrick's Cathedral, left, and, right, the City Hall

the building of embankments called levees, which extend along the city front and for many miles up and down the river. The city covers an area of about 200 sq. m., but the inhabited portion is only about 40 sq. m. in extent. Canal Street, which separates the picturesque old French section from the newer and commercial American part, is the principal business thoroughfare. The principal open spaces are the Audubon Park, the City Park, Jackson Square, Beaudry Square, and Lafayette Square. The buildings include the city hall, cotton exchange, court house, and custom house. Of the churches of New Orleans the finest are the cathedrals of St. Louis and St. Patrick.

The cemeteries are a remarkable feature of New Orleans. The soil is so saturated with water that burial beneath the surface is not possible, and vaults with arched cavities are used, the coffins being ranged one above the other in tiers, 12 ft. above the ground level.

New Orleans is one of the most important commercial cities of America, and, after Liverpool, the foremost cotton port of the world. Pop. 414,493.

NEW PLYMOUTH. Town of New Zealand. Situated on the S.W. coast of N. Island, it is a centre for the cattle-rearing and dairying industry of the dist., and is connected by rly. with both Wellington and Auckland. It was first settled in 1841. Pop. 17,210.

NEWPORT. Borough and market town, also the capital of the Isle of Wight. It stands on the Medina, near the centre of the island 10 m. from Ryde, and is served by the island rlys. The chief building is the church of St. Thomas. Rebuilt in the 19th century, it contains memorials from the older building, and a monument to Elizabeth, daughter of Charles I. There is a guildhall, corn exchange, museum, a grammar school dating from 1612, and a school for girls founded in 1761. God's Providence House is an interesting building. In 1928 a new cattle market was opened. Market day, Tues. Pop. 11,036.

NEWPORT. Borough, seaport and market town of Monmouthshire. It stands on the Usk, 4 m. from its mouth, and is 12 m. from Cardiff and 133 from London, being served by the G.W. and L.M.S. Railways. The town is chiefly on the W. side of the river; on the E. is the suburb of Maindee, included in the borough in 1889. The chief buildings are the church of S. Woollos, some parts of which are Norman and others Perpendicular, the town hall, the offices of the county council, art gallery and museum and market hall. Others include the technical college, theatres, the post office, and the Royal Gwent Hospital. There are remains including two towers, of a castle. S. Woollos' church is the pro-cathedral for the diocese of Monmouth. Newport does a large shipping trade, mainly in coal and iron, for which it has modern docks, covering 160 acres. Market day Wed. Pop. 93,700.

NEWPORT. Burgh of Fifeshire. It stands on the frith of Tay, 1½ m. S.E. of Dundee, of which it is practically a residential suburb. It is served by the L.N.E.R., while a ferry connects it with Dundee across the Tay. Pop. 3,320. See Fifeshire.

NEWPORT. Market town and urban district of Shropshire. It stands on the Shrews-

bury canal, 17 m. from Shrewsbury and 145 m. from London, and is served by a joint line of the L.M.S. and G.W. Railways. The chief building is the rebuilt church of S. Nicholas, and there are a town hall, corn exchange, and grammar school of 1665, also an old market cross. Market day, Fri. Pop. 3,056.

NEWPORT PAGNELL. Market town and urban dist. of Buckinghamshire. It stands where the Ousel joins the Ouse 14 m. from Buckingham and 50 from London. The town is served by the L.M.S. Rly and the Grand Union Canal. The chief building is the church of SS. Peter and Paul, dating in the main from the 14th century, with two fine porches. There is an almshouse, founded in 1280, hnt now known as Queen Anne's Hospital. Market day, Wed. Pop. 4,142.

NEWQUAY. Watering place and urban dist. of Cornwall. It is on the N. coast of the county, on Newquay Bay, 14 m. from Truro, and is served by the G.W. Rly. With a small harbour, it has a shipping trade and is a fishing port, but it is chiefly known as a pleasure resort. Pop. 6,633. See illus. below.

NEW RIVER. Artificial waterway in Hertfordshire and Middlesex. Fed by the Chadwell and Amwell springs in Herts, and by the Lee (Lea) at Broxbourne, it extends S. about 27 m. to New River Head in Clerkenwell. Constructed by Sir Hugh Myddelton (q.v.), 1609-13, at a cost of £500,000, the undertaking was acquired by the Metropolitan Water Board (q.v.) in 1904.

NEW ROSS. Urban dist. and river port of co. Wexford, Irish Free State. It stands on the Barrow, 13 m. N.E. of Waterford and 102 m. from Dublin, with a station on the

Newquay, Cornwall. Town beach from the Headland looking east. See above

Great Southern Rlys. On the other side of the river, in Kilkenny, is Rosbercon, part of the urban dist. Old Ross is a village 3½ m. away with ruins of a castle. Pop. 5,011

NEWRY. Urban dist. and seaport of co. Down, Northern Ireland. It stands on the river Newry, which has been canalised to afford access for vessels from the sea 35 m. from Belfast and 63 from Dublin. It is served by the G.N. of I. Rly and an electric rly., while there is a line from here to Greenore. The town has a technical school. It is an important port for the export of agricultural produce and cattle. The older part of the town is separated by the river from the newer part called Ballybot. Pop. 11,963.

NEW SCOTLAND YARD. Building on the Thames Embankment, London, erected in 1890 to serve as the headquarters of the Metropolitan Police. See Police; Scotland Yard.

NEW SIBERIA. Name of three groups of islands in the Arctic Ocean, in the autonomous Soviet Socialist republic of Yakutsk. The largest is Koteln (Kettle Island). They contain vast beds of petrified wood. Their area is 9,650 sq. m.

NEW SOUTH WALES. Oldest state of the Australian Commonwealth. It lies on the E. coast between Queensland and Victoria.

Newnham College, Cambridge. Sidgwick Hall and, right, Clough Hall, from the south

It includes Old Hall (the original Newnham Hall), Sidgwick Hall, Clough Hall, so named after the first principal, Anne J. Clough (q.v.), Peile Hall, and College Hall, the last named used for dinners, concerts, etc. There is accommodation for over 200 students.

NEW ORLEANS. City and port of Louisiana, U.S.A. It stands mainly on the left bank of the Mississippi river, 107 m. from its mouth, and is served by the Southern Pacific and other rlys. Much of the land bordering the city proper is marshy and below the level of the river at high tide, necessitating

Important towns include the capital, Sydney, Newcastle, Broken Hill, and Auburn. Its area is 309,432 sq. m. Pop. 2,458,721.

Physically the dominant feature is the main watershed, or divide, which crosses the great plateau, and separates the short rivers which flow to the E coast from those belonging to the Murray-Darling system. Stock raising, sheep farming, and lumbering are the chief occupations. Cultivation has a wide range, from wheat to sugar cane and oranges. Minerals include gold, silver, lead, copper, tin, and coal. See Australia.

NEWSPAPER. Periodical publication which contains a record of public events and a selection from current happenings. It contains comments on matters of public interest, criticisms of literature, music, and art, and discussions of commercial and financial questions. On the business side it has generally a considerable system of advertising which links together the business world and affords publicity to commercial enterprise.

While in London probably the daily morning papers are predominant, in the provinces the public get their news chiefly from evening papers. On the Continent morning and evening newspapers have perhaps almost equal rank. In the U.S.A. the daily morning paper seems to carry all before it; but the part played in Europe by popular weeklies is taken by the huge Sunday issues which every daily paper in America carries with it.

The first master of English journalism was Daniel Defoe, and the first newspaper to be considered was *The Review*, which he started in 1704. After Defoe, the next outstanding figure in Anglo-Saxon journalism was John Walter, who founded *The Times* in 1785. Another great journal, *The Daily Telegraph*, founded in 1855, was sold in 1928 to Lord Camrose, Sir Gomer Berry, and Sir E. Hiffe by Viscount Burnham (q.v.). In the provinces the same type of newspaper was reproduced in kind journals like *The Scotsman* and *The Manchester Guardian*.

About 1890 a new era was opened for newspapers. The Education Act of 1870 had been in force long enough to provide a vast army of readers who demanded something of a more popular kind than was afforded by the existing papers. The earliest success in this line was made by *The (London) Evening News* and the subsequent establishment of a halfpenny morning paper, *The Daily Mail*. This had been preceded by *The Star* and *The Echo*, evening papers, *The Morning* and *The Morning Leader*, and was succeeded by *The Daily Express*. Later came *The Daily Mirror* and *The Daily Sketch*, predominantly photographic papers.

Meanwhile a similar change was coming over the country by the development of popular weeklies with vast circulations. The movement this time began in the provinces, where *The Sunday Chronicle* and *The*

Umpire of Manchester led the way, followed by *The Sheffield Weekly Telegraph* and some Scottish weeklies in Glasgow and Dundee. London soon began to develop its Sunday papers. Lloyd's Weekly News, *The Referee*, *The People*, *The Weekly (later Sunday) Dispatch*, and *The News of the World* ran up circulations of a million or more. *The Sunday Pictorial* and *The Sunday Graphic* had also large circulations.

There are said to be more than 60,000 daily and weekly newspapers in the world. Of these 23,000 are published in the U.S.A. and 13,000 in the British Empire.

The Newspaper Press Fund exists to assist necessitous members of the literary staffs of newspapers. The offices are at 11, Garrick Street, London, W.C.

NEWSTEAD. Village of Nottinghamshire. It is 8 m. from Nottingham, and is famous for its association with the Byrons. An Augustinian priory was founded here in 1170, and at the dissolution of the monasteries the lands passed to the family of Byron. This was the seat of the Byrons until 1818, when Lord Byron, the poet, sold it. Of the original abbey the cloister square, with the refectory and chapter house, and the W. front of the church remain. The Leen rises within the park. In 1930 Newstead Abbey was bought by Sir Julius Cahn and presented to the nation. See Byron; Hucknall Torkard.

NEWT OR EFF (Molge or Triton). Genus of small, tailed Batrachians, of which three species are British. The common newt, found in clear ponds, is slightly over 3 ins. long. Newts spend a great part of their time on land, where they lurk among grass and moss under stones and in holes, usually hibernating in such situations. But at the breeding season in spring they are always found in the water, the eggs being deposited singly on the leaves of water plants, the edges of which are folded over them. The egg hatches out as a tadpole, and its development is similar to that of the frog. By the autumn the metamorphosis is complete. The newt has now four limbs.

NEW TESTAMENT. Name given to the collection of books in the Bible which contain accounts of the life and teaching of Jesus Christ, the beginnings of Christianity, and the faith of the early Church. These books were written to meet the needs of the Christians of the first century, and it was a considerable time before they were added to the canon of Scripture.

By the year 200 the majority of the documents in the N.T. had secured universal recognition in the whole of Christendom. The Western Church, however, rejected James and Hebrews, and the Eastern Church 2 and 3 John and Jude, while 2 Peter had not as yet won recognition at all. Some doubt, too, was expressed about the Apocalypse. See Bible.

NEWTON. District of Hyde, Cheshire. It is 7 m. S.E. of Manchester, with a station on the L.N.E. Rly. Cotton is the chief manufacture. Another Newton is in Cheshire.

NEWTON, SIR ISAAC (1642-1727). English scientist and philosopher. Born at Woolsthorpe, Lincolnshire, Dec. 25, 1642, and educated at Grantham School, in 1661 he entered Trinity College, Cambridge. He returned to Cambridge in 1668, having been elected to a fellowship the previous year. For the next 30 years he lived in college, engrossed in the researches on which his fame rests. Newton left Cambridge in 1696, and during the rest of his career lived in London, holding offices in the Mint which

Sir Isaac Newton,
English scientist
after J. Vanderbank

gave him a sufficient income. He died March 20, 1727. He had been knighted in 1705, and was president of the Royal Society from 1703 until his death.

As regards pure mathematics, Newton dealt with most of the subjects then read. In geometrical optics he for the first time offered an explanation of colour phenomena; he also invented a reflecting telescope, microscope, and sextant. These investigations led him to a theory of physical optics. In this he discussed the wave and corpuscular theories of light, rejecting the former, but admitting the latter as possible. Newton's work on mechanics and gravitation is even more important. He generalised the law of attraction into the statement that every particle of matter attracts every other particle with a force varying directly as the product of their masses and inversely as the square of the distance between them. See Gravitation; Light. Physics; Relativity.

NEWTON ABBOT.

Urban dist. and market town of Devonshire. It is 20 m. from Exeter, and is served by the G.W. Rly. The town stands amid beautiful scenery at the head of navigation of the Teign estuary. The chief buildings are the churches of S. Mary, Wolborough, and All Saints, Highweek, both Perpendicular. The town is an important railway junction. Market day, Wed. Pop. 13,837.

NEWTON-IN-MAKERFIELD. Urban dist. of Lancashire, also known as Newton-le-Willows. It is 16 m. from Manchester, and is served by the L.M.S. Rly, being a railway junction. The industries include railway shops. Around are coal mines. A racemeeting is held annually, as are cattle fairs. Pop. 20,163.

NEWTON STEWART. Burgh of Scotland. It is mainly in Wigtownshire, but one suburb is in Kirkcudbrightshire. It is on the river Cree, 30 m. W. of Castle Douglas on the L.M.S. Rly. Pop. 1,831.

NEWTOWN (Welsh Trenewydd). Urban dist., with Llanllwchaearn, and market town of Montgomeryshire. It stands on the Severn, 7 m. W.S.W. of Montgomery, on the G.W. Rly. It is a centre of the Welsh flannel industry. Market day, Tues. Pop. 5,670.

NEWTOWNARDS. Town of co. Down, Northern Ireland. It is a mile from the head of Strangford Lough and 14 m. by rail E. of Belfast on the Belfast and County Down Rly. The chief buildings are the town hall and the parish church, a fine cruciform building. The industries are linen and muslin manufacture. Markets and fairs are held here. Pop. 9,587.

NEWTOWN STEWART. Town of co. Tyrone, Northern Ireland. It stands on the river Mourne, 24 m. by rail S.E. of Londonderry on the G.N. of I.R. The town was granted to William Stewart, after whom it was named, by Charles I. Pop. 1,000.

NEW WESTMINSTER. Town of British Columbia. It is 80 m. from Victoria on the Canadian Pacific and other rlys., and stands on the Fraser river, 15 m. above the mouth. Its chief industries are salmon canning and the dressing and shipping of timber. Pop. 15,450.

NEW YEAR'S DAY. First day of the year. The ancient Attic year began with the new moon after June 21, and the Romans

Newton Abbot, S. Leonard's Church tower. In foreground, pedestal from which William III was proclaimed king

began their year on March 1. The beginning of the Roman year was changed by Julius Caesar to Jan 1.

Among customs observed on New Year's Eve and Day in England, Scotland, and elsewhere may be mentioned the ringing of the church bells at midnight, and Hogmanay (q.v.) In Scotland and parts of England first footing survives; the first person who enters the house on New Year's Eve is supposed to bring good luck according as, in different localities he is light or dark haired.

NEW YORK. State of the U.S.A. It includes many adjacent islands, of which Long, Staten, and Manhattan are the chief. The principal rivers are the Hudson, Mohawk, Delaware, Niagara, Oswego, Black, and Genesee. Numerous lakes occur in the Adirondack Mts., and the rivers are noted for their picturesque falls. Another mountain range in the state is the Catskill group. Waterway communication is maintained between Albany on the Hudson and the St. Lawrence and Great Lakes by means of the Champlain Canal to the N. and the New York State Barge Canal to the W. Two senators and 43 representatives are returned to Congress. New York, Buffalo, Rochester, and Syracuse are the principal cities, and Albany is the capital. The area is 49,204 sq. m. Pop. 11,550,000.

NEW YORK. Metropolis of the United States. Situated at the head of New York Bay and at the mouth of the Hudson or North river, it is a great seaport and the centre of an important industrial district. Since 1897 the city has included five boroughs, having a total area of 326 sq. m. Of these, Manhattan (q.v.), New York city proper, is the most important. Pop. 5,873,356.

Sky-scrapers, as they are called, are a feature of New York. A number of business blocks and hotels rise to over 300 ft., having 30 and more storeys, and one or two, notably the Chrysler, Bank of Manhattan, and Woolworth buildings, have over 60. In the midst of these sky-scrapers, in its own churchyard in Broadway, stands old Trinity Church, and near is Wall Street, which with Broad Street is the home of American finance. The city hall and other buildings used for government purposes are near the Battery, at the extreme end of the island is called. Broadway is a thoroughfare which runs from the Battery through the city until it becomes the high road to Albany.

For 2 m. from the Battery the street plan of New York is irregular, but after that the usual American rectangular plan prevails. The streets run roughly E. and W., 20 to the mile; the avenues N. and S., seven to the mile. Numbers are the rule, but in the N. districts many avenues adopt names, as, for example, Columbus or Amsterdam.

New York. Plan of the business quarter of the metropolis of the U.S.A.

New York. Aerial view of the lower and older part of the city. 1. Bank of Manhattan (838 ft.). 2. Woolworth Building. 3. Bell Telephone Building. 4. Aquarium. 5. Battery Park. 6. 120 Wall St. To the left are the quays belonging to the various steamship lines

Times Square, which is dominated by the Times building, is the Piccadilly Circus of New York. In this district may be found also the

New York. Statue of Liberty at the entrance to the harbour

the city's fine parks, and contains the Metropolitan Museum of Art, while the American Museum of Natural History is in Manhattan Square, adjoining it.

Four great bridges over the East river, the Brooklyn, the Manhattan, the Williamsburg, and the Queensborough, and several tunnels, join Manhattan to Brooklyn and Queens, and tunnels and ferries join it to New Jersey.

Three great trunk lines run into New York, the New York Central, and the New York, New Haven, and Hartford at the Grand Central station, and the Pennsylvania Railroad at the Pennsylvania Terminus.

Of the papers published in New York, the chief are The New York Times and The Herald-Tribune, a union dating from 1924 of Gordon Bennett's paper The New York Herald and The New York Tribune.

NEW ZEALAND. British Dominion in the South Seas. Politically it embraces the two main islands, North and South, the small Stewart Island separated from South Island by Foveaux Strait, and many islands in the neighbouring seas. In addition the Dominion is the mandatory for the former German colony of Western Samoa. The area, excluding annexed islands and mandated territory, is 103,569 sq. m.

Of this North Island covers 44,131 sq. m., South Island 58,120, and Stewart Island 662. Wellington, on North Island, is the capital. Other important towns include Auckland, Christchurch, and Dunedin. Pop. 1,408,094, exclusive of Maoris, 66,271.

The dominant industry is sheep rearing, both for food and wool. Dairy farming, mainly for butter and cheese, is of growing importance. Crops of wheat, oats, and barley are grown for local consumption. Kauri gum is dug in the Auckland peninsula, phormium is gathered from both wild and cultivated plants, and timber is cut from the forests. Coal is mined on the W coast of South Island, and gold in the Thames peninsula. In the valley of the Clutha, alluvial gold is dredged. Communication is maintained by a growing rly. system connecting the chief towns and supplemented by a coastal steamer service. The principal exports are wool, frozen meat, butter, cheese, tallow, hides, skins, phormium flax and tow, timber, gold, and coal.

The Dominion is under a governor-general and a general assembly, consisting of a legislative council of 41 paid members and a house of 80 paid representatives, including four Maoris. The Bank of New Zealand, established in 1861, acts as banker to the New Zealand Government. The University of New Zealand, an examining body only, consists of the university of Otago at Dunedin, Canterbury University College at Christchurch, Auckland University College, and Victoria University College at Wellington.

NEW ZEALAND CROSS. Decoration for bravery. Instituted in 1869, it is awarded to those "who may particularly distinguish themselves by their bravery in action, or devotion to their duty while on service." It consists of a silver Maltese cross, with a gold star on each limb; in the centre in a circle surrounded by a gilt laurel wreath is "New Zealand." On the reverse is the name of the recipient. A crown is placed above the uppermost limb. The ribbon of the decoration is crimson.

New Zealand Cross

NEW ZEALAND FLAX (Phormium tenax). Perennial herb of the order Liliaceae, native of New Zealand. The sword-shaped leathery leaves are from 3 ft. to 6 ft. in length. The flower-stem is about 15 ft. high, branched above, the branches supporting the curved, tubular, red or yellow flowers. The leaves yield strong fibres, but contain gum difficult of removal.

NEXT FRIEND. In English law, adult person who lends his name to a legal proceeding brought by or on behalf of an infant or lunatic. If the infant plaintiff loses with costs, the next friend is liable to the defendant for these costs, though as a rule these are allowed

tion, and in 1804 he was created a marshal, and later a duke. He distinguished himself at Jena, Eylau, and Friedland. His victory at Borodino in the Russian campaign in 1812 brought him the title of prince of Moskova, and to him is due the credit of saving the remnants of the French army in the retreat. In 1813 he fought at Lützen, Bantzen, and Leipzig, but he made his peace with the Bourbon régime in 1814. When Napoleon returned from Elba, Ney was sent to oppose him, but he joined his old master, and commanded the centre at Waterloo. Brought to trial, he was shot in Paris, Dec 7, 1815.

Marshal Ney, French soldier

NIAGARA. Town and watering place of Ontario, Canada. It stands on the Canadian side of the Niagara river, where it falls into Lake Ontario. It is 15 m. below the falls. It was the first capital of Upper Canada, now Ontario. Pop. 1,357.

On the opposite (U.S.A.) side of the river is Fort Niagara. A fort was built here in 1675, and another in 1725-27, earlier ones having been destroyed.

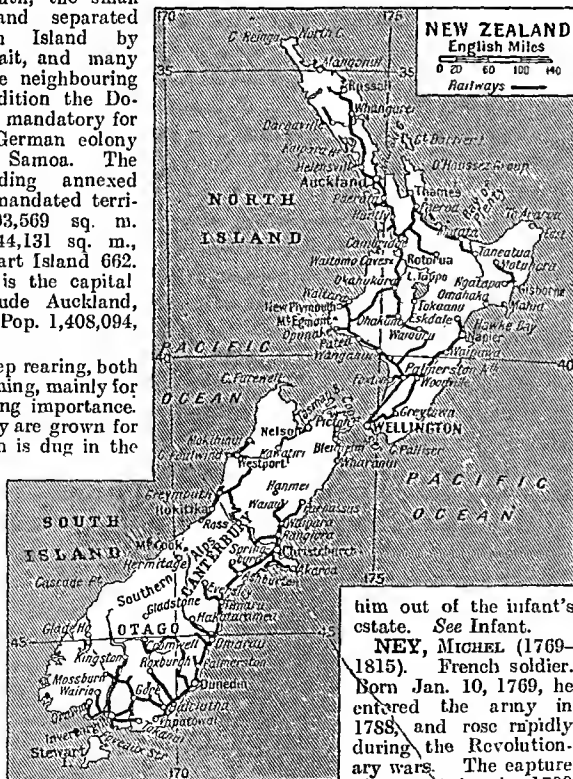

NIAGARA FALLS. Falls on the lower portion of the Niagara river, N. America. The river flows from Lake Erie to Lake Ontario. During its course it makes a total descent of 328 ft. The cataract is divided into two by Goat Island, the American Falls, on the N. side, being 1,080 ft. wide and 167 ft. high, and the Horseshoe or Canadian Falls, on the south side, 3,100 ft. across and 158 ft. high. Below the descent the river plunges through a deep and narrow chasm to Lewiston, 7 m. distant. About 2 m. below the Falls is the whirlpool. The river is crossed by three bridges below the Falls.

The water power is utilised for the generation of electricity, the water being drawn off through tunnels above the Falls and returned in a similar manner into the chasm below. The shores along both sides of the Falls have been made government reservations, the Queen Victoria Niagara Falls Park (154 acres), and the New York State Park (115 acres). See Blondin; also illus. p. 1013.

NIAGARA FALLS. City and port of entry of Ontario, Canada. It stands on the W. side of Niagara river, here crossed by three bridges, about 2 m. below the Falls, opposite the American city of Niagara Falls. (Pop. 57,000.) It is served by the C.P.R. and other rlys., and an electric rly. connects it with Toronto. It is an important rly. centre, and its enormous water power generates electric power, which is used for the factories here and for those of Toronto and other cities. Pop. 14,764.

NIBELUNGENLIED (Ger. song of the Nibelungs). Medieval German epic. Dating from about 1200, the poem, in 38 adventures, consists of two parts. The first relates the story of Siegfried, his marriage to Kriemhild, her jealousy of Brunhild, and the murder of Siegfried by Hagen, the Nibelung; and the second tells how Kriemhild, who had married Etzel or Attila, king of the Huns, avenged herself on the Nibelungs, and was herself slain. See Brunhild; Kriemhild; Siegfried. Pron. Neebelungenleed.

NICAIA (mod. Iznik). Ancient city of Bithynia, Asia Minor. The name was given by Lysimachus in honour of his wife to a city founded by Antigonos. It is celebrated as the scene of the general Church council of 325, convened by Constantine to settle the Arian controversy and consider other questions. This drew up the creed called the Nicene creed. See Arianism.

New Zealand. Map of the British Dominion in the South Pacific Ocean

him out of the infant's estate. See Infant.

NEY, MICHEL (1769-1815). French soldier. Born Jan. 10, 1769, he entered the army in 1788, and rose rapidly during the Revolutionary wars. The capture of Mannheim in 1799 added to his reputa-

NICARAGUA. Republic of Central America. It is bounded N. by Honduras and Salvador, S. by Costa Rica, E. by the Caribbean Sea, and W. by the Pacific. The E. coast is in parts known as the Mosquito Coast. The E. area is peopled by Indians and W. Indian negroes, the W. by Spaniards, Indians, and people of mixed Spanish and Indian origin. In the S.W. is Lake Nicaragua, with an area of about 3,000 sq. m. Managua is the capital, other towns including Leon, Granada, and Matagalpa. The principal port on the W. is Corinto and on the E. Bluefields.

The W. area produces coffee, sugar cane, cocoa, and maize, the E. bananas, coconuts, and pineapples. The extensive forests yield mahogany, cedar, gums, and medicinal plants. The area is about 51,660 sq. m. Pop. 750,000.

The republic is a member of the League of Nations. The constitution provides for an elected president and a parliament of two houses. The U.S.A., by a treaty ratified in 1916, acquired for \$600,000 the option for a canal route through Nicaragua. See Central America.

NICE. City and pleasure resort of the Riviera, France. On the Baie des Anges, an opening of the Mediterranean. at the mouth of the Paillon, it is 740 m. by rly. from Paris. It has fine squares, boulevards, municipal casino, and museums. There is an observatory on Mont Gros. In 1928 a new casino was erected. Pop. 184,441. Pron. Neece.

NICEPHORUS. East Roman Emperor, 1078-81. General of the army of the East under Michael VII, on the latter's resignation he was proclaimed emperor by the troops at Nicaea and crowned in Constantinople, April 3, 1078. During his reign the Seljuk Turks gained possession of Asia Minor except the coasts, and lower Italy fell into the hands of the Normans. His general, Alexius Comnenus (q.v.), raised the standard of revolt, and Nicephorus abdicated and retired to a convent. Pron. Niseeforus.

NICHOLAS or **NICOLAS** (d. c. 342). Bishop and saint. A native of Patara, in Lycia, Asia Minor, he became archbishop of Myra, and opposed the Arians at the Council of Nicaea. He is the patron saint of Russia and of seafarers, travellers, merchants, children, and those overtaken by sudden danger. The popular name Santa Claus is a corruption of S. Nicholas. His festival is kept on Dec. 6.

NICHOLAS I (1796-1855). Tsar of Russia. Born at St. Petersburg, July 6, 1796, third son of Paul I, he married Charlotte, eldest daughter of Frederick William III of Prussia. His elder brother Constantine renouncing his

claim to the throne, Nicholas succeeded Alexander I, Dec. 1, 1825. His foreign policy was directed towards the East, and particularly the conquest of Turkey. The war with Persia, concluded Feb. 28, 1828, much increased Russia's foreign territory. Nicholas died March 2, 1855. See Russia.

Nicholas II,
Tsar of Russia

Feodorovna. He made an alliance with France, initiated the Peace Conference at The Hague, 1894, and granted constitutional reforms. When the revolution broke out in Russia in 1917, Nicholas was forced to abdicate. He then retired to his estate in the Crimea, but was later arrested and

imprisoned at Tsarskoye, at Tobolsk, and finally at Ekaterinburg in the Urals, where, after months of distress, he was assassinated, with the tsaritsa, the tsarevitch, and other members of the imperial family, July 16, 1918. See Ekaterinburg; Russia.

NICHOLAS (1841-1921). King of Montenegro. Born Sept. 25, 1841, he was the nephew of Danilo, prince of Montenegro, then part of the Turkish empire. In 1860 he succeeded the murdered Danilo as prince. The independence

of his country was recognized in 1878, and in 1910 he took the title of king. In 1916, having joined the Great War on the side of Serbia, he was driven out and took refuge in France. He died at Antibes, France, March 1, 1921. See Montenegro.

NICHOLAS (1856-1929). Russian grand duke and soldier. The son of the grand duke Nicholas, and second cousin of Tsar Nicholas II, he was born at St. Petersburg, Nov. 6, 1856. He entered the army as an officer of cavalry, and on the outbreak of the Great War became commander-in-chief of the Russian armies. It was under him that the

Nicholas, King of
Montenegro

operations against the Austro-Germans were conducted until Sept., 1915. The grand duke was made viceroy of Caucasia, and then appointed to the command in the Caucasus. He died at Cap d'Antibes, Jan. 5, 1929.

NICHOLSON, JOHN (1821-57). British soldier and administrator. Born in Ireland, Dec. 11, 1821, he entered the service of the E. India Co. in 1839. Appointed a deputy commissioner in the Punjab after 1848,

Nicholson proved himself an administrator of extraordinary gifts, exerting a marked influence over the natives. When the mutiny broke out in 1857 he checked the movement in his own district, and then took command of a movable column and advanced to Delhi. On Sept. 14, when leading the storming party, he was mortally wounded, and he died Sept. 23, 1857.

NICKEL. Elementary metal. Its chemical symbol is Ni; atomic weight, 58.69; atomic number, 28; specific gravity, 8.35 to 8.96; melting point from 1,450° C. to 1,660° C. In colour it is white with a slightly yellowish tinge. It is one of the hardest and least fusible of metals, ductile, malleable, and tenacious. In tensile strength nickel surpasses iron; specimens carrying a minute proportion of magnesium have shown a tensile strength of over 38 tons to the sq. in. It is slightly magnetic, and is resistant to ordinary atmospheric influences. It may be readily welded to iron and certain alloys.

For many years garnierite, a nickel and aluminium silicate discovered in New Caledonia, was the most important source of the metal and is still the second, but recent discoveries in Ontario have resulted in the latter district becoming the largest producer.

In 1929 the world's production of nickel was approximately 58,000 tons. Nine-tenths of the supply comes from Canada. The first important industrial use to which nickel was put was the plating of other metals. German silver, or nickel silver, is an important alloy of the metal, and alloys of copper and nickel are largely used for coins. The most important use of nickel to-day is in the preparation of nickel steel. Many steels are now made, both tool steel and structural steel, which owe their special properties to nickel. On account of its high degree of magnetic permeability an alloy of nickel and iron known as permalloy is used for coating submarine cables. See Alloy; Metallurgy.

NICOBAR ISLANDS. British islands in the Bay of Bengal. Of the 21 islands 12 are inhabited. They lie S. of the Andaman Is., to which they are joined administratively, and from which they are 75 m. distant. Nancowry Harbour is a spacious anchorage between Nancowry and Camorta. Area 635 sq. m. Pop. 9,272.

NICOLL, SIR WILLIAM ROBERTSON (1851-1923). British journalist and theologian. Born at Lumsden, Aberdeenshire, Oct. 10, 1851, he was Free Church minister of Dufftown, 1874-77, and of Kelso, 1877-85. He settled in London in 1886 and founded The British Weekly, in which he wrote under the name of Claudius Clear; The Bookman, 1891; The Woman at Home (in cooperation with Annie S. Swan), 1893, and other periodicals. He was knighted in 1909, and made a companion of honour in 1921. He died May 4, 1923.

Sir W. R. Nicoll,
British journalist
Hoppe

NICOLSON, HAROLD (b. 1886). British writer. A son of Lord Carnock, he entered the diplomatic service in 1909. He served in Madrid and Constantinople, and in 1919 attended the Peace Conference in Paris. In 1925 he went to Teheran, and in 1927 to Berlin, but in 1929 he left the service. Nicolson's writings include brilliant books on Tennyson, 1923; Byron, The Last Journey, 1924; and Swinburne, 1926; also Some People, 1927, a series of sketches. In 1930 he brought out a biography of his father. He married Victoria Sackville-West, who, in 1927, won the Hawthornden Prize with The Land. In 1929 Nicolson joined the staff of The Daily Express

Nice. Promenade des Anglais, the
famous boulevard on the sea front

Niagara Falls. View from the Canadian side, showing the two great cascades separated by Goat Island. That on the right forms the Horseshoe Falls. See p. 1012
Courtesy of the Canadian Government

NICOTINE. Liquid alkaloid occurring in the leaves of *Nicotiana tabacum*, the tobacco plant. Colourless, with a strong, stupefying, irritating odour, it turns brown on exposure to the air. Tobacco contains from 2 to 8 p.c. of the liquid. Pure nicotine is a most deadly poison, rapidly causing death. Nicotine, being destroyed by burning, is not present in the smoke of tobacco, the toxic action of which is due to carbon monoxide and other substances. See Tobacco.

It is named from Jean Nicot (1530-1600), a French diplomatist, who brought the plant from Portugal into France.

Nidaros. Alternative name for the Norwegian town of Trondhjem (q.v.).

NIDD. River of Yorkshire (W.R.). It rises on Great Whernside, and flows through Nidderdale, past Pateley Bridge, Ripley, and Knaresborough, to the Ouse, 8 m. above York.

NIDDY OR **NIDDIE.** Coal-mining centre of Midlothian. It is 3 m. from Edinburgh, with a station on the L.N.E. Rly. Another place of this name is in Linlithgowshire, known for its ruined castle.

NIEMEN, NEMUNAS, OR MEMEL. River of Russia, Poland, Lithuania, and East Prussia. It rises south of Minsk, and empties itself into the Kurisches Haff, an arm of the Baltic Sea. Its length is 550 m.

In the Great War the Russians retreated to the Niemen after their defeat at Tannenberg (q.v.), Aug., 1914, and in Feb., 1915, they were driven back to it after their advance. See Kovno; Memel; Vilna.

NIETZSCHE, FRIEDRICH (1844-1900). German philosopher. Born at Röcken, in Prussian Saxony, Oct. 15, 1844, at the age of 25 he was appointed professor of classical philology at the university of Basel. Here he lectured until, in 1879, ill-health compelled him to resign. He died Aug. 25, 1900.

Essentially a poet; Nietzsche never framed a philosophy, or systematically arranged his reflections on life. He knew little of science, and when Darwinism spread, he superficially acclaimed it as the gospel of eternal struggle, of the triumph of the strong. He heatedly attacked pity and humanitarianism, and, on the ground that it had introduced these things into Europe, bitterly assailed Christianity. He imagined a group of "free spirits," termed in his writings the Beyond-Men or Supermen. The code of morals of these "master spirits" must differ from the prevailing "slave-morality," and his later works were almost entirely devoted to a "transvaluation of values," or a reconsideration of moral standards.

NIUEPORT (Flemish Nieuwpoort). Town of Belgium. It lies on the Yser, 10 m. S.W. of Ostend, connected by rly. with Dixmude, and by canal with Furnes. The town was completely ruined in the Great War, but was afterwards rebuilt. The 12th-15th century church of Notre Dame, the 15th century cloth hall, the Templars' Tower, and the hôtel de ville were notable buildings. Nieuport-Bains, 2½ m. N., was a small watering place in the dunes at the mouth of the Yser.

Nieuport was the extreme north-eastern point of the Western Skins, phornu timber, gold, and

Nightingale. Male specimen of the European song-bird

front in the Great War, and was an important point in the battle of the Yser (q.v.). It was awarded the Croix de Guerre, 1920. In 1928 a British war memorial to missing soldiers was unveiled here. Pop. 4,676.

NIGER. River of W. Africa. It rises in the mountainous zone on the frontiers of Sierra Leone and French Guinea. After a devious course of some 3,000 m., during which it passes through French territory and Nigeria, it falls into the Gulf of Guinea through a large estuary. The principal tributary is the Benue. The delta commences about 80 m. from the sea and has numerous mouths.

The colony of the Niger, formed in 1922, is part of French West Africa. Niamey is the capital. The estimated area is 404,914 sq. m. Pop. 1,441,413.

NIGERIA. British possession in W. Africa. Bounded W. by Dahomé, N. by French W. Africa, E. by Cameroons, and S. by the Gulf of Guinea, it comprises the colony and protectorate of Nigeria, the latter being divided into the northern and the southern provinces. The colony comprises the former colony of Southern Nigeria, and two groups of provs. have been formed from the former protectorates of Northern and Southern Nigeria. The capital is Lagos. The area is about 335,700 sq. m. Pop. 18,966,600, including about 5,200 Europeans.

A belt of dense mangrove swamp stretches along the coast, intersected by innumerable creeks. Behind lies a forest zone between 50 and 100 m. wide; farther inland the forests become less dense and give way to open country. The chief exports are palm oil, palm kernels, tin, hides and skins, ground nuts, cotton lint, cocoa, mahogany, and rubber. The principal tin fields are in the Bauchi district. Other minerals include gold, silver, lead, coal, and lignite. The railway system consists of a W. division from Lagos and an E. from Port Harcourt. There is a wireless station at Lagos. See Abeokuta; Africa; Negro.

Night Heron. Specimen of the European species
W. S. Berridge, F.Z.S.

Species of small heron, common on the continent of Europe and widely distributed in the Eastern hemisphere. About 2 ft. long, with greenish plumage on the back, purple breast, and long white plumes at the back of the head, it commonly nests in low trees, is usually found in swampy woods, and is most active at night. It visits Great Britain in the spring and autumn. The name is given in America to another species, *N. naevius*.

NIGHT HERON (*Nycticorax griseus*). Species of small heron, common on the continent of Europe and widely distributed in the Eastern hemisphere. About 2 ft. long, with greenish plumage on the back, purple breast, and long white plumes at the back of the head, it commonly nests in low trees, is usually found in swampy woods, and is most active at night. It visits Great Britain in the spring and autumn. The name is given in America to another species, *N. naevius*.

NIGHTINGALE (*Luscinia megarhynchos*). Bird of the thrush family, famous for its sustained and varied song, indulged in far into the night as well as by day. A native of parts of Europe, Asia, and N.W. Africa, its length slightly exceeds 6 ins. Its upper parts are russet brown and the underside is brownish white. Arriving in Britain in mid-April, it ranges only as far N. as S. Yorkshire, and W. as far as the valley of the Exe. It visits parts of Wales, but not Ireland. The nest is placed on or near the ground in the tangled vegetation of copse or hedgerow. While the hen is sitting, the cock frequently, on a branch above, pours out his rich song. This is not heard much after mid-June.

NIGHTINGALE, FLORENCE (1820-1910) British philanthropist. Born in Florence, May 12, 1820, her early life was passed in her home at Lea Hurst, Derbyshire. When quite young she began to take an interest in hospital work, and after visiting hospitals in England and abroad went through a course of training for nursing. During the Crimean War she offered her services to the war office, and in Nov., 1854, with 37 nurses, she reached Scutari.

Florence Nightingale, British philanthropist
After Sir W. E. Richmond

Taking full control, she gradually reformed the sanitary arrangements, and enormously reduced the death rate from cholera, typhus, and dysentery. Returning to England in 1856, she found herself a popular heroine, and was known as the lady of the lamp. In 1907 she was given the order of merit. She died Aug. 13, 1910. Consult Life, E. T. Cook, 1913.

NIGHTJAR (*Caprimulgus europaeus*). Migratory bird common in Great Britain during the summer, and spending the winter in Africa and Southern Asia. In shape it resembles a large swift, with a large, flat head and a wide, gaping mouth. It is called nightjar from its peculiar whirring cry, but flies silently by night in search of insects. It is about 10 ins. long, and its colour is grey, spotted and barred with yellow and brown. It lays its eggs on the bare ground.

NIGHTSHADE. Popular name for several species of plants. Woody nightshade or bittersweet (q.v.) is *Solanum dulcamara*, and common nightshade is *Solanum nigrum*, while enchanter's nightshade is *Circaea lutea*. Deadly nightshade (q.v.) is *atropa belladonna*. Common or black nightshade is an annual weed of waste places and cultivated ground. The white flowers, borne in umbels, are succeeded by globose black berries.

Nightshade. *Atropa belladonna*, or deadly nightshade

NIHILISM (Lat. nihil, nothing). Name given to the tenets of the Russian revolutionary socialists. Nihilism was the result of the terrible conditions of living of the vast mass of the Russian people. It aimed at the freedom of the press in Russia, freedom of speech, religious equality, equality of treatment for women, the land for the people, etc. The nihilist movement developed in 1860-70, and owing to its violent methods wholesale arrests were carried out during the next decade. The assassination in 1881 of the tsar, Alexander II, was followed by methods of extreme severity against the nihilists, who were gradually crushed. See Anarchism.

NIJNI NOVGOROD. City of the Union of Soviet republics. Situated at the confluence of the Volga and the Oka, and on the Moscow-Nijni Novgorod Rly., 250 m. N.E. of Moscow, it is divided into three parts: the upper town, on three hills, surmounted by a citadel; the lower town, on the right bank of the Volga; and the Kuvavino suburb, between the Oka and Volga, where the great fair is held. A university was opened in 1918. Pop. 185,274. See Russia.

NIKE. In Greek mythology, the goddess of victory, called Victoria by the Romans. She was the daughter of the giant Pallas. In art, Nikē is represented as a winged figure with a palm or a wreath.

NILE. River of Africa. It leaves Lake Victoria at its N. end, and proceeds through Lake Kioga, and thence generally N.W., until it reaches the north end of Lake Albert. That lake is fed by the river Semliki, which drains Lake Edward and forms, with the Kagera and other rivers flowing into Lake Victoria from the S., the extreme head-waters of the Nile. From the N. end of Lake Albert the river, here the Bahr-el-Jebel and later the White Nile, flows generally N. to the Mediterranean. At Refaj, 15 m. S. of Gondokoro, it enters the region of the plains and continues thence to Khartoum, some 1,096 m. to the N. Between these two points the Nile is navigable.

Farther on, its chief tributary is the Atbara, which joins the main river 24 m. south of Berber. In the Nile estuary irrigation is largely regulated by the harrages at Damietta and Rosetta, and by canals. The Blue Nile flood, enforced by that of the Atbara, is dammed by the Assuan harrage (see illus. p. 145) and held back for irrigation, as well as by the Sennar dam. The length of the Nile as far as Lake Victoria is 3,470 m. See Assuan; Dam; Egypt; Sennar.

NILE, BATTLE OF THE. British naval victory, Aug. 1, 1798. Lord St. Vincent, who was blockading Cadiz, heard of the armament preparing at Toulon, and sent Nelson to observe the proceedings of the French. After many weeks Nelson discovered the French transports at Alexandria, and their fleet of 13 sail of the line and 4 frigates, commanded by Brueys, anchored in a broken line in Abukir Bay. His plan was to attack the French van and centre, and to anchor inside and outside the French line. In the end the French fleet was surrounded and completely destroyed, leaving Napoleon isolated in Egypt.

NILGAI (*Boselaphus tragocamelus*). Species of antelope found among the plains and low hills of India. It stands between 4 ft. and 5 ft. high at the withers. The adult male is brownish grey, with white markings on the face and throat, white rings at the fetlocks, whitish underparts, and short, smooth, nearly straight horns. The females are smaller, brown, and without horns.

NILGIRI or **NEILCHERRY HILLS.** Hill range of the Deccan, India. The Blue Mts., so called from the haze which characterises the hills when seen from the plains, form a knot of high ground, alt. 6,000 ft., at the junction of the E. and W. Ghats. The elevation modifies the climate, so that the Nilgiris are a hot-weather resort of Europeans.

The district of Madras Presidency known as the Nilgiris comprises almost entirely the area of the Nilgiri Hills, only one-tenth being tilled. Its area is 1,009 sq. m. Pop. 126,519.

NILSSON, CHRISTINE (1843-1921). Swedish vocalist. Born near Vexjö, Sweden, Aug. 20, 1843, she studied in Stockholm and Paris, where she made her debut in 1864. Three years later she visited England, singing with great success in opera and oratorio. She toured in Europe and America, retired in 1891, and died Nov. 22, 1921.

Christine Nilsson, Swedish vocalist

NIMBUS (Lat. a cloud, divine effulgence). In art, the halo encircling

the head of a holy personage. It occurs in Egyptian, Buddhist, and Greco-Roman art, from the last of which it was probably adopted by Christian painters and sculptors in the 6th century. See Aureole.

NIMES. City of France. It is 25 m. N. of the Mediterranean and 174 m. S.W. of Lyons. Apart from the Roman remains the buildings include the cathedral, the churches of S. Baudile and S. Paul, the citadel, dating from the 17th century, and several museums.

Nîmes is famous for its Roman remains. It was founded by Augustus, and an amphitheatre and other features of a typical Roman city were soon erected. The amphitheatre is in an excellent state of preservation. The Maison Carrée is a perfect Roman temple. The Temple of Diana and two Roman gates still remain. The Great Tower is another Roman building. Outside the city are the Pont du Gard, a Roman aqueduct (see illus. p. 108), and the remains of some baths. Pop. 84,667.

NIMROD. In the O.T., a son of Cush, and a notable hunter and warrior (Gen. 10). He ruled at Shinar and is regarded as the founder of the Assyrian power.

NINE PINS. Wooden pieces with which the game of skittles or nine pins is played. The object of the game is to knock the pins over with a wooden ball thrown by the hand in the fewest possible attempts.

NINEVEH. Assyrian city on the left Tigris bank opposite Mosul. Its walls, enclosing 1,800 acres, with 15 gates and many towers, were protected on three sides by a moat filled from the Choser tributary. This crossed the city to the Tigris. A Mitannian domination, about 1400, preceded the outburst of Assyrian conquest under Shalmaneser I, about 1300, who restored the temple, although making Calah his capital. It was made a royal residence about 1100 B.C.

Nineveh owed its chief renown to Sennacherib (2 Kings 19), who erected a majestic palace at Kuyunjik and an arsenal at Nebi Yunus, the traditional tomb of the prophet Jonah, and also laid out a park wherein he acclimatised exotic animals and plants. Esarhaddon widened the streets and built a palace at Nebi Yunus. The fall of the city, foretold by Nahum and Zephaniah, was achieved by the Medes and Babylonians, 612, and a Sassanian village grew upon the mounds. See Assyria; Babylonia; Mesopotamia; Mosul.

NINGPO. City of Chekiang prov., China. It is situated at the junction of the two branches of the river Yung, 12 m. from the mouth. The site of old Ningpo, which is said to have existed 2205 B.C., is some distance from the present city. Portuguese traders visited Ningpo in 1522. The city was occupied by the British, 1841, and declared a treaty port in 1842. Pop. 212,400.

NINIAN or **NINIAS** (d. c. 432). British bishop and saint. A native of N. Wales, he was educated in Rome, and being consecrated bishop, built what is said to have been the first stone church in Britain at Whit-horn in Galloway. His festival is Sept. 16.

NIOME. In Greek mythology the wife of Amphiön, king of Thebes by whom she had twelve children. She was so proud of this that she mocked the goddess Leto or Latona, who had only given birth to two children, whereupon the offended goddess incited her son Apollo and her daughter Artemis to slay all the children of Niome with their arrows. Niome was changed into a stone. Her story has often been treated in art. See illus. below.

Nîmes. Roman amphitheatre, built 1st-2nd century A.D. It contains thirty-four tiers of seats and was capable of holding 20,000 spectators

NIOLUM or **COLUMBIUM.** Metallic element, chemical symbol Nb or Cb, atomic weight 93.1, atomic number 41. A rare element, it is steel grey in colour, with fine lustre. The metal is obtained from the mineral columbite (q.v.). It occurs also associated with uranium and yttrium in other rare minerals in Norway and Russia.

NIPIGON. Lake and river of Ontario, Canada. The lake is about 30 m. N. of Thunder Bay on Lake Superior, is 70 m. long, and contains about 1,000 islands. The river passes from the lake into Lake Superior.

NIPISSING. Lake of Ontario, Canada. It lies N. of Lake Huron, and is 50 m. long and about 20 m. broad. The Sturgeon flows into it, and French River carries its waters to Lake Huron. It contains many islands. The part of Ontario around it is known as the Nipissing district.

Nippon. Variant spelling for Nihon, or Dai Nihon, Japanese name for Japan (q.v.).

NIPPUR. City of Babylonia. A Sumerian centre, it was on the Shatt-en-Nil, 20 m. E.N.E. of Diwaniya, central Babylonia. It was examined by Layard, 1851, and excavations by Peters, Haynes, and Hilprecht, 1889-1900, revealed a more or less continuous history from reed huts on neolithic marshes to palaces of Parthian kings. Among tablets discovered at Nippur is one representing part of a Babylonian version of the Deluge Legend. See Bcl: Deluge; Parthia.

NIRVANA (Skt. extinction). Buddhistic term for the spiritual state attained by one who has conquered self and, by the exercise of self-sacrifice, sympathy, loving thought, and deeds

of kindness, extinguished desire. The attainment of Nirvana implies the union of the individual with the infinite.

NISH or **Nis.** Town of Yugoslavia, in Serbia, the ancient Naissus. It is on the river Nisava, and is a railway junction. On the

Niobe, with one of her daughters: sculpture attributed to Praxiteles. See above. Uffizi Gallery, Florence

outbreak of the Great War the Serbians made it their temporary capital. It was captured by the Bulgarians, Nov. 5, 1915, but recaptured by the Serbs, Oct. 12, 1918. Pop. 37,000.

NITH. River of Scotland. Rising in W. Ayrshire, it flows 55 m S.E. through Dumfriesshire to the Solway Firth, 13 m. below Dumfries. The district through which it flows is known as Nithsdale.

NITRATE. In chemistry, name given to the salts or compounds of nitric acid (q.v.), i.e. those formed by the substitution of metals for the hydrogen of nitric acid. Nitration is the process of treating a hydrocarbon with nitric acid. See Explosive: Nitrogen: Nitroglycerin

Nitre. Popular name given to potassium nitrate (KNO_3) or saltpetre. See Potassium.

NITRIC ACID or **AQUA FORTIS** (HNO_3). Powerful acid compound of hydrogen, nitrogen, and oxygen. It is made on a large scale by heating Chile nitre with sulphuric acid in cast-iron retorts. A newer method is by the direct combination of the nitrogen and oxygen of the atmosphere by means of an electric arc. Nitrogen peroxide thus formed, when absorbed by water, yields nitric and nitrous acids.

Nitric acid is largely used for the manufacture of explosives, and for making aniline dyes. It forms a series of salts known as nitrates, largely employed in many industries.

NITROUS ACID. This is an unstable compound (HNO_2) formed by dissolving the gas nitrogen trioxide in water. It yields the salts, nitrites

NITRIFICATION. Formation of nitrates in soils and manures through the agencies of micro-organisms. Organic matter in the soil contains abundant nitrogen, but not in a form suitable for plant food. The action of various microscopic bacteria effects the formation of nitrates, provided moisture and some basic substance as carbonate of lime are present, that the temperature is sufficiently high, and that there is free circulation of air. Nitrates are also formed by the fixation of the nitrogen in the air of the soil

NITROGEN. Gaseous element. Its chemical symbol is N; atomic weight, 14.008; and atomic number 7. Nitrogen constitutes about four-fifths of the atmosphere. The element also occurs in a combined state as saltpetre and Chile nitre, and as an essential constituent of animal and vegetable organisms. Animals are dependent for their supply of this element on nitrogenous foodstuffs which they eat. The nitrogenous materials are built up by plants, which obtain their nitrogen from the soil. (See Nitrification.) Nitrogen is prepared artificially by exhausting the oxygen from a confined space of air and so leaving impure nitrogen behind. Chemical methods are also employed. Nitrogen is combustible, and does not support combustion. It is also distinguished by its inactivity.

Ammonia is a compound of nitrogen and hydrogen (NH_3). Nitrogen monoxide, or nitrous oxide (laughing gas)— N_2O —is employed as an anaesthetic in minor operations.

NITROGLYCERIN. Sensitive highly explosive oil, prepared by nitrating glycerin. Its chemical formula is $\text{C}_3\text{H}_5(\text{O.NO}_2)_3$. For many years after its discovery nitroglycerin found no commercial use except as a remedy for angina pectoris, on account of difficulties in its ignition and transport. Nitroglycerin is chiefly used as an ingredient of various explosives. See Cordite; Dynamite.

NITROUS ETHER or **ETHYL NITRITE.** Liquid with a pleasant ethereal smell, made by distilling sodium nitrite with alcohol and dilute sulphuric acid. The alcoholic solution known as sweet spirit of nitre is employed in medicine as a diaphoretic.

NIUE or **SAVAGE ISLAND.** Island of the South Pacific, a dependency of New Zealand. It was named by its discoverer, Capt. Cook, 1774. It is 350 m. S.E. of Samoa, and consists of upheaved coral. Bananas and coconuts are exported. The area is 100 sq m. Pop. 3,795.

NIVELLE, ROBERT GEORGES (1856-1924). French general. Born at Tulle Oct. 15, 1856 he joined the French army as lieutenant of artillery.

R. G. Nivelle,
French general

Oct. 1, 1878. On the outbreak of the Great War, Nivelle, in command of an artillery regiment, participated in the invasion of Alsace. In Sept., 1914, he fought in the battle of the Aisne. Placed at the head of the second army, April 27 1916, he played a great part in the battle of Verdun, and as the result of his success was chosen to succeed Joffre. In April, 1917, he conducted a powerful offensive in the Craonne-Reims area; but the losses were heavy, and he was relieved of his command. From Dec., 1917-1919, Nivelle was commander-in-chief in N. Africa. He died Mar. 23, 1924

NIXIE, Nix, or Nick. Water sprite in the folklore of the peoples of N. Europe. It was often regarded as malignant, and its appearance presaged shipwreck and drowning. In the form Nick it has survived as one of the names used for the devil. Old Nick.

NIZAM (Arab. administration). Title of the sovereign of Hyderabad. The first holder was Asaf Jah (d. 1748), who was styled Nizam-ul-Mulk, i.e. the administrator of the kingdom. See Hyderabad.

NOAH. Biblical patriarch. Son of Lamech and father of Shem, Ham, and Japheth, by divine command he made an ark in which he and his family and a certain number of every kind of animal were preserved during the Deluge. See Deluge.

NOAH'S ARK. The Ark of Noah seems to be thought of as a flat-bottomed vessel. It was to be made of gopher wood, perhaps cedar or cypress, to be provided with rooms for the men and animals, and to be smeared within and without with pitch (Gen. 6, 14). It was to be in three storeys, and to have a light and a door (5, 16).

NOBEL, ALFRED BERNHARD (1833-96). Swedish chemist. Born at Stockholm, Oct. 21, 1833, he assisted his father, an inventor of considerable ability. From 1859-61 they devoted themselves to the study of explosives and perfected the manufacture of nitroglycerin. The inconvenience of a liquid explosive led Nobel, in 1866, to mix the liquid with absorbent earth, forming dynamite. He settled in Paris in 1873, and shortly afterwards invented a still more powerful explosive gelignite. He died Dec. 10, 1896.

The Nobel Prizes are annual awards from a fund established under Nobel's will. By this he set aside the sum of £1,700,000, the interest on which was to be devoted to awarding five prizes each year to men and women eminent in (1) physics, (2) chemistry, (3) physiology or medicine, (4) literature of an idealistic tendency, and (5) the cause of peace. Each prize is of the value of £7,500. The Nobel Foundation is administered by a board of five members, with a president appointed by the king of Sweden. The prizes are open to all nationalities. In addition there are a number of Nobel Institutes.

Alfred B. Nobel,
Swedish chemist

NOBLE. English gold coin, first struck by Edward III. Its original value was 6s. 8d. There were half- and quarter-noble pieces. See Angel.

NOCTURNE (Ital. *notturmo*). Musical composition, usually of a dreamy character. Some nocturnes are music to accompany sleep scenes, such as Mendelssohn's *Notturmo* in the music to *A Midsummer Night's Dream*. Chopin adopted the name for some of his pianoforte pieces.

NOGI, MARESUKE, COUNT (1849-1912). Japanese soldier. Born of a Samurai family, he became a soldier, and first saw service in the civil war of 1877. He led a brigade in the war against China, and in the Russo-Japanese

Count Nogi,
Japanese soldier

War commanded the third army. He forced Port Arthur to surrender, and then made the flank march which was the decisive move in the battle of Mukden. From 1896-1900 Nogi was governor of Formosa. With his wife he committed *hara-kiri* (q.v.) on the death of the mikado, Sept. 13, 1912.

NOMINALISM (Lat. *nomen*, name). Term in scholastic philosophy, opposed to realism (q.v.). It was first introduced by Roscellinus at the end of the 11th century. Its upholders asserted that genera and species, the universal notions, had no real existence, being merely sounds and words, products of abstraction; the individual alone has a real existence. Realism won the day, but in the 14th century Occam again brought nominalism into favour.

NONCONFORMITY. Religious movement implying dissent from the established church. Dissenters from the established church appeared in the reign of Elizabeth, and the division was accentuated by the policy of Charles I and Laud. These dissenters were prominent in the Commonwealth period, but at the Restoration episcopacy regained its ascendancy and they were subject to persecution under the old and new laws.

In 1662 was passed the Act of Uniformity, which required of all ministers unfeigned assent and consent to all and everything contained and prescribed in and by "the book of common prayer." It resulted in the ejection from the Church of some 2,000 ministers, many of them the most learned and faithful of her servants. They were compelled to join the ranks of the Congregationalists and Baptists, and though by no means at one with them in opinion, to form a compact body of Nonconformity against the Established Episcopal Church. Dissenting chapels were set up all over the country, but were not allowed to remain in peace. The Conventicle Act of 1664 made it a penal offence to attend their services, and the Five Mile Act prohibited ministers from exercising their vocation within five miles of any city or corporate town, and also from keeping schools. But Nonconformity continued to flourish. Meetings were held in secret, and the numbers of the recalcitrants grew steadily. The accession of William and Mary, and the passing of the Toleration Act in 1689, brought substantial relief. This Act did not repeal any of the previous legislation against the Nonconformists, but simply did away with the penalties of disobedience.

During the whole of the 18th century the history of Nonconformity was a struggle for existence, marked by repeated hostile measures, but also by a gradual escape from many of the disabilities under which it was suffering. During the latter part of the century the final separation of the Methodists from the Establishment led to a greater strengthening of the

Nonconformist position, while the 19th century witnessed a gradual but sure process of emancipation. The Conventicle Act, the Five Mile Act, and the Test and Corporation Act were all repealed in the first quarter of the century. At the same time began a definite campaign for the disestablishment of the Church, resulting in the disestablishment of the Church in Ireland in 1868, and of the Church in Wales in 1920. See Baptists; Church of England; Congregationalism; Methodism; Presbyterianism, etc.

Nones (Lat. nonus, ninth). The fifth, and in March, May, July, and Oct. the seventh day of the Roman month. See Calendar.

NONJUROR. Name given to a number of clergymen of the Church of England who refused to take the oath of allegiance to William and Mary in 1689. Their contention was that they had already taken the oath to James II, and could not transfer their allegiance to another sovereign at the bidding of Parliament. In 1690 they were deprived of their livings. Altogether they numbered about 400. When deprived they held services of their own, and kept up an episcopal succession, but they gradually died out.

NONPAREIL. Name of a size of printing type. Half the size of pica, it is one size smaller than minion, and one size larger than pearl, and is also called 6-point. Twelve lines make an inch.

This line of type is set in nonpareil.

NONSUCH. Name given by Henry VIII to a palace which he built between Cheam and Ewell, in Surrey. Begun in 1538, it was used in Elizabeth's time and that of the first three Stuarts as a royal residence. Charles II gave it to the duchess of Cleveland, who sold it, and it was pulled down about 1680.

On Old London Bridge was a remarkable structure called Nonsuch or Nonsuch House. Built about 1580, it was taken down about 1757. See London Bridge.

NORBITON. District of Surrey, just outside Kingston-on-Thames. It is 12 m. from London, of which it is a residential suburb, and has a station on the Southern Rly.

NORBURY. District of Surrey, and residential suburb of London. It is 7 m. from London, on the Southern Rly. Here are the links of the N. Surrey Golf Club. Norbury Park is near Box Hill.

There is a Norbury in Derbyshire, 7 m. from Uttoxeter, on the L.M.S. Rly.

NORDAU, MAX SIMON (1849-1923). German-Hungarian author. A Jew by family, he was born at Budapest, July 29, 1849, studied medicine, travelled widely, and having settled in Paris, practised as a physician. Nordau's novels and dramas were written to illustrate his social theories. He is better known by his analytical studies of contemporary society, *The Conventional Lies of Civilization*, 1884; *Paradoxes*, 1885; *The Malady of the Century*, 1887; and *Degeneration*, 1892. All these works have been translated into English. He died Jan. 22, 1923.

Max Nordau,
German-Hungarian
author

NORDENSKIÖLD, NILS ADOLF ERIK, BARON (1832-1901). Finnish explorer. Born Nov. 18, 1832, he studied mineralogy and mining. In 1858 he made valuable geological discoveries in Spitsbergen. In 1861 and 1864 he made expeditions to Spitsbergen, while in 1868 he made a polar expedition, reaching 81° 42' N. He accomplished the N.E. passage in the Vega in 1878-80. He died Aug. 12, 1901. He gave his name to the Nordenskiöld Sea, a section of the Arctic Ocean.

His nephew, Nils Otto Gustaf Nordenskiöld (1869-1928), made a scientific exploration of the straits of Magellan and Patagonia in 1895-97, and of Alaska in 1898. He commanded the Swedish expedition (1901-4) which discovered Oscar II Land. He died June 2, 1928.

N. A. Nordenskiöld,
Finnish explorer

NORE, THE. Sandhank in the Thames estuary. It is about 3 m. N.E. of Sheerness and 47 m. E. of London. At the E. extremity is the Nore lightship, anchored here since 1732. The Nore is generally regarded as marking the mouth of the Thames, and is an important anchorage. The naval mutiny at the Nore took place May 20 to June 13, 1797.

NORE. River of the Irish Free State. Rising in the N. of co. Tipperary, it flows 70 m. S.E. through Leix (Queen's) co. and co. Kilkenny to the Barrow, which it enters 2 m. above New Ross.

NORFOLK. Eastern county of England. It has about 90 m. of coastline on the Wash and the North Sea, and an area of 2,054 sq. m. The surface in the interior is undulating or flat, the latter in the W., where the fen district enters the county, while along much of the coast it is quite low, and suffers in parts from the encroachments of the sea. Along the Wash, however, some land has been reclaimed. The chief river is the Yare, with its tributaries, Wensum, Bure, and Waveney, which divides Norfolk from Suffolk. The Great Ouse and its tributaries also water the county, which contains the Broads (q.v.).

Norfolk is a noted agricultural county. Wheat, barley, and oats are largely grown; cattle and sheep are reared; and some land is given up to fruit. It is served by the L.N.E.R. Norwich is the county town and the largest place. Other corporate towns are Yarmouth, King's Lynn, and Thetford, while there are a number of small towns, among them East Dereham, North Walsham, Downham Market, and Wymondham. Cromer and Hunstanton are watering places. The county, which is mainly in the diocese of Norwich, sends five members to Parliament. In the south the Forestry Commissioners have planted a large forest called Breckland. Norfolk was part of E. Anglia, and soon after 1066 became one of the richest portions of England. Pop. 504,293.

NORFOLK. City of Virginia, U.S.A., in Norfolk co. It stands on Elizabeth river, an arm of Chesapeake Bay, 68 m. S.E. of Richmond, and is served by the Chesapeake and Ohio and other rlys., and by Transatlantic and other steamship lines. Transport facilities are also provided by two canals. An important port and the second largest city of the state, Norfolk has a spacious harbour and some manufacturing industries. Pop. 166,000.

Norfolk. Cruiser launched in 1928. She is the nameship of a class of four ships
S. Critt, Southern

NORFOLK. Name ship of a class of four British cruisers. She was built at Fairfield, and was begun in 1927 and completed in 1930. She displaces 10,000 tons and has an overall length of 633 ft. Her principal armament is eight 8-in. guns, and she was built to burn oil and to steam 32 knots. She is fitted with geared turbines with Diesel engines.

NORFOLK, EARL AND DUKE OF. English titles, the latter being the senior dukedom in the peerage. After the Conquest of 1066 the earldom of Norfolk was held by several nobles, including members of the family of Bigod. It passed through female descent from the Bigods to the Mowbrays, and in 1397 Thomas Mowbray was created duke of Norfolk. John, the 4th duke, died without sons.

In 1483 John Howard, descended through a female from Thomas Mowbray, the 1st duke, was created duke of Norfolk by Richard III, and the present title dates from that year. Many of the earlier earls and dukes of Norfolk had filled the office of earl marshal, and in 1672 this was made hereditary in the family. The principal seat of the family is Arundel Castle (q.v.), and the eldest son of the duke bears the courtesy title of earl of Arundel or earl of Surrey. See Mowbray, Baron.

Thomas Howard (1536-72), who became 4th duke in 1554, planned a marriage with Mary Queen of Scots, and was imprisoned. Released on a promise of allegiance

Norfolk. Map of the maritime county of East Anglia, noted for agriculture and stock raising

and renunciation of the marriage scheme, he was drawn into the Ridolfi Plot, arrested, and denying that he was a Roman Catholic, was executed as a traitor, Jan. 2, 1572.

Henry Fitzalan-Howard (1847-1917), the 15th duke, was postmaster-general, 1895-1900. He died Feb. 11, 1917, and was succeeded by his son, Bernard Marmaduke (b. 1908). See Earl Marshal.

NORFOLK ISLAND. Islet in the Pacific within the territory of the Commonwealth of Australia. It is 5 m. long, 3 m. wide, was discovered by Capt. Cook in 1774, and is 400 m. from New Zealand. Very fertile, it was handed over to Australia in 1914. Pop. 902.

NORFOLK REGIMENT. Regiment of the British army. Formerly the 9th Foot, it was raised in 1685 to assist in crushing Monmouth's rebellion, and first saw active service in Holland in 1701. In 1704 it went to Portugal, and its services at Almanza, 1707, earned for it the figure of Britannia as a regimental badge. It was fighting throughout the

Norfolk Regimental badge

Peninsular War, and later in the Afghan War, Sikh Wars, Crimean War, Afghan War, 1879-80, and Burmese War, 1889. In the South African War it formed part of the 7th division. In the Great War the 1st battalion was part of the expeditionary force; the 2nd battalion was in Gallipoli in 1915, went to Mesopotamia, and was in the siege of Kut, 1916, while other battalions did excellent service. The regimental depot is at Norwich.

NORHAM. Village of Northumberland. It stands on the Tweed, 6 m. from Berwick-on-Tweed, with a station on the L.N.E. Rly. It is famous for its castle, one of the strongest of the defences of the English border, and mentioned in *Marmion*. The parish church dates from Norman times. The district around is known as Northshire, and until 1844 was a detached part of Durham. Pop. 697.

NORMAN. Name given to the people of Normandy and their descendants in countries which were conquered by them. The word Norman is identical with Northman, but is generally restricted to the mixed race which arose after the conversion of the heathen settlers and their adoption of French culture. In addition to the conquest of England in the 11th century the Normans conquered and colonised South Italy and Sicily.

The term Norman architecture is applied to a style of building in England and Normandy during the 11th and 12th centuries. It is said to have been introduced into England by Edward the Confessor, who built the choir and transepts of the old Abbey of Westminster, but was not fully developed until after the Conquest. Historically, it is a local variety of Romanesque. The main characteristics of Norman, as of Romanesque, architecture are the round arch and the plain round or rectangular column.

NORMAN, MONTAGU COLLET (b. 1871). British banker. A son of F. H. Norman, he was educated at Eton and King's College, Cambridge. He became a partner in the family banking business, and in 1901 went to S. Africa with his regiment; there he won the D.S.O. In 1920 Norman was chosen governor of the Bank of England, and he still held that position in 1930, being responsible for important financial negotiations during the period. In 1923 he was made a privy councillor.

NORMANBY. District of Yorkshire (N.R.). It is 4 m. from Middlesbrough, in the urban district of Eston. Another Normanby, is the village, 5 m. from Pickering, from which the family of Phipps takes its title.

Constantine Henry Phipps (1797-1863), the 1st marquess of Normanby, was a son of Henry Phipps, 1st earl of Mulgrave. In 1834 he was appointed lord privy seal, and from 1835-39 was lord-lieutenant of Ireland. From 1839-41 he was home secretary under Lord Melbourne; from 1846-52 ambassador in Paris; and from 1854-58 at Florence.

NORMANDY. Old province of France. It was one of the largest of those into which France was divided before the Revolution, and takes its names from the Normans or Northmen. The name is still used to describe the district. Normandy lies along the English Channel between Picardy and Brittany. Its capital is Rouen, while Caen, Bayeux, Lisieux, and Evreux are interesting Norman towns. For many years the Channel Islands belonged to the duchy.

William the Conqueror, who became duke in 1035, was crowned king of England in 1066, and when he died in 1087 he left Normandy to his eldest son Robert, thus separating it from England. In 1106, however, Robert was beaten at Tinchebrai by his brother, Henry I, and the two countries were again united.

In 1202 Philip Augustus invaded Normandy, and when Rouen surrendered to him in 1204, it was all in his possession. It was formally surrendered to France in 1259.

The dialect of Old French spoken in Normandy and England was called Norman-French. Anglo-Norman is the name of the dialect spoken by the dominant class in England for about two centuries after the Conquest.

NORMANTON. Urban dist. and market town of Yorkshire (W.R.). It stands on the Calder, 10 m. from Leeds, and is an important rly. junction, as the L.M.S. and L.N.E. railways meet here. The principal building is the church of All Saints. There is a 16th century grammar school. There are coal mines and iron works. Market day, Mon. Pop. 16,130.

South Normanton is a market town near Alfreton, Derbyshire, also a coal-mining centre. Market day, Sat. Pop. 6,996.

NORN. In Scandinavian mythology, the three goddesses of fate. They cast lots over every infant and lay gifts in his cradle. One is malignant, the others are beneficent.

NORRIS, SIR JOHN (c. 1547-1597). English soldier. A son of Baron Norris, he fought for the Huguenots in France and was with the English force that went to assist the Dutch in their struggle against Spain. Having been governor of Munster, he led an army to the Netherlands in 1585, and in 1588 was marshal of the camp formed at Tilbury. After the defeat of the Armada he went with Drake on the expedition against Spain. He died July 3, 1597, at Mallow. Known as Black Norris, Sir John left several sons who won reputations as soldiers. The family memorial is in S. Andrew's Chapel, Westminster Abbey. The barony of Norris is now held by the earl of Abingdon.

Sir John Norris, English soldier After Zuccheri

NORSE. Adjective properly signifying Norwegian. It is applied usually to the older period of Norwegian history, including the age of the great migrations, often in a sense which includes the whole Scandinavian race.

NORTH, BARON. English title borne since 1554 by the family of North. Sir Edward North, a prominent lawyer and courtier in the time of Henry VIII, was made a baron in 1554. The 7th baron was a cousin, who was already Baron Gnilford and in 1752 was made earl of Guilford. The two titles were held together until 1802, when the 3rd earl died. The barony

then fell into abeyance: in 1841 it was granted to Susan, daughter of the earl of Guilford. She and her husband, J. S. Doyle, took the name of North, and in 1884 their son William became the 11th baron. The family seat is Wroxton Park, Banbury.

Frederick, Lord North (1732-92), was a son of Francis, 1st earl of Guilford, whom he succeeded in 1790. Entering Parliament in 1754, he was chancellor of the exchequer, 1767, and premier from 1770 until 1782, when he formed a coalition with C. J. Fox, and held office as secretary of state, April-Dec., 1783. He died August 5, 1792.

North, CHRISTOPHER. Pseudonym adopted by John Wilson (q.v.).

NORTHALLERTON. Market town and urban dist. of Yorkshire (N.R.). It is 30 m. from York on the L.N.E.R., on which it is a junction, and is the capital of the north riding. The chief building is the cruciform church of All Saints. There is a hospital founded in the 15th century and a grammar school. Market day, Wed. Pop. 4,791.

NORTHAM. Urban dist. of Devonshire. It stands near the left bank of the Torridge, 1½ m. from Bideford, with a station on the G.W. Rly. Pop. 5,861. Another Northam is part of the county borough of Southampton.

NORTHAM. Town of Western Australia. It is 57 m. E. from Perth by rly., a junction for the S. line to Albany, and the centre of a rich agricultural district. Pop. 4,895.

NORTH AMERICA. Northern part of the continent of America, sometimes regarded as a continent in itself. Covering an area of approximately 8,200,000 sq. m., it is bounded W. by the Pacific Ocean, E. by the Atlantic, terminates S. in a narrow isthmus connecting it with S. America, and extends N. to the Arctic. North America has a population of approximately 138,000,000. (See map, p. 71.)

Politically N. America is divided from E. to W. N. of 48° and the Great Lakes, except Alaska and Newfoundland, is the dominion of Canada. Alaska is a dependency of the U.S.A., which, stretching from the 46th parallel to the borders of Mexico, is the main centre of wealth and population, containing approximately four-fifths of the population of the continent. The republic of Mexico, which extends from the S. land borders of the U.S.A. to Guatemala, is a great plateau of amazing natural wealth.

Geographically the lines of division in N. America run from N. to S. The W. comprises the highest land in N. America, the Cordilleras, extending inland from the Pacific from 300 to 1,000 m. The E. includes the Appalachian highlands and an Atlantic coastal plain. Between them the Central Plain reaches from N. to S., with an ill-defined watershed in the height of land near the U.S.A. boundary. See Canada; Mexico; United States, etc.

NORTHAMPTON. Borough and market town of Northamptonshire, also the co. town. It stands on the left bank of the Nene, 66 m. from

Northampton. The Town Hall, built in 1864

London, and is served by the L.M.S. Rly. The chief buildings in the borough are the four parish churches: S. Peter's, a fine building, mainly Norman; S. Giles', varied in style and of somewhat later date; All Saints', rebuilt after

1675: and the round church of S. Sepulchre. S. John's and S. Thomas's hospitals are old foundations. The county hall dates from the 17th century, and the grammar school from the 16th. The chief industry is the manufacture of hoots and shoes. At Hardingstone is one of the existing Eleanor crosses. Market days, Wed. and Sat. Pop. 90,895.

The battle of Northampton was fought July 10, 1460, during the Wars of the Roses.

NORTHAMPTON, EARL AND MARQUESS OF. English titles borne by the family of Compton since 1618 and 1812. Earlier holders were members of the family of Bohun. William Parr in 1547 was made marquess of Northampton. In 1618 William Compton was made earl. Charles, the 9th earl, was made a marquess in 1812. The family seats are Castle Ashby, Northampton, and Compton Wynates (q.v.), Warwickshire. The marquess's eldest son is called Earl Compton.

NORTHAMPTONSHIRE. County of England. The surface is mainly undulating except in the soke of Peterborough, which is in the fen country.

Its area is 998 sq. m. The principal rivers are the Welland, dividing the county from Leicestershire and Lincolnshire, and the Nene. The Avon, Cherwell, Leam, and Ouse rise in the county, which is served by the L.N.E. and L.M.S. Railways, and by the Grand Union Canal. Northampton is the co. town; other large places are Peterborough, Kettering, and Wellingborough. Higham Ferrers, Daventry, and Brackley are small boroughs, and there are a number of urban districts. It is famous as a hunting county. For administrative purposes Northamptonshire is divided into two counties, each having a county council—Northampton proper and the soke of Peterborough. It sends four members to Parliament. Pop. 349,363.

NORTHAMPTONSHIRE REGIMENT. Originally the 48th and 58th Foot, the former having been embodied in 1741 and the latter in 1755, it first saw active service in Flanders, 1744. As evidence of its share in the defence of Gibraltar, 1779–83, the "Castle and Key" is seen on its badge. It fought in Egypt in 1801, in the New Zealand War, 1845–47, in the Crimean War, and in South Africa in 1879, 1881, and 1899.

In the Great War the 1st battalion formed part of the original expeditionary force, fought in all the battles of 1914, and took part in the battle of the Somme in 1916. Northamptonshire yeomanry took part in the British campaign in Italy, 1917–18. The regimental depot is at Northampton.

NORTH AUSTRALIA. Territory of Australia, one of the two parts into which Northern Territory was divided in 1927.

Northern Territory, having been part of New South Wales and then of South Australia, was added to the Commonwealth in 1911. In 1927 it was divided into two territories, North Australia and Central Australia, each under a government resident and an advisory council of four members. The capital is Darwin, and its area is 287,220 sq. m.

NORTH BAY. Town of Ontario, Canada. The capital of the Nipissing district, it is 360 m. from Montreal, and stands on the N.E. side of Lake Nipissing. It is served by the C.P. Rly. and C.N. Rly. Pop. 10,692.

NORTH BERWICK. Burgh and watering place of Haddingtonshire (East Lothian). It stands at the entrance to the Firth of Forth, 23 m. from Edinburgh, and is served by the L.N.E.R. With fine sands, it is famous for its golf courses. Behind the town is Berwick Law, a conical hill, 610 ft. high, and near are the Bass Rock and Tantallon and Dirleton Castles. Pop. 4,583.

NORTHBROOK, THOMAS GEORGE BARING, 1ST EARL OF (1826–1904). British politician.

Northamptonshire. Map of the eastern inland county of England

Born Jan. 22, 1826, he was the eldest son of Baron Northbrook. He entered Parliament in 1857 as a Liberal for Penryn and Falmouth. Northbrook was under-secretary for war 1868–72, and from 1872–76 viceroy of India. In 1876 he was made an earl, and from 1880–85 was first lord of the admiralty. He died Nov. 15, 1904, when his son, Francis George (1850–1929), became the second earl. On the latter's death the barony passed to his cousin, Francis Arthur Baring, while the earldom became extinct. See Baring.

North Cape. Promontory on Magerö Island, N. Norway. It is generally accepted as the northernmost point of Europe.

NORTHCLIFFE, ALFRED CHARLES WILLIAM HARMSWORTH, VISCOUNT (1865–1922). British newspaper proprietor. Born at Chapelized, Dublin, July 15, 1865, while still a child he showed a bent for journalism. When only 17 he was made assistant editor of Youth. He went in 1885 to Coventry, where he worked for Liffé & Sons, but in 1887 he returned to London and founded a publishing business. In 1888 he established the weekly journal Answers, which achieved great financial success, and was the forerunner of many other periodicals. Answers was floated as a limited

company and was thus the germ of the business of the Amalgamated Press. In 1894 he and his brother Harold, afterwards Viscount Rothermere (q.v.), acquired The Evening News (London), then in a bankrupt condition.

Lord Northcliffe, Newspaper owner Hoppel

On May 4, 1896, Harmsworth founded The Daily Mail, a halfpenny morning newspaper which revolutionized British journalism. In 1903 he founded The Daily Mirror, disposing of it in 1914 to Viscount Rothermere. In 1904 he received a baronetcy, followed in 1905 by a peerage. In 1908 he became chief proprietor of The Times. He was a persistent supporter of aircraft, and offered through the Daily Mail various prizes of £10,000 each for great flights.

During the Great War Northcliffe carried out a campaign for munitions in 1915, and unwaveringly advocated compulsory service, which was introduced in 1916. He advocated with success the construction of aircraft on a great scale, and paid numerous visits to the various Allied fronts. In May, 1917, he was appointed chairman of the British war mission in the U.S.A., and on his return he was advanced to the rank of viscount. In Feb., 1918, he became director of propaganda in enemy countries. He died Aug. 14, 1922, when the title became extinct. A memorial bust outside S. Dunstan's church, Fleet Street, was unveiled in 1930. Consult Northcliffe: an Intimate Biography, Hamilton Fyfe, 1930.

NORTHERN IRELAND. Part of the United Kingdom of Great Britain and Ireland, but with its own parliament and executive. It consists of six Ulster counties, Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and covers 5,236 sq. m. Belfast is the capital. Pop. (1926) 1,256,500.

Northern Ireland came into existence under an Act of 1920, amended in 1922. It has a parliament of two houses; the senate of 26 members and the House of Commons of 52. Responsible to this parliament is a cabinet under a prime minister, and the king is represented by the governor-general: Northern Ireland sends 13 members to the parliament at Westminster, which is responsible for matters of imperial concern. Other matters, including finance, are controlled by the parliament, the buildings of which are at Stormont, just outside Belfast. Northern Ireland has its own Supreme Court of Judicature, its own schemes of national health insurance and old age pensions and its own police, the Royal Ulster Constabulary.

Arms of Northern Ireland

NORTHERN UNION. Union of professional football clubs that play a game resembling Rugby football. It came into being in 1895 owing to the refusal of the English Rugby Union to recognize professionalism, and its constituent clubs are almost entirely confined to Lancashire and Yorkshire. See Football.

NORTHFLEET. Urban dist. of Kent. It is on the Thames, 22 m. from London, with a station on the Southern Rly. The church of S. Botolph is a fine building, partly Decorated and partly Perpendicular. The industries include the manufacture of cement, paper, and chemicals. Pop. 17,500.

Northolt. District of Middlesex. It is 2½ m. S.S.W. of Harrow. There is an aerodrome here. Pop. 700.

Northamptonshire Regimental badge

and renunciation of the marriage scheme, he was drawn into the Ridolfi Plot, arrested, and denying that he was a Roman Catholic, was executed as a traitor, Jan. 2, 1572.

Henry Fitzalan-Howard (1847-1917), the 15th duke, was postmaster-general, 1895-1900. He died Feb. 11, 1917, and was succeeded by his son, Bernard Marmaduke (b. 1908). See Earl Marshal.

NORFOLK ISLAND. Islet in the Pacific within the territory of the Commonwealth of Australia. It is 5 m. long, 3 m. wide, was discovered by Capt. Cook in 1774, and is 400 m. from New Zealand. Very fertile, it was handed over to Australia in 1914. Pop. 902.

NORFOLK REGIMENT. Regiment of the British army. Formerly the 9th Foot, it was raised in 1685 to assist in crushing Monmouth's rebellion, and first saw active service in Holland in 1701. In 1704 it went to Portugal, and its services at Almanza, 1707, earned for it the figure of Britannia as a regimental badge. It was fighting throughout the

Norfolk Regimental badge

Peninsular War, and later in the Afghan War, Sikh Wars, Crimean War, Afghan War, 1879-80, and Burmese War, 1889. In the South African War it formed part of the 7th division. In the Great War the 1st battalion was part of the expeditionary force; the 2nd battalion was in Gallipoli in 1915, went to Mesopotamia, and was in the siege of Kut, 1916, while other battalions did excellent service. The regimental depot is at Norwich.

NORHAM. Village of Northumberland. It stands on the Tweed, 6 m. from Berwick-on-Tweed, with a station on the L.N.E. Rly. It is famous for its castle, one of the strongest of the defences of the English border, and mentioned in Marmion. The parish church dates from Norman times. The district around is known as Northamshire, and until 1844 was a detached part of Durham. Pop. 697.

NORMAN. Name given to the people of Normandy and their descendants in countries which were conquered by them. The word Norman is identical with Northman, but is generally restricted to the mixed race which arose after the conversion of the heathen settlers and their adoption of French culture. In addition to the conquest of England in the 11th century the Normans conquered and colonised South Italy and Sicily.

The term Norman architecture is applied to a style of building in England and Normandy during the 11th and 12th centuries. It is said to have been introduced into England by Edward the Confessor, who built the choir and transepts of the old Abbey of Westminster, but was not fully developed until after the Conquest. Historically, it is a local variety of Romanesque. The main characteristics of Norman, as of Romanesque, architecture are the round arch and the plain round or rectangular column.

NORMAN, MONTAGU COLLET (b. 1871). British banker. A son of F. H. Norman, he was educated at Eton and King's College, Cambridge. He became a partner in the family banking business, and in 1901 went to S. Africa with his regiment; there he won the D.S.O. In 1920 Norman was chosen governor of the Bank of England, and he still held that position in 1930, being responsible for important financial negotiations during the period. In 1923 he was made a privy councillor.

NORMANBY. District of Yorkshire (N.R.). It is 4 m. from Middlesbrough, in the urban district of Eston. Another Normanby, is the village, 5 m. from Pickering, from which the family of Phipps takes its title.

Constantine Henry Phipps (1797-1863), the 1st marquess of Normanby, was a son of Henry Phipps, 1st earl of Mulgrave. In 1834 he was appointed lord privy seal, and from 1835-39 was lord-lieutenant of Ireland. From 1839-41 he was home secretary under Lord Melbourne; from 1846-52 ambassador in Paris; and from 1854-58 at Florence.

NORMANDY. Old province of France. It was one of the largest of those into which France was divided before the Revolution, and takes its names from the Normans or Northmen. The name is still used to describe the district. Normandy lies along the English Channel between Picardy and Brittany. Its capital is Rouen, while Caen, Bayeux, Lisieux, and Evreux are interesting Norman towns. For many years the Channel Islands belonged to the duchy.

William the Conqueror, who became duke in 1035, was crowned king of England in 1066, and when he died in 1087 he left Normandy to his eldest son Robert, thus separating it from England. In 1106, however, Robert was beaten at Tinchebrai by his brother, Henry I, and the two countries were again united.

In 1202 Philip Augustus invaded Normandy, and when Rouen surrendered to him in 1204, it was all in his possession. It was formally surrendered to France in 1259.

The dialect of Old French spoken in Normandy and England was called Norman-French. Anglo-Norman is the name of the dialect spoken by the dominant class in England for about two centuries after the Conquest.

NORMANTON. Urban dist. and market town of Yorkshire (W.R.). It stands on the Calder, 10 m. from Leeds, and is an important rly. junction, as the L.M.S. and L.N.E. railways meet here. The principal building is the church of All Saints. There is a 16th century grammar school. There are coal mines and iron works. Market day, Mon. Pop. 16,130.

South Normanton is a market town near Alfreton, Derbyshire, also a coal-mining centre. Market day, Sat. Pop. 6,996.

NORN. In Scandinavian mythology, the three goddesses of fate. They cast lots over every infant and lay gifts in his cradle. One is malignant, the others are beneficent.

NORRIS, SIR JOHN (c. 1547-1597). English soldier. A son of Baron Norris, he fought for the Huguenots in France and was with the

English force that went to assist the Dutch in their struggle against Spain. Having been governor of Munster, he led an army to the Netherlands in 1585, and in 1588 was marshal of the camp formed at Tilbury. After the defeat of the Armada he went with Drake on the expedition against Spain. He died July 3, 1597, at Mallow. Known as Black Norris, Sir John left several sons who won reputations as soldiers. The family memorial is in S. Andrew's Chapel, Westminster Abbey. The harony of Norris is now held by the earl of Airedale.

NORSE. Adjective properly signifying Norwegian. It is applied usually to the older period of Norwegian history, including the age of the great migrations, often in a sense which includes the whole Scandinavian race.

NORTH, BARON. English title borne since 1554 by the family of North. Sir Edward North, a prominent lawyer and courtier in the time of Henry VIII, was made a haron in 1554. The 7th haron was a cousin, who was already Baron Guilford and in 1752 was made earl of Guilford. The two titles were held together until 1802, when the 3rd earl died. The harony

then fell into abeyance: in 1841 it was granted to Susan, daughter of the earl of Guilford. She and her husband, J. S. Doyle, took the name of North, and in 1884 their son William became the 11th haron. The family seat is Wroxton Park, Banbury.

Frederick, Lord North (1732-92), was a son of Francis, 1st earl of Guilford, whom he succeeded in 1790. Entering Parliament in 1754, he was chancellor of the exchequer, 1767, and premier from 1770 until 1782, when he formed a coalition with C. J. Fox, and held office as secretary of state, April-Dec., 1783. He died August 5, 1792.

North, CHRISTOPHER. Pseudonym adopted by John Wilson (q.v.).

NORTHALLERTON. Market town and urban dist. of Yorkshire (N.R.). It is 30 m. from York on the L.N.E.R., on which it is a junction, and is the capital of the north riding. The chief building is the cruciform church of All Saints. There is a hospital founded in the 15th century and a grammar school. Market day, Wed. Pop. 4,791.

NORTHAM. Urban dist. of Devonshire. It stands near the left bank of the Torridge, 1½ m. from Bideford, with a station on the G.W. Rly. Pop. 5,861. Another Northam is part of the county borough of Southampton.

NORTHAM. Town of Western Australia. It is 57 m. E. from Perth by rly., a junction for the S. line to Albany, and the centre of a rich agricultural district. Pop. 4,895.

NORTH AMERICA. Northern part of the continent of America, sometimes regarded as a continent in itself. Covering an area of approximately 8,200,000 sq. m., it is bounded W. by the Pacific Ocean, E. by the Atlantic, terminates S. in a narrow isthmus connecting it with S. America, and extends N. to the Arctic. North America has a population of approximately 138,000,000. (See map, p. 71.)

Politically N. America is divided from E. to W. N. of 46° and the Great Lakes, except Alaska and Newfoundland, is the dominion of Canada. Alaska is a dependency of the U.S.A., which, stretching from the 46th parallel to the borders of Mexico, is the main centre of wealth and population, containing approximately four-fifths of the population of the continent. The republic of Mexico, which extends from the S. land borders of the U.S.A. to Guatemala, is a great plateau of amazing natural wealth.

Geographically the lines of division in N. America run from N. to S. The W. comprises the highest land in N. America, the Cordilleras, extending inland from the Pacific from 300 to 1,000 m. The E. includes the Appalachian highlands and an Atlantic coastal plain. Between them the Central Plain reaches from N. to S., with an ill-defined watershed in the height of land near the U.S.A. boundary. See Canada; Mexico; United States, etc.

NORTHAMPTON. Borough and market town of Northamptonshire, also the co. town. It stands on the left bank of the Nene, 66 m. from

London, and is served by the L.M.S. Rly. The chief buildings in the borough are the four parish churches: S. Peter's, a fine building, mainly Norman; S. Giles', varied in style and of somewhat later date; All Saints', rebuilt after

Sir John Norris, English soldier After Zuccheri

Northampton. The Town Hall, built in 1864

NORTHWOOD. District of Middlesex. It is 14 m. N.W. of London, on the Met. and L.N.E. Rlys. With Eastcote. It forms part of the urban dist. of Ruislip-Northwood. The parish church of Holy Trinity, erected 1854, is of flint. Pop., urban dist., 9,113.

NORTON, CAROLINE ELIZABETH SARAH (1808-77). British poet and novelist. Born in London, she was a daughter of Thomas and grand-daughter of Richard Brinsley Sheridan. Her husband, the Hon. George Chapple Norton (d. 1875), whom she married in 1827, brought divorce proceedings against her in 1836, but her character was vindicated at the trial. Her pamphlet, *English Laws for Women*, written in 1853, with other writings, forms a landmark in the movement for women's emancipation. In 1877 she married Sir W. Stirling-Maxwell, but died on June 15 in the same year.

Caroline Norton,
British writer
After J. Haytér.

NORTON ST. PHILIP. Village of Somerset, 6 m. from Bath. Here is The George Inn, dating from the 15th cent., which claims to be the oldest licensed house in England. Pop. 448.

NORWAY. Kingdom of N. Europe. Occupying the W. and N. parts of the Scandinavian peninsula, it is bounded W. by the North Sea and Atlantic Ocean. N. by the Arctic Ocean. E. by Sweden and Finland, and S. by the Skagerrak. The capital is Oslo, other important towns being Bergen, Nidaros (Trondhjem),

and Stavanger. The area is 125,086 sq. m. Pop. 2,810,592, including some 20,000 Lapps. The coast, except in the extreme S., is rocky and indented by innumerable fiords. Inland the country is very mountainous. Lakes are numerous. The rivers are, as a rule, short and turbulent. The barren and mountainous surface affords little scope for agriculture, the arable soil being mainly confined to strips in deep and narrow valleys and around the fiords and lakes. Oats, barley, potatoes, rye and wheat are raised, but the chief natural sources of wealth are the forests and the fisheries. Minerals include silver, copper, and iron ores. The lack of coal is compensated for by the enormous water power resources. There are 2,383 m. of rly. and several wireless stations. Norway attained her greatest prosperity under Haakon IV, 1217-63. At different stages of her history she has been intimately associated with Denmark and Sweden. In Jan., 1814, Norway was ceded to Sweden by Denmark. In the following August Norway was proclaimed independent, but in union with Sweden. In 1905 this union was dissolved, and Prince Charles of Denmark was elected king of Norway, taking the name of Haakon VII. The constitution dates from 1814, but has been much modified. The legislative body, the Storting, is composed of 150 members, divided into two sections, the Odelsting and the Lagting. Norway is a member of the League of Nations. See Denmark; Haakon; Oslo; Sweden.

NORWICH. City and county borough of Norfolk, also the county town. It stands on the Wensum, near its junction with the Yare, and is 114 m. from London, on the L.N.E. and L.M.S. Rlys. Its chief magistrate has been known since 1910 as the lord mayor. The cathedral was begun in Norman times, but not completed until about 1500. Two old gateways lead to it. Other churches include the 15th century S. Peter Mancroft and the modern Roman Catholic cathedral. S. Andrew's Hall, originally the nave of a 15th century monastic church, is used for the musical festivals. The guildhall was built in the 15th century. The castle, with a Norman keep, is now used as a museum and art gallery. George Borrow's house is now a Borrow museum. The early 16th century Strangers' Hall is used as an English folk museum. In the Maddermarket Theatre, a reconstruction of an Elizabethan theatre, the Norwich Players act Shakespearean and classical plays.

Norwich. Cathedral of Holy Trinity, from the south-east. It dates from Norman times
Frith

Since 1921 the following buildings have been presented to the city: the Lazar House, now a branch public library; the Bredwell, containing a museum of local industries; and the 14th century Suckling House, a fine example of a burgess's mansion. Mousehold Heath is public property. The Carrow bridge over the Wensum was opened in 1923.

The industries include engineering works and the making of boots and shoes, crape, starch, mustard, etc. Pop. 120,661.

NORWOOD. District of London. It forms the S. part of the bor. of Lambeth, lying between Streatham W., Sydenham E., and Croydon S., and is chiefly residential. At West Norwood is the S. Metropolitan cemetery. The Royal Normal College for the Blind was established at Upper Norwood in 1874. In the 17th century Norwood was covered by an oak wood; a spa, called Beulah Spa, was opened here in 1831. See Gipsy Hill.

NOSE. Organ of the sense of smell, also used in respiration. In human beings it ends below in the nostrils, which mark the entrance to the two nasal cavities, separated by the septum, between the base of the skull and the roof of the mouth. The roof, sides, and floor of the cavities are formed of certain bones of the skull, the roof being composed of a bone perforated like a sieve to afford passage to the nerve of smell. The sides are each covered by three highly vascular bodies (the turbinates) which moisten and warm the air passing through.

The nerve of smell breaks up into many branches, which end in the upper parts of the septum and sides of the nose. Respiration should always take place through the nose in order that air may be warmed and moistened before reaching the throat and lungs. See Adenoid; Smell; also illus. p. 1022.

Nose ornaments are worn by certain primitive races. They consist of objects attached to the nose by perforation. Made of bone, shell, feather, quill, tooth, wood, pearl, or metal, sometimes engraved or jewelled, their purpose was originally amuletive.

NOTARY (Lat. nota, note). In England, originally an officer in the ecclesiastical courts. Notaries are still admitted by the archbishop of Canterbury through his representatives, but their duties are mainly secular. A notary attests or certifies documents, mainly in connexion with a failure to meet bills of exchange. In England a notary is usually a solicitor; in Scotland he must be a law agent.

Norway. Man and woman in the costumes of the country

and Stavanger. The area is 125,086 sq. m. Pop. 2,810,592, including some 20,000 Lapps.

The coast, except in the extreme S., is rocky and indented by innumerable fiords. Inland the country is very mountainous. Lakes are numerous. The rivers are, as a rule, short and turbulent. The barren and mountainous surface affords little scope for agriculture, the arable soil being mainly confined to strips in deep and narrow valleys and around the fiords and lakes. Oats, barley, potatoes, rye and wheat are raised, but the chief natural sources of wealth are the forests and the fisheries. Minerals include silver, copper, and iron ores. The lack of coal is compensated for by the enormous water power resources. There are 2,383 m. of rly. and several wireless stations.

Norway attained her greatest prosperity under Haakon IV, 1217-63. At different stages of her

Norway and Sweden. Map of the two kingdoms forming the Scandinavian peninsula

NOTATION. Musical term, meaning the use of signs to represent musical sounds. Three chief methods have been employed:

(1) representing scale relations, as in the phonetic systems of the Hindus and Chinese, the old Greek systems, and modern Paris-Galin-Chevé figure notation, and the Tonic Sol-fa notation; (2) representing the fingering of certain instruments, known as tablature; (3) representing fixed pitch, as in the ordinary staff notation of modern W. Europe. Each of these methods of showing pitch is aided by time symbols consisting of various kinds.

ARITHMETICAL NOTATION.

The progress of arithmetic was long hampered for lack of a suitable notation. The number which in the present Arabic system is written 888 was written by letters in the Greek system and *DDCCLXXXVIII* in the Roman system. The latter is obviously inconvenient for arithmetical work; the advantage of the Arabic system over the Greek is that while in the Greek one letter stands for eight hundred, another for eighty, and yet another for eight, the Arabic symbol 8 can signify eight or eighty or eight hundred, according to position, the symbol 0 serving as a means of discriminating between two numbers like 88 and 808. The medieval invention of decimals put the finishing touch to the Arabic system of notation. See *Decimal*.

NOTIFICATION. In English law, the compulsory notification of specified infectious diseases by medical practitioners to the local medical officer of health. At the present time the notifiable diseases are smallpox, cholera, diphtheria, membranous croup, erysipelas, scarlatina, scarlet fever, typhus, typhoid, enteric, relapsing, continued or puerperal fever, acute primary and acute influenzal pneumonia, dysentery, plague, cerebro-spinal fever, acute polio-myelitis, acute polio-encephalitis, ophthalmia neonatorum, and encephalitis lethargica. Tuberculosis is also notifiable, and malaria, if contracted in England or Wales. From time to time other diseases, such as measles, may be made notifiable.

Notornis. Almost extinct bird of New Zealand

ous churches are thus dedicated in Paris and elsewhere, notably the cathedral, Notre Dame de Paris. Begun in 1163, and completed early in the 14th century, the existing building was a temple of reason in the years 1793-94. A magnificent example of decorated Gothic architecture, its length is 390 ft.

NOTTINGHAM. British light cruiser. She took part in the Dogger Bank (1915) and Jutland (1916) battles, and was torpedoed and sunk in the North Sea, Aug. 19, 1916, when 38 of her crew were lost. The Nottingham was of the Chatham class, and was completed in 1914. See *Birmingham*.

NOTTINGHAM. City, market town, and the co. town of Nottinghamshire. It stands on the N. bank of the Trent, 123 m. N.W. of

Nose. Sectional diagram showing lateral wall and principal parts of the organ. See article p. 1021

London, and is served by the L.M.S. and L.N.E. Rlys., and also by canals. Its area, since the extension of the boundaries in 1877, is 10,935 acres. It was made a city in 1897, and its chief magistrate is a lord mayor. Market days, Wed. and Sat. Pop. 262,624. The city's chief church is S. Mary's, a fine Perpendicular structure of the 15th century; S. Peter and S. Nicholas are old foundations; the others are modern. The Roman Catholic cathedral of S. Barnabas is a noble building, and the Nonconformists have many churches. The castle, acquired and rebuilt by the corporation after 1831, is now an art gallery. In Nov., 1928, the large open market place was closed, its place being taken by a new one. The old one has been laid out as an open space, and at one end are the new civic buildings which replaced the old exchange. Other buildings are the guildhall and the shire hall. A university college was opened in 1878. In 1928 much of its work was transferred to a fine range of buildings which are situated at the western end of the city.

Nottingham. New University building opened in 1928. Above, Civic Hall, which was opened in 1929

The city's staple industry is the making of lace, but others have been introduced. It has now large engineering works and factories for making hosiery, chemicals, bicycles and clothing. The city has a recorder, who holds here courts of quarter sessions, and is an assize town. It sends four members to Parliament, and has two daily papers, *The Guardian* and *The Journal*; also two evening papers. The airport at Tollerton was opened in 1930.

Nottingham is a famous football centre. Its two clubs, Notts County and Nottingham Forest, have both won the association cup; the former in 1894 and the latter in 1898.

NOTTINGHAM, EARL OF. English title borne by several families. In 1596 the seaman, Charles Howard, known as Lord Howard of Effingham, was made earl of Nottingham. The title again became extinct on the death of his grandson, the third holder, in 1681. In the same year it was revived for Heneage Finch (1621-82), a successful lawyer, who became lord chancellor. His son Daniel (1647-1730), the 2nd earl, was secretary of state under William III and Anne. In 1729 he succeeded to the earldom of Winchelsea, and his descendants have styled themselves earl

of Winchelsea and Nottingham. The earl's eldest son is called Viscount Maidstone.

NOTTINGHAMSHIRE. County of England. Wholly inland, its area is 844 sq. m. It is in the main a level region, much of it being the valley of the Trent, but there are wolds in the S. and some hills in the W. The chief river is the Trent; others are its tributaries, the Idle and the Erewash.

The county may be divided roughly into a coal-mining and industrial area in the S. and S.W., and an agricultural one in the N.E. and S.E. It is served by the L.M.S. and L.N.E. Rlys., and several canals pass through it. In the county are the remains of Sherwood Forest, including the district known as the Dukeries (q.v.). Other places of interest are Cresswell Crags, where traces of primitive men have been found, and the fine mansions of Welbeck, Thoresby, and Clumber. Nottingham is the county town; other boroughs are Mansfield, Newark, and Retford. Five members are returned to Parliament. Nottinghamshire is mainly in the diocese of Southwell. It has long been famous for its cricketers, and is a hunting centre. Pop. 641,149. See map, p. 1023.

The Nottinghamshire and Derbyshire Regiment is more usually known as the Sherwood Foresters (q.v.).

NOTTING HILL. District of London. Part of the borough of Kensington, it is N. of Holland Park, with Bayswater E. and Shepherd's Bush, W. At Notting Hill Gate was an old turnpike, removed in 1860. The district, built over 1828-48, was named from the manor of Knotting or Nutting Barnes.

NOVAIA ZEMBLIA. Archipelago of the Arctic Ocean, belonging to Russia, also known as Novaya Zemlya. It is composed mainly of two large islands. A large number of small islands, mainly off the E. coast, combine to make the archipelago. The total land area is estimated at 35,150 sq. m. See map, p. 118.

NOVA SCOTIA. One of the three maritime provinces of the Dominion of Canada. Its area is 21,428 sq. m., of which 360 sq. m. are water, and its population 550,000. The province consists of two parts. The larger is the peninsula of Nova Scotia, surrounded by the sea except where the isthmus of Chignecto, only 11½ m. wide, unites it to New Brunswick. The smaller is the island of Cape Breton (q.v.) to the N., the strait of Canso lying between the two. There are a number of lakes, including Rossignol in Nova Scotia, and the Bras d'Or lakes in Cape Breton. Many small islands lie off the coast. Halifax is the capital, the chief port, and the largest city. Sydney, on Cape Breton, a mining centre, is the next in size.

The affairs of Nova Scotia are managed by a ministry which is responsible to a parliament of one house, the House of Assembly, of 38 members, who are elected every five years, by the votes of all adults. The province sends 10 members to the Senate and 14 to the House of Commons of the Dominion. Its second chamber was abolished in 1928.

Nova Scotia is mainly an agricultural area. Cape Breton has a rich coalfield, and in Nova Scotia coal, iron, gold, copper, etc., are mined. The fisheries are valuable. The prov. is well served by rlys., which converge on Halifax.

Nova Scotia was colonised by the French, who called it Acadie. In the time of James I it was taken by the English, and, as those sent out at this time were chiefly Scotsmen, it was named Nova Scotia. The French regained it, but in 1713 it was ceded formally to Great Britain. See *Canada*.

NOVEL. Work of fiction written in prose and presenting dramatically the interplay of human emotions upon a stage of real life. The origin of the novel, like that of the word, was Italian. The short, racy fabliau of France was appropriated and perfected by Italian genius

of the Cinquecento, and as the novella of Boccaccio, Masuccio, Ser Giovanni, and the other novellieri was carried on the tide of the Renaissance all over Europe. The authors of these early novelle gave a true picture of life as they saw it, and this is still the first distinguishing note of the novel. In the 150 years that were the flowering time of English prose fiction, between the publication of Fielding's first novel and Meredith's and Hardy's last, the novel has been adapted to an infinity of different shapes.

NOVELLO, VINCENT (1781-1861). British composer. Born in London, Sept. 6, 1781, of mixed Italian and English parentage, he became a chorister in the Sardinian Chapel and later an organist. He was a founder of the London Philharmonic Society, composed church music, masses, etc., and edited collections of sacred music. His publication of these was the beginning of the business of Novello and Co., founded by his son Joseph in 1811. One of his daughters, Clara Novello (1818-1908) achieved great distinction as a vocalist. He died Aug. 11, 1861.

NOVOCAINE. Local anaesthetic. A paramino-henzoyldiethylamino-ethanol hydrochloride, it is used in surgery in a similar

NOYAU (Fr. kernel). Liqueur made from the kernels of peach stones or bitter almonds, brandy, and sugar. It is made in Martinique, and exported from Bordeaux.

NOYES, ALFRED (b. 1880). British poet. Born Sept. 16, 1880, he published his first book of verse, *The Loom of Years*, 1902. It was followed by many others which showed the easy flow of his coloured and resonant verse, including *Drake*, an English Epic, 1906; and *Forty Singing Seamen*, 1907. His collected poems were issued in 2 vols. in 1910, and a third vol. in 1920. He published a study of William Morris in 1908. Later works include *Tales of the Mermaid Tavern*, 1912, the *Torchbearers*, 1922 and 1925, and *Ballads and Poems*, 1928. He published two volumes of essays: *Aspects of Modern Poetry*, 1924, and *The Opalescent Parrot*, 1929; and a novel, *The Return of the Scarecrow*, 1929.

Alfred Noyes,
British poet

NOYON. City of France. It stands on the Verre, near its junction with the Oise, 67 m.

from Paris. Its famous cathedral of Notre Dame was badly damaged in the Great War. Noyon was one of the Frankish capitals, but from about 900 to the Revolution was only important as a bishopric. Noyon was the birthplace of Calvin. It was almost completely destroyed in the Great War. Pop. 6,025.

NUBIA. Name formerly applied to a large region of N. Africa. Nubia formed part of the ancient kingdom of Ethiopia, and was divided into Nubia Proper or Lower Nubia, extending from near Assuan to Dongola, and Upper Nubia. See Africa; Ethiopia; Sudan.

NULLITY (Lat. nullus, none). State of being null or void. In England the term is chiefly used in a legal sense. A nullity of marriage is a proceeding in the divorce court to declare a marriage null and void from the beginning on one of the following grounds: absence of real consent, by reason of one party being insane, or by reason of fraud or duress; consanguinity or affinity of the parties; or impotence of either party. The existence of a prior marriage is also ground for a decree of nullity.

When the decree has been pronounced, it is as if no marriage had ever been celebrated, and the wife resumes her maiden name. See Divorce.

NUMA POMPELIUS. Second of the seven legendary kings of ancient Rome. He is reputed to have reigned from 715 to 673 B.C. He first established the priestly offices of the Roman state. He also divided the land among

the people, and the craftsmen into guilds according to occupation.

NUMBERS. Fourth book of the Pentateuch, or, rather, Hexateuch. It takes its title from the Septuagint, the book being so called because it contains accounts of two numberings of the children of Israel. The Hebrew title is *In the Wilderness*. Three divisions may be distinguished: (a) the first census and other events preparatory to the departure from Sinai, Num. 1-9, 28; (h) the journey from Sinai to Moab, Num. 10, 29 to 25, 18; (c) the second census, the appointment of Joshua as Moses' successor, and other events, Num. 26-36.

NUMIDIA. Roman province in N. Africa. The name means land of nomads, and the country corresponded roughly with the eastern part of Algeria. Masinissa united it with Roman aid, 201 B.C. On the overthrow of Jugurtha the Romans conquered Numidia, but left it under its own kings. Juba I having sided with Pompey, Julius Caesar made Numidia a Roman province, 46 B.C., but in 25 B.C. Augustus gave the W. part to Juba II. The Numidians provided light cavalry for the Carthaginian, and later for the Roman army.

NUMISMATICS (Gr. nomisma, a coin). Science of coins and other similar objects, such as medals. The Greek colonies, especially in the south of Italy and Sicily, had their coinage from the 6th century onwards. The Sicilian series ranks in artistic value above any other in the whole history of coinage, the 10-drachm pieces of Syracuse, first struck at the end of the 5th century, being perhaps the most famous example of the art. The Roman coinage begins in the second half of the 4th century, with the as and its parts in bronze; the silver denarius, for long the standard denomination in the ancient world, was instituted in 269 B.C., at a weight of 4.55 grammes. The decay of the Roman Empire, and the rise of the modern nationalities, are faithfully reflected in the style of their coinages. In the 7th century the first Mahomedan coins made their appearance; although, as the representation of living objects was forbidden, they had little influence on the artistic side, they were soon serious rivals to the Byzantine gold in international currency.

It was not until the 13th century that the nations of western Europe began to possess a regular gold currency, and this began with the florin of Florence, first coined in 1252, and the ducat of Venice, first coined in 1280. The first English regular currency of gold, the noble, was begun in 1344. Among the northern nations the best period of the coinage is the 14th century, although the practical absence of portraiture robs it of one source of interest. In Italy the highest level is reached in the portrait coins of the end of the 15th century, but the noblest contribution of Italy to numismatic art is in the cast medal. Antonio Pisano of Verona (first half of the 15th century), the founder and greatest exponent of modern medallist art, was a master of dignified portraiture and fine design. Germany in the 16th century developed a characteristically vigorous but unimaginative school of portraiture; and in the 17th century France in Guillaume Dupré and England in Thomas Simon could boast of portrait medallists of very high rank.

During the 16th century the technique of striking, as distinct from casting, medals was rapidly developed. The old method of striking the metal between dies with a sledgehammer was gradually replaced by a press worked with a screw, which was firmly established in most countries in the second half of the 16th century, and by the second half of the 17th century superseded the primitive method. The 18th and 19th

Nottinghamshire. Map of the midland industrial county. See p. 1022

manner to cocaine, being employed in the form of a 0.5 p.c. solution as a local anaesthetic, particularly in the operation of tooth extraction. See Anaesthesia.

NOWRA. Town of New South Wales. It is the terminus of the coast rly., 94 m. in length, S. from Sydney, at the mouth of the Shoalhaven river. Pop. 1,900.

centuries show for the most part a deplorable falling off in the art of coinage, which is hardly redeemed by 20th century attempts at revival made chiefly in France. See Frane; Mark; etc.

NUMMULITE. Genus of fossil foraminifera. The shells are remarkable for being flattened and circular, resembling coins, and yet containing a large number of chambers arranged in a spiral. The genus was abundant during the Eocene, and limestones of that period composed chiefly of nummulites are sometimes several hundred feet in thickness. Such limestone formations are noticeable in the Alps, N. Africa, Asia, and Central America.

NUN (Lat. nouna, an elderly woman, mother, or nurse) Word adopted by the early Church for a woman consecrated to a life of devotion. The habit, veil, etc., forming the characteristic garb of a nun are of early date and a modification of the ordinary dress of women in ancient times. The term nun is only correctly applied to a female member of the Benedictine order, or of one of the orders springing from it. Women belonging to the orders of friars—as the Carmelite, Franciscan, and Dominican—are known as Sisters. See Mercy, Sisters of; Monasticism; Poor Clares.

NUNC DIMITTIS. Opening words used as the title of a Latin canticle or hymn (Lord, now lettest Thou Thy servant depart in peace) in the Book of Common Prayer. It is the Song of Simeon (Luke 2, 29-32), and in the Anglican Church is sung after the second lesson at Evensong.

Nuremberg. 1. Schöne Brunnen, a Gothic fountain built in 1380. 2. Derrer Brücke, the 15th cent. bridge from the island of Trödelmarkt

NUNEATON. Mun. bor. and market town of Warwickshire. It is on the little river Anker, 97 m. from London and 9 m. from Coventry, and is served by the L.M.S. Rly. and also by a canal. The chief buildings are the churches of S. Nicholas and S. Mary, and there is a grammar school dating from the 16th century and a free school of 1712. The town is a railway junction, and has manufactures of bricks, tiles, etc. Market days, Tues. and Sat. Pop. 41,901. See Eliot, George.

NUNHEAD. District of S.E. London. It is E. of Peckham Rye, and forms part of the bor. of Camberwell. It contains Nunhead cemetery, as well as the underground Beacroft reservoir of the Met. Water Board.

Nummulite. Diagrams illustrating formation of fossil shell. A. High-magnified vertical section of part of shell showing construction of air chambers. B. Horizontal bisection, showing spiral of chambers. C. Vertical bisection. D. Shell viewed from above

imperial castle of the 11th and 12th centuries has been largely modernised. The streets contain many fine houses of the 16th and 17th centuries, with richly ornamented fronts, among them being the house of Albert Dürer. Of the fountains the chief is the Schöne Brunnen (Beautiful Fountain), adorned with statues. There are many fine churches.

The grammar school was founded by Melancthon, 1526. The town hall, in Italian Renaissance style, dates from 1622. The Germanic Museum, established 1857 in a medieval Carthusian monastery, contains a large collection of German art. Watches, called Nuremberg eggs, are said to have been invented here. Pop. 392,494. Consult The Story of Nuremberg, C. Headlam, 1899.

NÜRNBERG. German light cruiser. Completed in 1908, she was sunk by the Kent in the battle of the Falkland Islands (q.v.), Dec. 8, 1914. Another German light cruiser of this name, launched in 1916, was surrendered to Britain in Nov., 1918, and scuttled at Scapa by her crew, June, 1919.

NURSING. Science of tending the sick. In olden days the laws of health were well understood both in Egypt and in India, while the highest standard of all was attained by the Jews. Hippocrates (460-377 B.C.) inculcated principles of good nursing, while in ancient Rome the best care available was given to wounded soldiers. From the beginning of the Christian era the chief orders of women concerned with nursing were the deaconesses, widows, and nuns.

With the dissolution of the monasteries by Henry VIII and the expulsion of the religious sisters from the English hospitals, lay nurses of the servant class were introduced. From the late 17th century to the middle of the 19th was the darkest period of nursing history, both in Great Britain and abroad. In 1836 Theodor Fliedner and his wife founded at Kaiserswerth the first deaconess institute, and from here Elizabeth Fry, Florence Nightingale, and others carried ideas and methods into Great Britain.

The movement for the organization of nursing as a profession was inaugurated in 1887 with the formation of the British Nurses' Association. To-day the training of nurses is regulated by the state through the Nurses Registration Act of 1919. A General Nursing Council was established for England and Wales and another for Scotland. General training

NUREMBERG or **NÜRNBERG.** City of Bavaria. It stands in a plain on the river Pegnitz, 95 m. N. of Munich. It is an important rly. junction, and is served by the Ludwigs Canal, connecting the Main and Danube. Its specialties are hops and toys. There are also chemical works, machine shops, lithographic and printing works, and manufactures of railway stock, electrical apparatus, pencils, matches, etc.

The old city is remarkably picturesque, most of its lofty walls and towers of the 14th-16th centuries being preserved. The

occupies three or four years, and there are five supplementary registers for male, mental, fever, mental defectives, and sick children's nurses, with varying periods of special training.

The most important branches of nursing to-day are: district nursing, including the highly skilled and specialised work of Queen's nurses; public health work, in which nurses are employed under county, borough, or city schemes; private nursing; nursing of mental disorders; midwifery and maternity nursing, controlled by a Central Midwives Board; and nursing in the services, army, navy, and R.A.F. See Hospital; Nightingale, F.; Red Cross.

The College of Nursing was founded in 1918 as a central organization to promote the interests of the profession.

NUT. Strictly, the dry fruit developed from the carpels of the flower. The carpel contains two or more ovules, but, as a rule, only one develops into a seed—the kernel of the nut. This is invested by a shell of hard or leathery tissue, which does not split until the seed germinates. The term as used popularly has a wider meaning; a ground-nut

is not a nut, but a pod; and walnut is the "stone" of a fruit formed like a plum or cherry (drupe). Types of true nuts are found in acorn, hazel, beech mast, and sweet chestnut.

NUTCRACKER. Bird belonging to the crow family. An occasional visitor to Great Britain, it is rather smaller than a jackdaw, and has brown plumage spotted with white, except the wings and

Nutcracker. Specimen of the species of crow

tail, which are black. It occurs in woods, where it feeds mainly on seeds of conifers and insects.

NUTHATCH (Sitta). Genus of birds of the family Sittidae. The common nuthatch, S.

caesia, is fairly common in the S. and midland counties of England. It is about 5 ins. long; and runs upwards or downwards over the branches and trunk of a tree like a mouse. It feeds upon the insects and grubs that it finds in crevices in the bark, in search of which it taps the tree like a woodpecker.

NUTMEG (Myristica fragrans). Seed of a tree of the order Myristicaceae, a native of Malaya. The tree attains a height of about 30 ft., has large, aromatic, leathery, alternate, evergreen leaves, and small, pale yellow flowers. Its seeds, in the form of nutmeg and mace, are used in cookery as a flavouring, and in medicine as an aromatic, stimulant, and carminative, but chiefly to mask the taste of less pleasant drugs.

NUX VOMICA. Seeds of a small tree, Strychnos nux-vomica, of the order Loganiaceae. A native of India and N. Australia,

it has strongly veined, oval, opposite leaves, and panicles of greenish-white tubular flowers. The fruit is a large berry, resembling an orange, with numerous silky-haired, disk-like seeds. The dried seeds yield the alkaloids strychnine (q.v.), brucine, loganin, and igasuric acid.

Nux Vomica. Foliage, flowers, and fruit (A)

Nutmeg. Seed of Myristica fragrans.

Nuthatch searching a tree trunk for insects

Oak. Specimen of the British oak tree, *Quercus robur*, in full leaf

NYANZA. Central African word for lake. Examples are found in the names of the three lakes which form the main sources of the Nile—Victoria Nyanza, Albert Nyanza, Edward Nyanza, now more often called Lakes Victoria, Albert, and Edward.

NYASA. Lake of Central Africa. About 300 m. long and from 15 to 60 m. wide, at an alt. of 1,645 ft., it occupies part of the Great African Rift Valley. The only outlet is the Shire river. Fort Johnston, Kota-Kota, and Karonga are important ports on its shores.

NYASALAND. British protectorate in Central Africa. It lies along the W. shores of Lake Nyasa and to the S. of that lake, and covers 37,890 sq. m. The administrative capital is Zomba, but the chief settlements are Blantyre and Limbe in the Shire Highlands. Pop. 1,877 Europeans, 1,085 Asiatics, and 1,326,165 natives.

A large portion of the protectorate is mountainous. The only important river is the Shire. There is a rly. from Chindio on the Zambezi to Blantyre (174 m.). Another, opened in 1922, runs from Murruga, on the S. bank of the Zambezi, to Beira, a distance of 175 m. This establishes direct rly. connexion between Blantyre and Beira.

The Nyasaland Protectorate was constituted in 1891. Before that date it was part of British Central Africa, from 1893 to 1907 being known as the British Central Africa Protectorate. It is administered by the Colonial Office. See Africa.

NYMPH. In classical mythology, a localised nature spirit, regarded as a minor deity. There were sea and water nymphs, such as the Oceanids, the Nereids, and the Naiads; Oreads, or mountain nymphs; Dryads and Hamadryads, or tree nymphs. They had no temples, but offerings were made to them of milk and honey in grottoes, at fountains, trees, etc.

NYREN. Name of two English cricketers. Richard Nyren came of a Scottish family, originally Nairn. He was settled in Hampshire by about 1750, when he founded the Hambleton club. Left-handed and one of the finest bowlers of his day, he was also a good batsman.

His son John (1764-1837), besides being a cricketer of repute, wrote *The Young Cricketer's Tutor*, comprising full directions for playing the Elegant and Manly Game of Cricket. John died at Bromley, June 30, 1837.

NYSTAGMUS. Oscillating movement of the eyeball, usually lateral, but sometimes vertical or rotatory. The most frequent form is coal-miner's nystagmus, due primarily to working in a dim light. It is also a symptom of various nervous disorders, particularly that known as disseminated sclerosis, and is then virtually incurable. See Eye.

NYX. In Greek mythology, the personification of night, called *Nox* by the Romans. She was the daughter of *Chaos*, and is represented as a winged goddess in a chariot.

O. Fifteenth letter and fourth vowel of the English and Latin alphabets. Its two chief values are long o, as in *dote*, and short o as in *dot*. It equals short u in another, and oo in *prove*. It combines freely with other vowels. *Oa* equals long o in *boat*, *moat*, but not in *abroad*, *board*; *oe* equals c in words of Greek origin, and is now generally so spelt, as in *economy*; in other words it equals long o as in *hoe*, *roe*. *Oo* is long in *boon*, and short in *wood*, and in *blood*, *food* equals short u. See Alphabet; Phonetics.

OAK (*Quercus*). Large genus of trees of the order *Amentaceae*, natives of the N. temperate regions, Indo-Malaya, the Pacific coasts, etc. The typical species is the British oak (*Q. robur*) whose trunk may be 120 ft. high, with a girth of 60-70 ft., covered with thick rugged bark. It lives to a great age, and does not produce acorns until between 60 and 70 years old. It does not pay to cut for timber until in its second century. The holm oak (*Q. ilex*) (q.v.) and the Turkey oak (*Q. cerris*) often to be seen in parks and gardens, are both from S. Europe. Another S. European species met with is the cork oak (*Q. suber*), and a well-represented N. American species is the dyer's oak (q.v.), whose large leaves turn an orange or dull red colour in autumn.

The fine-grained, hard oak timber is employed largely in structural work where endurance and the bearing of heavy strains are concerned. **OAK GALL.** Abnormal growth of the surface tissues of the oak, caused by the attacks of gall-wasps. Oak galls were formerly used in ink manufacture and are still used in dyeing.

Oak Gall. The marble or bullet gall

OAK-APPLE DAY. Name given in England to May 29. The birthday of Charles II in 1630, and the day in 1660 on which he set foot in England at the Restoration, it was celebrated by royalists, who decorated their houses with branches and leaves of oak, so commemorating also the king's escape when he hid in the oak at *Boscobel*.

OAKENGATES. Urban dist. and market town of Shropshire. It is 13 m. from Shrewsbury, and is served by the L.M.S. and G.W. Rlys. It is a coal mining centre. Market day, Sat. Pop. 11,349.

OAKHAM. Market town and co. town of Rutland. It is 94 m. from London on the L.M.S. Rly. The church of All Saints has interesting carved capitals. The banqueting hall of the castle is used for the assizes. Of interest, too, are *Flore's House* (13th and 14th centuries) and the butter cross. The main industries are the manufacture of boots and shoes. Oakham is also a hunting centre. Market days, Mon. and Sat. Pop. 3,327.

Oakham school was founded in 1584 by Rev. Robert Johnson. It is now a public school with accommodation for about 250 boys.

OAKLAND. City of California, U.S.A. A residential city opposite San Francisco, on the E. shore of San Francisco Bay, it has shipbuilding yards, fruit canneries, flour and planing mills, carriage works, and

cotton, iron and steel, and leather manufactures. Pop. 253,700.

OAKS, THE. English horse race. It is run at Epsom on the Friday of Derby week, and the race is for fillies of three years old. The Oaks is the name of a house near Epsom. See Horse Racing.

OAKWORTH. Urban dist. of Yorkshire (W.R.). It is 3 m. S.W. of Keighley, on the L.M.S. Rly. The industries are the manufacture of cotton and worsted goods. Pop. 4,171.

OAMARU. Town and port of South Island, New Zealand. It is 78 m. N. of Dunedin by rly., and exports wool, grain, and frozen meat. Its limestone is useful. Pop. 5,499.

OAR FISH (*Regalecus glesne*). Deep-sea teleostean fish of the family *Trachyteridae*, found in the Atlantic, Mediterranean, and North Sea.

Oar Fish. Specimen of the deep-sea fish called by North Sea fishermen King of the Herrings

The compressed, elongated, and scaleless body may be as much as 20 ft. long, with a small mouth, and a dorsal fin that extends from behind the head to the imperfect tail. The first few rays of this fin

are very long, with dilated tips, forming a conspicuous crest. The name was suggested by the long, slender ventral fins expanded at their extremity.

OATES, LAWRENCE EDWARD GRACE (1880-1912). British explorer. He served in the South African War, 1901-2, where he was severely wounded, and in India and Egypt. He joined the Antarctic Expedition in 1910, and was one of those who accompanied Scott in his final dash for the South Pole. On returning the party was storm-bound, and on March 17, 1912, Oates, crippled by frostbite, went out alone into the blizzard to die rather than be a burden to his starving comrades. See Antarctic Exploration.

L. E. G. Oates, British explorer

That part of South Victoria Land, Antarctica, between King George V Land (q.v.) and Cape Adare, in lat. 70° S. and long. 16° E., is called *Oates Land* after Captain Oates.

OATES, TITUS (1649-1705). British conspirator. Born at Oakham, Rutland, in 1677, he joined the Roman Catholic Church, and went to the English Jesuit College at Valladolid, whence he was expelled. In June, 1678,

Oates was in London concocting details of a Roman Catholic plot. He revealed it to Sir Edmund Godfrey, who was found dead shortly afterwards. For a time Oates was a popular idol. Nearly three dozen people were executed through his machinations. In May, 1684, he was arrested for calling the duke of York a traitor, and after the duke's accession as James II was tried, and sentenced to a heavy fine, to whipping, and to imprisonment for life. He was released after William III came to the throne. He died July 12, 1705.

OATH. In law, an appeal to God to witness the truth of evidence given. In English courts a witness must, before he gives evidence, take an oath that what he is about to say shall be the truth, the whole truth, and nothing but the truth. If any witness does not believe in the oath, or if to take an oath is contrary to

Titus Oates, British conspirator after R. White

his religious belief, he is allowed to affirm, i.e. to make solemn promise that he will speak the truth, etc. The old form of Christian oath was when the swearer placed his right hand on the Holy Evangelists (i.e. the Four Gospels). By the Oaths Act, 1909, the English form is for the witness to take the book in his uplifted hand and repeat the words of the oath. See Affirmation; Perjury.

OATLANDS. Estate near Weybridge, Surrey, England. Here Henry VIII built a magnificent palace, surrounded by a hunting park. The estate came later to the earl of Lincoln, who, about 1720, built another house in the park. This was sold in 1794 to the duke of York, son of George III, who rebuilt the house. In 1857 it became an hotel.

Oats. Heads of Avena sterilis

OATS (*Avena sativa*). Cultivated cereal of the order Gramineae, probably derived from the wild oat (*A. fatua*), which is found throughout Europe, in Siberia, N.W. India, and N. Africa. Cultivated in Europe up to about 70°N., oats are sown usually in spring. The crop is cut before the grains are ripe. An average yield per acre is 40-60 bushels of grain and 30 cwt. of straw. The percentage both of fat and albuminoids is much higher for oats than for wheat. The total world output of oats, excluding Russia, in 1928 was 860 million bushels. See Crops.

Obadiah. Minor prophet. His book in the O.T. predicts the utter ruin of Edom and the coming of the Day of the Lord.

OBAN. Burgh, seaport, and watering place of Argyllshire, Scotland. It is 113 m. from Glasgow, on the L.M.S. and L.N.E. Rlys. It is a tourist centre, and has a splendid harbour, protected by the island of Kerrera. Near is the ruined castle of Dunstaffnage. Pop. 6,344.

Oban. Town and harbour from the south-west

OBELISK (Gr. spit for roasting). Tapering pillar-stone, especially in ancient Egypt. Usually a four-sided monolith of pink scynite, with a base width one-tenth of its height and a copper-sheathed pyramidal apex, it bore incised hieroglyphs upon each face. Obelisks stood in pairs before the temple portals, indicative of sun worship. One remains at Heliopolis (Jeremiah 43); others, once there, are now in New York and London. One of Hatshepsut's at Karnak still stands. The tallest extant, 105½ ft., is in Rome. See Cleopatra; Karnak.

OBERAMMERGAU. Village of Upper Bavaria. It is prettily situated in the valley of the Ammer, 45 m. S.S.W. of Munich, with which it is connected by an electric rly. The village is famous for the Passion Play (q.v.) which was held here periodically since the

Oberammergau, Bavaria. Stage and Crucifixion scene of the Passion Play

middle of the 17th century until 1910. Owing to the Great War it was not given again until 1922. The affairs of the village are controlled by a burghmaster and council elected by the householders. The inhabitants are mostly peasants and carvers in wood. On a knoll behind the village rises The Group of the Crucifixion, presented by Louis II in memory of his visit in 1871. Nearby is the Benedictine monastery of Ettal, founded in 1330, dissolved in 1803, and rebuilt after a fire in 1844. Situated on the old trade route between Venice and Augsburg, Oberammergau was once of considerable importance. Pop. 2,281.

OBBERON. King of the Fairies. As Auberon he appears in the Charnelagne romance of Huon of Bordeaux, and as the dwarf, Alberich, of the Nibelungenlied, long before he was re-created by Shakespeare in A Midsummer Night's Dream.

OBLATES (Lat. oblatum, offered, part. of offerre, to offer). Word used in various monastic senses. Originally oblates were children brought to the monastery by their parents and dedicated to the religious life. Later they were lay brothers; still later, associate members who observed a simple rule of life, and devoted themselves and their fortunes to the service of the community. In the Roman Catholic Church the title oblates has been assumed by congregations of priests devoted to preaching, conducting missions, and education.

Oboe. Italian name for the double reed musical instrument, the hautboy (q.v.).

OBOLUS. Ancient Greek silver coin alloyed with copper. It was equal to about 1½d. in English money, and six obols made a drachma (q.v.).

O'BREGON, ALVARO (1880-1928). Mexican president. Born in Sonora, he became a prosperous agriculturist with advanced ideas and marked sympathy with the Indians. In command of the constitutionalist army, he won several battles, and entered Mexico City, Aug. 15, 1914. He carried out successful campaigns against Villa in 1915, and took part in the negotiations with the U.S. government in 1916. Obregon was elected president in Sept., 1920, and he remained in office until 1924, when Calles became president for four years. Obregon was chosen to succeed him, but was murdered, July 17, 1928.

Alvaro Obregon, Mexican president

O'BRIEN, WILLIAM (1852-1928). Irish journalist and politician. Born Oct. 2, 1852, in 1880 he founded United Ireland, a paper of advanced Nationalist views. In 1883 he was elected M.P., and for the next 12 years was a

leading member of the Nationalist party. In 1903 he came forward as an advocate of conciliation and toleration and founded the All for Ireland League. From 1910 to 1918 he was M.P. for Cork City. He died Feb. 25, 1928.

O'BRIEN, WILLIAM SMITH (1803-64). Irish leader. Born Oct. 17, 1803, son of Sir Edward O'Brien, a landowner of co. Clare, he became M.P. for Ennis in 1828, and represented the county of Limerick 1835-48. In

1843 he joined O'Connell's association for the repeal of the Union. When the Habeas Corpus Act was suspended in Ireland in 1848, O'Brien led an armed rising. He was tried and sentenced to death, but the penalty was commuted to transportation to Tasmania. Released in 1854, he died June 18, 1864.

W. S. O'Brien, Irish leader

OBSERVATORY. Building constructed for the purpose of making astronomical, meteorological, or other kindred scientific observations. Astronomical observatories were founded in China in very early times, and one was built at Alexandria about 200 B.C.

The Lick Observatory is built in the pure, dry atmosphere of Mt. Hamilton, at an alt. of 4,250 ft. The Boyden Observatory is established at Arequipa, Peru, at an alt. of 8,060 ft. The Lowell Observatory was established in 1894 at Flagstaff, Arizona, at a height of 7,000 ft. The Carnegie Solar Observatory was built in 1905 on Mt. Wilson, California. The Royal Observatory at Greenwich was founded in 1675. The observatories at Edinburgh and Cape Town are also royal observatories. There are also astronomical observatories at Armagh, Cambridge, Ottawa, Oxford, Johannesburg, and elsewhere.

In Great Britain there are important meteorological observatories at Kew, Greenwich, Falmouth, Oxford, Stonyhurst, Glasgow, and Manchester. See Astronomy; Lick; Meteorology; Telescope.

OBSERVER. Official term in use in the Royal Air Force to denote any member of the crew of an aircraft whose duties are distinct from those of the pilot, and who is charged generally with making aerial observations. They receive a thorough training.

OBSIDIAN. Volcanic vitreous rock consisting of a combination of silica, aluminium, calcium, iron, potassium, and sodium. The mineral, which resembles dark glass, is extremely hard and brittle, and is usually black or dark grey, although occasionally brown or green. It is found in most volcanic regions.

OBSTETRICS (Lat. obstetrix, midwife). Branch of medicine dealing with the care of women during pregnancy, labour, and the puerperium. Of recent years a great advance has been made in obstetrics, particularly with regard to ante-natal supervision and treatment, with the result that many serious complications liable to arise in the later months have been eliminated. The use of chloroform and the practice of aseptic methods have robbed childbirth of most of its discomforts and many of its dangers. The British College of Obstetricians and Gynaecologists was founded in 1929.

O'CASEY, SEAN (b. 1890). Irish dramatist. Born in Dublin, he became a builder, wrote essays on labour questions, short stories, and political ballads, and then came into prominence as the writer of a play called The Shadow

William O'Brien, Irish journalist

of a Gunman. Of its successors Juno and the Paycock was awarded the Hawthornden prize in 1926. It was followed by The Plough and the Stars and The Silver Tassie.

OCEANOGRAPHY. Science which deals with the form of the ocean floor, the nature of the sediments covering it, and the composition, temperature, and movements of the contained waters.

The primary feature of the earth's relief is the existence of depressions, the ocean basins, and of elevations, the continental platforms. But the latter do not, in their entirety, form land areas, for their margins tend to be submerged, producing the so-called continental shelves. The width of the shelf varies in different parts of the world; broadly speaking however, 50 m. marks the limit of breadth.

In most cases the ocean floor over vast areas seems to be an almost regular plain, but in places, especially in the Pacific Ocean, there are depressions, known as deeps, which sink very notably below the general level. A deep is defined as an area in which the depth exceeds 3,000 fathoms. Elsewhere, especially in the Atlantic, great swells rise from the ocean floor, forming areas of relatively shallow water. Such elevations are called rises, and are defined as areas in which the depth is 2,000 fathoms or less.

Active volcanoes often occur on the ocean floors. Since volcanoes, whether on land or in the sea, are associated with earth movements, the present oceans must be regarded as areas of subsidence, due to the collapse of earth blocks, while the present continents are areas which have either been left standing when other parts collapsed, or have been directly uplifted. See Atlantic; Pacific, etc.

OCEANIA. Collective name for the groups of islands in the South Seas, or S. and central Pacific Ocean. Physically, Oceania includes five groups of islands. The most important is the Australian festoon which stretches from New Guinea to Macquarie Island and includes the Papuan Islands and New Caledonia. Fiji and Samoa are in another group, while a third forms a link between Japan and the E. Indies. The islands are also loosely grouped in relation to their inhabitants into Melanesia, Micronesia, and Polynesia (q.v.). Oceania is divided among Britain, France, Japan, Chile, and the U.S.A.

OCEANUS. In Greek mythology, the god of the ocean, the father of all things. The name was also given to the river supposed to encircle the whole earth, which was regarded as being flat.

OCELOT (*Felis pardus*). Species of wild cat occurring in tropical America. It has tawny fur, beautifully marked, and is usually nearly 3 ft. long. It spends its time in trees, and preys upon birds and small mammals. Ocelot is the Europeanised form of the Mexican name for jaguar. Pron. Ō-selo.

OCHIL HILLS.

Range of hills in Scotland, principally in Perthshire, but also occupying parts of the cos. of Clackmannan, Kinross, and Fife. They trend 25 m. N.E. from Bridge of Allan, in Stirlingshire, to the Firth of Tay, and enclose valleys and glens of great beauty. The highest summit is Ben Cleuch (2,363 ft.).

OCHRE. Mineral paint consisting chiefly of hydrated iron oxide. From red to yellow in colour, it is a clay, and the variation in colour depends largely on the proportion of iron oxide present. For commercial purposes the ochre is dried, ground, and mixed with oil. Calcination produces a deeper tone. Many ochres are now artificially prepared.

O'CONNELL, DANIEL (1775-1847). Irish leader, known as the Liberator. Born near Cahirciveen, co. Kerry, Aug. 6, 1775, he was called to the Irish bar in 1793. Starting in 1803 on his long struggle for Catholic emancipation, by 1808 he had become the virtual leader of the movement in Ireland. In 1823 he founded the Catholic Association.

Daniel O'Connell,
Irish leader
After T. Carriek

O'Connell's election as M.P. for co. Clare, 1828, and his refusal to take the oath, had their influence in the passage of the Catholic Relief Bill, 1829, and, re-elected unopposed, he took his seat in Feb., 1830. Before long he started his struggle for the

repeal of the legislative union, and came to a working arrangement with the Whigs in 1835. The Repeal Association was founded in 1840. The Nation newspaper in 1842, and in 1843 came O'Connell's famous monster meetings all over Ireland. A great gathering fixed for Clontarf was proclaimed, and O'Connell was arrested and tried for sedition. He was fined £2,000 and sentenced to one year's imprisonment, but the sentence was reversed by the House of Lords, 1844. O'Connell died in Genoa, May 15, 1847. See Catholic Emancipation; Ireland.

O'CONNOR, THOMAS POWER (1848-1929). Irish journalist and politician. Born at Athlone, Ireland, Oct. 5, 1848, he became a reporter on Saunders's Newsletter, Dublin, in 1867. He joined the staff of The Daily Telegraph in 1870, and founded and edited The Star, The Sun, The Weekly Sun, M.A.P., T.P.'s Weekly, and other journals. In 1880 he was elected Nationalist M.P. for Galway. He was returned for the Scotland div. of Liverpool in 1885, and represented that constituency until his death. President of the United Irish League of Great Britain from 1896, he became chairman of the censorship board of British film makers in 1917. He was made a privy councillor in 1924, and died Nov. 18, 1929. In 1928 he published his memoirs.

T. P. O'Connor,
Irish journalist
Russell

OCTAVIA (d. 11 B.C.). Sister of Octavian, afterwards the Roman emperor Augustus, and wife, first of C. Marcellus, by whom she was the mother of

Marcus Marcellus, and secondly of Antony, the triumvir. The desertion of Octavia by Antony for Cleopatra was an important factor in causing the war between Octavian and Antony. See Mark Antony.

OCTOPUS. Genus of cephalopod molluscs. There are many species, the common octopus (*O. vulgaris*) occurring round the S. British coasts. It has a rounded hag-like

body, with a large head bearing eight long arms or tentacles thickly studded with suckers. By discharging sepia from its ink bag it can discolour the surrounding water. The month is provided with a horny beak resembling that of a parrot. The round eyes are prominent and staring. The octopus lurks in holes in the rocks and crawls on the sea bottom in search of crustaceans, its chief food. See Cuttle.

ODENATHUS. Prince of Palmyra. After the defeat of the army of the Roman emperor Valerian by the Persians, he organized a successful resistance, and in a series of campaigns from 262 to 264 restored Mesopotamia to Rome, and carried his arms as far as Ctesiphon. After his death by assassination, his widow, Zenobia, reigned as queen.

ODENSE (Odins-ø, i.e. Odin's Island). City of Denmark, capital of Fünen. Near the mouth of the river Odense, and connected

with Odense Fjord by a ship canal, it has a good harbour. The cathedral of S. Knud, founded 1086, is one of the finest Gothic buildings in Denmark; the church of Our Lady dates from the 13th century. Odense was the birthplace of Hans Andersen, whose house has been converted into a museum. Pop. 52,376. See Andersen, H. C.

ODER. River of Central Europe. It rises in Czechoslovakia, and flows to the Baltic Sea at the Stettiner Haff. It has been canalised to a depth of at least 5 ft. for 480 m. to Ratibor, although boats of 400 tons stop at Kosel, the river port for the mining region of Upper Silesia. The chief tributary is the Warta (Warthe), with its affluent the Netze. There are canal connexions to the Elbe and the Vistula. Its length is 550 m. The river is controlled by an international commission.

Octopus vulgaris, showing suckers on arms

Odessa, Russia. Richelieu stairs descending from the Nicholas Boulevard to the harbour

ODESSA. City and seaport of the republic of the Ukraine. It is 25 m. N. of the mouth of the Dneister, 90 m. S.W. of Kherson. Cut off from communication with the Allies when Turkey closed the Dardanelles, in 1914, Odessa was bombarded by the Turkish fleet on several occasions. It was occupied from the land side by the Germans on March 12, 1918, and was taken by the Bolsheviks in 1920. Soviet Russia made it an open port. Pop. 411,416. See Russia.

ODIN. In Norse mythology, the greatest of the gods. He is the Anglo-Saxon Woden and German Wotan. Contrasted with the rough peasants' god Thor, he was worshipped specially by the noble families, many of whom claimed descent from him, and was a patron of culture, inventor of runes, and god of wisdom, poetry, magic, and prophecy. As a war god Odin was lord of the Valkyries, and those who fell in battle, regarded as sacrificed to him, were received by him into Valhalla.

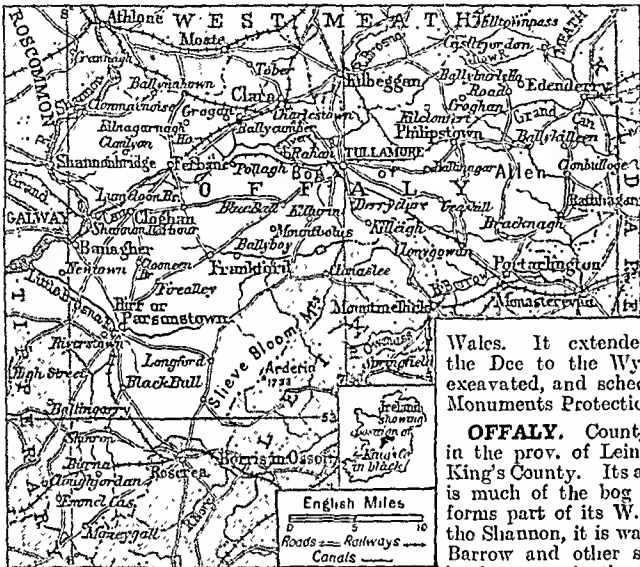

Ocelot. Specimen of the American species of wild cat
W. S. Berridge, F.Z.S.

ODOACER, ODOVAKAR OR OTTOGAR (c. 435-493). German soldier. He entered the Roman army and became one of the imperial bodyguard. He overthrew the emperor Romulus Augustulus, and became ruler of the West, nominally as a representative of Zeno, emperor of the East. Zeno, jealous of his success, persuaded Theodoric the Ostrogoth to attack him. Odoacer was besieged in Ravenna for three years, was forced to capitulate, and later was treacherously slain.

Odonata. Order of insects including the net-winged insects such as dragon flies. See Dragon Fly; Insect.

ODONTOGLOSSUM. Large genus of orchids of the order Orchidaceae, natives of tropical America. They have pseudo-bulbs and sword-shaped, more or less leathery leaves. The large, showy flowers are in handsome sprays. They are distinguished by the column being long and narrow, and by the base of the lip being parallel with the face of the column. See Orchid.

Offaly. Map of the inalaad county of the Irish Free State, in the province of Lelaster

ODYSSEUS. Greek form of the name of the hero called in Latin Ulixes and later Ulysses. In Greek legend, he was king of Ithaca, one of the leading heroes on the Greek side in the Trojan war, and the type of a resourceful and versatile leader. His wanderings after the fall of Troy are the theme of the *Odyssey*, an epic poem in 24 books, reputed to be by Homer. After relating his many surprising adventures, the poem ends with his return to Ithaca. Here he found that his wife Penelopé had been plagued by suitors. Disguised as a beggar, he made his way to the palace. Penelopé, apprised of his return, agreed to give her hand to the suitor who could bend the great bow of Odysseus. He alone succeeded, and then turned its arrows upon the suitors. He was unwittingly slain by Telegonus, his son by Circe. See Homer.

OEDIPUS (Gr. swollen foot). In Greek legend, son of Laius, king of Thebes, and Jocasta. An oracle having declared that Laius would perish at the hands of a son born of Jocasta, Oedipus, at birth, was exposed on the mountains with his feet pierced. There he was found by shepherds. Grown to manhood, Oedipus happened to meet Laius, and killed him without suspecting his identity.

Oedipus delivered Thebes from the Sphinx, and as reward received his own mother in marriage. A plague then ravaged the land, and an oracle having declared that this would

continue until the slayer of Laius was found, Oedipus set himself to discover the murderer, and learnt the truth from the prophet Tiresias. Jocasta hanged herself, and Oedipus put out his own eyes.

Oenone. In Greek legend, a nymph of Mt. Ida and wife of Paris, who deserted her for Helen. See Helen; Paris.

OERSTED, HANS CHRISTIAN (1777-1851). Danish physicist. Born at Rudkjöbing, Langland, and educated at Copenhagen, he won a travelling scholarship and visited Holland and Germany and Paris. In 1819 he made the discovery that a magnetic needle was deflected by a current in a wire passing below or over it, the initial discovery in electro-magnetism. He died March 9, 1851. See Electricity.

OFFA (d. 796). King of Mercia. A member of the royal

OFFSET. In printing, a method of transferring an image or design from the surface upon which it is impressed to a rubber sheet or cylinder, this becoming the printing surface, which in turn transfers the image to the paper. Decorations on tin boxes are produced in this way, and the tin-plate printing process was the pioneer of the modern use of offset printing, which is specially adaptable for rough papers. See Lithography.

OGAM OR OGHAM. System of writing employed in early Britain and Ireland. The alphabet comprised 21 characters, composed of straight incised lines or notches on one side of or across a stem line (see above). Perhaps invented

at the end of the Roman occupation, ogam-writing continued in use until the 10th century. Of the 300 examples known, about 30 are from E. Scotland, Orkney, Shetland, and Man, and an equal number from Wales, Devon, and Cornwall. The remainder were found in Ireland. The key to their decipherment was furnished by the 14th century MS. Book of Ballymote.

OGLETHORPE, JAMES EDWARD (1696-1785). English soldier and philanthropist. Born Dec. 21, 1696, he served under Prince

James E. Oglethorpe, English soldier

Eugene, and entered parliament in 1722. He did much to alleviate the sufferings of debtor prisoners, formed an association for the establishment in America of a colony of released debtors, and in 1733 founded Georgia, acting as governor there for 13 years. In 1745 he was sent against the Scottish rebels,

but was court-martialled on a charge of Jacobite sympathies, and though acquitted he resigned. He died July 1, 1785. See Georgia.

OGMORE. Dist. of Glamorganshire, part of the urban dist. of Ogmores and Garw. It is 9 m. from Bridgend, on the G.W. Rly., and is a coal-mining centre. Ogmores-by-the-Sea is 3 m. from Bridgend. Here are remains of a castle. Pop. urban dist., 32,120.

Oggu. Short name of a Soviet political department. Its work is to combat counter-revolution and espionage. See Cheka.

O'HIGGINS, AMBROSIO (c. 1720-1801). S. American administrator and soldier. Born in Ireland, he was despatched to S. America, and made his way across the Andes to Chile and then to Lima, where he kept a stall and trafficked in mules. Driven thence by the Inquisition, he returned to Santiago, where he obtained a government contract to build rest-houses on the mountain roads. In 1770 O'Higgins suppressed a rising of the Araucanian Indians, but he won their goodwill after peace was concluded. He was made intendent of Concepción in 1786, and two years later captain-governor of Chile. Promoted viceroy of Peru in 1796, he thus became the king of Spain's representative in S. America. He died Feb. 18, 1801.

Ambrosio O'Higgins, S. American administrator

His son, Bernardo O'Higgins (1778-1842), participated in the movement in Chile for independence. In 1813 he was made commander-in-chief, and in 1817 dictator of the country, in which capacity he formally declared its independence of Spain in 1818. He resigned in 1823, and died Oct. 24, 1842.

Jacques Offenbach, French composer

OFFALY. County of the Irish Free State, in the prov. of Leinster, formerly known as King's County. Its area is 773 sq. m. Herein is much of the bog of Allen. The Shannon forms part of its W. boundary. Apart from the Shannon, it is watered by the Brosna, the Barrow and other streams. The surface is level, except in the S., where are the Slieve Bloom Mts. The G.S. Rlys and the Grand Canal afford transport. Tullamore is the county town; other places are Birr (Parsonstown), Clara, Philipstown, Banagher, and Edenderry. In early times the county formed part of the kingdom of Offaly. Pop. 52,592.

OFFENBACH, JACQUES (1819-80). French composer. Of Jewish family, he was born at Cologne, June 21, 1819. His musical gifts led him to become a student in Paris, and after some preliminary experience he was made conductor at the Théâtre Français. Soon he began to compose, and in 1853 his *Pépito* was produced. His great successes were made in operettas of the type known as opera bouffe. In all he wrote over 70, the best known including *Madame Favart* and *Geneviève de Brabant*. Offenbach died Oct. 5, 1880.

Jacques Offenbach, French composer

OFFICIAL RECEIVER. Public official who manages the affairs of bankrupts, taking over their property, realizing the assets, and distributing the money to the creditors. England and Wales are divided into bankruptcy districts, each with a receiver appointed by the board of trade, while others are attached to the bankruptcy department of the high court of justice in London. See Bankruptcy.

OHIO. River of the U.S.A., a tributary of the Mississippi. It is formed by the union of the Monongahela and the Allegheny rivers at Pittsburg. It flows generally S.W. for 975 m., and joins the Mississippi at Cairo. The Ohio, except for a short distance at Louisville, where there is a canal, is navigable throughout its length.

OHIO. North-central state of the U.S.A. Its area is 41,040 sq. m. The Maumee, flowing into Lake Erie, is the chief northern river; the S. part of the state is watered by many affluents of the Ohio. The state produces maize, wheat, and oats, besides tobacco, hay, potatoes, fruit, etc.; stock-raising is a valuable interest. Coal, natural gas, petroleum, limestone, and other minerals are obtained. Columbus is the capital and Cleveland and Cincinnati the largest cities. The rly. mileage is 8,881. Pop. 6,826,000.

OHM. Unit of electrical resistance. The resistance of a circuit is 1 ohm when a pressure of 1 volt is required to cause a current-flow of 1 ampere. A megohm is equal to 1,000,000 ohms, and a microhm is one millionth of an ohm. An ohmmeter is an apparatus for measuring the electrical resistance of a conductor in ohms or megohms. See Mho.

OHM'S LAW. In electricity, a law first investigated by a German physicist, G. S. Ohm (1787-1854), who stated the law that in any given circuit the ratio of the electromotive force (E.M.F.) producing a current to the current produced depends on the resistance of the circuit. See Current; Electricity.

OICH, Loch. Lake of Inverness-shire, Scotland. It is 4 m. long and about ½ m. broad, and is the summit level (105 ft.) of the Caledonian Canal. The Glengarry flows into the loch, which is drained by the river Oich into Loch Ness at Fort Augustus. Trout and salmon are plentiful in its waters.

OIL. Oils may be divided into three groups: mineral oils (dealt with in the article on Petroleum) and those natural substances present in animal and vegetable organisms. Animal and vegetable oils form a homogeneous group, those which are solid above 68° F. being called fats, the remainder being liquid fats, or oils. They are neutral bodies with an unctuous feel and are tasteless and odourless.

These fatty or fixed oils differ from essential oils and volatile mineral oils in not being volatile without decomposition. They are essential for human food, are of great importance as medicines and unguents, and furnish raw materials for soaps, candles, burning oils, lubricants, paints, varnishes, leather-dressing, linoleum manufacture, and the like.

The extraction of oils is effected in three ways. Rendering, chiefly applied to animal fats, consists in heating the sodden material, with or without an acid, in open kettles or closed autoclaves. Pressure is chiefly applied to oil seeds and nuts, which are crushed and ground to meal. Cold-pressed or cold-drawn oils are pale, and furnish the salad and virgin oils of commerce. Hot pressing may follow, and the residual meal-cake makes cattle food. The highest possible oil yield is attained by employing hot or cold solvents. Further processes include filtering, refining, bleaching, and deodorising. See Petroleum.

OILCLOTH. Name given to a type of floor covering. It consists of coarse canvas coated on both sides with a thick oil paint. The quality of the oilcloth depends chiefly upon the number of separate coats of paint applied. See Linoleum.

OIL ENGINE. Type of internal combustion engine. The term is chiefly used for those engines which burn heavy oil. All heavy oil engines work on principles similar to those described under internal combustion engine, the chief difference being in the methods necessary to vaporise the oil before an explosive mixture can be formed in the cylinder. See Diesel Engine; Internal Combustion Engine; Locomotive.

OIL PALM (*Elais guineensis*). Tree of the order Palmae, native of W. Africa. It grows to a height of about 30 ft., and bears a crown of feather-like leaves, 15 ft. long. The male and female flowers are borne usually by separate trees. The bright red fruits form large oval heads. The oil is obtained by boiling the fruits in water and skimming the orange-red butter-like fat off the surface. The seed also yields oil. Palm oil is used as a lubricant and also in the making of margarine and soap.

OISE. River of France. Rising near Chimay, in the Ardennes, it enters France, and after flowing past Guise receives the Serre and the Ailette. Near Compiègne the Aisne flows into it. It falls into the Seine, 40 m. below Paris, after a course of 186 m. For about 60 m. the river is canalised and linked up by canals with the waterways of Belgium and N. France. It figured prominently in the Great War.

OKAPI (*Oeapia johnstoni*). Ruminant mammal related to the giraffe. It is about as large as a mule, and the general colour is blackish brown, with yellow legs striped horizontally with black. The neck is long in proportion to the body, and the head is giraffe-like, with large, up-standing ears. The okapi lives in the densest parts of the Central African forests.

OKAYAMA. Town of Japan, in Honshu. Situated 240 m. by rly. from Shimonoseki, it stands on a wide alluvial plain in the lower course of the Asahi river, 7 m. from its mouth. Branch rlys. run to Uno, Tatoi, and Tsuyama, the Uno line connecting with Shikoku. The park, one of the most beautiful in the country, extends over 22 acres. Cotton and silk yarns, cotton goods, and rice are the chief products. Pop. 124,521.

OKEHAMPTON. Borough and market town of Devonshire. On the N.W. edge of Dartmoor, where the rivers East and West Okement meet, it is 26 m. from Exeter by the Southern Rly. There are the remains of a 15th-century castle. Outside the town are artillery ranges. Market day, Sat. Pop. 3,456.

OKLAHOMA. State of U.S.A. It lies between Texas and Kansas, E. of Arkansas. Part of the basin of the Mississippi, it is a rolling plain. Much of the state is arid, and the rivers, of which the chief are the Arkansas, Cimarron, Canadian, and Red, are frequently dry during hot summers.

Maize, wheat, oats, cotton, and potatoes are the principal crops; horses, cattle, and sheep are reared; petroleum, coal, natural gas, lead, and zinc are the chief minerals. Part of their territory was ceded by the Indians to the U.S.A. in 1866. Oklahoma Territory was created as an administrative unit in 1890, and with Indian Territory became

a state in 1907. The area of Oklahoma is 70,057 sq. m. Pop. 2,426,000.

OKLAHOMA, City of Oklahoma, U.S.A., the state capital. It stands on the North Fork of the Canadian river, 31 m. S.S.W. of Guthrie, and is served by the Missouri, Kansas, and Texas, and other rlys. A trade in cattle, fruit, cereals, cotton, and oil is carried on, and there are some manufactures. Pop. 91,295.

OLAF. Name of five kings of Norway. The most famous was Olaf II, who became king in 1015 after spending some time in England. He became a Christian, and his desire to make his people Christians led to trouble. A league formed against him was joined by the king of Denmark, and in 1028 Olaf fled to Russia. On July 29, 1030, he was killed in battle. In 1164 he was canonised, and he is regarded as the patron saint of Norway. Olaf is the name of the crown prince of Norway, the only son of King Haakon VII. Born July 2, 1903, he was married in March, 1929, to Marthe, princess of Sweden. A daughter was born to them in 1930.

Oil Palm. Crown of feather-like foliage. Inset, part of fruit head.

OLD AGE PENSIONS. Grant made to aged persons by the state. In Britain, the first act authorising the scheme was passed in 1908, and since then others have been passed, notably those of 1924, which dealt with sources of income, and of 1925, giving pensions to widows and orphans, and also to insured persons over 65. Old age pensions are paid to all persons at the age of 70 subject to income qualifications, to certain persons and their wives at the age of 65 as insured workers, and to blind persons at the age of 50.

To qualify for a pension the recipient must be a British subject of at least 10 years' standing. If a natural-born British subject, he or she must have been a resident in the U.K. for 12 years since attaining the age of 50. If not natural born he or she must have been resident for 20 years in the aggregate. To qualify for the maximum pension of 10s. a week, the applicant's means from all sources must not exceed £26 5s. a year. A married couple living together who are qualified can receive 10s. a week each. As the means increase in scale the pension diminishes. To obtain a pension the applicant should apply at a post office for a form of application. The applicant's claim and the amount payable rest with the local Pensions Committee.

In 1930 the scales of pensions in relation to income were:

Pension	Income
10s. per week.	does not exceed £26 5s.
8s. "	is between £26 5s. and £31 10s.
6s. "	" £31 10s. and £36 15s.
4s. "	" £36 15s. and £42
2s. "	" £42 and £47 5s.
1s. "	" £47 5s. and £49 17s. 6d.

On Mar. 31, 1928, there were in England, Wales, and Scotland 995,978 pensioners, of whom 328,077 were men and 667,901 women. Since 1922 the Irish Free State has been responsible for its own pensions.

Pensions are also paid in Australia and New Zealand, and Germany, France, and Denmark have each a pension system. See Health Insurance; Pensions; Unemployment; Widow.

OLD BAILEY. London thoroughfare. It runs S. from Newgate Street to Ludgate Hill, E.C. At its N.E. corner is the Central Criminal Court (q.v.) on land occupied by old Newgate prison, opposite which were set up the pillory, whipping post, and gallows. There was a prison here in the 12th century.

Okapi. Specimen of the Central African ruminant

OLDBURY. Urban dist. and market town of Worcestershire. It is 5 m. from Birmingham, with a station on the L.M.S. Rly., and is on the Birmingham canal. Standing on the coalfield of the Black Country, its industries include steel works iron foundries, and the manufacture of nails, tools, chemicals, etc. Market day, Tues. Pop. 36,902.

OLDCASTLE, SIR JOHN (d. 1417). English Lollard, known also as Lord Cobham. In 1409 he married Lady Cobham, of Cooling, Rochester, and was summoned to Parliament as a baron. He was high in the favour of Henry, prince of Wales, afterwards Henry V, but in 1413 was charged and arrested for heresy, tried, and sentenced to death. Escaping from the Tower, he was engaged in a Lollard conspiracy which nearly brought about a rebellion. Captured, he was taken to London, and hanged Dec. 14, 1417.

OLD CATHOLICS. Roman Catholic congregations, separated from the Church of Rome mainly on the question of papal infallibility. The movement originated in a conference at Munich in 1863 under the presidency of Dr. Döllinger. In 1873 Dr. Reinkens was consecrated the first bishop of Deventer, according to the Roman rite. They are chiefly found in Germany and the Netherlands. See Jansenism; Papacy.

OLDENBURG. Free state of Germany. It consists of three portions, Oldenburg, Birkenfeld, and Lüneburg, and its total area is 2,480 sq. m. Oldenburg is the capital; other places are Varel and Delmenhorst. Birkenfeld and Eutin are the capitals of the two smaller parts of the republic. The republic is governed by a landtag of 48 members, elected for three years. Pop. 545,172.

In 1871 Oldenburg joined the new German empire, and in Nov., 1918, the grand duke abdicated and the state became one of the German republics. See Birkenfeld.

OLDFIELD, ANNE OR NANCE (1683-1730). English actress. Introduced to the stage by Farquhar and Vanbrugh, she first attracted attention at Drury Lane by her creation of two comedy rôles, Lady Betty Modish in Colley Cibber's *Careless Husband*, and Biddy Tipkin in Steele's *Tender Husband*. She played original parts in Addison's *Cato*. She died Oct. 23, 1730.

Anne Oldfield,
English actress

OLDHAM. County borough of Lancashire. It stands on the Mersey, 6 m. from Manchester, with stations on the L.M.S. and N.E. Rlys. It is also served by a canal. The buildings include the parish church, town hall, art gallery and museum. Among the schools is the Hulme Grammar School. Alexandra Park is a recreation ground. The town is a centre of the cotton manufacture, specially the spinning branch. Machinery, cloths, silks, satens, and other textiles are made. Around are coal mines. The Oldham Vales are a feature. Market days, Mon. and at. Pop. 144,983.

OLDHILL. District of Staffordshire. It is 3 m. from Dudley, on the G.W. and L.M.S. Rlys. It stands on a coalfield and is in the Birmingham area. The chief industry is the manufacture of hardware.

OLD RED SANDSTONE. Series of Palaeozoic rocks lying below the carboniferous strata. They are named from their commonest constituent, red sandstone, but the series also contains grey, yellow, and green sandstones, and limestones and clay beds. The rocks of the group are of immense thickness, and are called Old to distinguish them from similar deposits of a later geological

period. The series is found in Scotland, Wales, Ireland, Russia, Scandinavia, and N. America. See Devonian; Geology; Triassic.

OLD TESTAMENT. Name given to the collection of books which form the first part of the Bible and give an account of the history and religion of the Jewish people.

There are three well-defined stages in the growth of the O.T. (1) The earliest canon, which was formed about 440 B.C., contained the Pentateuch, or rather the Hexateuch—for the book of Joshua was included. It contains the Law of God, on which the whole national life was centred. (2) About 200 years later the first edition of the O.T. was expanded by the addition of the prophetic writings, among which were included the historical books known as Samuel and Kings. (3) During the last two centuries B.C. various other additions were made, known as "the writings," including Job, The Psalter, the Minor Prophets, Proverbs, Ecclesiastes, Chronicles, etc. The process of enlarging the canon was continued in Alexandria, where a fourth addition was made, consisting of the books now in the Apocrypha (q.v.). This addition is recognized as canonical by Roman Catholics, but not by Protestants. See Bible; Hexateuch; and the articles on the books and characters.

Oleander. Flower
and leaf of the
evergreen shrub

OLEASTER (Elaeagnus). Genus of shrubs of the order Elaeagnaceae, natives of Europe, Asia, and N. America. The shrubs range in height from 5 to 20 ft., and thrive in any ordinary soil, especially in S. or W. positions. The flowers are yellow, white, and occasionally green in colour.

OLEIN or **TRIOLEIN.** Name given to the glyceride of oleic acid, and to any liquid oil obtained from fats by pressure. Olein is a colourless oily liquid, and can be prepared by heating glycerin with oleic acid. It is made on a large scale for the manufacture of margarine.

OLIBANUM TREE (*Boswellia serrata*). Small evergreen tree of the order Burseraceae, native of the East Indies. Its leaves are divided into two rows of oval-oblong leaflets with saw-toothed edges. The small white flowers are borne in sprays. From the bark exudes a resinous gum, olibanum, said to be the frankincense of the ancients. Olibanum is astringent and stimulant, but is chiefly employed as incense.

Olibanum Tree. Foliage
and fruit of the East Indian tree

OLIGOCENE SYSTEM. Subdivision of the Tertiary period of time, the epoch which followed the Eocene and preceded the Miocene. Oligocene rocks are found in wide areas in Central and S. Europe, and in the Isle of Wight and Hampshire. See Eocene; Miocene.

OLIPHANT, LAURENCE (1829-88). British author. He was born at Cape Town, a son of the attorney general of Cape Colony. In 1853

Laurence Oliphant,
British author

he became private secretary to the earl of Elgin, governor-general of Canada, and took part in the negotiations leading up to the reciprocity treaty with the United States. In 1867 he fell under the influence of Thomas Lake Harris, and for a short time joined his religious community at Brocton, N.Y. Oliphant afterwards acted as correspondent for *The Times* in the Franco-Prussian War, and interested himself in a scheme for settling the Jews in Palestine. He died Dec. 23, 1888.

OLIPHANT, MARGARET OLIPHANT (1828-97). British author. Born April 4, 1828, she made her reputation with her first book, *Passages in the Life of Mrs. Margaret Maitland*, 1849, and thereafter produced more than a hundred books, remarkable for their high level of merit and unflagging freshness. Among her best-known novels are *Calch Field*, 1851; *Lilliesleaf*, 1855; *Zaidee*, 1856; *Salem Chapel*, 1863; *The Rector and the Doctor's Family*, 1863; *The Minister's Wife*, 1869; *The Wizard's Son*, 1884; and *Kirsteen*, 1890. She also wrote historical works and popular biographies of Edward Irving, 1862, and S. Francis of Assisi, 1871. Mrs. Oliphant died at Windsor, June 25, 1897.

M. O. Oliphant,
British author

OLIVE (*Olea europaea*). Small evergreen tree of the order Oleaceae, native of the Mediterranean region. It attains a height of

Olive, a South European tree;
spray of foliage

about 20 ft., has almost four-sided spiny branches and opposite oblong leaves. The small, white, funnel-shaped, fragrant flowers are produced in panicles, and the fruit is a small plum. This is the wild form. Pickled olives and olive

oil are the produce of the cultivated variety, *sativa*. It differs from the wild form in the branches being less square, without spines, the leaves more lance-shaped, and the fruit larger and more fleshy. Much of the "olive oil" of commerce is adulterated with other vegetable oils.

OLIVES, MOUNT OF, OR OLIVET. Mt. about 2,700 ft. high, E. of Jerusalem, from which it is separated by the valley of the Kidron. Its chief associations are with the life of Christ. On the brow of the mountain He wept over Jerusalem; and from its summit He ascended into heaven. See Bethany.

The Olivetans are a branch of the Benedictine Order, known as the Congregation of Our Lady of Mount Olivet. It was founded in 1313 at Siena by Giovanni de' Tolomei, who became their first abbot-general in 1319.

OLIVINE. In mineralogy (q.v.), a ferrous and magnesian orthosilicate. So called from its usual olive-green colour, the mineral is a common constituent of igneous rocks, especially basalts, and is often found in meteoric stones. Cut and polished, it is used as a gem stone under the names of chrysolite and peridot. Olivine easily weathers into serpentine.

OLLERTON. Parish of Nottinghamshire. It stands on the river Maun, 9 m. N.E. of Mansfield, and has a station on the L.N.E.R. It is a centre for visitors to Sherwood Forest and the Dukeries (q.v.). Pop. 676.

OLNEY. Market town of Buckinghamshire. It stands on the Ouse, 11 m. from Bedford and 59 m. from London on the L.M.S. Rly. Its large and beautiful church of S. Peter and S. Paul is a fine example of the Decorated style. Olney is known for its associations with William Cowper and John Newton. Cowper's house in the market place is now a museum housing relics of both men. Olney was once a centre of the lace industry. Market day, Thurs. Pop. 2,651.

OLSSON, JULIUS (b. 1864). British artist. Born in London, he specialised as a marine painter. His pictures of the Cornish coast and the open sea are marked by skilful blending of colours in reproducing the play of light on water. Elected A.R.A., 1914, he became R.A. in 1920, and president of the Royal Institute of Oil Painters and medallist of the Paris Salon.

OLYMPIA. Small plain in the Peloponnese, Greece, in ancient times the scene of the Olympic Games (q.v.).

A London place of entertainment is also called Olympia. Situated near Addison Road station, in the bor. of Hammersmith, it was opened in 1886 for agricultural shows, but has been chiefly used for spectacular shows, horse shows, military tournaments, industrial exhibitions, etc. In 1930 the building was much enlarged and improved.

OLYMPIC. White Star liner. Launched at Belfast in 1911, she displaced 46,359 tons, and during the Great War was employed as a troopship. In 1914 she rescued the crew of the Audacious. Attacked by submarines, she escaped, and herself rammed at least one German U-boat. In 1920 the vessel resumed her normal cross-Atlantic passenger service, having meantime been adapted to burn oil.

OLYMPIC GAMES. In ancient Greece a great athletic festival held at Olympia; also a modern international athletic festival. The ancient festival, which was in honour of Zeus, lasted five days, and took place every four years; a period of four years was called an Olympiad. There was a record of victors from 776 B.C., but the games were regularly held long before that date. They were abolished in A.D. 394. The centre of the festival was the precinct consecrated to Zeus and known as the altis, an enclosure 750 ft. by 550 ft. Outside stood the palaestra or wrestling ground, the stadium or racing track, the hippodrome where the chariot racing took place, and the gymnasium.

The Olympic Games were revived in 1896, the first meeting being held at Athens in that year. In 1900, 1904, 1908, 1912, 1920, 1924 there were meetings in Paris, St. Louis, London, Stockholm, Antwerp, and Paris respectively. In 1928 the Games were held in Amsterdam, and it has been decided to hold the 1932 meeting in the U.S.A. See Marathon Race.

OLYMPUS. Name of several mts., or mt. ranges, in ancient Greece. The best known formed the boundary between Macedonia and Thessaly, the highest peak of which reaches an alt. of 9,794 ft. On its snow-capped summit the ancient Greeks placed the home of the gods, whence Olympus came to be used as a synonym for heaven, and later for the sky. Other mts. of the same name were in Asia Minor and Cyprus.

OMAGH. County town of Tyrone, Northern Ireland. It stands on the Strule, 34 m. from Londonderry on the G.N. of I. Rly. and has remains of a castle. Pop. 4,836.

OMAHA. City of Nebraska, U.S.A. It stands on the Missouri river, about 500 m. N.W. of St. Louis, and is served by the Chicago, Milwaukee and St. Paul and other rlys. The river is here spanned by bridges communicating with Council Bluffs. The Union Pacific Rly. has extensive workshops, and here, also, is one of the best equipped plants in the world for the smelting of gold, silver, copper, lead, and zinc. Before 1867 Omaha was the state capital. South Omaha was incorporated with it in 1915. Pop. 211,768.

The Omaha Indians lived in what is now the state of Nebraska. The remnants of the tribe live on a reservation in Nebraska. The name means people of the upper stream.

Omnibus. Side view of type of omnibus with inside staircase, introduced in 1930
Courtesy of London General Omnibus Co.

OMAN. State of Arabia. It stretches for about 1,000 m. along the Gulf of Oman, a N.W. extension of the Arabian Sea, and is bounded on the land side by the desert. Its area is about 82,000 sq. m. Muscat is the capital. About 1741 an Arab chief seized Muscat, and his descendants have since kept their authority. The government of India has a resident at Muscat (est. pop. 20,000). Pop. about 500,000, chiefly Arabs, but some negroes.

OMAR KHAYYAM, HAKIM (c. 1071-1123). Persian poet, astronomer, and mathematician. Born at Nishapur, Khorassan, Omar helped to revise the Persian calendar, compiled astronomical tables, and wrote on mathematics. In Europe he was chiefly known as author of a work on algebra until attention was drawn to his value as a poet by the rendering into English, by Edward Fitzgerald (q.v.), of part of his Rubáiyát or quatrains. In this the Rubáiyát is frankly an expression of hedonism touched with a certain melancholy that attunes with western as well as eastern pessimism.

The Omar Khayyám Club was founded out of enthusiasm for Edward Fitzgerald's translation of the Rubáiyát in 1892, when three friends, Frederic Hudson, George Whale, and Clement King Shorter brought it into existence at Pagani's Restaurant, London. Among the first members were Edward Clodd, Justin Huntly McCarthy, Sir Henry Norman, Sir William Watson, and Arthur Haeker, who designed the first menu card.

Olympus. History of Throne, war, and Deception

The principal varieties grown are the sweet Michael's, the bitter the Jaffa, the Maltes

OMDURMAN. City of the Anglo-Egyptian Sudan. It is on the left bank of the Nile, facing Khartoum, and stretches for 7 m. along the river. During the regime of the Mahdi (q.v.) it became the capital of his empire. The ruins of his tomb are in the centre of the city. Pop. 102,648.

The battle of Omdurman was fought between the British and Egyptians and the forces of the Khalifa, Sept. 2, 1898. The battle began with a dervish attack, easily repulsed. The British marched forward to seize Omdurman before the enemy could return to it, and after some sharp engagements entered the city. The British and Egyptians lost about 500. See Athara; Egypt; Kitchener; consult also The River War, 2 vols., W. L. S. Churchill, 1899.

OMNIBUS (Lat. for all). Four-wheeled public conveyance. They are licensed to carry passengers for hire at stated times over a regular route, and to take up or set them down as required. The word is in popular speech shortened to 'bus. Vehicles, carrying 22 inside passengers and drawn by three horses abreast, were introduced into London on July 4, 1829, by a coach proprietor named Shillibeer. Later, two-horsed types gave accommodation for outside passengers, the roof being reached by a ladder from the conductor's step. A narrow seat, called the knife-board, ran lengthwise along the centre of the roof, and the passengers sat back to back. Development of the 'bus came with the advent of the internal combustion motor, and though steam omnibuses had some success, they were abandoned for petrol-driven vehicles.

OMPHALÉ. In Greek legend, wife of Tmolus, a Lydian king, whose kingdom she ruled after his death. When Hercules was condemned to a period of slavery as a punishment for the murder of Iphitus, Omphalé bought him, and they became deeply enamoured of each other.

OMSK. Town of the Siberian area of Soviet Asia. It is 265 m. N.E. of Akmolinsk, at the junction of the Om and Irtysh, and on the Trans-Siberian rly. Pop. 161,475.

Onager. Specimens of the race of wild ass. Gambler Bole, Asiatic and Occanee. Interior. F.Z.S. a black stripe down the centre of the shoulder showing the

ORANGE. The down the centre of the t situated 3,000 ft. above sea level. It is a W. of Sydney and legs. See Ass. area, yield **ONEGA.** River of Russia. Rising in town has Lacha, it flows N.E. and then N.W. in the Gulf of Onega. In length about 245 miles. It runs parallel with Lake Onega, about to the E. There are also a town and this name. The town is at the mouth of the river, and the bay is an arm of the V

ONEHUNGA. Town and port Island, New Zealand. On Manukau it is the W. outlet for Auckland, 7 Woollen mills, shipping, and the timber and farm produce are it industries. Pop. 6,000.

ONEIDA. City of New York Oneida Creek, 26 m. W. of iron w

wagon, furniture, and cigar factories, and flour mills. Pop. 10,541.

Lake Oneida, about 12 m. N. of Syracuse, is 24 m. long and 5 m. broad. The Oneida river drains it to the Oswego river.

The Oneida Community was a communistic society originally founded in Vermont, U.S.A., by John Humphrey Noyes, and re-started at Oneida in 1847. It has a religious basis. Noyes advanced N.T. authority for the doctrine that selflessness could be attained by holding all things in common. In 1879 the community was dissolved, but in 1881 it was revived.

O'NEILL, EUGENE GLADSTONE (b. 1888). American playwright. Born in New York, Oct. 16, 1888, he engaged in business in the U.S.A. and S. America, and spent two years at sea, an experience which provided much material for his dramatic work. He became known as a dramatist by his play *Thirst*, 1914. His other works include *In the Zone*, 1918; *The Moon of the Caribbees*, 1919; *Beyond the Horizon*, 1919; *The Emperor Jones*, 1920; *Anna Christie*, 1923; *The Great God Brown*, 1927. *Strange Interlude*, 1928; and *Lazarus Laughed*, 1929.

ONESIMUS. Christian convert. He was a slave who ran away from Philemon at Colossae and made his way to Rome. There he met S. Paul, who converted him to Christianity and sent him back with a letter, the Epistle to Philemon, and also mentioned him when writing to the church at Colossae.

ONE-STEP. American dance, popular also in England, where it was introduced about 1910, and in France. It is virtually a running walk, performed to rag-time music.

ONGAR. Market town of Essex. In full Chipping Ongar, it is on the Roding, 23 m. from London, with a station on the L.N.E. Ry. There are a few traces of an old castle. Market day, Sat. Pop. 1,142.

ONION (*Allium*). Hardy bulbous plant of the order Liliaceae. The plants are perennial, though onions and leeks for edible purposes are raised annually from seed. Native of Asia, *A. cepa* is the parent species of the garden onion, and has been cultivated for ages. Of the onions grown outside the British Isles, the Tripoli, Madeira, and Brittany varieties are the most popular in Britain. They are more delicate in flavour and less coarse of texture than the latter common Spanish onion.

Onion. Two common varieties.
1. Long-keeping 2. White Spanish
By courtesy of Sutton & Sons

It stands on the eastern bank of the Great Manchester, with a view of the city. Its length is 193 m. L.N.E. Ry. It is the broadest part, area 7,260 The buildings include a town hall, art gallery and average the schools is the Hulme G. S. feeders are the Alexandra Park is a recreation ground. The town is a centre of the cotton and textile industry, especially the spinning branch. Made by the velvets, silks, satens, and other textiles State made. Around are coal mines. The Oldham. Wakes are a feature. Market days, Mon. and Sat. Pop. 144,983.

OLDHILL. District of Staffordshire. It is 3 m. from Dudley, on the G.W. and L.M.S. Ry. It stands on a coalfield and is in the Birmingham area. The chief industry is the manufacture of hardware.

OLD RED SANDSTONE. Series of Palaeozoic rocks lying below the carboniferous strata. They are named from their commonest constituent, red sandstone, but the series also contains grey, yellow, and green sandstones, and limestones and clay beds. The rocks of the group are of immense thickness, and are called Old to distinguish them from similar deposits of a later geological

minerals are silver, nickel, copper, gold petroleum, natural gas, and iron. There are extensive fisheries, and much lumber is cut. Niagara and other falls provide the industries with an abundant supply of electric power. From 1791 to 1867 Ontario was called Upper Canada. Pop. 3,229,000. See Canada.

ONYX. General term applied to a band of agates characterised by well-defined alternate rings of pure milk-white with bands of other colours. If the tint of the secondary rings is flesh colour, the agate is known as chalcedony; if red, carnelian-onyx; if green, sardonyx. All these are utilised for intaglios and cameos in jewelry. Onyx opal is a natural stone built up of alternate layers of precious and common opal. Onyx marble, from Mexico, and onyx alabaster, from Egypt, are handsome forms of stalactite marble.

OOOLITE. Name given to the upper and middle division of the Jurassic rocks. The oolite deposits are chiefly limestones formed by marine fossil remains. Great oolite rocks found in Wiltshire, Somersetshire, Gloucestershire, etc., provide the well-known building stones, Bath stone, Stonesfield slate, etc. Inferior Oolite rocks are named from their occurrence in strata lying beneath the Great Oolite. Pron. o-o-lite.

OOTACAMUND. Hill station of Madras Presidency, India. It lies over 7,000 ft. in alt., among the open, rolling downs of the Nilgiri Hills. Here the Madras Government has its seat during the hot season. Pop. 20,000.

OPAL. Hydrous dioxide of silicon. It is amorphous or non-crystalline, and varies in colour from dark to pale yellow, red, blue, or green, the lighter colours being more common. The precious opal in ancient times was considered to bring its wearer good fortune. It is a semi-transparent, semi-translucent stone, bluish or yellowish white in colour as a rule, and showing a wonderful play of colours as the light strikes it at various angles. Precious opal is found in Czechoslovakia, S. America, New South Wales, the U.S.A., etc. The fire opal, a beautiful red stone with yellow, or yellow and green reflections, is found in Mexico; as is the girasol, a bluish white opal with red reflections. The common opal, which is not opalescent, occurs in a variety of colours.

OPERA (Ital. shortened from *opera in musica*, a musical work). Work for the stage compounded of music and drama. The dialogue is mostly in verse and sung to orchestral accompaniment; lyrics are an important element, and a ballet is often included. The rise of opera began about 1582, but it was not until the first public opera-house was opened at Venice, in 1637, that it became a popular form of entertainment.

The real founder of Italian opera was Alessandro Scarlatti (1659-1725), who not only established the aria as a legitimate form of expressing soliloquy, but also adopted two distinct kinds of recitative: (1) *Recitativo Flesco*, in which the voice was supported by exuberant chords filled in at the harpsichord from gum, oil, and (2) *Recitativo stromento*, said to be a neutral accompaniment of which was frankincense as that of the aria. This last the anciently developed until it is now Olibanum is modern opera. Early opera astringent and to the Italian Lull.

OLIGOCENE SYSTEM. Name used in all 42 works the Tertiary period of time, to call operas. The followed the Eocene and preceded the Miocene, however, Oligocene rocks are found in wide areas, and it Central and S. Europe, and in the Isle of Wight and Hampshire. See Eocene; Miocene.

The Carl Rosa Opera Company (q.v.) greatly helped to form English taste in opera, and Sir Thomas Beecham (q.v.) produced grand opera in London and elsewhere, founding an Imperial League of Opera in 1928. See Covent Garden.

Ophicleide, with keys to help fingering

OPHICLEIDE (Gr. *ophis*, serpent; *kleis*, key). Brass wind instrument. It was the successor of the serpent, the bass member of the cornetti group. All these instruments had a cup-shaped mouthpiece and lateral finger holes at distances to fit the stretch of the hand. The ophicleide has been succeeded in the orchestra and military band by the bass tuba or bombardon.

OPHIR. Land famed in O.T. times for its gold, which was brought to Palestine by the ships of Solomon and Hiram, king of Tyre. Its locality is uncertain, but S.E. Arabia is the most likely region.

OPHTHALMOSCOPE. Instrument invented by Helmholtz, and later extensively modified. It consists of a small mirror with a circular hole in its centre and a rotating wheel in which various types of lenses are fixed. The eye is illuminated and observed through the hole and one of the lenses.

OPIE, JOHN (1761-1807). British painter. A native of St. Agnes, near Truro, he obtained the patronage of Dr. Wolcott, known as Peter Pindar, accompanied him to London in 1780, and at once achieved celebrity. He became A.R.A. in 1787, R.A. in 1788, and professor of painting in 1805. He died April 9, 1807. His genius lay in historical paintings, in which, though his technique was always deficient, he showed extraordinary freshness and vigour. See Girtin, T.; Godwin, M.

John Opie, British painter

OPIUM (Gr. *opos*, juice). Juice obtained by cutting into the unripe capsules of the white poppy (*Papaver somniferum*). This is solidified by evaporation, and comes into the market in the form of dark brown or black irregular masses. Crude opium contains a number of alkaloids, of which morphine, which may be present to the extent of 12 p.c., is the most important. Opium acts as an anodyne and narcotic almost entirely in virtue of the morphine it contains. It is used medicinally in various forms to relieve pain and in the treatment of insomnia.

The best antidote in poisoning by opium is permanganate of potassium, enough dissolved in half a glass of water to make a deep red solution. After this, hot strong coffee should be given freely, and the patient must at all costs be kept awake.

In 1925 an international convention was signed at Geneva providing for the establishment of a board of control to suppress the illicit traffic in drugs derived from opium and other substances. This came into force in 1928, when, according to agreement, it had been ratified by ten countries.

OPORTO (Lat. *Portus Cale*; Port. *O* porto, i.e. the port). City of Portugal. It stands on the N. bank of the Douro, 3½ m. from the Atlantic and 209 m. by rly. N. of Lisbon. A striking feature is its two fine bridges; one carries the rly.; the other has two roadways, and its arch, one of the largest in Europe, spans 560 ft. The cathedral was built on the site of a Visigothic citadel dating from the 12th century. Other buildings include the episcopal palace, many old churches,

Oporto Portugal. Ribeira quay and the iron bridge of Dom Luiz I

and the university. The Torre dos Clerigos or Tower of the Clergy, is 246 ft. high.

Oporto is the centre of the port wine trade. Apart from the shipping, mostly carried on from its harbour of Leixões, other industries include the spinning and weaving of cotton, wool, and silk, sugar refining, distilling, and tanning, and the manufacture of pottery, tobacco, and paper. Pop. 215,625.

OPOSSUM (Didelphys). Marsupial mammal. The family to which it belongs is found only in America. Opossums are all of small size, nocturnal in habit, carnivorous and insectivorous, and with very few exceptions make their homes in the trees. Most of them have long prehensile tails, but many lack the pouch which is characteristic of marsupials. In Australia the name opossum is given to the phalanger. See Marsupial.

Ops. In Roman mythology, wife of Saturn, and patroness of agriculture. The Romans identified her with the Greek Rhea, the wife of Cronos (q.v.).

OPTICS. The science of light and vision. The most familiar phenomena of vision are our inability to see objects round corners; the forms of shadows cast by opaque bodies; the formation of images of luminous objects by mirrors and the lenses of such instruments as reading glasses, telescopes, microscopes, cameras, and projecting lanterns. A great deal of the knowledge we possess concerning these matters is very satisfactorily summarised in a few principles which are referred to as the laws of Geometrical Optics. No hypothesis is made as to the nature of light beyond the simple assumption that it is an influence emitted from all visible bodies and capable of affecting the retinae of our eyes.

While geometrical optics gives an adequate theoretical explanation of the facts concerning image formation, it is inadequate to explain many observed results of experiment in optical science. The phenomena of interference, diffraction, polarisation, and even chromatic dispersion are quite beyond its scope. As a simple statement of interference we can say that it is possible for two specially adjusted sources of light to produce darkness along certain paths, this being compensated by reinforced illumination along others. In diffraction we deal with the existence of certain colour fringes well inside the geometrical shadow cast by the edge of an opaque object. In polarisa-

tion we meet with the phenomenon of double refraction by certain crystals, each of the two refracted rays arising from one incident ray being plane-polarised.

In such phenomena, no adequate explanation is possible without the help of a definite theory as to the nature of light. Such matters are treated in works on physical optics. In them appeal has to be made to mathematical analysis of a type much more complex than that involved in the comparatively simple geometry used in geometrical optics. See Eye; Light; Polarisation; Refraction; Relativity.

OPTOPHONE. Instrument, invented by E. E. Fournier D'Albe, which converts optical into phonic or sound effects, to enable blind persons to read printed matter by ear. Rays of light are directed upon the printed matter, and are interrupted by a revolving disk perforated with eight rings of holes, the number of holes in the rings being proportional to the vibrations in the notes of a musical octave. There is also a cover containing a row of eight holes which register at intervals with those in the disk. The light traversing the perforations is received upon a selenium tablet connected with a telephone receiver. Each letter as it passes the row of perforations is accompanied by a characteristic sound in the receiver.

Opossum. The Azaras opossum of S. Bertrige

OPUNTIA. Genus of succulent plants of the order Cactaceae. All are natives of America, and some are familiarly known as prickly pear and Indian fig. The majority require treatment in greenhouses, as some of them reach a height of 20 to 30 ft. Several species are quite hardy in Britain. They flower during the summer months, with red, yellow, or purple blossoms.

OR (Fr.). In heraldry, gold, the principal metal.

It is represented in drawings by small dots over the whole space, and in painting either by gilding or yellow pigment. See Heraldry.

ORACLE (Lat. orare, to speak, pray). Originally, in Greece, the seat of worship of a deity where responses were given to inquirers. The responses were accepted as representing the voice of the deity as expressed through a priest or priestess in a state of religious exaltation, or through some other medium, as at the oracle of Zeus at Olympia, where the divine will was interpreted by inspection of the entrails of sacrificed animals.

Other well-known Greek oracles were the oracle of Zeus at Dodona, in Epirus, and that of Apollo at Delphi. See Divination.

ORAN. Seaport and naval station of Algeria. On the gulf of Oran, it is 260 m. by rly from Algiers. The city has an excellent harbour, and exports wine, cattle, grain, and minerals.

The modern parts are well planned and built in the French style; notable buildings are the cathedral and the grand mosque. Pop. 150,301.

ORANGE (A r a b. nāranj). Fruit of *Citrus aurantium* and its varieties, evergreen trees of the order Rutaceae, natives of Asia. The first British oranges appear to have been grown by Sir F. Carew at Bedington, from 1595 onward. The principal varieties now grown are the sweet S. Michael's, the bitter Seville, the Jaffa, the Maltese blood,

the Tangerine, and the Mandarin. Most imported oranges have had to be gathered and packed while still green, and undergo a sort of ripening in transport; consequently, they have not the delicious flavour of those ripened naturally on the tree.

The cultivation of the orange is carried on in all warm countries. The orange is extraordinarily prolific, and yields of fourteen and even sixteen thousand oranges have been secured from a single tree. See Citron.

ORANGE, GARIEP OR GROOTE RIVER of S. Africa. It rises near the Mont aux Sources, in the highest portion of the Drakensberg Range, in N.E. Basutoland, and flows into the Atlantic Ocean about 45 m. N.W. of Port Nolloth, after a course of about 1,300 m. Its chief tributary is the Caledon. W. from Palmietfontein the Orange forms the N. boundary of the Cape Province. It was explored in part, in 1779, by Colonel Gordon, a Dutch officer, who named it after the stadtholder of Holland.

ORANGE. Town of France. It is on the river Meyne, 17 m. by rly. N. of Avignon. The ancient Arausio, it contains a Roman triumphal arch and a Roman theatre.

The cathedral of Notre Dame dates from the 11th century. Pop. 10,766.

THE HOUSE OF ORANGE. As the capital of a little principality, the town gave its name to a famous European family. The principality had its own rulers from about 900, and in 1500 the family died out and it passed to the house of Nassau. Its members called themselves princes of Orange and retained the principality, although their interests were chiefly in the Netherlands until 1702. By the treaty of Utrecht, in 1713 it became part of France.

from about 900, and in 1500 the family died out and it passed to the house of Nassau. Its members called themselves princes of Orange and retained the principality, although their interests were chiefly in the Netherlands until 1702. By the treaty of Utrecht, in 1713 it became part of France.

Orange, France. Interior of the Roman theatre, showing the restored tiers of seats

ORANGE. Town of New South Wales. Situated 3,000 ft. above sea level and 190 m. W. of Sydney by rail, it is the centre of a fruit and wheat-growing district and a rich mineral area, yielding gold, silver, and copper. The town has been since 1830 an important point on the route W. from Sydney over the Blue Mts., first by the main road, and later by the railway. Pop. 8,470.

ORANGE FREE STATE. Province of the Union of South Africa. It is bounded N. by the Transvaal, E. by Natal and Basutoland, and S. and W. by the Cape Province. The area is 49,647 sq. m. The Cape to Cairo Rly., with numerous branches, traverses the province. Bloemfontein is the capital. Pop. 628,827, of whom 188,553 are Europeans.

Orange. Spray of foliage, flower, and fruit. Inset, fruit in section

About 1824 some Dutch farmers crossed into the Orange Free State from Cape Colony. In 1836 more Dutch farmers arrived. In 1843 the British appeared and took the Basutos under their protection. In 1848 British sovereignty was formally proclaimed by Sir Harry Smith, the country being at this time known as the Orange River Sovereignty. The British position was unsatisfactory, and on June 30, 1854, a proclamation declared the abandonment of British sovereignty. The Boer republic, then formed, lasted until 1900. It was named officially the Orange Free State. Warfare with the Basutos was carried on until 1869, when the boundary between the two peoples was defined. The British helped to negotiate this treaty, and by it part of Basutoland was added to the republic.

After 1888 the Boer republics entered into closer relations with each other, and in consequence the Orange Free State, under President M. T. Steyn, joined the war against Great Britain in 1899. The province was annexed by Great Britain in 1900 during the South African War as the Orange River Colony. Responsible government was given to it in 1907, and in 1910 it joined the Union of South Africa, being named the Orange Free State in place of the Orange River Colony. See South Africa; Transvaal.

ORANGE SOCIETY. Irish political association founded in Armagh in 1795 for the defence of Protestantism and the maintenance of the Protestant ascendancy in Ireland. In the 19th century Orangeism was directed to the repression of the movement for Catholic emancipation. See Catholic Emancipation.

ORANGE-TIP BUTTERFLY (*Euchloë cardamines*). Small butterfly of spring, common in British lanes, and distributed over Europe and a great part of Asia. It measures about $\frac{1}{2}$ in. across the expanded wings. These on the upper side are mainly white with a black base, and the tips of the fore wings margined with black, broadly in the female, narrowly in the male, in which sex nearly half the wing is orange. On the under side the hind wings are heavily blotched with green. See Butterfly.

ORANG UTAN (Malay, man of the woods). Species of anthropoid ape (*Simia satyrus*) found only in Borneo and Sumatra. A full-grown male stands about $4\frac{1}{2}$ ft. high, and its arms are so long that in the erect position the fingers almost touch the ground. The legs are short, and when walking the animal rests on the knuckles of the fingers and the outer edges of the feet, the soles being turned inwards. The skin is covered with long, shaggy, reddish-brown hair, and in old animals there is often a full beard. Orangs occur in the densest forests, and are usually found in families consisting of the two parents and a few young ones. They construct rough nests of sticks in the trees, in which they pass the night. They feed by day, principally on fruit, though they also eat leaves and shoots. See Man.

ORATORIAN. Familiar term for the R.C. Congregation of the Oratory of Our Lord Jesus Christ, and that of the Oratory of S. Philip Neri (q.v.). The first named was founded by Cardinal de Bérulle, at Paris, in 1611. The Oratory of S. Philip Neri dates from 1558. The society is composed of priests without vows, but agreeing to a rule approved by Paul VI in 1612. Each house is independent. The Oratory was introduced into Britain in 1847 by J. H. Neale, and its centres in England are at Farnham and Brompton (q.v.).

ORATORIO. Sacred story or drama set to music, in which solo voices, chorus, and instruments are employed. Its underlying idea may be traced to the plays of the Middle Ages which were employed as a popular method of instruction, presenting sacred history in a form which could be readily understood.

S. Philip Neri (q.v.) introduced into his society the acting of sacred dramas, and also the singing of hymns in Italian. In his Little Oratory in Rome the musical services of the Oratorians were held from about 1574. These early performances of sacred drama interspersed with sacred music gradually led to the conception of the oratorio as a complete work of musical art.

The earliest surviving work to which the name oratorio is applied was called *The Representation of the Soul and the Body*, the music of which was composed by Emilio Cavaliere. This was performed in the Oratory in 1600. The oratorios of Bach and Handel form the two most important landmarks in the history of the oratorio. Bach's chief works in this form are his two *Passions*—according to S. John and S. Matthew—and his *Christmas Oratorio*. The oratorios of Handel stand in marked contrast to the deeply devotional works of Bach.

ORCHARDSON, SIR WILLIAM QUILLER (1835-1910). British painter. Born in Edinburgh, March 27, 1835, he settled in London in 1862, became A.R.A. in 1868, R.A. in 1877, and was knighted in 1907. He painted historical genre with a definite aesthetic motive; but the oft-repeated brown tone of his pictures later developed into a mannerism. As a portraitist he steadily increased his reputation up to his death, which took place April 13, 1910. His last portrait, that of Lord Blyth, was one of his finest works.

ORCHESTRA. Musical term. Originally it meant only the platform or staging to accommodate the band and chorus, and other performers. Later the word was applied to the orchestral band, both players and instruments, including strings, wood-wind, brass, and percussion.

Successive stages have been as follows: (1) the period of Purcell, Bach, and Handel (1660-1750), strings in two, three, or four parts reinforced by hautboys and bassoons, with a background of harpsichord or organ tone; (2) the period of Haydn, Mozart, and Beethoven (1750-1827), when the strings were permanently established as the foundation of four-part harmony, with wood-wind, horns, trumpets, timpani, and trombones for brilliancy and colouring; (3) the modern period since Beethoven's death, when there has been a gradual piling up of all available effects.

ORCHID. Extensive order of herbs, growing in the ground or on trees. The flowers are either solitary, or form spikes, sprays, or clusters. They are irregular, and consist of three coloured sepals and three petals, of which the two laterals are alike, but the third (labellum or lip) is usually larger, and the base often ends in a hollow spur. There is a

single stamen, united with the style to form the column. The minute, spindle-shaped seeds are contained in a three-valved capsule.

Orchids are natives of all parts of the world, with the exception of the coldest regions. A few hardy ones are natives of Britain.

Orchid. Left, *Orchis maculata* (spotted orchis). Above, *Cattleya labiata*

which appears in April in copses, has red-purple flowers, and the leaves are spotted with purple black. The spotted orchis (*O. maculata*) has a more pyramidal spike, and the pale lilac flowers are marked with purple.

ORDEAL BEAN (*Physostigma venenosum*). Perennial climbing herb of the order Leguminosae, native of tropical Africa. The leaves are broken into three leaflets. The purple, bean-like flowers are in sprays, and are succeeded by dark brown pods containing two or three large blackish or brown seeds. These seeds are extremely poisonous.

ORDER. Short term for an order of chivalry and other distinctions of the same kind. In the United Kingdom the chief orders are the Garter, Bath, S. Michael and S. George, Thistle, British Empire and others. Another is the Order of Merit, which does not carry with it the dignity of knighthood as the others do. Other countries have orders, notable ones being the Order of the Golden Fleece in Spain, and formerly in Austria, and the Legion of Honour in France. Some orders lapsed during the changes that followed the Great War. Each order has its distinctive badge, ribbon, motto, etc. See Bath; British Empire; Garter; Golden Fleece; Knighthood, etc.

ORDNANCE (Fr. ordonnance). Edict issued by authority. Specifically, the term is applied in Great Britain to an Act of Parliament not sanctioned by all three estates of the realm, e.g. the self-denying ordinance passed by the Long Parliament in 1645 at Cromwell's instigation. Temporary Acts of Parliament and Acts which are merely declaratory are also called ordinances. In its connotation of an established rule or rite the word ordinance is also used, especially by Presbyterians, of the sacraments, as the ordinance of baptism.

ORDINARY. In heraldry, the commonest charge. They are mostly plain symbols, composed of broad hands. They are among those found on the earliest feudal coats, and are supposed to occupy one-third of the shield, but generally are given rather less space. Most of the ordinaries have diminutives, usually smaller representations. The names of the ordinaries are chief, pale or paller, bend, bend sinister, fess or fesse, chevron, cross, saltire, quarter, and pile. See Heraldry.

In ecclesiastical law an ordinary is an ecclesiastic who exercises jurisdiction within a given district. In England it usually means the bishop of the diocese. The expression ordinary of the Mass means the fixed portion of the service as distinguished from the variable parts—such as collects, gospels, etc.—proper to special occasions. See Bishop.

ORDNANCE. General designation of all guns, howitzers, and firearms of larger calibre than small arms. Ordnance may be broadly divided into guns and howitzers.

Orang Utan. Specimen of the man-like ape of Borneo and Sumatra

In army organization, the term ordnance formerly embraced the engineers and artillery and all their equipment, but now is confined to the latter branch and their stores. The master-general at the war office controls the artillery and fortifications, but the duties of the army ordnance department include the provision, storage, distribution, and maintenance of arms and ammunition of all kinds, personal and camp equipment, vehicles, harness and saddlery, horseshoes, signalling stores, and telegraphic, barrack, hospital, and miscellaneous stores. See Ammunition; Army Ordnance Corps; Artillery; Gun; Howitzer; Rifle.

An ordnance artificer is a non-commissioned officer of the British navy. The branch to which he belongs was established in 1919 to provide a force to care for and maintain the naval gun armament. It took over the work then being performed by the armourer branch and the turret engine-room artificers.

The ordnance college is an establishment at Woolwich where officers are trained in the duties of the ordnance department.

ORDNANCE SURVEY. Topographical survey of the United Kingdom. At first all the work was carried out on the scale of 1 in. to 1 m., but in 1824 mapping on the 6-in. scale was begun. Classifying the ordnance survey maps according to their scales, the largest scale maps are the cadastral maps on the scales of 25 in. and 6 in., and the 5 ft. and 10 ft. to the mile maps. The 6-in. map is a reduction of the 25-in. The best known is the 1-in. map. It is issued in three forms, of which that printed in colour and showing relief by means of contours and hachures is perhaps the best example. The headquarters of the Ordnance Survey Department are at Southampton.

ORDOVICIAN. In geology, the period following the Cambrian and preceding the Upper Silurian. The rocks of this period, widely distributed, consist of grits or greywackes, shales and limestones, and provide valuable building stones, including slates and marbles. The rocks are typical in Wales. The Ordovician rocks of N. America, in Ohio and Indiana, are sources of petroleum and natural gas, while iron, zinc, lead, silver, and graphite are found in British and other Ordovician rocks. See Geology; Rocks.

ÖRE. Bronze coin of Denmark, Sweden, and Norway; the one-hundredth part of a krone (q.v.). It is coined in bronze as one-öre, two-, and five-öre pieces; and in silver as 10-, 25-, and 50-öre pieces.

ORE. Mineral or rock mass containing one or more metals. The term is only applied to such masses if the metals are present in quantity and form calculated to make their extraction a profitable operation. The value of an ore depends on the proportion of the metal or metals present and the ease or difficulty with which the metals can be extracted. The payable proportion varies immensely.

The metallic ores are only occasionally found pure, being generally in the form of oxides, sulphides, sulphates, carbonates, silicates, etc., the most noted exceptions being gold and platinum

Oriel window. Example in Nuremberg, dating from 1361

found in their natural state. See Metal; Metallurgy; and under names of various metals.

OREGON. Western maritime state of the U.S.A. In the W., the Coast Range separates the rocky coast from the fertile valleys of the Willamette and Umpqua rivers, which are enclosed on the E. by the Cascade Range. In the E. lies an undulating prairie, scored by valleys and relieved by numerous mountains, and in the N.E. rise the Blue Mountains. The Columbia river marks most of the N. frontier, and the Snake river a large part of the E. frontier. Wheat, hay, potatoes, and fruits are produced, and the fisheries, stock-raising, dairying and lumbering are valuable industries. Gold, silver, copper, coal, and other minerals are worked. Salem is the capital, and Portland the commercial centre. Area, 96,699 sq. m. Pop. 1,065,174.

ORESTES. In Greek legend, son of Agamemnon and Clytemnestra. When his father was murdered, Orestes was saved from a like fate by his sister, Electra, who sent him to Phoeis, where he became an intimate friend of the king's son, Pylades. Having slain his father's murderers, he was pursued by the Furies, until his acquittal by the court of the Areopagus, at Athens. According to another legend, he went for purification accompanied by his friend, Pylades, to the country of the Tauri (Crimea), to fetch from there a statue of the goddess Artemis, returning with his sister, Iphigenia, to Argos, where Orestes reigned over his father's kingdom at Mycenae. See Agamemnon; Areopagus; Electra; Iphigenia.

ORFORD. Parish of Suffolk. It stands on the coast 20 m. from Ipswich. The ruins of the castle were presented to the town by Sir Arthur Churchman in 1928. The old church is also an object of interest. Pop. 818.

The title of earl of Orford was given to Sir Robert Walpole in 1742. It became extinct in 1797, but was revived in 1806 for another branch of the family. See Walpole.

ORGAN. The organ is the largest and most powerful of musical instruments. It has anything from one to five keyboards or manuals, a pedal keyboard, and numbers of stops. The draw-knobs controlling the stops are arranged in vertical rows on both sides of the manuals. Other draw-knobs, called couplers, control appliances for coupling the manuals to the pedals and to each other.

The manuals each have separate functions. The most important, great organ, contains the loud stops, flues, and reeds, of all pitches. Others are swell organ, choir organ, and solo organ. The last contains the stops imitating orchestral instruments—strings, wood-wind, and brass. Some organs have a fifth manual, echo organ, with pipes placed at a distance from the rest of the instrument. Only small organs can be blown by hand; the demand for different wind pressures and the use of pneumatic action make it imperative that larger organs should have some form of motor—combustion, hydraulic, or electric—for wind.

In the pneumatic action the keys, on being depressed, operate valves, admitting compressed air from a wind reservoir to tubes which transmit the power to other valves moving the pallets. The pallets admit wind to the organ pipes. In the electro-pneumatic action, electric current conveyed through small wires takes the place of the tubes. The depression of the key closes an electric circuit, operating magnets which, by means of pneumatic valves, open the pallets. See illus. American Organ, p. 73.

The Royal College of Organists was founded in 1864. Its headquarters are in Kensington Gore, London, S.W.7.

ORIEL (late Lat. oriolum, small room, recess). In architecture, term usually applied to a bay window corbelled out from the wall

of an upper floor, or over a porch, but formerly extended to a bay window on the ground floor. It was a conspicuous feature of Tudor architecture. See Gothic Architecture.

One of the Oxford Colleges is called Oriel. It was founded in 1326, and its buildings are in Oriel St. and High St. It was the college of Cecil Rhodes, who left money for new buildings.

Oriflamme. Five-pointed French royal standard

ORIFLAMME (Fr. golden-flame). Standard of the French kings. It was kept by ecclesiasties, and was supposed to have been the cloak of a saint. It was destroyed in battle. The second oriflamme, kept at S. Denis, was red with yellow flames, and bad streamers. It was raised by the French at Agincourt, after which no more was heard of it.

ORIGEN OR ORIGENES (c. 185-254). Greek father of the Church. Born at Alexandria, son of Leonidas, a Christian martyr. He taught in the catechetical school there, founded a theological school, was imprisoned during the Decian persecution, 250, and died at Caesarea or Tyre. A voluminous and learned writer, he wrote a polyglot of the O.T., the first textual criticism of the Bible. Origen also wrote commentaries.

ORILLIA. Town and watering place of Ontario, Canada. It stands on Lake Couchiching, 86 m. N. of Toronto, and is served by the C.N. Rlys. and the C.P.R. Steamers go from here to places on Lake Simcoe. Industries include the making of motor cars and agricultural implements. Pop. 7,631.

ORINOCO. River of S. America. It rises in the Sierra Parima in the S. of Venezuela, near the Brazilian frontier, flows round these mts. in a great curve, and thence E. to the Atlantic. Between the mouths of the Guaviare and Meta the main stream makes the falls of Maipures and Atures, 36 m. apart. About 160 m. from the sea the Orinoco delta begins. The length is about 1,600 m.

ORIOLE (Oriolidae). Family of passerine birds, natives of the Old World. About the size of a thrush, they are richly coloured with yellow, olive green, and black; have short legs and long wings, and construct hammock-like nests. The Golden Oriole (Oriolus galbula) of Asia, S. Europe, and N. Africa is a regular visitor to Britain. The cock is golden yellow with the exception of the wings and the middle of the tail, which are black. The so-called Orioles which are found in the U.S.A. belong to the family Icteridae.

Oriole. Specimen of the green oriole

ORION. In Greek mythology, a famous giant and hunter. Falling in love with Meropé, daughter of Oenopion, king of Chios, he obtained from her father the promise of her hand, provided he cleared the island of wild animals. This task he performed, but Oenopion made him drunk and put out his eyes. Having recovered his sight by following the advice of an oracle, Orion took vengeance. He was killed either by the arrows of Artemis or the bite of a scorpion.

In astronomy, Orion is one of the constellations. Lying on the celestial equator, S.E. of Taurus, it contains the three famous

stars, Rigel, Betelgeux, and Bellatrix, a large number of variable stars and the great Orion nebula. See Constellation.

ORKNEY ISLANDS. Group of about 90 islands off the N. coast of Scotland. Pentland Firth divides them from the mainland. The total area is 375 sq. m., and they form a county of Scotland. Pomona, or Mainland, is the largest. Others are North and South Ronaldsay, Stronsay, Hoy, Flotta, Rousay, Westray, Sanday, Shapinsay, Burray, and Eday.

V. E. Orlando,
Italian statesman

Kirkwall, the capital, and Stromness, both on Pomona, are the largest places. Seapa Flow (q.v.) is situated between Pomona and Hoy.

The Orkneys were known in early times as the Orades. In the 9th century they became dependencies of Norway and Denmark, passing to Scotland in 1468. Pop. 21,700.

ORLANDO, VITTORIO EMMANUELE (b. 1860). Italian statesman. Born at Palermo, May 19, 1860, he became professor of law there in 1883, entered the Italian parliament in 1898, and in 1908 was minister of public instruction, and later minister of justice. In 1916 he was minister of the interior, and was prime minister 1917-19. During these two years Orlando was virtually dictator in Italy, and he was a dominant force at the Paris peace conference. He later became president of the chamber, and in 1925, as an anti-Fascist retired from parliament.

Orle. 1, Heraldic ordinary, shown, 2, with bordure, and, 3, tressure flory

ORLE. In heraldry an ordinary. Virtually a narrow border which does not touch the edge of the shield. Charges can be arranged in the form of an orle, e.g. an orle of martlets. A diminutive of the orle is the tressure, a famous example of which occurs in the royal arms of Scotland (or, a lion rampant within a double tressure flory-counter-flory gules).

ORLÉANS. Island of Quebec, Canada. In the St. Lawrence river, 30 m. from the city of Quebec, it covers 69 sq. m., and is visited by pleasure seekers. Pop. 5,000.

ORLÉANS. City of France. The capital of the dept. of Loiret, it stands on the right bank of the Loire, 75 m. from Paris. The old part is quaint and beautiful, and the modern city has broad streets and spacious boulevards. The cathedral of Ste. Croix was built in the 17th century. The 14th century chapels of the choir are part of the older cathedral, burnt by the Huguenots in 1567. Of the other churches the finest is S. Aignan, which has beneath it a Romanesque crypt of the 9th century. The hôtel de ville dates from 1442. Orléans possesses a fine library and several museums.

Orléans. Cathedral of Ste. Croix a 17th century Gothic building

The city is famous for its

association with Joan of Arc and the siege of Orléans, of which the city has many visible memories. The equestrian statue of the heroine was built in the Place du Martroi in 1855. Pop. 69,000.

SIEGE OF ORLÉANS. On Oct. 12, 1428, in the course of the Hundred Years' War, an English force, under the earl of Salisbury, appeared before Orléans. An assault failed, and Salisbury having been killed, the siege dragged on until April, 1429. By then Joan of Arc appeared, and having entered Orléans, she led the garrison in a series of attacks on the English positions, until on May 4, 1429, the besiegers abandoned the enterprise.

ORLÉANS, HOUSE OF. Cadet branch of the house of Bourbon (q.v.). The first duke of Orléans was a younger son of Philip VI, and the second was Louis, a son of Charles V. The poet, Charles of Orléans, succeeded the latter, and his son became king as Louis XII in 1498. After twice lapsing, the title was given to Philip, a son of Louis XIII, whose descendants still hold it, although it is not officially recognized in France. On the death, in 1926, of Louis Philippe Robert, duke of Orléans, who was an Arctic traveller, his cousin, John, duke of Guise, became head of the house.

Famous bearers of the title of duke of Orléans include Charles, one of the most noted of medieval poets and the author of many ballads and rondeaux. He married the widow of Richard II, and died Jan. 4, 1465.

Philip, duke of Orléans (1640-1701), was the younger son of Louis XIII. He married

Philip II,
Duke of Orléans
After J. B. Santerre

Henrietta, daughter of Charles I, a lady who acted as the intermediary between her brother Charles II and Louis XIV. By his second wife Philip had a son Philip (1674-1723), known as the regent Orléans, because he was regent of France from 1715 until his death, Dec. 23, 1723. A later duke, Louis Philip Joseph (1747-93), called Philippe Égalité because of his advocacy of democratic ideas during the Revolution, was sent to the guillotine Nov. 6, 1793. Henry, prince of Orléans (1867-1901), was known as an explorer. He wrote several travel works, and died in Assam, Aug. 9, 1901.

ORME'S HEAD, GREAT AND LITTLE. Promontories, 4 m. apart, on the coast of N. Wales, in the N.E. of Carnarvonshire. Llandudno is on the bay between them. The Little Orme is a limestone height rising sheer from the sea, and its caves can only be reached by boat. A road constructed in 1879 encircles the Great Orme, and a funicular rly. goes to the summit. The lighthouse, with group occulting lights, is 325 ft. above high water.

ORMOLU. Brass alloy. It generally consists of copper 58 parts, zinc 26, and tin 16, and is employed in the preparation of small statues, candlesticks, etc., and as the basis of a form of enamel work. In the latter a design is chiselled in the metal and the cavities are filled with enamel material, which is fused into a solid mass with the metal by heating. See Candelabrum.

ORMONDE, MARQUESS OF. Irish title held by the family of Butler. The first earl of Ormonde was James Butler, created in 1328.

2nd Duke of
Ormonde
After Kneller

James Butler, the 12th earl (1610-1638), a strong supporter of Charles I and then of Charles II, was made a marquess in 1642 and a duke in 1661. Ormonde was succeeded by his grandson, also James Butler (1665-1746), as 2nd duke. He served under William III, and from 1710-13 was commander of the British army in the Netherlands. In 1715 he was impeached as a Jacobite, and his titles and estates were taken from him. The rest of his life was spent in the service of the exiled Stuarts.

In 1791 John Butler was allowed to take the title of earl of Ormonde, and in 1816 his son was made a marquess. The title soon became extinct, but was revived in 1825. In 1919 James Arthur Butler became the 4th marquess. His seat is Kilkenny Castle, and his eldest son is called the earl of Ossory.

ORMSKIRK. Urban dist. and market town of Lancashire. It is 12 m. from Liverpool, being served by the L.M.S. Rly. The church of SS. Peter and Paul, mainly Perpendicular, has a tower and spire side by side; it contains the burial vault of the Stanley family, whose former seat, Lathom House, is near. The town has a 17th century grammar school. Market day, Thurs. Pop. 7,655.

ORMUZD, ORMAZD, OR AHURA MAZDA. In Zoroastrian mythology, a being, or principle, representing light and goodness. He was the elder of the two emanations from the eternal one; the second being Ahriman, the spirit of Evil. They are regarded as ever working against each other, but in the end the victory of Ormuzd is assured.

ORNAMENTS. Term for all articles used in, and subservient to, divine worship. Ornaments of the church include the altar or communion table, paten, chalice, vessels for wine and water, font, pulpit, Bible, Book of Common Prayer, etc.; of ministers, alb, chasuble, cope, surplice, rochet, pastoral staff, mitre, etc. The question as to what is permitted according to the Ornaments Rubric in the English Book of Common Prayer has involved much controversy and litigation, but generally most of the ornaments used in 1549 are regarded as legal.

Ornithorhynchus. Generic name for the platypus or duckbill (q.v.), one of the three animals forming the zoological order Monotremata or Prototheria.

ORPEN, SIR WILLIAM (b. 1878). British painter. Born in Dublin, Nov. 27, 1878, he studied at the Dublin metropolitan school of art and the Slade School, London, and began to exhibit at the New English Art Club in 1899. He became A.R.A. in 1916, and R.A. in 1919. At first a painter of subject pictures of chiefly interiors, he developed into one of the most brilliant portraitists of the day. During the Great War he was commissioned by the government to paint pictures of the battle scenes and personalities on the western front, and also painted scenes in connexion with the Paris Peace Conference, 1919. These experiences he recounted in *An Onlooker in France, 1917-19*, published in 1921. He was knighted in 1918.

ORPHEUS. In Greek mythology, son of the muse Calliope. He was famed for his extraordinary skill with the lyre, bestowed

Sir William Orpen,
British painter
Elliott & Fry

Duchess of Orléans,
English princess
After Mignard

upon him by Apollo. He accompanied the Argonauts in their expedition to the Black Sea, and lulled to sleep the dragon which guarded the Golden Fleece. On his return he settled in Thrace, and there his wife Eurydice (q.v.) died of a serpent bite. Her memory remained with him, and he consistently rejected the advances of the Thracian women, who in revenge tore him to pieces. The muses set his lyre among the stars.

ORPINGTON. District of Kent. It is 14 m. from London and 9 from Sevenoaks, on the Southern Rly. The river Cray rises here, and around are large areas under fruit. The church of All Saints is mainly Early English, with some old brasses. Here, in 1873, Ruskin set up a printing establishment. During the Great War there was a large hospital for Canadian soldiers at Orpington. Pop. 7,047.

ORPINGTON. Name given to certain domestic fowls. The Black Orpington was raised by W. Cook of Orpington, Kent, who

Orpington. Cock of the white variety of the breed

stated that he raised them from crossings of the black Plymouth Rock, the Langshan, and the Minorca. The Buff Orpingtons are said to have been bred from Cochins crossed with ordinary farmyard fowls, and selected until the type was fixed. Orpingtons are good layers and good table birds. There is also a white Orpington.

ORRELL. Urban dist. of Lancashire, 3 m. from Wigan and near the Leeds and Liverpool canal. The chief industry is cotton manufacture. Pop. 6,775.

ORRIS ROOT. Dried rhizome of the

Florentine iris (*I. florentina*), which gives off a strong violet-like odour causing it to be extensively employed by the perfumer. It forms the basis of "violet powder" and other toilet powders. It possesses emetic and cathartic properties. Some of the orris root of commerce is obtained from *Iris pallida*.

ORSAY, ALFRED GUILLAUME GABRIEL, COUNT D' (1801-52). French dandy. Born in Paris, Sept. 4, 1801, in 1822 he formed an intimate friendship with the 1st earl and countess of Blessington, with whom he travelled in Italy. In 1827 he married Lady Harriet Gardiner, daughter of the earl's first marriage, but they soon separated. After the earl's death in 1829 d'Orsay lived with the countess at Kensington, and their house became famous as a social centre. With Lady Blessington he left for Paris, bankrupt, in 1849, and was appointed director of fine arts shortly before he died, on Aug. 4, 1852.

Count d'Orsay. French dandy After R. J. Lane, R.A.

ORSINI, FELICE, COUNT (1819-58). Italian revolutionist. A Romagnol by birth, he became an advanced liberal, and in 1844 was sentenced to life imprisonment for his connexion with the revolutionary party. Liberated under the amnesty of Pius IX, 1846, he was a member of the government of Rome during the republic of 1849, and on its fall became an indefatigable agitator. On Jan. 14, 1858, he threw a bomb at Napoleon III and his empress as they drove to the Opéra in Paris. They escaped injury, but ten other people were

killed and 150 wounded by the explosion. Orsini among them. He was arrested and executed March 13, 1858.

Felice Orsini. Italian revolutionist After Vintner

ORTHOCERAS. Genus of fossil nautiloid cephalopods. They are distinguished by their straight horn- or cone-shaped shells, the exterior of which is smooth or striated, and the interior divided into chambers by partitions. The fossil, which is one of the index fossils, is common in Palaeozoic limestones.

ORTHOCLASE. (Gr. *orthos*, straight, *klasis*, fracture). In geology, a potassium aluminium silicate or potash felspar. It is a constituent of many crystalline rocks, e.g. granite, porphyry, gneiss, etc., has a lustrous glassy white, light yellow, green, or red colour, and crystallises in the monoclinic system. It is found widely distributed, and many varieties are cut and polished for gem stones, e.g. moonstones and sunstones.

Orthodox Eastern Church. Alternative name for the Holy Orthodox Catholic Oriental Church, also known as the Greek Church (q.v.)

ORTHOPTERA (Gr. *orthos*, straight; *pteron*, wing) Name given to an order of insects. As a rule the fore wings are stiff, and when at rest they cover the large hind wings with which the insects fly. The mouth parts are adapted for biting. The metamorphosis is incomplete, the larvae resembling their parents but having no wings. There are more than 10,000 recognized species, which include the cockroaches, locusts, grasshoppers, earwigs, etc. See Insect.

Ortolan. Bird of the hunting family

ORTOLAN (*Emberiza hortulana*). Bird of the bunting family. A summer migrant to Europe, spending the winter in Africa, its plumage is reddish brown, streaked with black on the upper parts, with a yellow throat and greenish breast and head. It nests on the ground, and feeds on insects and various seeds. It is seen occasionally in England during the summer months. Numbers are netted in S. Europe and fattened upon grain as a table delicacy.

ORWELL OR GIPPING. River of Suffolk. Rising to the W. of Stowmarket, it flows S.E. to the North Sea. From its source to Ipswich it is known as the Gipping. The Orwell proper is an estuary, and extends 11 m. from Ipswich to Harwich, where it merges with the estuary of the Stour. See Ipswich.

ORYX. Genus of large antelopes. It includes about six species, which occur in Africa, Arabia, and Syria. They have long and bushy tails and are distinguished by their long, ringed horns, which are nearly straight. See Gemsbok.

OSAKA. City of Japan, in Honshu. It stands at the mouth of the Yodo, at the head of Osaka Bay. Osaka Castle dates from 1584. The walls were built of granite stones, but the superstructure was almost entirely destroyed by fire in 1868. There are shipbuilding yards and manufactures of cotton textiles, iron and metal goods, leather goods, ships, glass-ware, confectionery, and patent medicines. Osaka is a great exporting centre for textiles, refined sugar, and straw goods. There are exchanges for rice and cereals, cotton, cloth, and oils. The city owes its prosperity to Toyotomi Hideyoshi, who built the castle and made his capital here. Pop. 2,114,804.

OSBORNE HOUSE. Mansion in the Isle of Wight built for Queen Victoria. It is 1½ m. from E. Cowes, and, commanding a fine view of the Solent, is surrounded by an estate of about 3,000 acres. It was a favourite residence of the queen, who died here in 1901. There are other residences, Barton Manor and Osborne Cottage, on the estate. In 1902 King Edward presented the house and estate to the nation. Part of it was devoted to a convalescent home for officers. In 1903 a royal naval college was founded here, but in 1921 this was closed and the cadets and staff transferred to Dartmouth.

Osborne House, Isle of Wight, main front of the residence of Queen Victoria

OSCAR II (1829-1907). King of Sweden and Norway. He was born in Stockholm, Jan. 21, 1829, the third son of Oscar I. He succeeded to the throne on the death of his brother, Charles XV, in 1872, and his reign was chiefly occupied with the movement, which he resisted, to separate Norway from Sweden. Under the name of Oscar Fredrik he wrote a number of works in prose and verse, including a notable Military History of Sweden, and a biography of Charles XII. He died Dec. 8, 1907, and was succeeded by his son, Gustavus V (q.v.).

His father, Oscar I (1799-1859), was the son of Marshal Bernadotte. He married Josephine Beauharnais, granddaughter of the Empress Josephine, and proved a liberal and strongly anti-German monarch.

Oscar II, King of Norway and Sweden

OSHAWA. Town of Ontario, Canada. It stands on Lake Ontario, 34 m. from Toronto, and is served by the C.N.R. and C.P.R. It has a harbour and some manufactures. Pop. 11,940.

OSIER (*Salix viminalis*). Shrub or tree of the order Amentaceae. A native of Europe and N. Asia, it forms either a bushy shrub or a tree 30 ft high, growing in wet places. The long, straight branches are used for wicker-work. The leaves are narrow lance-shaped, the edges waved, and silvery beneath. The catkins are golden yellow. The purple osier (*S. purpurea*) does not attain the tree form, and its slender tough twigs have red or purple bark. Other willows are grown as osiers by pollarding the trunk.

Osier, in winter, showing long straight branches

OSIRIS. Egyptian deity. Originally the local god of Busiris, his worship developed during the Old Kingdom at Abydos, where he was traditionally interred. From being considered a virtuous benefactor, whence Egypt obtained her law

and agriculture, he became, by assimilation with Ra, a sun-god. He was also identified with other gods. The son of earth and sky, he was brother and husband of Isis and father of Horus. He was god of resurrection and eternal life, and judge of the dead. As lord of the underworld Osiris appears with a mummified body, wearing a plumed crown, and associated with ideas concerning the after-life. See Amenti; Anubis; Egypt; Isis; Serapis.

Osiris as the moon-god
From a statue in the
British Museum

OSLER, SIR WILLIAM (1849-1919). British physician. Born at Bondhead, Canada, July 12, 1849, he was appointed professor of physiology at McGill University, 1874, of clinical medicine at Pennsylvania University, 1884, of medicine at Johns Hopkins University, 1889, and regius professor at Oxford University, 1905. Created a baronet in 1911, Sir William Osler wrote widely and authoritatively on nearly every aspect of medicine. He died Dec. 29, 1919. Osler's books include *Principles and Practice of Medicine* and *A System of Medicine*.

OSLO. Capital of Norway, formerly called Christiania. It lies at the head of Oslo Fiord. The buildings include the old fortress of Akershus, the royal palace, Parliament House, university, and several museums. There are several fine parks. The city is an important rly. and commercial centre. There are ship-building yards, iron and steel foundries, and engine works, besides manufactures of paper, leather, matches, etc. The exports include timber, wood pulp, paper, matches, butter, condensed milk, fish, and hides. The name of the city was changed to Oslo as from Jan., 1925. It was called Christiania after King Christian IV of Denmark and Norway, who refounded it in 1624 after the destruction by fire of the old city of Oslo. Pop. 258,483.

Oslo. The Storting or Parliament House

OSMIUM. Rare metal, discovered in 1803. Its chemical symbol is Os, atomic weight 190.8; atomic number 76; specific gravity 22.0; melting point about 2,500° C. It is bluish white in colour with distinct lustre. It is found, chiefly associated with platinum, in the mines of Russia, South America, California, and the East Indies, in the form of osmiridium or iridosmine. The chief industrial use of the metal is in the manufacture of filaments for electric lamps.

OSMOSIS. Name applied to the diffusion of one liquid into another, when they are separated by a permeable membrane. The force impelling osmosis is known as osmotic pressure. A piece of bladder or parchment is a convenient membrane to employ in the apparatus. The direction of the osmosis varies according to the composition of the liquids in

the inner and outer vessels. If the osmosis be from the inner vessel to the outer, it is called exosmosis, if in the reverse direction endosmosis. Osmosis plays an important part in plant physiology and in chemistry.

OSNABRÜCK. City of Hanover, Prussia. It lies on the Hase, 70 m. W. of Hanover. Relics of its past include S. Mary's Church, a fine Gothic building, the R.C. cathedral with its cloisters, treasury, and relics of Charlemagne, and the town hall, wherein the treaty of Westphalia was discussed. The industries include iron and steel works. It is a rly. junction, and has a trade in cattle and horses.

Osnabrück was a member of the Hanseatic League. Its bishopric was founded about 800. In 1648, at the peace of Westphalia, it was arranged that it should be held by a Roman Catholic and a Protestant prince alternately. The last prince-bishop was George III's son, Frederick, duke of York. In 1815 its lands were added to Hanover. Pop. 89,079.

OSPREY. Bird of prey (*Pandion haliaetus*), known also as the fishing hawk. It is about 2 ft. long, the back and wings are dark brown, the crown of the head and the throat whitish, and the under parts white. It is found in nearly all parts of the world, but is rare in Great Britain. The nest, a large structure of sticks lined with moss, is usually built in a tree. It is always found near water, as the bird's food consists entirely of fish. The so-called osprey plumes which are articles of commerce are taken from a species of egret (q.v.).

Osprey. Bird of the
Australian species

OSSA. Mountain of Greece, in Thessaly. It lies E. of the river Peneus, and with its neighbouring height of Pelion (q.v.) is separated from Olympus by the vale of Tempe. The chief peak (6,398 ft.) is called Kissavo.

OSSETT. Borough of Yorkshire (W.R.). It stands near the Calder, 3 m. from Wakefield, with stations on the L.N.E. and L.M.S. Rlys. The chief industry is the manufacture of cloth, and in the vicinity are coal mines. Pop. 14,802.

OSSIAN (Ir. Oisín). Irish hero and bard of the 3rd century. The son of Finn Mac Cumhal, he is traditionally the great poet of the Gaels, and is himself a prominent figure in hundreds of ballads and tales from the 12th to the 18th century. He fled after the Fenian defeat at Gabhra in 293. A variant of a widespread tale relates that he was lured away by the daughter of the king of the Land of Youth, where he spent 300 years. Meeting S. Patrick, he recounted the past events to him.

OSSORY. Name of an old Irish kingdom. It existed for nearly 1,000 years, falling to pieces just before the English conquest of Ireland in the 12th century. It was part of the modern province of Leinster, roughly that now covered by Offaly (King's County), Leix (Queen's County), Kilkenny, and Carlow. Ossory is the name of a bishopric in the R.C. and Anglican churches, both cathedrals being situated at Kilkenny. See Ormonde.

OSTADE, ADRIAN VAN (1610-85). Dutch painter. Born at Haarlem, he

studied under Frans Hals, and spent the whole of his life at Haarlem, dying there April 27, 1685. A prolific painter of peasant genre, he was influenced in turn by Adrian Brouwer and Rembrandt. His brother Isaac (1621-49) painted landscapes

Ostend. The kursaal and part of the Digue, a promenade about 40 feet above the sea

OSTEND (Flemish, Oostende). Town of Belgium. It lies in flat country on the N. Sea coast, 14 m. W. of Bruges, with which it is connected by rly. and canal. Ostend is a popular watering place, and has a large kursaal, racecourse, theatres, and many other attractions. It has also the principal fishing fleet of the seaboard, and is a seaport of importance, with cross-Channel service, and the terminus of express lines to many parts of Central Europe. Pop. 44,241.

In the Great War Ostend was occupied by the British, Aug.-Oct., 1914, when it was entered by the Germans, who used it as a naval base, together with Zeebrugge. On the night of April 22nd-23rd, 1918, simultaneously with the attack on Zeebrugge, an attack was made on Ostend. On the night of May 9-10 a second attempt was made, the result being that *Vindictive*, used as a block-ship, was sunk in the harbour. Ostend was recovered by the Belgians in Oct., 1918. See Belgium.

Osteology (Gr. osteon, bone; logos, science). Science pertaining to bones. See Bone; Skeleton.

OSTIA. Ancient port of Central Italy. It was the port of Rome, and stood on the S. arm of the Tiber, which now flows by a different channel farther W., 14 m. S.W. of Rome. Its emporium or harbour became a naval station, and imported much wheat.

OSTRACISM. Political practice introduced by Cleisthenes at Athens in 508 B.C., and subsequently employed in other Greek states. Once a year every Athenian citizen had the privilege of writing on an oyster-shell (ostrakon) the name of any statesman whom he thought it would be desirable to send into exile. In the event of there being 6,000 votes adverse to any statesman, the decree of banishment or ostracism, as it came to be called, took effect. Athenians who suffered ostracism were Miltiades, Themistocles, Aristides, and Alcibiades, by the last of whom the practice was abolished.

OSTRICH (*Struthio camelus*). Largest living bird. Found wild in Africa, Arabia, and Mesopotamia, it is usually placed in the order Ratitae or running birds. The wings are small and useless for flight. A fine specimen stands nearly 5 ft. high at the back, and its neck accounts for about 3 ft. more. The legs, which are long and strong, and part of the thighs are bare, and the feet have only two toes. The head is relatively small, and is broad and flattened. The ostrich's beak is short and

Ostrich. Specimen of the African ostrich
Gambier Bolton, F.Z.S.

broad and the gape very wide. Ostriches are found in open country, specially desert, and never in wooded regions. They feed mainly on grass and leaves, but are practically omnivorous, and will swallow small mammals, birds, or reptiles.

Ostriches are chiefly valued for their plumes, and the establishment of farms for them dates from about 1867, and has developed into an important industry in S. Africa, Australia, the U.S.A., Algeria, and Argentina. The plumes are clipped usually three times in two years. See Cassowary.

OSTROGOTHS. Eastern branch of the Gothic people. They remained on the Dnieper when the others, who were called Visigoths, moved W. in the 3rd century. See Goths.

OSWALD (d. 642). King of Northumbria and saint. A son of King Ethelfrith, he crushed the British invaders near Hexham in 635 and became king of both Bernicia and Deira. In 642 he was defeated and killed at Oswestry by Penda, king of Mercia. Oswald is chiefly known for his efforts to promote Christianity, which caused him to be canonised.

OSWALDTWISTLE. Urban district of Lancashire. It is 3 m. from Blackburn, on the L.M.S. Rly. and the Leeds and Liverpool Canal. The chief industries are the making of cotton goods, chemicals, paper, and pottery, while around are stone quarries and coal mines. Pop. 15,440.

OSWEGO TEA (*Monarda didyma*) or **BEE BALM.** Perennial herb of the order Labiateae, native of N. America. It has square somewhat hairy stems, and opposite, ovalance-shaped, bristly leaves, which have a mint-like odour. The bright scarlet, two-lipped, tubular flowers are arranged in one or two whorls. The bracts beneath the flowers are coloured red. The folk-name indicates a use sometimes made of its leaves.

OSWESTRY. Borough and market town of Shropshire. It is 17 m. from Shrewsbury, on the G.W. Rly. S. Oswald's Church, Early English and Decorated, has been much restored. The grammar school dates from 1407. The industries include tanning and malting. There is also an agricultural trade. The town grew up around a monastery founded in memory of the Northumbrian king Oswald (q.v.), hence its name. Market day, Wed. Pop. 9,790.

OTAGO. Provincial dist. of South Island, New Zealand. Occupying the S. end of the island, it comprises Otago proper and Southland. Dunedin is the chief town, and the estuary at Dunedin is called Otago Harbour. The area of Otago proper is 13,957 sq. m.,

and of Southland 11,355. Pop., Otago, 149,522; Southland, 65,121. See New Zealand.

OTHO, MARCUS SALVIVS (A.D. 32-69). Roman emperor. He joined Galba in the rising against Nero, but later formed the conspiracy which resulted in Galba's murder. Otho was proclaimed emperor Jan. 15, 69, but in the same month Vitellius was also proclaimed emperor by the legions in Germany. The rival forces met at Bedriacum, where Otho was decisively defeated, and he put an end to his life, April 16, 69.

See Otto.

OTITIS. Inflammation of the organ of hearing. It may attack the outer ear, the middle ear, or the internal ear, and in all cases it produces deafness. External otitis is an inflammation of the skin of the outer ear. This should be frequently syringed with weak borax and water, dried, and smeared with zinc ointment.

Otitis media is an inflammation of the middle ear. It may be dry or moist, and occurs more often at or past middle life, and in rheumatic subjects. Internal otitis is occasionally the result of syphilis, and is sometimes caused by mumps. See Ear.

OTLEY. Market town and urban dist. of Yorkshire (W.R.) It stands on the Wharfe, 10 m. from Leeds, with stations on the L.M.S. and L.N.E. Rlys. The restored Perpendicular church of All Saints contains monuments to the Fairfax family, whose seat, Denton Park, is in the neighbourhood. The town has some manufactures and carries on an agricultural trade. Market days, Mon. and Fri. Pop. 9,536.

OTRANTO. City of Italy. It is on the S.E. coast on the strait of the same name, 45 m. S.E. of Brindisi, with which it is connected by rly. The cathedral contains a remarkable mosaic pavement of 1166; the church of San Pietro has Byzantine frescoes. The castle here gives its name to a romance by Horace Walpole. Pop. 2,729.

During the Great War the Strait of Otranto was closely patrolled by an Allied squadron, and British drifters guarded the nets laid to check the submarines.

OTTAWA. River of Canada, a tributary of the St. Lawrence. It rises in the W. of the prov. of Quebec, and joins the St. Lawrence by two branches at Montreal. Its length is 685 m. The Rideau Canal connects it with Lake Ontario. Its chief tributaries are the Gatineau, Lièvre, Coulouge, and Madawaska; most of these rivers are utilised for lumber transport.

OTTAWA. Capital of Canada. It is in the prov. of Ontario, where the Rideau joins the Ottawa, 116 m. from Montreal, and is served by the C.N. Railways, the C.P.R., and

Ottawa. 1. Parliament House, with the Tower of Peace. 2. Château Laurier Bridge and Hotel

Courtesy of the Canadian Government

the New York Central Rly. Electric lines connect it with its suburbs and with Hull across the Ottawa. The parliament house was burned down in 1916, but was rebuilt, a prominent feature of the new building being the Tower of Peace, containing a war memorial chamber. The National Museum, art gallery, observatory, and Rideau Hall are notable buildings. There are Roman Catholic and Anglican cathedrals, many churches and schools, a university, and some fine parks.

Largely a residential city, Ottawa is also a lumber centre and manufactures machinery, flour, paper, etc. The falls near provide plentiful water power. Pop. 122,731.

Otter. Common species of the aquatic mammal found in Great Britain
W. S. Berridge, F.Z.S.

OTTER (*Lutra*). Aquatic carnivorous fur-bearing mammal, belonging to the family Mustelidae. Found in Europe, Asia, and America, it is usually about 2 ft. long in body, with a tail 18 ins. long, and is cat-like in general form. Its thick brown fur is of considerable commercial

value, especially in the American species. The feet are webbed, and the long flattened tail assists in swimming. Otters are not uncommon in secluded waters of Great Britain, where they work havoc among the fish, of which they kill more than they need. They live in burrows in the river banks, but frequently descend to the sea, where they feed upon molluscs, crustaceans, and fish.

Otter hunting takes place from May to Oct. It is conducted on foot with otter hounds, of which there are a considerable number of packs in England and Wales, and a few in Scotland and Ireland.

OTTERBURN. Village of Northumberland. 31 m. from Newcastle, on the Rede, in Redesdale, it is famous for the battle fought between the Scots and English, Aug. 19, 1388. The invading Scots were attacked by Sir Henry Percy (Hotspur) and his brother Ralph, both of whom were taken prisoner. The ballad of Chevy Chase describes an otherwise unknown fight, often confused with this. See Chevy Chase.

OTTER HOUND. Breed of dog descended from the old Southern hound of Great Britain. The true otter hound resembles the harrier in general appearance, but has large broad feet and a rough thick coat of rather greasy hair. It possesses good scent and keen

Ottawa, Canada. Plan of the capital of the Dominion. See above

sight, is a powerful swimmer, and has great endurance. Its colour varies greatly. In height it should be 22 or 23 ins. Many so-called otter hounds are modified foxhounds. The otter hound has keen sight.

OTTERY ST. MARY.

Urban dist. and market town of Devonshire. On the Otter, 12 m. from Exeter, with a station on the Southern Rly., it is noted for its beautiful church, S. Mary's with two transeptal towers and other features of interest. Ottery was the birthplace of the poet Coleridge. Ottery figures in Thackeray's *Pendennis* as Clavering St. Mary. Market days, first and third Mon. Pop. 3,638.

OTTO. Name of four German kings and Roman emperors. Otto I, the Great (912-973) was the son of Henry the Fowler, whom he succeeded in 936. At first virtually little more than duke of Saxony, he ended by restoring the empire of Charlemagne. Gradually he extended his power, both in Germany and Italy, and in 962 was crowned emperor by the pope in Rome. He died May 7, 973.

His son, Otto II (955-983), became ruler, on his father's death, of Germany and Italy. Otto III (980-1002) succeeded his father, Otto II, at the age of three.

Otto IV (1174-1218) was the second son of Henry the Lion, duke of Bavaria and Saxony, and of Matilda of England. In 1208 he was elected emperor, and crowned in Rome, Oct. 4, 1209, but his authority was never fully recognized. He died May 19, 1218.

OTTO I (1848-1916). King of Bavaria. Born April 27, 1848, the second son of King Maximilian II, he became king on the death of his elder brother, Louis II, on June 13, 1886. He had, however, then been insane for ten years, and his uncle, Prince Luitpold, acted as regent until his death in 1912. It was then decided to depose the king as incurably insane, in favour of his cousin, Louis III. Otto died Oct. 13, 1916. See Bavaria.

Otto I,
King of Bavaria

OTTO I (1815-67). King of the Hellenes. Born June 1, 1815, the second son of Louis I, king of Bavaria, he accepted the throne of liberated Greece, Feb. 6, 1833. The revolution of Sept., 1843, compelled the king to call a National Assembly. In 1862 an insurrection led to the abdication of Otto, who retired to Bavaria. He died July 26, 1867.

OTTO OF ROSES (Arab. 'ytr, perfume). Volatile scented oil distilled from roses, chiefly *Rosa damascena* and *moschata*. It is used in scents, medicines, lotions and ointments. Centres of the industry are Kashmir, Damascus, S. France and Kazanluk, Bulgaria.

OTTOMAN. Name of the dominant Turkish people. It is derived from Osman, who about 1290 became the leader of a tribe living under the protection of the Seljuks. Having won a great reputation as a fighter, he declared himself independent. His tribe, known as the Ottoman Turks, entered on their career of conquest, and in 1453 took Constantinople. See Turkey.

OTWAY, THOMAS (1651-85). English dramatist. He was born at

Otter Hound, Champion type of the breed of dog used in otter hunting

Trotton, Sussex March 3, 1651, and in 1675 appeared his first play, the tragedy of *Aleibades*, which had some success chiefly owing to the line acting of Mrs. Barry, with whom Otway fell in love. Her cruel treatment of him drove him first into the army and a campaign in Flanders with a cornet's commission, and latterly to a life of degrading dissipation. He died in utter destitution, April 14, 1685. Otway's best known plays are the tragedies *Venice Preserved*, 1682, and *The Orphan*. He also wrote several comedies, including

The Soldier's Fortune, 1679.

OUDENARDE. Town of Belgium. It is 10 m. from Ghent, on the Schelde. The town hall is a beautiful 16th century building with a tower in five storeys. Pop. 6,355.

The battle of Oudenarde was fought July 11, 1708, between the British and their allies and the French. The result was a decisive victory for the allied armies, who were commanded by the duke of Marlborough.

ODUH. Eastern portion of the United Provinces of Agra and Oudh, India. In ancient days a flourishing kingdom, later successively under the sway of the Afghan and Mogul emperors, it became independent about 1732. In 1856 Lord Dalhousie deposed the king of Oudh, and his territory was incorporated in what were then called the North Western provinces. Its area is 24,153 sq. m. Pop. 12,166,642. See India.

ODUTSHOORN. Town of the Cape Province, S. Africa. On the Grobelaars river, a tributary of the Olifants, 277 m. by rly. from Port Elizabeth, it is the centre of a prosperous agricultural district in which fruit and tobacco are grown and ostriches are reared. To the N., 18 m. away, are the Congo Caves, among the finest stalactite caverns in the world. Pop. (whites) 5,649.

OUIDA. Pen-name of Marie Loniso de la Ramée (1839-1908), British novelist. Born Jan. 1, 1839, at Bury St. Edmunds, she was the daughter of Louis Ramée, a teacher of French. She wrote some 40 novels, including *Strathmore*, 1865; *Under Two Flags*, 1867; *Moths*, 1880; and *The Massarenes*, 1897; and a number of short stories and essays of merit. She died at Viareggio in Italy, Jan. 25, 1908.

Ouida,
British novelist

OULTON. Village and lake of Suffolk. The village is 2 m. from Lowestoft, on the L.N.E. Rly. Borrow lived here for many years. Oulton Broad is visited for yachting and angling. Pop. 4,870.

OUNCE. Measure of weight. In Great Britain it is the 12th part of a pound troy and the 16th part of a pound avoirdupois. A fluid ounce is a measure of capacity, and equals one avoirdupois ounce of distilled water at 62° F. The ounce troy contains 480 grains, and the ounce avoirdupois 437½ grains.

OUNCE OR SNOW LEOPARD (*Felis uncia*). Species of leopard. Found in the mountainous districts of Central Asia, it reaches a length of

7 ft. and differs from the true leopard in its long woolly fur, whitish-grey colour, large spots, and arched skull. It never descends to the plains, and preys mainly upon wild sheep and goats. See Leopard.

OUNDELE. Urban dist. and market town of Northamptonshire. On the Nene, 30 m. from Northampton, it has a station on the L.M.S. Rly. The church of S. Peter is a fine old building with a lofty spire. The Talbot Inn was built partly from materials brought from Fotheringhay. Brewing is an industry. Market day, Thurs. Pop. 2,655.

Oundle School was a country grammar school until the 19th century, when the Grocers' Company began to enlarge it. There is now accommodation for 500 boys.

OUSE. Name of several English rivers. It is a Celtic word meaning water. The Sussex Ouse rises between Horsham and Cuckfield, and flows to the English Channel at Newhaven. Its length is 30 m.

The Yorkshire Ouse is formed by the Ure and Swale, which unite near Boroughbridge. Thence, as the Ouse, it flows past York, Selby, and Goole to the Trent, with which it unites to form the Humber. The length is 60 m.

The Great Ouse rises near Brackley in Northamptonshire, and flows, mainly E., through Buckinghamshire, Bedfordshire, Huntingdonshire, Cambridgeshire, and Norfolk to the Wash, 2½ m. below King's Lynn. It is navigable to Bedford.

Oudenarde, Belgium. The 16th century town hall on the N. side of the Grande Place

OUTRAM, SIR JAMES (1803-63). British soldier and administrator. Born at Butterley Hall, Derbyshire, Jan. 29, 1803, he joined the East India Company in 1819. He was appointed chief commissioner of Oudh, and in 1857 commanded the Persian expedition. In the Indian Mutiny he joined Havelock on Sept. 15, helped to relieve the residency at Lucknow, and held it until relieved by Sir Colin Campbell. He was made a baronet, and is known as the Bayard of India. Outram died March 11, 1863.

Sir James Outram,
British soldier
After T. Briggs

OUZEL. Name for several birds of the thrush family (*Turdidae*). It is represented in Britain by the ring ouzel and the water ouzel (*Cinclus aquaticus*). The former is a large moorland blackbird, a migrant from Africa. The water ouzel or dipper is a resident. See Ring Ouzel; Water Ouzel.

OVAL, THE. Ground of the Surrey County Cricket Club. It is on the W. side of the Kennington Park Road, London, S.E., and covers about 9 acres. Opened as a cricket ground on April 16, 1846, it is held on a lease from the duchy of Cornwall. See Kennington.

OVAMBOLAND OR **AMBOLAND.** Country of South-West Africa. It is situated on both sides of the boundary between Angola and South-West Africa (q.v.). Area 16,000 sq. m.

OVARY. Gland in the female in which, after fertilisation by the spermatozoon, develop into new individuals. The ovaries are two in number, and are situated in the pelvis, one on each side of the uterus. Removal of the ovaries after puberty leads to cessation of menstruation, and possibly some degree of atrophy of the uterus and breasts.

Thomas Otway,
English dramatist

In botany, the ovary is the base of the pistil, containing the carpel or carpels, in which are the ovules or rudimentary seeds. See Flower.

OVEN BIRD. Popular name for the genus *Furnarius* of S. American birds, resembling tree-creepers, of which there are some 20 species. The name is derived from the oven-like nest constructed by some of the species. In the U.S.A. the golden-crowned water-thrush, a kind of wood-warbler, is called oven bird for a similar reason.

OVERBURY, SIR THOMAS (1581-1613). English poet and essayist. Born at Compton Scorpion, Warwick, his works include the poem *A Wife, Characters or Witty Descriptions of the Properties of Sundry Persons*, and *Crumbs Fal'n from King James's Table*. He was an associate of Robert Carr (later earl of Somerset), for opposing whose marriage with the countess of Essex he was imprisoned and poisoned, Sept. 15, 1613.

OVERTURE. Musical composition for instruments, intended originally as an introduction or opening of an opera, suite, oratorio, or play. Concert overtures are built on similar lines, but independent of any opera or play.

OVID (43 B.C.-A.D. 17). Roman poet, whose full name was *Publius Ovidius Naso*. He was born March 20, 43 B.C., at Sulmo (mod. Sulmona), in the country of the *Pacligni*. Being intended for the legal profession, he studied in Rome under the most famous rhetoricians of the day, but soon abandoned law for poetry. In A.D. 9 he was suddenly exiled to Tomi, now Constanta, on the Euxine. Unable to obtain remission of his sentence, he died at Tomi.

Ovid's extant poems, all except the *Metamorphoses* written in hexameters, may be divided into three classes: (1) *Erotic*. These include *Heroides*, a collection of fictitious love letters. (2) *Mythological*. These are: *Metamorphoses*, an account of the myths involving changes of form from the beginning of the world to the transformation of Caesar into a star; *Fasti*, a poetical calendar. (3) *Poems of exile*: *Tristia*, and *Epistulae ex Ponto*.

OVIEDO. City of Spain, capital of the prov. of the same name. Some 60 m. N.W. of León, on the edge of a fertile plain where sugar beet is extensively cultivated, it has national ordnance factories and manufactures textiles, leather goods, chocolate, and matches. The cathedral, rebuilt 1388, is one of the finest in Spain. The church of S. Miguel de Lino or Lillo, 9th century, has noteworthy carving. The university dates from 1604. Pop. 72,276.

OWEN, JOHN (1616-83). English Puritan. He was born at Stadhampton, Oxfordshire, and educated at Oxford. He became an independent, and went as chaplain with Cromwell to Ireland in 1649. Two years later he was appointed dean of Christ Church, Oxford, and in 1652 vice-chancellor of the university. At the restoration he was expelled from office, and became minister of an independent congregation in Leadenhall St., London. He died Aug. 24, 1683.

John Owen,
English Puritan
After 1655

OWEN, SIR RICHARD (1804-92). British scientist. Born at Lancaster, July 20, 1804, he entered the museum of the Royal College of Surgeons, London, 1826.

Sir Richard Owen,
British scientist

Ultimately he became its curator, a post he held until 1856, when he was appointed superintendent of the natural history department of the British Museum. In 1836 he had been selected for the first Hunterian professorship of comparative anatomy. He was knighted in 1884, and died Dec. 18, 1892.

OWEN, ROBERT (1771-1858). British social reformer. Born at Newtown, Montgomeryshire, May 14, 1771, in 1800 he became manager of and partner in the New Lanark Mills, and put into practice on a large scale his theory that the best work can only be expected from happy, prosperous, and educated employees. With the aid of Jeremy Bentham, he converted his business into a philanthropic trust for his workpeople. The colonies established by Owen—at Orbiston, in Lanarkshire, and at New Harmony, Indiana, U.S.A.—were unsuccessful. He died Nov. 17, 1858.

Robert Owen,
Social reformer

OWEN SOUND. Town and port of Ontario, Canada. On Owen Sound, where the Sydenham river falls into Georgian Bay, and 120 m. from Toronto, it is served by the C.N. Ry. and the C.P.R., and is a port for steamers to the Great Lakes and the St. Lawrence. Pop. 12,190. See Ontario.

OWL. Order of nocturnal birds of prey (*Strigiformes*).

Owl. 1. Long-eared (*Asio otus*).
2. Short-eared (*A. accipitrinus*).
W. S. Berridge, F.Z.S.

They are externally distinguished by their large heads and the radiated ruffs of feathers around the large eyes. They are noted for their silent flight and their keenness of vision at night.

The barn owl (*Strix flammea*) is tawny yellow above, with white face and under parts. In its nocturnal bunting it never wanders far from its abode, often a church tower or hollow tree. It utters a discordant scream, from which it is sometimes known as the screech-owl. The long-eared owl (*Asio otus*) is darker, with erect tufts of feathers above the eyes. It is gregarious, lives in dense pine woods, and usually varies its diet of small birds with insects.

The tawny owl (*Strix stridula*) is reddish brown above and reddish white barred with brown below, and is not uncommon in most wooded districts of England and Scotland. It makes its home in hollow trees, and utters the well-known hooting cry.

OX. Word of Anglo-Saxon origin, used for the male of the different species of the *Bovidae*. Oxen is one of the few existing forms of the old plural "en." The ox genus (*Bos*) includes the buffalo, bison, and yak, as well as the various domesticated breeds. All its members have hollow horns, as distinguished from the deer, which have solid antlers of bone, shed and renewed yearly.

Oxen belong to the ruminants. The stomach is four-fold, and the hastily-gathered food is stored in the first cavity or paunch until it can be regurgitated by means of the second or boneycomb stomach, and chewed at leisure.

With the one exception of the bison of North America, all oxen are natives of the Eastern hemisphere. See Cattle; Gyal; Zebu.

OXALIC ACID (H₂C₂O₄·2H₂O). A solid organic acid first prepared from wood sorrel (*Oxalis acetosella*), in which plant it occurs as the acid potassium oxalate. The acid is made on the commercial scale by treating sawdust from soft woods with a mixture of caustic potash and soda. It is largely used in calico printing and dyeing, and in the preparation of formic acid and synthetic dyes. Oxalic acid is also used in bleaching straw and flax, and also in cleansing brass and other metals.

OX-EYE DAISY or **DOG DAISY** (*Chrysanthemum leucanthemum*). Perennial herb of the order *Compositae*. A native of Europe and N. and W. Asia, it has spoon-shaped, deeply cut leaves and daisy-like flower-heads, 2 ins. across.

Ox-eye Daisy or
Dog Daisy

The rays are pure white, the disk florets yellow. It is a common weed in meadows.

OXFORD. City and eo. town of Oxfordshire. It is on the Thames, here called the Isis, which sweeps round the W. and S. of the city, and is here joined by the Cherwell. It is 63 m. by rly. from London, and is served by the G.W. and L.M.S. Ry. At Carfax, the centre of the old city, four streets meet: the High Street, the Cornmarket, Queen Street, and St. Aldate's. Across Magdalen Bridge, at the other end of the High Street, are modern suburbs. The chief industry is catering for the members of the university: there are also breweries and printing works, and an important cattle market. The cathedral, formerly the priory church of S. Frideswide, is included in Christ Church. Other interesting churches are the university church of S. Mary the Virgin, S. Peter in the East, S. Giles, S. Barnabas, S. Aldate, and S. Michael. All Saints is the city church.

In 1928 the boundaries of the city were extended considerably, the urban district of Headington and other adjoining areas being included. This extension brings within the boundaries the Morris Motor Works at Cowley. Pop. 73,660.

OXFORD UNIVERSITY. This dates from about 1100, and the oldest college was founded in the 13th century. Oxford university was soon famed and flourishing. The members became a body under a chancellor, protected by privileges from the king. Colleges and halls were rapidly founded. In 1571 the university was reorganized, and in 1636 its statutes were revised. The constitution was revised in 1854 and extensive changes made in 1877.

Apart from the colleges, of which there are 21 and two halls, the university owns a good deal of property. Its buildings and institutions in Oxford include the Bodleian Library, University Galleries, Sheldonian Theatre, Indian Institute, observatories, several museums, and the buildings erected for examination and other purposes. It owns the parks and has a botanic garden. The head of the university is the chancellor, and its acting head the vice-chancellor, the head of one of the colleges. Two members have been returned to

Oxford. The famous High Street,

Parliament since 1604. See Ashmole, Elias; also the articles on the separate colleges.

The Oxford University Press has been continuous since 1585, and the Biblio section since 1675. The associated name of the Clarendon Press dates from 1713, when, from the profits of Clarendon's History of the Rebellion, new offices were erected. The London publishing house is at Amen House, Warwick Square, and there are branches elsewhere.

OXFORD, EARL OF. English title held successively by the families of Vere and Harley. In 1142 one of the Veres was made earl of Oxford. Robert, the 9th earl (1362-92), was made duke of Ireland. Aubrey, the 20th earl, died in 1703, and the title became extinct.

In 1711 Robert Harley was made earl of Oxford. He was succeeded by his son Edward (1689-1741), who had no sons, and the title passed to a cousin. It became extinct in 1853.

OXFORD, ROBERT HARLEY, 1ST EARL OF (1661-1724). English statesman. Born in London, Dec. 5, 1661, he entered Parliament in 1689 as a staunch Whig. He was speaker 1701-5 and in 1706 was appointed secretary of state for the southern department. In 1710 he became chancellor of the exchequer and virtual prime minister. Despite the bitter opposition of Marlborough and Godolphin, secret negotiations with France were begun in 1711, and the peace itself was signed two years later. In 1715 he was impeached for concluding the French treaty, and was committed to the Tower, where he remained until 1717. He died May 21, 1724. Of literary tastes, he made the collection of books and MSS. which is famous as the Harleian MSS.

Earl of Oxford and Asquith
British politician
Russell

OXFORD AND ASQUITH, HERBERT

HENRY ASQUITH, 1ST EARL OF (1852-1928). British politician. Born at Morley, Sept. 12.

1852, he was educated at Pndsey, and then, his father, Joseph Dixon Asquith, being dead, at the City of London school. From there he went to Balliol College, Oxford, where he had a brilliant career. In 1876 he was called to the bar and settled in London. In 1886 Asquith was elected M.P. for East Fife as a Liberal, and in 1892 he was appointed home secretary, a post he retained for three years. In 1895 he became one of the leaders of the Opposition, and during the South African War he was a conspicuous figure in the Liberal Imperialist group.

In Dec., 1905, Asquith was appointed chancellor of the exchequer. He succeeded Campbell-Bannerman as prime minister in April, 1908, and held that office until Dec., 1916. He was secretary for war as well as prime minister when war was declared against Germany in Aug., 1914. On May 25, 1915, his government became a coalition, and on Dec. 5, 1916, Asquith resigned the premiership.

In 1920 Asquith, having in 1918 lost his seat in Fife, was chosen M.P. for Paisley. At the general election of October, 1924, he was defeated, and in Feb., 1925, he was given an earldom, taking the title of earl of Oxford and Asquith. In Oct., 1926, he resigned the leadership of the Liberal party, and he died

Feb. 15, 1928. His title passed to a grandson, Julian, a son of Raymond Asquith, who was killed in action in 1916.

In 1877 Asquith married Helen, daughter of Dr. F. Melland, of Manchester, and in 1894 he married Margaret (Margot), daughter of Sir Charles Tennant. A prominent figure in social life, Lady Oxford, as she became, wrote an Autobiography, 1922, Places and Persons, 1923, and a novel, Octavia, 1928. See Asquith.

OXFORD HOUSE. Anglican settlement in East London. Founded in 1881 for members of Oxford University, the house itself is in Mape Street, Bethnal Green, E., but its activities are spread over a number of buildings in the locality. In connexion is a women's settlement called S. Margaret's House.

OXFORD MOVEMENT. Name given to the movement for reforming the life and worship of the Church of England that began at Oxford in 1833. An essential feature was the restoration of some of the ceremonial of worship that had fallen into disuse since the Reformation, and it was here that strong opposition was aroused. It was also called the Tractarian Movement because its aims were set forth in *Tracts for the Times*, a volume by various writers first published in 1834, while the adherents of the movement were called High Churchmen or, by their foes, ritualists. See Keble; Newman; Pusey.

OXFORDSHIRE. County of England, known sometimes as Oxon. Its area is 748 sq. m. Of very irregular shape, it is bounded on the S. by the Thames. In the S.E. are the Chiltern Hills, reaching up to 700 ft. Spurs of the Cotswolds enter the county, but the rest of it is undulating or flat. The chief rivers, tributaries of the Thames, are the Windrush, Cherwell, Thame, and Evenlode. It is served by the Gt. Western and L.M.S. Rlys. and the

Oxfordshire. Map of the South Midland county of England, sometimes known as Oxon

Oxford Canal. Oxford is the county town; other places are Banbury, Henley-on-Thames, Chipping Norton, Bicester, Thame, and Witney. Herein are historic and picturesque places such as Woodstock, Burford, Bampton, and Dorechester. Pop. 189,615.

OXFORDSHIRE AND BUCKINGHAMSHIRE LIGHT INFANTRY. Regiment of the British Army. It was originally the 43rd and 52nd Foot, raised in 1741 and 1755 respectively, the two being united as the

Oxford and Bucks Light Infantry badge

Oxfordshire Light Infantry in 1881. The 43rd served under Wolfe at the capture of Quebec in 1759 and in the West Indies, while both it and the 52nd fought in the American War of Independence. About 1801 the two, together with the 95th, were placed under Sir John Moore, were called light infantry, and became the famous light division. It won honour during the Indian Mutiny and in the South African War. In the Great War the regiment had, in addition to its regular battalions, territorial and service battalions, and several allied units from New Zealand and Canada. The depot is at Oxford.

OXFORD STREET. London thoroughfare. It runs W. from New Oxford Street, a link with Holborn, to join the Bayswater Road at the Marble Arch, W. Where it crosses Regent Street is Oxford Circus. New Oxford Street, opened in 1847, covers the site of the "rookery" of S. Giles. Oxford Street, named after Edward Harley, earl of Oxford, was formerly known as Tyburn Road. The street is a shopping centre, and in 1929-30 a number of fine new buildings were erected.

OXIDATION. Term in chemistry. It is applied in the strict sense to changes which result in the formation of new compounds with oxygen. The term oxidation has, however, been extended to kindred changes, such as new unions with chlorine or with some other element. See Oxygen.

OXIDES. In chemistry, compounds which oxygen forms with other elements. They are classified as: (1) Acid-forming oxides, those which when combined with water form acids; this class is also known as acid anhydrides, i.e. acids without water. (2) Basic oxides, produced when metals burn in air or oxygen. When combined with water basic oxides form hydroxides or hydrated oxides. (3) Peroxides, which contain more oxygen than basic oxides; part of the oxygen is loosely combined, and is given off on heating. (4) Neutral or indifferent oxides. See Anhydrides; Oxygen.

OXIDE ORES. The more important oxide ores are those of iron, the haematites; magnetic iron ore; magnetite; siderite; chalybite or spathic iron ore; cuprite or copper ruby ore; zincite or red zinc ore; and cassiterite.

OXLIP (*Primula elatior*). Perennial herb of the order Primulaceae, a native of Europe and Siberia. Its flowers are similar to those of the primrose, with short individual stalks springing from the top of a stout, tall stem like that of the cowslip. What is commonly known as the oxlip in gardens is a hybrid between the primrose and cowslip.

OX PECKER OR RHINOCEROS BIRD (*Buphaga*). Bird found in Africa. They are dull brown above and light brown beneath, and about

Oxlip. Leaves and flowers

the size of a starling. Insectivorous, they get their name from the habit of settling on the backs of the ox and rhinoceros to search for parasitic insects.

OXYGEN. Most widely distributed of the chemical elements, chemical symbol O, atomic weight 16, atomic number 8. It is a colourless, odourless, and tasteless gas, and forms about 21 p.e. by volume of the atmosphere. Oxygen also occurs in enormous quantities in the combined state. The characteristic of oxygen is its power of supporting combustion. It is essential to life.

In the laboratory oxygen is usually prepared by heating potassium chlorate, generally mixed with one-eighth its weight of manganese dioxide. This method was employed for making large quantities before the discovery of cheaper processes. When barium dioxide is heated it gives off an atom of oxygen, and yields the lower oxide (BaO). This process has been employed on a very large scale for the preparation of oxygen, the advantage being its economical working. It is known as the Brin process.

Oxygen is employed in medicine in cases of pneumonia. It is utilised also to make good a deficiency in the air of confined spaces, e.g. in submarines and coal mines, and is used in diving apparatus. When oxygen and hydrogen are burnt together in a special jet, a flame of very high temperature is so obtained, in which refractory metals such as platinum can be readily melted. When the oxyhydrogen flame is allowed to impinge on a cylinder of lime an intense white light is obtained, known as the limelight, or Drummond light. Oxygen is supplied on a commercial scale compressed into steel cylinders of various sizes. See Atmosphere; Combustion; Ozone.

OXYRHYNCHUS. Ancient town near Bahasa, Upper Egypt. The oxyrhynchus (sharp-snouted) fish was venerated in the vicinity. Great finds of papyri were made here by B. P. Grenfell and A. S. Hunt.

OYSTER (*Ostrea*). Genus of bivalve molluscs. Over 100 species are known. In the edible oyster (*O. edulis*), common round the British coasts, the valves of the shell are unequal, the left valve, by which the animal is attached to the rock, being the larger. The exterior is rough and irregular, and the interior is white and pearly. The mantle edges are open all round, and the oyster feeds by lying with its valves slightly open, when the minute organisms on which it subsists are brought to its mouth by current movements in the surrounding water.

The oyster is extremely prolific. The spawning time is from May till August, during which the oyster is out of season. The ova hatch out on the folds of the mantle edges, and the young are periodically discharged as a cloud of spat. At this period the young swim freely in the water by means of cilia, and are the prey of many enemies. The survivors soon attach themselves to rocks or other objects, where they remain for the rest of their lives.

British native oysters—notably those laid down on the beds at Whitstable—have the reputation of being the best in the world. See Bivalve; Mollusc; Pearl.

OYSTER CATCHER OR SEA PIE (*Haematopus ostralegus*). British shore bird belonging to the plover tribe. The head and upper parts are black and the under parts white, while the long and straight beak is reddish orange. It is found about all the more rocky parts of the coast, and feeds upon molluscs, crustaceans, and marine worms.

Oyster Catcher, a British shore bird
W. S. Berridge, F.Z.S.

OYSTERMOUTH. Watering place of Glamorganshire, Wales, now part of Swansea. It stands near Mumbles Head, 5 m. from Swansea, and is on the L.M.S. and G.W. Rlys. In 1920 it became part of the borough of Swansea. The site and ruins of the castle here were given to the town by the duke of Beaufort in 1928.

OZOKERITE. Solid hydrocarbon mineral resembling beeswax. It is mined in various parts of the world, and, geologically, is always accompanied by petroleum. The white ozokerite is used for candle-making. A semi-solid substance is also obtained resembling vaseline, while the residue in the stills, consisting of a hard, black, waxy mass, is employed, mixed with indiarubber, for insulating electric cables. See Paraffin.

OZONE (O_3). Gas with a peculiar odour somewhat resembling that of dilute chlorine. It is a form of oxygen containing three atoms in the molecule against two atoms in a molecule of ordinary oxygen. The gas readily changes into ordinary oxygen, but has distinct properties. The peculiar odour of the air noticed in sea breezes is due to the presence of ozone. It is formed on a large scale by the discharge from an electrical machine in oxygen or air. Ozone is a powerful oxidising agent.

P. Sixteenth letter of the English and Latin alphabets. It is a voiceless labial or lip-sound. Its normal sound is that in peck, although in some cases it is mute, or nearly so, as in psalm, attempt. The combination ph in words derived from the Greek is pronounced f, as in philology. See Alphabet; Phonetics.

PAARDEBERG, BATTLE OF. Fought between the British and the Boers, Feb. 18, 1900. Near Paardeberg Hill the two armies came into touch. On Feb. 18 the Boers, entrenched in the dry bed of the river, were attacked from both sides, but when night fell the British infantry had lost heavily. The attack was not renewed, but starvation did its work, and on Feb. 27 4,000 Boers surrendered.

Paca or Spotted Cavy, S. American rodent related to the agouti
W. S. Berridge, F.Z.S.

PAARL, THE. Town of Cape Province, S. Africa. It stands on the Berg river, 36 m. from Cape Town, with which it is connected by rly. In the surrounding district the vine is grown. The town extends for about 7 m. along the river bank. The name means pearl. Pop. (whites) 6,678. To the W. of the town is the Paarl Mt.

PACA OR SPOTTED CAVY (*Coelogenys paca*). Rodent mammal related to the agouti. It is found in Central and S. America. Its fur is brown, with rows of white spots along the sides of the body. It is about 2 ft. long, and in form suggests a rabbit without the characteristic ears or the long hind limbs. It lives in burrows and does great damage to the crops.

PACHMANN, VLADIMIR DE (b. 1848) Russian pianist. Born at Odessa, July 27, 1848, he studied under his father, Vincent de Pachmann, a professor at Odessa, and then in Vienna. In 1878 he appeared at the Gewandhaus concerts in Leipzig, and afterwards in most of the great cities of Europe. He frequently visited London.

PACIFIC OCEAN. Largest of the oceans. It embraces about three-eighths of the total sea area. Northwards it is very definitely limited by the narrow Bering Strait, which contains a belt of shallow water stretching from the E. Cape of Asia to the American Cape Prince of Wales. Like the Atlantic, it is widely open to the S.

The Pacific differs from the Atlantic, not only in shape, but in its greater mean depth, which is 2½ m. as against 2 m., and in its greater absolute depth, for the deepest sounding hitherto obtained is that of 5,348 fathoms, off Mindanao, in the Philippines.

After the Great War the question of the control of the Pacific Ocean became an acute international problem, and in 1921 President Harding called a conference at Washington to discuss, among other questions, this matter. In 1922, by treaty the United States, Great

PADEREWSKI, IGNACE JAN (b. 1859) Polish pianist. Born at Kurylowka, Podolia, Nov. 18, 1859, he showed extraordinary talent on the piano when a child.

Ignace Paderewski,
Polish pianist

He played first in London in May, 1890, and his tours in Europe and America placed him in the front rank of living pianists. He also won distinction as a composer, his works including the opera *Manru*. In 1900 he founded the Paderewski fund with £2,000 to reward musicians. He was prime minister of Poland in Jan.-Dec., 1919, and represented his country at the Paris peace conference in 1919. Pron. *Pahd-er-efski*.

PADIHAM. Market town and urban dist. of Lancashire. It stands on the Calder, 8 m. from Blackburn and 3 m. from Burnley, with a station on the L.M.S. Rly. The chief building is S. Leonard's Church, an old foundation rebuilt in the 19th century. The industries include the manufacture of cotton, while coal mines and stone quarries are in the neighbourhood. Market day, Fri. Pop. 12,474.

PADSTOW. Urban dist. and seaport of Cornwall. It stands on the north coast, near the estuary of the Camel, 12 m. from Bodmin, with a station on the Southern Rly. The church of S. Petroek is an old building with some features of interest. S. Enodock's church has a Norman font. The name is a corruption of Petroek's Stow. Padstow Bay is formed by the Camel. Pop. 1,636.

PADUA. City of Italy. It stands on several branches of the Bacchiglione, just above its confluence with the Brenta, 22 m. W. of Venice, for which it is the rly. junction. Nearly all the ancient monuments and buildings have been destroyed. The university, founded in 1222, was famous throughout the Middle Ages. Many streets are bordered by arcades; the Renaissance cathedral and the 13th century church of Sant' Antonio, before which stands Donatello's equestrian statue of Gattamelata, the soldier of fortune, are notable. The Madonna dell' Arena and the Eremitani contain frescoes by Giotto and Mantegna. Padua has manufactures and a trade in agricultural produce. Pop. 125,159.

Paestum. Temple of Neptune, an example at 6th century B.C. Greek architecture

PAESTUM. Ancient city of Italy. It stands on the Gulf of Salerno, 24 m. by rly. from the city of Salerno. Founded by Greeks from Sybaris about 600 B.C., and originally called Poseidonia, it became a Roman colony in 273 B.C. There are remains of three Greek Doric temples: the Temple of Neptune, 197 ft. long, 80 ft. wide; the so-called Basilica, and the Temple of Ceres. All three probably belong to the 6th century B.C. The city was surrounded by a wall partly preserved, and there are remains of a Roman amphitheatre and temple.

PAGANINI, NICOLÒ (1784-1840). Italian violinist. Born at Genoa, Feb. 18, 1784, he made his first public appearance when nine

years of age. In 1798 he began a wandering career, gaining fame as a violinist of extraordinary powers. In 1828 he extended his tours beyond Italy, visiting Vienna, Berlin, Paris, and England. He died at Nice, May 27, 1840. He composed many pieces for the violin, including some caprices which have been arranged for the piano by both Schumann and Liszt.

PAGE. In feudal times, a youth of gentle birth in training for esquireship and knighthood, who acted as assistant to an esquire in attendance on a knight and his lady.

PAGE, WALTER HINES (1855-1918). American diplomatist and editor. He was born at Cary, North Carolina, Aug. 15, 1855. In

W.H. Page, American diplomatist
Elliot & Fry

1890 he took control of The Forum, after which he edited in succession The Atlantic Monthly and The World's Work. In 1899 he became a member of the publishing house of Doubleday, Page & Co. In 1913 Page was appointed ambassador to Great Britain, and he was in London during the whole of the war period, showing in many ways, not least in his letters to Wilson, his sympathy with the cause of the Allies. He resigned in Aug., 1918, and died Dec. 22, 1918. Consult *Life and Letters of W. H. Page*, edited by B. J. Hendrick (3 vols.), 1922-25.

PAGET. Famous English family. Its first prominent member was William Paget, an official of the city of London, who lived about 1500. His eldest son, William Paget (1506-63), was a secretary of state. He was also a high official under Edward VI and Mary, and was created a baron in 1549. He obtained a good deal of wealth, including Beaudesert, Staffs, still the seat of the Pagets. A descendant, Henry Paget, was made an earl in 1784, and in 1815 the 2nd earl was made marquess of Anglesey (q.v.).

PAGET, SIR JAMES (1814-99). British surgeon. Born at Yarmouth, Jan. 11, 1814, he became a student at S. Bartholomew's Hospital, London, 1834, and demonstrator in the hospital 1839. He rapidly became famous as a pathologist and surgeon, his lectures, 1847-52, as professor of anatomy at the College of Surgeons, afterwards published in book form, being a standard text-book for many years. In 1871 he was made a baronet, and in 1875 president of the Royal College of Surgeons. He died Dec. 30, 1899. Of his sons, Francis (1851-1911) was bishop of Oxford and Henry Luke bishop of Chester.

PAGODA. Term in European use denoting a tower-like structure in India and E. Asia. A 16th century Portuguese corruption either of dagoba, a stupa or tope, or of Pers. but-kadah, an idol-temple, it designates in India temples with pyramidal towers. In Burma it denotes the Buddhist paya or sedi, a bell-shaped structure with conical final, often gilded. See illus. under Mandala.

PAGODA TREE (*Sophora japonica*). Tree of the order Leguminosae, a native of China and Japan. The long bluish-green leaves are divided into about a dozen oval leaflets, and the small cream-coloured flowers are lavishly produced in large clusters. The Chinese obtain from the flowers a fine yellow dye.

Pagoda Tree. Leaves and flower sprays

Padua, Italy. Thirteenth century church of Sant' Antonio and statue of Gattamelata by Donatello

Britain and Japan bound themselves to maintain the existing position as regards the provision of naval bases and the fortification of strategic positions.

PACIFIC FLIGHT. In June, 1928, Captain C. Kingsford-Smith, in the Southern Cross, flew from Oakland, California, to Brisbane, covering the 7,300 miles in three stages. The Australian Government granted him £5,000.

PACTOLUS. Brook in Lydia, famous for the gold found in its sands in classical times. It is believed to be the modern Sarabat, rising in the Boz Dagh.

PADDINGTON. Met. bor. of the co. of London. Between Marylebone and Kensington, it is intersected by the Harrow Road and a branch of the Grand Union Canal, and includes the terminus of the G.W.R., completed 1856, and the dists. of Maida Vale, Tyburnia, and Bayswater, with the busy shopping centre of Westbourne Grove. In addition to the town hall, enlarged in 1906, the bor. contains S. Mary's Hospital, founded in 1845, and a technical institute. In the churchyard of S. Mary's, Paddington Green, are the graves of Sarah Siddons, Benjamin Haydon, and Joseph Nollekens. A notable open space is the recreation ground of 27 acres at Kilburn Park. Two members are returned to Parliament. Pop. 146,700. See London.

Another Paddington is a suburb of Sydney, N.S. Wales. It has an imposing town hall.

PADDY. Rice in the husk. Paddy is the form used throughout the East, but in America it becomes baddy. Fields of growing rice, and also very low-lying fields, are called paddy fields. See Rice.

PAHANG. One of the Federated Malay States, now a British possession. With a long coast on the China Sea, it lies between Johore on the S. and Kelantan and Trengganu on the N., and is separated from the other three states of the Federation by mts. It consists almost entirely of the basin of the Pahang. In 1881 it became a British protectorate. Pekan, at the mouth of the Pahang, is the seat of the sultan; Kuala Lipis is the administrative capital. Its area is 14,000 sq. m. Pop. 146,064. See *Malaya*.

PAIGNTON. Urban dist. and watering place of Devonshire. It stands on Tor Bay, 2 m. from Torquay, with a station on the G.W. Rly. The chief building is the Perpendicular church of S. John, with interesting features. The Bible Tower is part of the old palace of the bishops of Exeter. Pop. 18,000.

PAIN, BARRY ERIC ODELL (1864-1928). British author. Born Oct. 22, 1864, he turned early to literary work, and became known as a writer of humorous stories and novels. In a Canadian Canoe appeared in 1891, and subsequent works include *Stories and Interludes*, 1892, *The Kindness of the Celestial*, 1894, *Eliza*, 1900, *Memoirs of Constantine Dix*, 1905, *Wilhelmina* in London, 1906, *Eliza Getting On*, 1911, *Exit Eliza*, 1912, and *Innocent Amusements*, 1918. His *Collected Tales* were published in 1916; he wrote *The Short Story*, a study in literary craftsmanship, in 1915. Barry Pain died May 5, 1928.

PAINE, THOMAS (1737-1809). British author. Born at Thetford, Norfolk, Jan. 29, 1737, he emigrated to America. Settling in Philadelphia, he issued in 1776 a pamphlet entitled *Common Sense*, putting the case for independence which Washington admitted to have had great influence on the colonists. In 1787 Paine returned to England and issued *The Rights of Man* as a counterblast to Burke's *Reflections on the French Revolution*. The work made a great sensation, and Paine was indicted in 1792, but escaped to France. There he was at first a popular hero, but later he was put in prison, where he remained for nearly a year. The first part of *The Age of Reason* had been finished just before his arrest, and the second part followed in 1795. The book was an attack upon revealed religion. Paine died in New York, June 8, 1809.

Thomas Paine,

After Homney

and Paine was indicted in 1792, but escaped to France. There he was at first a popular hero, but later he was put in prison, where he remained for nearly a year. The first part of *The Age of Reason* had been finished just before his arrest, and the second part followed in 1795. The book was an attack upon revealed religion. Paine died in New York, June 8, 1809.

PAINLEVÉ, PAUL (b. 1863). French politician. He became professor of science at Lille in 1886, and at the Sorbonne seven years later. He was minister of public instruction and inventions, 1915, minister of war, March-Sept., 1917, and prime minister, Sept.-Nov., 1917. He was criticised for the failure of the French offensive of April, 1917, which Nivelle's supporters maintained was due to the interference of the cabinet with military plans. In April, 1925, he again became for a short time prime minister, and in 1926-30 was minister of war.

Paul Painlevé,
French politician

PAINTED LADY (*Pyrausta nardui*). British butterfly of the family Nymphalidae. It has tawny-orange wings heavily blotched with black and spotted with white. The caterpillar is grey-green or blackish, protected by short, branched spines; it feeds upon various plants, chiefly thistles. In some years it is exceedingly abundant, owing to great migrations, probably from N. Africa, whence it swarms to many parts of the world.

PAINTING. Prehistoric and antique paintings were done with coloured earths. In ancient Egypt and Greece the colours were mixed with water and fixed with gum. But the craft of painting as we know it began with the early Italians, who drew an outline on a wall covered with fresh plaster and filled it in while wet with water colour in flat coats. This was fresco. They used also tempera.

The desire to show form in depth by means of light and dark came with the renaissance. Masaccio was the pioneer of this development; then perspective was created by Uccello (1397-1475), and the foreshortening of figures by Mantegna. Leonardo completed the break away from the old limitations of Italian flat painting.

Oil painting originated with the Van Eycks in Flanders, but their secret died with them, and the process used in Italy down to Perugino was transparent oil colour imposed upon solidly painted tempera. Perugino, Verrocchio, Leonardo and others adopted the new process in Florence, and Venetians, such as Tintoretto and Veronese, embraced it with enthusiasm. The Florentines, following the Flemings, painted a solid oil impasto over a monochrome on a white ground, while the Venetians added a glaze of transparent oil colour. Florentine art decayed during the 16th century, but a vigorous school had developed at Naples and in Germany, and during this century and the next great advances were made in Flanders, Spain, Holland, and Venice. The 18th century produced Watteau, Chardin, and Fragonard in France, Hogarth, Reynolds, and Gainsborough in England.

Landscape and subject painting, heralded by Claude Lorrain and the Dutch masters in the 17th century, developed strikingly in the 19th in the romantic and impressionist schools. Post-impressionism, cubism, futurism, vorticism, and expressionism are terms that describe developments of modern painting.

Below is given a list of the principal schools, with their dates and representative artists.

ITALIAN, 12th to 18th CENTURY. *Byzantine School*, 9-12 cent.: Margaritone, Cimabue. *Siena*, 14 cent.: Duccio. *Florence*, 14-15 cent.: Giotto, Fra Angelico, Filippo Lippi, Filippino Lippi, Botticelli, Uccello, Masaccio, Michelangelo. *Venice*, 15-18 cent.: Carpaccio, the Bellini, Titian, Giorgione, Tintoretto, Veronese, Guardi, Canaletto, Tiepolo. *Milan*, 15 cent.: Leonardo da Vinci, Luini. *Rome*, 15-18 cent.: Raphael, Perugino, Romano. *Naples*, 16 cent.: Salvator Rosa, Caravaggio. *Bologna*, 16-18 cent.: Francia, the Caracci. *Reni*, *Padua*, 14-15 cent.: Squarcione, Mantegna. *Genoa*, 15-17 cent.: Paggi, Strozzi. *Ferrara*, 15-17 cent.: Dossi, Costa. *Parma*, 15-16 cent.: Correggio.

FRENCH, 15th to 20th CENTURY. *Classic School*, 17-19 cent.: Claude Lorrain, Poussin, David, Ingres, Puvion de Chavannes. *Louis Quinze and Louis Seize*, 18 cent.: Watteau, Fragonard, Boucher, Greuze, Chardin. *Romantic School*, including Fontainebleau Group, 19 cent.: Delacroix, Delacroix, Millet, Corot, Diaz, Roussau, Monticelli. *Realist School*, 19 cent.: Courbet, Bastien-Lepage, Constant, Donnay, Duran. *Impressionist School*, 19 cent.: Manet, Monet, Degas, Sisley, Renoir, Morisot. *Post-Impressionist School*: Cézanne, Matisse.

GERMAN, 14th to 17th CENTURY. *Cologne*, 14-15 cent.: Meister Wilhelm, Lochner. *School of Scharia (Cologne, Ulm, Augsburg)*, 15-16 cent.: Schongauer, Holbein the Elder, Holbein the Younger. *Nuremberg*, 15-16 cent.: Albrecht Dürer.

SPANISH, Madrid, 16-19 cent.: El Greco, Velazquez, del Mazo, Pareja, Carreño, Coello, Goya, Fortuny. *Seville*, 16-18 cent.: Fernandez, Vargas, Herrera, Cano, Murillo, Valdes, Leal.

DUTCH, 17th CENTURY. Rembrandt, Goyen, Hobbema, Ruissdael, Potter, van der Velde, Cuyp, Hals. *The "Little Masters"*, 17 cent.: Dou, Vermeer, de Hooch, Terburg, Steen, Brouwer.

FLEMISH, 14th to 17th CENTURY. Hubert and Jan van Eyck, Memling, van der Weyden, Massys, Mabuse, Rubens, Van Dyck.

ENGLISH, 17th to 20th CENTURY. *Portraitists*, 17 cent.: Lely, Kneller. *Portraitists*, 18 cent.: Reynolds, Gainsborough, Romney, Lawrence. *Subject and Landscape Painters*, 18-19 cent.: Hogarth, Morland, Crome, Turner, Constable, Cotman, Watts, Millais, Leighton. *Pre-Raphaelite School*, 1849-c. 1900: Hunt, Rossetti, Burne-Jones. *Modern Painters*: Whistler, Sargent, Brangwyn, John.

SCOTTISH, 18th to 20th CENTURY. *Portraitists and Subject Painters*, 18 and 19 cent.: Raeburn, Wilkie, Orchardson, Pettie. *Landscape Painter*, 19 cent.: McTaggart. *Modern Painters*: Guthrie, Lavery, etc.

PAISLEY. Burgh of Renfrewshire, Scotland. It stands on the White Cart, near its union with the Clyde, and is served by the L.M.S. Rly., being 7 m. from Glasgow. The abbey church dates mainly from the 15th century. In 1928 it was opened after extensive restoration work carried on intermittently since 1862. It contains Stewart tombs.

The chief industry is the manufacture of thread, here being the mills of the firm of Coats. Other manufactures include carpets, chemicals, starch, soap, and preserves. Shipbuilding is carried on and there are engineering works. About 1700 Paisley began to be a manufacturing centre, the famous shawls being made here; but it was the introduction of the cotton thread industry about 1810 that began its modern prosperity. Pop. 84,837.

PALACIO VALDES, ARMANDO (b. 1853). Spanish novelist. He was born at Entralgo, in Asturias, Oct. 4, 1853, and became editor of the *Revista Europea*, in which his first essays appeared. His first novel, *El Señorito Octavio*, 1881, was followed by *Marta y Maria*, 1883, and by others, of which the most notable were *Riverita*, 1886; *El Cuarto Poder* (The Fourth Power, a novel of journalistic life), 1888; and *La Espuma* (Froth), 1892. Later work included *La Aldea Perdida*, 1902. *Papeles del Doctor Angélico*, 1911; *La Novela de un Novelista*, 1922; and *Los Carmenes de Granada*, 1928.

PALAEOGRAPHY (Gr. palaios, ancient; graphein, to write). Study of ancient handwriting. It concentrates upon the forms of writing in inscriptions on plant materials, such as papyrus, vellum, and paper. In the case of undated MSS., palaeography is often able to decide problems of date by considerations of style. It is also of decisive importance in determining the genuineness of documents. Ancient MSS., mostly in the form of rolls, tablets, or books, sometimes occur on leaves, bark, linen, potsherds, and wood boards. The writing implements were pointed, split, or frayed reeds, stiles and quills, the hairbrush being of Chinese invention. The scripts tend to become running or cursive hands. See *Codex*; *Writing*.

PALAEOLITHIC. Term introduced by Sir John Lubbock, afterwards Lord Avebury, to denote the older phase of the prehistoric stone-aged civilization which preceded the use of metals. This phase was itself preceded by the colithic, characterised by the production of still cruder stone implements called coliths, and was followed by the neolithic age. The palaeolithic age has been divided into six consecutive periods: Lower: Chellian, Acheulian, Mousterian. Upper: Aurignacian, Magdalenian. Each is marked by characteristic types of flint working, and by an advancing growth of material achievement, fine art, and social organization. See *Anthropology*; *Man*; *Stone Age*.

Palanquin of the type which is in common use in China

PALANQUIN or **PALKI** (Skt. paryanka, a bed). Eastern conveyance for one person, in the form of a litter, borne on the shoulders of two or more, generally four men, by means of poles passed through rings at each end. Originally open, it is now an enclosed box, with sliding panels or latticed shutters.

PALATE. Roof of the mouth, separating the cavity of the nose from the mouth. It consists of the hard palate in front, formed mainly by the two palate bones, and the soft

palate behind, consisting of muscular tissues between two layers of mucous membrane. It is prolonged into a pointed structure, the uvula, which hangs downwards and can be seen at the back

PALATINE (Lat. palatium palace). Literally, someone belonging to the palace, and so a servant of the ruler. In the Roman Empire the name was given to certain officials with special duties, and in France and Germany counts palatine appeared about the 8th century. The districts over which they ruled were called palatinates, the most important of which was the one that grew into the Palatinate of the Rhine.

In England the earls of certain counties, generally those on the borders, such as Durham and Cheshire, were given special privileges, and the counties were counties palatine.

PALATINE HILL (anc. Mons Palatinus). One of the seven hills of Rome (q.v.). The name is derived from Pales, the goddess of shepherds, who was worshipped here. In republican times the hill was a residential quarter. Augustus and Tiberius had palaces there, and Nero's Golden House extended from the Palatine to the Esquiline.

PALE. In heraldry, a broad band, placed vertically, and occupying a third of the shield. Pale is one of the ordinaries. If a shield is divided down the middle by a vertical line it is said to be per pale. A row of charges placed one above the other are described as in pale. See Heraldry; Ordinary

PALE (Lat. palus, stake). Term applied to that part of Ireland, in Dublin, Kildare, Meath, and Louth, where English law prevailed, as opposed to the Celtic portion.

PALEMBANG. Town, river, and residency of Sumatra. The town is 54 m. from the sea in the S.E. of the island. below the town

the river, also called the Musi, flows through an extensive area of marshland. The chief commercial centre of the island, it trades chiefly in coffee and pepper. There is a fine mosque (1740). Pop. 62,438.

The residency, which has been a Dutch possession since 1825, has an area of 33,173 sq. m. and a pop. of 872,552.

PALENQUE. Ancient city of Mexico. One of the centres of Maya civilization its ruins are near the village of Santo Domingo del Palenque in the state of Chiapas. Of the buildings the largest is called the palace; and the others were presumably temples. Of the palace the remains of the tower are notable. More remarkable, perhaps, are the bas-reliefs. Another object of considerable interest is an arched waterway, nearly 600 ft. long. See Maya; Mexico.

PALERMO. Seaport of Italy, capital of Sicily. On the N. coast of the island on the W. of the Bay of Palermo, it is backed by an amphitheatre of mountains. The town is built in a quadrangle, with the E. side on the sea. The cathedral was built in the 12th century. The palace contains the Cappella Palatina, built by King Roger II in 1143, and reputed to be the most beautiful palace chapel in the world (see illus. page 332). The churches of San Salvatore, San Giovanni degli Eremiti, La Martorana, and San Domenico, the 16th century archbishop's palace, the university and the national museum are notable buildings. Pop. 447,335.

The Palermo Stone is an inscribed black granite slab in the Palermo museum. Erected in Lower Egypt during the Vth or VIth dynasty, it is engraved with linear hieroglyphs, of which the beginning and end of each line have disappeared.

PALESTINE. Country of Asia. The boundaries of the region called Palestine have varied greatly at different periods. Palestine under British mandate extends from the Mediterranean on the W. to Transjordan on the E., and from Syria on the N. to Egypt and Hejaz on the S. Jerusalem is the chief town, others including Jaffa, Tel Aviv, Haifa, Acre, Gaza, and Nablus. The area is about 10,000 sq. m. Pop. 816,064, including 572,443 Moslems, 154,330 Jews, and 80,225 Christians.

After having been under the rule of Egypt for several centuries, about 1100 B.C. Palestine fell to the Philistines, from whom the land takes its name. The Hebrews fused with the Canaanites, drove out the Philistines, and under David Palestine enjoyed great prosperity. From the 9th to the 6th century B.C., Assyria and Babylonia continually won and lost and re-won the control of Palestine.

From the 6th century to the 4th, Persia took command of the provinces of Babylon, including Palestine, and set the exiles in Babylon free to go back and rebuild Jerusalem. Alexander the Great overcame the Persian empire (333 B.C. onwards), and after his death and the division of his empire Palestine fell to Egypt and the dynasty of the Ptolemies, who fought the Seleucids across the prostrate body of Palestine. As these powers were enfeebled by the blows of Rome, the Jews rose in revolt. The Maccabean family led them, 168 B.C., and the Jews won complete freedom in 143 B.C.

In A.D. 70 Jerusalem was practically destroyed after a long siege, and through six centuries the Roman Empire held Palestine with

a gradually relaxing grasp. In A.D. 635 the fall of Damascus yielded Palestine to Mahomedan rule. From the 7th till the 11th century Palestine was ruled by the Caliphs; and in the 11th century the Turks became gradually dominant. The period of the Crusades, 12th-13th centuries, ended in leaving the Turkish power still dominant over Palestine. A new terror swept down from the N. in the 13th century, in the shape of the Tartars, and the Mameluke or Tartar sultans ruled till the Ottoman Turks, in the 16th century, gained the upper hand and ruled Palestine continuously thereafter until they were defeated and dispossessed in 1918.

The present administration by Britain, under a mandate granted by the League of Nations, is exercised by a high commissioner. In 1922 a new constitution was given. This provides for a legislative council of 22 members, 12 being elected. The Jews have an elected assembly which represents them in their dealings with the administration.

The Palestine Exploration Fund, a British archaeological organization, was founded in London, 1864. It has a Palestine museum and library at its headquarters, 2, Hinde Street, Manchester Square, London, W.1. See Archaeology.

CONQUEST OF PALESTINE. British campaign in the Great War. After defeating Turkish attacks on the Suez Canal, 1915-16, the British decided to invade Palestine. Rafa was taken Jan. 9, 1917, and the two battles of Gaza fought Mar. 26-27, and April 19. There was then a pause while Allenby made his plans.

Beersheba was captured on Oct. 31. Gaza on Nov. 7. Pushing N., he took Ascalon, Ashdod, and Gath, and on Nov. 13 won a considerable victory at El Mughhar. On Dec. 6 Hebron was occupied, and by nightfall, Dec. 8, the British were within 1½ m. of the Holy City, which surrendered on the next day. During the early months of 1918 there was considerable fighting, Jericho being occupied on Feb. 21, and Tel Asur in the following month. The great final offensive began on the night of Sept. 18-19, and lasted until the 24th. W. of the Jordan the enemy was forced to retreat, and by the 29th the British and their Arab allies were advancing on Damascus. See Allenby; Gaza; Hejaz; Jerusalem.

PALESTRINA. City of Italy. It is 23 m. from Rome and occupies the site of the Roman Praeneste (q.v.). The modern town is built on the ruins of a vast temple of Fortuna, which graced the Roman city. The buildings include a modern cathedral. Pop. 7,427.

PALESTRINA, GIOVANNI PIERLUIGI DA (1524-94). Italian composer. Born at Palestrina, he was canon and organist there from 1544-51, when he was made master of music at the Vatican. On the accession of Paul IV, in 1555, he lost his post, but soon filled a similar one at St John Lateran. In 1571 he returned to the Vatican, and remained there until his death which took place Feb. 2, 1594. Palestrina's famous Masses represent the most perfect type for vocal music in the modal style.

PALEY, WILLIAM (1743-1805). British theologian. Born at Peterborough, the son of a schoolmaster, he took a living in Westmorland in 1776; in 1782 he was made archdeacon of

Palermo. The Pizzis del Duomo and the 12th century cathedral

Palestine. Map of the country, administered by Britain since 1920, under the League of Nations mandate

William Paley, British theologian

Carlisle, and later rector of Bishop Wearmouth. He died at Lincoln, May 25, 1805, and was buried in Carlisle Cathedral. Paley's writings include *Principles of Moral and Political Philosophy*, 1785; *Popular Evidences of Christianity*, 1794; and *Natural Theology*, 1802.

PALI (canon). One of the oldest popular dialects of India. The Pali characters are akin to those of Sanskrit, from which it is derived. Its extensive literature includes *Tipitaka* (the three baskets), the Buddhist scriptures; the commentaries on them; the Questions of Menander, a religious discussion with a Bactrian king, and two chronicles of Ceylon.

PALINURUS. In classical legend, the steersman of the ship of Aeneas. The promontory of Palinurus, now Cape Spartivento, on the coast of Lucania, in Italy, is said in the Aeneid to have been named from this hero, who there fell into the sea.

PALISSY, BERNARD (c. 1510-89). French potter. Born in S.W. France, he was brought up to his father's trade of glass painting. At Saintonge he began experiments which, after 16 years of effort, resulted, in 1557, in his perfecting the process of coloured enamel ware which bears his name. In 1564-65 he set up his workshop in the Tuileries, Paris. He died while imprisoned in the Bastille.

Bernard Palissy,
French potter

PALK STRAIT. Channel between Ceylon and the mainland of India. It lies N. of Adam's Bridge, which separates it from the gulf of Manaar. It is named after Robert Palk, governor of Madras, 1755-63.

PALLADIAN. Style of classical architecture associated with Andrea Palladio (1518-80), an Italian architect. It was invented to meet the special demands of Venetian patrons. In real Palladian buildings, such as the Palazzo Thiene at Vicenza, a favourite device is the use of two orders of columns or pilasters, the minor order being used to support the arches which occurred between the major.

PALLADIUM. In Greek legend, a statue of Pallas Athena, which fell from heaven, and was kept in the city of Troy, which could not be taken so long as this statue was there. Shortly before the fall of Troy it was abstracted by Odysseus and Diomedes, who entered the city in disguise.

PALLADIUM. Rare elementary metal belonging to the platinum group. Its chemical symbol is Pd, atomic weight, 106.7; atomic number 46; specific gravity, 11.40; and melting point, 1,500° C. White in colour, with a strong lustre, resembling platinum, it is malleable and ductile, can be readily welded, and approaches steel in hardness. It is the most fusible of the platinum group. Its chief source is the nickeliferous ores of Ontario. Because of its great resistance to corrosion and its hardness it is used for certain parts of the mechanism of chronometers and for chemical and surgical appliances.

PALLAS. One of the minor planets or asteroids. It is remarkable for its great inclination of 34 degrees to the ecliptic. The second to be discovered, it was found on March 28, 1802, by Olbers (1758-1840). See *Asteroid*.

Pallas. In Greek mythology, epithet of, and later name for, the goddess Athena (q.v.). One of the Titans was also called Pallas.

PALL MALL. London thoroughfare. It runs W. from the junction of Cockspur Street and Pall Mall East, to St. James's Palace. Originally formed about 1690, it was at first called Catherine Street. The game of pall mall, from which it takes its name, was introduced into England in the reign of Charles I. It was

Pall Mall, London, looking west from Waterloo Place. On the left is the Athenaeum Club

a combination of croquet and golf, boxwood balls being driven by mallets through iron hoops set in an alley floored with powdered cockle shells.

PALM (Palmae). Natural order of trees, natives of tropical and sub-tropical regions. There are about 1,100 known species, distributed in 128 genera, many familiar from their economic importance—e.g. coconut, oil palm, date, betel, wine palm, etc. There is only one European species (*Chamaerops humilis*), which is found in the Mediterranean region. The flowers are produced in a great branching cluster, usually from the axils of the leaves. In some species male and female flowers are produced by the same tree, in others the sexes are in separate trees.

Sugary fluid or starch is furnished by the stems of some species. The leaves are utilised for thatching, basket-making, mats, and hats, and the fibres of the leaf-sheaths are of considerable economic importance.

Palm oil, extracted from the fruit of several species, is largely used in the manufacture of candles and soap.

Many species are grown in greenhouses as foliage plants, mostly in a juvenile condition. See *Bactris*; *Coconut Palm*; *Date Palm*; *Doom Palm*; *Fan Palm*; etc.

PALMA VECCHIO (c. 1480-1528). Name by which Giacomo Negretti or Palma, Italian painter, is generally known. Born near Bergamo, he probably studied under Cima at Venice, where he continued to work, and where he died, July 28, 1528. Examples of his work are best seen in Venice, Dresden, and Vienna. He is called Vecchio (old) to distinguish him from his grand-nephew Jacopo (1544-1628).

PALMERSTON, HENRY JOHN TEMPLE, 3RD VISCOUNT (1784-1865). British statesman. Born Oct. 20, 1784, at Broadlands, Hampshire, he belonged to an Irish branch of the family. He succeeded in 1802 to the title, an Irish one, and in 1807 entered the House of Commons as M.P. for Newtown, Isle of Wight.

At once he was appointed a lord of the admiralty, and from 1809-28 he was secretary at war. A Tory, he served under Perceval,

Liverpool, and their successors, but after Canning's death he gravitated towards the Whigs. In 1830 he was made foreign secretary under Lord Grey, and he was at the foreign office with the Whigs until 1841. He was home secretary 1853-55, when he became prime minister. He left office in 1858, but in 1859 he was again in power, and he remained prime minister until his death, Oct. 18, 1865. From 1811-31 he had represented the university of Cambridge, and from 1831-65 the borough of Tiverton. Palmerston was notable for his vigorous and even aggressive assertion of, and devotion to, Britain's interests.

PALMERSTON NORTH. Town of North Island, New Zealand, 88 m. from Wellington. It is a rly. junction. The industries of the neighbourhood are saw-milling and dairy-farming, and it has an experimental farm. Pop. 21,280

PALMISTRY. Science of hand reading, also called cheiromancy. The fingers are named Jupiter, Saturn, Apollo, and Mercury, and the fleshy pads at the base of the fingers are called mounts, and take their names from the fingers under which they occur. The principal lines on the palm are named life line, head line, heart line, fate line, and line of Apollo, the last-named dealing with the gain or loss of riches, etc.

The right hand tells why success or failure has come, the use or abuse of one's talents, the development of character, and what may be expected in the future. The left hand shows inherited gifts and tendencies, the illnesses, accidents, and events that are passed.

The mounts deal with the character and denote courage, imagination, pride, benevolence, love of art, etc., which are present or absent according to the size and placing of the various mounts.

PALMITE RUSH (*Prionium palmita*).

Perennial plant of the order Juncaceae. It is a native of S. Africa, growing in swamps and rivers, frequently choking the latter. Unlike other rushes, it forms a trunk-like stem 5 ft. to 10 ft. long, which is partly submerged. From the top springs a cluster of sword-shaped leaves, which are an inch broad at the base. The greenish-yellow, rush-like flowers rise from the centre of the leaf-tuft in a cluster which may be several feet long.

PALMITIC ACID. One of the fatty acids ($C_{16}H_{32}O_2$). It is obtained in large quantities from palm oil, in which it occurs as palmitin. Palmitic acid occurs also in other vegetable and animal fats.

PALM SUNDAY. Sunday before Easter. On this day the Christian churches celebrate Christ's entry into Jerusalem, when the multitude strewed palm leaves and branches, emblems of victory and rejoicing, on the way (John 12). In the R.C. Church it is celebrated by the blessing and distribution of palm or olive branches, and a procession.

Palmistry. Left hand, illustrating principal lines and significant parts. Fingers—A, Jupiter; B, Saturn; C, Apollo; and D, Mercury—have each 3 phalanges, numbered 1, 2, and 3. On the hand: 1, 2, 3, and 4 are mounts of Jupiter, Saturn, Apollo, and Mercury respectively; 5, mount of Luna; 6, mount of Venus; 7, mount of Mars. Principal lines are: EE, Life; FF, Fate; GG, Heart; HH, Head; XX, Apollo

Palma Vecchio,
Italian painter
Self-portrait in Pina-
kothek, Munich

Palmite Rush. Leaf cluster and flower

Lord Palmerston,
British statesman

PALMYRA. City of Syria. It stood about 150 m. N.E. of Damascus. Tadmor, as it was at first called, was founded by Solomon.

Palmyra. Ruins of the ancient city and Temple of the Sun

Under the Roman empire it became a great commercial centre. Surrounded by walls of the age of Justinian, the city is intersected by a street with a quadruple colonnade and a triumphal arch. The ruins include sepulchral towers and a temple.

PALMYRA PALM (*Borassus flabelliformis*) Tree of the order Palmae, native of India. The large three-seeded brown fruits are produced in clusters of 15 or 20. From the unexpaused flower spikes palm wine is obtained in quantity, which is evaporated into jaggery, or palm sugar, fermented into toddy, and distilled to produce arrack. The trunks of old trees yield timber, and the leaves serve a variety of useful purposes. Seedling plants are used as food, and the pulp of the fruit furnishes a kind of jelly.

Palmyra Palm, leaves and fruit

PAMIR OR ROOF OF THE WORLD. Mountain knot in the N.W. of India. From it radiate the Kunlun, Karakoram, and Himalaya, Sulaiman, Hindu Kush and Paropamisus, and Tien Shan ranges. It comprises a series of ridges of elevation varying from 16,000 ft. to 18,000 ft., with elevated valleys or pamirs between them.

PAMPAS. Temperate grasslands of S. America. W. of the Paraná river and E. of the Andes. They support vast numbers of cattle and sheep, and produce enormous quantities of wheat for export. See Steppe.

PAMPAS GRASS (*Gyncrium argenteum*). Noble grass of the order Gramineae. It is a native of S. America, where it grows on the pampas. It forms a tuft five or six feet in diameter, its long, slender, arching leaves being about 6 ft. long. The flowers form large, dense, silky, and silvery-white plumes rising to a height of 10 or 12 ft., bearing 40 or 50 plumes.

Pampas Grass. Tuft of the South American grass

PAN. In Greek mythology, the god of shepherds. Generally regarded as the son of Hermes, and especially associated with Arcadia, he had the horns and legs of a goat. He was the inventor of the flute, or shepherd's pipe, which he made from reeds. The sudden apparition of Pan to travellers caused terror, whence the word panic. The name pandean pipes is given to a musical instrument consisting of a row of tubes, stopped at their lower ends and bound together, and blown across their tops by the performer. The number of tubes has varied. See Peter Pan,

PANAMA. Republic of Central America, formerly a dept. of the republic of Colombia. The separation arose in 1903 from the exigencies of the situation regarding the Panama Canal. The constitution, adopted in 1904 and amended in 1918 and 1928, is based upon an elected president and an elected chamber of deputies. The republic is a member of the League of Nations.

The state occupies the narrowest portion of the connecting link between N. and S. America, and lies in a curve E. and W. between the Caribbean Sea to the N. and the Pacific Ocean on the S. The interior is elevated. The people are a mixed race of Spanish, Indian, and negro origin. Panama is the capital. The area is 32,380 sq. m. Pop. 442,522. See Central America.

PANAMA. Capital of the republic of Panama. It is situated within the Canal Zone at the head of the Gulf of Panama, and extends W. and N. from a small peninsula which is entirely within the city. It is the chief Pacific port at the S. end of the Panama Canal and is connected by rly. with Colon at the Atlantic end. It includes the harbour of Balboa (q.v.). It has a fine cathedral and a university. Pop. 59,458.

PANAMA CANAL, THE. Canal through the Isthmus of Panama, connecting the Caribbean Sea and the Pacific Ocean. The isthmus averages 70 m. across, but is 32 m. at its narrowest. The canal was informally opened to commerce in 1914, and formally in 1920.

The French attempt to construct a canal under the auspices of the maker of the Suez Canal, Ferdinand de Lesseps, was a failure, owing to financial extravagance and corruption, and also to insanitary conditions at the isthmus. The experiences of the Spanish war had impressed the United States with the necessity of a quicker water communication between their Atlantic and Pacific coasts. In 1904 they acquired the rights and property of the New Panama Company. They also obtained from the republic of Panama a strip of land running across the isthmus, five miles wide, on either side of the proposed waterway, and known as the Canal Zone.

Near the Caribbean outlet of the Chagres river they built a huge earthwork, the Gatun Dam, across the channel of the stream, and another dam about 20 m. S.E. at Gamboa. The waters of the Chagres were allowed to accumulate until a lake was formed, 164 sq. m. in extent and at an alt. of 85 ft. The channel of the canal runs for about 30 m. through the lake, up to the surface of which ships are lifted by locks at either end.

The channel of the canal begins about 4½ m. out to sea in Limon Bay in the Caribbean at a depth of 41 ft. Through the sea and the shore it runs for 8 m. till it reaches the gigantic three-stepped, two-flighted stairway at Gatun. These locks lift the ship on to the surface of the Gatun lake. 20 m. farther on the channel is compressed into the Culebra cut, which runs to the Pedro Miguel lock at the other extremity of the 85-ft.-above-sea-level section. Coming from the Caribbean the vessel drops down this lock by 30 ft. to the Miraflores lake at 55 ft. above sea level, from which the Miraflores

locks in two steps drop it down to the sea-level salt-water stretch of 8 m. on the Pacific side. Its minimum width is 300 ft. at the bottom, and minimum depth 41 ft.

An important result for the British Empire is the change in comparative distances between England and Australasia and New York and Australasia. Henceforth New York, and not Liverpool, is nearer to Yokohama, Sydney, and Melbourne. In 1929 6,413 vessels passed through the canal. See Balboa; Colon; Culebra; Dredging; Lesseps, F.; Lock.

Panda. Small Himalayan cat-bear allied to the racoons. See below W. S. Berridge, F.Z.S.

PANCRAS. Patron saint of children. He is said traditionally to have been born at Synnada, in Phrygia, of noble parentage, and to have been taken in childhood to Rome, where he was baptized by the pope. During Diocletian's persecution he was beheaded at the age of 14. Many churches are named after him.

Panama Canal. Section of the mile-long Gatun Locks, looking towards the Atlantic

PANCREAS. Organ situated behind the stomach. About 6 to 8 ins. long, it contains a duct which opens into the second part of the duodenum in contact with the common bile duct. The pancreas secretes a juice which plays an important part in the digestion of food. Scattered throughout the pancreatic substance are little collections of cells which produce the internal secretion known as insulin (q.v.). The pancreas of sheep is called the sweetbread when used as human food.

PANDA OR WAH (*Aelurus fulgens*). Small mammal of the order Carnivora, a native of the Himalayas only. Its total length is about 2½ ft., but somewhat more than half this measurement is due to the bushy tail. Its coat of fur is chestnut-brown above and black beneath. Mainly nocturnal and arboreal in habits, it is found near pine woods. See illus. above.

Panama Canal, connecting the Atlantic and Pacific Oceans

PANDORA (Gr. all-gifted). In Greek mythology, the first woman on earth. Pandora became the wife of Epimetheus. In his house was a box which he had been forbidden to open, but Pandora, overcome by curiosity, opened the box, and by this action let out all the evils that afflict mankind. She was able to shut the box, however, in time to prevent the escape of Hope.

PANGBOURNE. Village of Berkshire. It stands on the Thames, 5 m. from Reading. From 2 ft. to 3 ft. long, the Pang here falls into the Thames. Pop. 1,936.

PANGOLIN (Manis). Genus of edentate mammals, occurring in S. Asia and Africa. From 2 ft. to 3 ft. long, the body is somewhat lizard-like in shape, covered, except about the mouth and on the under parts, with large horny scales. The feet bear strong claws. No teeth are present, but there are horny ridges on the lower jaws; the tongue is long and worm-like. The pangolin rolls itself into a ball when disturbed. The Asiatic pangolins, which comprise three species, live in crevices of the rocks and in long burrows. They are strictly nocturnal, and feed on termites. There are four African species, which resemble the Asiatic species.

Pangolin, the African species

PANICK GRASS (Panicum). Large genus of grasses of the order Gramineae, mostly natives of the tropics, a few being widely distributed in temperate regions. The flowers are clustered in spikes or branching sprays. Many are useful fodder grasses, and a few yield food grains. *Panicum miliaceum*, which yields Indian millet, is cultivated in S. Europe. *P. maximum*, of the W. Indies, attains a height of 6 ft. to 10 ft.

PANKHURST, EMMELINE (1858-1928). British feminist. Born in Manchester, daughter of Robert Goulden, she married Dr. R. M. Pankhurst, a barrister, and with him helped to found the Women's Franchise League, 1889. She was a poor law guardian, and member of the school board, Manchester, and on her husband's death, in 1898, was appointed registrar of births, a post she held until 1900. In 1903 she founded the Women's Social and Political Union. When militant methods began Mrs. Pankhurst was several times imprisoned. In 1914 she published *My Own Story*. She died June 14, 1928. A statue to her was unveiled in the Victoria Tower Gardens, Westminster, London, 1930.

Emmeline Pankhurst, British feminist
Elliott & Fry

Two of her daughters, Christabel (b. 1880) and Sylvia (b. 1882), were also prominent in the suffrage agitation.

PANSY (Viola tricolor). Perennial herb of the order Violaceae, a native of Europe, N. Africa, and N. and W. Asia. The leaves in general form are oblong or lance-shaped, variously lobed, and cut. The flowers are purple, whitish, or yellow, or a varied mixture of the three colours. The number of named varieties is enormous, and every year sees additions. The name is generally given to the garden flower, the wild pansy being called heart-case (q.v.). See Violet.

Pansy, common yellow variety

PANTALON (Ital. Pantaloon, a saint popular in Venice). Ridiculous character in Italian comedy. Sometimes he was an old bachelor, but generally he was married to an unfaithful young wife or was the father of troublesome young daughters. Columbine was very often his daughter, and Harlequin was sometimes his lackey. Pantaloon wore

the skin-tight trousers named after him. In modern pantomime he is a butt for the practical jokes of harlequin and clown. See Columbine; Harlequin; Pantomime.

PANTEG OR **PANTEAGUE**. Urban dist. of Monmouthshire. It is 2 m. from Pontypool, on the G.W. Rly. There are iron works and coal mines. Pop. 10,984.

PANTHEISM (Gr. pan, all; theos, god). The doctrine which affirms the unity of the Deity with the world. A fundamental part of much ancient Indian philosophy. Pantheism appears in the Greek Eleatic and Neoplatonic systems, and in many Christian mystics from the so-called Dionysius the Areopagite onwards. Pantheism was taught by Bruno and other Italians of the Renaissance, and by many of the German idealists. It is most completely developed in the philosophy of Spinoza (q.v.).

PANTHEON (Gr. pantheon, belonging to all the gods). Temple in Rome, now a church. It was built by Hadrian between A.D. 120-130. The main structural parts consist of a rotunda and a dome, the total height and diameter of the building amounting to 142 ft. 6 ins. The portico of Corinthian columns supports a massive pediment surmounted by another partially screening the dome, which is constructed of solid concrete and lighted at the summit. The interior is lined with marble. In 609 the Pantheon was consecrated. It contains the tombs of eminent Italians.

The Panthéon, Paris, a building in the Roman style, with a large portico and a dome, was begun in 1764, and has been three times a church, and three times, as now, a temple of honour to great Frenchmen, of whom Voltaire, Rousseau, and Hugo are buried in the crypt.

PANTHER (Felis pardus). Large and ferocious spotted cat. It is a native of Africa, S. Asia, Java, and Japan. About 7 ft. in length, its upper parts are yellow closely spotted with black, paling to white on the under surface. Generally known in India as the panther, in other parts of its distribution it is called leopard (q.v.).

PANTOMIME. Art of acting without words, by gestures and facial expression only. Though practised in ancient Greece, it became more popular in Rome. Facial expression, however, was excluded in those days because of the masks worn by the performers. In the 17th and 18th centuries the word pantomime was applied in France to a kind of mythological ballet which was in great favour in Paris and at Versailles. Nowadays the word is seldom used in English, except in connexion with a form of Christmas entertainment. See Acting; Drama; Drury Lane; Harlequin; Pantaloon.

PAPACY (Lat. papa). Term used for the possessions and dignities which attach to the pope. Traditionally, it dates from 43 A.D., when S. Peter went to Rome and became the city's first bishop. A succession of bishops followed, but for some 300 years their powers were spiritual only.

As a temporal power the Papacy may be said to date from early in the 4th century, and two events contributed to the creation of its unique position in Christendom. In 324 Constantine moved his capital from Rome to Constantinople. This left the bishop in a position of importance which would never have been his had the emperor and his successors remained in Rome. The other event was the assertion by the council of Nicaea that the bishop of Rome had authority over other bishops. Leo I made this assertion a reality. Meanwhile land was bequeathed or given to the bishop, or pope, as he began to be called, and soon he ruled an extensive domain.

Thus elevated and enriched, the pope claimed the right to crown kings, and one of them made good this claim by crowning Charlemagne as emperor in 800 and creating the Holy Roman Empire, an event which completed the alliance between church and state begun by Constantine. In this the emperor was at first the dominant partner, but in the 11th century the popes, especially Gregory VII (Hildebrand), asserted that the state was subject to the church, a bold policy that was boldly carried out by successive popes.

The Reformation altered entirely the status of the Papacy. It became simply the Roman Catholic Church reinvigorated by the work of the counter-reformation and reformed by the council of Trent. It remained a temporal power, although its temporalities were confined to Italy until 1870, and again became one, though on a small scale, in 1929. See Pope; Roman Catholic Church; Vatican.

Pantaloon, in English pantomime

Pantheon. Portico of the ancient Roman temple built by Hadrian and now used as a church

PAPAL STATES OR **STATES OF THE CHURCH**. Name given to the Italian territories which were under the temporal sovereignty of the popes. Differing at different periods, they generally formed a solid strip of territory running across Italy.

Throughout the Middle Ages the area of the papal states varied a good deal. Their extent was greatest in the time of Innocent III, about 1300, while from about 1600 to 1860, except during the Napoleonic upheaval, it remained fairly constant. In 1860 some of the states were taken from the pope and added to the new kingdom of Italy, and in 1870 the remainder were absorbed. The pope remained without territorial possessions until 1929, when, by a concordat with Italy, his sovereignty over the Vatican was recognized.

PAPAW (Carica papaya). Small evergreen tree of the order Papayaceae. A native of S. America, it has large, alternate, seven-lobed leaves. The greenish flowers are either male or female, and the two are often on separate trees. The dingy, orange-coloured fruit is an elongated oval nearly a foot long, with fleshy gourd-like rind enclosing small black seeds. It is eaten after being boiled or pickled. It also yields papain.

PAPER. Aqueous deposit of vegetable fibre. Real paper is prepared from fibrous pulp. The art of paper-making originated in the East. Acquired by the Arabs in Tartary,

Papaw tree laden with fruit

it was introduced by the Moors in Spain and brought to Europe proper by the Crusaders. The first English paper mill was built by John Tate at Hertford about 1496. In 1725 De Portal was granted a monopoly of making paper for Bank of England notes, and in 1739 Whatman erected his Maidstone mill. In 1798 Louis Robert, manager of Didot's paper mills at Essones, invented his paper machine. The first Fourdrinier machine, an improvement on this, was erected in Two Waters Mill, Hertford, in 1804. In 1831 a machine was constructed in all essentials like the one in use to-day. In 1861 the duty on paper imported into Great Britain was abolished. Esparto grass, introduced in 1852, came into general use about 1861. It is to the production of ground wood (1840), and to the sulphite process of producing chemical pulp from wood (patented in 1866, by Tilghman of Philadelphia), that we owe our cheap press and the modern newspaper.

PAPER MULBERRY (*Broussonetia papyrifera*). Small tree of the order Urticaceae. A native of China, it has hairy egg-shaped leaves. The greenish flowers have the sexes distinct on separate trees, the males in catkin-like clusters, the females in a round head. The latter are succeeded by scarlet fruits much like a mulberry in shape, but without flavour. The inner bark is beaten into pulp to make paper in China and Japan, and in the South Sea Islands into a kind of cloth.

Paper Mulberry. Leaves and flower clusters

PAPINEAU, Louis Joseph (1786-1871). Canadian politician. Born at Montreal, Oct. 7, 1786, he became a lawyer, and in 1808 a member of the house of assembly of Lower Canada. In 1815 he was made Speaker, and in 1820 a member of the executive council. As the leader of the French Canadians, he was prominent in desiring drastic changes in the methods of government, and in opposing the suggested union of the two Canadas.

Embittered by failure to carry his reforms, he became actively hostile to the British government, and in 1837 led a rebellion. This failed, and Papineau fled. In 1847 a general amnesty was proclaimed and he returned to Canada. Elected to the legislature, until 1864 he took part in public life. He died Sept. 24, 1871.

PAPUA. British territory in S.E. New Guinea. About 1884 it became a protectorate, and in 1888 a colony. In 1901 financial responsibility and in 1906 complete control passed to the Commonwealth of Australia.

The territory includes the neighbouring islands, Samarai, the Louisiades, the D'Entrecasteaux Group, the Laughlan and Trobriand islands, and Woodlark Island. The chief crops are coconuts, rubber, and sisal hemp. Minerals include copper, gold, tin, lead, and zinc. Port Moresby is the seat of government. The area is

Papua. Native couple, the woman in mourning weeds

Parachute. Left, wearer of R.A.F. pattern pointing to ring which, when pulled, opens the parachute. The equipment is worn at front or rear. Right, airman descending beneath opened parachute

90,540 sq. m., of which about 88,000 are on the mainland. Pop. 1,523 Europeans and some 275,000 Papuans. See New Guinea.

The term Papuan (Malay, mop-headed) denotes aboriginal peoples of negroid stock, mostly in Dutch New Guinea.

The gulf of Papua is a large bay on the S. coast of the island of New Guinea, N.E. of C. York Peninsula, Queensland.

PAPWORTH. Village of Cambridgeshire, 4 m. from Huntingdon. There is a settlement for sufferers from tuberculosis, men and women, and various industries are carried on by those who have passed through the sanatorium.

PAPYRUS (*Cyperus papyrus*). Perennial sedge of the family Cyperaceae, formerly common in the Egyptian delta, and still found on the Upper Nile. It grows also in Syria, Nubia, and Abyssinia. Its smooth, triangular stems, 6 to 10 ft. high, spring from a woody root-stock. At the tip of the stem is borne a compound umbel of drooping spikelets surrounded by an involucre of long, narrow leaves. The name papyrus is applied to the writing material made from the stem, and to a manuscript written on this substance.

The papyrus was cultivated by the ancient Egyptians in prepared pools, and used for a variety of purposes. To make the writing material, moistened strips of stem were laid side by side to form the warp; shorter strips were overlaid crosswise, and the whole was pressed, dried, and polished. Ink, of sepia, animal charcoal, and other substances, was applied with a reed. These materials endured in literary use from the pyramid age, if not before, to the 4th century of our era, surviving casually to 1250.

PARA. Coin in general use in Turkey, Montenegro, Yugoslavia, Cyprus, and Egypt. Usually of copper, but also an alloy of various metals, it is the fortieth part of a piastre. Forty, 20, 10, 5, and 1 para pieces are coined in Turkey. In Yugoslavia the para is the one hundredth part of the dinar, and is equivalent to a centime. Fifty, 20, 10, 5, 2, and 1 para coins are issued. In N. Borneo the para is a weight equivalent to 90 lb. avoirdupois.

PARÁ OR BELEM DO PARÁ. Seaport of Brazil, capital of the state of Pará. It is situated on the Bay of Guajara, a portion of the arm of the Amazon delta known as the Rio Pará. Notable buildings are the cathedral and the La Paz theatre. All merchant ships trading on the Amazon must enter or clear at the port, which exports cacao, Brazil nuts, hides, and rubber. Pop. 236,402.

The Pará rubber tree (*Hevea brasiliensis*) is a tree of the natural order Euphorbiaceae.

A native of Brazil, it has bell-shaped flowers of greenish white and a thin, milky juice. The juice is collected in earthen vessels and barded by exposing it to smoke, when it becomes crude rubber or caoutchouc.

PARACELSUS OR THEOPHRASTUS BOMBAST VON HOHENHEIM (c. 1493-1541). Swiss physician and philosopher. Born at Einsiedeln, the son of a physician, he travelled much, studied alchemy and chemistry and the properties of minerals and metals; and by his successful if empirical application of mineral medicines gave a great impetus to pharmaceutical chemistry. Accused of being a necromancer, he had to flee from Basel, and after an adventurous life died at Salzburg, Sept. 24, 1541. Only a few of the writings attributed to him are regarded as genuine. Paracelsus is the hero of a poem by Browning.

PARACHUTE. Apparatus to reduce the speed of bodies falling through the air. It is an inverted bowl-shaped fabric with suspension ropes at its circumference which meet at a point some distance below the extended fabric. When a parachute is released from a height its vertical movement produces an upward air pressure on the fabric which retards the fall. Some types open automatically; in others a "rip cord" must be pulled to free the apparatus from its envelope.

PARADISE (old Persian pairidaēza, Gr. paradisos, a park or garden). Word used as a synonym for the garden of Eden; a place to which the souls of the righteous are translated after death; and sometimes for heaven. It was used by the apocalyptic writers for the heavenly counterpart of the earthly garden. Modern commentators on the Koran insist that Paradise is not only a place in which to enjoy the blessings and rewards of good deeds on earth, but a starting-point of unending spiritual advancement.

PARADISE FISH. Name given to an artificially modified fish belonging to the genus *Polyacanthus*. Allied to the climbing perch, it is striped with red, gold, and green, has long wavy fins and tail, and is very hardy.

PARAFFIN. In chemistry, term applied to a large class of hydrocarbons. Generally it refers to the solid, crystalline mass obtained from petroleum and from certain coals and shale oils. When pure, paraffin is white with a tinge of blue and highly translucent; hard and wax-like, free from taste or odour, it is used in the manufacture of candles and matches, for waterproofing fabrics, preserving food and wood, and as an insulator in electricity. Ozokerite is a natural impure

Paradise Fish. The artificially modified fish bred in China

paraffin. Paraffin oil is obtained by fractional distillation of shale, the lightest oils from the latter being used as solvents, and the next as paraffin oil, the rest being solid paraffin.

PARAGUAY. River of S. America. It rises in the Sierra Diamante in the Matto Grosso plateau, and flows S. to join the Paraná above Corrientes. Its length is 1,500 m.

PARAGUAY. S. American republic. It is bounded N. by Bolivia and Brazil; E. by Brazil and Argentina; S. by Argentina; W. by Argentina and Bolivia. The area is estimated at 62,000 sq. m. and the pop. at about 830,000. Asunción is the capital, other towns including Villarrica and Concepción. The people are partly of Spanish, partly of Indian (Guaraní) origin. Spanish is the official language. Education is free. There is a university at Asunción. There is a standing army of 2,800 and reserve of 100,000. The legal monetary unit is a gold dollar at five to the £, but the actual currency is paper, which varies in value.

An agricultural and pastoral country of high grassy plateaus and richly timbered forests, Paraguay is both tropical and semi-tropical. Minerals are abundant. The river Paraguay provides a splendid natural waterway from N. to S. The Rio de la Plata places the republic in contact with the outer world. There are some short rlys. Almost the whole foreign trade passes through Buenos Aires, 985 m. from Asunción.

Paraguay was settled by Spain in 1535, and gained its independence in 1811. It is governed by a president, elected for five years, and a small council of ministers. They are responsible to Congress, a parliament of two houses, the senate and the chamber of deputies. There are 20 senators and 40 deputies, all chosen by popular vote. See Argentina; South America.

PARALYSIS. Loss of power to contract muscles or loss of sensation. Functional paralysis is a manifestation of hysteria; organic paralysis is due to disease or destruction of a nerve.

Functional paralysis frequently follows a severe shock, mental or physical, but may also follow an organic injury when it is due to a fixed idea in the mind of the individual that an affected limb is powerless.

Organic paralysis is a symptom of any disease of the nervous system, the result of injury to nerves or nerve centres. The diseases most frequently responsible for organic paralysis are apoplexy, locomotor ataxia, disseminated sclerosis, and anterior poliomyelitis or infantile paralysis.

PARANÁ. River of S. America. It begins at the confluence of the Paranahyba and Rio

Grande, flows S.W. to Posadas, W. until it receives the Paraguay, and then past Corrientes to Rosario, to the Rio de la Plata. Its total length is about 2,500 m.

PARASITE (Gr. *parasitos*, one who eats at another's table, from *para*, beside; *sitos*, food). Name applied to an organism, animal or vegetable, which lives upon or within another organism and nourishes itself at the expense of its host. The parasite may live permanently on or in its host, as in the case of intestinal worms; or it may only visit its host, as in the cases of the flea and mosquito. Animals may be parasites on other animals, as the ticks and flukes; or on plants, as the mistletoe; or on insects and aphids. Plants may be parasitic on other plants, as the scale insects and aphids. Plants may be parasitic on other plants, as the mistletoe; or on animals, as the fungus which produces ring-worm. Most of the bacteria which invade human bodies and cause disease are parasites belonging to the vegetable kingdom. See Malaria.

PARAVANE. Naval invention employed against mines during the Great War. The main credit for its invention is attributed to Commander C. D. Burney, R.N. Its action was to deflect the mine from the side of the ship, cut through its mooring cables, and render it harmless and easy to destroy. The apparatus

consisted of a torpedo-shaped body fitted with hydrovanes, to one of which was attached a float and to the other a weight, and it had a rudder which regulated the depth of flotation by means of a hydrostatic valve. Paravanes were used in pairs, towed one on either side of the ship by wires.

PARÉ, AMBROISE (1510-90). French surgeon. Born near Laval, Mayenne, he wrote on gunshot wounds and anatomy, and was the first to use ligatures for arteries after amputation, his rational treatment earning him the title of Father of modern French surgery. He died in Paris, Dec. 22, 1590.

PAREGORIC. Compound tincture of camphor. It is used as a sedative in conditions associated with irritating cough. It should not be given to children.

Pari-Mutuel. Method of hacking horses adopted in Great Britain in the form of the totalisator (q.v.). See Betting.

PARIS. In Greek legend, son of Priam and Hecuba. The goddess of strife having thrown a golden apple inscribed "for the fairest" among the guests at the marriage of Peleus and Thetis this was claimed by Hera, Athena, and Aphrodite. Zeus ordered them to submit to the judgement of Paris. Paris gave the apple to Aphrodite, who caused Helen, wife of Menelaus of Sparta, to fall in love with Paris. He carried her off to Troy, and thus provoked the Trojan War.

PARIS. Capital of France. Divided by the Seine into two parts, it covers about 30 sq.m. and has a pop. of about 3,000,000. It has developed in some 2,000 years from a cluster of fishermen's huts round the small island called

Paravane, towed from the bows of a liner, about to cut the mooring cable of a mine

Paris. Plan of the central part of the capital of France, showing the principal public buildings and the railway communications

Paris West front of the cathedral of Notre Dame.
It stands on the Ile de la Cité

the Ile de la Cité, is 110 m. in a straight line from the mouth of the Seine, 230 m. counting the windings of the river, and 285 m. by air from Croydon. Intersected by broad, tree-planted boulevards, brightened by noble squares and beautiful gardens, its two parts linked by thirty-two bridges, it is splendidly provided with transport by road and river. The airport is at Le Bourget, 15 m. to the N.E.

On the N. or right bank are the incomparable Louvre, Hôtel de Ville, Palais Royal, Palais d'Élysées, Champs-Élysées, Jardin des Tuileries, Bibliothèque Nationale, Archives Nationales, Halles Centrales (markets), Bourse, Banque de France, Imprimerie Nationale, Théâtre-Français, Opéra, Trocadéro, Madeleine, Musée Carnavalet, Montmartre, Auteuil and Longchamp racecourses, the beautiful Bois de Boulogne, the leading hotels and restaurants, the finest shops and most fashionable residences, and Père Lachaise cemetery.

The more historic S. or left bank covers the site of the original Gallic settlement of Lutetia mentioned by Caesar. Here are the great cathedral of Notre Dame, Saint-Chapelle, Panthéon, Musée de Cluny, the Luxembourg Gallery and Garden, Jardin des Plantes (with Zoological Gardens), the Invalides (with Napoleon's tomb), Palais de Justice and the famous Conciergerie, the Sorbonne, Collège de France and other educational institutions, the historic Quartier Latin, Hôtel des Monnaies (Mint), the Chambre des Députés, chief government buildings, Champ de Mars, Eiffel Tower, Gobelins tapestry factory, Observatoire, and Institut Pasteur.

The city is divided into twenty arrondissements, each sub-divided into four quarters, and each with a mayor. There are two prefects and a municipal council. Nearly every form of French industry is carried on. During the 19th century Paris knew war and revolution more than any other great capital. See Bastille; Bois de Boulogne; Comédie Française; Eiffel Tower; Louvre; Luxembourg, etc.

PARIS, LOUIS PHILIPPE ALBERT, COMTE DE (1838-94). French prince. Grandson of Louis Philippe, he was born Aug. 24, 1838, was heir to the throne from 1842-48, when Louis Philippe was deposed. He lived in Germany and England, and served in the American Civil War, of which he wrote a history in 8 vols. In 1871 he returned to France, and remained there until 1886, when he and his family were again exiled. He died Sept. 8 1894.

PARIS, MATTHEW (c. 1200-59). English historian. Educated and ordained priest at St. Albans, 1217, he assisted and succeeded Roger de Wendover in compiling the chronicles of England kept by the abbey. A learned and accurate historian, his chief work is the *Chronica Majora*, the MS. of which is in the library of Corpus Christi College, Cambridge.

PARIS, DECLARATION OF. Four articles for the regulation of maritime warfare agreed to by the plenipotentiaries of the powers who concluded in Paris in 1856 the treaty of peace after the Crimean War. The articles are: (1) privateering is and remains abolished; (2) the neutral flag covers enemy goods, with the exception of contraband of war; (3) neutral goods, with the exception of contraband of war, are not liable to capture under the enemy flag; (4) a blockading force must be able to prevent all ingress to and egress from the enemy coast.

PARIS, TREATIES OF. Various international treaties signed in Paris. They include: (1) Treaty signed Feb. 10, 1763, by Britain, France, and Spain at the close of the Seven Years' War. (2) Treaty concluded May 30, 1814, by the Allies and France after the abdication of Napoleon I. (3) Treaty concluded between the Allies and France, Nov. 20, 1815, after the final overthrow of Napoleon I. (4) Treaty signed March 30, 1856, by France, Great Britain, Sardinia, Turkey, and Russia, at the close of the Crimean War. The treaty of June 28, 1919, at the close of the Great War, is known as the Treaty of Versailles (q.v.).

PARISH (Gr. paroikia, neighborhood, from para, near; oikos, house). Ecclesiastically, a district under the care of one parson or minister known as the incumbent. Parishes appear to have become general about the 9th or 10th century. For civil purposes the parish is the smallest area in local government.

PARISH COUNCIL. Every rural parish in England and Wales which has a population of over 300 has a parish council, while those with less than 300 inhabitants have one if the parishioners so desire, or two or more may be united under one council. These

councils consist of a number of members varying from 5 to 15, are elected by the parish meeting held in March, and hold office for three years. In 1928 these councils were abolished in Scotland.

PARK, MUNGO (1771-1806). British explorer. Born at Foulshields, in Selkirkshire, Sept. 20, 1771, he became a surgeon. In 1793 he was employed by the African association to explore the Niger. His adventures, described in his *Travels in the Interior of Africa*, 1799, awakened great interest, and he was commissioned by the government to make another expedition in 1805. He reached Bamabakoo, but on the journey thence down the Niger was, with his companions, drowned at Boussa. One native rower escaped, from whom the facts were learned in 1812.

Mungo Park,
British explorer

PARKER, SIR GILBERT (b. 1862). British novelist. Born at Camden East, Addington, Ontario, Nov. 23, 1862, he was educated at Trinity College, Toronto. He travelled in the East and through Canada, and drew largely upon the land of his birth in his novels, which include *The Seats of the Mighty* (dramatised by its author), 1896. *The World in the Crucible*, 1915, deals with the Great War. Sir Gilbert Parker has also written an excellent

history of Old Quebec, 1903. He was M.P. for Gravesend, 1900-18. Knighted in 1902, he was created a baronet in 1915.

PARKER, SIR HYDE (1714-82). British sailor. Born at Tredington, Worcestershire, Feb. 25, 1714, he entered the navy as A.B. at 24, and became vice-admiral in 1780. In 1762, when captain, he captured a Spanish

Paris. Top: bridges across the Seine, and the historic Ile de la Cité. Centre, left: Arc de Triomphe; right, church of the Madeleine from the south-west. Bottom, left: The Opéra; right, church of the Sacré Coeur on the heights of Montmartre

ship which brought him about £30,000 in prize money. He served long in the West Indies, and fought the Dutch admiral Zoutman off the Dogger Bank in 1781. In Dec., 1782, he was lost in the 60-gun ship *Cato*, off S. America.

PARKER, SIR HYDE (1739-1807). British sailor. Second son of Admiral Sir Hyde Parker, he was commissioned in the navy in 1758. Knighted for his services in the American War of Independence and made a rear-admiral in 1793, his irresolution at the Battle of Copenhagen in 1801 led to his recall. He died March 16, 1807.

PARKER, JOSEPH (1830-1902). British Congregational minister. The son of a stonemason, he was born at Hexham, April 9, 1830.

Joseph Parker,
British divine
Elliott & Fry

Entering the Congregational ministry in 1852, he was in 1869 invited to the pastorate of the historic Independent church in the Poultry, London, and in 1874 removed the congregation to the City Temple, where he became one of the most popular preachers of the day. He died Nov. 28, 1902. He published many books, including *The People's Bible*, 25 vols., 1885-95; and *The Paraclete*, 1874.

PARKER, LOUIS NAPOLEON (b. 1852). British dramatist and composer. Born at Calvados, France, Oct. 21, 1852, from 1873-92 he was director of music in Sherborne School. He designed the Sherborne historical pageant in 1905, and was author, part author, or translator of nearly 50 plays, including *Disraeli*, *Drake*, and *Joseph and His Brethren*.

PARKER, MATTHEW (1504-75). English prelate. Born at Norwich, Aug. 6, 1504, and educated at Corpus Christi College, Cambridge, he became chaplain to Anne Boleyn in 1535, and in 1537 to Henry VIII. In 1544 he was appointed master of his college, and was twice elected vice-chancellor of Cambridge University. In danger of his life throughout Mary's reign, he was made archbishop of Canterbury by Elizabeth. Parker took a leading part in translating and publishing the Bishops' Bible, 1563-68. He died May 17, 1575.

Matthew Parker
English prelate

PARKES, SIR HENRY (1815-96). Australian statesman. Born at Stoneleigh, Warwickshire, May 27, 1815, he emigrated to Australia at 24. At Sydney he started *The Empire* newspaper, 1849, and agitated for colonial self-government. Member of the legislative council in 1858, he was colonial secretary 1866-68, and in 1872 became prime minister of New South Wales. Defeated in 1875, he returned to office for a few months in 1877, when he was knighted. He was prime minister again 1878-83, 1887-91. A consistent advocate of free trade, he was also the principal author of Australian federation. He died April 27, 1896. He wrote his autobiography, *Fifty Years in the Making of Australian History*, 1892.

Sir Henry Parkes,
Australian statesman

PARKHURST. British convict establishment, near Newport, Isle of Wight. One part is used as a convalescent prison for old and infirm convicts, the other as an ordinary convict institution. There is accommodation for about 750 convicts.

PARK LANE. London thoroughfare. Once notable for its palatial mansions, it runs N.W. from Piccadilly to the Marble Arch. From its junction with Hamilton Place, where is a handsome fountain by Thornycroft, 1875, it has Hyde Park on its W. side, and on the E., on the site of Grosvenor House, is an extensive and lofty block of modern flats.

PARK ROYAL. Dist. of Middlesex, England. Laid out as a showground of the Royal Agricultural Society in 1903, the estate was later split up into building sites.

PARLIAMENT. (Fr. *parler*, to talk). Name given in England to the great council of the realm which succeeded the Witenagemot of the Anglo-Saxons. It was used for meetings of the king's council summoned to consider public affairs and difficult legal cases. The prelates, earls, and barons gradually swamped the council and became the House of Lords; the lower clergy went off to convocation; and the knights of the shire and burgesses united to form the House of Commons, as it came to be called. Thus it became a legislature of two Houses, and in course of time the Commons became the dominant party.

Parliament makes and unmakes laws, retains or turns out ministries, and directly or indirectly controls British policy. On it have been modelled national governing bodies in every quarter of the globe.

PARLIAMENTARY PROCEDURE. In England at the commencement of a new Parliament the Commons are summoned to the upper chamber, where they are directed to elect a speaker. In the Commons, Mr. Speaker having been elected, the mace is placed on the table. Next day he heads the Commons to the Lords, and claims all their ancient rights and privileges. A few days later Parliament is opened by the speech from the throne in the House of Lords.

In both Houses the front Government bench is to the right of the Speaker; the Opposition benches are on the Speaker's left. The Speaker does not intervene in debate unless to guide its course and maintain order. The lord chancellor, who is ex-officio Speaker of the House of Lords, is free to vote, and frequently speaks. He has no casting vote, the not-contents carrying the division if the numbers are equal. See Commons, House of; Lords, House of.

HOUSES OF PARLIAMENT. The buildings in which the two Houses meet is a fine pile overlooking the Thames at Westminster. It was built from designs by Sir C. Barry to replace a building burned down in 1834. In the Gothic style, it covers eight acres and contains 11 courts and quadrangles. It cost £3,000,000 and was completed in 1857, although used before that date.

Features of the building are the clock tower, 316 ft. high, containing Big Ben, the central tower, and the Victoria tower. The chief apartments are those in which the two houses meet, the House of Lords with the throne and the woolsack being especially fine, and those set apart for the use of the sovereign on ceremonial occasions, the royal court and the royal gallery. A fine terrace fronts the river. There are dining rooms, smoking rooms, libraries, etc., for the use of members, as well as private rooms for ministers and others. In the block are residences for the Speaker and other

officials. Statues and frescoes adorn the corridors and lobbies. Westminster Hall and S. Stephen's Hall, which escaped the fire of 1834, have been incorporated in the building.

PARLIAMENT ACT. Statute, enacted Aug. 18, 1911, limiting the power of the House of Lords and making other constitutional changes. By it the Lords can at the most delay a money bill for one month; such bills are defined with some precision, and the Speaker is the authority who decides doubtful cases. An ordinary bill, if passed by the Commons in three successive sessions, will become law at the expiration of that time even if rejected by the Lords. Two years, however, must elapse between its second reading on its first introduction and its final acceptance by the Commons, and it must be sent to the Lords a month or more before the end of a session.

PARMA. City of Italy, capital of the prov. of Parma. An ancient and handsome city on both banks of the river Parma, 75 m. by rly S.E. of Milan, its Lombard-Romanesque cathedral has a lofty campanile and an octagonal dome, containing a fresco of the Assumption, one of Correggio's greatest works. The Romanesque baptistery, with a Gothic upper storey, built of marble, is one of the finest in Italy. There are about 60 other churches, a ducal palace, or Palazzo della Pilotta, with art galleries, library, and museum, and a university founded in 1482. Pop. 72,000.

Houses of Parliament from the Thames. Extreme left, towers of Westminster Abbey; then the Victoria Tower; the lantern over the central hall; and the Clock Tower
Reginald Haines

DUCHY OF PARMA. At one time an independent Italian state, this dated from 1541, when Pope Paul III made his son duke of Parma. The duchy remained in the family of Farnese until its extinction in 1731. It then became a Spanish possession, and so remained until the time of the French Revolution.

The congress of Vienna, 1815, welded Parma, Piacenza, and Guastalla into a grand duchy of Parma. In 1860, when the grand duchy became part of the kingdom of Italy, the area was about 2,400 sq. m. and the pop. 500,000.

The most famous of the dukes of Parma was Alexander Farnese (1545-92), a grandson of the emperor Charles V. He was governor-general of the Netherlands at the time of the Spanish Armada, and died Dec. 3, 1592.

PARMOOR, CHARLES ALFRED CRIPPS, 1ST BARON (b. 1852). British politician. Born Oct. 3, 1852, and educated at Winchester and Oxford, he was called to the bar in 1877, sat in the House of Commons from 1895-1914, and was knighted in 1903. In 1914 he was made a peer and a member of the judicial committee of the privy council. He was lord president of the council in the labour ministry, 1924, and again in 1929.

1st Baron Parmoor
British lawyer
Russell

PARNAHYBA. Town and river of Brazil. The town, in the state of Piahy, stands on the river Parnahyba, 14 m. from its mouth. It exports cattle, hides, tobacco, and cotton. Pop. 52,990.

The river rises in the Serra das Mangabeiras, and after a course of about 800 m. discharges into the Atlantic.

PARNASSUS. Mountain of Greece. It is the highest peak (8,069 ft.) of a range in Phocis, ancient Greece, N. of Delphi. Parnassus was sacred to Apollo and the Muses, and also to Dionysus. Above Delphi is the celebrated Castalian spring.

The name Parnassians is given to a group of French poets and is derived from Le Parnasse Contemporain, a collection of aesthetic poems published in 1866. The contributors included Leconte de Lisle, Théophile Gautier, Théodore de Banville, and Charles Baudelaire. The Parnassians were succeeded by the Symbolists.

PARNELL, CHARLES STEWART (1846-91). Irish Nationalist. He was born at Avondale, co. Wicklow, June 27, 1846, of an English family long settled as landowners in Ireland, and was educated at Magdalene College, Cambridge. In 1875 he entered Parliament as a Home Ruler, and transformed the Home Rule party into an instrument which came near to paralysing the House of Commons. Parnell's aim was explicitly the establishment of an

Charles S. Parnell,
Irish Nationalist

independent parliament in Dublin. To that end in 1878 he organized the Land League, and urged the Irish peasantry to adopt every method short of positive crime to render the law nugatory. In Nov., 1890, Captain O'Shea secured a divorce, citing Parnell as co-respondent, and while fighting for the retention of his leadership Parnell died suddenly on Oct. 6, 1891, within four months of his marriage to Mrs. O'Shea. He was buried at Glasnevin. See Home Rule; Ireland.

PARNELL, THOMAS (1679-1718). English poet. He was born in Dublin, and educated at Trinity College, Dublin. Made a minor canon of S. Patrick's Cathedral, 1704, he was archdeacon of Clogher, 1706-16, and became vicar of Finglas in 1716. He died at Chester, Oct. 24, 1718. His work is marked by love of the classics, humorous fancy, grace, good taste, and moral feeling, and serves as a link between that of Pope (whom he aided in his translation of the Iliad) and Goldsmith. Especially notable are his Hymn to Contentment, A Night-piece on Death, and Epistle to Pope.

PAROTID GLAND. Largest of the salivary glands. Lying in the recess between the lower jaw and the ear, its function is to secrete saliva.

PARR, CATHERINE (1512-48). Sixth wife of Henry VIII. Born at Kendal Castle, Westmorland, daughter of Sir Thomas Parr, she first married Edward Borough (perhaps Lord Borough), then Neville, Lord Latimer, and, on July 12, 1543, Henry VIII. Surviving the king, she married Sir T. Seymour, June, 1547, and died at Sudeley Castle, Sept. 7, 1548.

PARR, THOMAS (c. 1483-1635). English centenarian, known as Old Parr. Tradition says he was born at Winnington, Shropshire, in 1483, and died in London in 1635, being buried in Westminster Abbey. The cottage in which he lived between Shrewsbury and Welshpool was sold to a namesake in 1917.

Catherine Parr,
Queen of England
After Holbein

PARRAKEET. Name given to many small long-tailed parrots. The ring-necked parakeet, well known in aviaries, has green plumage with a red collar. It is found in India and C o c h i n China. The grass parakeets of Australia have very beautiful plumage of green and blue, and are popular as pets.

Parakeet. Alexandrine parakeet.
green and black, with red bill
P. W. Bond

PARRAMATTA. Town and river of New South Wales, Australia. The town is on the river, 13 m. W.N.W. of Sydney. The orchards of the locality are celebrated. The river is only 10 m. long. Pop. 16,760.

PARRATT, SIR WALTER (1841-1924). British organist. Born at Huddersfield, Feb. 10, 1841, and educated privately, he was organist at Magdalen College, Oxford, 1872-82, and then at S. George's Chapel, Windsor. In 1883 he was made professor of the organ at the Royal College of Music, and from 1908-18 was professor of music at Oxford. Knighted in 1892, he died Mar. 27, 1924.

PARRET. River of England. It rises in Dorset, near Cheddington, and flows through Somerset, to the Bristol Channel. Navigable to Langport, its length is 35 m.

PARROT. Name applied broadly to all birds of the order Psittaci, of which there are about 500 species known. They have hooked bills, brightly coloured plumage, are monogamous, mostly sociable, and nest in tree holes. They are mainly fruit-eaters. The order includes the cockatoos (Ptyctolophidae), macaws (Conuridae), parakeets (Platyercidae), lorries (Trichoglossidae), the true parrots (Psittacidae), and others. The Psittacidae are mainly African, and of these the most familiar in Britain is the grey parrot. From May 20, 1930, the importation into Britain of parrots was prohibited, on account of a number of cases of parrot disease (psittacosis). See Kea; Loriquet; Macaw; Parakeet, etc.

Parrot. West African grey parrot,
Psittacus erithacus
W. S. Berridge, P.Z.S.

PARROT FISH (Scarus). Name applied to several species of tropical fish of the wrasse family. The teeth are modified to form sharp biting beaks; and this, with their brilliant colouring, has given rise to the popular name. They feed upon corals, molluscs, and seaweeds.

PARRY, SIR CHARLES HUBERT HASTINGS (1848-1918). British organist and composer. Born at Bournemouth, Feb. 27, 1848, he held professorships at the R.C.M. and at Oxford, was knighted in 1898, and made a baronet in 1902. He died Oct. 7, 1918. Parry's compositions include several fine oratorios, of which Judith and Job are the best known, and a beautiful setting of Milton's Blest Pair of Sirens. He wrote The Art of Music, 1893; Music of the 17th Century, 1902; and J. S. Bach, 1910. Consult Life, C. L. Graves, 1920.

PARRY, SIR WILLIAM EDWARD (1790-1855). British explorer. Born at Bath, Dec. 19, 1790, he entered the navy in 1806, was employed in protecting whalers in Spitsbergen,

1811-13, and five years later accompanied Ross's Arctic expedition. In 1819 he set sail in the Hecla to find the North-West Passage. Passing through Baffin Bay, he made 114° W. From 1821-25 he made two other Arctic voyages, and in 1827 reached 82° 45' N., a record unsurpassed for nearly fifty years. In 1829 he was knighted. He died at Ems, July 8, 1855. He wrote Voyages to the North-West Passage, 1821; and Narrative of an Attempt to Reach the North Pole, 1828.

PARSEES (inhabitants of Pars, or Persia). Religious community of India and parts of Persia. In India they numbered in 1921 rather more than 100,000, living mostly on the W. coast. Their religion is a form of Zoroastrianism, and from their regard for fire as an emblem of purity they are called Fire-worshippers. They are the most enterprising and educated native community in India, and many have devoted their wealth and ability to philanthropic public ends. They expose their dead on iron gratings in towers of silence, where the bones, denuded of flesh by vultures, drop into a pit, and are removed to a resting-place underground.

PARSLEY (*Carum petroselinum*). Biennial culinary herb of the natural order Umbelliferae. It was introduced into Britain from Sardinia in 1548. It succeeds best in a light loam.

Parsley Fern, tuft of the
delicate fronds

PARSLEY FERN (*Cryptogramma crispa*). Fern of the natural order Polypodiaceae. Native of Europe, Asia, and Alaska, it forms tufts among the stones in mountain districts. The fronds are bluish green, and much divided like a parsley leaf.

PARSNIP (*Pastinaca sativa*). Native British biennial edible plant of the natural order Umbelliferae. In its wild state it has no nutritive value, but under cultivation it has developed into the well-known root vegetable. Parsnips flourish in deep, rich loam.

PARSONS, SIR CHARLES ALGERNON (b. 1854). British engineer. Born June 13, 1854, a younger son of the 3rd earl of Rosse, he founded at Newcastle the firm of C. A. Parsons & Co. His great invention was the Parsons marine steam turbine. Knighted in 1911 and made F.R.S. in 1898, he was president of the British Association 1917 and 1919, and was awarded the O.M. in 1927.

Sir C. A. Parsons,
British engineer
Russell

PARSONSTOWN or BIRR. Urban dist. of Offaly (King's co.), Irish Free State. It stands on the Little Brosna river, 89 m. from Dublin, on the G.S. Rlys. S. Brendan's is the chief church. Known at first as Birr, its other name was given to it after it became the property of the family of Parsons, earls of Rosse, about 1610. The earl's seat is Birr Castle. Pop. 3,402.

PARTHENOGENESIS. Biological term to express a mode of reproduction in which impregnation of the female germ-cell by the male element is absent. Some species, e.g. many gall-flies and saw-flies, consist entirely of females. Examples occur among insects, rotifers, crustaceans, and some plants. Plant lice develop in the same way. From the unfertilised eggs of the queen bee only males result.

PARTHENON, THE (Gr. Virgin's chamber). Temple of Athena, on the Acropolis, Athens. In plan the Parthenon is a parallelogram, divided into two main parts. There were eight outside columns at each end, and 17 on each side. The portico at either end included an inner line of six columns. Its chief glory was the decorative sculpture by Pheidias (q.v.) and his school. With the exception of the inside sculptures, the Parthenon remained nearly intact till 1687, when the explosion of a powder magazine stored here by the Turks dislodged much of its splendid masonry. See illus. pp. 14, 381, 555.

PARTHIA. Country of ancient Asia. It lay S.E. of the Caspian Sea, and adjoined Media. It formed a part of the old Persian or Achaemenid empire, and when that empire was overthrown by Alexander the Great was included in the dominion of the Seleucid kings of Syria. About 250 B.C. it became an independent kingdom under Arsaces I. During succeeding centuries it increased enormously, and under Mithradates I (170-138 B.C.) became the Parthian empire, stretching from the Euphrates to beyond the Indus, with Ctésiphon as its capital. In A.D. 226 Parthia was conquered by Ardasir I and absorbed in the rehabilitated Persian empire.

PARTNERSHIP. According to the Partnership Act, 1890, "the relation which subsists between two or more persons carrying on a business in common with a view to profit." In England and Ireland the rights of a creditor are against the individuals who compose the firm, and all partnership debts are joint. In Scotland partnership debts are joint and several. A partnership ends by effluxion of time, agreement to dissolve, decree of dissolution, or death of a partner.

PARTRIDGE. Game bird of which two species occur in Great Britain. The French partridge (*Caccabis rufa*) is distinguished by

Partridge. Specimen of the common British partridge.

its more handsome plumage and bright red legs and beak, and prefers sandy soil and uncultivated land, while the grey partridge (*Perdix cinerea*) thrives best on rich soil and a mid cultivated fields. Partridges are found in coveys of from five to twenty, and feed upon insects, leaves, grain, and other seeds. At night the covey roosts in a circle in an open field, each bird facing outwards. The nest is made of grass and leaves placed in a hollow under a hedge or among standing corn. In Great Britain and Ireland the partridge-shooting season is from Sept. 1 to Feb. 1.

PARTRIDGE, SIR BERNARD (b. 1861). British cartoonist. Born in London, Oct. 11, 1861, son of Prof. Richard Partridge, F.R.S., he was first engaged in stained glass designing. He began to contribute to *Punch* in 1891, joined the staff in 1901, and later became chief cartoonist. He was knighted in 1925.

PARTRIDGE BERRY (*Mitella repens*). Small trailing evergreen herb of the natural order Rubiaceae. A native of N. America, it has oval, shining, small fragrant white flowers in pairs and it bears scarlet, edible berries.

Partridge wood is another name for the Cabage-bark tree (q.v.).

PASADENA. City of California, U.S.A. It is 9 m. N.E. of Los Angeles, and is a winter resort. On Mount Wilson is the Carnegie Solar Observatory. Pasadena was settled in 1874, and incorporated in 1886. Pop. 85,500.

PASCAL, BLAISE (1623-62). French philosopher, theologian, and mathematician. Born at Clermont-Ferrand, Auvergne, June 19,

Blaise Pascal, French philosopher

1623, he is famous as a great French prose writer. His philosophy was influenced by Epictetus, Montaigne, and Descartes. He came under the influence of the Jansenists, and about 1654 retired to Port-Royal, which his sister, Jacqueline, had entered, and where he adopted the ascetic mode of life. In 1656-57 he became the champion of Port-Royal against the Jesuits, writing pseudonymously the 18 *Lettres* familiarly known as *The Provincial Letters*. His *Pensées*, issued posthumously in 1670, though only fragments of a projected *Apology or Defence of Christianity*, have exercised perhaps a wider influence in theology than the *Lettres*. Pascal died in Paris, Aug. 19, 1662.

Pasha. Turkish title given to governors of provinces, high military and naval officers, and others. Bashaw is an early English form of the word.

PASQUE FLOWER (*Anemone pulsatilla*). Perennial herb of the natural order Ranunculaceae. A native of Europe and N. Asia, it has leaves much divided into narrow segments and dull purple, silky, solitary flowers supported on stout erect stalks. The seeds have feathery tails. In long, Easter (Lat. Pascha) eggs were often stained by rubbing them with the flowers.

PASSAGE, WEST. Urban dist. of co. Cork, Irish Free State. It is 6 m. from Cork, on the G.S. Rlys., has a harbour, and is a pleasure resort. Pop. 3,019.

Passaro. Cape of Sicily. It forms the S.E. corner of the island and is on the E. side of the small bay of Porto Palo.

PASCHENDAELE. Village and ridge of Belgium, in the prov. of W. Flanders. The village is 7½ m. N.E. of Ypres, and the ridge extends from Gheluvelt on the S. to the forest of Houthulst on the N. Village and ridge were captured by the Germans, Oct., 1914, and held until stormed by the British in Oct.-Nov., 1917. Lost in the German advance of April, 1918, the positions were regained by the Belgians in Oct., 1918.

PASSENGER DUTY. Tax levied upon railway travelling in Great Britain. It was imposed in 1841 at the rate of 5 p.c. on all money received from passenger traffic. An act of 1883 abolished it in the case of all fares not exceeding a penny a mile, and reduced it to 2 p.c. on short journeys in urban districts. It was entirely abolished in 1928.

PASSFIELD, SIDNEY WEBB, BARON (h. 1859). British sociologist and politician. Born in London, July 13, 1859, he entered the civil service in 1878, but left it in 1891. In 1892 he was elected to the L.C.C., of which he was a member for 18 years. One of the founders of the London School of Economics in 1913, he started *The New Statesman*. He entered Parliament in 1922 as a Labour M.P., and was president of the board of trade, Jan.-Nov., 1924. In 1929 he became colonial secretary and was made a baron.

Wehbs married in 1892 Beatrice Potter (b. 1858), an authority on social and industrial conditions. The Wehbs jointly wrote *The History of Trade Unionism*, 1894; *English Local Government*, 1906; and *A Constitution for the Socialist Commonwealth of Great Britain*, 1920. In 1926 Mrs. Wehbs published *My Apprenticeship*. When her husband became a baron she retained the name of Mrs. Sidney Wehbs.

PASSION, THE. Religious term for the sufferings and Crucifixion of Jesus Christ. It early became a custom in the Church to recite the story of the Passion as told in the Gospels, the narrative portion being sung to Gregorian tones by a tenor while individual speeches were allotted to other selected voices and the answers of the crowd were sung by a chorus. These musical compositions were known as Passion music, which in the hands of J. S. Bach attained its highest development.

PASSION PLAY. Scriptural drama presented periodically at Oberammergau, Bavaria. Representing Christ's Passion, it is presented by 600 performers, all natives of Oberammergau, who accept small fees, the profits going to charity. The play originated in a vow taken by survivors of the pest in 1633 to present once in every ten years living pictures of Christ's Passion. See Oberammergau.

Pasque Flower. Bloom of the species of anemone, formerly used for colouring Easter eggs

PASSION FLOWER (*Passiflora*). Large genus of climbing herbs and shrubs of the natural order Passifloraceae, natives chiefly of the warmer parts of America. The flowers are often large and showy, coloured blue, purple, red, white or yellow. The name (*flos passionis*) is due to the fact that the early Jesuits saw in the flower numerous emblems of the Crucifixion of Christ. See illus. below.

PASSIONISTS. Roman Catholic order of priests and laymen. It was founded about the year 1730 by S. Paul of the Cross (1694-1775), and formally approved by the pope in 1741. Its special work is to conduct nunsions and retreats and to undertake parochial work.

PASSOVER (Heb. pesach; Gr. pascha). Ancient Jewish feast. Instituted at the time of the exodus, it was so named from the passing over by the destroying angel of the thresholds of the Israelites when all the first-born of Egypt were smitten (Ex. 12). Celebrated on Nisan 15-22, it is also called the festival of unleavened bread.

PASSPORT (Fr. passeport). Safe-conduct and licence to travel. In Great Britain passports are issued to British subjects on the recommendation of a banker, mayor, magistrate, minister of religion, barrister or physician resident in the U.K. In 1930 the fee was 7s. 6d. Visas by the authorities of countries through which the traveller passes are often required, though for British subjects the visé has

Passion Flower foliage and bloom. See above

been abolished in Germany, France, Belgium, and Switzerland. The passport office is 1, Queen Anne's Gate Buildings, Dartmouth St., Westminster, London, S.W.1. There is a branch office at 36, Dale Street, Liverpool.

PASTEUR, LOUIS (1822-95). French biological chemist and physicist. Born at Dôle, Dec. 27, 1822, and educated at the École Normale, Paris, he held several professorships before becoming in 1867-69 professor of chemistry at the Sorbonne. He established the Pasteur Institute in Paris, 1888, and remained its director until his death, Sept. 28, 1895.

Pasteur first attracted notice by his discovery that vinous, acetous, and lactic fermentations were caused by micro-organisms in the air, and he formulated methods for the prevention of "diseases" in wines, beer, vinegar, etc. He studied silkworm disease, isolated the bacillus of anthrax, and prepared vaccines for rabies, diphtheria, and other diseases.

PASTEUR INSTITUTE. This is a research laboratory established for the purpose of combating hydrophobia, and named after Louis Pasteur. The first and most important, L'Institut Pasteur, was erected in Paris by public subscription, and opened Nov. 14, 1888.

A method of preserving wine, milk, and other liquids from deterioration by heating is called pasteurization. Pasteur showed that sufficient heat killed all micro-organisms.

PASTOR. Bird, known also as the rose-coloured starling (*Pastor roseus*). The plumage is pink on the back and under parts, violet-black on the head, neck, and tail, and greenish-black on the wings. It nests in W. Asia and S.E. Europe, and feeds mainly on locusts.

Pastor, also called rose-coloured starling
W. S. Herridge, F.Z.S.

PATAGONIA. Extensive region forming the southern extremity of S. America and belonging to Argentina and Chile. It extends S. from the Río Colorado to the Strait of Magellan, which divides it from the islands of the Tierra del Fuegian archipelago. A treaty, ratified in 1881, apportioned the territory E. of the Andes to Argentina and the W. coastal region to Chile. Argentine Patagonia is divided into the territories of Río Negro, Neuquén, Chubut, and Santa Cruz. Its area is 322,004 sq. m., or, including the E. section of Tierra del Fuego, 331,203 sq. m. The pop. is estimated at 106,625. The area of Chilean Patagonia is 584,491 sq. m. See Argentina.

PATELEY BRIDGE. Mining town of Yorkshire (W.R.). It stands on the Nidd, 10 m. from Ripon, on the L.N.E. Rly. Here are stone quarries. Sheep and cattle fairs are held. Pop. 2,500.

PATEN. In the service of the Eucharist, the plate on which the consecrated bread is placed: also in the Mass, the plate on which the Host is laid. The term is also used for the covering of the chalice. It is usually of gold or silver-gilt. See Eucharist.

PATENT. Exclusive right or privilege. By the statute of monopolies, 1624, the grant of a patent was restricted to the "first and true inventor," who, according to present practice, may comprise not only the actual inventor, but the first importer of an invention into the U.K. Evidence of ingenuity must be disclosed. The investigation period is restricted to 50 years. The normal protection period is 16 years. Interested parties may, within two months after the acceptance of the complete specification by the Patent Office, oppose the sealing of the patent. At any time not less than four years after the date of a patent, any

person may apply for its revocation on the ground that the protected product or process is manufactured or carried on wholly or largely outside the United Kingdom.

To deal with all matters affecting patents in Great Britain there is a Patent Office. The offices are at Southampton Buildings, London, W.C., where there is a valuable scientific library.

A patent medicine is a medicine or specific for the cure or relief of any physical malady, and of which the owners claim an exclusive right of sale. The Medicine Stamp Act, 1812, imposed a duty on patent medicines. The British Medical Association has published a handbook containing an analysis of the composition, cost of production, and selling price of the chief patent medicines.

PATER, WALTER HORATIO (1830-94). British scholar. Born at Shadwell, August 4, 1830, the son of a physician, and educated at King's School, Canterbury, and Queen's College, Oxford, he became a fellow of Brasenose College in 1864. A visit to Italy in 1865 inspired a number of essays which, collected in 1873, obtained wide recognition as *Studies in the History of the Renaissance*. In 1885 appeared *Marius the Epicurean*. Other publications include *Imaginary Portraits*, 1887, and *Plato and Platonism*, 1893. He died July 30, 1894.

PATERNOSTER ROW. London thoroughfare. It runs W. from Cheapside to Amen Corner, Warwick Lane. Long associated with the publishing trade, it was originally inhabited by makers of prayer-beads, the dealers in which, known as paternosters, moved here from St. Paul's Churchyard in the 13th century. The Chapter coffee house was famous in the 18th century as a publishers' meeting place.

PATERSON. City of New Jersey, U.S.A., on the Passaic river, 15 m. N.W. of New York. The river provides ample water power for industries. Silk is an important manufacture. Founded in 1791, Paterson became a township in 1831 and a city in 1851. Pop. 135,875.

PATESI. Sumerian name for the ruler of a city-state in early Babylonia. It regarded him as the steward of the city-god, in whose name he administered its affairs.

PATHAN. Name popularly denoting the Iranian peoples of E. Afghanistan and the N.W. frontier province of India. The predominant speech is Pushtu. The Pathans in India number about 4,000,000.

PATHOLOGY (Gr. pathos, disease; logos, discourse). Study of the essential nature of disease, particularly the structural changes and morbid processes in the body which are associated with disease. The investigator uses experimental pathology when he produces a disease in animals and studies its effects. The observation of morbid processes in sick persons is termed clinical pathology. The study of the changes in diseased tissues is sometimes known by the name of morbid anatomy.

PATIALA. Native state and town of the Punjab, India. The state has an area of 5,932 sq. m. and a pop. of 1,499,739. The ruler is a maharaja entitled to a salute of 17 guns. The capital is built round the old palace, and is a busy trading centre. Pop. 47,531.

PATIENCE. Card game for a single person. There are many hundreds of such games. In one class, after shuffling the cards, the player places them in sequence according

to some plan, the object being to do this by working through the cards for a certain number of times, perhaps three.

PATINA. Green coloration seen on bronze or copper articles which have been exposed to a moist atmosphere for a long period. It is imitated by wetting bronze articles with dilute acids, or applying a paint of copper carbonate. Japanese patina is a glossy black with a violet sheen, or golden sheen with shades of red and grey, according to the metal used.

PATMORE, COVENTRY KERSEY DIGHTON (1823-96). British poet. Born at Woodford, Essex, July 23, 1823, he was an assistant in the printed book dept. of the British Museum, 1846-66. His works include *The Angel in the House*, 1854-62, his most notable poem; *The Unknown Eros*, 1877; *Amelia*, 1878; and *Red, Root and Flower*, 1895. A man of difficult temperament and a mystic, he became a Roman Catholic in 1864, and died at Lymington, Nov. 26, 1896.

Coventry Patmore, British poet

PATMOS, OR PATIMA. Island of the Aegean, one of the Sporades group. On the S.E. side of the Aegean, it is famous as the place of banishment of the Apostle John. It belongs to Italy. Its area is 16 sq. m. Pop. 2,550. See Aegean Sea.

PATNA. Town of Bihar and Orissa, India. It is on the right bank of the Ganges, close to the mouths of the three tributaries, Son, Gogra, Gandak. The remains of a pillared hall, erected in the 3rd century B.C., were unearthed in 1912-13. The oldest mosque is that of Sher Shah (1540-45); the library has a collection of Arabic and Persian manuscripts. Pop. 119,976.

PATON, SIR JOSEPH NOEL (1821-1901). Scottish painter. Born at Dunfermline, Dec. 13, 1821, he became A.R.S.A. in 1847, and R.S.A. in 1856; and the queen's limner for Scotland in 1866. He painted religious and other subject pictures in the pre-Raphaelite manner, with strong but not always attractive colour. He was at his best in black and white work. Knighted, 1867, he died in Edinburgh, Dec. 26, 1901.

PATRICIA. District of Ontario, Canada. The most N. area in the prov., it was formed from parts of Keewatin and the N.W. Territories in 1912. Its area is 146,400 sq. m.

PATRICIAN. Member of the ruling order in ancient Rome, as opposed to the plebs or plebeians. Descendants of the original citizens, they had the monopoly of the priestly offices and the exclusive right of interpreting the law. The senate was recruited almost exclusively from their ranks.

PATRICK (c. 387-493). Patron saint of Ireland. He was born probably near Dumbarton, Scotland. Escaping from servitude in Antrim, he became a monk at Tours, was ordained by S. Germain of Auxerre, and entrusted by Pope Celestine I with the conversion of Ireland, where he founded numerous churches, religious houses, and bishoprics. Croagh Patrick, at Clew Bay, and the island in Lough Derg, co. Donegal, were among his places of retreat for meditation and devotion. (See Derg). He died at Saul, near Downpatrick, on March 17, 493 or 460. His literary remains are the valuable Confession, preserved at Dublin, and the Letter to Coroticus.

PATRINGTON. Town of Yorkshire (E.R.). It is in the East Riding, 14 m. by rly. S.E. of Hull, and has a trade in seed, corn, and coal. Pop. 1,137.

Pathan from the North-West Frontier of India

PATTESON, JOHN COLERIDGE (1827-71). British missionary. Born in London, April 1, 1827, the son of Sir John Patteson, a judge, he was educated at Eton and Balliol College, Oxford. He was ordained in 1853, and in 1861 was made bishop of Melanesia. After ten years of devoted service he was murdered, Sept. 20, 1871, on the island of Nukupu.

PATTI, ADELINA JUANA MARIA (1843-1919). Anglo-Italian vocalist. Born at Madrid, Feb. 19, 1843, she made her operatic début as Lucia in 1859 in New York. In 1861 she sang with great success in London, and then visited the chief cities of Europe. Madame Patti was for long the most popular soprano in the world. Her farewell concerts in London lasted from 1895 to 1908. She was thrice married, her third husband being a Swede, Baron Cederström. She died Sept. 27, 1919.

Adelina Patti, Anglo-Italian vocalist

PATTISON, MARK (1813-84). British scholar. Born Oct. 10, 1813, at Hornby, Yorkshire, the son of a clergyman, he was educated at Oriel College, Oxford. Elected fellow of Lincoln College in 1839, he won a reputation as tutor and lecturer there. In 1861, after six years away from Oxford, he was chosen rector of the college, and he remained there until his death at Harrogate July 30, 1884. In 1841 he was ordained. He married Emilia Frances Strong, who later became the wife of Sir Charles Dilke.

Mark Pattison, British scholar

Pattison wrote a life of Casaubon and began one of Scaliger. His Memoirs, those of a disappointed man, appeared in 1885. He is regarded as the original of Isaac Casaubon in George Eliot's Middlemarch.

PAU. Town of France. The capital of the dept. of Basses-Pyrénées, on the right bank of the Gave du Pau, 66 m from Bayonne, it stands at a height of 670 ft., with a delightful climate, and is a favourite winter resort. It was from 1512-89 the capital of the little state of Béarn. Pop. 37,711. See France.

PAU, PAUL MARIE CÉSAR GERALD (b. 1848). French soldier. He was born at Montélimar, Nov. 29, 1848, and educated at St. Cyr. Entering the French army as a lieutenant of infantry, he served in the Franco-Prussian War, 1870-71, where he lost an arm. He reached the rank of general in 1897, and commanded the 16th, and then the 20th army corps. In 1914 he was given general direction of the French offensive in Alsace. In 1915-16 he was engaged on military missions to Russia, Italy, and Rumania, but in 1917 he was again commanding French forces in Alsace.

P. M. C. G. Pau, French soldier

PAUL. Urban dist. of Cornwall. It is 2 m. from Penzance. The Spaniards burned the village in 1593. In the neighbourhood are remains of a British camp. Pop. 5,669.

PAUL, SAINT. Born at Tarsus, in Cilicia, about the same time as Jesus Christ was born in Judea, Paul's name was originally Saul. A Jew of the Dispersion, he learned the local trade of tent-making, and was sent to Jerusalem to be a rabbi. Among the first opponents of the Christian religion, he headed a persecution intended to suppress it; but on the way

to Damascus, where he was going to hunt out the Christians, he was converted by a vision.

Paul spent three years in Arabia, thinking over his experience. On leaving Arabia, he went to Jerusalem; but the disciples were afraid of the persecutor turned apostle, till Barnabas won for him their confidence. The opposition of the Jews was too strong, however, and he went to Tarsus, spending some years evangelising his native province. Then, in company with Barnabas, he was sent forth on his first missionary journey round Cilicia. On his second missionary journey he evangelised the cities of Greece, among them Athens and Corinth. The third journey went over the same ground, but its principal centre was Ephesus. On arriving in Jerusalem at the end of it, he was arrested at the instance of the Jews, appealed to Caesar, and was sent to Rome for trial. He was beheaded under Nero.

PAUL. Name of five popes. Paul I was pope from 757 to 767. Paul II, a nephew of Eugenius IV, was pope from 1464 to 1471. Paul III, a member of the Farnese family, was made a cardinal in 1483 by Alexander VI. He became pope in 1534 and reigned until his death, Nov. 10, 1549. Paul IV, a member of the Caraffa family, was pope from 1555 to 1559. Paul V, a Borghese, was pope from 1605 to 1621.

PAUL (1754-1801). Tsar of Russia. He was born Oct. 1, 1754, the son of Catherine the Great and Peter III. After the murder of Peter, in 1762, Catherine seized the throne, and Paul led an obscure existence until her death, when he banished her counsellors, joined the allied powers against Napoleon, and later entered into an alliance with Napoleon in order to crush the Bourbons. On March 23, 1801, he was assassinated.

Paul I, Tsar of Russia

PAULINUS, GAIUS SÆTORIUS (fl. 41-69). Roman general. In 59 he was appointed governor of Britain, and in 61 subdued Anglesey. Summoned south to quell the Iceni, who had rebelled under the leadership of their queen, Boadicea, Paulinus gained a decisive victory over them near London. The following year he was recalled to Rome.

Another Paulinus was a follower of S. Augustine. He became the first bishop of York, and then bishop of Rochester.

PAUPERISM (Lat. pauper, a poor person). State of dependence upon the community through lack of means of subsistence.

In ancient Greece and Rome the maintenance of the poor was a matter of state concern, and feudalism involved the dependence of the serf upon his lord for maintenance.

The Church in the Middle Ages was a great almsgiver, so when the religious houses fell, the poor suffered. Compulsory contributions for their support began in

Anna Pavlova, Russian dancer, in her garden at Hampstead
Miss Compton Collier

1535, the duty of relief for the poor being put upon every parish.

In 1601 a law was passed which has since formed the basis of the English poor law system, and has been copied in Ireland. Overseers were appointed in every parish and power was given to them to levy taxes on the inhabitants for the relief of the poor. In 1723, and again in 1834, changes were made, one being the introduction of the workhouse and another the grouping of parishes into unions.

Later the overseers and, in 1929, the boards of guardians were abolished; the duties of the boards were transferred to the county and county borough councils.

In England and Wales the expenditure on pauperism for 1928-29 was £36,200,000. For the year 1928 the number of persons in receipt of relief was 1,364,691. In Scotland, in 1923, 240,580 were relieved. See Poor Law.

PAUSANIAS (c. A.D. 150). Greek traveller and geographer. Perhaps a native of Lydia, he travelled extensively in Greece, embodying the results of his journeys in a work in 10 volumes, *The Itinerary of Greece*.

Pavane (Lat. pavo, peacock). Stately dance tune in duple time, joining with the galliard in the earliest kind of suite.

PAVIA. City of Italy. The capital of the prov. of Pavia, it is the ancient Ticinum. It stands on the Ticino, near its junction with the Po, 22 m. by rly. S. of Milan. A magnificent 14th century covered bridge connects with the suburb of Ticino. The cathedral was founded in 1487. S. Michele, one of the finest specimens of the Lombard basilica, dates from the 11th century.

The university is a handsome building, dating from 1490, but Pavia was a centre of learning as early as the 9th century. Near by is the Certosa (q.v.). There is trade in silk, wine, olives and olive oil, corn, hemp, and Parmesan cheese. Pop. 50,000.

BATTLE OF PAVIA. At Pavia, on Feb. 24, 1525, the French, under Francis I, were routed with a loss of 10,000 men, Francis himself being taken prisoner.

PAVLOVA, ANNA. Russian dancer. Born in Russia, she made her first appearance at the Imperial Opera House, St. Petersburg, and soon became the most noted dancer in Europe. She made her début in London in 1909, at the Palace Theatre, and later toured America.

PAWNBROKER. Person licensed to lend money not over £10 at interest on the security of articles deposited with him. In Great Britain, on loans of 10s. and under, the pawnbroker's charge is 1d. for the ticket and interest at 1d. per calendar month on each florin or part of a florin; between 10s. and 40s. the charges are 1d. for the ticket and 1d. a month per florin. In both these cases additional interest at the rate of 1d. for each 5s. or part thereof may now be charged. On larger sums up to £10 the charge for the ticket is 1d. and the interest 1d. per half-crown. Special contracts, however, may be made with loans exceeding 40s. Every pawnbroker must take out an annual licence at a cost of £7 10s. Pledges may be redeemed at any time within one year and seven days.

Pavia. Facade of the church of S. Michele, dating from the 11th cent.

PAXTON, SIR JOSEPH (1801-65). British architect and gardener. Born at Milton Bryant, Bedfordshire, Aug. 3, 1801, he was gardener at Chatsworth. He was knighted for his design of the Great Exhibition building of 1851, and had charge of its erection as the Crystal Palace at Sydenham. M.P. for Coventry 1854-65, he died June 8, 1865.

Sir Joseph Paxton,
British architect
After Oakley

PAYMASTER GENERAL. Government official. His department pays out public money in accordance with the votes of Parliament and as requisitioned by the treasury.

PAYN, JAMES (1830-98). British novelist. Born at Cheltenham, Feb. 28, 1830, and educated at Eton, he edited *Chambers's Journal* 1858-74, and the *Cornhill Magazine*, 1882-96. His works include *What He Cost Her*, 1877; *By Proxy*, 1878; *Thicker than Water*, 1883; *The Talk of the Town*, 1885, which deals with the Shakespearean forger Ireland. Some *Literary Recollections*, 1884, contains interesting reminiscences of contemporary literary society, and *The Backwater of Life*, published posthumously in 1899, some cultured essays. He died in London, March 25, 1898.

PAYNE, JOHN HOWARD (1791-1852). American actor and playwright. Born in New York, he made his stage debut at the Park Theatre there, Feb. 24, 1809, as Young Norval in John Home's tragedy, *Douglas*. He acted in England, and adapted many plays from the French. Payne was American consul at Tunis, 1842-45 and 1851-52, and died there, April 9, 1852. He is chiefly remembered as the author of *Home, Sweet Home*.

Peach. Blossom and, right, fruit

Peas in the pod

PEA (*Pisum sativum*). Annual climbing herb of the natural order Leguminosae. Its seeds, in pods, form one of the most popular of vegetables. The garden pea is said to have been introduced into Britain from S. Europe in 1548. The variety known as sugar pea has edible pods. See *Sweet Pea*.

PEABODY, GEORGE (1795-1869). American philanthropist. Born at South Danvers, Massachusetts, Feb. 18, 1795, he amassed a large fortune in business 1814-43. He then moved to London, where he set up as a merchant and banker and became known for his charitable gifts. He died in London, Nov. 4, 1869, and after lying in state in Westminster Abbey his remains were taken to America. In 1868 South Danvers was renamed Peabody.

PEABODY TRUST. This fund was established in 1862 by George Peabody, to build houses for the working classes of London. Blocks of buildings were erected in various parts of London until there were 18 of them.

PEACE. River of Canada. Rising W. of the Rockies in the mountains of British Columbia, it passes through the Rockies

and empties itself into the Great Slave Lake. Its length is 1,067 m. and its basin covers 117,000 sq. m. The Peace River district in Alberta possesses 30,000,000 acres waiting for colonists and vast mineral resources.

PEACE, CHARLES (1832-79). British criminal. Born in Sheffield, May 14, 1832, he received his first sentence for robbery in 1851. Before his execution at Leeds on Feb. 25, 1879, for the murder of Arthur Dyson on Nov. 29, 1876, he confessed to many burglaries and to the murder of Constable Cock at Manchester in 1876. For this crime a man named William Hahron had been convicted and sentenced to death, and was suffering penal servitude for life at the moment of Peace's confession. Hahron received a free pardon and £800 compensation.

Charles Peace,
British criminal

PEACE CONFERENCE. Meeting of representatives of belligerents following hostilities to settle territorial and other questions. The term is specially associated with the meeting of representatives of the Allied powers in Paris which drew up the peace treaties following the Great War. It was formally opened on Jan. 18, 1919. The terms were presented to Germany on May 7, and signed June 28; those to Austria were presented June 2, and signed Sept. 10; Bulgaria signed on Nov. 27. See *Verailles*.

Peacehaven. Bungalow town of Sussex. It stands on the cliffs between Brighton and Newhaven.

PEACH (*Prunus Persica*). Small fruit-bearing tree of the natural order Rosaceae.

It is a native of Asia, was cultivated before the Christian era, and was introduced into Britain in the 16th century. The flowers are pink, white, and red, and the fruit, in the case of the peach itself, is large, pale yellow and crimson in colour, and smooth-skinned. The nectarine, a variety, is much smaller in size.

There are two types of peaches, known as freestone and clingstone. In the former the flesh parts readily from the stone, but in the latter, fibrous cords from the stone hold the flesh around it. A white double-flowered peach (*Persica vulgaris flore pleno*) is grown as an ornamental shrub.

PEACOCK (*Pavo*). Genus of the pheasant family. The common peacock (*P. cristatus*) is a native of India and Ceylon. It was introduced into Europe at an early date, and was a favourite table bird with the Romans.

The peacock is one of the handsomest of birds, especially at the breeding season, when the male displays his gorgeously eyed train for the delectation of the hens. The green or Java peacock is a native of Burma, Malay Peninsula, and Java.

PEACOCK, THOMAS LOVE (1785-1866). British novelist and poet. Born at Weymouth, Oct. 18, 1785, the most notable of his poems is *Rhododaphne*, 1818. He is remembered best for his satiric novels; *Headlong Hall*, 1816; *Nightmare Abbey*, 1818; *Maid Marian*, 1822; and *Crochet Castle*, 1831. He died at Halliford, near Chertsey, Jan. 23, 1866. One of his daughters married George Meredith (q.v.).

George Peabody,
American
philanthropist

PEACOCK BUTTERFLY. Name given to butterflies of the species *Vanessa Io*. The wings are purplish above, with dusky base and hind margins. There is a large eye-spot on each. On the under side the wings are brown, with black markings. The caterpillar is black, with spots of white.

Peacock Butterfly. *Vanessa Io*, a species which appears in August
J. J. Ward

PEAK. Wild tableland of Derbyshire. It is north of Buxton and forms the S. end of the Pennine Chain. Its highest point is Kinder Scout (2,088 ft.), other heights being Axe Edge, near Buxton (1,860 ft.), and Mam Tor (1,700 ft.). Castleton is regarded as the capital of the Peak, and Chatsworth is known as the palace of the Peak. Peveril Castle, near Castleton, figures in Scott's *Peveril of the Peak*. Peak Forest is a station on the L.M.S. Rly. 36 m. from Derby. The Peak Cavern, Castleton, goes 500 yards into the limestone.

Pear. Fruit of cultivated variety

PEAR (*Pyrus communis*). Tree of the natural order Rosaceae. It is a native of Britain, and from E. Europe to the Himalayas, and is propagated in the same way as apples, chiefly by grafting. The fruit is slightly woody. Late pears should never be left on the trees after the middle of November, but picked and carefully stored. The pear, particularly in an uncooked state, should be avoided by bilious persons. See *Perry*.

PEARL. Secretion deposited by many bivalve molluscs, and a few univalves, in the form of thin layers of calcium carbonate one upon the other. The iridescent play of colour is due to irregular refraction caused by obstruction to light by the numerous thin layers. Pearls dissolve in acids, and discolour if exposed to alkali or even to constant warmth against human skin. The best pearls are produced by the pearl oyster. The finest blacks come from the South Seas and the Gulf of Mexico. Imitation pearls are fashioned out of mother-of-pearl. "Cultured" pearls are produced by introducing into the flesh of the oyster a foreign substance, which the oyster covers with nacre.

Pearl found in an oyster shell off Turtle Island in 1909

Peacock with train outspread

PEARL. Type, half the size of long primer, a size smaller than ruby and a size larger than diamond. Known also as 5 point, about 15 lines make an inch in depth.

PEARSON, SIR CYRIL ARTHUR (1866-1921). British newspaper proprietor. Born Feb. 24, 1866, at Woolkey, Somersetshire, he founded *Pearson's Weekly* and *The Daily Express*, and amalgamated *The Evening Standard* with *The St. James's Gazette*. Overtaken by

blindness, he devoted himself to the welfare of those similarly affected, organizing St. Dunstan's Hostel (q.v.). He was made a baronet in 1916. He wrote *Victory over Blindness*, 1919. He died Dec. 9, 1921.

PEARY, ROBERT EDWIN (1856-1920). American explorer. Born May 6, 1856, he entered the U.S. navy in 1881, and was employed in the survey of the proposed Nicaragua Ship Canal. In 1898 he charted the coast N. of Greenland, and in 1908 began the voyage which, according to his own account, led to his discovery of the N. Pole, April 6, 1909. Promoted rear-admiral, 1911, he died at Washington, Feb. 19, 1920. See *Arctic Exploration*.

Peary Land is a desolate ice-bound tract of N. Greenland named after Robert E. Peary.

R. E. Peary,
American explorer

PEAT. Spongy substance of vegetable origin common to almost every temperate country. The larger part of British peat appears to be composed of mosses, hill peat being mainly sphagnum and andromeda, while lowland is principally hypnum moss.

The process of formation is similar to that of the coal measures, but the oldest peat deposits are, geologically speaking, modern compared with coal. Peat bogs cover about 6,000,000 acres in the British Isles, Ireland possessing 3,000,000 acres. They vary greatly in depth.

PECCARY (Dicotyles). Genus of hog-like ungulate mammals with only three toes on the hind foot. They are natives of America from Paraguay to Arkansas.

Peccary. The collared peccary, a tailless mammal of America

PECKHAM. Dist. of London. Part of the met. bor. of Camberwell, S.E., it lies N. of Peckham Rye and Nunhead and W. of New Cross and Hatcham. Peckham Rye, 64 acres, a public recreation ground from time immemorial, has been definitely public property since 1882. Peckham Rye Park, over 42 acres, opened in 1894, has been since enlarged.

PECTIN. Gelatinous substance found in fruits, as apples and gooseberries, and in fleshy roots, as carrots and beets. It causes jams made from fruits to set into a jelly and has a nutritive value similar to that of starch.

PECULIAR PEOPLE. Protestant sect, founded in 1838 by John Banyard. They refuse to make use of medical treatment in case of sickness, relying on prayer and anointing with oil to effect a cure.

PEDAL. Mechanism of musical instruments. Pedals are of various kinds. (1) On the pianoforte they are two levers for the feet, one on the right which allows the tone to be sustained as long as the strings will naturally vibrate, and one on the left which softens the tone. (2) On the harp they are foot levers to raise the pitch of the strings a tone or semitone. (3) On the organ they are wooden keys for the feet controlling the deepest toned pipes, and levers moving the swell shutters and controlling groups of stops.

In music, a note sustained regardless of any changes of harmony is called a pedal point.

PEDICULOSIS. Affection of the skin caused by a minute parasite, of which there are three varieties: the *Pediculus capitis* or head louse, the *P. corporis* vel *vestimentorum* or body louse, and the *P. pubis* or crabs louse, which infects the pubic hair. Children are more often affected than adults with *P. capitis*, and girls more than boys owing to their longer hair.

PEDLAR. General term for an itinerant vendor of small wares. In Great Britain a pedlar is one who sells goods, or his skill in handicraft, as tinkering, chair-mending, etc., on foot. He must obtain annually a licence from the police. See *Hawker*.

PEDOMETER (Lat. pes, foot; Gr. metron, measure). Instrument for indicating the number of steps taken in walking, thus enabling the distance covered to be determined. It is usually constructed in the form of a watch, upon the dial of which are recorded the number of revolutions of a mechanism actuated by a bob or weight oscillated by the movement of the body, or in some cases by a cord connected with the foot. Adjustments are made for the length of step, thus permitting the distance covered to be determined more accurately.

PEDRO I (1798-1834). Emperor of Brazil, 1822-31. Son of John VI of Portugal, he was proclaimed emperor of Brazil in 1822, and in 1825 the independence of that country was recognized. In 1826 he became king of Portugal, but abdicated in favour of his daughter, Maria. After an outbreak in Rio de Janeiro he abdicated the Brazilian throne also, April 7, 1831, and returned to Portugal.

He was succeeded by his son Pedro II, who was proclaimed emperor on his father's abdication. He reigned until he was dethroned after the revolution of 1889, and he died in Paris, Dec. 5, 1891.

PEEBLES. Burgh and co. town of Peebles-shire, Scotland. It stands on the river Tweed, 23 m. S. of Edinburgh on the L.M.S. and L.N.E. Rlys. The chief buildings are the parish church, and those erected for municipal purposes by the liberality of Andrew Carnegie. The town has a hydropathic establishment and a good golf course. Tweed and woollen cloth are manufactured. Market day, Tues. Pop. 5,537.

PEEBLES SHIRE OR **TWEEDDALE.** Inland county of Scotland. Its area is 347 sq. m., and is traversed by the Tweed. Broad Law (2,754 ft.) is the highest summit. Peebles is a pastoral county, and sheep are reared in large numbers. Peebles is the co. town. In conjunction with part of Midlothian one member is sent to Parliament. Pop. 15,300.

LITERARY ASSOCIATIONS. William and Robert Chambers were born in the co. town. James Nicol (1769-1819), poet and miscellaneous writer, was born at Innerleithen. Sir Walter Scott found much inspiration in the county, as also did T. T. Stoddart (1810-80) and J. C. Shairp in *The Bush* Aboon Traquair.

PEEL. Town and watering place of the Isle of Man. It is 11 m. N.W. of Douglas, on the Isle of Man Rly. There are manufactures of sails, nets, boats, etc., but the

Peel. Ruins of the castle on St. Patrick's Isle; right, the roofless cathedral of S. German

people are principally engaged in the fisheries. Joined to the mainland by causeway is St. Patrick's Isle, which contains the ruin of Peel Castle, mentioned in Scott's *Peveril of the Peak*, and the remains of S. German's Cathedral, a cruciform structure dating partly from the 12th century. Pop. 2,455.

PEEL, ARTHUR WELLESLEY PEEL, 1ST VISCOUNT (1829-1912). British statesman. Born Aug. 3, 1829, the youngest son of Sir Robert Peel, he was educated at Eton and Balliol College, Oxford, and entered the House of Commons as Liberal M.P. for Warwick in 1865. He was elected Speaker in 1884, and ranks as one of the ablest occupants of that high office. He retired in 1895, and was made a viscount. In his later years he was associated with proposals for temperance reform. He died Oct. 24, 1912.

Viscount Peel,
British statesman
Elliott & Fry

PEEL, WILLIAM ROBERT WELLESLEY PEEL, 1ST EARL (b. 1867). British politician. The eldest son of the 1st viscount, he was born Jan. 7, 1867, and called to the bar in 1893. He was leader of the municipal reform party and chairman of the L.C.C., and entered Parliament, 1900. In 1919-21 he was under-secretary for war, and in 1922-24 and 1928-29 secretary for India. He was made an earl in 1929.

PEEL, JOHN (1776-1854). Cumberland yeoman, remarkable for his passion for fox-hunting. Born at Caldbeck, Nov. 13, 1776, he died there, Nov. 13, 1854. He is the hero of the song *D'ye ken John Peel?* written by J. W. Graves about 1828-29.

PEEL, SIR ROBERT (1788-1850). British statesman. He was born near Bury, Lancashire, Feb. 5, 1788, the son of a wealthy cotton manufacturer, and was brought up in an atmosphere of intelligent Conservatism. He was educated at Harrow and Oxford, and entered Parliament in 1809. At 24 he became secretary for Ireland; six years later he retired from the Liverpool ministry, to return in 1822 as home secretary, in which capacity he carried several valuable reforms,

Peeblesshire. Map of the inland county of S.E. Scotland

including the establishment of the Metropolitan Police.

In 1834 and in 1839 Peel was called to office as prime minister, but in both cases was obliged to resign after a few weeks. It was not till 1841 that he was able to take office with a decisive Conservative majority behind him. Advancing in successive budgets along the path towards free trade, he introduced the measure repealing the Corn Laws, but at the very moment when the bill passed its final stage Peel was defeated on an Irish question and resigned, June 29, 1846. The Liberals came into office, and were there maintained by the general support of the Peelites, with whom they ultimately coalesced in 1852. Peel died on July 2, 1850, from injuries caused by a fall from his horse.

British statesman
After Lawrence

and resigned, June 29, 1846. The Liberals came into office, and were there maintained by the general support of the Peelites, with whom they ultimately coalesced in 1852. Peel died on July 2, 1850, from injuries caused by a fall from his horse.

PEERAGE (Lat. par, equal). Word now applied to peers and members of their families, i.e. to those who can succeed to titles. In the United Kingdom there are five ranks in the peerage, duke, marquess, earl, viscount, and baron. The bishops and the law lords are lords of parliament, but not peers. Peers are created by letters patent.

A peerage may be limited to sons and their descendants, or be extended to daughters or to a brother. The early peers owed their position to tenure of land. A woman can be a peeress, but cannot sit in the House of Lords. Peerages, or works giving biographical details of peers and their families, include Burke, Cokayne, and Debrett. There is also a Jacobite peerage. See Baron; Duke; Earl, etc. The so-called peerage bill was introduced into Parliament in 1720 to prevent the sovereign from creating new peerages. The bill was rejected by the Commons.

PEGASUS. In Greek mythology, the winged horse which sprang from the blood of the Gorgon Medusa, when her head was struck off by Perseus. Pegasus created Hippocrene, the spring of the Muses, with a kick of his hoof.

A club of barristers who are interested in horse racing is called the Pegasus Club. It holds meetings for point-to-point races.

In astronomy, Pegasus is the name of one of the constellations.

PEKINESE. Small breed of dog. It is purely a domestic pet and is seen in several colours, but the golden-tan self-coloured dogs are the truest to type.

The maximum weight is 18 lb., but the smaller dogs are the more desirable.

PEKING OR **PEIPING**. Former capital of China. Situated about 100 m. from the gulf of Chih-li, its pop. is estimated at over 1,300,000. The ancient capital of Yen, Peking became the capital of the Chinese empire in 1264, under Kublai Khan.

It includes the Chinese or outer city and the Tartar or Manchu city, within which is

the Imperial city, inside which is the Forbidden city. The circuit of the outer walls is 24½ m., of the Tartar City 14 m., of the Imperial City 6 m. A moat and a brick wall in the centre of the Imperial city mark off the Forbidden city, in which are the imperial palaces. In the Tartar city is the observatory, which dates from the 13th century. There are some wonderful temples. The Chinese city is the commercial section. There is a national university, also a medical training college. Peking is connected by rly with Hankow, Manchuria, and Kalgan. In 1928 Peking was taken by the nationalists, who changed its name to Peiping and removed the government to Nanking. See China.

PELAGIUS (c. 360-420). British theologian. A great traveller and a student of early literature, he held that sin is not transmitted from Adam, but that each child born into the world is morally clean; that it is possible for him not to sin; and that for all his good deeds he accumulates merit with God. His views were (about A.D. 409) embodied in a Latin commentary on the Epistles of St. Paul, the original form of which was discovered in 1906.

PELARGONIUM. Genus of flowering and ornamental-foliaged plants, including half-hardy succulent and shrubby perennials of the natural order Geraniaceae. Most are natives of S. Africa. See Geranium.

PELECYPODA. Class of the Mollusca, alternatively termed Lamellibranchiata and, popularly, bivalves. The general form and structure of the animals and their shells are exhibited by such familiar species as the cockle, mussel, scallop, and oyster. See Bivalve; Mollusc.

PELÉE, MONT. Volcano of Martinique, French West Indies. Small eruptions had been recorded in 1762 and 1851, and on May 8, 1902, a great eruption destroyed St. Pierre and 30,000 people; on Aug. 30 a second eruption destroyed two villages and 2,500 people. The new cone is 4,400 ft. in altitude.

PELEUS. In Greek legend, king of the Myrmidons in Thessaly, and father of Achilles. His wedding with Thetis, a sea-deity, daughter of Nereus, was of great magnificence, all the gods being invited, except Eris, the goddess of Discord. Pron. Pee-léwss.

PELEW OR **PALAU ISLANDS**. Group in the Pacific Ocean. They lie E. of the Philippines and W. of the Carolines. The total area of the 26 islands is 170 sq. m. and the pop. about 10,000. The islands were sold by Spain to Germany in 1899 and are ruled now by Japan.

PELHAM, HENRY (c. 1696-1754). British statesman. Younger son of Thomas Pelham, made Baron Pelham in 1706, he was educated at Westminster School and Hart

Hall, Oxford. His eldest brother, Thomas Holles Pelham, became duke of Newcastle. Henry entered parliament in 1717. In 1724 he was made secretary at war, and in 1743 became prime minister and chancellor of the exchequer. During his term of office, eleven years, he followed the financial policy of Walpole. He died March 6, 1754. See Newcastle, Duke of.

PELIAS. In Greek legend, king of Iolcus, the throne of which he had seized from Aeson. When

Jason came to claim Iolcus, Pelias sent him in search of the Golden Fleece, in the hope that he would perish. See Argonauts.

PELICAN (Pelicanus). Small genus of about six species of large birds. Their food is fish, which they seek in the shallow waters of rivers and lakes.

The long upper mandible is hooked at the tip, and the lower mandible carries a large pouch, formed by the loose, naked skin of the neck, in which fish can be temporarily stored.

PELION.

Mountain range of ancient Greece. It is in the Thessalian district of Magnesia, near the coast, S.E. of Mt. Ossa. It is famous in Greek mythology as the scene of the conflict between the gods of Olympus and the giants, who are said to have piled Pelion and Ossa on Olympus, to reach the sky.

PELISSIER, HENRY GABRIEL (1874-1913). British comedian. A son of Frederic Pellissier, a London diamond merchant, he established the troupe called The Follies, whose songs, dances, and especially parodies of popular plays—potted plays, as they were called—were for some years a feature of London theatrical life. The troupe first appeared in March, 1907, at The Royalty, but it was at The Apollo in 1908 that they made their reputation. Pellissier married, in Sept., 1911, Fay Compton. He died Sept. 25, 1913.

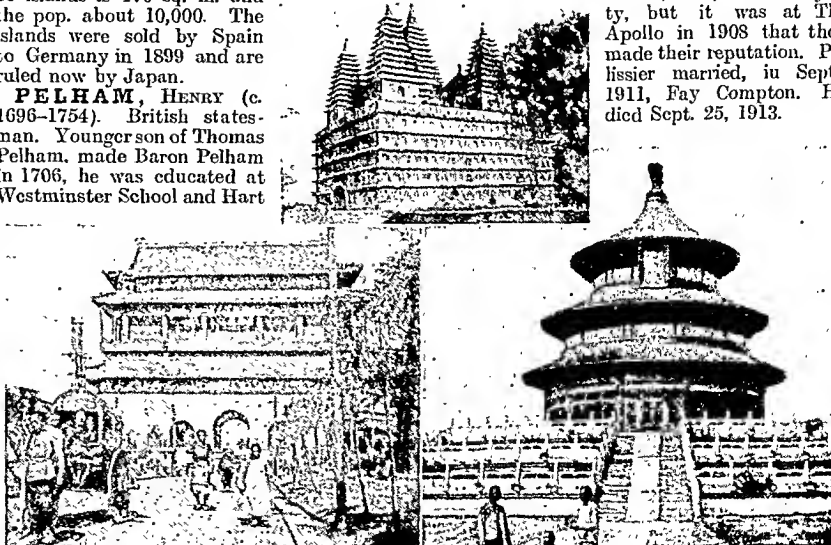

Henry Pelham,
British statesman

Pelican. White species of this large bird
Gambier Bolton, F.Z.S.

Pekinese Dog, a Chinese breed

Peking. Left, ancient city gate. Right, part of the 15th century Temple of Heaven, one of the greatest shrines in China. Above, Temple of the Five Towers, built in 1474, in the suburb of Hai-Tien

PELLEGRINI, CARLO (1839-89). Italian caricaturist. Born at Capua, he served in Garibaldi's army, came to England in 1865, and was engaged by Vanity Fair. To this journal he contributed hundreds of portraits of notabilities over the signatures Singe or Ape. He died in London, Jan. 22, 1889.

PELLITORY (*Parietaria ramiflora*). Perennial herb of the natural order Urticaceae. It is a native of Europe, N. Africa, and W. Asia, and is usually found growing on old walls. It has greenish flowers. Under the influence of sunshine, or slight irritation, the anthers explode and little clouds of pollen are seen.

PELOPONNESE or **PELOPONNESUS** (Gr. island of Pelops). The S. portion of ancient Greece. It was divided into seven states. Achaëa, Corinthia, Elis, Argolis, Messenia, Laconia, and Arcadia. It is the modern Morea. See Greece.

PELOPONNESIAN WAR. This name is given to the war in 431-404 B.C. between Sparta and Athens. The ostensible cause was the quarrel between Coreyra and Corinth, in which Athens supported the former and Sparta the latter. In reality, it was a struggle between the democratic Ionians of Athens, the islands, and the maritime towns, and the oligarchical, continental Dorians, represented by Sparta.

PELOPS. In Greek legend, the son of Tantalus, king of Phrygia. Being expelled from his native country, he migrated to Pisa, where he became one of the suitors of Hippodamia, daughter of King Oenomaus. The conditions of winning were that he should enter for a chariot race with her father, in which unsuccessful competitors were put to death. Pelops won the race by inducing Myrtilus, the king's charioteer, to remove the lynch-pin from his master's chariot wheel.

Mary Herbert,
Countess of
Pembroke
After Mark Gernads

PELOTA (Lat. *pila*; Span. *pella*, ball). Ball game popular in Spain and Spanish America. Players wear a curved basket attachment for the right hand. The game is known in Spain as *el ble a cesta*, or basket play. The hard ball weighs about 4 oz., is made of rubber and wire, and is covered with leather. It is struck violently with the cesta against two walls of cement at right angles, known as the frontón and the pared respectively.

Pelton. Colliery centre of Durham. It is 6 m. from Durham, with a station on the L.N.E.R. Pop. 8,815.

PELVIS (Lat. basin). Bony girdle which connects the trunk with the lower extremities, supports the weight of the body, and contains the pelvic viscera. The pelvis consists of the two innominate or hip bones, one on each side, which meet in front, and are separated behind by the sacrum, terminating in the coccyx.

PEMBA. British island off the coast of Tanganyika Territory, Africa. Of coral formation, it has an area of 372 sq. m., and is divided into three districts. The chief products are cloves, copra, and rubber. Pop. 88,691.

Pemba Bay is on the coast of Portuguese E. Africa. About 120 m. N. of Mozambique, it is one of the finest harbours in the world.

PEMBREY. Seaport of Carmarthenshire, Wales. It is 4 m. from Llanelly, on the Gwent. It has a harbour and docks, and there are copper-smelting works. The river Burry enters the sea here. Pop. 5,544.

PEMBROKE. Borough, seaport, and market town of Pembrokeshire, Wales. It stands on the S. side of Milford Haven, 42 m. W. of Swansea, on the G.W.R. S. Mary's church has an old massive tower; the castle is

one of the finest ruins in Wales, and there are remains of a Benedictine house, Monckton Abbey. Market day, Mon. Pop. 15,481.

The borough includes Pembroke Dock, 2 m. away. This was a government dockyard from 1814 until it was closed in 1925. In 1929 it was handed over to the Royal Air Force.

PEMBROKE. Town of Ontario, Canada. It stands on Lake Allumette, a widening of the Ottawa river, 220 m. from Montreal. Industries include lumber mills, saw mills, brick-yards, and tanning. Pop. 7,875.

PEMBROKE, EARL OF. British title held by the family of Herbert. The first earl was Gilbert de Clare, created in 1138, and the second his son Richard (Strongbow). In 1176 the title passed to Strongbow's son-in-law, William Marshal. In 1245 William de Valence secured the earldom by marriage. In 1551 Sir William Herbert was made earl, and the title has since been held by his descendants. The earl's chief seat is Wilton House, near Salisbury, built in its present form by Inigo Jones. His eldest son is called Lord Herbert.

PEMBROKE, MARY HERBERT, COUNTESS OF (1561-1621). Fourth daughter of Sir Henry Sidney and wife of Henry Herbert, earl of Pembroke. Born at Ticknell Palace, Bewdley, Worcestershire, Oct. 27, 1561, she was one of the most learned women of her time and a patroness of Spenser, Ben Jonson, and other poets. Her brother, Sir Philip Sidney, wrote his *Arcadia* (q.v.) for her. She died Sept. 25, 1621, and was the subject of the famous epitaph "Underneath this sable hearse," attributed to Ben Jonson.

PEMBROKE, WILLIAM HERBERT, 3RD EARL OF (1580-1630). English statesman. Born at Wilton, April 8, 1580, he was lord chamberlain to James I, held office under Charles I, and was chancellor of Oxford University. To him and his brother Philip Shakespeare dedicated his *First Folio*. He died at Wilton House, April 10, 1630.

William Herbert,
3rd Earl of
Pembroke
After Van Dyck

PEMBROKE COLLEGE. College of the university of Oxford. It was founded in 1624 by James I, and so named as a mark of esteem for the earl of Pembroke, then chancellor of the university. The buildings are in S. Aldate's, opposite Christ Church, and its most distinguished name is Samuel Johnson.

Pembroke College, Cambridge, was founded in 1346, in memory of her husband, by Mary, widow of Aymer de Valence, earl of Pembroke. The younger Pitt was educated here.

PEMBROKESHIRE. Maritime co. of Wales. It has a rugged and irregular coastline, and an area of 614 sq. m. The surface is scored with valleys. The Teifi divides it from Cardiganshire. The G.W.R. serves the co. Haverfordwest is the co. town. Fishguard is a modern port and Newport an old one. The chief industry is the rearing of cattle. The co. is in the diocese of S. David's and sends one member to Parliament.

Called Dyfed, Pembrokeshire was ruled by the princes of Wales until after the Norman conquest. In the 12th century Flemings settled here, and Pembrokeshire was divided into a Welsh part in the N.W. and an English

Pembrokeshire. Map of the south-western county of Wales

part in the S.E. The English part became a palatine earldom until 1536. The co. contains a number of castles, and its ecclesiastical buildings, which include those at S. David's, Tenby, and Haverfordwest, are particularly interesting from an architectural point of view. Pop. (1921) 92,000.

Pemmican. Preparation of food. It is made by the American Indians with lean meat, dried and pounded into a paste.

PENAL SERVITUDE. In English criminal law, a form of punishment which in 1853 superseded transportation. Imprisonment may extend from a minimum of three years to a maximum of life. Convicts wear a dress marked by a broad arrow, and are employed on useful work, taught a trade, etc. *P.*; good conduct a remission of sentence may be earned, and the home secretary is empowered to grant licence or tickets-of-leave to convicts. Convict establishments are Dartmoor and Parkhurst (the former used exclusively for males, the latter chiefly occupied by prisoners in ill-health), Broadmoor for criminal lunatics, Aylesbury for females, and Peterhead, Scotland. See Hard Labour.

PENANCE (Lat. *poenitentia*, repentance). Eccles. term for the turning of a sinner from sin to repentance; for the acts that form the visible proof of repentance; for the penitential discipline of the Church, and, in the R.C. communion, for the sacrament for the remission of sin committed after baptism. Originally the expiatory part of penance involved heavy and lasting penalties. In process of time the penalties came to be confined to prayers, fasting, and alms-giving.

PENANG. One of the Straits settlements. A British crown colony since 1867, it comprises the island of Penang, Province Wellesley on the Malay Peninsula, and the Dindings. Penang Island has an area of 108 sq. m., and contains George Town, the port and capital. Province Wellesley includes 280 sq. m., and has 45 m. of coast. It is traversed by the main W. railway of Malaya from Singapore to Siam, and a branch goes to Prai, whence steam ferries make connexion with George Town. Both Penang and Prov. Wellesley have numerous motor roads. The Dindings Territory covers 183 sq. m. and comprises a group of islands, of which Pangkor is the largest.

Penang Island was bought from the native state of Kedah in 1785, and Province Wellesley was ceded by the same state in 1798. Pop., including the Dindings, 306,000. See Malaya

PENARTH. Urban dist., watering place, and seaport of Glamorganshire, Wales. It stands on the Ely, 4 m. from Cardiff, on the G.W.R. It has a tidal harbour and commodious docks. Pop. 17,097.

Penates. Household gods of the ancient Romans, at one time distinct from, but afterwards identified with, the Lares (q.v.).

PENDLEBURY. District of Lancashire. It is 3½ m. N.W. of Manchester, on the L.M.S. Rly. It forms part of the urban district of Swinton and Pendlebury. Pop. 10,130.

PENDLESIDE SERIES. In geology, the name given to a series of rocks between the upper division of the Carboniferous limestones and the Millstone grits.

PENDULUM. Rigid body free to swing on a horizontal axis under the influence of gravity. A compensation

Penelope. From a Greek sculpture in the Vatican

pendulum is one compensated against changes of temperature. Besides its use in regulating clocks and for obtaining the value of the acceleration due to gravity, the pendulum has been used in the famous experiment of Foucault to show the rotation of the earth. A ballistic pendulum is one used to measure the velocities of explosives. See Ballistics; Clock; Gun.

PENELOPE. In Greek legend, wife of Odysseus (q.v.). The long absence of her husband caused a number of suitors for her hand to come to the royal palace at Ithaca, where, in spite of her refusals, they lived riotously. She promised to make up her mind as soon as she had finished a garment, of which she secretly unwove each night as much as she had woven in the day. Pron. Pe-nel'oppy.

PENETANGUIS SHENE OR **PENETANG.** Town of Ontario, Canada. It is on an inlet of Lake Huron, in Simcoe co. During the war with the U.S.A. the town was fortified as a Canadian naval station. Pop. 4,037.

Penge. Urban dist. of Kent. Adjoining Lower Sydenham, it is 6 m. S. of London, on the S.R. Pop. 26,430.

PENGUIN.

Name applied to the several genera of the order Impennes. They are sea-birds with boat-shaped bodies, legs placed very far back, the toes webbed, and the wings useless for flight, but efficient paddles. The birds stand erect, move grotesquely, and assemble in thousands at their breeding places. The Macaroni Penguins (Eudyptes) have long, curling crests on their heads. The "Jackass" or braying penguin is found at the Cape of Good Hope. Their range extends from the equator to the Antarctic.

Penguin. King penguin, from the Antarctic seas

PENICUIK OR **PENNYCUIK.** Burgh of Midlothian, Scotland. It stands on the N. Esk river, 10 m. from Edinburgh. The buildings include the tower of the old church of S. Kentigern and the Cowan Institute. The name means cuckoo's hill. Pop. 2,673.

PENINSULAR WAR. Struggle carried on by Great Britain as the ally of Spain and Portugal against France between 1808-14. This name was given to it because it was waged in the Iberian peninsula. The Spanish people, over whom Napoleon had placed his brother Joseph, rose in revolt, and secured the surrender of a French force at Baylen in July, 1808. The Portuguese joined the movement, and in Aug., 1808, the directors of British policy, having realized the possibility of striking at France through Spain, sent out Sir A. Wellesley (later duke of Wellington). The battles in the campaign included Vimero, Corunna (in which Sir John Moore was killed), Talavera, Busaco, Fuentes d'Onoro, Albuera, Salamanca, and Vittoria, after which the French, driven into their own country, finally stood before Toulouse, which was entered in April, 1814, when the abdication of Napoleon ended the war.

The British losses were put down as 36,000. The French lost heavily, too, while this "running sore," as Napoleon called it, was one of the chief causes of his overthrow.

PENISTONE. Market town and urban dist. of Yorkshire (W.R.). It stands on the Don, 12 m. from Sheffield, on the L.M.S. and L.N.E. Rlys. There is an old grammar school here. Penistone gives its name to a division returning one member to Parliament. Market day, Thurs. Pop. 3,791.

PENKRIDGE. Market town of Staffordshire. It is 6 m. from Stafford on the L.M.S. Rly. It has an agricultural trade, and stone is quarried in the neighbourhood. Market day, Mon. Pop. 2,570.

PENLEY, WILLIAM SYDNEY (1851-1912). British actor. Born at St. Peter's, Thanet, the son of a schoolmaster, he made his name as a comedian in The Private Secretary. His reputation, however, rests still more upon his appearances in Charley's Aunt. He died Nov. 11, 1912.

PENMAENMAWR. Urban dist. and watering place of Carnarvonshire, Wales. It is about 4 m. from Conway on the L.M.S. Rly. Penmaenmawr Mt., 1,550 ft. high, is the N. extremity of the Snowdon range. Pop. 4,000.

PENN, WILLIAM (1644-1718). English Quaker, founder of Pennsylvania. The son of Sir William Penn (1621-70), he was born in London, Oct. 24, 1644, and

while at Christ Church, Oxford, became converted to Quakerism, which led to his imprisonment for infringing the Conventicle Act. In 1676 he took a leading part in the foundation of a Quaker colony in West New Jersey, and five years later secured a grant of the territory which was to form the state of Pennsylvania (q.v.). In 1682 he crossed to America to take possession of his territory, fixed on the site for its capital, to be named Philadelphia (q.v.), and made his treaty of friendship with the Indians. Penn remained in Pennsylvania until 1684, and again from 1699-1701, but his later life was passed in supporting the efforts of the Friends in England. He died at Ruscombe on May 30, 1718, and was buried at Jordans (q.v.).

PENNANT OR **PENNON** (Lat. penna, plume). A long flag narrowing to a point, sometimes forking at the end, formerly borne on a lance by a knight bachelor. In the nautical sense, the pennant, or pendant, is a long streamer-like flag flown at the mast of a vessel in commission, and lowered when the vessel goes out of commission. A broad pennant, short and forked, is flown to show the ship of the commodore of a squadron.

William Penn, English Quaker After H. West

PENNELL, JOSEPH (1860-1926). American etcher. Born at Philadelphia, U.S.A., July 4, 1860, he spent much time in Great Britain, and was the author, with his wife, Elizabeth Robins, of the standard Life of J. McWhistler. He was a prime authority on lithography. Great industrial undertakings, e.g. the Panama Canal, and British munition works during the Great War, furnished subjects for his art. He died April 23, 1926.

Pennenden Heath. Common in Kent. Near Maidstone, it has been made into a recreation ground for that town.

PENNINE CHAIN. Mountainous region of N. England. It extends S. from the Scottish border as far as the great curve of the Trent; the S. portion is the Peak. Its continuity is broken by the Tyne and Aire Gaps. On the N.W. it is continuous with the Cumbrian upland, the lowest point being the Shap saddle between Edendale and the

W. S. Penley, in character as The Private Secretary

flats round Morecambe Bay. The loftiest summits are Cross Fell, 2,892 ft., Mickell Fell, 2,591 ft., Wharfedale, 2,414 ft., Ingleborough, 2,373 ft., and Kinder Scout, 2,088 ft.

PENNSYLVANIA.

State of the U.S.A. The Delaware river forms the E. boundary, and the state touches Lake Erie in the N.W. corner. The other rivers include the Susquehanna and Allegheny. Its area is 45,126 sq. m. Iron, coal, anthracite, and petroleum are found in large quantities. The chief crops are hay, corn, wheat, and oats. There are numerous steel works,

and the state engages in tinplate and iron working, and the making of pig iron rails, silks, woollens, leather, glass, and tobacco. Rly. and waterway transport are highly developed. Harrisburg is the capital, and the chief towns include Philadelphia, Pittsburg, Reading, and Erie. Pennsylvania owes much to William Penn, who gave it that liberal and democratic basis which helped its rapid growth. Estimated pop. (1928) 9,854,000.

PENNY. British bronze coin, one-twelfth of a shilling. Originally the penny was a silver coin, of which 240 weighed a pound. Hence the pennyweight (dwt.), the 240th part of 1 lb. troy. Till the reign of Edward I the coin was indented with a cross, enabling it to be divided into halfpennies and farthings. Silver pennies were coined until the reign of Charles II, but steadily decreased in weight. The bronze penny was introduced in 1800.

PENNY BANK. This name is given to a class of savings bank that receives deposits as low as a penny. Many such were established in Great Britain during the 19th century.

PENNYROYAL

(Mentha pulegium). Perennial herb of the natural order Labiatae. A native of Europe, N. and W. Asia, and N. Africa, it has a creeping root-stock. The small leaves are oval or oblong, with toothed edges. Its tubular, two-lipped, lilac flowers are borne in whorls around the upper part of the stems. From the fresh tops and leaves a medicinal oil is distilled.

Penny, British copper coin, one-twelfth of a shilling

PENNYWORT OR **PENNY-LEAF**. Name given to a wall plant better known as the wall pennywort; also to the white-rot or marsh pennywort (*Hydrocotyle vulgaris*).

PENOBSCOT. River of Maine, U.S.A. Rising close to the Canadian border, it enters the Atlantic through Penobscot Bay. It is about 360 m. long, and supplies water power to many paper and pulp mills.

Penobscot Bay is an inlet on the coast of Maine, U.S.A. It is divided into two portions by a chain of islands, and is 30 m. long.

PENRHYN. District of Carnarvonshire, Wales. It is chiefly known for its connexion with the slate quarries, the slate being shipped from Port Penrhyn on the Menai Strait.

The title of Baron Penrhyn has been borne by the family of Douglas-Pennant since 1866. Richard Penryn was made Baron Penryn in 1763. In 1808 the estates passed to a kinsman, George Hay-Dawkins-Pennant, and from him to his daughter, who became the wife of Col. E. G. Douglas (1800-86), a son of the earl of Morton. He was made Baron Penrhyn in 1866. The family seat is Penrhyn Castle, near Bangor.

Penrhyn, N. Wales. Keep and garden front of the 18th century castle
Frith

PENRITH. Urban dist. and market town of Cumberland. It is 12 m. from Carlisle on the L.M.S. and L.N.E. Rlys. There is a 14th century grammar school and the ruins of a castle. In the neighbourhood are Edenhall and Brougham Castle. Penrith Beacon is 940 ft. high. The chief industries are hewing, tanning, and a trade in agricultural produce. Market day, Tues. Pop. 8,342.

PENRITH. Town of New South Wales, in Cumberland co. It is 34 m. W. of Sydney by rail, and stands at the foot of the Blue Mountains in the valley of the Nepean river. It was one of the first settlements. Pop. 2,500.

Penshurst, Kent. Penshurst Place, the mansion of Lord de L'Isle and Dudley, where Sir Philip Sidney was born in 1554. See below

PENRYN. Borough and market town of Cornwall. It stands on the estuary of the Penryn river, $3\frac{1}{2}$ m. from Falmouth, on the G.W. Rly. The chief industries are tanning, brewing, the making of chemicals and paper, and the export of granite. In the Middle Ages it was a seaport. Market day, Sat. Pop. 3,151.

PENSHURST. Village of Kent. It is 5 m. S.W. of Tonbridge on the S.R. The church, dating from about 1200, but much restored, has some old brasses and other monuments of note. Penshurst's chief glory is Penshurst Place, in its park of 350 acres. It passed in 1552 to Sir William Sidney, grandfather of Sir Philip Sidney, in the possession of whose descendants it has remained. Pop. 1,531. See illus. above.

PENSION (Lat. pensio, payment). Stated allowance made to certain classes of retired workers, soldiers, sailors, civil servants, and others. In Great Britain £1,200 is distributed

by the state each year among literary and artistic persons or their survivors. These are the civil list pensions.

Fighting men's pensions were the subject of legislation in the 16th century. The Crimean War saw the establishment of the Royal Patriotic Fund, which raised the sum of nearly £1,500,000.

The Great War was responsible for an enormous addition to pensions paid by the state. These war pensions, for which special legislation had to be passed, are of several classes. A disablement pension is awarded to ex-service officers and men, and at the outset is a temporary award based on medical assessment of the degree of disablement. This temporary pension is usually given for a period of 12 months, after which the case is reviewed and a final award made. The pension for a private soldier 100 per cent. disabled is 40s. a week, and 7s. 6d. for the first child, and 6s. for each other child. A widow's pension, which ceases on re-marriage, is 26s. 8d. a week if she is over 40 or with children. If under 40 and without children it is 20s.

The expenditure in the year 1929-30 was estimated at about £53,743,500. The pensioners of former wars have had their pensions increased to the modern scale, and allowances are given to dependants other than widows and children.

CONTRIBUTORY PENSIONS. In addition to the old age pensions (q.v.) there is in force a system of contributory pensions introduced in 1925 and extended in 1929. By this, persons insured under the health insurance scheme pay an extra sum weekly, and both they and their wives receive pensions of 10s. a week at the age of 65 instead of waiting until they are 70. Moreover, if the insured man dies at any time, a pension of 10s. a week is granted to his widow, with additional allowances for each young child. If he leaves orphans they are entitled to 7s. 6d. a week each. The combined contribution for health and pensions is 1s. 6d. a week for men and 1s. 1d. for women in Great Britain. In Northern Ireland it is 1s. 4d. and 11d. respectively.

The Ministry of Pensions is a department of the British Government. It was formed in 1916 to deal with the payment of pensions to sailors, soldiers, and their dependants. The minister has a salary of £2,000 a year, and the head offices are at 18, Great Smith Street, Westminster, London, S.W.1., and the issue offices are at Acton, W.

PENTATEUCH (Gr. pente, five: teuchos, volume). Term used by Christian scholars from the time of Tertullian and Origen to designate collectively the first five books of the O.T. (Genesis, Exodus, Leviticus, Numbers, Deuteronomy). Some scholars contend that the sixth book (Joshua) is inseparable from the other five, and that it is better to use the term hexateuch (q.v.).

PENTECOST (Gr. pentecostē, the 50th). Jewish festival, also known as the Feast of Weeks. It is observed on Sivan 6-7, and was so called because it was celebrated 50 days from the morrow of the Sabbath after the Passover. The festival corresponds with the Christian Whitsuntide.

PENTLAND FIRTH. Strait separating the Orkney Islands from Caithness, Scotland, and connecting the North Sea with the Atlantic Ocean. The channel is 14 m. long and from 6 to 8 m. broad. There is a lighthouse on one of the rocks known as Pentland Skerries, at the E. entrance.

PENTLAND HILLS. Range in Scotland. It extends for about 16 m. S.W. through Midlothian, Peeblesshire, and Lanarkshire, and has a breadth of from 4 to 6 m. The highest summits are Seald Law (1,898 ft.) and Carnethy (1,980 ft.). See Edinburgh.

PENTONVILLE. Dist. of London. In the borough of Islington, it is named after the estate of Henry Penton, M.P. (d. 1812), which began to be built upon about 1773. Pentonville prison was erected in 1842 by Sir Joshua Jebb, in the Caledonian Road, Islington, and was the first of what were known as model prisons to deal with the new solitary confinement of convicts. See Prison.

PENTSTEMON OR **BEARD-TONGUE**. Genus of perennial herbs and sub-shrubs of the order Scrophulariaceae. They are natives of America, and have tubular two-lipped showy flowers of red, blue, violet, or white, in upright sprays. Many species, with varieties and hybrids, are grown in gardens.

PENZANCE. Borough, market town, seaport, and watering place of Cornwall. It stands at the head of Mount's Bay, 325 m. from London and 8 m. from Land's End, with a station on the G.W. Rly. It has a very mild climate. There is an old market cross, the Morrab gardens, and a statue

Peony. The Chinese variety, *Paeonia Intea*

to Sir Humphry Davy, a native. St. Michael's Mount and the Seilly Isles can be visited from here. The industries include fishing for mackerel and pilchard, and the shipping of tin, china clay, granite, etc. Market day, Thurs. Pop. 12,096. See Land's End.

PEONY (*Paeonia*). Genus of hardy perennial herbs, some of which are evergreen.

of the order Ranunculaceae. They are natives of Asia, S. Europe, and America. *Paeonia officinalis* and *P. albiflora* were introduced into Britain in 1548. They range in height from 2 to 5 ft., and their colours vary from white to crimson, though there is a yellow variety. The tree peony (*P. moutan*), of China and Japan, grows to a height of about 12 ft., with a shrubby habit.

PEOPLE'S PALACE. Institution in Mile End Road, East London, England. The original foundation was a bequest by J. E. B. Beaumont (1774-1840), to provide for the recreation and moral and intellectual advancement of the working classes in the East End of London, and large donations to the endowment fund were subsequently made. The existing buildings, opened in 1887, include the Queen's Hall, where industrial and other exhibitions and concerts are held, a technical school (now the East London College, attached to the university of London), and other equipment for education, recreation, etc.

People's Palace, London. Main front of the building, which is in Mile End Road

PEPPER (*Piper nigrum*). Climbing shrub of the order Piperaceae. It is a native of the E. Indies, and has a wavy stem and large, broad oval, alternate leaves. The minute flowers—without sepals or petals—are crowded in hanging sprays. The little rounded red fruits ultimately become black, when they are the peppercorns of commerce. When ground to powder they form black pepper; white pepper is produced from the shrub's fruit of which the outer fleshy coat has been removed before ripening.

Pepper. Leaves and flower sprays. Inset, fruit

PEPPERCORN. Berry of the pepper plant, used as a synonym for something of little or no value. A peppercorn rent is a term in English law for a nominal rent.

PEPPERMINT (*Mentha piperita*). Strong-scented perennial herb of the order Labiatae. It is a native of Europe, and has creeping underground stems which send vertical branches into the air. The opposite, coarsely toothed leaves are oval or broad lance-shaped, the flowers purple, in loose spikes. Oil of peppermint, extensively used as a gastric stimulant in certain forms of dyspepsia, is distilled from the leaves. See Mint.

Peppermint. Branch with foliage and flowers

PEPPER TREE (*Drimys aromatica*). Small aromatic evergreen tree of the order Magnoliaceae. A native of Tasmania, it has oblong leaves with transparent dots, and white flowers, the sexes being separate. The many-seeded, globular fruit is sometimes used as a substitute for pepper.

PEPSIN. Enzyme or ferment present in the gastric juice of the stomach. It acts upon protein, the essential constituent of meat, converting it into simpler substances in the process of digestion. Pepsin only acts in this way in the presence of free hydrochloric acid. See Digestion; Pancreas.

PEPYS, SAMUEL (1633-1703). English diarist. Born in London, Feb. 23, 1633, fifth son of John Pepys, tailor and member of an old East Anglian family, he was befriended by a relative, Sir Edward Montagu, 1st earl of Sandwich, and held several offices in connexion with the admiralty, including that of secretary. He represented Castle Rising and Harwich in Parliament, and proved an untiring and patriotic official. He was president of the Royal Society,

Samuel Pepys, English diarist. Nat. Port. Gall.

1684-86. He died May 26, 1703.

Among the MSS. preserved with Pepys's library at Magdalene College, Cambridge, was his Diary, written in cipher, Jan. 1, 1659-May 31, 1669. In this work, the most intimate human document of its kind, he supplies a vivid picture of his own character, and throws invaluable sidelights on the court, official, and social life of his time. The Diary was first deciphered by John Smith, 1819-22, and first published 1825. Pron. Peeps

PERA or **BEYOGLU**. Suburb of Istanbul (Constantinople). Situated on the N. side of the Golden Horn and adjoining Galata, it

is the European quarter. An underground cable lift descends from Pera to Galata and affords access to the Galata bridge and the quays. See Golden Horn; Istanbul.

PERAK. Most northerly of the Federated Malay States. It surrounds the Dindings, a detached portion of Penang, and lies between Kedah and Siam on the N. and Selangor on the S., and has a long coast on the Strait of Malacca. Tin is mined, and rubber and rice are grown. Its area is 7,800 sq. m. Pop. 600,000. See Malaya.

PERCEVAL, SPENCER (1762-1812). British statesman. Born Nov. 1, 1762, second son of John Perceval, 2nd earl of Egmont, he entered Parliament as Tory member for Northampton in 1796. On Pitt's retirement in 1801 Perceval became solicitor-general, and attorney-general in 1802. He was leader of the House after Pitt's death in 1806, and became chancellor of the exchequer in 1807, and prime minister and first lord of the treasury in 1809. Perceval was assassinated in the lobby of the House of Commons on May 11, 1812, by Bellingham, a crazy bankrupt.

Spencer Perceval, British statesman after Sir W. Beechey

PERCH (*Perca fluviatilis*). Fresh-water fish of the order Acanthopterygii. It is a native of Britain, the greater part of Europe, and much of N. Asia. The skeleton is shown in p. 603. It has a somewhat oblong body, with the back humped above the pectoral fins. There are two dorsal fins, of which the anterior is conspicuous from its superior size and strong, sharp-pointed rays. Ordinarily the perch attains a length from 9 to 12 ins. and a weight of 2-3 lb. See Climbing Perch.

Perch, a fish common in European and North Asiatic rivers

PERCUSSION. Musical term. Percussion instruments are those in which sound is set up by being struck either with sticks (gong, and all drums), with hammers (pianoforte, dulcimer, glockenspiel, xylophone, etc.), with a steel rod (triangle), with clappers (bells), or, being in pairs, by being struck against one another (cymbals, castanets, etc.).

PERCUSSION CAP. Small case of explosive, which may be ignited by the shock of a blow and is used to convey ignition to the propellant charge of a gun or rifle. In the old muzzle-loading guns the percussion cap was a separate copper case, containing fulminate of mercury, which was placed on a hollow nipple, the bore of which communicated with the powder chamber. The next efforts to improve firearms were made with the object of combining powder, shot, and means of ignition in one cartridge, which could be inserted in the breech, and in 1836 the pin-fire breech-loader was introduced. In this a projecting pin on the cartridge was driven in by the hammer and ignited a ball of fulminate.

PERCY. Name of a noble English family. It was founded by William de Percy, who was granted large holdings in the northern counties by William the Conqueror. Henry, 12th Baron Percy, was created earl of Northumberland, July 16, 1377. The title died out in 1670, but was revived for the family of Seymour, and passed later to Sir H. Smithson, whose son took the name of Percy. See Northumberland.

PERCY, THOMAS (1729-1811). British prelate and man of letters. Born at Bridgnorth, April 13, 1729, he devoted himself to the study of old literatures, and published, in 1765, the famous *Reliques of Ancient English Poetry*. The foundation of this work was a folio MS. of about 200 poems which had been compiled about the middle of the 17th century. Percy's translation of P. H. Mallet's *Northern Antiquities*, published in 1770, aroused a similar interest in old Norse records. Of Percy's original work the only piece that deserves to be remembered is the ballad, *O Nancy, wilt thou go with me?* Made dean of Carlisle in 1778, and bishop of Dromore in 1782, he died Sept. 30, 1811.

Thomas Percy, British prelate After Reynolds

PEREGRINE FALCON (*Falco peregrinus*). Bird of prey formerly much used for hawking. A native of Britain, and found in most other parts of the world, it nests chiefly on sea-cliffs. Adult birds have the crown of the head and the moustaches bluish black, the back and upper parts bluish grey. The size is about that of the rook. It has a very rapid, graceful flight. Its prey is chiefly the larger birds, including pigeons, grouse, and duck. See Falcon.

PÈRE LACHAISE. Cemetery of Paris. Situated in the N.E. of the city, in the Boulevard de Ménilmontant, it is the oldest and largest extra-mural cemetery of Paris, covering about 212 acres. The ground occupied by it formerly belonged to the Jesuits, and the cemetery received its name from Père François de La Chaise, who was superior of the order in Paris. On the suppression of the order the ground was sold and passed through a number of hands, until in 1804 it was purchased by the municipality and converted into a cemetery. It is celebrated by reason of the famous people buried there.

PERENNIAL. Plant that lives through a number of years. The term is restricted in its use to herbaceous plants, to distinguish the long-lived species from annuals and biennials. Perennial herbs with stems die down to the earth, as a rule, before winter, their vitality being preserved in root-stocks, bulbs, or tubers. Stemless and creeping perennials, such as the primrose and white arabis, retain at least some of their leaves until the new leaves of spring are expanded.

PERGAMUM or **PERGAMUS.** Ancient city of Mysia, Asia Minor. The modern Bergama, it is about 20 m. from the sea, on the N. bank of the Caicus. The kingdom established by Philetaerus in 280 B.C.

Pergamum. Restoration of the south wing of the great altar of Zeus

reached its zenith in 190 B.C. under Eumenes II, who was tactful enough to identify himself with the all-conquering Romans, and received from them most of W. and central Asia Minor. Eumenes founded the great library and beautified the city with many fine buildings and sculptures. In 133 B.C. Attalus III, the last king, died, and the kingdom passed to the Romans. Excavations have revealed a great altar of Zeus, with colossal reliefs of the battle between the gods and giants, now in Berlin. Another example of the statuary of the Pergamene school is the Dying Gaul, falsely called the Dying Gladiator, now at Rome.

PERGOLA (Ital. arbour). Name given to a trellis erection spanning a garden walk, upon which flowers and creepers, e.g. clematis, wistaria, and jasmine are trained. It was introduced from Italy.

PERI. In Persian mythology, a fairy-like being of a race between angels and demons. They are harmless and beautiful, but are excluded from Paradise.

PERICARDIUM (Gr. peri, around; kardia heart). Fibro-serous membrane which encloses the heart. The base of the pericardium is attached to the central part of the diaphragm, and the apex surrounds the commencement of the aorta or main blood vessel of the body. The pericardium contains in health a small amount of lymph, the function of which is to lubricate the two surfaces and thus facilitate the movements of the heart.

Inflammation of the pericardium is called pericarditis. The most frequent cause is acute rheumatism. Counter-irritation should be applied over the heart, and sometimes fluid is drawn off by tapping.

PERICLES (c. 499-429 B.C.). Athenian statesman. He made his appearance in public life in 469, and, six years later, in conjunction with his colleague Ephialtes, procured the important reform restricting the powers of the aristocratic Areopagus (q.v.). The murder of Ephialtes in 461 left him without a rival in his own party. In 443 B.C. the exile of the conservative leader Thucydides left him without a rival in the state, in which he continued supreme until his death in 429.

Pericles regarded the state as existing in the interests of the whole, not of a class. He made Athens free, and he made her the first state in the Grecian world, but he did not give her the organization which might have fitted her to retain the position he won for her. He saw that the true policy for Athens was to establish her own naval supremacy, and her primacy in a league of maritime states. The age of Pericles was the most brilliant in the history of Greece. See Greece.

PERIDOTITE. Name given to a group of crystalline igneous rocks. They consist chiefly of olivine, together with augite, hiotite, hornblende, hypersthene, and magnetite, etc. The rocks are rich in magnesia, and for that reason are alternatively known as magnesian rocks. Peridotites are often rich in iron, and on decomposition pass into serpentine, most of which rock has been so formed. See Olivine; Serpentine.

Pergamum. Bronze group of a Gaulish warrior slaying his wife and himself to avoid capture. Museo delle Terme, Rome

PERIM. Rocky island in the straits of Bab-el-Mandeb under British control. It commands the entrance to the Red Sea, and is 97 m. W. of Aden. It is about 5 sq. m. in area, and is a coaling depot. It is administered as a dependency of Aden. Pop. 1,200. See Arabia.

PERIPATUS. Caterpillar-like animal about three inches in length, whose organization is intermediate between that of the annelids and the arthropods. The cylindrical body is built up of soft rings, and has 17 pairs of short conical feet ending in a pair of hooked claws. The head bears a pair of antennae, two simple eyes, and a mouth provided with swollen lips and four horny jaws. Originally classed as a slug, and later as a worm, it has since been put in a class (Onychophora) by itself. About 50 species of peripatus are known, which have been found in S. Africa, S. America, the W. Indies, and New Zealand.

PERISCOPE (Gr. peri, around; skopein, to watch). Apparatus for observing from a concealed position or enabling an observer to see over obstructions. It consists usually of reflecting mirrors or prisms fixed in a tube, one set of mirrors reflecting the object down the tube and the other to the eye of the observer. The submarine periscope has additional lenses in the tube itself and a special eyepiece. The diagram gives a sectional view of a submarine periscope. The picture enters at A, is reflected down by prism B to prism C, thence to eye-piece D. E is the valve to shut out water if the periscope is shot away, while F is the wheel to rotate the instrument. The trench or field periscope consists of two mirrors fixed at the ends of a collapsible framework. See Altiscope; Camera; Submarine.

PERITONEUM (Gr. peritonein, to stretch around). Serous membrane which lines the walls of the abdominal cavity and is reflected over the internal organs, so as to cover them more or less completely. The function of the peritoneum is to facilitate the peristaltic movements of the intestine.

Inflammation of the peritoneum is termed peritonitis. It results from injury of the membrane or extension of disease from one of the abdominal organs. Most often the infecting organism is the *Bacillus coli*, which is normally present in the intestine. Peritonitis may be general, and either acute or chronic. The symptoms of acute peritonitis are severe and continuous pain in the abdomen, accompanied by vomiting. Where perforation of the bowel is suspected, operative treatment is the only hope. Chronic localised peritonitis may follow an acute attack or be due to alcoholism, cancer, chronic rheumatism, or Bright's disease. It may be treated with plasters and iodine.

PERIWINKLE (*Littorina littorea*). Marine snail with thick stony shell. It is abundant on all parts of the British coasts. The mollusc has a distinct muzzle extended in front of a pair of tentacles or antennae, at the base of which are the eyes. Its principal food is marine algae, which are rasped by the very efficient tooth ribbon. Periwinkles, or winkles, are found at low-water mark in nearly all parts of the world.

PERIWINKLE (*Vinca minor*). Perennial herb of the order Apocynaceae. It is a native of Europe and W. Asia. It has tough trailing stems about 2 ft. long, which root from the base of the paired oval varnished leaves. The blue-purple flowers are borne singly, chiefly on short, erect stems. The greater periwinkle, which is familiar in gardens, is similar, but larger in all its parts. It is a native of Europe and N. Africa.

Periwinkle. Flower of *Vinca minor*

PERJURY. Wilfully swearing falsely in a judicial proceeding after having taken a lawful oath, on a matter material to the issue. The statement need not be known to be false, if a person who knows nothing of the matter takes it upon himself to swear that it is true when it is not true. The statement must be positive; and as a rule "I believe," or "to the best of my knowledge" will protect the deponent. Perjury is a misdemeanour, and so is subornation of perjury, i.e. procuring another to commit perjury. Both are punishable by fine, imprisonment, or penal servitude. See Oath.

PERKIN, SIR WILLIAM HENRY (1838-1907). British chemist. He was born in London, March 12, 1838. In 1856, while endeavouring to prepare quinine synthetically, he obtained a beautiful mauve dye or Perkin's purple, so founding the aniline dye industry. Perkin also invented several other important aniline dyes. He was the first to prepare the perfume coumarin synthetically. He retired in 1873, and devoted the rest of his life to physical and chemical researches. Knighted in 1906, he died July 14, 1907.

PERLIS. Most northerly of the non-federated Malay States. It adjoins Kedah on the S., has a coastline of 25 m. on the W., and is elsewhere bounded by Siam. Rice, rubber, and coconuts are cultivated, and tin is mined. Kangar is the chief town. The area is 316 sq. m. Pop. 40,000.

PERMANGANATES. Salts of permanganic acid. The best known is potassium permanganate, a purple-coloured substance used in solution as a disinfecting agent, and also as an oxidising agent in analytical chemistry. It is unknown in a pure state.

PERMEABILITY, MAGNETIC. Conductivity of a material for magnetism, the ratio of the flux density to the magnetising force. Iron, steel, nickel, and cobalt are magnetic substances, and are hence called ferromagnetic metals. The permeability of pure iron is 250 to 8,000; of nickel, 250 to 400; of cobalt, 150; and of cast steel, 1,500. Soft iron is used for the core of electromagnets on account of its high permeability. An alloy of nickel and iron, known as permalloy, has a permeability of 9,000 to 100,000. Used as a coating for the conductor of a long submarine cable, permalloy increased the speed of working fivefold. See Magnetism; Reluctance.

PERMIAN. In geology, name given by Sir R. Murchison to the rocks overlying the coal measures. So called from their occurrence in Perm, Russia, in which country they cover a very large area, they consist largely of sandstones and shales, and reach a thickness of over 4,000 ft. in some strata. They are found over large areas of Europe, N. America, in Africa, Australia, and Asia. The Permian rocks supply a fine quality of building stone, the magnesian limestone of the N.E. of England being particularly notable. They are rich in fossils, including the shells of many mollusca, corals, etc., and tree ferns.

Pericles, Athenian statesman. British Museum

Submarine periscope. See Text

PERNAMBUCO OR RECIFE Seaport of Brazil. It stands on the Atlantic coast, 380 m. N.E. of Bahia, and is a terminus of rly. lines running to the N., S., and interior. The city comprises (1) the old settlement of Recife, still the chief commercial centre, situated on a sandy peninsula, and connected with the mainland by bridges; (2) São Antonio, on the island of São Antonio; (3) Boa Vista, on the mainland, the residential section. Pernambuco has some of the finest churches and public buildings in Brazil. Its exports include sugar and cotton. Pop. 327,843.

PÉRONNE. Town of France. It stands on the right bank of the Somme, 94 m. from Paris and 35 from Amiens. The chief building is the church of S. Jean, and there are ruins of a castle. During the Great War the Germans occupied the town, Sept. 24, 1914, and held it until March 18, 1917. The Germans regained it March 24, 1918, but on Sept. 1, 1918, it was entered by the Australians. The historic town hall was reduced to ruins, but has been rebuilt. With Maricourt, Péronne has been adopted by Blackburn. Pop. 4,241.

PERPENDICULAR (Lat. perpendiculum, a plummet). Term used for something exactly upright. In architecture, the Perpendicular period refers to the phase of Gothic architecture which began towards the end of the 14th century and lasted till the Renaissance, about 1500. It was peculiar to England, and its principal characteristic was verticality, even the window tracery consisting of vertical members. Arches consisted either of two arcs or four; columns were composite or clustered, with small capitals, generally moulded; roofs were of the hammer beam type. The Perpendicular period witnessed a great increase in the use of panelling, and the perfection of fan tracery vaulting. The western part of the nave of Westminster Abbey is Perpendicular architecture at its best.

Perpignan. Part of the old castle of the counts of Roussillon

See Architecture; Gothic Architecture.

PERPIGNAN. Town of France. It stands on the right bank of the Têt, about 40 m. S.S.W. of Narbonne. On a height overlooking the town is the citadel which encloses the old castle of the counts of Roussillon. Among important buildings are the cathedral of S. Jean, founded 1324, and the old university, containing a library and museum. Pop. 68,835.

PERRAULT, CHARLES (1628-1703). French author. Born in Paris, Jan. 12, 1628, he became secretary to Colbert, and signalled his admission to the Academy in 1671 by a long poem, *Le Siècle de Louis XIV*, which precipitated a six years' dispute with Boileau on the respective merits of the ancients and the moderns. His fame rests on a series of fairy tales, which he made his own by the delightful style in which they were written. Issued in volume form, 1697, as *Histoires ou Contes du Temps Passé*, by Perron Darnemour, they achieved immense popularity. Perrault died May 16, 1703.

Charles Perrault, French author

PERRY (Old Fr. a pear). Alcoholic fermented pear-juice. Normandy and Brittany, and in England, in the counties of Worcester, Gloucester, Hereford, Devon, and Somerset. It is a sweet and aromatic beverage, containing from 5 to 9 p.c. of alcohol. See Cider.

PERSEPHONE OR PROSERPINE. In Greek mythology, daughter of Zeus and Demeter, the goddess of agriculture. She was carried off while gathering flowers by Pluto, the god of the underworld, and thenceforward spent six months of the year in the underworld, and six months with her mother. The rape of Persephonē is symbolical of the process of agriculture. See Demeter Pron. Per-sefonce.

PERSEPOLIS (Gr. city of the Persians). Capital of the ancient Persian empire after Pasargadae. It was situated some 35 m. N.E. of the modern Shiraz. The palaces and other public buildings are built on a terrace of masonry some miles from the city proper, and were approached by splendid stairways. The great hall alone covered 2½ acres.

PERSEUS. In Greek legend, son of Zeus and Danaë. Polydectes, king of Seriphus, wishing to marry Danaë, got rid of Perseus by sending him to Libya to secure the head of Medusa, the Gorgon. With the help of Athena, Perseus succeeded in his task, and on his return journey passed through Ethiopia, where he saved Andromeda (q.v.) from the sea-monster and made her his wife. Reaching Seriphus, and finding that Polydectes had been treating his mother unkindly, he turned the king and his whole court into stone by showing them the Gorgon's head. Perseus is also regarded as the founder of the city of Mycenae. Pron. Pers-yewss.

In astronomy, Perseus is a N. constellation extending from Cassiopeia to Taurus. It is traversed by the Milky Way.

PERSHING, JOHN JOSEPH (b. 1860). American soldier. Of Alsatian descent, he was born in Missouri, Sept. 13, 1860. In 1886 he entered the U.S. army, and in 1898 took part in the Spanish-American War. In 1899 he was sent to the Philippines, and with the rank of general had charge of the expedition against the Moros of Mindanao in 1902. Appointed military attaché at Tokyo, he was in Manchuria with Kuroki's army during the Russo-Japanese War in 1905. After serving again in the Philippines, he was placed in command of the El Paso patrol on the Mexican border, and in 1916 led the punitive expedition sent into Mexico in pursuit of Villa. On the entry of the U.S.A. into the Great War, he was made commander-in-chief of the American expeditionary force, May 18, 1917. In 1921 he succeeded Peyton March as chief of the staff, a post he retained until 1924.

PERSHORE. Parish of Worcestershire. It stands on the Avon, 8 m from Worcester, on the G.W. Rly. The chief building is the abbey church of the Holy Cross, with a fine tower and an Early English choir. Pershore is noted for plums. Other industries are the manufacture of agricultural machinery and jam. Pop. 3,384.

PERSIA. Country of Asia. In ancient times Persia included the whole of the tableland enclosed S. by the Arabian Sea, E. by the Indus valley, W. by the Persian Gulf and Mesopotamia, and N. by the depression between the Caspian and Aral Seas. The total area of this region is nearly a million sq. m., but modern Persia occupies only some 628,000 sq. m. Tehran is the capital, other towns including Isfahan (Isfahan), the old capital, Tabriz, and Meshed. The pop. is estimated at about 9,000,000.

The climate generally is one of great aridity combined with excessive heat, although on some of the uplands extreme cold prevails. Date palm cultivation has made great strides along the shores of the Persian Gulf; cedars, oaks, beech, and box flourish on the N. slopes of the Elburz range. Food products include the cereals wheat, barley, and millet. The lowlands yield silk, cotton, olives, opium, and tobacco. The higher ground is pastoral country, from whose sheep and goats is gained the wool for the celebrated carpets. There are pearl fisheries in the Persian Gulf. Mules, camels, and small horses are reared. Minerals include coal, iron, copper, lead, turquoise, and rock salt. The country is rich in oil.

The first inhabitants of the country in historical times appear to have been of Sumerian stock, but on the fall of the Assyrian Empire an Aryan people, the Medes, became the heirs of its political power, and to a great extent of its civilization. Media became a powerful empire under Cyaxares (d. 584 B.C.). His son, Astyages, was attacked by an army of Persians under Cyrus, and in 550 the empire of Media passed into the hands of the kindred Aryan people of Persia. Darius, a usurper, attacked and reduced the Greek cities of Thrace and Macedonia and refounded the Persian Empire on a more solid basis. The rise of Macedonia under Philip and Alexander brought about the temporary fall of Persia.

At the death of Alexander, what is now Persia was ruled by the dynasty of the Seleucids, descendants of one of his generals. The Parthians, a Turanian tribe from the N., produced the Arsacid dynasty, about 249 B.C., who gradually seized the whole of Persian soil. The Parthian power was superseded by the Sassanian dynasty, which ruled the land until 651, a period marked by constant wars with the Byzantine Empire. The Turks then got possession of Persia, and for nearly 600 years it was part of the Caliphate, but with its own petty rulers. In 1055 the Seljuk Turks united the country again, but when, in the 13th century, their power waned it was overrun by the Mongols, who founded a dynasty that lasted for about a century. They were driven out by Tamerlane, whose son and his descendants ruled until about 1500.

Persia. Map which shows its strategic situation in relation to the Persian Gulf and the Bagdad and Turkistan Railways

John Pershing, American soldier
Russell

See Constellation.

In 1499 a new dynasty, that of the Sufavi, was founded and an era of conquest began. Georgia was annexed, and Abbas, the great shah, who belonged to the Sufavi dynasty, extended his sway over Afghanistan and Baluchistan. He made Ispahan his capital, and in his reign the English, followed by the Dutch and the French, began to trade with Persia. A little later the Russians began to show their interest in the country.

The Sufavi dynasty was overthrown by the subject Afghans, who revolted and, in 1722, captured Ispahan. The Turks took advantage of Persia's weakness, and in 1736 a Turk, Nadir Kuli, made himself shah. His reign, short but tyrannical, was followed by another period of disorder, in which Afghanistan and Baluchistan became independent. In 1795 a new dynasty, that of Kajar, appeared, but the country's decline was hardly arrested. Teheran again became the capital.

Early in the 19th century Georgia and other districts were annexed by Russia, and in 1856-57 a short war with Great Britain ended in the shah recognizing the independence of Afghanistan. More than once, external pressure combining with internal disorder, the country seemed likely to fall to pieces, but this did not happen. In 1907 Great Britain and Russia agreed by treaty to respect the independence of Persia, at the

Persia : some types. 1. Workers in the opium fields. 2. Peasant at prayer. 3. Woman in outdoor dress

same time marking out their respective spheres of influence.

A nationalist movement was begun in Persia in 1905, and in 1906 a constitution adopted. Before that time the shah had been an absolute ruler. In 1921 the nationalist leader, Riza Khan, turned out the government and set up one controlled by himself. He himself was war minister until, in Oct., 1923, he made himself premier. At this time the shah left Persia, and Riza contemplated a republic, but religious influences were against this idea. In Oct., 1925, the meljis (national assembly) deposed the absent shah, and in Dec. Riza was chosen shah, the crown being made hereditary in his family. The finances were reformed under American control.

PERSIAN ART. From Babylonian and Assyrian art developed old Persian art. The sun-dried brick of the Assyrians was discarded for stone, though their peculiar raised palaces were repeated in Persia, and the columnar feature, seen in the remains of the palace of Cyrus at Pasagardae, was borrowed from the Medes. Persian constitutes one of the five main schools of Mahomedan art. It is seen to

perfection in the tomb of Zobeide at Bagdad. Notable examples of religious art are the mosque of Masjid Shah at Ispahan and the beautiful glazed tile and interlaced ornament work of the mosque at Tahriz. Methods of inlaying metal on metal, at first silver on iron or bronze, were skilfully practised.

PERSIAN GULF. Arm of the Indian Ocean, the ancient Persicus Sinus. It stretches N.W. from the Gulf of Oman on the S. to the Shatt-el-Arab and the adjacent regions on the N., and is more than 500 m. long.

During the Great War the British made much use of this area, the strategic key to almost the whole of the Middle East. See Basra; Fao; Mesopotamia.

PERSIMMON OR VIRGINIAN DATE PLUM (*Diospyros virginiana*). Small tree of the order Ebenaceae, native of N. America. It has rather thick, oval-oblong, alternate leaves and pale yellow, bell-shaped flowers. The wood is very hard and blackish. See Ebony.

PERSIUS (A.D. 34-62). Roman satiric poet, whose full name was Aulus Persius Flaccus. Born at Volaterrae, in Etruria, Dec. 4, A.D. 34, he studied Stoic philosophy in Rome under Cornutus, and died Nov. 24, 62. He left six Satires, which display original genius, in spite of their immaturity, excess of literary allusion, and obscure style. They have been edited, with a prose translation, by J. Conington, 1872, and there are verse translations by Dryden and Gifford.

PERSONAL PROPERTY. Term peculiar to English law. It comprises all goods, chattels, choses in action, leaseholds; but not freeholds, copyholds, or things thereunto annexed. The distinction is quite illogical, and the most logical division of property is into movable and immovable. See Intestacy.

PERSONATION (Lat. persona, mask, person). In English law, pretending to be someone else. A person who does this in order to obtain property is guilty of a felony by the False Personation Act, 1874, passed in consequence of the Tichborne case. To personate a master so as to give a false character to a servant is a misdemeanour under an old statute of George III; and the Ballot Act, 1872, made it a criminal offence to personate a voter at a parliamentary or municipal election.

PERSPECTIVE (Lat. perspicere, to look through). In art, the representation of objects occupying different planes upon a single plane surface in such a way that the representation shall appear the same to the eye as the objects themselves; also the science or laws determining such representation. The colour as well as the size and form of objects being affected by distance, perspective is divided into two species, linear and aerial. Linear perspective concerns itself with the apparent form and grouping of objects, aerial perspective with their distinctness and colour.

PERSPIRATION. Excretion of water from the skin through the sweat glands. In the human being the sweat glands consist of

small coiled tubes situated in the deepest part of the true skin, from which a duct passes up to the surface. Sweat glands are abundant all over the skin. There is always a certain amount of activity in the glands, but the secretion, as soon as it reaches the surface, is evaporated, and thus normally the skin feels dry. Under the influence of exercise, heat, or certain emotions, the activity of the glands is greatly increased. The physiological function of sweating is to assist in regulation of the body temperature. Anidrosis is abnormal diminution in the quantity of sweat excreted. See Hyperidrosis.

PERTAB SINGH, SIR (1845-1922). Indian ruler and soldier. Early in his career he was put at the head of the administration of Jodhpur by his brother, the maharaja, and in this capacity introduced reforms, constructed railways, etc. He took part in the Mohmand expedition, 1897, and the Tirah campaign, 1898, led Jodhpur imperial troops in China, 1900, and two years later became ruling chief of Idar in Gujarat, but abdicated in favour of his son. An hon. commandant of the Imperial Cadet Corps, he served in the Great War, 1914-15. He died Sept. 3, 1922.

Sir Pertab Singh, Indian soldier
Vandryk

PERTH. Burgh and county town of Perthshire, Scotland. On the Tay, it is 48 m. by rly. N. of Edinburgh, and is served by the L.M.S. and L.N.E. Rlys. In the church of S. John, John Knox preached his famous sermon against idolatry. The county buildings

Perth, Scotland. General view across the L.M.S. Railway Bridge over the Tay

occupy the site of the palace in which the Gowrie conspirators met. An imposing bridge, by Smeaton, across the Tay communicates with the suburb of Bridgend, and along the W. bank of the river extend two public parks—the N. and S. Inch. Dyeing and distilling are the staple industries. From here steamers go to Dundee and other ports on the E. coast. It has valuable salmon fisheries and large cattle markets. Pop. 33,210.

The title of earl of Perth has been borne since 1605 by the family of Drummond, except that between 1760 and 1853 it was in abeyance.

PERTH. Capital of Western Australia. It stands on the Swan river, 12 m. from its mouth. Its port is Fremantle. Notable buildings include the town hall and the post office. It is the seat of the university of W. Australia.

Perth, capital of Western Australia. View from King's Park
Courtesy of the Australian Government

South Perth is a suburb across the river. The growth of the city was due to the discovery of gold in the neighbourhood soon after 1890. In 1929 the mayor became a lord mayor. Pop., with suburbs, 196,251.

Perthshire. Map of the Scottish county celebrated for its scenery

PERTHSHIRE. County of Scotland. Its area is 2,294 sq. m. It belongs partly to the Highlands and partly to the Lowlands, and is pierced by the Firth of Tay. In the N. and W. are the Grampians, and in the S. and E. are the Sidlaw and Ochil Hills. The chief river is the Tay. The many lochs include Tay, Vennachar, Rannoch, Katrine, and Achray. Across the S.E. stretches the valley of Strathmore, and in the E. is the Carse of Gowrie. Beautiful glens—Garry for instance—abound, and herein are the Trossachs, the pass of Killiecrankie, and other famous spots.

Perth is the capital and largest town, others being Crieff, Blairgowrie, Dunblane, and Auchterarder. In the county, too, are Abernethy and Blair Atholl. Much of the land is given up to deer forests and grouse moors. Oats, barley, and wheat are grown; cattle and sheep are reared. The county is served by the L.M.S. and L.N.E. Rlys. Pop. 125,503.

PERTINAX, PUBLIUS HELVIUS. Roman emperor from Jan. 1 to Mar. 28, A.D. 193. A man of humble birth, born at Alba Pompeia in Liguria, he entered the army and distinguished himself in the wars with the Parthians and in Britain. After the murder of Commodus he became emperor, but was soon murdered.

Pertinax is the nom-de-plume of André Gérard, French publicist. Born Oct. 18, 1882, from 1908-14 he was London correspondent of the Echo de Paris, in which an article by him, signed "Pertinax," appeared daily after 1917.

PERU. S. American republic bordering the Pacific. It is bounded N. by Ecuador and Colombia; E. by Brazil, S.E. by Bolivia, and S. by Chile. The Ecuador and Colombia frontiers are still unsettled. The long dispute with Chile over Tacna and Arica was settled in 1929, Tacna going to Peru and Arica to Chile. Lima is the capital, and Callao the chief port. The area is about 532,000 sq. m. Pop. estimated at 6,147,000.

The country's vast mountain system cuts Peru into three distinct longitudinal zones: the rainless coastal plain, from 30 to 60 m. wide; the sierra or mountain system itself, about 250 m. wide; and the montaña, the remote inland re-

gion of forest. Three great navigable rivers cut their way by deep gorges through the lofty chain of the Eastern Cordillera, the Marañon, the Huallaga, and the Ucayali.

The name of Peru is traditionally identified with wealth in the precious metals, particularly silver. Nowadays the chief minerals are petroleum, copper, silver, and lead. The vegetable products far exceed the minerals in value, notably sugar, cotton, and coffee. Guano, once a prolific source of wealth and revenue, is still gathered. Cinchona and other medicinal plants abound. There is a considerable export of alpaca, llama, and sheep wool. The country has about 300 m. of railways.

In 1533 the Inca empire fell, and about the middle of the 16th century the authority of the Spanish viceroy was established. For two centuries the history of Peru was virtually the history of Spanish S. America.

For the viceroy held authority over almost all the Spanish governors upon the continent. Peru declared its independence in 1821, but it was not until 1824 that the Spanish dominion in S. America ended. For three years Peru recognized the authority of Simon Bolivar, but upon his departure, in 1826, the republic entered upon the stormy career characteristic of such tropical republics, presidents and dictators succeeding one another with bewildering rapidity.

Between 1845 and 1862 Ramon Castilla brought to Peru comparative tranquillity, better administration, and economic progress, but after him the old disorders recurred, and frontier disputes became frequent. The frontiers of Peru, Bolivia, and Chile in the coastal desert were not a burning question until it was discovered that the desert might yield great wealth, first in the form of guano, and then in that of nitrate. Latterly Peru has shared the general South American movement of consolidation and settlement. During the Great War Peru broke off diplomatic relations with Germany. Peru was one of the signatories of the treaty of Versailles, and is a member of the League of Nations. As the result of a revolution in Aug., 1930, Col. Cerro became president. See Inca.

Perugia, Italy. Palazzo del Municipio, built 1281-1333

antiquities. The municipal palace (1281-1333) has a valuable collection of pictures. The money changers' hall (1453) has beautiful frescos by Perugino. Pop. 81,409

PERUGINO or **PIETRO VANNUCCI** (1446-1524). Italian painter. Born at Città della Pieve, he worked in Florence and Perugia till 1480, when he was employed by Pope Sixtus IV on the decoration of the Sistine chapel and other portions of the Vatican. He was among the first of the Italians to use the oil medium successfully, though he painted also in tempera, and his graceful figures, with their landscape background, made his reputation. There are five works by him in the National Gallery, London.

Perugino, Italian painter. Self-portrait

PERUVIAN BARK. Former name for the bark of various species of cinchona imported from Peru and Bolivia for the sake of the quinine contained in it. The species yielding the highest percentage of quinine is *C. calisaya* and *C. ledgeriana*, known as yellow barks. Another species is red bark. See Cinchona.

PERVISE. Village of Belgium. It lies 4½ m. S. of Nieuport, on the line of the Nieuport-Dixmude rly. It was held by the French against the German attacks on the Yser front in 1914, and later was part of the front held by the Belgian army. See Yser.

PESCADORES or **FISHERS' ISLANDS** Group of islands belonging to Japan. In Formosa Strait, between the island of Formosa and the mainland of China, it covers nearly 50 sq. m. Rice, millet, and other cereals are produced. Navigation is extremely dangerous. A possession of China down to 1895, when it was ceded to Japan, the group is officially called Hokoto by the Japanese, and is known as Pang-hu to the Chinese. About 20 of the islands are inhabited. Pop. 60,000.

Peru. Indians in dress similar to that worn in the Inca period

Peru. Map of the Andean republic

PESETA. Spanish silver coin. The monetary unit of Spain, its nominal value is about 94d. It is divided into 100 centimos and coined in 1, 1, 2, and 5 peseta silver pieces, and 5, 10, 20, and 25 peseta gold pieces.

Peseta. Obverse and reverse of the Spanish coin.

PESHAWAR. Capital of the N.W. Frontier Province, India. It lies near the Bara, 190 m. from Kabul, and occupies a strategic position in relation to the Khyber Pass. A broad-gauge rly. joins the town with Jamrud and with Campbellpur, where connexion is made with the two great rlys. of N.W. India. Pop. 104,452. Fighting took place around Peshawar between British troops and Afridi tribesmen, in Aug., 1930. Pron. Pesháh-wer.

PESO (Lat. *pensum*, weight). Coin used in several countries of S. and Central America. Argentina, Chile, Uruguay, Panama, Paraguay,

Peso. Silver coin used in Guatemala. Half actual size

Honduras, Salvador, Colombia, and Guatemala have each a silver coin of one peso, which is divided into 100 centavos or other similar unit. The Mexican dollar is called the peso. *Peseta* is a diminutive.

PESTALOZZI, JOHANN HEINRICH (1746-1827). Swiss educationist. Born at Zürich, Jan. 12, 1746, in 1780 he opened a school for waifs and strays, and wrote the successful moral tale, *Leonard and Gertrude*, 1781. From 1798-99 he conducted a school for orphan children at Stanz, on the Lake of Lucerne, and from 1799 to 1825 a school first at Berthoud and then at Yverdon, where he put into practice his educational theories, which are based on the idea that understanding is only possible by that spontaneous perception which is a result of observation. His views are in *How Gertrude Teaches her Children*, 1801. He died Feb. 17, 1827.

PÉTAÏN, HENRI PHILIPPE (h. 1856). French soldier. Born at Cauchy-à-la-Tour, Pas-de-Calais, April 24, 1856, he became a sub-lieutenant of infantry in 1878. At the outbreak of the Great War he was in command of the 4th brigade. As commander of an army in Sept., 1915, he participated in the offensive in Champagne, and in Feb., 1916, was placed in command of the defences of Verdun. He later became chief of the staff, and in May, 1917, succeeded Nivelle as commander of the armies of the north and north-east. In March, 1918, when Foch was made generalissimo, Pétain became commander-in-chief, and in 1922 became inspector-general. He was made a marshal, Nov. 19, 1918.

Marshal Pétain, French soldier

PETAL (Gr. *petalon*, thin sheet of metal). In a flower, the inner series of floral leaves, as distinguished from the outer series, or sepals. See *Corolla*; *Flower*.

PETER. One of the twelve apostles. A son of Jonas, apparently a native of Capernaum, he was in partnership with his brother Andrew as a fisher on the lake of Galilee when called to be an apostle. Originally called Simon, he received the name of Cephas or Peter from Christ, who, in reference to the meaning of the name, declared that on this rock He would

build His Church. He preached the first sermon after the great Pentecost, and was the first to admit a Gentile to the Church. He is believed to have preached throughout Asia Minor, to have gone to Rome, and to have met death by crucifixion, perhaps under Nero, A.D. 68. See *Papacy*.

PETER, EPISTLES OF. Two books in the New Testament, attributed to S. Peter. Several works have survived which were ascribed to the apostle, but were not in reality his. The claim for the first epistle may be accepted, and we may conclude that it was written from Rome before A.D. 64. It is addressed to the Christians in Asia Minor, encouraging them to face persecution. It is probable that the second epistle was written by a disciple of Peter in his master's name.

PETER I, THE GREAT (1672-1725). Tsar of Russia. Son of the Tsar Alexis, he was born May 30, 1672, and succeeded to the tsardom jointly with his elder brother, Feodor, in 1682. In 1689 he overturned the regency of his sister Sophia, though without officially deposing his brother. A war with Turkey gave him the port of Azov in 1696, and the opportunity for creating a Russian navy. In 1697 he visited European courts and worked with his own hands in the shipyards of Holland and England. He returned to Russia to complete the suppression of a revolt raised by the party hostile to western innovations, and brought with him engineers, artisans, and scientists.

Peter the Great, Tsar of Russia After J. M. Wattier

In 1699, after the accession in Sweden of Charles XII, he formed a coalition with Poland and Denmark for a partition of the Baltic provinces of Sweden, but Charles crushed Denmark, shattered Peter's huge army at Narva, and then turned on Poland. Peter was left at leisure to found his new capital of Petersburg. When Charles again turned upon Russia his army was annihilated at Poltava in 1709. A war with Turkey, ended by a humiliating peace, followed. Peter then made himself master of Finland, and extended his empire at the expense of Sweden in the north and of Persia in the south-east. He died Jan. 28, 1725, and was succeeded by his widow Catherine I (q.v.).

Peter's grandson, who became Peter II (1715-30), succeeded Catherine I in 1727. In the hands of court officials, he died Jan. 29, 1730.

Another grandson, Peter III, was tsar for six months in 1762. A son of Peter's daughter Anne, he was murdered by his wife Catherine, who succeeded him.

PETER (1844-1921). King of the Serbs, Croats, and Slovenes. Son of Alexander I, prince of Serbia, 1842-58, Peter Karageorgevitch was born at Belgrade, July 11, 1844. Exiled with the rest of the family, he fought in the foreign legion during the Franco-Prussian War. On the assassination of King Alexander, June 10, 1903, Peter was elected king by the National Assembly on June 15. In June, 1914, he committed the regency of the kingdom to the crown prince Alexander, his second son, but was with the army during the first part of the Great War, accompanying it in the retreat of 1915-16 to Greece, where he spent his second exile. On the reconquest of Serbia, Peter returned to Belgrade, where he died Aug. 16, 1921. His son Alexander (q.v.) succeeded him as King of Yugoslavia. See *Serbia*; *Yugoslavia*.

Peter, King of the Serbs

PETER THE HERMIT. Medieval preacher. He was a priest at Amiens when Pope Urban II, in 1095, declared a crusade, and he became one of the most successful of the wandering preachers who went through France urging its claims. He led one band of crusaders from Cologne to Constantinople, and after some vicissitudes reached the Holy Land. He is said to have died in 1115.

PETERBOROUGH. City and market town of Northamptonshire. It stands on the Nene, 76 miles from London, and is served by

Peterborough. West front of the cathedral

the L.M.S. and L.N.E. Rlys., being a railway centre. The cathedral contains examples of several styles of architecture. Notable features are the magnificent west front, the nave, and the central tower. The staple industries are the making of railway rolling stock and agricultural implements. The diocese covers the county of Northampton. In 1928 the area of the city was enlarged. Market days, Wed. and Sat. Pop. 35,533. (See *Apse*.)

The soke of Peterborough, a district around the city, forms a separate county for administrative purposes. It has an area of 83 sq. m.

PETERBOROUGH. Town of S. Australia. It is near Terowie, the rly. junction of the line from Broken Hill to Port Pirie and the main line from Adelaide to Perth. Pop. 2,966

PETERBOROUGH. City of Ontario, Canada. It stands on the river Otonabee, 72 m. from Toronto, and is served by the C.N. Rlys. Its industries include lumber and flour mills. There is a R.C. cathedral. Pop. 20,994.

PETERHEAD. Burgh and seaport of Aberdeenshire, Scotland. It stands on the north side of Peterhead Bay, 44 m. from Aberdeen, on the L.N.E. Rly. The burgh consists of two parts, Peterhead proper and Keith Inch, separated by the harbour, which includes a large harbour of refuge, built 1886-1921 by prisoners from the convict prison near. The chief industry is the herring fishery; another is the polishing of red granite, which is extensively quarried in the neighbourhood. Pop. 13,000.

PETERHOF. Town of the Russian Soviet Republic. It is 15 m. S.W. of Leningrad, with which it is connected by railway, on the S. shore of the bay of Kronstadt. Founded in 1711 by Peter the Great, it is celebrated for its château, formerly a favourite summer residence of the tsars. Pop. 8,925.

PETERHOUSE OR **S. PETER'S COLLEGE.** Oldest of the Cambridge colleges. It was founded in 1257 by Hugo de Balsham, bishop of Ely, on the lines of Merton College, Oxford; its charter is dated 1284. The principal court assumed quadrangular form in the 15th century, the N. range being begun in 1424. The existing chapel, consecrated in 1632, contains specimens of Munich glass.

PETER MARTYR (1205-52). Dominican monk and saint. He was born at Verona, and at the age of 15 admitted by S. Dominic to his order. He conducted missions with great success in the Romagna, Tuscany, Bologna, and Milan, and, appointed in 1232 head of the Inquisition, is said to have acted with greater zeal than mercy. He was murdered in 1252, and canonised in 1253.

Peter Martyr was also the name given to an Italian Protestant reformer whose surname was Vermigli (1500-62). An abbot in Italy, he became a Protestant. In 1547 he was

made professor of theology at Oxford, but on the accession of Mary he returned to Strashourg, and later became a teacher of Hebrew at Zürich, where he died.

PETER PAN.

Children's play by Sir J. M. Barrie. It was produced Dec. 27, 1904, at the Duke of York's Theatre, London. Based on Barrie's tale, *The Little White Bird*, 1902, the play, retold as *Peter and Wendy*, 1911, deals with the adventures among fairies, pirates, and Indians of some

Peter Pan, Statue by Sir G. Frampton in Kensington Gardens

children who follow the guidance of Peter, the boy who never grew up. In 1912 a statue of Peter by Sir G. Frampton was erected in Kensington Gardens. See Barrie, Sir J. M.

PETERSFIELD. Urban dist. and market town of Hampshire. It is 55 m. from London and 19 m. from Portsmouth, on the Southern Rly., on which line it is a junction. The church of S. Peter is partly Norman. Near is Bedales co-educational school. Market day, Wednesday (alternate). Pop. 3,933.

PETERSHAM. District of Surrey, part of the hor. of Richmond. The church of S. Peter, founded 1505, has some interesting monuments. In the churchyard is the grave of Mary and Agnes Berry, Horace Walpole's "Elder-Berries." See Ham; Richmond.

PETER'S PENCE. Tax levied in England by the pope from the 8th or 9th century, and subsequently extended to other countries. It was withheld by England in 1366 in order to bring pressure to bear on the pope to agree to the statute of praemunire, and was abolished by Henry VIII in 1534. It has been since revived as a voluntary contribution to the pope.

PETHICK-LAWRENCE, FREDERICK WILLIAM (b. 1871). British politician. Born Dec. 28, 1871, he became a harrister. He edited *The Echo*, 1902-5, the *Reformers' Year Book*, 1904-8, and *The Labour Record and Review*, 1905-7. In 1901 he married Emmeline Pethick, assuming her surname, and was associated with her in the agitation for woman suffrage. Labour M.P. for West Leicester from 1923, he became financial secretary to the Treasury in 1929.

PETITION (Lat. petere, to seek). Term used for a request, generally one from an inferior to a superior. The right of petitioning the king was established in the time of Henry IV, and in 1689 was laid down in the Bill of Rights. Until the time of Henry VII, legislation was usually based on petition, the laws being drafted by the judges from the petitions received. The modern petition is usually to one of the Houses of Parliament.

What was known as the Petition of Right was a statement of constitutional claims drawn up by Wentworth, Pym and others, passed through both Houses and signed by Charles I on June 7, 1628. To-day the term petition of right is given in English law to the method of obtaining redress against the crown.

PETITS CHEVAUX (Fr. little horses). Gambling machine. It is a miniature representation of horses with their jockeys, which revolve round a circular space in the centre of a long table. The mechanism is so contrived that each horse revolves independently, and the momentum is applied so as to leave the result of each spin a matter of pure chance.

PETRA (Gr. rock). Ruined capital of the Nabataeans. Known also as Sela, Joktheel, or Regem, it lies under Mount Hor, between the Dead Sea and the Akabah (Aqaba) Gulf. A gorge leads to a rose-red temple with graceful columns and sculptures of winged war-maidens, Arab war-horses, and war dances. Beyond is a mountain-ringed oval space, about one mile long and $\frac{1}{2}$ m. broad. Here stood the vanished city of Petra, which is represented by thousands of rock tombs, ranged in tiers on the sandstone flanks of encircling mountains.

In Assyrian and Babylonian invasions Petra became the refuge of the Nabataeans. They used the valley as a burial place and treasure store, and it was raided in 312 B.C. by Macedonians, and later by Pompey. In A.D. 105 Trajan captured the city.

Treasure hunters began to break into tombs, and Saracens in the 7th century wrecked the

town in search of buried spoil. In addition to the empty funeral caves, little remains, even in ruin, except the temple in the gorge, a great amphitheatre, and the wreck of a colossal classic temple on the mountain top of El-Deir. In the Great War Petra was used as a base by T. E. Lawrence (q.v.), in his attacks on the Turks.

PETRARCH (Ital. Petrarca) (1304-74). Italian poet and humanist. Son of a notary, who was exiled with Dante from Florence, he was born at Arezzo, Tuscany, July 20, 1304. He early displayed a love for the classics, but studied for the law, which, after his father's death in 1326, he abandoned for letters. He took minor orders, found generous patrons, particularly in the Roman house of Colonna, and won the friendship of Azzo di Correggio. In 1327, in the church of S. Clara, Avignon, he first saw the Laura who inspired his muse. This lady, to whom he addressed some 300 sonnets, has been doubtfully identified with Laura di Noves, the wife of Hugo de Sade.

While pursuing ardently his Latin studies, and regarded by his younger literary contemporaries as their leader, he took a deep and constant interest in public affairs. He travelled in France, Germany, and the Netherlands, and undertook many important public missions. He wrote a treatise on government, and in 1351 his advice was sought in the drafting of a constitution for Rome, in which city, on Easter Sunday, 1341, he had been crowned poet laureate. He found a congenial retreat at Vaucluse, but later moved to a village, since called Arqua Petrarca, near Padua, where he died, July 18, 1374. In 1928 his house at Vaucluse was opened as a museum.

Petrarch, Italian poet

Petrarch has been called the first of the moderns. His fame soon spread throughout Europe, largely through his sonnets and other poems, which exerted a lasting influence on the love poetry of France and England.

PETREL (Dim. of Peter, from some species appearing to walk on the water). General name for about 100 species of oceanic birds,

Petrel. Storm petrel, *Procellaria pelagica*, or Mother Carey's Chicken

constituting the order Tuhinares. It includes the albatross, diving petrels (*Poecanoides*), storm petrels (*Procellaria*), flat-billed P. (Prion), fulmar P. (*Fulmarus*), and the shearwater P. (*Puffinus*). They have a rudimentary hinder toe, hooked bill, and tubular nostrils. They nest in burrows or rock-clefts, and lay a single egg. The name indicates more particularly the storm petrel, or Mother Carey's chicken (*Procellaria pelagica*), which breeds in Britain, chiefly in Scotland and Ireland.

PETRIE, SIR WILLIAM MATTHEW FLINDERS (b. 1853). British Egyptologist. Born at Charlton, June 3, 1853, he surveyed Stonehenge and ancient British earthworks, 1875-80. Applying similar methods to the pyramids of Gizeh, 1880, he undertook thereafter, down to 1914, systematic excavations in Egypt. In 1890 he excavated Lachish for the Palestine Exploration Fund. Edwards professor of Egyptology at University College, London, from 1892, he founded the Egyptian Research Account, 1894. Besides numerous works covering the whole field of Egyptian history, he wrote *Some Sources of Human History*, 1919; and *Hill Figures of England*, 1926. He was knighted in 1923.

Petrograd. Name applied from 1914 to 1924 to the town known as Leningrad (q.v.).

PETROLEUM OR ROCK OIL. Dark brown, black, or dark green mineral oil, the raw material from which petrol, paraffin oil, lubricating oils, fuel oil, paraffin wax for candles, and many other products are manufactured. Its main constituents are carbon and hydrogen. It is mined by means of wells, up to 4,000 or 5,000 ft. deep, lined with iron or steel tubes, through which it is conveyed to the surface. A tower-like derrick contains the drilling machinery, and serves as a support in lowering the tools and lengths of casing. The stratum in which the petroleum occurs is porous, usually sandstone or limestone.

Crude oil, in countries where it is abundant, is transported through pipe lines, sometimes hundreds of miles in length. The oil is treated by fractional distillation in order to obtain various products. At a moderate temperature vapours are given off which condense into petrol or motor spirit. Greater heat sets free another set of vapours, which when condensed and purified become paraffin oil. With yet higher ranges of temperature lubricating oils are obtained; and the residue left in the still may in some cases be used as fuel oil. Some crude oil is heated sufficiently to remove the petrol, the remainder being used as fuel oil. Again, crude oils of one class yield paraffin wax, and those of another class yield asphalt.

Oil fuel is being used to a greater extent every year, and is employed by the largest and most modern British liners. The navy uses it almost exclusively. Its use on British railway engines in place of coal has begun; and many heating and steam-raising plants burn the liquid fuel. Some grades are used in the internal combustion or oil engine. See Oil.

PETROLIA. Town of Ontario, Canada. It is 50 m. from London, being a station on the C.N.R., and obtained its name from the oil-fields in the vicinity. Pop. 3,148.

PETROLOGY (Gr. *petra*, rock; *logos*, science). Science of rocks. It is one of the divisions of geology, overlaps the kindred science of mineralogy, and is concerned with the composition, chemical and mineralogical, the structure, and the classification of rocks. Rocks for examination under the microscope are usually cut into thin sections, and for chemical analysis or for separation purposes crushed into small grains. In putting a rock into its proper category some characteristics which have to be considered by the petrologist are its composition, hardness, colour, crystalline or non-crystalline character, specific gravity, etc. See *Geology*; *Rock*.

PETRONIUS (d. A.D. 65). Roman writer, whose full name was Gaius Petronius Arbitr. Although he passed his days in sleep and his nights in business or pleasure, as governor of Bithynia he was a capable administrator. Apparently he aroused the jealousy of Tigellinus, and anticipated his fate by opening his veins in a warm bath. Petronius was the author of a remarkable work of fiction, called *Satyricon*, of which considerable fragments have been preserved. It describes the adventures of a Greek freedman in Italy.

PETTICOAT LANE. Name, until about 1830, of Middlesex Street, London; E. Running N. from High Street, Whitechapel, to Widegate Street, Bishopsgate, it was known in Stow's time as Hog Lane. In the 17th century Petticoat Lane was the centre of a colony of French refugee weavers, but it has for many years been a Jewish quarter, notable for its Sunday morning

Petticoat Lane, London, during the Sunday morning market

open-air market, in which secondhand clothing forms a conspicuous feature.

PETTIE, JOHN (1839-93). Scottish painter. Born at Edinburgh, March 17, 1839, he came to London in 1862. He attracted attention with his *Drumhead Court Martial*, 1865; became A.R.A. in 1866, and R.A. in 1873. He died Feb. 21, 1893. Pettie was essentially an interpreter of chivalrous romance.

PETTY OFFICER. In the British navy, rank below and next to warrant officer, corresponding to that of non-commissioned officers in the army. Candidates are selected from leading seamen of very good character with at least one year's seagoing service, and have to pass a stringent examination and in addition possess a gunnery or torpedo qualification.

PETTY SESSIONS. In English law, sittings of two or more justices of the peace or of a stipendiary magistrate. The courts of petty session are those which try in a summary way, without a jury, certain minor offences, and the amount of punishment which may be inflicted is strictly limited.

PETUNIA. Perennial ornamental herb of the order Solanaceae. A native of S. America, it was introduced into Britain early in the 19th century. The plants are from 6 ins. to 2 ft. high, and the funnel or salver shaped flowers are chiefly red, violet, blue, and white.

PETWORTH. Town of Sussex. It is 14 m. from Chichester on the Southern Rly. S. Mary's Church has memorials of the Percy and Wyndham families. Petworth House, now the seat of Lord Leonfield, was built by the 3rd earl of Egremont about 1800. It contains carvings by Grinling Gibbons and some fine pictures. Pop. 2,435.

PEVENSEY. Village of Sussex. It stands on Pevensay Bay, 6 m. from Eastbourne, and 12 m. from Hastings, with a station on the Southern Rly. It occupies the site of the Roman station of Anderida, and was the landing place of William the Conqueror. A castle, of which ruins remain, was built here by the Normans, who erected it within the Roman walls. This is now the property of the nation, to whom it was given by the duke of Devonshire. Other buildings of interest are the church of S. Nicolas, and the Old Mint House. Pop. 764. See *Anderida*.

PEWSEY. Market town of Wiltshire. On the Avon near the Kennet and Avon canal, 11 m. from Marlborough, it is served by the G.W. Rly. The valley in which it lies is called the vale of Pewsey. Market day, first Wed. in month. Pop. 1,700.

PEWTER. Alloy at one time very largely used for the manufacture of drinking vessels, flagons; salt cellars, trays and plates, inkpots, etc. Its preparation in Great Britain was more or less regulated for many generations by the Pewterers' Company of London. While the composition of pewter has varied very much, the commonest variety consists of about 80 p.c. tin and 20 p.c. lead. As a metal pewter is soft, somewhat resembling tin in colour, but duller and darker. Old pewter is a favourite subject of collectors.

The Pewterers' Company has a history going back to the middle of the 14th century. Its first charter was granted in 1474, arms being allowed in 1479. The first hall, in Lime Street, E.C., was built in 1497, and destroyed in the fire of 1666, was rebuilt in 1678, again burnt in 1840, and then rebuilt a second time.

PFENNIG. Coin of the German currency. It represents the one-hundredth part of a mark (q.v.), and normally copper coins of 1 and 2 pfennig value were issued. Iron pieces of 5 and 10 pfennigs were coined in 1915, aluminium pieces of 1 and 50 pfennigs in 1916 and 1919 respectively, and zinc pieces of 10 pfennigs in 1917. Since 1927 50 pfennig pieces consisting of pure nickel have been minted.

PHAEDRA. In Greek mythology, daughter of Minos, king of Crete, and wife of Theseus, king of Athens. She took her own life because the passion she had conceived for her stepson, Hippolytus, was not returned by him. See *Hippolytus*.

Petunia. Flower of the South American plant

built about 1800 B.C., are the remains of an earlier one. Two miles away, at Hagia Triada, is a small palace of about 1600 B.C.

The Phaestus disk is a clay tablet now in the Candia Museum, Crete, discovered at Phaestus in 1908. It bears on both sides in spiral lines 241 pictorial characters printed from 45 stamps. The pictures include a mastless galley and seamen. See *Aegean Civilization*.

PHAETHON (Gr. *shining*). In Greek mythology, the son of Helios, the sun-god.

Pevensy, Sussex. Walls of the ruined castle, from the north-west

Attempting once to drive his father's chariot across the skies, he proved too weak to control the spirited horses, with the result that he came so near to earth that a portion of it was burned, the parched condition of the Sahara being attributed to this mishap.

From his name was taken that of phaeton, a high, four-wheeled open carriage, for one or two horses. Invented in the second half of the 18th century, it had long popularity as a showy equipage for fashionable whips.

PHALANX (Gr.). Tactical formation of infantry introduced by Philip of Macedon and perfected by Alexander the Great. The Macedonian spearmen, armed with very long spears, were arranged many ranks deep, so that a large number of spears projected beyond the first line. With this formation the charge was made, and to it Alexander's great victories over the Persians at Issus, 333 B.C., and Arbela, 331 B.C., were largely due. The Roman legionaries checkmated the phalanx by giving it no opportunity to charge, by luring it on to broken ground, and thereupon breaking it up with missiles.

PHALAROPE (Gr. *phalaris*, eot; *pous*, foot). Small, migratory shore bird related to the snipe. Two species occur in Great Britain, the red-necked phalarope and the grey phalarope. The former breeds in the Hebrides and the Shetlands. The latter is an irregular winter migrant to the S. coasts of England.

PHARAOH. Kingly title in ancient Egypt. In the pyramid age this term denoted the royal estates, and during the Middle Kingdom tended to be used symbolically. With the new Empire it became a personal title, and in Shishak's time accompanied the personal name. Thereafter Pharaoh came to denote colloquially the reigning king.

PHARISEES (Heb. *parush*, separated). Religious party among the Jews. They sprang from the Chasidim during the Maccabean wars, and were originally the patriots of the nation, who insisted on the permanent separateness of the Jews from the Gentiles, and upon the eternal and unchanging authority of the law of Moses. As the champions of Jewish nationalism they were politically opposed to the Sadducees and Herodians; but all were agreed to oppose the teaching of Christ. See *Scribe*.

PHARMACY. Greek word meaning originally the use of drugs. It appears to have been at first practised by priests, and later in Europe it was largely in the hands of monks. In the 17th century the word began to be used for the compounding of medicines, and the work of the chemist became quite distinct from that of the medical man. After 1852, in Great

Britain, registered chemists were distinguished from unregistered ones, since when the former have been known as pharmaceutical chemists. See Chemist; Dispenser.

The Pharmaceutical Society was established in 1841 for the purpose of advancing chemistry and pharmacy. It conducts examinations for those wishing to qualify for registration as pharmaceutical chemists and institutes proceedings against persons who contravene the Pharmacy Acts. The offices are at 17, Bloomsbury Square, London, W.C.1.

The British Pharmacopoeia, an authoritative work on the preparation, constitution, and dosage of drugs and medicines, is issued by the General Medical Council and revised from time to time. It first appeared in 1864.

PHAROS. Western extremity of the city of Alexandria, Egypt. Formerly an island, it was joined to the city by a causeway which divided the harbour into two portions. Here stood the ancient Pharos, or lighthouse, accounted one of the seven wonders of the world, built under Ptolemy II, about 260 B.C. The site of the old lighthouse was later occupied by the picturesque Port Kait Bey. See Alexandria.

PHARSALUS. Town of ancient Greece, in the dist. of Pharsalia, Thessaly. Situated near the river Enipeus, it was the scene of fighting during the war between Rome and Macedonia (197 B.C.). The battle of Pharsalus was fought Aug. 9, 48 B.C., on the territory (Pharsalia) of the town of Pharsalus, between Caesar, with 22,000 men, and Pompey, with twice that number. It was the decisive battle of the civil war. See Lucan.

PHARYNX (Gr. throat). Cavity extending from the base of the skull to the level of the cricoid cartilage of the throat, where it becomes continuous with the oesophagus or gullet. The Eustachian tubes (q.v.) open into the upper part of the pharynx, one on each side. Inflammation of the pharynx is known as pharyngitis. Acute pharyngitis may be the simple sore throat of a common cold, or may be due to more serious infection from scarlet fever, diphtheria, etc. Chronic pharyngitis or "clergyman's sore throat" results from over-use of the voice. Treatment demands rest of the voice and abstinence from smoking and alcohol. Astringent sprays containing menthol may be prescribed.

PHEASANT. Family (Phasianidae) of game birds greatly esteemed for the table. It includes over 50 genera, and comprises the partridges, quails, domestic poultry, guinea fowl, and peafowl.

The common pheasant (*Phasianus colchicus*) is a native of Turkey, Greece, and Asia Minor, and is believed to have been introduced into Britain by the Romans. It has, however, been freely interbred with other spe-

Pheasant. Cock of the common variety, *Phasianus colchicus*, of the game bird W. S. Berridge, F.Z.S.

cies introduced later, notably the ring-necked pheasant from China and the green pheasant from Japan. The pheasant feeds upon insects and snails, in addition to seeds, grain, and berries. It will flourish in the coverts without attention if protected from foxes and poachers. In Great Britain the close time for pheasants is from Feb. 2 to Sept. 30. See Argus Pheasant; Guinea Fowl.

PHEASANT'S EYE or **BIRD'S EYE** (*Adonis annua*). Annual herb of the order Ranunculaceae. A native of Europe (rare in Britain), W. Asia, and N. Africa, it has short, branching stems, with numerous much-divided leaves. The flowers are nearly globular. The petals are crimson with a darker spot at the base, which constitutes the pupil of the eye indicated by the name. Pheasant's eye is also applied to the poet's narcissus.

PHEIDIAS (c. 490-432 B.C.). Sculptor of ancient Greece. Born at Athens, the son of Charmides, he was employed on the famous statue of Athena Parthenos, and became superintendent of all the artistic undertakings carried out during the administration of Pericles. Thus he directed the execution and decoration of the whole group of buildings on the Acropolis. Later he was accused of impiety and of misappropriation of the treasure entrusted to him, and is said either to have died in prison or to have fled to Elis.

Pharynx. Section of throat showing position of the pharynx. A. Posterior edge of nasal septum. B. Orifice of Eustachian tube. C. Soft palate. D. Palatine tonsil. E. Pharyngo-palatine arch. F. Epiglottis

PHELPS, SAMUEL (1804-78). British actor. He was born at Devonport, Feb. 13, 1804, and made his first London appearance as Shylock at The Haymarket, Aug. 28, 1837. For the next five years he played with Macready at Covent Garden and Drury Lane. On May 27, 1844, he opened Sadler's Wells Theatre with Macbeth, and gave his last performance there, March 15, 1862, having produced in the interval no fewer than 31 of Shakespeare's plays and made the theatre a power in the dramatic world. He died Nov. 6, 1878.

Samuel Phelps, British actor

PHENACETIN. Colourless crystals. Sparingly soluble in water, it is tasteless and odourless. It is frequently employed to relieve headache, neuralgia, migraine, and the pains of sciatica and locomotor ataxia and similar troubles. Phenacetin is one of the substances derived from coal tar.

PHILADELPHIA. Ancient city of Lydia, Asia Minor. Founded by Attalus Philadelphus, king of Pergamum, about 150 B.C., it is now represented by the town of Ala-Shehr, at the N.E. base of Mt. Tmolus (Boz Dag), 80 m. E. of Smyrna. Pop. 22,000.

PHILADELPHIA. City and port of U.S.A. It stands on the right bank of the Delaware river, 96 m. from its mouth and 90 m. by rly. from New York, and is intersected by the Schuylkill river. Broad Street bisects the city from N. to S., and where Market Street cuts it at right angles is City Hall Square. The chief wholesale houses occupy Market Street, and S. of it is Chestnut Street, with retail stores and newspaper offices.

William Penn, in 1682, founded Philadelphia as a Quaker colony, and later it was the political centre of the young republic. In Independence Hall the Declaration of Independence was signed. Here is the Liberty

Bell (see illus. p. 72), which announced that the declaration had been adopted. Close by is the old Congress Hall, the first regular home of Congress, and a few streets away is Carpenters' Hall. The Penn Treaty Park, in Beach Street, commemorates the elm under which, in 1682,

Penn made his bargain with the Indians.

Philadelphia is a busy industrial and commercial city. It is a great oil shipping port. Sugar and petroleum refining, printing and publishing, and shipbuilding are important industries. The City Hall is an immense white marble structure surmounted by a statue of Penn. Other notable buildings are the Masonic Temple, the Stock Exchange, and the Girard Bank. New buildings include a magnificent art gallery and a beautiful free library. The private art collections of Philadelphia are famous. Pennsylvania and the Philadelphia and Reading Rlys. have their head offices in the city. The university of Pennsylvania dates from 1740. Pop. 2,064,200.

Philadelphia. 1. City Hall. 2. Independence Hall where the Declaration of Independence was signed, July 4, 1776

PHILAE. Small island in the Nile near Assuan (Aswan), celebrated for its exquisite temples. Here are the small unfinished Roman hall colloquially called "Pharaoh's Bed," and two Ptolemaic structures, the Temple of Hathor and the great Temple of Isis. These buildings are now submerged during part of each year owing to the building of the dam at Assuan (q.v.). See illus. below.

PHILEMON. Friend and disciple of S. Paul. To him the apostle addressed one of the epistles belonging to the group known as the epistles of the captivity. It is concerned with a runaway slave of his, who had become one of S. Paul's converts. The slave, Onesimus, had wronged his master and been unprofitable, and S. Paul sends him back and pleads for his forgiveness. The epistle may have been written between about A.D. 60 and 62.

PHILEMON. In Greek legend the name of an aged man who with his wife Baucis (q.v.) received Zeus and Hermes when they visited the earth and no one else entertained them.

PHILIP. One of the apostles. A native of Bethsaida, it was he who estimated the cost of feeding the hungry multitude that had come some distance to hear Christ (John 6).

Another Philip was one of the seven deacons selected by the apostles to relieve them of the work of caring for the poor.

Philae. Left, ruins of the Temple of Isis; right, the Kiosk, called Pharaoh's Bed. See above

PHILIP. Name of six kings of France. Philip I (1052-1108) was the son of Henry I. He added much to the effective area of his little kingdom in a series of wars with the rulers of Normandy, Anjou, and Flanders.

Philip II (1165-1223), known as Philip Augustus, was the eldest son of Louis VII, whom he succeeded in 1198. His great work was the consolidation of the French monarchy. He accompanied Richard I on the Third Crusade, but returned prematurely, and in 1193 invaded Normandy. Later he conquered Normandy, Maine, Anjou, Touraine, and Poitou, 1204-6.

Philip III (1245-85), called the Bold, was a son of Louis IX. His reign was uneventful. He was succeeded by his son Philip IV (1268-1314), called the Fair, who carried on a war with England (1294-99), was defeated by the Flemings at Courtrai, 1302, and in that year started his great struggle with the Papacy over the taxation of the clergy. His younger son became Philip V, and during his short reign (1316-22) did much for France. He was succeeded by his cousin, a son of Charles of Valois, who became Philip VI (1293-1350). In 1337 the long war with England began, and in 1346 Philip was beaten at Crécy.

PHILIP. Name of five kings of Spain. Philip I (1478-1506) was a son of the emperor Maximilian I and the founder of the Hapsburg dynasty in Spain, which he obtained through his mother, who was a daughter of Ferdinand and Isabella.

Philip II (1527-98) was the son of Charles V, and upon the latter's abdication, in 1556, became the chief monarch in Christendom. As his second wife he married Mary, Queen of England. Philip looked upon himself as the champion of the Catholic faith, and he lost the northern Netherlands through his persecution of Protestants. The defeat of his Great Armada, with which he hoped to crush England, was the beginning of Spain's decline. He died Sept. 13, 1598.

He was succeeded by Philip III (1578-1621), his son by his fourth wife, Anne of Austria. Under the reign of his son and successor, Philip IV (1605-65), Spain was brought to the verge of ruin by the aggressive foreign policy of Olivares. Philip V (1683-1746), who founded the Spanish Bourbon dynasty, was a grandson of Louis XIV, and obtained the throne as a result of the war of the Spanish Succession. He died July 9, 1746.

PHILIP II (382-336 B.C.). King of Macedonia. The younger son of King Amyntas, he was brought up, not in his native country, but at Thebes, where he studied military science under Epaminondas. Recalled to Macedonia in 364 to act as regent for his nephew Amyntas, he seized the throne and then set about

bringing the Macedonian army under discipline and organization which would make it a first-rate instrument of war. Philip created the Macedonian phalanx, and added to it the cavalry organization which gave the combined arms an overwhelming superiority over the traditional Greek tactics. Athens took alarm at his growing power, and united with Thebes to oppose him, but they were decisively

beaten at Chaeonea, 338 B.C., and at a congress of the Greek states Philip was elected captain-general in 337. Philip was the father of Alexander the Great.

Philip V (c. 237-179 B.C.), king of Macedonia, was the son of Demetrius II. In 215 he concluded an alliance with Hannibal in consequence of which the Romans formed a combination against him in 211 which kept Philip busy fighting until 205, when a peace was concluded. The war was renewed by the Romans in 200, and in 197 Philip was completely defeated.

PHILIPHAUGH. Battlefield in Selkirkshire. It is 3 m. from Selkirk. Here, Sept. 13, 1645, the marquis of Montrose was defeated by the parliamentarians under David Leslie. The victory was stained by a massacre of Irish prisoners and women. See Montrose, Marquess of.

PHILIPPEVILLE. Port of Algeria, forming the main entrance to the dept. of Constantine. The city, founded by the French in 1838, stands on the site of an ancient city identified with the Rusiada of the Romans. It is a terminus of the rly line from Constantine, 54 m. S., handles much of the trade of E. Algeria and the Sahara, and has steamer connexion with Algiers and Marseilles. It was bombarded by the German cruisers Goeben and Breslau, Aug. 4, 1914. Pop. 29,242.

PHILIPPI. City of ancient Macedonia. Founded by Philip of Macedon, it was situated on a spur of Mt. Pangaeus near the river Gangas. One of the first Christian churches was founded here by the Apostle Paul, whose letter to the inhabitants is included in the N.T. It is important as the scene of two battles fought in 42 B.C. between the forces of Brutus and Cassius, and those of Octavian. In the second engagement here, Brutus was defeated and committed suicide, and his army was annihilated. The result was to make Octavian and Antony masters of the Roman world. See Augustus; Brutus.

PHILIPPIANS, EPISTLE TO THE. One of the epistles of S. Paul, belonging to the group known as the epistles of the captivity. It is addressed from prison to the Church of Philippi, which S. Paul founded on his second missionary journey. Since the imprisonment was probably in Rome rather than in Caesarea, the epistle may be assigned to A.D. 63. It is a very personal letter, expressing S. Paul's thanks for gifts and other friendly acts, and his great joy in the

Gospel, and exhorting the Philippians to rejoice with him.

PHILIPPICS. Series of speeches by Demosthenes. They were so called because their purport was to warn his countrymen against the designs cherished by Philip of Macedon for the overthrow of Greek independence.

PHILIPPINE ISLANDS. Group of islands in the N. part of the East Indies, belonging to the U.S.A. They number more than 7,000, and cover about 115,000 sq. m. Among the principal islands are Luzon, Mindanao, Palawan, Negros, Panay, Samar, Mindoro, and Cebu. Manila is the capital.

Mainly of volcanic origin, the Philippines are traversed by mt. ranges, well clothed with vegetation and separated by plains of great fertility, watered by innumerable lakes and rivers, which afford ample means of transport. Large forests of teak, ebony, sandal, and other valuable woods occur, and among the economic plants are the Manila hemp, coconut, gomuti palm, pineapple, cotton, tea, coffee, cocoa, indigo, sugar cane, tamarind, and tobacco. Rice is cultivated, and bananas and other fruits produced. Gold is the most valuable mineral. Pop. 12,353,800. See map below.

PHILIPPOPOLIS on Plovdiv City of Bulgaria. On the Maritsa, here navigable, it was the capital of the former Turkish province of E. Rumelia, and lies about 100 m. N.W. of Adrianople. On the trunk rly from Sofia to Istanbul (Constantinople), and with a branch line to Burgas, it is a trade centre. There are fine churches and mosques. It was named after Philip of Macedon. Pop. 84,655.

PHILIPPUS, MARCUS JULIUS Roman emperor, A.D. 244-249. He was commander of the army which the emperor Gordian III led against the Persians, and incited a mutiny, as a result of which Gordian was murdered and Philippus was proclaimed his successor. He concluded an ignoble peace with the Persians. Philippus was slain at Verona.

PHILIPSTOWN. Town of Otago (King's co.), Irish Free State. It stands on the Grand Canal, 10 m. from Portarlington. It was called Philipstown in honour of Philip II of Spain. Its early name was Dingan. Pop. 460.

PHILISTINES. Ancient people living along the coast of Palestine. They appear to have come originally from Crete and the Anatolian coast, and established themselves in five cities in Palestine—Gaza, Ashkelon, and Ashdod on the coast, and Gath and Ekron inland. They retained their independence till their subjugation was begun by Tiglath-pileser, 734 B.C., and completed by Sennacherib, 701 B.C. Modern research has demolished the legend of their artistic insensibility. The main evidences are the Phaestus disk, the temple carvings of Rameses III at Medinet Habu (1200 B.C.), and the Gezer and Bethshehem excavations. They dominated the neolithic inhabitants by their knowledge of metals and their early monopoly of iron. See Phaestus.

PHILLIMORE, WALTER GEORGE FRANK PHILLIMORE. 1st Baron (1845-1929). British lawyer. Born in London, Nov. 21, 1845, he became a barrister. In 1897 he was made a judge, and from 1913-16 was a lord justice of appeal. He was created a peer in 1918. An authority on ecclesiastical law, Phillimore

Philip, kings of France. Left to right, Philip II, 1198-1223; Philip IV, 1285-1314; Philip VI, 1328-50

Philippine Islands. Map of the Pacific group belonging to U.S.A. See above

revised J J Blunt's Book of Church Law He died March 13, 1929.

His father Sir Robert Joseph Phillimore (1810-85), was called to the bar in 1841. He became M.P. for Tavistock in 1852 and was an authority on international law. He was made a knight in 1862, and in 1867 was appointed judge of the high court of admiralty. Created a baronet in 1881, he died Feb 4, 1885.

PHILLIPS, STEPHEN (1866-1915). British poet. Son of Dr. Stephen Phillips, precentor of Peterborough Cathedral, he was born July 28, 1866. He went on the stage and played many parts in Sir Frank Benson's company. The appearance of his first volume of poems, *Marpessa*, 1890, brought him exceptional popularity. Later his experience in stage-craft inspired Paolo and Francesca, 1899, a drama in verse, the production of which by Sir Herbert Tree three years later secured the poet's triumph. He then wrote *Herod*, 1900, *Ulysses*, 1902, and *Nero*, 1906, and later volumes of poetry include *A New Inferno*, 1911, and *Panama*, 1915. He died Dec. 9, 1915.

Stephen Phillips.
British poet
Elliott & Fry

PHILLIPS, THOMAS (1770-1845). British painter. Born at Dudley, Warwickshire, Oct. 18, 1770, he acquired the art of glass-painting at Birmingham, and in 1790 was working on the windows in St George's Chapel, Windsor. In 1792 he painted a view of Windsor Castle, and in the next two years exhibited several subject pictures. After 1796 he confined himself to portrait painting. He was elected associate of the Royal Academy in 1804 and member in 1808. He died April 20, 1845. See illus pp 263, 284, 332, and 716.

PHILLPOTTS, EDEN (b. 1862). British novelist. Born in India, Nov 4, 1862, he eventually adopted literature as a profession.

His novels, many of which are fine, intimate, dramatic studies of Devonshire life, with vivid realizations of the Dartmoor country and people, include: *Widcombe Fair*, 1913; *The Spinners*, 1918; *The Bronze Venus*, 1921; *Children of Men*, 1923; *Redcliff*, 1924; and *The Human Boy*, 1927. The *Human Boy*, 1899, is a sympathetic study of boyhood. He collaborated with Basil M. Hastings in *The Happy Ending*, *The Angel in the House*, and other plays. His play, *The Farmer's Wife*, 1917, was a great success, as was also *Yellow Sands*, 1926, written with his daughter, Adelaide, whose *The Mayor* was produced 1929. In 1927 *The Blue Comet*, in 1928 *My Lady's Mill*, and in 1930 *Devonshire Cream* were produced.

thetic study of boyhood. He collaborated with Basil M. Hastings in *The Happy Ending*, *The Angel in the House*, and other plays. His play, *The Farmer's Wife*, 1917, was a great success, as was also *Yellow Sands*, 1926, written with his daughter, Adelaide, whose *The Mayor* was produced 1929. In 1927 *The Blue Comet*, in 1928 *My Lady's Mill*, and in 1930 *Devonshire Cream* were produced.

PHILOLOGY (Gr. philos, lover of; logos, word, speech). The study of words, their sounds, origin, meaning, inflexion and usage, specifically comparative philology, the study of the different sounds and words of languages included in a kindred group, such as the Indo-Germanic or Aryan, the Semitic, etc. Its object is to collate and explain varieties in form, and to discover the principles which govern them. Languages are divided into: (1) monosyllabic or radical, without inflexions, such as Chinese; (2) agglutinative, with separable prefixes and suffixes attached to a root-word, such as Hungarian; (3) inflexional, such as the great Indo-Germanic group (see Aryan).

A comparison of the older with more recent forms of a language shows that great changes

have taken place and are still going on in the form and meaning of words. Philology examines these, and where possible accounts for them. Causes of such changes are many, as to make a sound or combination of sounds as easy as possible, unconscious or imperfect imitation, assimilation, and indistinct articulation, etc. Most of these are connected with the mechanism of speech, and are therefore classed under the head of phonetic change. The modern school of philology has found that phonetic laws, of a specific period and in a specific speech-community, are absolutely fixed and subject to no exception in that period. See Phonetics.

PHILOMELA (Gr. lover of song). In Greek mythology, daughter of Pandion, king of Athens. Dishonoured by Tereus, who had married her sister Procné, Philomela, together with her sister, took revenge by serving up to Tereus the flesh of his own son Itys. Pursued by Tereus, Procné and Philomela were transformed into a nightingale and a swallow. According to another version, Philomela becomes the nightingale. Pron. Fillo-meela.

PHILOSOPHY. Greek word, invented by Socrates in the 5th century B.C. to express the distinctive attitude which he took up to knowledge. His scientific contemporaries and predecessors had called themselves sophoi—wise men; he called himself a philosopher—one fond of or seeking wisdom—to show that while he believed in wisdom or science, he did not think he or anyone else had attained it. As developed by the Greeks, philosophy came to have two main characteristics. In the first place its method is reflective. It takes as its data not the data of the sciences, but the sciences themselves. In the second place it is concerned with things as a whole, while the sciences are departmental.

The impulse to philosophy arises from the apparent contradictions of different spheres of human inquiry. We can only understand what we are doing in these different spheres by reflecting on the principles or assumptions on which our different activities are based. This is the task of philosophy. Thus the business of moral philosophy is not to say what is right or wrong—that is done in moral judgements—but to understand what morality is; as the business of the philosophy of art is not to say what is beautiful or ugly, but to understand what we are doing when we call things beautiful or ugly, and what the relation of that activity is to morality or to science.

Philosophy, therefore, is always concerned with the principles or assumptions which lie behind different branches of human activity. It is not concerned with the details of those activities, except in so far as they illustrate the principles. See Metaphysics.

Phiz (abbrev. of physiognomy). Pseudonym taken by the draughtsman and Dickens illustrator, Hablot K. Browne (q.v.).

Phlebitis (Gr. phleps, vein). Scientific name for the inflammation of a vein (q.v.).

PHLOX (Gr. flame). Genus, of about 50 species, of herbs, mostly perennials, of the order Polemoniacae. Natives of N. America (chiefly) and Siberia, they have undivided leaves, and showy salver-shaped flowers of some tint of red, violet, or white, borne singly or in panicles. Many of them have become favourite garden flowers in Britain. Mostly hybrids, these are perennials, propagated by cuttings and root-divisions; the natural species may also be increased by seed sown as soon as ripe. Phloxes do well in any well-drained garden soil; the tall-growing forms need one that is heavy and deep, and in hot weather require ample water.

Phoebus. In Greek mythology, name given to Apollo as the sun god. See Apollo.

PHOENICIA. Ancient territory on the E. coast of the Mediterranean, N. of Palestine, between the range of Mount Lebanon and the sea. Its length from Akko (the modern Acre) northwards did not exceed two hundred miles; its breadth averaged perhaps fifteen miles.

The destinies of Phoenicia were determined by her geographical position. Her security upon the landward side encouraged maritime development, and the fame of the Phoenicians is due to their supremacy as navigators. In the 5th century B.C. the pre-eminence for a thousand years which they had inherited was still undisputed. They alone of seafaring men had passed out of the Mediterranean, coasted along Spain and France, established a trade with the "Tin islands"—the Scilly Isles and Cornwall—and penetrated possibly as far as the Baltic. Phoenician ships in the Egyptian service actually accomplished the circumnavigation of Africa about the year 610 B.C.

Phoenicia never formed a united nation with a common government. It was a group of city states, among the most important of which were Sidon and Tyre. In the 11th century B.C. Tyre had definitely become the leading Phoenician state. Hiram, king of Tyre, was the ally of David and Solomon during the brief period of Hebrew consolidation and expansion. After having been subjugated by Assyria and later by Babylonia, Phoenicia formed for two hundred years an autonomous province within one of the great satrapies of the Persian empire, providing the Persian kings with the most efficient contingents of their fleets.

After Alexander the Great had put Darius to rout at the Issus (333), the cities of Phoenicia, with the exception of Tyre, broke from the Persian allegiance and submitted to the Macedonian. Then ensued one of the most memorable sieges in classical history. Tyre had defied Nebuchadrezzar for 13 years; now it defied Alexander. With the fall of Tyre in July, 332, the separate history of Phoenicia comes to an end. The history of Greater Phoenicia, the independent Phoenician colonies, was to all intents and purposes the history of Carthage. See Alphabet; Carthage.

PHOENIX. In Greek legend, king of the Dolopæ. He became tutor of Achilles and accompanied him to the Trojan War. Phoenix was one of the heroes who took part in the hunt for the Calydonian boar.

PHOENIX. Mythical bird of the Egyptians, sacred to the sun god. In the best-known version of the fable the bird was supposed to appear at Heliopolis once in every 500 years and build a pyre, on which it was burnt, a new phoenix arising from the ashes.

In astronomy the phoenix is one of the southern constellations. It possesses a number of well-known double stars.

PHOENIX PARK. Public park in Dublin. The name is derived from the Irish fionn nisse, meaning clear water.

On May 6, 1882, Lord Frederick Cavendish and T. H. Burke were murdered in Phoenix Park. In 1883 a builder named

James Carcy turned informer, and largely on his evidence 20 men were found guilty and five were hanged for the murders. Carcy was sent for safety to S. Africa, but he was murdered at sea, July 29, 1883.

Phlox. Foliage and clusters of flowers

PHOLAS. Genus of marine bivalve molluscs. They burrow in soft rocks, wood, and firm mud around the shore, about four species occurring in Great Britain. They have white shells. The common species, known as the piddock, is used both for bait and food.

PHONETICS (Gk. *phonētikos*, connected with the voice). Study of the articulate sounds of a language, the manner of their production, and their mutual relations. The sounds are formed by a current of air breathed out from the lungs, passing through the larynx (q.v.) and modified by the relative position of the tongue, palate, teeth, lips, etc.

Speech-sounds are divided into vowels and consonants, the latter characterised by definite contact between the two parts of the mouth-passage. Sounds are said to be voiced (e.g. v, m, b, and usually vowels), or voiceless (e.g. t, s) according as the vocal chords are drawn across the larynx or are relaxed.

Consonants are classified according to (a) the place of formation, e.g. lip (b, p, m); point (of tongue), (t, d, l, n); back (k, g), etc.; (b) the character of the contact in the mouth-passage, e.g. momentary complete closure (stop consonants) as in b, p; extreme narrowing, as in f, s, th (open consonants), and so on. Vowels are divided into (a) high, mid, or low, i.e. surface of the tongue nearer to or farther from the palate; (b) front, back, or flat, i.e. tongue pushed forward, drawn back, or lying flat; (c) round or unrounded, i.e. lips protruded or in natural position; (d) tense or slack, i.e. tongue muscles braced or relaxed.

PHONOGRAPH (Gr. *phōnē*, sound; *graphein*, to write). Talking machine which records and reproduces sounds. As invented in 1876 it consisted of a rotating brass cylinder, covered with tin foil, against which pressed a needle secured to a thin diaphragm. The needle ran in the middle of a helical groove cut on the cylinder, and when the diaphragm was not vibrating the needle forced the tin foil into the groove, whereas when the diaphragm was vibrated by sound waves entering a horn, the movements of the needle made indentations in the tin foil in the groove. In the modern perfected machine the metal cylinder covered with foil is replaced by a cylinder of wax or its equivalent, in which is cut the sound record. See Dictaphone; Gramophone.

PHOSGENE. Alternative name for carbonyl chloride, COCl_2 . A gas discovered by J. Davy in 1811, it is formed by the action of light on equal volumes of carbonic oxide and chlorine. It is employed in the manufacture of aniline dyes and other organic chemicals. Phosgene was one of the poison gases used in the Great War.

PHOSPHATES. Mineral deposits largely used in fertilisers. The phosphate rocks found in different parts of the world consist largely of fossilised animal remains or of mineralised guano. Rocks of this type may contain from 40 to 80 p.c. of tribasic phosphate of lime. Phosphate, however, in its raw state is not soluble in water. It therefore must be chemically treated and turned into super-phosphate before its phosphoric acid becomes available as plant food. See Basic Slag; Manure.

PHOSPHORESCENCE. Power of emitting light possessed by many animals. It occurs frequently among the Protozoa, jelly fishes, worms, crustaceans, insects, and fishes. The familiar phosphorescence of the sea is due to the presence of swarms of the protozoan

Noctiluca. In the jelly-fishes, phosphorescence accompanies the power of stinging, and is probably of a warning character; while the angler fish uses it to attract the small species on which it preys. Among animals of the deep sea it serves apparently as an illuminant. The means by which the light is produced is not yet fully understood. It is probably akin to electrical phenomena.

A number of substances continue to emit light when placed in darkness after exposure to light. Phosphorus itself does so, but the phenomenon is due to oxidation and not to true phosphorescence. Barium and calcium sulphides, all minerals containing aluminium, etc., are phosphorescent. It has been shown that it depends upon the presence of a metal, a soluble flux, and a sulphide of an alkaline earth. See Fluorescence.

PHOSPHORUS (Gr. *phosphoros*, light-bringing). Chemical element which derives its name from its property of becoming luminous in the dark. Its symbol is P; atomic weight 31.027; atomic number 15. Phosphorus does not occur in the free state in nature, but exists combined as phosphate. It is always found in plants, from which animals derive the phosphate found in bones to the extent of three-fifths of their weight. Large deposits of mineral phosphates exist, which are now employed in place of bone-ash for the preparation of phosphorus.

Phosphorus is a pale yellow waxy-looking solid which readily takes fire when exposed to the air. It is converted into another variety known as red phosphorus by heating to a temperature of between 240° to 250°C . for a time. It is this variety which is used in the manufacture of matches. Phosphorus is also used in the preparation of vermin-killer.

Acute poisoning by phosphorus has occurred from taking rat poison, and among children from sucking match-heads. From one to two grains are likely to be fatal. Treatment consists in washing out the stomach, or giving copper sulphate as an emetic. Fatty material, such as milk, should not be given.

PHOSPHORIC ACID. Compound of phosphorus, hydrogen, and oxygen, H_3PO_4 . It is made on a commercial scale by treating bone-ash or mineral phosphate with sulphuric acid in wooden vats and filtering off the phosphoric acid from the precipitated calcium sulphate. Its salts are called phosphates.

PHOSPHOROUS ACID. H_3PO_3 . Acid formed when phosphorus oxide is added to water, the oxide being produced by the slow oxidation of phosphorus. The salts obtained are called phosphites.

PHOTO-CHEMISTRY. Branch of chemistry which deals with chemical changes due to the action of light. For example, if a mixture of chlorine and hydrogen is kept in the dark, no chemical combination takes place, but if a beam of light be allowed to fall on the glass vessel containing the mixture, chemical combination takes place with explosive violence, hydrochloric acid being formed. Light also "reduces" many chemical salts, this fact being the basis of the operations of photography (q.v.).

PHOTO-ELECTRICITY. H. R. Hertz (q.v.) found that an electric spark passed more readily between metallic terminals when these were illuminated by ultra-violet light. As a result largely of the researches of Hallwachs, Elster, and Geitel it was found that many metals emit electrons when subjected to the action of light. The alkali metals especially show the photo-electric effect. A typical photo-electric cell, as used in sound-film work, phototelegraphy, and television, comprises a glass bulb, exhausted to a vacuum, or filled with some such gas as argon. The cathode, or electron-emitting electrode, consists of a film of potassium, rubidium, etc., deposited on a layer of silver inside the glass bulb. There is an anode, often ring-shaped. Current from a battery connected to cathode and anode maintains a potential difference between the electrodes, and drives the electrons across the cell. The emission is proportional in amount to the intensity of the light. In some substances the photo-electric effect is dependent on the direction of the plane of polarisation of the light rays. See Cinematograph; Phototelegraphy; Television.

PHOTOGRAPHY. Process by which forms of objects are recorded by the action of light on materials treated with light sensitive chemicals. Joseph Nicéphore Niepce about 1829 devised a crude printing process depending upon the sensitivity of bitumen. Partnership with Louis Mandé Daguerre (q.v.) produced the daguerrotype (1839), depending on light action on silver iodide. Fox Talbot sensitised paper with silver nitrate, fixed the negative prints with common salt, and produced positive prints (1835). In 1837 he patented the calotype, which competed successfully with the daguerrotype. Sir John Herschel used hypo (hyposulphite of soda) as the fixing agent, and is said to have invented the terms photograph, positive and negative.

Glass instead of paper negatives were next devised, and in 1851 all previous methods were superseded by Scott Archer's wet plate (collodion) process with silver iodide as the light sensitive reagent. The plates could not be stored, and had to be exposed and developed while wet, requiring a portable dark room. Plates with dry gelatin emulsion were put on the market in 1877 by J. W. Swan (q.v.). These and all other plates were sensitive only to rays in the blue and violet sections of the spectrum until Dr. H. W. Vogel of Berlin in 1872 made them also sensitive to the green and yellow by adding certain dyes to the

Photography as an archaeological aid. Aerial photograph of the site of a Roman town at Caistor, near Norwich. The streets and the foundations of some of the buildings were revealed by pale streaks in the barley which was then growing

R. I. F. Official

emulsion. Such colour sensitive (orthochromatic) plates are now superseded by panchromatic (sensitive to all colours) plates, made possible by the discovery of other dyes.

Modern plates are machine-coated with emulsion of silver nitrate and potassium bromide in warm gelatin solution. Films (q.v.) in roll form have largely displaced the glass plate. Albumen printing paper, generally used from about 1850 to 1892, had to be sensitised in a silver nitrate bath just before use. Sir William Abney devised a gelatin-emulsion paper which sold ready for use, and was marketed by the Ilford Company as P.O.P. (printing-out-paper) in 1891.

AERIAL PHOTOGRAPHY. In war time the aerial photograph is used to provide information about an enemy and his territory, for military map-making, and to furnish permanent records of the results of bombardments and other operations.

In photographic surveying the aeroplane is flown to and fro at a regular speed, exposures being made in ordered succession. A strip of the territory is thus dealt with, the photographs overlapping to some extent. Adjacent strips also overlap. The prints are pieced together so that a record of the whole area is obtained. Besides map making, other important applications are for topographical, geological, or engineering survey.

Aerial photography has proved of immense value in archaeological surveying. Wherever the soil has been disturbed the vegetation takes on a different hue. Seen from the air, the lines of an ancient city show up in a remarkable manner, and even after years of cultivation the location of ancient ditches or roads is marked by lines among the corn or barley. The streets and building foundations of a Roman town at Caistor near Norwich were completely revealed in this way (see illus. p. 1075).

Photogravure. Photo-mechanical process of making printing plates, known also as intaglio (q.v.).

PHOTOTELEGRAPHY. Process of transmitting photographs, pictures, drawings, etc., by telegraphy. It may be divided into four stages: (1) The print or diagram to be transmitted, fixed to a revolving cylinder, is scanned, i.e. traversed by a minute spot of light, which passes in successive lines over its whole surface. The cylinder advances by a spiral motion. (2) The variations of light and shade on the picture are caused to affect a photo-electric cell, and are thus changed into variations of electric current. The current, after amplification by a thermionic valve, is caused to modulate a carrier current in the transmitting circuit. (3) The modulated carrier current is sent out over the telegraph wires to the distant station. (4) At the receiving apparatus the carrier current operates a light valve, and the electrical variations are thus translated into light variations corresponding to those set up by the original picture when scanned. A tiny spot of light, controlled by the light valve, falls on a sensitive photographic film attached to a revolving cylinder. The cylinder is synchronised with that at the sending station, so that there appears on the photographic film a replica in light values of the original, built up strip by strip. The film when developed becomes a copy of the original picture or diagram. A phototelegraphic service between London and Berlin was opened by the British Post Office in Jan., 1930.

PHRENOLOGY (Gr. phrēn, mind; logos, science). So-called science having for its basis the supposition that mental faculties and traits of character can be gauged from the shape and

size of the skull. It is claimed that the brain is a congeries of organs, through each of which a distinct power of intellect is manifested. The strength of each mental organ is judged by the extent of the cerebral development.

The forty-two sections into which most phrenologists divide the skull are as follows: 1. Amativeness. 2. Conjugality. 3. Parental Love. 4. Friendship. 5. Inhabitiveness. 6. Continuity. 7. Vitativeness (love of life). 8. Combativeness. 9. Destructiveness. 10. Alimentiveness. 11. Acquisitiveness. 12. Secretiveness. 13. Cautiousness. 14. Approbativeness. 15. Self-esteem. 16. Firmness. 17. Conscientiousness. 18. Hope. 19. Spirituality. 20. Veneration. 21. Benevolence. 22. Constructiveness. 23. Ideality. 24. Sublimity. 25. Imitation. 26. Mirthfulness. 27. Individuality. 28. Form. 29. Size. 30. Weight. 31. Colour. 32. Order. 33. Calculation. 34. Locality. 35. Eventuality. 36. Time. 37. Tune. 38. Language. 39. Causality. 40. Comparison. 41. Human Nature. 42. Agreeableness.

PHRYGIA. Ancient country of Asia Minor. It comprehended roughly the tableland of modern Anatolia as far E. as the river Halys, but its confines varied at different times. It was inhabited by the Phryges, warlike settlers of Aryan descent from Thrace. The inhabitants displaced by these invaders, probably about 1200 B.C., appear to have been of the same mixed race as the Hittites, to whose empire they may possibly have belonged.

There existed a powerful Phrygian monarchy, beginning at an unknown date and lasting till the beginning of the 7th century B.C., when it was overthrown. It was then ruled by the Lydians and later by the Persians, and eventually became incorporated in the Roman empire.

Phryne. Greek courtesan of the 4th century B.C. She sat to Apelles as model for his picture of Aphrodite rising from the sea.

Phthisis (Gr. wasting away). Term now restricted to tuberculous disease of the lungs. See Tuberculosis.

PHYLACTERY or **FRONTLET** (Gr. phylaktērion, safeguard). Among the Jews, strips of parchment inscribed with passages from Ex. 13 and Deut. 6, enclosed in a black calf-skin case, and fastened by thongs to the forehead or left hand or arm, the command in Deut.

Phylactery and thongs by which it is bound to the forehead or arm

6, 8, being literally interpreted. The word is sometimes used to describe a case containing relics of the dead.

PHYLLOCACTUS. Small genus of leafless succulent shrubs of the order

Cactaceae, natives of tropical America. They have flattened green stems and branches with notched edges. From the notches are produced the large, red, rose or white flowers, which have numerous petals and stamens.

PHYLLOXERA. Genus of insect pests of the order Hemiptera. They are very similar to green fly (q.v.), and one species, *P. vastatrix*, the grape louse, chiefly infests grape vines. They cause destruction by laying eggs under the bark of the vine, and when hatched out may destroy the whole plant. Spraying or washing with bisulphide of carbon is excellent for small vineries, but where the disease is on a large scale frequent spraying with petroleum emulsion should be carried out.

PHYSICAL TRAINING. Systematic exercise for the promotion of health and the development of the body. The earliest form of physical training or physical education was that practised by the ancient Greeks, and consisted chiefly of running, jumping, wrestling, and discus throwing. The Greek example was followed by the Romans, but it was not until the second half of the 18th century that the value of systematic methods was fully appreciated.

Phrenology. Diagram indicating the sections into which the skull is divided phrenologically. See text

The Swedish system, often referred to as "free movements," is practised without apparatus, and is now adopted in Great Britain. It was an important part of the training of the British soldier during the Great War, and forms the basis of the syllabus of physical exercises for public elementary schools issued by the board of education. It is divided into groups, each concentrating on the development of a certain part of the body. See Enrichments; Exercise; Gymnastics; Swedish Drill.

PHYSICIAN. One who practises medicine. Under an Act of 1858 no person can be registered as a medical practitioner unless qualified in medicine, surgery, and midwifery.

The Royal College of Physicians, founded in 1518, was for many years in Warwick Lane, London, but now occupies a building in Pall Mall East.

The Royal College of Physicians of Edinburgh was founded in 1631. Its headquarters are in Queen Street, Edinburgh. The College of Physicians in Dublin was founded in 1654. The office is at 6, Kildare Street, Dublin.

PHYSICS. Branch of science concerned with the fundamental laws of the material universe. It deals with the general properties of matter and the manifestations of various forms of energy. It may broadly be divided into two heads, laboratory physics and mathematical physics. Under the former, research work is carried on in order to obtain the necessary data which enable the postulates and axioms of mathematical physics to be stated.

Mathematical physics is concerned with obtaining axioms and postulates which will enable rigid mathematical rules to be formulated to satisfy observed phenomena. The theories of matter, energy, etc., all come within the domain of mathematical physics. In 1920 an Institute of Physics was formed in Great Britain under the auspices of the Faraday Society, the Optical Society, and the Physical Society of London. See Atom; Gas; Light; Matter; Quantum; Relativity; Wave; etc.

PHYSIOLOGY. Branch of biology which deals with the functions, as distinct from the structure, of living organisms.

Living organisms possess two characteristic properties, upon the possession of which depends their ability to carry out their functions. The first is that the animal is constantly undergoing change, and every day part of its protoplasm, the essential substance of living cells, is destroyed and

Phyllocactus. Flower of the leafless American shrub

replaced by new protoplasm. The second is that the animal has the power to store up energy in its body, and to expend part of this energy from time to time. Food, after undergoing a process of digestion, furnishes the raw material which the living animal transmutates into living protoplasm, or utilises as a source of energy.

In the lowest forms of animal life these processes take place within the compass of a single cell. In animals higher in the scale of evolution there is differentiation of both structure and function, since these animals consist of many cells, some of which are gathered together to form organs. The different organs fall into two main groups. One group is primarily concerned with providing for the nutritive requirements of the body, with the supply of oxygen, and with the removal of waste products from the body. The other group is responsible for bringing about the reactions of an animal to changes in its surroundings. All the higher animals are provided with muscles, which bring about movement of part or the whole of the body: and such movements form the only means by which an animal or man can enter into communication with the outer world.

In the normal animal every muscular movement is controlled by the central nervous system, which consists of the brain and spinal cord connected with the muscles by nerves. The brain is also connected by means of nerves with the surface of the body, with the eye, and with the ear. The development of its nervous system is the measure of an animal's position in the scale of evolution.

PIACENZA. City of Italy, the ancient Placentia. It stands on the right bank of the river Po, just below the influx of the Trebbia, and is a junction 92 m. by rly. N.W. of Bologna and 36 m. W.N.W. of Parma. It contains several palaces, notably the Farnese, a huge structure begun in 1558, but unfinished and now used as a barracks. The cathedral, dating from 1122-1233, has a handsome belfry. The church of S. Antonino, the original cathedral, was founded in the 4th century, and rebuilt in 1104. The church of Santa Maria is decorated with mural paintings, while that of San Sisto (1499) formerly held Raphael's Sistine Madonna, now at Dresden. Pop. 61,676.

PIANOFORTE (It. soft-loud). Musical instrument. The tone is produced by the impact of felt hammers upon wires or strings of varying gauge, length, and tension. The instrument is played from a keyboard composed of seven octaves of long (white) and short (black) levers or keys, seven of the former and five of the latter in each octave. These, on being depressed by the fingers,

set in motion a complicated mechanism (action) designed not only to propel the hammers against the strings, but also to respond to the player's will, by means of his touch, in the way of graduated tone. The action necessitates dampers to check undesired vibrations when the finger releases the key. There are usually two pedals. That on the right suspends the whole damper action when pressed down; that on the left is a contrivance for producing less tone, generally by shifting the hammers so that one string fewer is struck.

The best form of pianoforte is that known as the grand, in which the strings are placed in a horizontal position. In the upright pianoforte they are stretched vertically.

PIASSABA. Fibre largely used for making brushes and brooms. It is obtained from two S. American palms, of the order Palmae. The finer kind, known as Para piassaba, is the envelope of the young leaves of Leopoldinia (Cocos) piassaba. The other and coarser kind comes from the leaf sheaths of Attalea funifera.

PIASTRE (It. piastra, plate of metal, also a coin). Name of a Turkish and an Egyptian coin. The Turkish coin is silver, divided into 40 paras, and nominally worth about 2½d. It is coined in 1, 1, 5, 10, and 20 piastre pieces, and 100 piales go to the £ sterling. The Egyptian piastre is worth a little more than the Turkish, and is coined in similar denominations.

PIAVE. River of Italy. It rises in the Carnic Alps and flows to the Adriatic 22 m. N.E. of Venice, after a course of 125 m. At its present mouth is Porto di Cortellazzo: the old mouth is at Porto di Piave Vecchia nearer Venice. Pron. Pe-ah-vay.

BATTLES OF THE PIAVE. Three battles fought between the Austrians and the Italians in Nov., 1917, June, 1918, and Oct.-Nov., 1918. The first battle was an unsuccessful Austrian attempt to cross the Piave, to which the Italians retreated after the disaster at Caporetto (q.v.) in Oct. 1917. The second battle was an Austrian offensive of mid-June, 1918, to force the river front, in which the first effort was made early on June 15. This was equally unsuccessful.

The third battle was a great Allied victory. The Italians were aided by the 14th British corps and an American regiment. On the night of Oct. 23-24, 1918, British troops crossed the main channel of the Piave. Throughout the rest of the month Allied attacks pressed the enemy at all points of their line. By Oct. 30 the British had reached the Livenza, further advance being only checked by the armistice granted to Austria on Nov. 4, 1918. See Isonzo; Vittorio Veneto.

Piave. Map of the battlefield showing the area recovered in the battle of Oct.-Nov., 1918.

PIBROCH (Gael. piohaircahd, art of piping). Music of the Scottish Highlands, suitable for the bagpipes. In form it is of the variation type, an air being given out and then varied by ornamental treatment of all kinds. The variations usually increase in elaboration, sometimes alternating with a slow version. See Bagpipe. Pron. pee-broch.

PICA. Printing type. Also known as 12-point, it is a size larger than small pica, a size smaller than

English, and the largest ordinary size of book type: six lines make an inch in depth.

This line is in Pica.

PICARDY. One of the provs. into which France was divided before the Revolution. It had a frontier on the English Channel, and through it ran the rivers Somme and Oise. In it were the cities of Amiens, Laon, Beauvais, Senlis, Soissons, and Noyon; also Boulogne and St. Quentin. It was long a very prosperous district, while the Picard also had a reputation as a fighting man. To-day Picardy is represented by the departments of Somme, and parts of those of Pas-de-Calais, Aisne, and Oise, all of which figured prominently in the Great War. See Amiens.

PICASSO. Name taken by the Spanish painter, Pablo Ruiz. Born in 1881 in Malaga, he moved to Paris, and from 1906-12 was one of the leading exponents of cubism. Later he turned to more conventional forms of art.

PICCADILLY. London thoroughfare. It extends W. from Coventry Street and Piccadilly Circus to Hyde Park Corner. It contains

Piccadilly Circus, London, after the building of the new Underground station.

the Piccadilly, Ritz, Park Lane, Splendide, and Berkeley hotels, Burlington House (q.v.), Burlington Arcade, and many elubs.

Piccadilly Circus is crossed by Regent Street, while Shaftesbury Avenue, Coventry Street and Glasshouse Street lead from it. The elaborate underground station in Piccadilly Circus was opened in Dec., 1928. Piccadilly derives its name from a house called Piccadilly Hall because its owner had made foppish doublet trimmings and collars known as peccadills or peckadills.

The name Piccadilly is also given to a thoroughfare in Manchester.

PICCOLO. Italian word meaning small. Most commonly applied to the little flute which sounds an octave higher than the concert flute. The compass of the piccolo is similar to that of the flute. It is much used in light orchestral music. See Flute.

PICCOLOMINI, MARIETTA (1836-99). Italian opera singer. Born in Siena, she made a successful debut at Florence, in Lucrezia Borgia, 1852, and repeated this success in Rome, Pisa, Bologna, Palermo, Verona, and Turin. Her first appearance in London was at Her Majesty's Theatre, 1856, in La Traviata. Her soprano voice was notable for its sweetness and delicacy of articulation. She died Dec., 1899.

M. Piccolomini, Italian singer.

Pice. Indian copper coin. Four equal one anna (q.v.), and its value is a farthing. It is divided into three pies.

PICHEGRU, CHARLES (1761-1804). French soldier. He was born Feb. 16, 1761, and taught at the military academy of Brienne. In 1793 he became a general, and acquired a great reputation by his series of victories

over the Austrians and their allies. In 1795, however, he began a series of intrigues with the Bourbons, which led to his deportation to Cayenne. Escaping to England, in 1798 he resumed his intrigues, and took part in a plot for the assassination of Napoleon. He was betrayed and arrested, and on April 15, 1804, was found strangled in his bed.

Stephen Pichon,
French statesman

PICHON, STEPHEN JEAN MARIE (b. 1857). French politician. Born Aug. 10, 1857, he became a journalist under Clemenceau. For some years he was in the diplomatic service, being minister to Brazil and China; he was in Peking during the rebellion of the boxers. From 1901-05 he was resident general in Tunis. In 1906 he was elected a senator, and in 1907-09 was foreign minister under Clemenceau. He held that post again in 1909-11, in 1913, and from 1917 to 1920, when he resigned and returned to his post as editor of *Le Petit Journal*.

PICKERING. Urban dist. and market town of Yorkshire (N.R.). It is 32 m. from York, with a station on the L.N.E. Rly., on which line it is a junction. The chief building is the church of S. Peter, which contains some old mural paintings discovered in 1851, and restored, a Norman font, and other Norman work. There are ruins of a castle. The vale of Pickering lies between the moors and the wolds. Market day, Mon. Pop. 3,503.

PICKET. Military term signifying a small detachment of troops used as an outpost or guard. Pickets are usually entrenched, and the picket line is frequently made the line of resistance in case of attack. A picket may also mean a body of troops detailed for certain special eventual duties.

The picket boat is a small boat, usually a steam pinnace, carried by warships.

PICKETING. Term derived from the military word picket, and used in industrialism in a cognate sense. It describes the practice, common during strikes, of placing men near the affected works, to restrain the hands from working, or to obtain information bearing on the dispute. In 1875 picketing, in the sense of bringing compulsion to bear upon other workers, was declared illegal. The interpretation of picketing led to a good deal of litigation. Peaceful picketing, i.e. persuading men by peaceful means to abstain from work, was made lawful by the Trade Disputes Act of 1906, but by an act of 1927 it is an offence if it is committed in connexion with a strike which has been declared unlawful, a general strike, for instance. Picketing is also unlawful if violence is used.

PICKFORD, MARY (b. 1893). American cinematograph actress. Born April 8, 1893, she appeared on the stage as a child, but met with greater success in connexion with the films. In 1920 she married as her second husband Douglas Fairbanks (q.v.).

PICÓN, JACINTO OCTAVIO (1853-1923). Spanish novelist and critic. Born in Madrid, Picón established his reputation as a novelist by his *Lazaro*, 1883, a study of ecclesiastical problems which aroused keen controversy. Other works of fiction, marked by independence of outlook and shrewd psychology, are *La Hijastra del Amor*, 1884; *El Enemigo*, 1887; *Dulce y Sabrosa*, 1891; and *Cuentos de mi Tiempo*, 1895. He was also a distinguished critic, publishing a volume on Velazquez in 1899. He died in Nov., 1923.

PICRIC ACID or TRINITROPHENOL. Bright yellow crystalline powder obtained by the action of nitric acid on phenol (carbolic acid). Picric acid is a powerful antiseptic, but its chief use is in the manufacture of explosives.

PICTOU. Seaport of Nova Scotia, Canada. It stands on a harbour, an inlet of Northumberland Strait, 118 m. by rly. from Halifax. Coal is exported. Pop. 2,938.

PICTS. Name of a people formerly inhabiting northern Scotland. Divided into two nations, the Northern Picts inhabited the country between the Pentland Firth and the Grampians; the Southern Picts that between the Grampians and the Firth of Forth.

From the 3rd century A.D. the Picts are recorded as harassing foes of the Roman occupation, by whom they were never definitely subdued. S. Ninian and S. Columba were among the missionaries who worked to convert them. Oswald of Northumbria held temporary sway over Pictland in the 7th century, and there were constant wars with the Scots and with the Dalriadic kingdom during the 8th century. The peculiar system of royal succession, by which the rule passed to brothers or the son of a sister, led to confusion, which ended with the establishment of Kenneth MacAlpin, a Pict by maternal descent, as ruler of Scots and Picts in 844.

Picts' Houses. This is a name given to primitive underground structures of the early metallic age. Their erection is attributed to the Picts, although they may be of earlier date, and the theory is that they were used as refuges in times of danger. There are several in the Orkneys, but the greatest number are in the western part of Aberdeenshire. They are also found in Angus and other counties N. of the Tay, while there are a few in Berwickshire and other southern counties.

PIEDMONT (Ital. Piemonte, foot of the mountain). District of N.W. Italy. It is bounded N. by Switzerland, W. by France, S. by Liguria, and E. by Lombardy. It em-

Pietermaritzburg. View showing the Council House in the foreground and, right, the Town Hall

braces the provs. of Alessandria, Cuneo, Novara, and Turin. Mountainous on all its borders but the E., the remainder is a fertile plain. The beautiful Lago Maggiore lies on its E. border. Piedmont is watered by the Po and its tributaries. It became part of the county of Savoy, and later of the kingdom of Sardinia. See Italy.

PIER. In architecture, any isolated vertical mass of masonry, such as the supports of an arch, or the square or round posts on which a gate or bridge is hung. A number of columns grouped or clustered together is known as a compound pier; in this form the pier is a conspicuous feature of medieval architecture from the 10th century.

Bridge piers are the intermediate supports of a bridge, and serve to distribute the weight of the superstructure and its load. They vary from simple timber supports to great masses of masonry on caisson foundations, such as the piers of the Forth Bridge. Steel and iron piers consist of columns, pillars, or stanchions

resting upon masonry or piled foundations. Masonry piers are of concrete, brick, granite, or other suitable stone built up from their foundations. Cylinder piers are steel or iron cylinders, sunk to the right level and filled solid with concrete, upon which the bridge girders rest.

PIER. Jetty or staging projecting into a sea, river, or lake. A pier may be built of stone, being then more often called a mole. It usually consists of superstructure beams or girders carried upon intermediate supports, such as piles driven or screwed down to a secure foundation, carrying rly. or other traffic, and providing embarkation and landing facilities. Along that portion of a pier where ships berth, fendering is provided, consisting either of timber piles or of spring beams, which resist the impact of vessels. Mooring pawls or bollards are provided. See Breakwater; Jetty.

PIERCE, FRANKLIN (1804-69). President of the U.S.A. Born at Hillsborough, New Hampshire, Nov. 23, 1804, he was called to the bar in 1827. He was member of Congress, 1833-37, and sat in the Senate, 1837-42, being a strong Democrat and a consistent supporter of slavery. After serving with distinction in the Mexican War, he was elected president in 1852. His presidency was marked by the passage of the Kansas-Nebraska Act; the Ostend manifesto, advocating the acquisition of Cuba by the U.S.A.; and the Gadsden purchase. He died at Concord, Oct. 8, 1869.

Franklin Pierce,
American president

PIERRE. Capital of S. Dakota, U.S.A. On the Missouri, 119 m. W. of Huron, it is a great cattle market, and uses natural gas. There is a school for Indians. Pop. 3,560.

PIETÀ (Ital. piety, compassion). Representation, in painting, or sculpture, of the Virgin mourning over the dead Christ taken down from the cross; also of any group of the holy women at the Deposition. The episode has formed the motive of innumerable pictures. See Michelangelo.

PIETERMARITZBURG or MARITZBURG. City of S. Africa, the capital of Natal. It stands near the Umsindusi river, 73 m. N.W. of Durban by rly. The chief buildings are the town hall, opened in 1901, the Anglican cathedral, the buildings where the legislature of Natal meets, and others erected for official use, including the law courts. There are also a university college, in the suburb of Scottsville, hospital, library, museum, and theatre. The city has a public park, and there is a botanical garden. The barracks at Fort Napier overlook the city. Pietermaritzburg is an important rly. junction, being on the main line from Durban to the Orange Free State and the Transvaal. The city's industries include tanning and brewing, and the making of wagons and bricks.

Pietermaritzburg was founded by the Boers in 1839, the name being formed by those of two of their leaders, Piet Retief and Safoman Maritz. It became the capital of Natal in 1842. Pop. 19,748 whites. See Natal.

PIETERSBURG. Town of the Transvaal. It stands near the source of the Sand river, 176 m. by rail N.E. of Pretoria. The centre for the Waterberg goldfields, tin, gold, and corundum are mined in the neighbourhood. Pop. 2,412 whites.

PIEZOMETER. Instrument for measuring the compressibility of liquids under varying pressure. The first piezometer was invented in 1882, and consisted of a thick glass tube

closed at each end by a brass cap, one of which was fitted with another tube containing a piston or screw plug, for applying pressure to the liquid in the first tube. This latter tube was fitted with a flask, the neck of which was drawn out into a thin tube and graduated. Pressure on the liquid is communicated to the liquid in the flask by means of a system of valves, and the amount of compression read off on the graduated tube.

FIG. Name applied to members of the family Suidae, which forms part of the even-toed group of the zoological order Ungulata or hoofed mammals. The tribe includes the true pig, hush pig, wart hog, and babirusa. The typical pigs include over a dozen species, the domesticated pig being merely a modified variety of one or more of the wild forms.

Of the various wild species, the European wild boar is the best known. All wild pigs frequent marshes and damp places, and this trait is seen in the love of the tame pig for wallowing in any mud it can find; while the habit of turning up the ground with its snout is a survival of the root-hunting methods of its wild ancestors. The British breeds, derived from the European wild boar (see illus. p. 270), have been greatly modified by crossing with Chinese and other Asiatic breeds. Probably as a result of these crosses, domesticated swine have undergone many modifications, the number of teeth and the vertebrae

turtle dove also breeds in Great Britain, but it is only a summer visitor, arriving early in May and leaving in Sept.

The domesticated pigeon has received great attention at the hands of fanciers, and the number of strains is now very large. Many of these birds differ in form to such a degree that they appear to be almost different species. Darwin selected this fertile group for the study of variation in relation to the evolution of species. The chief varieties are the pouter, the carrier, the tumbler, the fantail, and the homer. The homer and not the carrier is used for carrying messages. Pigeons are fairly hardy birds, but need reasonable attention to keep them fit. See Fruit Pigeon.

PIGEON FLYING. This sport developed from the ancient practice of using pigeons to carry messages, and first became popular in Belgium, where races were instituted about 1820, a special type of bird being bred for them. It was introduced into England about 1871, Belgian birds being brought over. In 1880 a club was founded, and in 1896 the National Homing Union, the controlling body of the sport, came into existence. The organ of the sport is The Racing Pigeon, and there are a large number of clubs in existence.

PIGEON SHOOTING. Shooting of practically tame pigeons released from traps. Monte Carlo was a centre of the sport. In 1921 public attention was drawn to the cruelty of this amusement. This campaign drew public attention to the competitions carried out in Great Britain under rules drawn up by the National Gun Club. The practice was prohibited by a law passed in 1921.

PIGMENT (Lat. *pingere*, to paint). In animals, the colouring matter in the dermis or epidermis. Brown to black in most mammals and in man, it is found in the cells of the Malpighian layer. The colouring matter of birds is chiefly found in the feathers. In the case of crustaceans, many fish, and insects there are special colour-secreting cells. Haemoglobin, the red colouring matter, and its derivatives are the best known animal colouring matters from a chemical point of view, the great majority of animal pigments being present in such small quantities, though giving a large coloration effect, as to make accurate chemical analysis difficult. Much of the colour of many animals is the result of a peculiar absorption of light, and is not due to pigments.

Another kind of pigment is the insoluble coloured powder used in painting. The pigments of the ancients were mainly obtained from minerals and earths and were comparatively few in number, but they are the basis of most modern colours. See Painting.

PIGOTT, RICHARD (c. 1828-89). Irish journalist and forger. A native of Meath, he was associated with several journals of an extreme nationalist type. He forged papers purporting to incriminate Charles Stewart Parnell (q.v.) in the murders of Lord Frederick Cavendish and Thomas H. Burke in 1882. His guilt having become apparent in cross-examination before the Parnell Commission, he confessed to H. Labouchere, fled to Spain, and shot himself in Madrid, March 1, 1889.

PIG STICKING. Wild boar hunting. The pig sticking season in India lasts from Feb. to July. Parties usually camp out overnight. An early start is made in

Pigeon. 1. Pouter pigeon. 2. White fantail. 3. Mottled tumbler. 4. Homer or homing. By courtesy of Pigeons and the Pigeon World

the morning, when natives are sent out to beat the surrounding jungle. The mounted huntsmen are stationed in parties of three or four, and directly a boar breaks cover the party nearest to it proceeds to ride it down. Only the male pig is hunted. As soon as the first spear has been driven into the boar it will probably turn and show fight.

PIGTAIL. Long plait of hair worn at the back of the head. Among the Chinese the shaven head and pigtail were a mark of servitude imposed upon them in the 17th century by their Manchu conquerors. Later it became a source of pride to the Chinaman, but is gradually going out of favour. A queue or pigtail was worn in the British army and navy until 1808. See Wig.

PIKA or **TAILESS HARE** (*Lagomys*). Genus of rodents. Found in Russia, Asia,

and N. America, they live among the mountains, burrowing and living in crevices of the rocks, and feeding mainly on grass. The pika is about the size of a guinea pig. See Rodent.

Pika or tailless hare of the mountains of Russia and E. Asia

PIKE. Infantry weapon used for thrusting. It consisted of a staff with a long metal lance-head or sharp spike at the end, and sometimes a spike also at the butt for striking into the ground. Its handle or staff was often from 12 to 14 ft. long. Pikemen played a great part in the wars of the 17th century.

PIKE (*Esox*). Genus of fresh-water fishes. They are found in most temperate regions of Europe, Asia, and America. The common pike (*E. lucius*) occurs in British rivers, and is long and narrow in shape, a fine specimen attaining a length of nearly 4 ft. and a weight of nearly 40 lb. The head is broad and flattened, and the protruding jaws are armed with sharp teeth. In colour it is olive grey above, thickly spotted with a lighter tint, and silvery on the under parts. It has the power of considerably modifying its hue to match its surroundings. It is noted for its great voracity, preying not only on other fish, but upon water fowl, water voles, frogs, and worms. Small specimens are known as jack, and afford good sport. See Angling.

Pike. Specimen of the voracious fresh-water fish

Pig: four British breeds. 1. Large Black sow. 2. Wessex Saddleback sow. 3. Berkshire sow. 4. Lincoln Curly-coated sow. By courtesy of The Farmer and Stockbreeder

having changed, while the straight face of the wild swine has given way to the concave one.

Owing to the demand for pork, bacon and other products of the pig, which are imported in enormous quantities from N. America and Denmark, much attention has been paid of late to the breeding of pigs in Great Britain. Societies were started to improve the breed and to aid the farmer by the use of cooperative methods. The result has been an increase in the number of pigs kept, this having risen from 3,338,000 in 1926 to 4,578,000 in 1928. See Babirusa; Bacon; Pork; Swine Fever.

PIG or **PIG IRON.** Term used for iron run out from the blast furnace and cast in a rough mould. The molten iron is usually directed into a channel about 8 ins. wide formed in a bed of sand; branching off from each side are moulds communicating at one end with the main channel. When filled with the metal these suggest the idea of a sow suckling her young: hence the blocks of metal formed in the moulds are called pigs. See Iron.

PIGEON. Name applied to the various species of birds of the order Columbiformes, which includes the pigeons proper, the doves, and the extinct solitaire and dodo (q.v.). There are about 60 genera included in this order, and the typical pigeons number about 70 species, distributed over nearly the whole world with the exception of the polar regions.

In Great Britain three species of pigeon occur in the wild state, the stock dove, the wood pigeon, and the blue rock pigeon. The

PILATE, Pontius (Lat. Pontius Pilatus) Roman procurator or governor of Judea, A.D. 26-36. His administration was severe and offensive to the Jews, of whom he was contemptuous, but the N.T. narratives of the trial of Jesus before him credit him with a sense of justice and a desire to save Him. Called to Rome to answer charges against him, Pilate is said to have been banished to Gaul, and to have committed suicide. The Copts declare that he died a Christian martyr: the Ethiopic Church regards him as a saint, his day being June 25. His wife, Claudia Procula or Procla (Matt. 27), is honoured by the Greek Church as a saint.

PILATUS. Mountain mass of central Switzerland. Between the cantons of Lucerne and Unterwalden, about 5 m. S. of Lucerne, alt. 6,996 ft., it commands a very extensive view. It was called Mons Pilatus—the capped mountain from its generally cloud-capped summit. There is a mt. rly for tourists.

PILCHARD (*Clupea pilchardus*). Fish of the herring family. Found in the English Channel west of Portland, and off the coasts of Portugal and Spain, there is a smaller race in the Mediterranean. It is about 8-10 ins long at maturity, and may be distinguished from the herring by the larger size and smaller number of the larger scales and by the absence of teeth. Immature pilchards in their first year taken off the W. coast of France and tinned in oil are the true sardines of commerce. Pilchards are taken off the Cornish shore in the late autumn and throughout the winter. The seine net is chiefly used, and the shoals are located by watchers or "huers" stationed on the cliffs, who detect them by the reddish tinge which they give to the water.

PILE DWELLING. Primitive habitation built on piles. In England, pile foundations have been found at Walbrook, London, Barton Mero in Suffolk, and Pickering, Yorkshire. Island strongholds of the fascine type—traceable in Holderness, Yorkshire; at Llangorse, Brecknockshire; and in the Glastonbury lake villages—are numerous in Scotland and Ireland. In Bosnia pile villages were erected along the Danube tributaries during the period from the Neolithic to the early Iron Age.

Pilewort (*Ranunculus ficaria*). Alternative name for the lesser celandine. See Celandine.

PILGRIM (Lat. peregrinus, foreign). One who from religious motives journeys to visit some place considered sacred, as the scenes connected with the life of Christ or the tomb of a saint. Examples are the pilgrimages of the Jews to Jerusalem during great festivals; of the ancient Greeks to the shrines of Apollo at Delphi, Diana at Ephesus, etc.; of the Indian sects to the shrines of Rama and Krishna; of Buddhists to the scenes of Gautama's life; and of Mahomedans to Mecca.

Among Christians the practice was not unusual as early as the close of the second century. Next after the Holy Land, the tombs of the Apostles at Rome became the great centre of pilgrimage. In Great Britain the shrine of S. Thomas Becket at Canterbury, of S. Alban at St. Albans, and of Our Lady of Walsingham were noted centres of pilgrimage, among many others. See Lourdes.

PILGRIMAGE OF GRACE. This was a rising which broke out in Lincolnshire and Yorkshire in 1536, due chiefly to the suppression of the monasteries. The rebels, adopting as their sign the five wounds of Christ, entered York and marched to Doncaster, but were persuaded to return home. The promises made were not kept, and the rising broke out again, whereupon the original leader, Robert Aske, and others were arrested and put to death.

PILGRIM FATHERS, THE. Term applied to the English founders of Plymouth Colony, Massachusetts, in 1620. They belonged to the church founded by John Robinson at Leiden, in Holland. Having obtained a grant of land in New Jersey, they set sail from Plymouth in the Mayflower (q.v.), in all 78 men and 24 women, Sept. 6, 1620. By stress of weather they were forced to land, Dec. 21, on the coast of Massachusetts, far S. of the territory granted to them, and here they founded Plymouth Colony. The tercentenary of their sailing was commemorated on an extensive scale in England, Holland, and the U.S.A. in 1920. There are memorials at Plymouth and elsewhere.

The Pilgrims is a club founded in their honour. Started in 1902, it has two branches, one in London and the other in New York.

PILGRIMS' WAY, THE. Track along which pilgrims travelled through Winchester to Becket's shrine at Canterbury. Of its 120 m. portions are traceable, mainly by way of Alesford, Farnham, Shalford, Albury Park, Wotton, Burford Bridge, Merstham, Titsey, Chevening, Otford, Wrotham, West Malling, Hollingbourne, and Charing. With the exception of some 12 m. between Dartford and Strood, Chaucer's Pilgrims' Way, from London to Canterbury, 56 m., followed the modern Dover Road, touching Deptford, Dartford, Rochester, Chatham, Sittingbourne, Ospringe, and Harbledown. See Becket.

PILLAR. In architecture, an irregular column, i.e. one not constructed in accordance with the proportions of the recognized orders. The term is loosely applied also to any disengaged column that does not act as a structural support, e.g. a vertical monolith, or memorial column, such as Pompey's Pillar, Alexandria. Pillar saints, or Stylites, among whom S. Simeon Stylites is prominent, is a term sometimes used for hermits who made a home on the top of a pillar in the open air. In prehistoric times pillars were erected for worship, as in the Mediterranean basin.

PILLORY. Instrument of punishment. It consisted of a post surmounted by a wooden frame with holes through which the head and hands of the culprit were thrust.

In England, variations of the device were of old institution. After 1637 it became the usual punishment for press offences, such as printing books without licence and libelling the government. In 1816 its use was restricted to punishment for perjury and subordination, perjurers being still liable to have their ears

nailed to the pillory; and in 1837 it was abolished, having last been used, June 22, 1830, for the punishment of Peter James Bossy, convicted of perjury. The pillory was used in Germany, in France as late as 1840, and in the U.S.A. until 1839. See Torture.

PILLWORT OR **PEPPER GRASS** (*Pilularia globulifera*). Perennial herb of the natural order Marsileaceae. It is a native of Europe N. of the Alps. It is one of the water ferns, but has a closer superficial resemblance to a delicate grass than to a fern. Its habitat is the margin of ponds and lakes, and ground that is inundated in winter. The creeping root-stock is a mere thread from which the slender bright green fronds unroll. The spores are produced in rough-coated globular capsules at the base of the fronds.

Pillwort, showing the globular spore capsules.

PILOT. Person who navigates vessels. A licensed pilot is a person taken on board a vessel at any particular place for the purpose of conducting a ship through a river, road, or channel, or from or into a port.

Pilots are licensed and controlled in various British ports by particular statutes and ancient charters of incorporation, as Trinity House, Cinque Port Pilots, and Trinity Houses of Hull and Newcastle, etc. In most cases it is obligatory upon a ship entering a port to take in a pilot, who has sole responsibility while in charge of the ship. The master or mate of a ship may be licensed as a pilot.

The licence of a pilot is issued by the chief officer of customs nearest to where the pilot lives, and the licence carries with it certain restrictions, e.g. a licensed pilot cannot have any interest in licensed premises.

In aeronautics a pilot is one qualified to control an aircraft in flight. There are certain recognized standard tests for pilots of aircraft.

PILOT FISH (*Naucreates ductor*). Marine fish, nearly related to the horse mackerel. It is about

Pilot Fish. Marine fish related to the horse mackerel.

a foot long and of a bluish colour with dark transverse stripes. It is common in the tropic seas and often accompanies ships, whence arose the old notion that it acted as a pilot and indicated the proximity of land. It also frequents the company of sharks.

Pilot Whale. Variant name for the species of dolphin, called (q.v.) whale.

PILSEN OR **PILZEN**. Town of Czechoslovakia. It is 52 m. W.S.W. of Prague at the confluence of the Mies (Mže) and Radbuza, and is an important rly. junction. S. Bartholomew's church has a spire 335 ft. high. The Renaissance town hall dates from the 16th century. The town is famous for its beer. The first printing press in Bohemia was established in Pilsen. Near is the great Skoda (q.v.) industrial works. Pop. 108,023.

PILSUDSKI, JOSEPH (b. 1867). Polish statesman and soldier. Belonging to an old Lithuanian family, he was born March 19, 1867. When a university student he became prominent for his socialist and nationalist opinions, and was sent to Siberia, where he remained for four years. In 1901 he escaped from prison in St. Petersburg and visited Britain and Japan and other countries. He had, however, returned to Poland when the Great War began. At once he raised a legion of Poles, with which he invaded Russia.

Pillory. Daniel Defoe standing in the pillory at Temple Bar. From the picture by E. Crowe.

In 1917 Pilsudski became a member of the council of state set up in Poland, but the same year he was imprisoned in Magdeburg for his hostility to Germany. He was soon released, and in 1919 was elected president of the new republic. He held that post until 1922, when he resigned, and for four years he was in retirement. In 1926 he led a revolt in Warsaw which overthrew the existing administration and was himself appointed prime minister and minister for military affairs. In June, 1928, he resigned the premiership, but he kept his other position, and for practical purposes was dictator of the country. In 1930 he returned to the office of premier and denounced the existing constitution. In 1920 Pilsudski was made a marshal. See Poland.

Joseph Pilsudski.
Polish soldier

PILTDOWN SKULL. Fossil bones of the oldest known European race with distinct human traits. They were discovered by Charles Dawson (d. 1916) in quaternary gravels at Pilt Down, Sussex, from 1912 onwards. See Anthropology; Man.

PIMENTO (Sp. pimienta). Genus of tropical American trees belonging to the order Myrtaceae. They bear cymes of small flowers and coriaceous leaves. The chief species are *Pimenta officinalis*, the pimento bush, and *P. acris*, the wild clove or black cinnamon tree. The chief use of pimento is as a spice. The oil is used in medicine in the same way as cloves, and in perfumery. The bay-rum toilet requisite is sometimes scented with *P. acris*. See Allspice; Cinnamon; Pepper.

PIMLICO. District of London. It lies between the Thames, E. and S., Chelsea, W., and Belgravia and Victoria Street, Westminster. N. Pimlico Road links the Royal Hospital Road with Buckingham Palace Road. It is said to derive its name from a house of popular resort resembling one of the same name at Hoxton, called after its Italian proprietor. Hoxton still has a Pimlico Walk. Victoria Station is in the district, which is in the city of Westminster.

Pimpernel.
Leaves and flowers

PIMPERNEL (Med. Lat. *pipinella*) or POOR MAN'S WEATHERGLASS (*Anagallis arvensis*). Annual herb of the natural order Primulaceae. It is a native of Europe, Asia, and N. Africa. The slender square stem mostly lies along the ground, the branches more erect. The opposite, stalkless leaves are oval or lance-shaped. The bright scarlet flowers open only in the earlier part of the day and in clear weather. The fruit is a globular capsule containing many three-sided seeds. A variety has the flowers bright blue.

PINCHBECK. Variety of brass. It was named after Christopher Pinchbeck (d. 1732), a London clockmaker, who is said to have discovered it, although there is no contemporary mention of the fact. His son, another Christopher Pinchbeck (d. 1783), was also a clockmaker who had a number of mechanical inventions to his credit.

The best pinchbeck is obtained by an alloy of copper 89 p.c. and zinc 11 p.c. to 93 copper and 7 zinc. Pinchbeck was at one time largely used for the manufacture of cheap jewelry and watch cases, but what are known as gold-filled products have largely superseded it.

PINDAR (c. 522-443 B.C.). Greek lyric poet. He was born of a noble Dorian family, near Thebes. The traditions of the family were musical, and Pindar is believed to have excelled in flute playing. His first poetical composition was a choral ode, written at the age of 20 in celebration of the victory of a Thessalian youth at the Pythian games. He rose rapidly to fame, receiving commissions to write choral songs for special occasions from all parts of the Greek world, from democracies such as Athens and from tyrants such as Hiero of Syracuse in Sicily. He came to be regarded as the great national lyric poet of Greece, and after his death his memory was held in the utmost veneration. His Odes are divided into four books according as the victories celebrated were at the Olympian, Pythian, Nemean, or Isthmian games. Nearly all his other work is lost.

PINDAR, PETER. Pseudonym of John Wolcott (1738-1819). British satirist. He was born at Dodbrooke, in Devonshire, and, having qualified in medicine, went to Jamaica and became physician-general of the island. Returning to England in 1773, he set up in practice in Cornwall, where his ideas of treatment scandalised his orthodox medical brethren. In 1781 he settled in London, where his satires and lampoons, witty but brutal and sometimes profane, on the Royal Academy, on royalty, and on other subjects, brought him great fame. Wolcott died Jan. 14, 1819.

Pinus. Mt. range of N.W. Greece. Once the boundary between Epirus and Thessaly, it is the continuation S. of the Albanian Mts.

PINE (*Pinus*). Genus of about 70 species of large evergreen trees of the natural order Coniferae, natives chiefly of the N. temperate regions and the mountains of the N. tropics. The branches form whorls, each whorl marking a season's growth. The lower branches are killed off by the upper ones depriving them of light. The evergreen leaves are needle-shaped, produced in clusters of two to five. The flowers are simple, without sepals or petals, male and female on separate branches. For the production of the valuable soft timber (deal) pines are grown crowded together, in order to discourage branch growth and increase the length and girth of the trunk.

The Scotch pine (*P. sylvestris*) of Europe and N. Asia is the only British species. It reproduces itself by self-sown seed on heaths and wastes, however poor the soil. Its growth in Britain is more rapid than in Scandinavia, and as a consequence the timber is coarse-grained and less durable than that imported from the Baltic region. It abounds

Pine. Left, Scotch pine. Right, top, young cone of cluster pine; bottom, cones of Scotch pine

in turpentine, and yields tar, pitch, and resin. Other species of pine introduced and commonly grown in Britain include the Corsican *P. (P. laricio)* from Central and S. Europe, the Cluster *P. (P. pinaster)* from the Mediterranean region, and the Weymouth *P. (P. strobus)* from N. America. Pine timber is always in demand for joists, flooring, etc.

PINEAPPLE (*Ananas sativus*) Perennial herb of the natural order Bromeliaceae. It is a native of S. America. The berries succeeding the flowers grow together into a juicy compound fruit, the pineapple. The plant was introduced to Europe in the 17th century, and grown in stove houses, where fine fruit was often produced; but its extensive field cultivation in the W. Indies and the Azores supplied the markets with an abundance of excellent fruit, which has led to the gradual abandonment of stove cultivation.

Pineapple. Fruit arising from leaf cluster

PINENE. Hydrocarbon of the terpene group. It is the chief constituent of oils distilled from resinous excretions of pine trees, as turpentine. Pinene is a colourless liquid, which on keeping becomes resinified through the absorption of oxygen from the air. When hydrochloric acid gas is passed into pinene, the hydrochloride, artificial camphor, is formed.

PINERO, SIR ARTHUR WING (b. 1855). British dramatist. Born in London, May 24, 1855, the son of a solicitor, he was an actor from 1874 until 1881, when he took to writing for the stage. After some preliminary success, notably with *The Squire*, 1881, and *The Magistrate*, 1885, he produced a series of brilliant comedies at the Court Theatre, 1885-93, a charming comedy of sentiment, *Sweet Lavender*, 1888, and the dramatic play, *The Profligate*, 1889. He secured his place as the foremost living British dramatist with *The Second Mrs. Tanqueray*, 1893. Later plays include *Trelawney of the Wells*, 1898; *The Gay Lord Quex*, 1899; *His House in Order*, 1906; *The Enchanted Cottage*, 1922; *A Private Room*, 1928. He was knighted in 1909. Pron. Pin-ay-ro.

Sir Arthur Pinero.
British dramatist

Ping Pong. Name used sometimes for the game known as table tennis (q.v.)

PING-YANG. Town and open port of Korea. It stands on the Ta-tong or Tai-dong, about 35 m. from its embouchure into Korea Bay, and is connected by rly with Chinnampo, its outpost. It carries on an active foreign trade. Pop. 175,500.

PINK (*Dianthus plumarius*). Tufted perennial herb of the natural order Caryophyllaceae. It was introduced into Britain in 1629. It has slender, rounded, branching stems, 1 ft. high, swollen where the grass-like, glaucous leaves are given off in pairs. The rose-purple fragrant flowers have fringed petals. Under cultivation it has given rise to many varieties, single and double, pure white, or variously spotted and variegated, which are classed as show or laced pinks, and border pinks.

Pink. Flower of the fragrant garden plant

PINKERTON; ALLAN (1819-84). American detective. Born in Glasgow, Aug. 25, 1819, he emigrated to America in 1842, and opened a detective agency in Chicago. In 1861 he was appointed to guard President Lincoln, and in the same year he inaugurated the Federal Secret Service. He organized a band of men to protect employers against strike riots, and took a leading part in suppressing the Molly Maguires. He died July 1, 1884.

His agency was responsible for the solution of many sensational criminal cases, and flourished under his sons, Robert and William. A noted member of the firm, Allan Pinkerton, grandson of the founder, died Oct. 8, 1930.

PINK EYE. Term for horse influenza, first used in America. The first symptom of the disease is a red and swollen condition of the membranes of the eye. See Horse

PINKIE, BATTLE OF. Fought Sept. 10, 1547, between the English and the Scots. An English army about 16,000 strong, and led by the duke of Somerset, invaded Scotland, and met a Scottish army, about 23,000 strong, drawn up behind the Esk, at Pinkie, near Musselburgh. It resulted in a complete victory for the English, 6,000 Scots being killed.

PINK ROOT (*Spigelia marilandica*). Perennial herb of the natural order Loganiaceae. A native of N. America, the opposite, oval lance-shaped leaves are stalkless. The leaves and roots yield spigeline, which is a powerful worm medicine.

PINNACE. One of a warship's boats. It may be propelled by oars, sail, steam, or motor. Most pinnaces are motor-driven. When oars alone are used, a pinnace is generally eight-oared and double-banked. The term applies to a light sailing-boat, frequently schooner-rigged, used as a tender to a much larger vessel. Sailing pinnaces often relied upon oars as a means of propulsion when the wind fell.

PINNER. District of Middlesex. It is 13 m. N.W. of London, on the Pin, a feeder of the Colne, and is served by the L.M.S., L.N.E., and Met. Railways. The cruciform church of S. John the Baptist has a fine Perpendicular tower. The Queen's Head inn dates from 1705. Here are the Commercial Travellers' Schools, which were opened in 1855. At Headstone was a residence of the archbishops of Canterbury. Pop. 9,462.

PINT. Measure of capacity. The English pint is both a liquid and a dry measure, is the eighth part of an imperial gallon, and contains 34.65925 cubic inches. The pint is subdivided into four gills, and two pints make a quart. The Scottish pint contains a little over three imperial pints, and the U.S.A. standard pint 28.875 cubic inches. In medicine a pint is equivalent to twenty fluid ounces.

PINTAIL DUCK (*Dasila acuta*). Wild duck, widely distributed over the N. hemisphere and a winter migrant to British shores. It breeds in Scotland and the islands adjacent. Locally known as the sea-pheasant, it is easily

PINXTON. Market town of Derbyshire. It is 6 m. from Mansfield, and is served by the L.M.S. and L.N.E. Rlys. Lace is made, and there are large coal mines in the neighbourhood. Market day, Fri. Pop. 5,348.

PIOZZI, HESTER LYNCH (1741-1821). British authoress, friend of Dr. Johnson. She was born at Bodvel, Carnarvonshire, Jan. 16,

Mrs. Piozzi,
British writer

1741, the daughter of John Salusbury. In 1763 she married Henry Thrale, the brewer. They made their home at Streatham Park, near London, where the long friendship with Dr. Johnson began. Thrale died in 1781. A friendship, formed in 1780, with Gabriel Piozzi, an Italian musician, ripened into a passionate attachment, and after much altercation with her children, Mrs. Thrale was married to him in July, 1784. She died May 2, 1821.

PIPE. Tubular channel for the conveyance of gases, liquids, and, under some conditions, solids. Earthenware, concrete, cast-iron, and cast-steel pipes are made in moulds; and the first are hardened by being fired in kilns. Glass tubes are drawn out of cylinders. Lead and composition tubes are extruded through a die by pressure. Seamless pipes of wrought iron, copper, brass, and various alloys are drawn through dies of decreasing external diameter.

A pipe line is a stretch of pipes used for the conveyance of fluids. Although steam, gas, air, and water mains may be said to constitute pipe

lines, the term is more particularly applied to long stretches of piping in which oil or water is conveyed from a source of supply to a storage reservoir.

TOBACCO PIPE. Introduced into England about 1586, the making of pipes from clay became a recognized industry in London about 1620.

Later, pipes for smoking were made of wood, chiefly the wood of the heath. As this was also called the briar, these pipes became known as briar pipes, or briars. Pipes were also made of fine porcelain. Other materials used were meerschaum, bauboo, ivory, cane, horn and glass. In 1928 it was decided that briar pipes imported into Great Britain must be marked to show the country of their origin. Pipes used by primitive men have been found in the Mississippi valley. They were used by the American Indians, one form being the calumet. See Calumet; Hookah.

PIPE. In music, a general name for wind instruments, more particularly those of the whistle or flute family, and thence by analogy the sound of the song of birds. It is also the medium by which sound is produced in the organ (q.v.).

The pipe and tabor are two instruments formerly used to accompany morris dancing and known popularly as whistle and dub. The pipe was a kind of small recorder, but with

only three holes, two at the front for the first and second fingers, and one at the back for the thumb. The player held it in his left hand, from the wrist of which hung the tabor, a small shallow drum a foot or so across, which was beaten with a stick in his right hand. See Morris Dance.

PIPE. Measure of liquid capacity. It varies according to the locality, and the liquid that is measured. The ordinary pipe is two hogheads, equivalent to 108 imperial gallons, or 126 wine gallons. Two pipes form a tun. A pipe of Madeira contains 92 gallons; of sherry 108; and port wine 115.

PIPE FISH. Popular name for a group of long, slender fishes constituting several genera of the family Syngnathidae. The gills take the form of paired tufts upon the branchial arches, and the gill-cover is a large, fixed, bony plate with only a small aperture to admit water to the gills. In most cases the males are provided with pouches in which they carry the eggs until hatched. They live among seaweeds in shallow water.

Pipit. *Anthus petrosus*, the rock pipit of Britain

PIPIT (*Anthus*). Genus of small passerine birds, related to the wagtails. Great Britain possesses four species. The meadow pipit, the commonest, is to be seen almost everywhere in the country. The tree pipit is migratory, arriving in April and leaving in Sept. In appearance it is difficult to distinguish from the meadow pipit. The rock pipit is the

only British song-bird that lives among the rocks on the coast, where it feeds on small crustaceans and worms. The water pipit, Richard's pipit, and the tawny pipit are only occasional visitors to the S. of England. The pipits are often mistaken for larks, to which they are very similar, and are locally known as larks, e.g. the tree pipit is called the woodlark in Scotland and the meadow pipit generally is the titlark.

PIQUET. Card game known in England in the 16th century as la rousle and subsequently in the time of Charles I as piquet. It is played by two persons with 32 cards, the six down to the deuce inclusive of each suite being discarded from the ordinary pack. The cards rank from ace, king, queen, knave, ten, etc.; the ace counts the highest both in cutting and play, and there are no trumps.

PIRACY (Gr. *peirátēs*, an adventurer who makes attacks on ships). The offence, by common law, of committing these acts of robbery and depredation upon the high seas

which, if they had been committed upon land, would amount to felony. By statute it includes some other offences. Thus, any natural-born British subject who commits any act of hostility upon the high seas against other British subjects under colour of a commission from a foreign power, or who, in time of war, does so or assists an enemy at sea, is liable to be convicted as a pirate; so, too, is any commander or seaman who betrays his trust and runs away with any ship, ammunition, ordnance, or goods, or yields them up voluntarily to a pirate. The punishment may be penal servitude for life.

Piracy, as we see from the poems of Homer was regarded as an honourable calling among the Greeks. The Romans had to deal with pirates in the Mediterranean, where they

Pinnace. Steam pinnace used in the British navy
Cribb, Southsea

Pintail Duck. A winter migrant to Britain

W. S. Betridge, F.Z.S.

were again notorious until about 1820. See *Buccaneer*; Kidd, W.; consult also *The Pirate's Who's Who*, 1924, Philip Gosse.

PIRAEUS. Seaport of Greece, the port of Athens. Situated on the Saronic Gulf, 6 m. S.W. of Athens, it owed its foundation to Themistocles and Pericles. It was destroyed by Sulla, 86 B.C., and was not rebuilt until after the establishment of the modern kingdom of Greece. Formerly connected with Athens by the well-known "Long Walls," it now has railway communication. In 1929 a scheme was set on foot to modernize it. Pop. 217,793. See Athens. Pron. Py-ree-us.

PIRANDELLO, LUIGI (h. 1867). Italian writer. Born in Sicily, Jan. 28, 1867, he was educated in Rome and Germany. He became a teacher, and wrote some verse which was followed by a novel and a number of short stories. After other novels, including a striking one, *Il fu Mattia Pascal*, he turned to the drama, and in 1913 his first play was produced in Milan. From then onwards he wrote a succession of plays on which his reputation rests, and which have been translated into many languages. His main theme is the power and prevalence of illusion as the dominant factor in all lives. Although our real life is that of the ideas that come from the subconscious mind, we live in an atmosphere of illusions, quite ignorant of truth and reality. In 1930 Pirandello settled in the United States.

PISA (Lat. Pisae). City of Italy. It stands on the Arno, 7 m. from the Ligurian Sea and 50 m. by rly. W. of Florence. The cathedral, dating from 1063, is of white marble with an elliptical dome and an arcaded façade. The baptistery, 1153-1278 (see illus. p. 192) has a fine pulpit by Niccolò Pisano. The campanile, or Leaning Tower, was over 16 ft. out of the perpendicular in 1928, when a British

firm secured a contract for strengthening it. Among other interesting churches are S. Maria della Spina (1325-29), the basilica of S. Michele and S. Paolo and S. Niccolò. The city has a university. Pop. 77,105. See Baptistery; Campo Santo; Pulpit.

Pisa. The Leaning Tower or Campanile, and, beyond, the cathedral

The Council of Pisa was a Church council held in 1409 to settle the great schism occasioned by the residence of the popes at Avignon. The schismatics refused to recognize its authority, and the schism, lasted another 30 years.

PISANO, ANDREA (c. 1270-1349). Italian architect and sculptor. Born at Pontedera, he constructed a good part of the fortifications of Florence. His greatest achievement, however, was the decoration in relief of one set of bronze doors in the baptistery at Florence, the other set being executed by Ghiberti. He worked also at Venice, and died at Orvieto.

Another Italian sculptor of this name was Niccolò Pisano (c. 1206-78), whose best known works are the sculptured pulpit of the baptistery of Pisa, 1260, and that of Siena cathedral, 1268. His son Giovanni (c. 1250-1330) was also a sculptor and architect, one extant work being the tomb of Benedict XI in the church of S. Domenico at Perugia, which he built in 1304.

PISCES. In astronomy, the twelfth constellation of the Zodiac. It contains no bright stars. Alpha Piscium is a variable double star of the fourth magnitude, while zeta and eta Piscium are triple. See Constellation; Zodiac.

PISCINA (Lat. a fishpond, cistern) In ecclesial architecture, a bowl for water recessed in a niche, in which the priest could wash his hands or the sacred vessels after the service. Its place was generally in the sanctuary wall, south of the altar. The piscina and its architectural setting were often very elaborately decorated.

Piscina in the chapel of S. Mary Magdalene, Ereter cathedral

later came under Manet's influence and was one of the first Impressionists of 1874. Later, he launched and led the Pointillist painters. He virtually confined himself to landscapes, producing beautiful views of Paris, where he died Oct. 12, 1903.

His son, Lucien Pissarro (h. 1863), became an exponent of the Pointillist method of impressionism, exhibiting many landscapes both in Paris and in London.

PISTACHIO NUT (*Pistacia vera*). Small tree of the order Anacardiaceae, native of W. Asia. The leaves are divided into three or five oval leaflets, and the small brownish-green flowers are without petals. The oval fruits contain a single green, oily seed enclosed in a hony shell. They are eaten dry like almonds, or made into confectionery. The tree produces galls used in dyeing and tanning.

PISTIL (Lat. pistillum, a pestle). Botanical term for the female organs in a flower, including the ovary, the style, and the stigma. The ovary, containing the ovules or seed-eggs, develops after fertilisation into the seed vessel. The style is often absent, when the stigma is seated directly upon the ovary. The stigma may be thread-like (filiform), knobbed (capitate), lobed, etc.; and is either sticky, rough with raised points, or hairy, to retain the grains of pollen. See Flower.

PISTOIA or **PISTOJA**. City of Italy. It stands on the left bank of the Ombrone, 21 m. by rly. N.W. of Florence. The walls date from 1302 and the cathedral from the 12th and 13th centuries. Pistoia, in art history, held rank midway between Florence and Pisa; its early sculpture is especially remarkable. Pop. 75,988. Pron. Pistō-ya.

PISTOL (Fr. pistolet, originally a dagger, made at Pistoia). Firearm capable of being used from one hand. Pistols were invented about 1500. In 1515 the wheel-lock was invented, retaining its position until about 1825, in spite of the invention of the flint-lock about 1630. Pistols, with a half-inch bore, became duelling weapons in 1780. The percussion cap came into use about 1815, and by 1830 had displaced all other types of ignition. By this time the weapons were practically all rifled.

To-day the automatic pistol seems likely to displace the revolver. This is an adoption of the machine-gun principle in which the recoil of the weapon actuates mechanism which ejects the empty shell, cocks the pistol, and reloads the chamber from the magazine ready for the next shot. The first weapon of this type was made by Borchardt in 1893. In 1894 one was constructed by Bergmann, and this is the ancestor of the small flat pocket pistol of to-day. See Blunderbuss; Revolver.

PISTOLE. French name of an obsolete Spanish gold coin in use from the 16th century. A double escudo, it was worth about 17s. The word was generally applied to similar gold coins, e.g. the Louis d'or.

PISTON. Sliding body moved by or moving against fluid pressure. It usually consists of a short cylinder fitting within a cylindrical vessel along which it moves to and fro. Pistons used in steam and internal combustion engines make an easy running fit with the cylinder, and are provided with elastic rings, fitting in external grooves, which press outwards against the cylinder and prevent leakage past the pistons. The trunk piston, used in most gas and oil engines for

open-ended cylinders, is longer than its diameter, so as to be stable under the oblique pressure of the connecting-rod attached directly to it. In force pumps a solid plunger is often employed instead of a piston. See Hydraulics; Internal Combustion Engine.

Pistachio Nut. Spray with leaves and nuts

Motor Car; Motor Cycle; Pump.

In music a piston is a valve applied to wind instruments for the purpose of obtaining a complete chromatic scale.

PITA (Span. aloé). Fibre from the American aloé, *Agave americana*, and other species of agave, which grow in all parts of tropical America. The fibre is tough, and is used for making twine, matting, netting, and paper. *A. rigida*, var. *sisalana*, gives the best fibre for ships' cables. The name pita is also sometimes given to the cariacus, a S. American decr.

PITCAIRN. Island in the Pacific Ocean. It is roughly midway between Auckland, New Zealand, and Lima, in Peru. It produces bananas, oranges, yams, coffee, maize, sugar cane, and other plants. Discovered in 1767, it

Pistol. 1. Double pistol with single trigger actuating two hammers. 2. Double grip saddle pistol, with cartridge ejector. 3. Colt hammerless automatic, with six-shot magazine. 4. Mauser automatic, and method of inserting clip of 10 rounds

takes its name from a midshipman who first sighted it. It is peopled by descendants of the mutineers of H.M.S. *Bounty* (q.v.). Great Britain took possession of the island in 1839, and it is under the high commissioner for the W. Pacific. Its area is 2 sq. m. Pop. 174.

PITCH. In music, the precise degree of gravity or acuteness of any musical sound, and depending upon the frequency of vibrations. The greater the number of vibrations per second, the higher the pitch. As commonly employed, the term denotes some standard for a given note, but there is no uniformity in this matter, and the nominal pitch has varied very much in different periods. In 1896 a standard was unofficially adopted in Great Britain of $A=439$ double vibrations per second at 68° Fahr., or 435 at 59° Fahr. This is now generally used by all the principal orchestras, and by the leading pianoforte manufacturers.

PITCH. One of the products of coal tar, or one of the mixtures of hydrocarbons which remain after the distillation of oils and fatty acids. A black, soft to hard substance, according to the temperature, it forms a viscous liquid on heating, and is used for mixing with natural asphalt. See Asphalt. Bitumen: Tar.

PITCHBLLENDE ON URANINITE. In mineralogy, an impure uranium oxide. Dark brown, green to black in colour, it has a very similar appearance to pitch. The mineral is one of the chief sources of uranium and radium, as well as of many of the rarer elements, as thorium, cerium, yttrium, polonium, etc. It was also the first terrestrial source of the gas helium. Pitchblende is found at Joachimsthal in Bohemia, in Hungary, in various parts of N. America, and in Cornwall. See Radium; Uranium.

PITCHER PLANT (*Nepenthes*). Genus and order (*Nepenthaceae*) of shrubs, natives of the E. tropics. They have alternate leaves,

Pitcher Plant, showing hanging pitchers in which insects are entrapped

whose midrib is prolonged and enlarged into a flask- or pitcher-shaped organ with a partly opened lid. The mouth of the pitcher is strengthened by a thick, corrugated rim, which secretes a sweet fluid, whose purpose is to attract insects. These fall into the liquid which partly fills the pitcher and which has digestive properties. The insects thus afford

nourishment for the plant. In the Californian pitcher plant (*Darlingtonia californica*) the leaves take the form of erect trumpet-shaped tubes with a swollen hood at the top, in which is the opening to the pitcher.

PITCH LAKE. Lake of pitch in Trinidad. Near the S.W. coast, close to the village of La Brea, it is of circular shape, a little more than 100 acres in area and about 3 m. in circumference. Always more or less soft in hot weather, the pitch in the middle of the lake is liquid and can be seen bubbling. The yield in 1928 was 195,980 tons.

PITCHSTONE. In geology, name given to a glassy igneous rock, remarkable for the amount of contained water in its composition. It is lustrous, and dark grey-green, brown, or nearly black in colour. The best specimens are found in Arran and near Meissen, Saxony.

PITLOCHRY. Tourist resort of Perthshire, Scotland. On the left bank of the Tummel, on the L.M.S. Rly., 28 miles from

Perth, it has a bracing climate and picturesque mountainous surroundings. It is at the southern end of the Pass of Killicerankie (q.v.), and near are the Falls of Tummel. Pop. 2,241.

PITMAN, SIR ISAAC (1813-97). Inventor of the phonographic system of shorthand known as Pitman's. Born at Trowbridge,

Sir Isaac Pitman, Inventor of system of shorthand

Wiltshire, Jan. 4, 1813, he became a schoolmaster. At Wotton-under-Edge, he taught Taylor's shorthand and published *Stenographic Sound Hand*, 1837.

In 1839 he opened a school at Bath, where he erected a printing press, started *The Phonetic Journal*, later known as *Pitman's Journal*, in 1842, and laid the foundation of the business of Sir Isaac Pitman and Sons. Knighted in 1894, he died Jan. 22, 1897. See Shorthand.

PITT, WILLIAM (1759-1806). British statesman. Younger son of the 1st earl of Chatham (q.v.) he was born at Hayes, Kent.

May 28, 1759. He took his degree at Cambridge in 1777, and was called to the bar in 1780. In 1781 he became M.P. for the pocket borough of Appleby, joining the Whigs, led by Shelburne. As an advocate of parliamentary and other reforms he quickly became one of the leading figures in the House. In 1784 Cambridge returned him, and he represented the university until his death. In July, 1782, Pitt entered office as chancellor of the exchequer, but the ministry only survived for nine months. In Dec., 1783, he became prime minister as well as chancellor of the exchequer.

From 1784 to 1792 Pitt's chief aim was to restore to his country the prosperity damaged by the American War, and he made his name as a finance minister. In 1789 the French Revolution opened, and in 1793 Britain entered the struggle. From then Pitt was a war minister. His high courage was specially needed in 1797, when Britain was left to continue the fight alone and the seamen mutinied.

In 1798 the rebellion in Ireland was crushed, and in 1800 came the union of the parliaments of England and Ireland. Pitt's Irish policy was to complete the union by granting civil liberties to the Roman Catholics. Decisive opposition came from the king, and Pitt resigned office in Feb., 1801. In 1804 he returned to office, formed a fresh coalition, and, though the Austrians were beaten at Ulm, the victory of Trafalgar restored the fortunes of the Allies. On the news of Napoleon's victory at Austerlitz he returned from Bath to London, and, already very ill, he died at his house in Putney on Jan. 23, 1806.

PITTENWEEM. Burgh and seaport of Fifeshire, Scotland. It is on the N. shore of the Firth of Forth, 9 m. from St. Andrews, on the L.N.E. Rly. The chief building is the parish church, fishing and fish-curing are industries. Pop. 1,756.

PITTSBURG OR PITTSBURGH. City and port of entry of Pennsylvania, U.S.A. It

Pittsburg, Allegheny County Soldiers' Memorial Hall

Among its many fine public buildings are the Carnegie institute and the Allegheny County soldiers' memorial hall. Pittsburg University is the chief institution for higher education. One of the principal centres in the world for the production of iron and steel goods, Pittsburg has numerous large blast furnaces and rolling mills. It is actively engaged in turning out steel rails and has a variety of other manufactures. Pop. 588,343.

PITYRIASIS (Gr. scurf, from pityron, bran). Name given to several affections of the skin. P. capitis, dandruff or scurf, is a chronic parasitic affection of the scalp characterised by the formation of scales or scurf, leading to atrophy of the hair. With it may be associated P. circinata. Pink spots appear in the middle of the trunk and on the back. These enlarge and clear up in the centre, forming rings, the margins of which become covered with greasy scales. Treatment of P. capitis demands shampooing at regular intervals with a lotion consisting of soft soap and spirit in equal parts with ten grains of thymol to the ounce. For P. circinata an ointment containing sulphur is used.

PIUS. Name of eleven popes, of whom the more important are noticed separately. Pius I, whose pontificate was from about 140 to 154, is venerated as a saint and martyr. Pius II, pope 1458-64, attempted to unite Europe against the Turkish menace, and set out to lead a crusade when he died at Ancona, Aug. 14, 1464. He was a voluminous author. His nephew became Pius III, but was pope for only a few weeks in 1503. Under Pius IV, pope 1559-65, the council of Trent sat for the third time. Pius V, who held office 1566-72, excommunicated Queen Elizabeth.

On the refusal of Pius VI, who was pope 1775-99, to acknowledge in 1791 the civil constitution of the clergy, France annexed the

Pius: four popes of that name. 1. Pius VI, pope 1775-99. 2. Pius VII, pope 1800-23. 3. Pius IX, pope 1846-78. 4. Pius X, pope 1903-14 (see page 1085)

1. after G. Eichler; 2. after Laurence

papal territory at Avignon. He declined to acknowledge the Roman republic, set up in 1798, and died in exile at Valence, Aug. 29, 1799. The great event during the pontificate, 1800-23, of Pius VII was the concordat with Napoleon in 1801. He obtained the restoration of the papal states, and also re-established the Jesuit order. Pius VIII was pope from 1829 to 1830.

PIUS IX (1792-1878). Pope from 1846-78. Born at Sinigaglia, May 13, 1792, he was made archbishop of Spoleto, 1827, created cardinal, 1840, and elected pope on the death of Gregory XVI. He set up a constitution for

the papal states, but a series of riots in Rome ended in his retirement, 1848, and the establishment of a republic. Restored by French troops, 1850, Pius IX saw the annexation of the papal states and of Rome to the kingdom of Italy in 1870; in 1870, too, he convoked the Vatican Council which declared the pope to be infallible. He died Feb. 7, 1878. See portrait, p. 1084.

PIUS X (1835-1914). Pope from 1903-14. Born at Riese, in Venice, his name was Giuseppe Melchiorre Sarto. He was made canon of Treviso, 1875, bishop of Mantua, 1884, and cardinal archbishop of Venice, 1893. On the death of Leo XIII he was elected pope by 55 votes out of 60. The pontificate of Pius X was distinguished for the attention given to increasing the discipline of the church and suppressing modernism. See portrait p. 1084.

PIUS XI (b. 1857). Pope from 1922. He was born May 31, 1857, at Desio, in the prov. of Milan, his name being Achilles Ratti.

Pius XI,
Elected Pope, 1922
Manuel

Ordained in 1879, he was for many years prefect of the Ambrosian library at Milan, and later of the Vatican library. He received cardinal's rank in 1921, and was appointed archbishop of Milan. On the death of Benedict XV he was elected pope, and took the name of Pius XI, Feb. 6, 1922. He was instrumental in re-establishing the temporal power of the papacy in 1929, when the state of the Vatican City was created in Rome. See Vatican.

PIZARRO, FRANCISCO, DON (c. 1475-1541). Conqueror of Peru. He was born at Trujillo, Spain, entered the Spanish military service early, and fought under Gonsalvo de Cordova in Italy. Fired with ambition by the conquest of Mexico, 1520, Pizarro conceived the idea of conquering Peru.

After a preliminary voyage in 1526, Pizarro, with 183 men armed only with muskets, landed in May, 1532, at Tumbez. The crown of the Incas had been seized by Atahualpa, who had deposed the legitimate ruler, Huascar. Pizarro marched inland, captured Atahualpa, and had him executed, setting up another member of the royal family as a puppet emperor. Almagro arrived with reinforcements, and the empire was partitioned, Pizarro taking the northern governorship, while Almagro made himself master of Chile. No effective resistance was offered to the conquerors until an Indian insurrection broke out in 1536. It was crushed by the aid of Almagro, between whom and Pizarro there then arose a contest. Pizarro's brothers defeated and killed Almagro in 1538, but three years later Almagro's followers assassinated Pizarro, on June 26, 1541. See Atahualpa: Lima; Peru.

Viceroy's Palace, Lima

PLACER. Name given to alluvial gravel, in which gold and tin ore deposits occur very frequently. Gold occurs in the metallic form in placers, while tin occurs as cassiterite (tin dioxide). Placers are divided into two classes, superficial and deep-lying. The former are recent, and owe their origin to the action of rivers which may still exist, whilst the latter have been formed by the action of extinct or ancient rivers; in either case the contained mineral is derived from the disintegration of metalliferous veins (primary deposits).

PLAGUE (Lat. *plaga*, stroke). Disease caused by the *bacillus pestis*. It has been known in epidemic form at least from the

6th century. In the 14th century an outbreak known as the Black Death occurred in Europe, and swept away one-fourth of the population. In the Great Plague of London, 1665-66, some 70,000 persons perished. At the present day the regions in which the disease is endemic are Mesopotamia, Northern India, Tibet, and Yunnan in China.

Plague is, in the first instance, a disease of rats, and the infection is conveyed to man solely by the rat flea. The disease may travel from place to place by rat fleas carried in merchandise or on human beings. The bubonic form constitutes some three-quarters of all cases. The initial symptoms are headache, pain in the back, stiffness of limbs and restlessness. The temperature rises and severe prostration occurs. Death may take place at this stage, but in most cases swellings known as buboes appear, affecting the glands of the groin, the axilla, and the neck. Haemorrhages under the skin may also occur.

Prevention of plague is an important necessity in areas liable to be infected. The most essential step is to take energetic measures against rats by their systematic destruction. The risk of acquiring the disease in infected areas has been reduced by means of Haffkine's prophylactic vaccine. See Black Death; Rat.

PLAQUES OF EGYPT. Ten plagues brought upon the Egyptian Pharaoh and his people by Jehovah when the Israelites were in bondage in Egypt (Exod. 7, 14-12). The plagues were turning of the waters of the Nile to blood; swarms of frogs, of gnats, of flies; affliction of cattle with pestilence; of man and beast with boils and blains; havoc by thunder and hail; swarms of locusts; dense darkness; and the death of the first-born of man and beast. See Passover.

PLAICE (*Pleuronectes platessa*). Important food fish of the family *Pleuronectidae*. A native of the Atlantic and North Sea, it is also found rarely in the Mediterranean. Of a long, oval form, the body of the plaice is strongly compressed from side to side, and fringed with the long dorsal and ventral fins. Beginning life as a round fish, like the cod, the young plaice soon takes to lying on the bottom on its left side, and the left eye travels round to the right side. The young flat-fish affects sandy shores in shallow water, going deeper as it gets larger. It is adult when from 2½ to 3 years old. Its food consists of molluscs, sand stars, and marine worms.

PLAINSONG. System of Gregorian church music. It proceeded by contrapuntal movement in notes of equal length, representing what is now known as the first species of counterpoint. The *Canto fermo*, generally in the tenor part, was the foundation on which the counterpoint was built, though each part was supposed to be of equal interest. The form is still used in Roman Catholic and some Anglican churches.

PLAISTOW. Dist. of London. In the co. of Essex, between West Ham, N., and Canning Town, S., it is 4½ m. from Fenchurch Street station on the L.M.S. and L.N.E. Rlys. It is a crowded industrial suburb, and has many chemical, engineering, and other works. Here is the East London Cemetery. There is another Plaistow, near Sundridge Park, in Kent, and one in Sussex.

PLANCHETTE. Small wooden tablet, standing on three legs. One leg is a pencil and the others terminate in small wheels, the

whole being so contrived that, when placed on a sheet of paper, it moves at the slightest impulse and the pencil makes marks. It is used by spiritualists for recording messages.

PLANCK, MAX (b. 1858). German physicist. Born at Kiel, April 23, 1858, he

Planchette, the wooden table employed
to automatic writing.

became professor at the university there in 1885, and from 1889 to 1923 held a similar post at Berlin. He was awarded the Nobel prize for physics in 1918. Planck interested himself especially in thermodynamics, and in 1901 stated his hypothesis of radiation, i.e., that the energy of radiation is given out in definite fixed amounts or quanta. Some years later Planck widened his theory to cover all kinds of energy. See Quantum Theory; Radiation; Relativity.

PLANE (*Platanus*). Small genus of large trees of the order *Platanaceae*, natives of the N temperate regions. The large alternate leaves are palmately divided into five or seven toothed and sharply pointed lobes. The flowers are simple, without sepals or petals, and the sexes separate. The fruits are closely packed in spiky balls. A peculiarity of the tree which helps it to thrive in soot-laden atmospheres is its habit of throwing off the outer layers of its bark in large or small, thin flakes, showing yellow patches of newer bark. The Oriental plane (*P. orientalis*) was introduced to England from the Levant at some date

Plaice viewed from above, showing
position of both eyes on upper side

previous to 1548, and the Western plane (*P. occidentalis*) from Virginia about 1640. The maple-leaved plane (*P. acerifolia*) is believed to be a hybrid between the two. The wood of *P. orientalis* is extensively used for carpentry and cabinet work. See illus. below.

PLANET (Gr. *planētēs*, wanderer). Name given to the chief of the solid bodies

that revolve around the sun. The planets are Mercury, Venus, Mars, Earth, Jupiter, Saturn, Uranus, and Neptune. The existence of another planet has been conjectured by astronomers, and in 1914 Lowell predicted the existence of a trans-Neptunian planet of the 12th-13th magnitude. Its discovery was announced in Jan., 1930. Named Pluto (q.v.) its magnitude is computed as 15 to 16.

Plane. Fine specimen of the tree. Inset, fruit of
London plane. See article above

In the solar system the planets are generally divided into two groups, the inferior planets, those between the earth and the sun, and the superior planets, those farther away from the sun than the earth. All planets travel round the sun in an anti-clockwise direction, looking down on the system, and all orbits are elliptical. A machine designed to exhibit the movements of the planets and other bodies of the solar system is called a planetarium.

In astronomical tables, almanacs, etc., symbols are given to the names of various planets and the sun and moon for convenience of tabulation, etc. These symbols are Mercury, ♀; Venus, ♀; Earth, ☿; Mars, ♂; Asteroids, ① ② according to the order of their discovery; Jupiter, ♃; Saturn, ♄; Uranus, ♅; Neptune, ♆. See Asteroid; Astronomy; Earth; Jupiter; Nebula; Neptune; Pluto; Saturn; Solar System; Sun.

PLANKTON (Gr. planktos, wandering). Term used for the drifting or swimming organisms of lakes, rivers, and seas. The plankton of the latter is the basis of oceanic life, and the term was first used by Victor Hensen to indicate those organisms which were at the mercy of every current, their swimming powers being too feeble to make any headway against a flow of water. The colour of certain seas is entirely due to these minute organisms, which include plants as well as animals, and exist in countless myriads.

PLANT (Lat. planta, sucker or shoot). Word usually indicating in its everyday popular use a herb. In the broader botanical sense, however, it covers all vegetable organisms, not only trees, shrubs, and herbs, but the ferns, mosses, liverworts, seaweeds, fungi, and even the minute single-celled organisms that are so like the simplest forms of animal life. The higher plants have distinct parts, as root, stem, leaves, flower, and fruit, all of which are subject to considerable modification, and upon these they are classified into orders, genera, and species.

The root as a rule burrows into the earth and bears no leaves, its functions being to attach the plant, and to provide it with water and mineral salts for food. The stem takes a more or less upward direction above the soil and bears leaves. It may be composed entirely of soft cells and easily crushed by a little pressure, or of hard cells forming a more or less massive enduring trunk. The leaf is normally a thin, flat, green expansion of soft cells which contain the green chlorophyll essential to the nutrition of the plant. Leaves are modified into sepals and petals to protect the reproductive organs and form the flower. The stamens and carpels (pistils) which contain the sexual elements—the pollen and ovules—are also greatly modified leaves.

Plants possess the powers of communicating impressions from one part of the plant body to another by means of protoplasmic threads connecting cell with cell, and of responding to these impressions. They are sensitive to light and touch, and they have a good deal of power of adaptation to their environment. See Botany; Bud; Crescograph; Flower; Grafting; Leaf; Pistil; Root; Stamen, etc.

PLANTAGENET. Name commonly given to the family to which the English kings from Henry II to Richard II belonged. More correctly they are styled Angevins, from Anjou, of which Geoffrey, father of Henry II, was count. In the male line the family became extinct when Edward, earl of Warwick, a nephew of Edward IV, was put to death in 1499. Through females all the sovereigns of Great Britain since Henry VIII are

descended from the Plantagenets. See Angevin; Henry II; Royal Family.

PLANTAIN (*Plantago*). Genus of herbs of the order Plantaginaceae, natives of all temperate regions. They have inconspicuous green flowers, fertilised by the wind as pollen carrier.

Plantain. Leaves and fruit spike of *P. major*

The Greater Plantain (*P. major*), known also as way bread, produces long spikes of fruit, used for feeding cage-birds. *P. media*, lamb's tongue or hoary plantain, is an obnoxious lawn weed, where its rosette of broad leaves lies so close to the ground that it kills out the grass.

PLANTAIN LILY (*Funkia*). Genus of perennial herbs of the order Liliaceae. They are natives of Japan. The perennial organs are a bunch of tubers. The leaves are large, oval or heart-shaped. The flowering stems rise above the leaves and bear a number of tubular flowers of white or lilac tint. Several species are used as hedging or border plants.

PLANTIN, CHRISTOPHE (1514-89). French printer. Born at St. Avertin, near Tours, he settled at Antwerp in 1549 as a bookbinder, took up printing in 1555, and founded a business which won for him a European reputation. The building in Antwerp in which Plantin established his home and printing-office in 1576 is now known as the Plantin-Moretus Museum, having been acquired by the city in 1876. It contains many productions of the Plantin-Moretus and other early presses, valuable books, and MSS.

PLASSEY. Village of Bengal, India, about 95 m. N. of Calcutta. It was here that Clive defeated the nawab of Bengal, Suraj-ud-Dowla, June 23, 1757. Clive advanced on June 13 up the Hooghly. His force consisted of about 1,000 Europeans, 2,100 sepoy, and 10 guns. Suraj commanded some 35,000 foot soldiers, with 18,000 cavalry, and about 50 guns. After a violent bombardment, Clive attacked, and overpowering a strong redoubt, won a complete victory. See Clive; India.

PLATAEA. City of Greece, Cithaeron. Leaving the Theban league, Plataea became an ally of Athens, and sent 1,000 men to the battle of Marathon. In the second Persian War, Xerxes destroyed the city at the instigation of Thebes, 480 B.C. The Persian army fought the allied Greeks under Pausanias of Sparta before Plataea in 479, and was almost annihilated. This victory, following upon that of Salamis, decided the struggle between the East and the West. See Greece.

PLATINUM. Rare metallic element. Its chemical symbol is Pt; atomic weight, 195.23; atomic number 78; specific gravity, 21.5; melting point, 1,775° C.; colour, tin white or steel grey with metallic lustre. The metal is very ductile, and next to gold and silver the most malleable substance known.

It was first recognized in the alluvial gold deposits of Choco and Barbacoas, in Colombia. It has since been found in the Ural Mts., its chief source, in Borneo, the Rhine sands, St. Domingo, Tasmania, New South Wales, N. Carolina, U.S.A., Burma, Japan, Spain, Canada, Brazil, and Sierra Leone. Platinum is mostly found associated or combined with minute proportions of palladium, rhodium, iridium, and osmium.

The metal is used in the manufacture of strong sulphuric acid; in the construction of

electric lamp bulbs; in the preparation of standard weights and measures, crucibles, pyrometers, and other implements for chemical laboratories; in dentistry for the preparation of plates and anchors; in photography, as potassium chloroplatinate, in the platinotype process; and for jewelry.

PLATO (427-347 B.C.). Greek philosopher. Born at Athens, or in the island of Aegina, of distinguished family, Plato spent most of his life in the city of Athens, immersed in the study and the teaching of philosophy. He is known to have travelled widely, and to have been captured and sold as a slave at Aegina. After the trial and execution of Socrates, 399 B.C., he devoted himself to carrying on the mission of his martyred teacher. The record of that mission is set forth in the collection of Dialogues that have come down to us. Of the 35 treatises—many critics reject the Letters—ascribed to Plato, some 24 are probably from his hand.

Plato set himself to understand Hellenic society with the practical object of indicating reforms. In so doing he formulated a system of philosophy based on contemporary experience, designed to set forth the principles of life and conduct exhibited therein. The note of his conclusions everywhere is idealistic, and the whole question of the interpretation of Platonism depends on an understanding of these "ideas." His great dictum is "what is wholly real is wholly knowable, and what is utterly non-existent is completely unknowable." This answers to the modern assertion of "the unity of the intelligible world with itself and the mind that knows it."

In the region of ethics and politics, Plato was the first thinker to offer a satisfying

Plato, Athenian philosopher

account of the principles that form and govern conduct and character. But his morality is far from being intellectual in the sense of abstract. Plato's "justice" is the virtue of the good citizen, and his idea of the good is to be realized in the life of the commonwealth. He shows in the Republic that it is in the larger life of the justly organized state or

society that the good life of the individual finds expression. Here is the embodiment, the actuality, even if imperfectly attained, of the idea of the good, which for Plato solves the riddle of the universe. See Aristotle.

PLATOON (Fr. peloton, group of people). In the British army, a division of an infantry company. A battalion is divided into sixteen platoons, four platoons forming a company. Each platoon is under the command of a subaltern and has a strength of about 60 men.

Platypus. Name sometimes used for the duck bill (*Ornithorhynchus anatinus*). See Duck Bill.

PLAUEN. Town of Saxony, Germany. It stands on a plateau on the right bank of the White Elster, 60 m. from Leipzig, and is a rly. junction. The buildings include the old castle, the town hall, and St. John's church. The principal industries of the town are the manufacture of lace and embroideries, and there are textile works. Pop. 111,436.

PLAUTUS, *Titus Maccius* (c. 251-184 B.C.). Roman writer of comedies. In his spare time he wrote comedies, which proved so successful that he devoted the rest of his life to playwriting. Of the 130 comedies with which he was credited in antiquity only 21 have been preserved; they are adaptations from Demophilus, Diphilus, Menander, and

Plantagenet badge, a sprig of broom

Philemon The pungent wit, the rapidity of the action, and the shrewd knowledge of human nature displayed, have made the comedies of Plautus popular down to modern times.

PLAYER PIANO. Strictly speaking, a piano fitted with a player, sometimes called a piano player. The "notation" or music consists of perforated paper which passes over a tracker-bar in which are 88 holes, each corresponding to a particular note. The bellows act on the suction principle, the notes of the piano being actuated by the air which is drawn in when the holes in the perforated roll coincide with those in the tracker-bar. By means of levers the speed and the soft and the sustaining pedals can be controlled, and expression and special melodic effects secured. The latest development is to switch on certain mechanism whereby rolls can be manipulated, reproducing the individual performances of great artists.

PLAYFAIR, LYON PLAYFAIR, 1ST BARON (1818-98). British chemist and politician. Born at Chunar, Bengal, May 21, 1818. he became in 1842 professor of chemistry at the Royal Institution, Manchester. He was appointed chemist to the Geological Survey, 1845, and professor at the School of Mines, and carried out at this time a series of important investigations into nitro-prussides, coals for steam navigation, the gases of the blast furnace, etc. He became professor of chemistry at Edinburgh in 1858. He was M.P. for Edinburgh and St. Andrews Universities, 1868-85, for South Leeds, 1885-92. Made a peer in 1892, Playfair died May 29, 1898.

PLEADINGS. In English law, the documents in which the plaintiff and defendant respectively state their cases. Under the present system the plaintiff must first set out the facts on which he relies in a statement of claim. The defendant answers in a defence, in which he either admits or denies each or any of the plaintiff's allegations, and sets out also any affirmative facts on which he relies.

PLEASLEY. Village of Derbyshire and Nottinghamshire. It stands on the river Meiden, 3 m. from Mansfield, on the L.N.E. and L.M.S. Rlys. At Pleasley Vale are factories for making silk and cotton material, and around are coal mines. Pop. 2,510.

PLEBEIAN. Name given to the common people (plebs) of ancient Rome, as opposed to the ruling order of patricians. They were originally the subject peoples, resident aliens, and even fugitive slaves; but as time went on and many attained to wealth and influence, they demanded some share of the political power. In 494 B.C. the plebeians gained the right of electing special magistrates called tribunes; in 451 the Decemvirate was created to codify the laws and equalise them as between the two orders. The republican magistracies were successively thrown open to them. See Rome.

PLEBISCITE (Lat. plebs, people: scitum, decree). Term originally applied to a law passed by the Roman people assembled in the comitia tributa, i.e. by tribes. Such laws, originally binding only on the plebeians, or commons, were subsequently extended to the whole of the body politic. In modern Europe a plebiscite is a popular vote on a clearly defined political or national issue involving the answer yes or no.

PLEIADES. In Greek mythology, the seven daughters of Atlas and Pleione, and companions of Artemis. When pursued by Orion they prayed to be turned into doves. Their prayer was granted, and they were placed among the stars.

In astronomy, the Pleiades form a group of conspicuous stars marking the shoulder of the constellation of Taurus. To the eye six stars only are usually visible, but in the telescope over 2,000 can be seen.

PLEISTOCENE (Gr. pleistos, most; kainos, new). In geology, name given to the period of time between the end of the Tertiary and the beginning of history. The period is also known as Post-Tertiary, Glacial, and Ice Age.

PLESIOSAURUS (Gr. plēsiōs, near; sauros, lizard). Extinct marine reptile found as fossil remains in Liassic rocks. Members of the order Sauropterygia, they had thick lizard-like bodies, strong tails as long as the body, and powerful paddles for swimming. The length of the animal varied from 10 to

Plesiosaurus. Fossil skeleton of the extinct marine reptile Victoria and Albert Museum, S. Kensington

over 40 ft. The jaws of the relatively small head were armed with powerful teeth. In 1928 the skeleton of one of these reptiles was unearthed at Harbury in Warwickshire. It is now in the S Kensington Museum. See Dinosaur; Lizard.

PLEURISY. Inflammation of the pleura or serous membrane of the lung. Two forms are recognized—dry pleurisy and pleurisy with effusion. Dry or fibrinous pleurisy may follow exposure to cold, or may occur in the course of pneumonia and other diseases of the lung. Pleurisy with effusion is much the commoner condition. The disease most often follows exposure to cold or a wetting. The onset is usually abrupt, with severe pain in the side and rise of temperature. The breathing becomes difficult, particularly in cases where there has been a rapid effusion of fluid into the pleural cavity. In mild cases the symptoms subside after a week or ten days. See Aspirator.

PLEURODYNIA. Painful affection of the intercostal muscles on one side of the body. Due to inflammation of the fibrous tissue surrounding the muscles, it may be brought on by exposure to cold or wet. Treatment of the affection consists in resting the muscles by strapping the chest so as to restrict the breathing movements.

PLEVNA OR **PLEVEN.** Town of Bulgaria, about 90 m. N.E. of Sofia. Pop. 28,775. It is famous as the scene of a siege in the Russo-Turkish War, 1877-78. After a brief bombardment, the Russians launched an attack, which was repulsed by the Turks with heavy losses, July 20, 1877. Five weeks later a second attempt was defeated. The Russians then collected 100,000 men and over 400 guns and gave battle, Sept. 6-7, but the Turks, under Osman Pasha, succeeded in repulsing them. The siege was continued, however, and on Dec. 9 starvation forced Osman to surrender the fortress.

PLIMSOLL, SAMUEL (1824-98). British politician. Born in Bristol, Feb. 10, 1824, he became a clerk in Sheffield. In 1853 he settled in London. He had already given much attention to the loss of life at sea caused by unseaworthy ships being sent out, and his entry into the House of Commons as Radical M.P. for Derby, in 1868, gave him opportunity to

draw attention to the subject. He resigned his seat in 1880, and spent the rest of his life in attempts to improve the condition of seamen. He died at Folkestone, June 3, 1898.

Samuel Plimsoll, British politician

PLINY (A.D. 23-79). Roman soldier and writer, whose full name was Gaius Plinius Secundus. He was called Pliny the Elder to distinguish him from his nephew. In 67 he was appointed procurator in Spain. His last official post was that of commander of the fleet at Misenum, when he met his death at the eruption of Vesuvius. In addition to other works he was the author of an encyclopedic work entitled Natural History (in the widest sense) in 37 books, in the compilation of which he read more than 2,000 volumes. The work deals with anthropology, zoology, botany, mineralogy, painting, sculpture, etc.

PLINY (A.D. 61-c. 113) Roman writer, whose full name was Gaius Plinius Cæcilius Secundus. He was called the Younger to distinguish him from his uncle. Born at Novum Comum (Como), he was adopted by his uncle, from whom he received an excellent education. Beginning as a pleader in the law courts, he had a successful public career.

His correspondence is of peculiar interest, but the Letters, which were published in nine books, suffer from the fact that they were obviously written for publication.

PLIOCENE (Gr. pleion, more; kainos, new). In geology, name given to the uppermost division of the Tertiary system. Pliocene deposits are chiefly found in Europe, especially in France, Spain, Italy, Greece, and on a smaller scale in England, Belgium, etc. The pliocene deposits, the accumulations of shallow seas, and the estuaries of large rivers, are rich in fossils, particularly of mollusca, extinct fishes, reptiles, amphibians, and birds.

PLOEGSTEERT. Village and wood of Belgium, in W. Flanders. The former is 8 m. S. of Ypres and 3 m. N. of Armentières. Both village and its adjacent wood figured prominently in the British operations in the Great War in the Ypres salient. After changing hands several times in 1914 they were for the next three years in the British front line. Captured by the Germans in 1918, they were finally retaken by the Allies in Sept. of that year. They were known to the British troops as Plug Street. See Ypres.

PLOVER. Name given to a large family of shore birds, including the plovers proper, stilts, oyster-catchers, curlews, sandpipers, godwits, snipe, and others. The golden plover (*Charadrius pluvialis*) has greyish-black plumage spotted with yellow on the upper parts and black below, and is about 11 ins. long.

Plover. Hen of the Kentish plover, *Aegialitis cantiana*

It breeds in many localities in the N., nesting on the ground. The Kentish plover (*Aegialitis cantiana*) is small and pale in colour, with black and white head, and occurs in summer along the

coasts from Sussex to Yorkshire. The ringed plover (*Aegialitis hiaticula*) is distinguished by its black and white collar. The green plover is better known as the peewit or lapwing. See Dotterel; Lapwing

PLUM (*Prunus*) Fruit-bearing trees of the order Rosaceae. The genus includes the damson, greengage, and sloe. The ordinary plum (*Prunus domestica*), though found wild, is not a native of Britain; it usually forms the stock upon which are grafted the choicer varieties, of which there are now in cultivation close upon two hundred. The plum flourishes in a fairly light soil, with a mixture of lime for preference. It is propagated by grafting in springtime. An alternative method is by layering in autumn. See Damson; Greengage

Plum. Victoria plum, the best all-round variety

PLUMBAGO (*Plumbago capensis*). Climbing or trailing shrub of the order Plumbaginaceae, native of S. Africa. It has alternate, oblong leaves, and short spikes of pale blue, salver-shaped flowers. *P. rosea*, from the East Indies, has an erect stem, branching above, and long spikes of rosy-scarlet flowers.

Plumbago
Flowers of *P. capensis*

Plumbago. Alternative name for the mineral form of carbon more commonly known as graphite (q.v.). See Lead.

PLUMER, HERBERT CHARLES ONSLOW PLUMER, 1st Viscount (b. 1857). British soldier. Born March 13, 1857, a son of Hall Plumer of Torquay, he entered the army in 1876, and served with it in the Sudan in 1884. He came into the public eye by raising and commanding a mounted force during the rising of the Matabele in 1896. He served in the S. African War, 1899-1902. From 1902-14 Plumer was constantly employed, becoming quartermaster-general and a member of the army council, while in 1911-14 he was in charge of the northern district. In 1906 he was knighted. In Jan., 1915, Plumer was sent to take command of the 5th army corps, and in the following May was appointed to the 2nd army. From Nov., 1917, to March, 1918, he was in charge of the British force in Italy, after which, having returned to the 2nd army, he remained on the western front until Dec., 1918. In 1919 he was made a field-marshal and a peer as Baron Plumer of Messines (q.v.). He was governor of Malta from 1920 to 1924, and high-commissioner for Palestine, 1925-28. In 1929 he was made a viscount.

Viscount Plumer,
British soldier
Russell

PLUMPTON. Village of Sussex. It is 4 m. from Lewes on the Southern Rly. There is a racecourse. There is also a Plumpton in Yorkshire (W.R.), 2 m. from Knaresborough.

PLUMSTEAD. District of London. Part of the met. bor. of Woolwich, it is in the eo. of Kent, 10½ m. from Charing Cross, on the

Southern Rly. In addition to the marshes, the open spaces include Plumstead Common, Shoulder of Mutton Green, Bostall Heath, acquired for the public in 1877-78, and Bostall Woods, acquired in 1892.

PLUNKET, WILLIAM CONYNTHAM PLUNKET, 1st Baron (1764-1854). Irish lawyer. Born at Enniskillen, July 1, 1764, he became a barrister and a member of the Irish Parliament. After the union of 1800, which he opposed, he sat in the united parliament as M.P. for the university of Dublin. He was Irish attorney-general for two periods, and in 1827 was made chief justice of the common pleas. From 1830-34, and again 1835-41, Plunket was lord chancellor of Ireland. Made a baron 1827, he died Jan. 5, 1854, being succeeded by his son, the bishop of Tuam.

Lord Plunket,
Irish lawyer

Plunket's descendant, William Conyngham Plunket (1828-97), the 4th baron, was bishop of Meath 1876-84, and archbishop of Dublin 1884-97. He succeeded to the title in 1871, and died April 1, 1897.

His son, William Lee Plunket (1864-1920), who became the 5th baron, was governor of New Zealand 1904-10.

PLUNKETT, SIR HORACE CURZON (b. 1854). Irish statesman. Third son of the 16th Baron Dunsany, he was educated at Eton and University College, Oxford, and spent ten years ranching in the U.S.A. A strong supporter of co-operative methods in agriculture, he founded the Irish Agricultural Organization Society, 1894, in connexion with which he became widely known in Ireland. He sat as Unionist member for Dublin eo. S. 1892-1900, and acted as chairman of the Irish Convention

several constituencies. By the Representation of the People Act of 1918 it was practically abolished. A voter in the United Kingdom can now under certain conditions have two votes, but no more. See Franchise.

PLUTARCH (c. A.D. 48-122). Greek biographer and philosopher. He was born at Chaeronea, in Boeotia, and appears to have spent a considerable time in Rome. Plutarch's fame rests almost entirely on his *Parallel Lives*, a collection of biographies of notable men (with the exception of four) in pairs, one Greek, the other Roman. The resemblance between the pairs is often slight. They are of great historical interest, much of the matter being based on authorities now lost.

PLUTO (Gr. Ploutōn). Roman name for the god of the lower regions, more commonly known to the Greeks as Hades. He is regarded as (1) the stern ruler of the horrible underworld; (2) as a beneficent deity, who distributes to mankind the products of the earth, both mineral and grain. His wife was Persephonē. He is not to be confused with Plutus, the god of wealth, although etymologically the two deities are identical. See Hades; Persephonē.

PLUTO. Name given in 1930 by American astronomers to a trans-Neptunian body discovered by the Lowell Observatory, Arizona, in Jan., 1930, and claimed to be a new planet. Its magnitude has been computed as 15 to 16. Percival Lowell, in 1914, predicted the existence of a trans-Neptunian planet of the 12th to 13th magnitude. See Planet.

PLUTO MONKEY (*Cercopithecus leucampyx*). Species of guenon monkey, better known as the black-bellied monkey. It occurs in Central Africa, and the general colour of its hair is black, grizzled on the head and back. It is conspicuous by its bushy whiskers.

PLYMOUTH.

City of Devonshire. Since 1914 it has included Devonport and Stonehouse, and in 1928 it was raised to the rank of a city. It lies at the mouth of the river Plym at the head of Plymouth Sound, and is served by the Southern and G.W. Rlys. A large number of ships can find safe anchorage in Sutton Pool, Millbay, the Catwater,

Plymouth. The Hoe, with the upper section of the third Eddystone Lighthouse, dismantled in 1877 and now a memorial to Smeaton, its builder

1917-18. Among his writings on political and economic subjects are *Ireland in the New Century*, 1904; *A Better Way* 1914; *Home Rule and Conscription*, 1918.

PLURALISM. Practice of holding more than one ecclesiastical benefice at the same time. It was forbidden in England in 1529, but during the Georgian period it revived to a scandalous extent.

Acts of 1838 and 1885 made pluralities illegal, except in respect of very small livings with few parishioners, in which case the archbishop can grant a dispensation, if he thinks fit, for a clergyman to hold two livings, providing that the churches are within four miles of each other, and that the annual value of one of the livings does not exceed £200.

PLURAL VOTING. Name given to an electoral system that allows a man to have more than one vote at the same election. In the United Kingdom before 1918 there was a certain amount of plural voting at parliamentary elections, as a man could qualify as a landowner, although not as a resident, in

and the Hamoaze. Plymouth is a mail station for fast traffic from overseas to London, and is one of the chief fishery stations on the S. coast. The naval station is at Devonport. Plymouth Hoe contains a statue of Sir Francis Drake, and part of the old Eddystone Lighthouse as a monument to Smeaton. On the Hoe, too, is the citadel. The buildings include S. Andrew's church, and the block near erected for municipal purposes. There is a technical college. In 1929 an Elizabethan house in New Street was bought for a Drake and Mayflower museum. The town has adopted Estaires. Pop. 210,036. See Devonport.

Plymouth china is a variety of chinaware manufactured at Plymouth by William Cooksworth, from 1768-74. It is a hard paste biscuit ware.

EARL OF PLYMOUTH. Title borne since 1905 by the family of Windsor-Clive. Previously it had been held from 1682 to 1843 by the family of Hickman-Windsor. Robert Grey Windsor-Clive (1857-1923) was made earl of Plymouth in 1905.

Plymouth, Massachusetts. The old burying ground in which are buried some of the Pilgrim Fathers

PLYMOUTH. Town and port of Massachusetts, U.S.A. It stands on Plymouth Harbour, a branch of Massachusetts Bay, 36 m. S.E. of Boston. It was the landing-place of the Pilgrim Fathers in 1620, and the spot at which they disembarked is marked by Plymouth Rock, a granite boulder covered by a granite canopy. Other objects associated with the Mayflower Pilgrims are a national monument, 1858-88, and Pilgrim Hall. Pop. 13,045. See Pilgrim Fathers.

PLYMOUTH BRETHREN. Protestant sect which arose about 1830 in Plymouth and Dublin. One of its chief founders was John Nelson Darby. He gave up his position in the Church and travelled about the country, forming small societies of Evangelical Christians for Bible study and the promotion of spiritual life. These became small congregations, which met in houses and halls. The Brethren have no organic unity and no creed.

PLYMOUTH ROCK. Popular "utility" breed of fowls, originating in the U.S.A. from crossing a Black Java hen with a Grey Dominique cock. Robust, hardy birds, their blue-grey plumage is uniformly barred with black; and the bill, legs, and feet are yellow. Capital layers, their eggs are large and brown.

PLYMPTON. Market town of Devonshire. It is 5 m. from Plymouth on the Plym, and has a station on the G.W. Rly. The buildings include an old grammar school. Market day, first Mon. in month. Pop. 5,191.

PLYMSTOCK. Parish of Devonshire. It stands on Plymouth Sound, 3 m. from Plymouth. The Perpendicular church of S. Mary and All Saints has a Norman font. Pop. 4,121.

PLYNYMMON. Mountain of Wales. It stands on the borders of Cardiganshire and Montgomeryshire, and its highest point is 2,465 ft. Five rivers rise hereon—Wye, Severn, Rheidol, Dulas, and Llynfnant.

PLYWOOD. Name given to boards built up of plies or thin veneers of wood. These are cemented or glued together with the grain of each ply placed at right angles to that of the ply on either side of it. The special advantages of plywood are its extreme lightness and the counteracting of the natural tendency of timber to warp and split. Plywood is chiefly used for wall and ceiling panelling, furniture manufacture, and box-making, and in the construction of aeroplanes.

PNEUMATIC APPLIANCES. Name given to that class of machine or instrument which depends largely upon compressed air for power. Air is compressed in one, two, three, or four stages, according to the final pressure which is required. As a rule isothermal compression is used, i.e. the air is kept cooled to as near atmospheric temperature as possible by cold water circulated through jackets outside the cylinders, and in coolers through which the air passes between any two stages of compression. Cooling means a great loss of energy, a considerable proportion of which can be made good, however, by re-heating the air just before use.

The pneumatic hammer is a heavy piston moved to and fro by compressed air inside a

cylinder, furnished with a handle and a thumb valve. At the end of an outward stroke it strikes against a loose piece, which transmits the blow directly, or through a chisel, caulker, or other tool fitted into it. The small short-stroke hammer works at tremendous speed and makes 2,000-12,000 light blows a minute; the larger long-stroke gives 800-1,200 heavy blows in the same time. Pneumatic rock drills are generally larger and heavier than pneumatic hammers, are carried on supports, and have a mechanism for feeding the drill forwards and rotating it slightly between strokes. Pneumatic hoists are of great use in workshops and foundries for heavy work.

The application of paint, varnish, oil, etc., in the form of a fine air-blown spray has certain advantages over brush-work. The covering speed is much higher; the material is deposited more evenly on irregular surfaces. The air is led from a small compressor, or other source of supply, through flexible tubing to a portable air-tight vessel which contains the pot holding the paint and serves also as air reservoir. The spraying nozzle, connected with the container by two flexible pipes—one for the paint and the other for air—is controlled by a thumb valve. When the valve is depressed, paint is forced by air pressure through a fine jet and meets a stream of air issuing from another jet, by which it is atomised and blown on to the work.

PNEUMOGASTRIC or **VAGUS NERVE.** Important nerve on each side of the body, which arises from the base of the brain. After leaving the

Plymouth Rock, cross between Black Java and Grey Dominique

skull it traverses the neck and chest to reach the abdomen by passing through the diaphragm. It sends branches to the pharynx, larynx, heart, lungs, stomach, liver, and spleen, and in view of its connexion with the heart especially, and its power of slowing its beat, it must be regarded as a very important nerve.

PNEUMONIA (Gr. pneumōn, lung). Acute infective disease of the lung. The two chief forms are lobar or croupous pneumonia, and lobular or broncho-pneumonia.

Lobar pneumonia is a widespread and fatal disease. It is more common in towns than in rural districts, and poor health, underfeeding, alcoholism, and old age predispose towards the malady, of which exposure to cold or wet may be the immediate cause. Pneumonia may also occur in the course of, or as a complication of, many other diseases. The *Diplococcus pneumoniae* is the infecting micro-organism, and its first effect upon the lung is to produce congestion, followed by solidification of parts of the lung.

Broncho-pneumonia is an inflammation of the small bronchioles or air tubes of the lung and of the air vesicles. It may occur as a primary infection, or may be secondary to other diseases of the respiratory system. This form of pneumonia is very prevalent among children, particularly those living in towns who are badly nourished or suffer from rickets, and it is the most common cause of death following measles. Treatment of pneumonia consists mainly in very careful nursing. The patient should be in the open air, or in a

large, well-ventilated room. The diet should be very light, consisting chiefly of milk.

PNEUMONOKONIOSIS (Gr. pneumōn, lung; koniein, to make dusty). Disease of the lung due to inhalation of coal, steel, or stone dust, in industrial processes. The solid particles become deposited in the lymphatic glands of the lungs and bronchi.

PNOM PENH. Capital of Cambodia. French Indo-China. It stands on the Mekong, 130 m. N.W. of Saigon. Under the French régime the city has been provided with fine public buildings and spacious boulevards. The chief buildings are the palace of the Buddhist priests and the pagoda. It is a great centre of trade. Pop. 83,079.

PO (anc. Padus). River of Italy. It rises in the Cottian Alps (q.v.) by Mt. Viso, and flows in an E. direction through Piedmont, Lombardy, and Venetia to the Adriatic, which it enters by several mouths. It is about 415 m. long. The tributaries include the two Doras, Sesia, Ticino, Adda, Oglio, Mincio, Tanaro, Trebbia, and Secchia. Historically the river has been one of the major cock-pits of Europe. See Italy.

POACHING. Term used in English law for trespass upon another's land in pursuit of game or fish. For poaching during the day fines can be inflicted. The penalties for night poaching are three months' hard labour for a first offence, double that term for a second, and penal servitude or two years' hard labour for any subsequent offence.

People who unlawfully and knowingly fish in the daytime in waters where they have no right to fish are liable to have their tackle confiscated and to a fine of from £2 to £5. If the unlawful fishing is done by night, the offender can be arrested by anybody on sight, and taken before a magistrate for summary punishment. The use of any explosive to kill fish is forbidden, and the use of lime or any noxious material in private fisheries for the same purpose is punishable with penal servitude. Somewhat similar game laws are in force in other countries.

POCAHONTAS (c. 1595-1617). North American Indian princess, sometimes known as Matoaka. She was a daughter of Powhattan, over-king of the Indian tribes of Virginia. In 1612 she was lured upon an English vessel and taken to Jamestown as hostage for the good behaviour of the Indian tribes. Converted to Christianity, she was baptized Rebecca, and in 1613 married John Rolfe (1585-1622), a leading Virginian settler. In 1616 she accompanied her husband to England, and in March, 1617, died at Gravesend, leaving one son.

POCHARD (*Nyroca ferina*). Diving duck of the sub-family Anatidae. An expert diver, the male has a reddish-brown head, black breast and back, and grey sides. The female

Pochard, a wild diving duck which visits Great Britain

has greyish brown plumage. It is common as a migrant to Great Britain in the winter. The bird is found over a wide range in Europe, Asia, and North America. Pron. Pokard.

POCKET GOPHER (Geomys). A family of rat-like rodents which occur in North and Central America. The name is derived from their very large cheek pouches. They are about 8 ins. long without the tail, and the body

is covered with soft velvet-like fur. They burrow like moles beneath the ground and construct large chambers in which they collect stores of potatoes, nuts, and seeds.

POCKLINGTON. Market town and urban dist. of Yorkshire (E.R.). It is 13 m. from York, on the L.N.E. Rly. The church of All Saints, mainly Early English, has finely carved capitals. The school was founded in 1515. The industries are the making of farm implements and corn-milling, while horse, cattle, and sheep fairs are held. A canal connects the town with the Derwent. Market day, Tues. Pop. 2,642.

PODOPHYLLUM (*P. peltatum*) OR MAY APPLE. Perennial herb of the order Berberidaceae, native of N. America. Barren

Podophyllum. Leaves and flower; inset, fruit

stems end in a large round leaf with lobed margins; flowering stems with two one-sided, lobed leaves, and between them a solitary white flower, succeeded by a large yellow oval fruit with edible pulp, sweet and slightly acid. The leaves and stems are narcotic and poisonous. From the root-stocks the resinous extract known as podophyllin is obtained, which is used as a cathartic medicine.

POE, EDGAR ALLAN (1809-49). American poet, critic, and story writer. Born at Boston, Massachusetts, Jan. 19, 1809, he was left an orphan at the age of three. Poe published volumes of poems in 1827, 1829, and 1831. His first work as a story writer, *A MS. Found in a Bottle*, won a prize offered in 1833 by The Baltimore Saturday Visitor. His realistic romance of the sea, *The Narrative of Arthur Gordon Pym*, appeared in 1838; *Tales of the Grotesque and Arabesque* in 1840. He also achieved recognition as a critic. With the *Adventures of one Hans Pfaal* and *The Balloon Hoax* he anticipated Jules Verne, as in *The Gold Bug*, *The Murders of the Rue Morgue*, *The Mystery of Marie Roget*, and *The Purloined Letter* he may be said to have founded the modern detective story. Of his tales of fantasy the most remarkable are *The Fall of the House of Usher*, *The Pit and the Pendulum*, *The Cask of Amontillado*, and *The Assumption*. Fame came tardily with the publication in 1845 of *The Raven*. Then followed *The Bells*, *Ulalume*, *For Annie*, and *Annabel Lee*, the last named written in memory of his wife. He died of brain fever in hospital at Baltimore, Oct. 7, 1849.

Edgar Allan Poe, American writer

POELCAPELLE. Village of Belgium, in W. Flanders. It lies one mile E. of Lange-marck, and was prominent in the British operations in the Ypres salient in the Great War, especially in the third battle of Ypres, fought in 1917. See Ypres.

POET LAUREATE. A poet crowned with bays or wreath of laurel. The custom originated in Greece, and was perpetuated in Rome. In England the title poet laureate was applied to a poet attached to the court in the time of Edward IV, the first holder being John Kaye, author of *The Siege of Rhodes*. John Skelton called himself both poet laureate and regius orator; but the English laureateship is usually dated from Ben Jonson, to whom James I, by letters patent, gave a pension of

100 marks (about £67), a sum increased by Charles I to £100 and a tierce of canary wiae. Holders of the office have included Dryden, Southey, Wordsworth, Tennyson, Robert Bridges, and John Maschfield.

POETRY. Expression of thought and emotion in verse, with an appropriate diction, which, according to Milton, must be 'simple, sensuous and passionate.' Poetry is classified according to its form as dramatic, epic, lyric, etc., or according to the subject or motive as didactic, erotic, satiric, etc., but in the last analysis one cannot separate form from substance in poetry; the poem itself is the link that holds them together. Nevertheless there are many types. In Browning, for example, the intellectual element is emphasised: in Swinburne the musical. On the one side poetry may fall away so as to be barely distinguishable from prose; on the other, so as to be little more than verbal music. What is common to poets is a similarity in their way of viewing human experience, the emotional and imaginative way, together with a similarity in their way of presenting it, the rhythmical way. See Alliteration; Anthology; Rhythm.

POILU (Fr. hairy or bearded). Popular name given to the French soldier. It was first used for the recruits as distinct from the older men. Later the word came to signify the common soldier of France, particularly under the conditions of trench warfare.

POINCARÉ, JULES HENRI (1854-1912). French scientist. Born at Nancy, April 29, 1854, he became an engineer. In 1886 he was appointed professor of mathematical physics in the Faculty of Sciences, Paris, and in 1896 he became professor of celestial mechanics. He died July 17, 1912.

Poincaré was one of the most brilliant mathematicians of the 19th century, not only carrying out a series of remarkable investigations into the problem of three bodies and the theory of functions, in which he introduced an entirely new mathematical weapon, but also investigating the theory of non-Euclidean geometry, the higher algebraic functions, etc.

POINCARÉ, RAYMOND NICOLAS LANDRY (h. 1860). French statesman. Born Aug. 20, 1860, at Bar-le-Duc, he was called to the bar, and for some time contributed law court reports to *Le Voltaire*. He was elected to the Chamber of Deputies in 1887, and was minister of finance in the Dupuy cabinet, 1893-5, and again in 1906. On the fall of the Caillaux (q.v.) cabinet in Jan., 1912, Poincaré became prime minister and, with the premiership,

Raymond Poincaré, French statesman

took the ministry of foreign affairs. He was still premier when elected president on Jan. 17, 1913.

Poincaré retired from the presidency in Jan., 1920. He was president of the reparations commission for a short time, but resigned owing to lack of sympathy with the general Allied policy on that question. In Feb., 1921, he was elected president of the foreign affairs commission of the senate. In that capacity, and as foreign editor of *La Revue des*

Deux Mondes, Poincaré stood for a strongly nationalist policy. He was premier and minister for foreign affairs 1922-1924. He was again premier 1926-29, and for two years was also finance minister, being responsible for the stabilisation of the franc. His volume on *The Invasion of France* appeared in Dec., 1928, this being part of the series he undertook to write on the events of 1911-20.

POINTER. Old breed of sporting dog of Spanish origin, which as its British type has been crossed with the foxhound and the greyhound. It is characterised by the habit of pointing, or stopping dead and remaining rigid when it finds game at close quarters. A large specimen stands about 24 ins. high at the shoulder. In general appearance it is not unlike a foxhound, but is always parti-coloured, liver and white being the favourite combination.

Pointer. Prize-winning specimen of the breed of sporting dogs

POINT TO POINT.

Name given to a type of race for hunters. They are held under the auspices of a hunt, and are usually divided into two classes: for welter-weights, over 13 stone, and for light-weights under that figure. The course is generally one of three or four miles. See Steeplechasing.

Poiré, ESMANUEL. Real name of the French caricaturist better known by his pseudonym of Caran d'Ache (q.v.).

POISON (Lat. potio, draught). Substance which, when taken into the mouth or stomach or absorbed by the blood, is capable of seriously affecting health or destroying life. Some poisons have a local action only, as the strong mineral acids which injure the tissues with which they come directly in contact. Other poisons, e.g. morphia, only produce symptoms after having been absorbed into the system.

In the treatment of poisoning, the first object aimed at is removal of the poison from the system. Vomiting may be produced by tickling the back of the throat with a feather, or by the administration of an emetic (q.v.). The treatment for strong acid poisoning is to administer an alkali, calcined magnesia being the best; but sodium bicarbonate, chalk, or even plaster from the ceiling may be given. In poisoning by caustic potash or other alkalis, water with vinegar or lemon-juice should be given to neutralise the acid.

Poisoning by vegetable food, with the exception of fungi, is rare. Poisoning by meat is nearly always the result of acute infection by bacteria, following the eating of diseased or putrefying meat. Any decomposing fish may give rise to poisoning.

Certain substances are statutory poisons. They are enumerated in the schedule to the Poisons Act. Any preparation containing a statutory poison must be labelled as "poison," and dispensed in containers easily distinguishable by colour and shape. See Botulism.

POISON GAS. Term used to designate the various noxious chemicals employed to incapacitate troops in warfare. The chemical may either be discharged as a cloud, or filled into bombs or shell, the contents, generally in liquid form, being distributed by a small charge of explosive. See Gas Warfare.

POISON IVY (*Rhus toxicodendron*) OR POISON OAK. Bushy shrub of the order Anacardiaceae. It is a native of N. America, abundant in woods, thickets, and hedgerows, often climbing to considerable heights by means of rootlets, after the manner of ivy. The leaves are divided into three oval or rhombic leaflets, paler and downy beneath. It has minute, whitish flowers in panicles, succeeded by small cream-coloured berries. The whole plant is highly poisonous. See Sumac.

POITIERS. City of France. It stands on a hill near the confluence of the Clain and Boivre, 61 m. from Tours. The cathedral of S. Pierre, begun in the 12th century, contains architectural and other features of interest. S. John's church, said to be the oldest Christian building in France, dates from the 4th century, when it was built as a baptistery. S. Hilary's contains the relics of S. Hilary. Other churches are S. Radegonde's, much visited by pilgrims, and Notre Dame la Grande, both of the 11th and 12th centuries. The old tower of S. Porchaire was restored in the 19th century. The palais de justice embodies some parts of the castle of the counts of Poitou. The university dates from 1432. Pop. 42,347.

Poitiers. Church of Notre Dame la Grande, dating from the 11th century

The battle of Poitiers was an English victory over the French during the Hundred Years' War, Sept. 19, 1336. Edward, the Black Prince, in command of some 8,000 men, was marching up from Guienne when, near Poitiers, he found his way barred by a French army of 15,000 under King John. The fight ended in a complete victory for the English. King John, his son Philip, and some 2,000 knights were made prisoners, while about 3,000 were killed. The English losses were slight.

POKER. Card game. A full pack of cards is used, bearing their usual face value, except that the ace may count either as the highest or lowest. Five players make the best number. The dealer gives five cards, one at a time, to each person. Every player is for himself, and the object of the game is to hold the best hand; the different hands ranking in this order: 1. A sequence flush: a sequence of five cards all of the same suit. 2. Fours: four cards of the same denomination. 3. A full: a hand consisting of three and two cards of the same denominations. 4. A flush: five cards of the same suit. 5. A sequence or straight: five cards of different suits, but all in sequence. 6. Threes: three cards of the same denomination. 7. Two pairs. 8. One pair. 9. Highest card.

POKER WORK. Simple method of decoration. Formerly a red-hot poker with a sharp point was used, but a special apparatus is now in use, consisting of a lamp, with a tube and hand bellows, and a metal point, which is held in the flame until heated. Various woods and leather, velvet, and other materials can be decorated.

POKEWEED (*Phytolacca decandra*). **PIGEON-BERRY, OR RED-INK PLANT.** Perennial herb of the order Phytolaccaceae, a native of the warmer parts of N. America. It has large, fleshy, poisonous roots, tall stems, and large, oval, alternate leaves. The root is emetic and purging, and a tincture of the berries is used as a remedy for rheumatism.

POLA. Town of Italy, formerly the chief naval station of Austria-Hungary. There are two harbours, commercial and naval. E. of the commercial harbour is the 15th century cathedral; farther E. is the wall-encircled Castle Hill, crowned by a castle built by the Venetians. A temple of Augustus, built 19 B.C., and the amphitheatre are monuments of the Romans.

In the Great War part of the Austrian fleet was blockaded in Pola harbour by the Italians. The Italians occupied Pola early in Nov., 1918, and with Istria it passed to Italy by the peace treaty of 1919. Pop. 54,477.

POLACCA. Three-masted ship seen in the Mediterranean. Though square-rigged and carrying a jibboom, the main and fore masts are single spars, without top or cross-trees.

Polacca. Three-masted square-rigged vessel employed in the Mediterranean

POLAND. Republic of Central Europe, created by the peace conference following the Great War. It consists of Russian Poland, corresponding broadly with Congress Poland

Poland. Group of peasants in characteristic working dress

(Poland as defined by the Congress of Vienna, 1815); German Poland, comprising Posen (Poznan) and part of German Silesia; Austrian Poland, or Galicia; and part of the Vilna district, though Lithuania still claims it. Poland is bounded N. by the Baltic, East Prussia, Latvia and Lithuania, S. by Czechoslovakia and Rumania, E. by White Russia and Ukraine, and W. by Germany. Warsaw is the capital. The republic has the right to use the ports of Danzig and Memel. Its own port is at Gdynia (q.v.). The area is about 150,000 sq. m. Pop. about 30,000,000.

The crops include rye, potatoes, oats, wheat, barley, sugar beet, hemp, hops, and chicory. Cattle, horses, pigs, and sheep are reared, and the forests yield much timber. Coal is the most important mineral, others being petroleum, iron, zinc, salt, and potash.

Until the end of the 18th century Poland was an independent state, but it decayed, and by the partitions of 1772, 1793, and 1795 was divided between Russia, Prussia, and Austria. In 1807 Napoleon created the grand-duchy of Warsaw,

but in 1815 Poland was again partitioned between Prussia, Austria, and Russia.

In 1915 the country was seized by the Germans and Austrians, who in 1916 proclaimed its independence. A council of regency was set up, and under it were a ministry and a council of state. Independence was proclaimed on Nov. 9, 1918. Having taken control, Pilsudski (q.v.) called a constituent assembly. He himself became president and the musician Paderewski prime minister. The Treaty of Versailles recognized this independence, June, 1919. On March 17, 1921, a new constitution was adopted, and meanwhile the boundaries were defined.

The Poles were soon at war, first with the Bolsheviks and then with Ukraine and Czechoslovakia. They forced the Bolsheviks back into Soviet Russia, and in March, 1921, a peace was made by which Poland gained territory. There was friction with Lithuania, and in 1923 the Poles seized Vilna, which was formally given to them by the Council of Ambassadors. In 1922 Pilsudski retired, but in 1926 he returned and overthrew the existing government. He refused to become president, but became premier and minister of war. Resigning in 1928, in 1930 he again became premier.

The constitution of March 17, 1921, revised July, 1926, is based upon adult franchise. The Sejm comprises a senate or upper house and a diet or lower house, both elective. The president is elected by the national assembly for a period of seven years. The executive is a council of ministers.

POLARISATION. An ordinary ray of light may be thought of as an axis, about which very small electro-magnetic vibrations are being executed at an exceedingly rapid rate, and in every possible direction perpendicular to that of the ray. The polarisation of light involves the reduction of these haphazard and disorderly vibrations to a more regular system. The simplest type of polarisation is "plane polarisation," in which all the

Poland. Map of the republic which came into existence after the Great War, and includes territory once belonging to Russia, Germany, and Austria-Hungary

Pola, Italy. Ruins of the Roman amphitheatre; it was built of white Istrian limestone

vibrations along the ray are in the same plane; in the case of a vertical ray of plane polarised light the vibrations would all be horizontal and all in a given direction, e.g. the N.-S. direction. A ray of light may also be circularly polarised, in which case the vibrations are executed in circles about the axis of the ray. The phenomenon of polarisation may be obtained very simply by passing an ordinary ray of light through a crystal of tourmaline or of Iceland spar (q.v.). The plane of polarisation can be rotated by the presence of a strong magnetic field, and the passage of the ray through certain substances, such as quartz and various solutions, also causes a rotation. *See* Light.

POLARITY. Property of having poles, i.e. ends with some opposite quality or qualities. The best known example is the ordinary bar magnet with a N. and S. pole. The term is frequently used by electrical engineers. In a generator the positive pole is the terminal from which it is assumed that the current issues into the external circuit. The negative pole is that into which the current is assumed to flow from the external circuit. *See* Anode; Electricity; Magnetism.

Polar Regions. Term applied to the areas around the earth's geographical poles. *See* Amundsen; Antarctic; Arctic, etc.

Pole. Measure of length, also known as the rod. It is $5\frac{1}{2}$ yds. long. A square pole covers $30\frac{1}{4}$ sq. yds.

POLE, REGINALD (1500-58). English cardinal. Born in March, 1500, at Stourton Castle, Staffordshire, he entered the Church, retired from England to Italy in 1532, definitely broke with Henry VIII in 1535, and was made a cardinal in 1536. During the reign of Henry and the Protestant government under his successor, Edward VI, Pole could not venture to England; but on the accession of Queen Mary (1553) he was sent as papal legate to effect the formal reconciliation of England with Rome. Arriving Nov. 25, 1554, he was elevated to the vacant see of Canterbury. He died Nov. 17, 1558.

Reginald Pole,
English cardinal
After Tiltan

POLECAT (*Putorius foetidus*). British carnivorous mammal, belonging to the weasel tribe. It is about 17 ins. in length, and has a short, bushy tail. The general colour is blackish brown, the under-fur being yellowish brown; the legs are black, the rims of the ears and the lips white, and there is a bluish-grey band across the forehead. It lives in deserted rabbit holes, old buildings, and crevices in rocks; and preys upon small mammals and birds, frogs, reptiles, and eggs. It is noted for its very ferocious disposition. *See* Ferret.

POLESWORTH. Colliery centre of Warwickshire. It stands on the Anker, 4 m. from Tamworth, with a station on the L.M.S. Rly. Pop. 6,277.

POLICE (Fr. from late Lat. *politia*, civil government; Gr. *polis*, city). Civilian or semi-military force appointed by the government or other constituted authority to preserve law and order. Not until Peel's Act of 1829 "for improving the police in and near the metropolis" were there any properly organized police forces in the United Kingdom. This act brought the London police, with the exception of the City police, under the home secretary; defined the metropolitan police district, and

appointed two justices of the peace, afterwards called commissioners, to frame the necessary discipline, regulations, etc., for the management of the new force.

Police: five typical members of the London Force. 1. Metropolitan police-sergeant. 2. Mounted constable. 3. Inspector. 4. Policewoman. 5. Special constable

Under the Municipal Corporations Act of 1835 watch committees came into existence in the towns. They were responsible for the appointment of head and other constables. In 1839 the passing of an act enabled a majority of the justices at quarter sessions to raise and equip a paid police for the protection of their county, thus inaugurating the county police as distinct from the police forces controlled by the boroughs.

The Metropolitan Police are under the home secretary, who appoints the commissioner. Their headquarters are at New Scotland Yard. Elsewhere the police are controlled by the various county and borough councils, but the home secretary has certain powers over them. They are inspected from time to time on his behalf, and a state grant is made towards their expenses. In Scotland similar duties are discharged by the secretary for Scotland. In 1929 there were 57,300 policemen in England and Wales, 6,600 in Scotland, and 2,930 in Northern Ireland. The city of London police are controlled by the common council.

In 1920 the employment of suitable women police was recommended by a committee appointed for the purpose, and soon a number of women were appointed for duty as constables.

Polecat, small savage mammal found in parts of Britain
fr. S. Bertridge, F.Z.S.

POLICE COURT. This is a court of first instance or court of summary jurisdiction. In London and some other towns such courts are presided over by stipendiary magistrates. The judges of other police courts are styled justices of the peace and are unpaid. *See* Bow Street; Detective; Justice of the Peace; Magistrate; Scotland Yard.

POLITICAL ECONOMY. Science concerned with the production, distribution, and consumption of wealth. Adam Smith's Inquiry into the Nature and Causes of the Wealth of Nations, 1776, has been incomparably the most influential of all economic writings, determining the character and scope of the new science almost up to the present. It started from the individualistic point of view; it regarded benefit to society as the criterion of the moral character of actions; and it held that, within very wide and ill-defined limits, the well-being of society was brought about by individuals following their

natural passions or feelings. In particular, the pursuit of individual material self-interest was justified by its results to society.

To make of political economy the neat bundle of half a dozen interdependent "laws" which it afterwards became, and to apply these laws rigorously to the problems of taxation, was the work of Ricardo, in his Principles of Political Economy and Taxation, 1817, and of his popularisers, especially James Mill.

It was effected by dropping Smith's historical disquisitions, by pushing deductions from the motive of interest to their logical conclusions, and by taking over from Malthus as a second dominating force in economic life by the side of competition "the principle of population."

The developments of the 20th century, and still more the upheaval caused by the Great War, brought about a change in the general

conception of political economy. It became much wider in its scope. The idea of an economic man, isolated from all save purely economic forces, tended to disappear. Economists began to take account of health and environment, education and pleasures, because these, no less than rent and interest, are factors in the production and distribution of the nation's wealth.

POLK, JAMES KNOX (1795-1849). President of the U.S.A. Born in Mecklenburg county, N. Carolina, Nov. 2, 1795, of Scottish-Irish descent, his original name being Pollock, he was called to the bar in 1820. In 1823 he was elected to the legislature of Tennessee, and in 1825 became a member of Congress. For eight years he was speaker of the House of Representatives, and from 1839-41 governor of Tennessee. In 1844 he was elected president. During his term the Mexican war took place, and the Oregon boundary dispute with Great Britain was settled. Polk died at Nashville, June 15, 1849.

James K. Polk,
American president

POLKA. Round dance. Said to have been invented about 1830 by a Bohemian servant girl, in a few years it attained extraordinary popularity throughout Europe. The music is in 2-4 time, the characteristic feature being the rest on the second beat.

POLL (Mid. Eng. *pol*, back of the head). Taking of votes in order to ascertain the wishes of a majority of the people qualified to vote. The polling booth is the place where electors go to record their votes, and the polling day the day fixed for the voting. The announcement of the result is known as the declaration of the poll. The poll also plays a part in English company law. *See* Company Law; Election; Vote.

POLL TAX. This is a tax on every poll or head, sometimes called a capitation tax. Such were often levied in England until 1698. The imposition of this tax was one of the causes of Wat Tyler's rebellion in 1381. The tax was graded, the very poor paying nothing; others paid from 1s. to 20s.

POLLACK (*Gadus pollachius*). Common British fish, belonging to the cod family and nearly related to the coal fish. It is usually about 20 ins. long and is of a greenish colour.

It occurs off the coasts of Cornwall and Devon, Norway, N. America, etc., and is a valuable food fish and a source of oil. See Cod.

POLLEN. Mealy substance, mostly yellow, which fills the anthers of flowering plants and grasses. The grains of which it is composed contain the male elements or nuclei, which fuse with the female element in the ovules enclosed in the carpels or ovary. In plants that are pollinated by the wind (e.g. most forest trees) the pollen grains are dry and light. In other cases the pollen grain is variously roughened, that it may the more easily catch upon the hairy bodies of the insects that act as pollen carriers. When the pollen grains are brought to the stigma they are stimulated into activity and emit a long shoot which penetrates the ovary and enters the ovules, thus effecting fertilisation. See Botany; Flower.

Pollen from British plants. 1. Thistle. 2. Sage. 3. Evening primrose. 4. Sweet Pea. 1, 3 and 4, magnified 66 times; 2, magnified 100 times

POLLOCK, SIR FREDERICK (b. 1845). British jurist. The eldest son of Sir W. F. Pollock, Bart., he was born in London, Dec. 10, 1845, and became a barrister in 1871. In 1882 he was appointed professor of jurisprudence at University College, London, and from 1884-1903 was Corpus professor of jurisprudence at Oxford. From 1884-90 he was professor of common law to the Inns of Court, and he edited *The Law Quarterly Review* and *The Law Reports*. With F. W. Maitland he wrote the standard *History of English Law*, 2nd ed., 1898.

Other noted members of this family include Sir F. Pollock's father, Sir William Frederick Pollock (1815-88), a distinguished lawyer, and Sir George Pollock (1786-1872), the soldier who led the expedition to Kabul in 1842. To a later generation belong Ernest Murray Pollock and his brother Bertram. The former was a Unionist M.P. from 1910-23, solicitor general 1919-22, and attorney-general 1922. In 1923 he was made master of the rolls, and in 1926 a peer as Baron Hanworth. Bertram was headmaster of Wellington College 1893-1910, when he was made bishop of Norwich.

POLLOKSHAW. District of Glasgow, formerly a separate burgh. On the White Cart, with stations on the L.M.S. Rly., it is mainly an industrial area. It was absorbed into Glasgow in 1912. See Glasgow.

Sir F. Pollock, British jurist
Russell

POLLUX. In Greek mythology, the twin brother of Castor. See Castor and Pollux. In astronomy Pollux is the popular name given to the star Beta Geminorum, in the constellation of the Twins. See Constellation.

Pollack, a British fish belonging to the cod family

and Japan. In India it was taken up by British officers, and so spread over the world. The first polo club in London was at Lillie Bridge.

Polo grounds are of turf, the standard size being 300 yards by 160 yards. In the centre of each end are the goal posts, 24 ft. apart. The game is played with balls and sticks and resembles hockey, except that the players are mounted on specially trained ponies. The best ponies are those which on a foundation of native British pony stock have grafted thoroughbred or Arab blood. The modern game is played at a high rate of speed, with four players a side. No. 1 and No. 2 are forwards. No. 3 is generally the best player in the team, and plays forward or back as the game requires. No. 4 is back, his primary duty being to defend his goal. In defence it is the duty of every man to ride the corresponding man on the other side off the ball. The governing body of polo is the Hurlingham Club (Fulham, London) polo committee.

POLO, MARCO (c. 1254-1324). Venetian traveller. Born of noble parentage, he accompanied his father and uncle in 1271 to China. Crossing Persia, Western Asia, and Tartary, through districts unknown to Europeans until modern times, the three Italians crossed the Gobi desert, and eventually reached the city of Shang-tu in 1275. Here they saw the Great Khan, who conceived a liking for Marco, conferred dignities upon him, and even appointed him to an administrative post. For three years Marco was governor of the city of Yangchow, and was employed in various political missions to India and to other parts of China. In 1292 the three Polos accompanied an embassy to Persia, and eventually reached Venice in 1295. Three years later Marco was taken prisoner by the Genoese, and during his confinement dictated an account of his travels in French.

Marco Polo, Venetian traveller

POLONIUM. Radio-active substance discovered by Pierre and Marie Curie in 1898. It is a product of radium emanation, and is also known as radium F. See Radium.

POLPERRO. Village of Cornwall. On the S. coast, 13 m. from Bodmin, it occupies a picturesque position in a valley. The chief industry is the pilchard fishery.

POLTAVA OR PULTAVA. Town of the Ukraine. It is 70 m. S.W. of Kharkov and is a rly. junction. Its chief industries are the making of tobacco, candles, soap, and leather. Peter the Great's signal victory over the Swedes in 1709 is commemorated by a memorial stone in the town. Poltava was captured by the Germans in 1918, and was taken by Denikin (q.v.) in 1919. Pop. 91,895.

POLTERGEIST (Ger. noisy ghost). In spiritualism, name given to the supposed agent of inexplicable occurrences in a house, e.g. the rattling of crockery, moving of furniture, etc. In a number of cases the apparent mystery has been proved to be the result of human agency, a cleverly managed trick. But, as the inquiries of the Psychical Research Society seem to show, some occurrences permit, if they do not compel, even the frankly sceptical to keep an open mind on the subject of the doings of the poltergeist.

POLYANDRY (Gr. polys, many; andres, males). Plurality of husbands. Usually deemed to arise from a paucity of women, especially in mountainous, insular, or sterile regions, it is often associated with food scarcity and girl infanticide. See Marriage. Polygamy.

Polyanthus. Flowers and leaves of the hybrid

POLYANTHUS. Garden hybrid originally derived from crossing the cowslip (*Primula veris*) and the primrose (*P. acaulis*). By selection and further crossing an almost endless variety of form and colour has been raised.

POLYBIUS (c. 210-120 B.C.). Greek historian. He was born in Megalopolis in Arcadia. Deported to Italy after the conquest of Macedonia, Polybius was received in the household of Aemilius Paulus, with whose son, the younger Scipio, he formed a lifelong friendship. He returned to Greece in 146 B.C., and when the inevitable defeat took place Polybius set himself to secure the most favourable terms for his countrymen. So successful were his efforts that statues were erected in his honour in several of the cities of Greece. Of the 40 books of his history of Rome from 221-146, only the first five survive.

POLYCARP (c. 69-155). Apostolic father and saint. Born about A.D. 69, he is said to have become a Christian about the year 80 and to have been consecrated bishop of Smyrna by S. John about the year 96. Polycarp was the author of an Epistle to the Philippians, and about 155 he went to Rome to confer with Pope Anicetus on matters of Church observance. Soon after his return to Smyrna he was apprehended in a persecution of the Christians and burnt at the stake.

POLYCLITUS (5th century B.C.). Greek sculptor. One of the greatest artists of his time, his Doryphorus (spearman), of which there are copies at Rome, Florence,

Poltava. Memorial church to Swedish soldiers who fell in 1709

Naples, and Berlin, was, according to Pliny, the last word in perfect sculpture. Among his other works was the famous chryselephantine statue of the goddess Hera, once in the temple at Argos. Pron. Poly-cl'y-tus.

POLYGAMY (Gr. polys, many; gamos, marriage). Term commonly used for a plurality of wives. Strictly speaking, however, this is polygyny, from Greek words meaning many women, and its converse is polyandry, having many husbands. Polygamy really includes the two, and its antithesis is monogamy. See Marriage; Polyandry.

POLYGENISM (Gr. polys, many; genos, kind). Theory attributing to mankind descent from more than one original stock or pair. In one form it claims a separate ancestry for the main human races now extant, on the ground that their physical and mental differences are so fixed as not to be accounted for by the alternative view, called monogenism, of the unity of the human species.

POLYMERISM. Form of isomerism (q.v.), defined as the power which certain chemical elements and compounds possess of condensing their molecules. The product is said to be a polymer or polymeric of the simpler substance. Examples in inorganic chemistry are oxygen and acetylene. In the former case the condensed oxygen molecule (O_2) is known as ozone, while acetylene passed through a red-hot tube polymerises into benzene.

POLYNESIA (Gr. polys, many; nēsos, island). Term applied to the most easterly of the islands of the Pacific Ocean. Their limits are approximately the tropics of Cancer and Capricorn on the N. and S. and meridian 180° on the W. They include the Hawaiian islands, Samoa, the Society and Tubuai groups, the Marquesas, Fiji, the Phoenix and Tokelau or Union groups, and the Hervey or Cook and Manahiki islands.

The term Polynesian denotes the aboriginal population of the Pacific islands S. and E. of the Micronesian and Melanesian groups. Their ambit lies within a triangle whose corners are New Zealand, Hawaii, and Easter Island. Polynesians are usually lithe and active, averaging 5 ft. 8 ins. in height; olive-brown and longish-headed, they have oval faces and wavy hair, and are cheerful and dignified. The Polynesian dialects form a sub-family of the Austronesian division of the Austric family of languages. See Ethnology; Kanaka; Maori; Oceania; Taboo.

POLYPHEMUS. In Greek mythology, one of the Cyclopes, a race of giants. The son of Poseidon and Thoësa, he dwelt on the coast of Trinacria (Sicily), where he kept his flocks. In the course of their wanderings, Odysseus and his comrades sought refuge in the cave of Polyphemus, who killed and ate some of the companions of the hero. When the giant had gone to sleep Odysseus destroyed the sight of his one eye and escaped with the remainder of his comrades. See Cyclopes.

POLYPODY (*Polypodium vulgare*). Fern of the order Polypodiaceae. A native of Europe and the N. temperate zone, it has a fleshy root-stock which creeps on the surface of tree trunks, walls, and hedge bottoms. The leathery fronds are cut into lobes from the sides, and their stalks are jointed to the root-stock in such a way that they can be thrown off when old. They are produced singly at short intervals along the root-stock, and remain fresh and green throughout the winter.

POLYPORUS. Large genus of fungi of the order Hymenomycetaceae. The substance of the cap or pileus is corky or woody. They mostly grow upon living or dead wood—trunks, branches, or roots of standing trees, or worked wood. Those that grow from the trunks usually take the form of brackets. Many species are destructive to growing timber.

Polyporus. *P. squamosus*, a bracket-shaped species on a tree trunk

POLYPUS. Fibrous tumour growing from mucous membrane, to which it is attached by a stalk. Polypi are most frequently met with in the nose, bladder, rectum, or uterus. They rarely become malignant, i.e. cancerous in nature. If the growth is accessible, it is as a rule easily removed.

POLYTECHNIC (Gr. polys, many; technē, art). Term applied to any institution affording practical training in the arts and sciences. The first London polytechnic, 309, Regent Street and 5, Cavendish Square, opened Aug. 6, 1839, was devoted to lectures and the exhibition of new inventions. Other London polytechnics are at Battersea, Clerkenwell, Chelsea, and Woolwich, and there are similar institutions in many provincial cities. The work, carried on by means of day as well as evening classes, at these polytechnics embraces both theoretical and practical training in classrooms and laboratories, while at most of them is a department for the teaching of domestic economy to girls and women. See Hogg, Quintin.

POLYXENA. In Greek legend, the daughter of Priam, king of Troy, and beloved of Achilles. After the taking of Troy, Polyxena was taken captive by Neoptolemus, the son of Achilles, and sacrificed by him on his father's grave in obedience to the demand of the shade of Achilles. Pron. Polliëks-in-a.

POLYZOA. Name applied to a zoological phylum of minute animals, mostly marine; which live in colonies. The sea-nats, common on sandy shores and often mistaken for seaweeds, are familiar examples. The colonies assume many forms, some being tree-like, others leaf-like, while others form incrustations on rocks and seaweeds.

POMEGRANATE (*Punica granatum*). Tree of the order Lythraceae, native of W. Asia. The leaves are oblong or lance-shaped, and the red flowers are in small clusters at the ends of the branches. The large fruits, golden tinged with red, are remarkable in their structure, there being two series of carpels, one above the other. The seeds are coated with sweet, juicy pulp. The rind is used for tanning.

POMERANIA (Ger. Pommern). Dist. of Prussia, once a separate duchy. The present province, which is not coterminous with the old duchy, has an area of 11,664 sq. m. and a pop. of 1,878,781. It extends along the shores of the Baltic between Mecklenburg and Poland. The islands of Rügen, Wollin, and Usedom lie off the coast. Pomerania is remarkable for the number of its lakes. The chief rivers are the Oder and its tributaries.

About 1200 the rulers of Pomerania called themselves dukes and the district became part of the German kingdom. The dukes subdivided their lands to provide for various branches of the ducal family. In 1625 it was united under a single duke, and in 1637, on his death without sons, it was claimed by Brandenburg. In 1648

it was divided; Brandenburg secured eastern, and Sweden western, Pomerania. In 1720 most of Western Pomerania was handed over to Brandenburg, and in 1815 the whole became part of Prussia. See Prussia.

POMERANIAN DOG. Breed of pet dog. In Germany it is known as the Spitz and is claimed as one of the national breeds. In general appearance the Pomeranian recalls a diminutive chow or Eskimo dog. In its original and large form, a breed now little known, the Pomeranian was used as a wolf dog, but in Great Britain only the diminutive type is seen. Specimens weigh 8 lb. and less; the favourite colour is black, but white and fawn are sometimes seen; the ears should be erect. See illustration below.

Pomona. In Roman mythology, a nymph or goddess. She was the patroness of gardens and fruit.

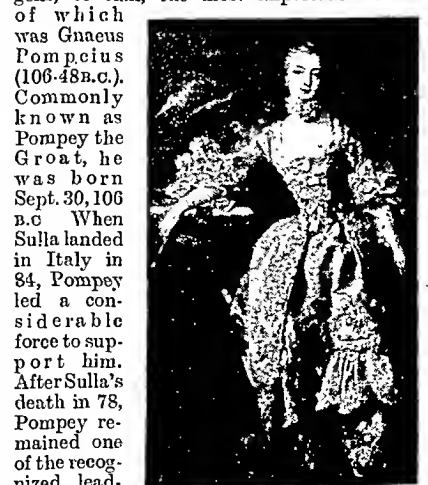

POMONA OR MAINLAND. Largest of the Orkney Islands. Its area is 150 sq. m. It is divided into two unequal portions by Kirkwall Bay and Scapa Flow (q.v.). The surface is mainly moorland and heath, with some fertile valleys. Kirkwall and Stromness are the only towns. "Maes Howe," a chambered barrow, and the Standing Stones of Stenness, a group of stone circles, are interesting antiquities. Pop. 14,083.

Pomeranian Dog. Champion specimen of the breed. See above

POMPADOUR, JEANNE ANTOINETTE POISSON, MARQUISE DE (1721-64). Mistress of Louis XV. Born in Paris, Dec. 29, 1721, she became mistress of Louis XV in 1745, and thenceforth, a woman of high talents and with great ambition, exercised much political influence. She accumulated a large fortune, became a duchess, 1752, and lady-in-waiting to the queen, 1756. She personally carried out many of the king's state duties, and her patronage of writers and artists enhanced her influence. The French alliance with Austria, 1756, was due to her spite against Frederick II. She died at Versailles, April 15, 1764.

POMPEIA. Name of a Roman plebeian gens, or clan, the most important member

Marquise de Pompadour, mistress of Louis XV
From the portrait by Boucher in the Wallace Collection, London

of which was Gnaeus Pompeius (106-48 B.C.). Commonly known as Pompey the Great, he was born Sept. 30, 106 B.C. When Sulla landed in Italy in 84, Pompey led a considerable force to support him. After Sulla's death in 78, Pompey remained one of the recognized leaders of the senatorial party, whose armies he commanded in Spain, 76-71. In 67 he was successful in suppressing the pirates in the Mediterranean, and in 66 overthrew Mithradates (q.v.), thus bringing the entire east under the Roman sway.

After the year 62 his hitherto brilliant record became one of failure. Since now he would neither give way to the senate nor seize absolute power, he formed an alliance, known as the first triumvirate, with Crassus and Julius Caesar. In 58 Caesar took up the consulship of Gaul, while Pompey, remaining in Rome, rapidly lost influence. In 52 the government broke down altogether. The result was the invasion of Italy by Caesar in 49, the decisive defeat of Pompey at Pharsalus, Aug. 9, 48, and his flight to Egypt, where he was assassinated, Sept. 29. See Caesar, Julius.

Pompey's younger son, Sextus Pompeius Magnus, in the second civil war collected a powerful fleet and seized Sicily. In 36 his fleet was defeated, and after a time he was captured in Asia and put to death.

Sextus Pompeius
From a statue in the
Louvre, Paris

still ruinous when the great eruption of Vesuvius, Aug. 24, 79. The city stood at the mouth of the river Sarnus. The walls are nearly two miles long, but had been pulled down on the sea side. The streets are narrow and generally straight, and are paved with lava. Of the two fora or market places, the larger is surrounded on

three sides by a colonnade, and facing it are the principal temples, the municipal buildings, the macellum or provision market, and other public buildings. The smaller, or triangular, forum, partly surrounded with a portico, contains remains of a Greek temple. Near are two theatres and the gladiators' barracks. At the E. end of the city is an amphitheatre.

There are three thermæ, or public baths, and outside the walls are two streets of tombs. The most interesting remains are the private houses, which illustrate with extraordinary vividness the life of all classes. In 1925 and 1926 excavations brought many treasures to light, including a beautiful bronze statue of Apollo. See illus pp. 15, 591

PONCHO. Cloak worn by men in Peru, Chile, Argentina, and other parts of S. America. It is a wide strip of cloth with a slit in the middle through which the head is passed.

PONDICHERY. Seaport of India, belonging to France. It stands on the E. coast, 85 m. from Madras, and is divided by a canal into a European and a native town. The capital of a district, 115 sq. m. in extent, Pondicherry was founded by the French about 1675. Pop. 47,626.

PONDOLAND. Country forming part of the Cape Province, S. Africa. It stretches

along the coast, S.W. of Natal. The area is 3,906 sq. m. Pop. 264,904. See South Africa.

PONDWEED (Potamogeton). Genus of aquatic herbs of the order Naiadaceae, natives chiefly of temperate regions. They have submerged, translucent or floating, opaque leaves, and simple flowers in spikes.

PONIARD (Lat. pugnus, fist). Term used for a small dagger. It usually refers to a slender weapon of this kind, introduced from France, having a triangular or square blade, and used for stabbing at close quarters. See Dagger.

PONTEFRAC or POMFRET. Borough and market town of Yorkshire (W.R.). It is 21 m. from York, near the junction of the rivers Aire and Calder, and is served by the L.M.S. and L.N.E. Rlys. The ruins of the Norman castle show it to have been of unusual strength and size. The adjoining grounds have been made into a public recreation

Pontefract, Yorkshire. Ruined hall of the castle
a Norman structure

ground. Of the churches the chief are S. Giles and All Saints. There is an old hermitage cut out of the rock. The industries include tanning, brewing, iron-founding, and corn milling. Pomfret cakes made here are lozenges of liquorice. Race meetings are held Market days, Tues. and Sat. Pop. 16,790.

PONTIAC (c. 1712-69). North American Indian chief. As chief of the Ottawas he assisted the French commander, Montcalm, against the British, and took part in the annihilation of Braddock's force in 1755. In 1763 he was mainly responsible for the carrying out of a conspiracy against the British garrisons in N. America, and unsuccessfully besieged Detroit for five months. He was murdered by an Indian belonging to the Kaskaskian tribe in 1769.

Pompeii. 1. The Street of Abundance, so called because it was the centre of the jewellers. 2. Peristyle and inner court of a Pompeian house

PONTIFEX (Lat. bridgemaker) Member of the most important college of priests in ancient Rome. The college was charged with the maintenance of the law in so far as it was bound up with religion, a special function being the supervision of the calendar. When Christianity became the state religion the title was assumed by the popes. See Pope.

PONTIFICAL or ORDINARY. Roman Catholic service book for the use of bishops or of priests specially empowered by bishops. Books of this kind originated in the 8th century, and were compiled by bishops from old sacramentaries, etc., in the Middle Ages. The Roman pontifical was first printed in 1485; that in use was revised by order of Leo XIII. The Greek Church has its own pontifical. A bishop's vestments are also called pontificals. See Vestment.

PONTOON. Flat-bottomed boat, particularly one of special design employed for military bridge building. This type of bridge utilises the boats as piers, the superstructure forming the roadway being thrown across from boat to boat. It can be speedily erected and is particularly useful for crossing wide streams, as no foundations for the piers are required. Modern pontoons are usually made in two or three sections for convenience of transport.

PONTRESINA. Village of the Upper Engadine, Switzerland. At an alt. of 5,915 ft., 4 m. E. of St. Moritz, it is a favourite summer and winter resort. Pop. 734.

PONTUS. Ancient dist. of Asia Minor along the Black Sea. It was a monarchy about 400 B.C., and was prosperous, strong and independent until its king, Mithradates the Great, was conquered by Pompey, 63 B.C.

Pontoon. Last stage in the construction of a pontoon bridge. See above

Part became a Roman province, and the rest survived under a native ruler until A.D. 63, when this, too, was taken by Rome. Amasia was the capital, and afterwards Pharnacia.

PONTYPOOL. Urban dist. and market town of Monmouthshire. It is 8 m. from

Newport, with stations on the G.W. and L.M.S. Rlys., being also served by a canal which connects it with Newport. The chief industries are coalmining and works for making iron and tin plate. The buildings include S. James's church and the town hall. In the 17th cent. japanned wares were made here, and sheet iron was manufactured a little later. Market day, Sat. Pop. 7,800.

PONTYPRIDD. Market town and urban dist. of Glamorganshire, Wales. It stands at the junction of the rivers Rhondda and Taff, 12 m. from Cardiff, on the Great Western Railway.

In the neighbourhood are coal and ironstone mines, and the chief industries are the manufacture of tinplate and iron goods, and the founding of iron and brass. A bridge, dating from 1755, which crosses the Taff here is regarded as a wonderful engineering feat. Market days, Wed. and Sat. Pop 49,000.

PONY (Old Fr. poulenet, from Lat. pullus, young animal). Small type of horse. Ranging in height from 14 hands to as low as eight

Pony. Shetland pony, one of the oldest breeds of the domesticated horse

it is probably the oldest breed of domesticated horse. In many details the small, half-wild ponies of the Shetland Islands and Connemara resemble Przevalsky's wild horse of Mongolia. The Celtic breed is found in its purest form in Iceland, and the ponies of the Faroe and Shetland Islands have undergone but slight modification. These ponies develop a heavy rough coat, and the mane and forelock are luxuriant. The ponies of the Devonshire moors and the New Forest, and also those of the Welsh hills, have undergone considerable modification from the original type. See Horse.

POODLE. Breed of dog commonly supposed to be of French origin, but found in both Russia and Germany. In France and Russia the poodles are black, but in Germany a white breed is found. The poodle is very intelligent and learns tricks readily. It makes one of the best retrievers known, and in Germany and France is largely employed in the chase. In its natural state the coat is very long, often hangs in cords, and drags the ground; but the and the clip the hinder half of the body and tail, leaving the hair in tufts.

POOL. It is played by a played on a billiard table. two to twelve, each number of players from ball, and playing having a different coloured sequence of the color turn according to the The object of the games on the scoring board. the ball played on. Throughout is to pocket an equal share to the person contributes three lives, losing a lifelol, and starts with each time his ball is pocketed paying forfeit The last player left in taked by another. Billiards; Snooker Pool. is the pool. See

POOLE. Borough, seaport town of Dorset. It stands on and market 5 m. from Bournemouth on the Dorset peninsula. The guildhall dates from 1761. Southern Rly. manufactures of pottery, rope, and There are implements. Poole Harbour is an agricultural English Channel about 7 m. long at the broad. Within it is Brownsea, or Ed 41 m. Island. Market day, Thurs. Pop. 4,661.

POONA. Town of Bombay, India. The capital of a district, it stands at the union of the rivers Mutha and Mula, 120 m from Bombay, and is an important rly. junction. It is the residence of the governor of Bombay during the rainy season, and an important military station. The industries include the making of fine wares of gold, silver, brass, etc., and of cotton, paper, and flour. The district has an area of 5,360 sq. m. Pop., dist., 1,009,033; town, 214,796.

POOR CLARES OR CLARISSSES. Order of nuns founded in 1212 by S. Clare with the advice of S. Francis of Assisi. They were brought under the Benedictine rule, which was repeatedly modified, and no uniform system was accepted: the Urbanists following the milder rule instituted in 1264 by Pope Urban IV, and the Coletines observing the reforms made by S. Colette in 1436. The Poor Clares devote themselves to the education of poor girls. They are under the authority of the Minorites, and the Minorities in London preserves the memory of one of their former nunneries. See Clare: Francis, S.

POOR LAW. Legislation passed for the benefit of the needy and distressed. In Great Britain the statute of 1601 laid down that each parish should take care of its aged and impotent poor people, provide work for its able-bodied poor, and apprentice its pauper children; that overseers of the poor should be appointed with power to levy a poor rate and build workhouses.

The first workhouse was built in Bristol in 1697. Guardians of the poor were established in 1782. A royal commission appointed in 1832 reported that "the great source of abuse was the out-door relief afforded to the able-bodied, either in kind or in money." The great measure of 1834 followed, and a poor law board was appointed. In 1871 this was replaced by the local government board, whose duties were transferred in 1919 to the ministry of health. In April, 1930, the boards of guardians ceased to function, their duties being transferred to committees of the county and county borough councils.

VAGRANCY LAWS. The law confers upon the authorities certain powers for punishing the incurably idle and impostors who seek to take advantage of poor law relief. "Idle and disorderly persons" are liable to a month's hard labour. An appeal lies to quarter sessions. They include able-bodied people who become chargeable to the rates through refusing to work, paupers becoming chargeable to parishes from which they have been removed under the old law of settlement of paupers, those who leave workhouses or casual wards without leave or remain on after their time is up, those who break the workhouse rules, etc. See Pauperism.

POPE, THE (Gr. pappas or papas, Lat. papa, father). Name specifically applied to the bishop of Rome since 1073. The full title of the pope is Bishop of Rome and Vicar of Jesus Christ, Successor of S. Peter, Prince of the Apostles, Supreme Pontiff of the Universal Church, Patriarch of the West, Primate of Italy, Archbishop and Metropolitan of the

Roman Province, and Sovereign of the Temporal Dominions of the Holy Roman Church.

Known also as Pontifex Maximus, he claims supreme authority in all matters of faith. Elected by the college of cardinals, his coronation in S. Peter's includes the laying-on of hands by other bishops according to a rite dating from the early part of the 14th century. His ordinary dress includes a white silk cassock and rochet and a scarlet mantle; his insignia, the straight crosier, or pedum reotum, pall or pallium, and tiara or triple crown. He is addressed as Your Holiness, Beatissime Pater, etc., and refers to himself as Servus Servorum Dei, servant of the servants of God.

The pope lost his temporal power in 1870, and remained confined to the Vatican until 1929. See Papacy; Rome; Vatican.

POPE, ALEXANDER (1688-1744). English poet and satirist. He was born May 21, 1688, in Lombard Street, London, where his father was a prosperous linen-draper. Bred in the Roman Catholic faith, his religion made it impossible for him to enter any of the professions. He therefore followed his own predilection for literature. His reputation was made first by his Essay on Criticism, 1711, and secondly by The Rape of the Lock, 1712, a brilliant satire on the fashionable life of his time, which brought him an interesting circle of literary friends, including Gay, Addison, and Swift. The first part of his translation of the Iliad appeared in 1715, the last part of the Odyssey in 1725. Pope received some £10,000 for the work, and was thus enabled in 1718 to establish himself at Twickenham, where he lived until his death, May 30, 1744.

During the period in which he was occupied with Homer he published two poems, the Elegy to the Memory of an Unfortunate Lady, and the Epistle of Eloisa to Abelard; he was also engaged on an edition of Shakespeare which came in for unfavourable criticism from a certain Lewis Theobald. This so annoyed Pope that he made Theobald the hero of his satirical poem, The Dunciad, 1728. His Essay on Man appeared in 1733.

POPERINGHE. Town of Belgium. In Flanders, it is 6 m. W. of Ypres and is a hop growing centre. During the Great War it was a centre of the British forces on the Flanders front. Held by German troops at the beginning of the war, it was occupied by Allied forces on Oct. 15, 1914. Serious damage was caused in the German advance in 1918. Toc H, a social centre for officers and men, was established here in 1915. The church and other buildings were restored and a memorial erected in the Grande Place. Pop. 11,767.

POPISH PLOT, THE. Name given to an imaginary Roman Catholic conspiracy in 1678. Taking advantage of a popular feeling against the duke of York and the Roman Catholics, Titus Oates (q.v.) swore an information, Sept. 6, 1678, before Sir Edmund Berry Godfrey, that a Popish plot was afoot to kill the king and massacre Protestants. Five weeks later Godfrey was murdered, and panic ensued. As a result of Oates's further allegations many Catholics in all stations of life were imprisoned and some were executed. Ultimately one of Oates's informers was found guilty of perjury, and in 1685 Oates was convicted.

POPLAR (Populus). Genus of trees of the order Salicaceae, natives of Europe, Asia, and N. America. They have alternate leaves, and the small flowers (without sepals or petals) are

Alexander Pope, English poet. After H. Hudson

Poodle. Champion corded poodle, showing one way of clipping this breed of dog

crowded in hanging catkins, which usually appear before the leaves. The sexes are on different trees. Familiar examples are the white poplar (*P. alba*), black poplar (*P. nigra*), Lombardy poplar (*P. italica*), and the aspen (*P. tremula*). See Lombardy Poplar.

POPLAR.

Borough of the co. of London. It lies N. of the Thames, combines the parishes of Poplar, Bow and Bromley, and contains the East and West India docks, Mill-wall docks and the Isle of Dogs. Here are the L.C.C. School of Engineering, 1906, and Poplar Hospital, in which about 60,000 patients are treated annually. In addition to Victoria Park, 73½ acres, the bor. has several small open spaces, including Island Gardens, 3 acres, in which is the entrance to the tunnel to Greenwich, opened in 1902. It sends two members to Parliament. Pop. 162,618.

POPOCATEPETL (Aztec, smoking mountain). Conical volcano of Mexico. Situated about 40 m. S.E. of Mexico city, it reaches 17,520 ft. alt.

POPPY (*Papaver*). Genus of about 40 erect, annual or perennial herbs, of the natural order Papaveraceae. They are natives of Europe, Asia, Africa, and Australia. They have erect stems with variously lobed or cut alternate leaves, and large, showy flowers on long stalks. The numerous small oily seeds can escape from openings under the eaves of the ripe capsule only when the latter is jerked. The field poppy is the cornfield weed. The larger opium poppy, with white or purple flowers, and the oriental poppy are frequently grown in gardens, but the Shirley poppy is the more general favourite. All the species have a milky sap with narcotic properties, and the seeds under pressure yield a valuable oil which is not narcotic. See Californian Poppy; Horn Poppy; Opium.

POPPY DAY. This name is sometimes given to Armistice Day (Nov. 11), because on that day artificial poppies are sold in the streets for the benefit of ex-service men.

POPULATION. Term for the inhabitants of any place, regarded collectively. In 1798 Malthus propounded the doctrine that population tended to increase more quickly than the means of subsistence. He could not have foreseen the marvellous development of science and transport by which food supplies have been both increased and made more accessible. But his doctrine will be recalled perhaps by the calculation made at Geneva in 1930 that if the increase since 1926 were maintained the pop. of the world would be doubled in 70 years.

Poppy. Left, scarlet field poppy. Right, varieties of Shirley poppy, a favourite garden species

In 1929 the population of the world was estimated at 1,849,500,000, divided as follows: Asia, 1,013,000,000; Europe, 475,000,000; N. America, 146,000,000; Africa, 143,000,000; S. America, 64,000,000; Oceania, 8,500,000.

As regards race the main divisions with their totals, are as follows:

Mongolian	680,000,000
Caucasian	725,000,000
Negro	210,000,000
Semitic	100,000,000
Malayan	104,500,000
Red Indian	30,000,000
	1,849,500,000

BRITISH EMPIRE. In 1929 the population of the British Empire was estimated at 449,600,000. This figure was divided as follows:

Great Britain and Northern Ireland	44,200,000
Europe (including Irish Free State)	3,400,000
Asia	332,650,000
Africa	50,400,000
America (including W. Indies)	11,150,000
Australasia	7,800,000
	449,600,000

The total shows an increase of only 4,000,000 over that for 1921, when most of the censuses were taken, but the actual increase is really 17,000,000, as the population of Egypt, which is now outside the Empire, was included in the 1921 figure.

As regards Great Britain the census figures show how the population has grown since 1821. The figures are in millions, and that for Ireland in 1921 is an estimate only.

	1821	1851	1881	1911	1921
England	11.3	16.9	24.6	34.0	35.7
Wales	0.7	1.0	1.4	2.0	2.2
Scotland	2.1	2.9	3.7	4.8	4.9
Ireland	6.8	6.6	5.2	4.4	4.5
United Kingdom ..	20.9	27.4	34.9	45.2	47.3

While the population of the United Kingdom grew by about 2,000,000 in the intercensal period 1911-21, the increase was less than any corresponding figure since 1811. This was due to increased emigration, war losses, and loss of births through the war. See Census.

PORCELAIN. Fine pottery of more or less translucent substance coated with a hard transparent glaze. It was discovered by the Chinese, wherefore it is often called china, and attained great perfection during the Ming dynasty, 1368-1644. The Japanese also have made porcelain for many centuries. It was not introduced to Europe until the late 17th and 18th centuries. See China; Pottery.

PORCH (Lat. porticus). In building, an enclosed place of entrance and exit projecting from the main mass. The church porch originated in the narthex (q.v.). In civil and domestic architecture the term includes the gabled cottage porch, and the verandah screening the entrance to a house in the "colonial" style.

The porch was the name given to the Stoics and their philosophy, from the fact that the founder, Zeno, lectured in the Stoa Poecile, the painted porch (or colonnade) in the market place of Athens. See Stoicism.

PORCHESTER OR **PORTCHESTER.** Village of Hampshire. It stands on Portsmouth Harbour, on the S. Rly. An important Roman station, it was one of the chief stations of the navy until the sea receded. In 1926 the remains of its Norman castle (12th cent.) became national property.

PORCUPINE. Rodent mammals of the family Hystricidae, distinguished by their defensive armour of hollow quills and spines.

They are distributed over S. Europe, S. Asia, Africa, and America. The common porcupine (*Hystris cristata*) is about 27 inches in length, and has black hair with a white crest on the head and band on the neck. The quills are ringed with black and white, and are of great length. Porcupines are generally found in hilly districts, and spend the day in burrows or clefts in the rocks, feeding at night upon roots and vegetables. When attacked, they rush backward at their foe, and can inflict very severe wounds with their quills. The porcupines of America have short quills and long tails.

Porcupine. The common crested variety found in Europe

Porcupine Ant Eater. Variant name of the echidna (q.v.).

PORCUPINE GRASS (*Spinifex*). Small genus of grasses of the tribe Panicaceae, three species natives of Australia, and one native of tropical Asia. The leaves are in the form of spines, which inflict terrible sufferings on man or beast venturing among the grass.

PORDENONE, It. Name taken by the Italian painter, Giovanni Antonio Licinio (1483-1539). He was born near Pordenone, Venetia. His frescoes in Treviso cathedral and the altarpiece of The Trinity for the cathedral of San Daniel are noteworthy.

Porcupine Grass. Spiny leaves and flower

PORK (Lat. porcus, hog). Uncured flesh of the hog. In Great Britain the greater part of the consumption is in the form of bacon. Still there is a considerable demand for fresh and salted pork, which in the U.S.A. and Canada is a standard and favourite article of diet. The United States is the greatest hog producing country in the world.

Pork is a forbidden food to both Mahomedan and Jew, perhaps originally because it deteriorates rapidly in hot weather. Hutehison (Food and Principles of Dietetics) states that 3½ oz. of pork require 3 hours for digestion, as compared with 2 hours for beef. Medium fat pork contains 60.9 p.c. of water, 12.3 p.c. protein and gelatin, 26.2 p.c. fat, and 0.6 p.c. ash. In very fat pork the percentage of protein and gelatin may be as low as 9.7 p.c. and the fat content as high as 45.5 p.c. See Pig.

PORLOCK. Village of Somerset. It is 6 m. from Minehead, and about a mile from the coast. Porlock Bay is an opening of the Bristol Channel, about 4½ m. across. Pop. 965.

PORPHYRY. In geology, name given to igneous rocks of varying composition. The famous red porphyry used by the Romans for an ornamental stone is obtained from Jebel Dukhan, in Egypt. Cut and polished, the rock shows bright red or white spots on a deep red background. Granite porphyries are generally pink to grey. A green variety was often used with the red as a contrasting ornamental stone, especially for objects of art and decorations. The green variety is found in Greece, and at Lambay Island, near Dublin.

PORPOISE. Genus of aquatic mammals belonging to the order Cetacea. The common porpoise (*Phocaena communis*) is about 5 ft. to

8 ft. long, is blackish on the upper parts and white below, and in form resembles a miniature whale, but has a more sloping head. It is found in herds or schools off the British, Scandinavian, and American coasts. It lives on fish, and is now killed mainly for its oil, a fine specimen yielding about three gallons. The so-called porpoise hide is the product of the white whale.

PORSENA or **PORSENNIA**, LARS. King of Clusium in Etruria. According to the Roman legend, he led his army against Rome to restore Tarquin. An attempt to storm the city was defeated by the valour of Horatius Coclès (q.v.).

PORSON, RICHARD (1759-1808). English scholar. Born at East Ruston, Norfolk, Dec 25, 1759, the son of a parish clerk, he went from Eton to Trinity College, Cambridge, where he had a brilliant career.

Richard Porson.
English scholar

Declining to take orders within the specified time, he lost his fellowship in 1792, but was in the same year elected regius professor of Greek at Cambridge. In 1806 he was made librarian of the London Institution. He died Sept. 25, 1808. Among

his works are editions of Aeschylus and of some of the plays of Euripides.

The Porson prize is an annual prize awarded to undergraduates of Cambridge University for the best translation of a passage of English poetry into Greek verse.

PORT ADELAIDE. Seaport of S. Australia. It stands on an estuary of the gulf of St. Vincent, 8 m. from Adelaide, of which it is a part, and has an excellent harbour and docks. Agricultural products are exported.

PORTADOWN. Urban dist. of co. Armagh, Northern Ireland. It stands on the Bann, 25 m. from Belfast, on the G.N.R. It has manufactures of linen, and a trade in agricultural produce. Pop. 11,727.

PORTAGE LA PRAIRIE. City of Manitoba, Canada. Situated 56 m. W. of Winnipeg, it is the centre of a famous farming district, and its industries include flour and brick making and grain elevators. Pop. 6,513.

PORT ALFRED. Seaside resort of the Cape Province, S. Africa. It stands at the mouth of the Kowie river, and is connected by rly with Grahamstown. The attractions include boating, golf links, and a racecourse. Pop. 873 whites.

PORT ANTONIO. Seaport town of Jamaica. Situated on the N.E. coast, 28 m. N.E. of Kingston, it has two good harbours, and is the chief exporting centre for the Jamaica banana trade. Pop. 6,272.

PORTARLINGTON. Town of the Irish Free State. It is partly in King's co. (Offaly) and partly in Queen's co. (Leix), 42 m. from Dublin on the G.S. Rlys. Pop. 1,954.

The Irish title of earl of Portarlington has been borne since 1785 by the family of Dawson, now Dawson-Damer. The family seat is Emo Park, Portarlington, and the earl's eldest son is known as Viscount Carlow.

PORT ARTHUR. City and port of Ontario, Canada. It stands at the head of Lake Superior, 991 m. from Montreal. It has a fine harbour, ships quantities of grain to Montreal and elsewhere, and in addition to large grain elevators has shipbuilding yards, sawmills, blast furnaces, etc. Pop. 14,886

PORT ARTHUR or **LUSHUN.** Fortified seaport at the S.W. end of the Liao-tung peninsula, Manchuria. It is a terminus of the Siberian rly. and has a secure harbour ice-free throughout the year. Pop. 23,702.

Porpoise. Common species, Phocaena communis, found off the coasts of Britain

The fortress was captured twice by the Japanese; easily in 1894 from China; and from the Russians between May, 1904, and Jan. 2, 1905, at a cost of

58,000 killed and wounded, the Russians losing 23,000 killed and 15,000 wounded and sick.

By the treaty of Portsmouth, 1905, Port Arthur was ceded by the Russians to Japan, and in 1915 the Chinese extended the lease for a further 99 years. During the occupation by Japan important rly. construction has been undertaken in the Liao-tung peninsula. See Russo-Japanese War.

PORT AUGUSTA. Seaport of S. Australia. At the head of Spencer Gulf, 259 m. N. of Adelaide by rly., it is the outlet of a district of gold, copper, iron, and coal mines, and of a pastoral area producing wheat and wool. Ostrich farming is carried on. Pop. 1,389.

Port au Prince. Capital and chief seaport of Haiti, West Indies. It ships coffee, hides, and logwood. Pop. 79,797. See Haiti.

PORT BANNATYNE. Watering place of Buteshire. It stands on Kames Bay, 2 m. from Rothesay. Near is Kames castle, dating from 14th cent.

Port Blair. Penal settlement of the Andaman Islands, in the bay of Bengal.

PORT CHALMERS. Port of South Island, New Zealand. Situated 8 m. from Dunedin, for which it is the deep water port, it has graving docks, etc. Pop. 2,700.

PORTCULLIS (Fr. porte, gate; coulisse, a groove). In military architecture, a strong, timber-framed grating like a harrow, made to slide up and down in stone grooves in the portals of fortified castles.

Portcullis. Defensive grating of medieval castles

Port Darwin. Former name of the port of North Australia now known as Darwin (q.v.).

PORTE or **SUBLIME PORTE.** Term formerly used for the government of Turkey. It comes from an Arabic word for gate. This special use of the word bears relation to the Eastern custom of using the gates of cities and royal palaces as places where justice was administered.

PORT ELIZABETH. Seaport of Cape Province, S. Africa. It stands on Algoa Bay, 712 m. from Johannesburg and 664 from

Cape Town, with both of which it is connected by rly. The Baakens river runs through the town, which is a shipping and distributing centre, but has no enclosed harbour, goods being landed at modern jetties. The roadstead, however, is sheltered. The manufactures include boots, flour, and jam, and there is an ostrich market. Pop. 33,370.

PORTEOUS RIOTS. Two affrays between the Edinburgh populace and the city guard in 1736. At the execution on April 14 of a smuggler named Wilson the crowd assaulted the guard, which, led by its captain, John Porteous, opened fire, killing five or six persons. Porteous was convicted of murder but respited, and the citizens dragged him from the Tolbooth prison and hanged him in the Grass Market on Sept. 7. Scott described the affair in *The Heart of Midlothian*.

PORTER, HORACE (1837-1921). American soldier. Born April 15, 1837, he entered the army and became a major-general. Closely associated with Grant, he served with distinction through the civil war. In 1866 he was made assistant secretary for war, and from 1869-73 he was executive secretary to President Grant. From 1897 to 1905 he was American ambassador in Paris, and he died May 29, 1921. He wrote reminiscences of the civil war.

Horace Porter.
American soldier

PORT ERIN. Watering place of the Isle of Man. It is 15 m. by rly. from Douglas and stands at the head of Port Erin Bay. Here are a fish hatchery and a marine biological station. Pop. 3,200.

Port Fairy. Town and harbour of Victoria, Australia. It is 187 m. by rail W.S.W. of Melbourne. Pop. 2,000.

PORT GLASGOW. Burgh and seaport of Renfrewshire, Scotland. It is on the Clyde, 20 m. from Glasgow, on the L.M.S. Rly. There are wet and dry docks, shipbuilding yards, iron foundries, and works for making rope, sailcloth, etc. Timber is imported. Port Glasgow arose from the village of Newark, and the ruins of Newark Castle are near. In 1668 the bailies of Glasgow bought the land, built a harbour, and made it the seaport of Glasgow. In 1775 it was created a burgh. Pop. 21,022.

PORT HARCOURT. Seaport of Nigeria. It stands at Iguaicha, and is the terminus of the rly. being constructed N. to join the Iddo-Kano Rly.

PORTHCRAWL. Seaport and urban dist. of Glamorganshire, Wales. It is 30 m. from Cardiff on the G.W.R. The town is visited for bathing and golf. It is proposed to construct a promenade 7 m. long. The urban district includes Newton. Pop. 7,000.

Port Herald. Town of the Nyasaland Protectorate, S. Africa. It is on the Shire river. 61 m. from Chindio.

PORT HOPE. Port and town of Ontario, Canada, in Durham co. Situated on Lake Ontario, 63 m. from Toronto, it is a watering place, as well as a market for the fruit of the neighbourhood. Pop. 4,456.

PORTISHEAD. Urban dist and watering place of Somerset. It stands on the estuary of the Severn, 11 m. from Bristol, on the G.W.R. There is a dock here covering 12 acres. Pop. 3,817.

Port Elizabeth. South end viewed from the lighthouse

PORT JACKSON. Harbour of New South Wales, Australia. The so-called Parramatta river is really the largest arm of the harbour. Sydney was founded on one of its coves. See Sydney.

Portland, Dorsetshire. The castle built by Henry VIII in 1520 and still in official use

PORTLAND. Peninsula of Dorsetshire known as the Isle of Portland. It is also an urban district. Connected with the mainland by Chesil Bank, it is 4½ m. long, with an average breadth of one mile. It is noted for its stone quarries. In 1921 the prison was made into a Borstal Institution. There is a castle, built in the 16th century. The naval harbour, Portland Roads, covers 2,200 acres, and is protected by gigantic breakwaters. The inhabitants live by fishing and pasturing sheep. The rocky extremity of the peninsula is called Portland Bill. Pop. 12,550.

BATTLE OF PORTLAND. This was a naval fight between the English and the Dutch, Feb. 18-20, 1653. The Dutch lost heavily both in warships and merchantmen, which were being convoyed from the East Indies.

PORTLAND BEDS. In geology this name is given to a sub-division of the Upper Jurassic system of rocks. The strata of the Portland Beds lie above the Kimmeridge Clay and below the Purbeck Beds, and are typical in the S. of England, particularly at Portland. Portland Beds consist chiefly of limestones, contain many fossil shells, and are extensively used for building stones. See Kimmeridgian.

PORTLAND. City of Maine, U.S.A. The largest and chief commercial city of the state, it stands on Casco Bay, 106 m. N.N.E. of Boston. The first settlement here was made in 1633, the place being first known by its Indian name of Machigonne. Later it was known as Falmouth. Longfellow was born here. Pop. 69,272.

PORTLAND. City of Oregon, U.S.A. It stands at the confluence of the Columbia and Willamette rivers, 53 m. N. by E. of Salem. Here is the medical department of the state university. The city has a zoological garden and about 350 acres of public parks. Portland harbour is accessible by the largest vessels, and carries on an important export trade in flour, grain, and lumber. The city has lumber and flour mills, foundries and machine shops, iron works, and furniture, saddlery, soap, candle, and paint factories. Portland was founded in 1845. Pop. 282,383.

Three towns in Australia are named Portland. One is in New South Wales; the second is in Victoria; and the third in South Australia.

PORTLAND, DUKE OF. English title. The earldom of Portland was held by the family of Weston from 1633-88. It was revived in 1689 by William III for his Dutch favourite, Hans Willem Bentinck (1649-1709), and his son Henry was made duke of Portland in 1716.

The 3rd duke, William Henry Cavendish-Bentinck (1738-1809), who became duke in 1762, was made a cabinet minister in 1765. In 1782 he was Lord-lieutenant of Ireland, and in 1783 was for a short time prime minister. From 1794 to 1801 he was home secretary under Pitt, and from 1807 to 1809 he was again prime minister. He married a daughter of the duke of Devonshire and took the additional name of Cavendish. He died Oct. 30, 1809. William John (1800-79), the 5th duke, was the eccentric recluse who was wrongly believed to have lived a double life, masquerading as T. C. Druce, a tradesman in Baker St., London. He died in 1879, when a kinsman, William John Arthur Cavendish-Bentinck (h. 1857), became the 6th duke. He was master of the horse 1886-92 and 1895-1905.

The duke's eldest son is called the marquess of Titchfield. The chief residence of the family is Welbeck Abbey, in Nottinghamshire. The London property around Welbeck Street, Portland Place, Baker Street, and neighbourhood owned by the 5th duke was left by him to his sisters, one of whom was Lady Howard de Walden.

The Portland club is a London social club. It was founded in 1816 and is generally recognized as the chief card playing club. The house is at 9, St. James's Square, S.W.

The Portland Vase is a fine example of cameo-glass of the early Roman empire. Formerly in the Barberini palace, Rome, the Portland family deposited it from 1810-1929 in the British Museum. Shattered by a madman in 1845, it was skillfully restored.

PORT LOUIS OR ISLE OF FRANCE. Seaport of Mauritius, capital of the island. There are botanical gardens and two observatories, astronomical and meteorological. The exports include sugar, aloë fibre, coconut oil, etc. Pop., with suburbs, 54,460.

PORTMADOC. Urban dist., market town and seaport of Carnarvonshire, Wales. It stands on Tremadoc Bay, 16 m. from Carnarvon, on the G.W.R. It has a commodious harbour, and exports slates. Market day, Fri. Pop. 4,185.

PORT MAHON. Spanish naval station and seaport. It is the capital of Minorea, Balearic Isles, and has an arsenal and a wireless station. Pop. 17,500.

PORTMAN, VISCOUNT. British title held since 1873 by the family of Portman. Edward Berkeley Portman (1799-1888), a Dorset landowner, was made Baron Portman in 1837, and a viscount in 1873.

Portman Square is a London square. At the S.W. end of Baker Street, Marylebone, W., it is named after William Henry Portman (d. 1796), owner of a large estate in Marylebone. Begun about 1764, it was completed about 1784.

PORT MORESBY. Capital and chief port of Papua. It is centrally situated on the sheltered and picturesque Fairfax Harbour, has regular steamship communication with Sydney, and has a wireless station. It dates from 1873. Pop. 3,000.

PORT NOLLOTH. Port of Namaqualand, S. Africa. It is on the N.W. coast of the Cape Province, is the terminus of the rly. that runs to the copper mines at O'okiep, and has regular steamship communication with Cape Town. Pop. 1,600.

3rd Duke of Portland
British statesman
After Stothard

6th Duke of Portland
British nobleman
Russell

PORTOBELLO. Wateriog place of Midlothian, Scotland, part of the city of Edinburgh. It stands on the Firth of Forth, 3 m. from Edinburgh (q.v.) proper.

PORT OF SPAIN. Seaport and capital of Trinidad, British W. Indies. Situated on the E. coast and a finely built town, it exports cocoa, sugar, asphalt, coconuts, copra, rum, and petroleum. It is also known as Spanish Town. Pop. 66,836.

PORTON. Hamlet of Wilts, 5½ m. N.E. of Salisbury, with a station on the S.R. Here is a chemical warfare experimental station of the British navy.

PORTO RICO. Island in the W. Indies, a possession of the U.S.A. The easternmost and smallest of the Greater Antilles, it lies 75 m. E. of Haiti, and measures 100 m. by 38 m. The elevated parts are covered with forests of palms. Sugar, coffee, cotton, bananas, and tobacco are produced and cattle rearing is an important industry. The capital is San Juan; other large towns being Ponce and Mayaguez. Discovered by Columbus in 1493, and settled by Juan Ponce de León in 1510, the island remained a Spanish possession down to 1898, when it was ceded to the U.S.A. Its area is 3,435 sq. m. Pop. 1,422,000, about two-thirds whites. See West Indies.

PORTPATRICK. Seaport and watering place of Wigtownshire. It is 7 m. from Stranraer and 21 m. from the coast of Ireland. From 1600 to 1849 it was a station for the packet service to Ireland. Pop. 1,100.

PORT PHILLIP. Harbour of Victoria, Australia. The largest indentation on the Victorian coast, it is 30 m. from N. to S. and 30 m. across at its widest part. It was colonised in 1835, and gave its name to the district which in 1851 became Victoria.

PORT PIRIE. Seaport in S. Australia. It stands on Spencer Gulf, and has smelting works for the Broken Hill silver mines. It exports ore and wheat. Pop. 2,527.

PORTREE. Town of Skye, also the capital of the island. It stands on Portree Bay, on the western side of the island, 120 m. from Oban, with which it is connected by steamer. It is visited by tourists. Pop. 2,120.

PORT ROYAL. Name of a famous Cistercian convent in France and of a school of theological thought to which it gave rise.

Portland Vase. Roman cameo-glass vase formerly loaned to the British Museum. See above

Founded in 1204 by Mathilde de Garlande, it stood between Versailles and Chevreuse, in the valley of the Yvette. Early in the 17th century it underwent a great revival under Jacqueline Marie Angélique Arnauld (q.v.), and had the support of S. Francis de Sales, Blaise Pascal, and others, and removing to Paris in 1626, in 1633 began

a new life in the Faubourg St. Jacques, Paris, where it became a centre of Jansenist and educational and anti-Jesuit activity. Political jealousy and ecclesiastical opposition forced the recluses to vacate Port Royal des Champs for Les Granges, a farm near by. Finally,

Earl of Portland,
English politician
After Simon de Bois

the remaining members having been expelled in 1709, the buildings were destroyed, by order of Louis XIV, Jan 22, 1710. See Jansenism.

Port Royal. Seaport and naval station of Jamaica. It has a naval dockyard, arsenal, barracks, hospital, etc. Pop. 1,004

Portrush, Northern Ireland. Ruins of Dunluce Castle formerly a stronghold of the earls of Antrim

PORTRUSH. Urban dist., seaport, and watering place of co. Antrim, Northern Ireland. It stands on Ramore Head, 67 m. from Belfast. An electric line connects it with the Giant's Causeway, 7 m. away, and near are the ruins of Dunluce Castle. There are golf links and good bathing. Pop. 2,100.

PORT SAID. Town in Egypt, at the N entrance of the Suez Canal. Named after Said Pasha, it stands on land reclaimed from the sea, and was founded in 1859 as a coaling station. Pop. 100,900.

Adjoining Port Said is a model town, Port Fuad. Pron. Sigh-id.

PORTSEA. Peninsula of Hampshire, known as the island of Portsea. It lies between Portsmouth and Langstone Harbours. On it stands Portsmouth, and part of that borough is known as Portsea.

Portslade. Urban dist. and watering place of Sussex. It is 4 m W of Brighton, with a station on the S. Rly. Pop. 8,136.

PORTSMOUTH. City, naval station, and seaport of Hampshire. It stands on a peninsula jutting into the English Channel, and is 74 m from London, on the S. Rly. The city consists of Portsmouth proper, Portsea, Landport, Southsea, and Cosham. Portsmouth and Portsea, facing the harbour, are

the naval districts; Southsea is a watering place. In 1926 Portsmouth was made a city, in 1927 it became the seat of a bishop, and in 1928 its chief magistrate was made a lord mayor. It returns three members to Parliament

Apart from the naval establishments, the chief buildings are the town hall, the church of S. Thomas Becket, dating from the 12th century but largely restored, and now the cathedral, the fine parish church at Portsea, the garrison church, and the Roman Catholic cathedral. There is a grammar school and a fine municipal college. Other buildings of interest include the Star and Garter, the museum in the old guildhall, and the Dickens museum. There are theatres, picture palaces, and a concert hall. At Southsea are a fine esplanade and an extensive common. Steamers go regularly from here to Ryde and Southampton. A ferry and a floating bridge connect it with Gosport. The royal dockyard covers over 300 acres and has 10 m. of rlys. Connected with it are Admiralty House, barracks, hospitals, a naval college, museum, and a torpedo range. N. of the dockyard is Whale Island, where is the naval gunnery school. Southsea Castle, now a fort, was built by Henry VIII in the 16th century. Pop. (1921) 240,700 (excluding non-civilians).

Portsmouth Harbour is an opening of the English Channel, 4 m. from N. to S.

PORTSMOUTH. City of New Hampshire, U.S.A. It stands on the Piscataqua river, 58 m. by rly. N. by E. of Boston. It has a capacious harbour, containing a number of picturesque islands, on one of which there is a U.S. navy yard. Boots and shoes are manufactured; marble is quarried. Settled in 1623, Portsmouth became a city in 1849. The peace treaty between Russia and Japan was signed here, Sept. 5, 1905. Pop. 13,600.

Another Portsmouth is a city of Virginia. It stands on the Elizabeth river opposite Norfolk, and has a large naval yard. The buildings include Trinity church, dating from 1762, the city hall, and a naval hospital.

PORTSMOUTH, LOUISE DE KÉROUALLE, DUCHESS OF (1649-1734). Mistress of Charles II of Great Britain. She belonged to an old Breton family. In 1672 she bore the king a son, who was created duke of Richmond; in 1673 she was created duchess of Portsmouth. Unpopular in England, owing to her insatiable avarice, after Charles's death she returned to France. She died in Paris, Nov. 14, 1734.

Portsmouth. 1. George Hotel, High Street, where Nelson spent his last night ashore. 2. The City Hall. A fine classic building erected in 1890. 3. Parade Ground of the Royal Naval Barracks

Stephen Cribb, Southsea

The title of earl of Ports mouth has been borne since 1743 by the family of Wallop. The earl's eldest son is called Viscount Lymington.

Port Stanley. Seaport and capital of the Falkland Islands. Whale products, wool, hides, etc., are exported. Pop. 900.

PORT SUDAN. Seaport of Sudan, on the Red Sea. It is the centre of traffic with the Sudan in gum, cotton, sesame, senna, and ivory. There is an extensive harbour. Pop. 7,000.

PORT SUNLIGHT. Industrial town of Cheshire. It lies 3 m. S. by E. of Birkenhead on the L.M.S. Rly., and is reached from the river Mersey by a tributary, Bromborough Pool. The estate, laid out in 1888 by Messrs.

Louise de Kéroualle, Duchess of Portsmouth After Lely

Port Sunlight, Cheshire. The Post Office in this model industrial village Courtesy of Lever Bros.

Lever Bros. Ltd., covers 235 acres. There are large recreation grounds, social clubs, and welfare institutions. See Leverhulme, Viscount.

PORT SWETTENHAM. Seaport on the Strait of Malacca in Selangor. It dates from 1901, when the rubber of the Federated Malay States required a port for export.

PORT TALBOT. Seaport of Glamorgan-shire, Wales. It stands on Swansea Bay, 11 m. from Swansea, on the G.W.R. It has two large docks, and copper smelting is an industry. Founded in the 19th century, it was made a bor. in 1921. It absorbed the borough of Aberavon and included the urban dist. of Margam and some rural areas. Aberavon has large tinplate and engineering works, and gives its name to a co. division which returns one member to Parliament. Pop. 40,039.

PORTUGAL. Republic of S.W. Europe. The ancient Lusitania, it is bounded N. and E. by Spain, and W. and S. by the Atlantic Ocean. Its area is 34,254 sq. m., or, with the Azores and Madeira Islands, 35,490 sq. m. Pop. 5,621,977 and 6,032,991 respectively. Lisbon is the capital and largest town; Oporto is the only other populous place.

Physically, Portugal is an integral part of the Iberian Peninsula. The largest mt. range is the Serra da Estrela, 6,540 ft. The chief rivers are the Minho, Guadiana, Douro, and Tagus. The coast, some 500 m. in length, is generally low and flat. Sulphur, copper, wolfram, lead, coal, tin, silver, gold, and iron are found. Salt is obtained from the Aveiro lagoon and other salt-marshes. The climate generally is equable and temperate.

Portugal, famous in the story of maritime exploration and discovery, possesses colonies in Africa and Asia as follows: Capo Verde Islands, Guinea, Principe and St. Thomas Islands, Angola, East Africa or Mozambique, Goa, Diu, Timor, Macao, etc. Their total area is 945,575 sq. m.; and they have a pop. of over 10,000,000.

An independent state since the 12th century and a monarchy until 1910 (Oct. 5), the existing constitution was adopted Aug. 20, 1911. It provides for a president and two

chambers, viz. the national council of 164, elected for three years by direct suffrage; and an upper chamber of 71, elected by all the municipal councils and renewable as to one half of the members every three years. The president of the republic is elected by both chambers, his term of office being for four years; he may not be re-elected. There is no state religion, but the predominant faith is Roman Catholic. Education is compulsory. There are three universities. Military service is compulsory between the ages of 17 and 45. The peace strength of the army is about 35,000. There is a small navy. The currency unit is the gold escudo of 100 centavos.

Agriculture is backward. Forests cover over 4,000,000 acres, with pine, oak, cork, chestnut, and Pyrenean oak trees. The vine is generally cultivated, and wine the most important product. In the mountainous regions rye is grown and sheep and goats reared; in the N., maize and cattle are raised; in the S., wheat and swine, large herds of pigs fattening in the oak forests. Olive trees cover nearly 1,000,000 acres; figs, tomatoes, onions, known as Spanish, potatoes, oranges, nuts, etc., are grown; silkworms and bees are reared. Oxen are used for agricultural work and transport. Fish abound, and sardines and oysters are exported.

Cotton spinning and weaving have been firmly established; porcelain tiles, called azulejos, are made; there are large cooperages, and articles of cork are largely exported.

During the Great War, of 65,000 officers and men sent to France, 1,860 were killed and about 12,000 were wounded or missing. Some 35,000 European Portuguese troops and upwards of 100,000 native askaris took part in the war in Angola and in the fighting for German E. Africa. The Peace Conference on Sept. 3, 1919, allotted to Portugal the territory S. of the Korumu, formerly part of German E. Africa. See Spain, map.

PORTUGUESE MAN OF WAR. Popular name for the genus Physalia of the Siphonophora, a group of jelly fish. In this group the animals occur in stocks or colonies. In Physalia the individual members are attached

Portuguese Man of War, showing air-filled float which enables the jelly fish to sail before the wind

to a large float filled with air, which is supposed to hear some resemblance to an ancient man of war. The colony is found floating on the surface of the water in the S. seas. Some of the dependent polyps are provided with mouths and act as feeders to the colony; others are reproductive, and the rest are provided with stings capable of injuring anyone handling them.

PORTUMNA. Town of Galway, Irish Free State. It is 39 m. from Galway and near the head of Lough Derg. The castle was a seat

of the marquess of Clanricarde, from whom it passed to Viscount Lascelles. In 1922 it was burned down. Pop. 892.

PORT WINE. Red, rich, strong wine grown near the mouth of the Douro, Portugal, and named from Oporto. The wine-growing region, Alto Douro, lies mainly on the S. bank of the river, 60 m. E. of Oporto. The grapes, carefully gathered, are foot-pressed. Before fermentation is complete, about five parts of alcohol are added to 100 of wine; after the first racking more spirit, generally brandy, is put in the wine, and this is again repeated before shipping. Port wine thus contains from 17 to 25 p.c. of alcohol, the average amount varying from 18 to 21 p.c. Port contains from 7 to 15 p.c. of sugar and a fair amount of tannin. Some white port is also manufactured.

Port-wine Mark. Mark present on the skin at birth, due to dilatation of the blood-vessels of the skin.

POSEIDON. In Greek mythology, son of Cronos and Rhea, and god of the sea. For conspiring against his brother Zeus he had to work for a period for Laomedon, king of Troy, for whom he constructed the famous walls of Troy; but when he claimed the reward promised, Laomedon refused to make good his word. Poseidon accordingly sent a sea-monster, which ravaged the country and exacted a tribute of maidens until killed by Hercules. The palace of Poseidon was supposed to lie at the bottom of the sea. The symbol of his powers was a trident, and the Isthmian Games were held in his honour. His wife was Amphitrite (q.v.), and the Romans identified him with Neptune.

POSEN OR POZNAN.

City of Poland. It stands on the Warthe, here crossed by five bridges, 158 m. from Berlin. Its nucleus is the old Polish city, where at one time the kings lived. Near is the district of Wilhelmstadt, built by the Prussians when they acquired Posen in 1792, and around both are modern suburbs. Of the churches the chief is the cathedral. Scenar buildings include the town hall, the palace built in the 20th century for the German emperor, and several museums and libraries. There is a large

Posen. The palace built, 1905-10, as a residence for the German emperor

university. Posen has a trade along the river and many prosperous industries. It was returned to Poland in 1919. Pop. 226,800.

Before 1918 there was a province of Prussia called Posen, this being practically the same as the existing county.

POSITIVISM (Lat. positivus, laid down). Term applied to the philosophic system of Auguste Comte (q.v.). It only recognizes facts or laws established by scientific methods and unaffected by metaphysical or theological considerations. Facts are the phenomena manifested to us by the senses, beyond which nothing exists; laws are the relations of certain facts to other facts. Philosophy investigates the relations of the general laws of each particular science; the object of its search is not the absolute, the causes and principles of things; its only concern is the relative. Regarded as a religious system, Positivism is the worship of humanity regarded as a whole and single being. Comte's leading idea was that all intellectual training should serve to cultivate the whole character.

POST IMPRESSIONISM. School of painting, originating in France with Paul Cézanne (q.v.). The Post Impressionist strives to record the emotional significance of things, instead of their mere outward appearance, which is the Impressionist's principal aim. (See Impressionism.) In practice this involves the substitution of deliberate design for passive naturalism, which in turn means a drastic simplification of natural forms.

POST OFFICE. Government department for receiving and transmitting letters, packages,

Poseidon. Greek god of the sea. From a statue of the 4th century B.C. National Museum, Athens

telegrams and so on. The system, similar to-day in all civilized countries, has developed from the ancient employment of state carriers. In the U.K. in 1035 a service of messengers was set up to convey letters along eight main routes at a minimum charge of two-pence. In 1653 the posts were farmed to John Manley for £10,000 a year. Thirty years later a private penny post was established in London, but it was forfeited, and resumed as a branch of the official system, and exists to-day as the London postal district service. A statute of 1710 created a general post office for the three kingdoms and, in addition, for the colonies, the organization being under the control of the postmaster-general.

When post-boys were replaced by mail coaches, the service was completely remodelled. The first dispatch of mails by train was made in 1830, between Liverpool and Manchester. Rates were determined by distance till on Jan. 10, 1840, at the instigation of Mr. (afterwards Sir) Rowland Hill, a uniform penny postage became operative. Prepayment by means of postage stamps replaced the old system of collecting dues on delivery. Later devices include postal sorting-carriages on the railway, special mail trains, and the apparatus by which letters are delivered from and collected by expresses. The registration of packages containing valuables dates from 1792. Imperial penny postage was instituted in 1898 and penny postage between the U.K. and the U.S.A. in 1908. In 1918 the postage was increased to 1½d. for 4 ounces, and for postcards to 1d. In 1920 letters (up to 3 oz.) became 2d., and postcards 1½d. In 1928 the rates were reduced to 1½d. (2 oz.) and 1d. for letters and postcards respectively.

The postal money order business dates from 1792; postal orders from 1881; the savings bank from 1861; the parcel post from 1883; telegrams from 1870. There followed the telephone and more recently the wireless and air mail services, and the C.O.D. system. Other modern extensions of post office business are the issue of licences, the sale of

is grown largely for manufacture into starch, syrup, and potato spirit or ethyl alcohol.

POTCHEFSTROOM. Town of the Transvaal, S. Africa. It stands on the Mooi river, at an elevation of 4,436 ft., 88 m. by rly. S.W. of Johannesburg. The university college is a constituent college of the University of S. Africa. The town was founded by a band of wandering Boers under Potgieter in 1839, and was for some time before 1863 the capital of the little Boer republic. In the war of 1880-81 a small British force surrendered here to the Boers. Pop., whites, 9,336.

POTEEN or **POTHEEN** (Irish poitin, little pot). Whisky illicitly distilled by Irish peasantry. The making of poteen arose at the end of the 18th century owing to the government's refusal to license small stills in Ireland. Smuggling became so general that, in 1815, to discourage illicit distilleries, licences were granted to stills of only 40 gallons content. It is still occasionally made in remote parts.

POTENT. In heraldry, a fur represented by crutch-like figures of white and blue, placed in rows, the base of the white against the base of a blue. The variants are, counter-potent, in which the bases of one tincture are placed against bases of the same; and potent-counter-potent, in which the rows are so arranged that the base of a metal figure rests on the centre of a coloured crutch head, and so on alternately.

POTENTIAL. Broadly, a term meaning power to do work. A steam boiler under pressure, an elevated body of water, a cylinder of compressed gas or air, all have potential, whenever the necessary conditions are satisfied. The essential factor is always a difference.

In electricity, the term is used for the work done in charging a body with a positive charge taken from a body in which the electrical tension is zero. The earth itself has potential, but it is so little that it is regarded as nothing—zero potential. All practical purposes are served by regarding electric potential as pressure. Hence it is regarded as potential difference and commonly expressed by the letters P.D.; while another expression used for it is electromotive force (E.M.F.). It is measured in volts. *See* Electricity.

POTENTIOMETER. In electricity, an instrument for measuring or comparing the electromotive force (E.M.F.) of a cell, or of a current passing through a resistance. The potentiometer comprises a wire or coil of high resistance with sliders which enable it to be tapped at various points. The potential to be measured is compared with a potential of known value (e.g. that of a standard cell), and the unknown value found by calculation. The term is loosely applied to the apparatus, similar in principle, more correctly called a potential divider. It is used to vary the potential of a circuit.

POT HOLE. Hollow in a river bed which is deepened by the gyration of accumulated stones by the current. In a limestone region, after having drilled a pot hole, the water often reaches a marked plane of stratification, i.e. the division plane between two beds or strata of rock, and along this it dissolves the rock, in course of time producing a cave. Such limestone pot holes become shafts or swallow holes, down which the river disappears.

POTOMAC. River of the U.S.A. It is formed by the junction of two branches about 14 m. below Cumberland in Maryland. The main river follows a general S.E. course of 365 m. and enters Chesapeake Bay by an estuary from 2 m. to 7 m. broad, and nearly 80 m. long. It forms a cataract about 35 ft. high, 15 m. above Washington, near which city it becomes navigable. There was much fighting around the Potomac river during the American Civil War.

POTOMAO GROUP. Series of deposits of the Lower Cretaceous and Jurassic period, found in N. America. Rocks of this group consist chiefly of sands, gravels, and clays and are a source of glass sand and iron ores. They are typical in New Jersey up the Mississippi valley to Tennessee, etc.

POTOSÍ. Mountain, dept., and town of Bolivia. The mt. is 15,400 ft. high, and is the site of one of the richest silver mines known. It is now worked for tin. The dept. occupies the S.W. of the country and adjoins Chile on the W and Argentina on the S. Its area is 45,031 sq. m. Pop. 529,259.

The town of Potosí, one of the highest inhabited places in the world, stands some 13,000 ft. above the sea on the side of the mt.; much of it is in ruins, having been, in part, deserted. It contains a large granite-built cathedral. Pop. 34,083. *See* Bolivia.

POT-POURRI (Fr. rotten pot). French translation of olla podrida the name of a Spanish dish

made up of different kinds of meat and vegetables. It has come to be used for any composition, literary or musical, put together without regard to order. The name is also in common use for a mixture of dried rose petals, lavender, and spico kept for its fragrance in china jars.

POTSDAM. Town of Prussia. It stands on an island in the Havel, 16 m. from Berlin. Around are a number of lakes formed by the Havel. It is chiefly known for its palaces until 1918 the residences of the Hohenzollern family. Outside the town, in a large park, is the palace of Sans Souci built by Frederick the Great, who also laid out the park in the French style; in it are an orangery and a model of a Pompeian villa. The Brandenburg Gate resembles a Roman triumphal arch. Pop. 64,203. *See* illus. below.

POTSHERD. Fragment of an earthenware pot, or any broken piece of earthenware. In archaeological exploration such sherds are of great importance, often enabling the successive layers in ancient settlements to be identified. Mounds may exhibit neolithic sherds found at the base and Arab pottery on the surface.

Potsdam. The New Palace, built 1763-69, by Frederick the Great. *See* above

Post Office. Headquarters of the British postal service, St. Martin's-le-Grand, London

national health insurance stamps and war saving certificates, and the distribution of old age and other pensions and allowances. In 1928 the Post Office ceased to conduct the business of life insurance. In Dec., 1928, the Canadian Government restored the penny post from Canada to all parts of the Empire.

The headquarters of the British postal service are at St. Martin's-le-Grand in central London. The staff numbers upwards of 230,000. The receipts in 1928-9 were £65,360,000 and the expenditure £57,314,000. The head is the postmaster general, who is sometimes a member of the Cabinet.

POTASSIUM. One of the alkaline metals. Its chemical symbol is K (Arabic, Kali); atomic weight, 39.1; atomic number 19; specific gravity, 0.87; melting point, 62° C; in colour, silver white with a touch of violet and a brilliant metallic lustre. Being lighter than water, it will float on its surface, but it instantly decomposes the water with which it is in contact owing to its great affinity for oxygen. It is the metallic base of potash.

Potassium was first isolated by Sir Humphry Davy in 1807. It does not occur native in the crust of the earth, but is very widely distributed, as a constituent of feldspar and mica, and thus of all granite rocks; the mineral sylvin or silvite is a chlorite, leucite a silicate, of potassium; nitre or saltpetre is crude nitrate of potassium; it is found as carbonate mostly in the ashes of all plants, particularly in those of seaweeds; carnallite, the mineral of the potash formations of Prussia, consists of from 16 p.c. to 27 p.c. of potassium chloride.

Potassium is a powerful chemical reagent in analytical work. It has no direct metallurgical uses, but is largely used in the art of electro-plating. Caustic potash, or potassium hydroxide, prepared by the interaction of potassium carbonate and milk of lime, rapidly destroys both animal and vegetable substances with which it is brought into contact. Caustic potash is employed for making soft soap. Potassium bromide and the iodide of potassium are much used in medicine. Potassium chlorate is used as an oxidising agent, and for many purposes in industrial chemistry.

POTATO (*Solanum tuberosum*). Tuberos rooted perennial plant of the order Solanaceae. A native of S. America, it is said to have been introduced from Peru into Europe by Spaniards early in the 16th century and into Britain by Sir Walter Raleigh about 1585. There have been over one thousand different varieties of potatoes, but, owing to their susceptibility to the attacks of a mould-like fungus (potato disease), relatively few sorts are of cultural worth or marketable. Apart from its culinary use, the potato

The largest heap known is Monte Testaccio, in Rome, 1,000 paces round by 115 ft. high, comprising fragments of imported jars, and proving an extensive trade with Spain and Africa. In Anglo-Saxon graves potsherds were intentionally thrown upon the body, a superstition mentioned in Shakespeare's Hamlet.

POTTER, PAUL (1625-54). Dutch painter. Born at Enkhuysen, he was a pupil of his father, Pieter, at Amsterdam, and of Jakob de Wit at Haarlem. He painted landscapes with horses or cattle, generally on rather a small scale; but his famous hull, now at the Mauritshuis, at The Hague, is nearly life-size. He died in Amsterdam.

POTTERIES, THE. District in N. Staffordshire, including the former county borough of Hanley, the former bors. of Stoke-upon-Trent, Burslem, and Longton, the former urban dists. of Tunstall and Fenton, and several parishes formerly in adjoining rural dists., all of which were united, March 31, 1910, to form the county bor. (now city) of Stoke-upon-Trent. The Potteries is the principal centre in Great Britain for the manufacture of earthenware, china, etc., and measures some 9 m. in length by 3 m. in breadth. Here is the N. Staffs. coalfield. See Stoke-upon-Trent; Tunstall.

POTTER'S BAR. District of Middlesex. On the Great North Road, 13 m. from London and 3 m. N. of Barnet (q.v.), on the L.N.E. Rly., it is under the control of the South Mimms rural district council. Here, on Oct. 1, 1916, a Zeppelin was brought down in flames by Lieut. W. J. Tempest, D.S.O.

POTTERY. The making of earthenware and the objects so made. Fashioned out of the moist plastic earths called clays, with or without other materials, it is hardened by air-drying or by firing. Fired pottery becomes stone-like, and furnishes some of the most imperishable relics of early culture.

The fabrics were built up with the free hand by adding consecutive pieces of ribbons of clay. The fashioning of vessels on

rounded pebbles or pivoted disks enabled the potters to turn the fabrics towards them as they proceeded. This culminated in the potter's wheel, perhaps in early dynastic Egypt, where also the open hearth was replaced by the pot-oven or kiln. Simple methods of decoration, by finger-marks, incised lines, and smears of ochre, were followed by the admixture of sand, powdered sherds, and other materials, to avert cracking.

Pottery: two stages in manufacture. 1. Turning on lathe to complete the shape. 2. Decorating a vase before glazing.

The roughened surfaces encouraged the use of slip, thin fluid clay applied before baking. This in later ages was supplemented by various processes of burning, varnishing, enamelling, and glazing.

The Greeks held the potter's art in high esteem. Their skill undoubtedly came from Egypt, and vases of good form and workmanship date from 900 B.C. Three distinct styles exist, primitive, geometric, and archaic, and the fine vase period follows, which extended over 400 years from the 7th to the 3rd centuries B.C. Roman ware divides itself into several classes, Samian, Grey, and Upchurch wares, beside the coarse native pottery made where suitable clay was found.

From the East enamelled earthenware was introduced into Europe, mainly through such intercourse as that between the Moors and Spain. Moorish potters established themselves in Malaga and Valencia, and the art spread thence to Majorca and Sicily. Many Italian cities became famous for ceramic productions, e.g. Gubbio, Faenza, from which comes the name faience, Siena, Urbino, and Pesaro. Delft in Holland made a ware which may be regarded as a compromise between Italian majolica and Chinese porcelain.

The early English potters of the 16th and 17th centuries devoted themselves to the production of ware of a homely character. Josiah Wedgwood (1730-1795) did more to raise the quality of English ware than any other maker. Deriving his artistic inspiration from the antique, he produced beautiful shapes, improved existing materials, and by long and energetic research discovered new mixtures. Side by side with the growth of earthenware was that of the pottery called stoneware, so named from its excessive hardness. It came to Britain from the Low Countries and Germany, the first English factory being established at Fulham by John Dwight in 1611. Fine salt-glazed stoneware was made at Burslem, where pieces were produced in 1690.

PORCELAIN. As earthenware and faience developed in the West, so porcelain more especially occupied the Oriental potters. The Chinese were the real inventors of porcelain, perfection being attained during the Ming dynasty, 1368-1644. Early specimens were exported to every civilized country, and found their way into Europe, which resulted in the manufacture of porcelain by potters in almost every Western country. France preceded Germany in the production of porcelain, soft paste only being made up to 1768, when the true clay was discovered. True porcelain, made as the Chinese wares, was a distinction long left to Dresden.

In England, Chelsea porcelain stands first in point of time, the earliest known pieces being dated 1745. London also made porcelain at Bow, the industry there making great progress under the proprietorship of William Duesbury, who also purchased the Chelsea works. In

1755 William Cookworthy discovered the true kaolin or china clay in Cornwall, which was extensively used at Worcester.

During the whole of the 19th century pottery manufacture increased in every country: the introduction of machinery added tremendously to the output, and many new processes were invented. Sevres and Dresden have both carried on to the present day, and so also have the Wedgwood and the Worcester factories.

POTTON. Town of Bedfordshire. It is 11 m. from Bedford, on the L.M.S. Rly. The church of S. Mary has a Norman font. The industries include engineering and the making of leather, parchment, and beer. Pop. 2,087.

POULTON-LE-FYLDE. Market town and urban dist. of Lancashire. It stands on the river Wyre, 3 m. from Blackpool, and is served by the L.M.S. Rly. It has an interesting church, S. Chad's, and a market cross. Market day, Mon. Pop. 2,732.

POULTRY. General term for domesticated fowls, ducks, geese, and turkeys. The utility breeds of poultry may be roughly divided into three classes. These are general purpose breeds that combine table with fair laying qualities, laying breeds, and table breeds. In the first named class are Langshans, Orpingtons, Plymouth Rocks, Rhode Island Reds, and Wyandottes; in the second, Leghorns, Minorcas, Andalusians, and Anconas; and in the third, Dorkings, Indian Game, and some of the French varieties or

Pound. Enclosure for straying animals on Hampstead Heath, London. See below

crosses of these with other breeds. Ducks, although aquatic in habit, will thrive almost anywhere, and ponds are by no means indispensable to their well-being. Geese thrive in almost any situation, and so do guinea-fowl, but turkeys require careful handling, as they are very susceptible to climatic conditions. See Duck; Goose; Incubator; Turkey; and under the headings of the individual breeds of fowl.

The Poultry Club is the ruling body of the British poultry industry. It was founded in 1867. The club quarters are at 3, Ludgate Broadway, London, E.C.4.

POUND. Unit of weight. The English unit of weight is the pound avoirdupois of 7,000 grains divided into 16 ounces. It was made the legal unit of weight in 1855. The pound troy consists of 5,760 grains, and is the measure used for gold and silver.

POUND. British monetary unit, in full the pound sterling. It was originally a weight of silver, i.e. 5,760 grains of a certain standard of fineness. In 1816 the silver standard was abolished, and replaced by a gold one, the gold sovereign or pound sterling becoming the unit. Its weight was fixed at 123.274 grains, and its fineness at 22 carats.

POUND (A.S. pund, enclosure) Enclosure erected by legal authority, in which cattle distrained for rent, or caught straying and doing damage on land belonging to another than their owner, or straying on the highway, can be confined pending payment. Pounds are either overt, i.e. open to the sky, or covert, roofed in. See illus. above.

POUNDS, JOHN (1766-1839). British philanthropist. Born at Portsmouth, June 17, 1766, he became interested in poor children,

teaching them reading and arithmetic, together with the rudiments of useful knowledge, and thus originating the movement for the institution of ragged schools. After his death, Jan. 1, 1839, memorial schools were established in several towns.

POUSSIN, NICHOLAS (1594–1665). French painter. Born at Villers, near Les Andelys, Normandy, he studied under Quentin Varin, and at Paris. In 1624 Poussin made his way to Rome, where he obtained the patronage of Cardinal Barberini. Painting historical pictures and landscapes in the classical style, he rapidly achieved fame. From 1640 to 1643 he was in Paris, but he had returned to Rome when he died, Nov. 19, 1665. There are fine specimens of his work in the National Gallery, London, at Dulwich, and in the Louvre.

His brother-in-law, whose real name was Gaspard Dughet, but who called himself Poussin, was a painter who excelled in landscapes, particularly those with stormy effects.

POUT (*Gadus luscus*). Marine fish of the cod family. Nearly related to the whiting, from which, however, it differs in the possession of a thin barbel and deeper body, it occurs round the W. shores of Europe, and attains a weight of 5 lb. It is used to some extent for the table.

POWER OF ATTORNEY. Authority given by one person to another to act on his behalf. In all English-speaking countries it is common, when a man is going abroad for some time, for him to execute a deed appointing someone to act as his attorney, or agent, in his absence. A power may be general, or it may contain limitations of the agent's authority.

POWERSCOURT. Town of co. Wicklow, Irish Free State. It stands on the Dargle, 3 m. from Bray. From it the family of Wingfield takes the title of viscount, a creation of 1743. Powerscourt Castle is a fine granite building standing in a large park and surrounded by magnificent mountain scenery.

POWIS, EARL OF. British title borne since 1804 by the family of Clive, later Herbert. The earls are descended from Robert Clive

Powis Castle, Montgomeryshire. The castle and hanging gardens from across the lower lawn
By courtesy of Country Life, Ltd.

(q.v.), whose son Edward was created Baron Powis, and in 1804 was raised to the rank of an earl. His son Edward, the 2nd earl, took the name of Herbert instead of Clive, and from him the present earl is descended. His estates are mainly in the counties of Shropshire and Montgomery, and his residence is Powis Castle, Welshpool, the seat of the Herberts since Elizabethan times. Pron. Po-is.

POY. Pseudonym of the British cartoonist, Percy Hutton Fearon. Born in Shanghai, Sept. 6, 1874, he studied art at New York and at Herkomer's school at Bushey. His

first cartoons appeared in the London journal, *Judy*, and later he was on the staff of several papers in Manchester. In July, 1913, he joined *The Evening News* (London), in which he created a number of popular pictorial figures, including John Citizen and Dilly and Dally.

POYNINGS, SIR EDWARD (1459–1521). Lord Deputy of Ireland. Born in Southwark, he supported Buckingham's rebellion in 1483, but on its failure escaped into Brittany. There he joined Henry, earl of Richmond, and with that prince he landed at Milford Haven, Aug. 7, 1485. He was appointed lord deputy of Ireland in 1494, and in that year enacted the statute, associated with his name, by which no measures might be introduced into the Irish Parliament without the previous sanction of the English king and his privy council; also that all existing English laws should be deemed to be in force in Ireland. Poyning's Law was not repealed until 1782.

POYNTER, SIR EDWARD JOHN (1836–1919). British painter. Born March 20, 1836, he studied art in England and in Paris. In 1869 he was elected A.R.A., becoming R.A. in 1876, and succeeding Millais as president in 1896. In 1871 he was appointed the first Slade professor at University College, London, and from 1871–76 was director of art and principal of the training schools at South Kensington. From 1894–1905 he was director of the National Gallery. In addition to painting classic genre and portraits in oil and water colours, he designed mural decorations at S. Kensington and mosaics in the Houses of Parliament. He resigned the presidency of the R.A., and died July 26, 1919, having been a baronet since 1902.

Sir Edward Poynter, British painter
Russell

POZIÈRES. Village of France. It stands 4½ m. E. of Albert, on rising ground which in the Great War gave the Germans valuable observation in the Somme battle area. It was stormed by the British 48th and 1st Australian divisions, July 23–25, 1916. Lost in the spring of 1918, its ruins were recovered by the British, Aug. 24, 1918. A cross on the ruins of the village commemorates the Australians. In 1930 a British memorial was unveiled here. See Somme.

POZZUOLI (Gr. Dicacarehia; Lat. Puteoli). Seaport of Italy. It stands on a promontory in the gulf of Pozzuoli, an inlet of the bay of Naples, 8 m. by rly. W. of Naples. The surrounding districts were crowded with the residences of wealthy Romans. Its mineral baths, used by the Romans, are still frequented.

In the vicinity are temples, tombs, baths, cisterns, the Serapeum or Temple of Serapis, and an amphitheatre. Pop. 20,304.

PRADO. Short name for the great art gallery at Madrid, the Real Museo de Pintura del Prado. It is the most important of Spanish art collections. The Spanish school is

represented from first to last, and there is a fine collection of Flemish and Italian paintings.

PRAEFECT (Lat. praefectus, set over). Title held by various officials appointed by superior authority, not chosen by the people, in the Roman constitution. Such were the praefectus urbi, or deputy governor of the city; the military and naval praefects; and the praefect of Egypt. See Praefect.

PRAENESTE. Ancient city of Latium, now represented by Palestrina (q.v.). It lay about 22 m. E. of Rome, on the borders of the country of the Aequi, and was traditionally believed to have been founded by Caeculus, son of Vulcan. It became a favourite resort. The Temple of Fortune was famed for its oracle. Archaeological discoveries include the Roman calendar, known as the Fasti Praenestini, and the Fibula Praenestina, a gold brooch inscribed with Latin of probably the 6th century B.C. See Phoenicia.

Praetorian Guard, from a bas relief
Louvre, Paris

PRAETOR. Second in dignity among the magistrates of the Roman republic, the consuls being first. The duties of the praetor urbanus were chiefly legal. There were also praetores militares charged with the administration of provinces. The praetors were preceded by lictors.

The Praetorian Guard was the term given to the household troops of the Roman Empire.

PRAGMATISM. Philosophical term of American origin, the idea of which was due to C. S. Pierce, and the first use of the word to William James. It signifies an empiricism which considers the practical value, the consequences and bearing upon human interests of an assertion or conception, to be the criterion of its truth. See James, W.

PRAGUE (Ger. Prag; Czech, Praha). Capital of Czechoslovakia. Situated on the Moldau (Vltava), the city has spread on to the neighbouring heights. On the left bank of the river is the Hradčany, the castle of the former kings of Bohemia. The old town on the right bank contains the Grosser Ring, the chief square, where are the fine town hall, the Kinsky Palace, and the old Hussite church, the Tyn Church. The cathedral was begun in 1344. There are two universities. The city is an important rly. centre, while the lower Moldau and the Elbe give routes for river traffic to Hamburg. Breweries, textile factories, iron foundries, and machine shops are among the industrial establishments. Pop. 676,663. See Moldau.

Prague, Czechoslovakia. The Charles Bridge across the Moldau, looking towards Hradčany, the castle of the former kings of Bohemia, now the residence of the President of the republic. In the centre is seen the cathedral of S. Vitus

The battle of Prague was fought May 6, 1757, during the Seven Years' War. Frederick the Great marched on the city, which was defended by about 75,000 Austrians. After a fierce fight the Prussians defeated their foes, who retired into Prague, which was then besieged and finally taken by Frederick.

PRAIRIE DOG OR **PRAIRIE MARMOT** (*Cynomys ludovicianus*). Rodent found in N. America and allied to the squirrel. There are three or four other species, all of which live in burrows. They are about a foot long. They construct mounds before their homes, which they use as watch-towers.

PRAIRIE HEN (*Tympanuchus americanus*). Bird allied to the grouse, native of N. America from the valley of the Mississippi to Ontario. The flesh is esteemed as food. About 19 ins. long, it is brown above, streaked with black and buff; the under-side pale brown, with the transverse marks white. In the breeding season males assemble at day-break in their "scratching places" and go through a performance of display in which low tooting and booming sounds are produced.

PRĀKRIT (Skt. natural, common). General name for the popular languages of India as opposed to the classical Sanskrit (q.v.). Until about A.D. 1000 the Prakrits were divided into four chief dialects which are the source of all the modern vernaculars of India. The chief source for the knowledge of early Prakrit is the Indian dramas, in which it is used by characters of lower rank.

PRASEODYMIUM. Rare earth metal of the cerium group. Its chemical symbol is Pr; atomic weight, 140.92; atomic number, 59; specific gravity, 6.475; melting point, 940 C°. See Neodymium.

PRAWN (Leander serratus). Stalk-eyed crustacean of the family Palaemonidae, common on the British coasts, particularly where there are submerged rocks in shallow water. About four inches long, it is clad in a translucent, jointed shell of greenish grey, which turns red when the prawn is cooked. There are two pairs of antennae. The first two pairs of legs are armed with pincers. The prawn swims by means of the six pairs of swimming feet under the hind body. It feeds upon the small green seaweeds and crustaceans. Prawns are caught in small ring-nets and in wicker traps. See illus. below.

PRAXITELES (fl. 360-340 B.C.). Greek sculptor. He worked at Athens, which was probably his birthplace. The only authentic work by him known to exist is the group of Hermes and Dionysus, discovered 1877, with the base and signature intact, among the ruins at Olympia; this is now in the local museum. There are, however, numerous copies of the Aphrodite of Cos and Aphrodite of Knidos, Sleeping Satyr, Apollo the Python-slayer, and other statues. Pron. Praxitel-eez.

PRAYER. Term used to denote a request made by an inferior to his superior and more particularly a request made by man to the supernatural being or beings who form the object of his worship. In the lowest forms of religion prayer is associated with the use of spells and charms.

A praying mat is used by Mahomedans. This is marked with a nick, the point of which is turned towards Mecca.

Prawn. Crustacean common around the British coast. See above

PRAYER BOOK. Authorised service book of the Church of England. Other churches in communion with it, such as the Church of Ireland, the Episcopal Church of Scotland, and the American Church, have service books which differ from the Anglican Prayer Book.

Prairie Dog. N. American burrowing rodent, allied to the squirrel
W. S. Berridge, F.Z.S.

worship in the English language. It did not go far enough in the direction of innovation to satisfy the more extreme reformers, such as Ridley and Hooper, and in 1552 the second Prayer Book was authorised, which went a long way to meet their demands, and represents the nearest approach made by the Church of England to assimilation with the services of the reformed churches abroad.

The accession of Elizabeth saw another revision of the Prayer Book, 1559, which was on the whole a return towards the position of the first Prayer Book. Under Elizabeth the Prayer Book assumed substantially the form which it still retains, and subsequent alterations have been of minor importance.

In 1927 the Prayer Book, as revised by the bishops, was accepted by the two convocations and by the Church Assembly. It was then submitted to Parliament, where it was rejected on Dec. 15 by the House of Commons. Further alterations were then made, but the Commons on June 14, 1928, again refused to accept it. The chief objection to the changes was that, especially in the communion service, they weakened the Protestant character of the book. In Canada and the United States the prayer books used by the Anglican communions have been revised.

PRAYING WHEEL. Symbolical instrument used by Buddhists of Tibet in religious exercises. It consists of a cylinder around which are wound paper bands inscribed with repetitions of the sacred mantra, om mani padme hum—Oh, the Jewel in the Lotus—a form of adoration of the Buddha. The cylinders are turned by hand, or by the agency of wind, water, or fire. The paper used is so thin, and so closely printed are the symbols, that a praying wheel 8 ft. in height may contain many more than a million repetitions of the mantra.

PREACHING (Lat. praedicare, to proclaim). Public oral appeal on behalf of a religious belief, i.e. the delivery of a sermon. It is intended to convert, or exhort, occupies an important place in the history of Christianity, and is also practised in other religions.

The disciples of Jesus Christ, notably S. Paul, preached a great deal, as did some of the fathers of the Church. The next group of great preachers were the missionaries who, from the monasteries of Ireland and Scotland, carried the Christian faith over Europe. The

Reformation gave an added importance to preaching. It was a feature of the religious revival of the 18th century, as of all religious revivals, Wesley and Whitefield being among the best known of many popular preachers. In the 19th century Spurgeon exercised a remarkable sway by his preaching, while Robertson and Liddon, with their more intellectual appeal, were equally, though less apparently, successful. Of many other great 19th century preachers may be mentioned Newman and Lacordaire.

PREBEND (late Lat. praebenda, soldier's rations). Ecclesiastical term for the food, clothing, etc., provided for a clergyman or monk, as distinct from the income of a benefice. Later it came to be used for an endowment provided for the support of a priest attached to the staff of a cathedral, the holder being known as a prebendary. The office of prebendary is now usually a sinecure conferred on a clergyman as a mark of distinction.

PRECENTOR (late Lat. praecinere, to sing before). Leader of the singers in the rendering of the musical portion of the service in a cathedral. The precentor is usually the chief of the minor canons, and is responsible for all the musical arrangements of the services. The word was specially used of the leader of praise in Scottish churches before the introduction of organs.

PRECESSION. In astronomy, term used in connexion with the movements of the equinoctial points. The slow retrograde movement of these points, known as the precession of the equinoxes, is due to the unequal gravitational pull of the sun and moon on the earth's equatorial protuberance. The equinoctial points take 25,800 years to make a complete circuit in the heavens, and the effect of the movement is to shorten the time between successive equinoxes and to alter the signs of the zodiac relative to those of the ecliptic. See Ecliptic; Equinox; Zodiac.

PREDESTINATION. Term used in Christian theology to denote the act of God in determining the destiny of nations and individuals. The term is used in several senses to denote (1) the eternal purpose of God, which was predetermined before the creation of the world; (2) the selection of certain nations or individuals for the performance of specific tasks in connexion with the realization of this purpose; (3) the selection of individuals as subjects for the exercise of Divine grace and the inheritance of eternal life. It is in the third sense that the term is most commonly used. The doctrine was first formulated by S. Augustine (q.v.). See Calvin.

PREFECT (Lat. praefectus, set in command). Generally, one who is in a position of authority over others. In ancient Rome the praefect (q.v.) was an important official. In France the prefect (préfet) is the chief administrative officer of each department, and the prefect of police is the chief of the police of Paris and the Seine dept. In English public schools, and other schools on their model, the prefects are senior boys responsible for maintaining discipline in a house or dormitory, and often have powers of inflicting punishment for various minor offences; the title monitor is also used in this connexion.

Praying-Wheel of Hindu silver ware, Tibetan type

PREGNANCY. Period from the time of conception to the birth of the child. The average duration of this period is 280 days, reckoned from the first day of the last menstrual period. Cessation of the monthly flow is the first indication that a woman is pregnant. Morning sickness usually occurs in the second month and becomes more marked in the third, fourth, and fifth months. Changes in the breast may be noticed from the second month. Quickening, the term applied to the sensation experienced by the mother when she first feels the movements of the foetus within her, generally occurs in the fourth or fifth month. During the fifth month the foetal heart beat becomes audible through the stethoscope.

Pregnancy is a natural condition, and the expectant mother should not regard herself as an invalid. Any form of excess or undue exertion should be avoided, but otherwise she should depart as little as possible from a normal well-regulated life.

PREMIER (Lat. *primus*, first). Anything that is first or chief, e.g. the premier duke. It is used for the chief minister of the crown, who is also known as the prime minister (q.v.).

PREMIUM (Lat. *prae*, above; *emere*, to buy). Literally a prize or reward. As a financial term it implies something above the nominal or fixed price. Thus, shares at a premium are worth more than their nominal value. The opposite of premium in this sense is discount. The term is used also for the periodical payments to an insurance company in respect of a policy of insurance.

A premium bond is a bond issued for public subscription on terms involving an element of chance as well as investment considerations.

PREMONSTRATENSIA or **NORBERTINES**. Order of regular canons founded in 1120 by S. Norbert of Cleeves, afterwards archbishop of Magdeburg. The order follows the Augustinian rule, and was powerful in N. Europe before the Reformation. It has been revived at Storrington, Sussex, and in France.

PRE-RAPHAELITES. Name given to a group of British artists who formed themselves into a "pre-Raphaelite Brotherhood" in 1848. W. Holman Hunt originated the movement and the brotherhood included D. G. Rossetti, J. E. Millais, F. G. Stephens, T. Woolner, W. H. Deverell, and J. Collinson. Launched as a revolt against the academic standard of the day, the movement aimed primarily at a return to the simpler and more natural ideals of art before Raphael. Its expression was complex; realism (Hunt and Millais) and romanticism (Rossetti) declared themselves as two different tendencies from the first; but brilliant colour and a minutely detailed technique were common to all the principal exponents.

PREROGATIVE (Lat. *praerogare*, to ask before). Exclusive right or privilege belonging to a person or body in virtue of his or its status or character. At the present day the royal prerogative includes such powers as those of declaring war, summoning and dismissing parliament, creating peers, and pardoning offenders. In practice the royal prerogative is exercised only through the privy council or the cabinet.

The prerogative court was an ecclesiastical court for testamentary cases. Prerogative writs are in the nature of commands for the better execution of justice or the protection of the liberty of the subject, issued by order of the judges of the court of the king's bench. See *Divine Right*; *Writ*.

PRESBYOPIA (Gr. *presbys*, old man; *ops*, eye). Diminution in the power of focusing the eye, owing to advancing age. Near objects must be held increasingly farther from the eye in order to be seen distinctly. The

condition is corrected by wearing convex glasses. See *Eye*; *Sight*.

PRESBYTERIANISM. Organization of the Christian Church on the basis of rule by presbyters (Gr. *presbyteros*, elder). These are chosen by the congregations and set apart for their twofold duties of teaching and ruling, the former office, which includes the administration of the sacraments, corresponding to the clerical, the latter to the lay element in other churches. The presbyters are ordained for life, are equal in rank, electing temporary moderators or presidents from their own number in the presbyteries, synods, and general assemblies.

Thus the three notes of Presbyterianism are: the parity of the clergy, in distinction from the episcopal system or the papal; the right of the congregation to govern itself by means of office-bearers chosen from its own members—a primitive right which was only taken gradually from the early Church; and the avoidance of congregational individualism by means of administrative unity secured in the church courts, where the presbyters sit as representatives of their various congregations. In 1929 the various Presbyterian Churches in Scotland were united.

In 1929 the membership of the Presbyterian Church throughout the world was estimated at 11,453,000 and the congregations at 49,229. See *Reunion*; *Scotland*, *Church of*.

PRESBYTERY (Gr. *presbyteros*, elder). Word originally applied to that part of a church which was occupied by the clergy. It was also used to signify the body of the clergy taken together. In this sense it occurs in the Greek N.T. (1 Tim. 4, 14), and is used in the Presbyterian denominations for the official assemblies. The word is often used—especially in the Roman Church—for the residence of the priests.

PRESCOT. Urban dist. and market town of Lancashire. It is 7 m. from Liverpool, on the L.M.S. Rly. The chief manufactures are matches, electric cables, and pottery. Near is Knowsley (q.v.). Market days, Tues. and Sat. Pop. 9,043.

PRESCOTT, WILLIAM HICKLING (1796–1859). American historian. Born May 4, 1796, he graduated at Harvard and studied law. Defective eyesight caused him to abandon this profession, and he turned to literary work. By using readers and secretaries, and aided also by a writing frame made for the blind, he produced works of high value on the early history of America and the contemporary period in Spain. His books include *The Reign of Ferdinand and Isabella*, 1838; *The Conquest of Mexico*, 1843; *The Conquest of Peru*, 1847; and *The Reign of Philip II* (unfinished). He died in New York, Jan. 27, 1859.

W. H. Prescott,
American historian

PRESCRIPTION (Lat. *praescribere*, to write beforehand). In English law, title by long use and enjoyment. By an act of 1833, uninterrupted possession for 12 years gives a good prescriptive title to land. A right of light enjoyed for 20 years is indefeasible, unless it can be shown that it was enjoyed not as of right, but under a written agreement or permission. A right of common is *prima facie* established by 30 years' enjoyment; and absolutely by 60 years'; again in the absence of a written agreement. An easement (e.g. a right of way, or of water, or of support) is *prima facie* conferred by 20, and absolutely by 40, years' uninterrupted use, and in the absence of a written agreement.

PRESIDENCY. Former administrative division of British India. The name was originally given to those units of the East India Company's territory administered by the presidents of the company's factories. The original three were Bengal, Madras, and Bombay.

The term presidency bank was given to three banks, one in each of the three presidencies. The bank of Bengal was founded in 1806, the bank of Bombay in 1840, and the bank of Madras in 1868. In 1920 they were amalgamated as the Imperial Bank of India.

PRESIDENT (Lat. *praesidere*, to sit in front of). Word which denotes headship, with many applications. It is the recognized title of the head of a republic. The head of a college in a university is sometimes called the president. The term is also used of the head of a society, and in the U.S.A. of the chairman of a company. The word occurs in the title of ministerial and legal officers, e.g. lord president of the council.

PRESIDENT, H.M.S. Vessel of the British navy. The first President was a vessel of 42 guns built under the Commonwealth. In 1887 a sloop of 1,140 tons was launched at Sheerness and named President. With her engines removed, she was stationed between Blackfriars Bridge and the Temple Stairs, and served as a stationary drillship for the London division of the Royal Naval Volunteer Reserve until 1922. In that year a larger training ship, the *Saxifrage*, which was renamed the President, took her place.

PRESS. Comprehensive term for the output of the printing press. It is especially applied to newspapers and periodicals.

The Press Association is an organization of British provincial newspaper proprietors. Founded in 1868, on cooperative principles, to collect and distribute news, it now serves nearly 150 provincial journals in addition to London newspapers. The office is at Byron House, Fleet Street, London, E.C.4.

PRESS BUREAU. British Government department. It was founded Aug. 7, 1914, on the outbreak of the Great War, to issue official information to the newspapers, and to censor matter submitted to it for publication by the press. It came to an end April 30, 1919. See *Newspaper*.

Pressburg. German name of the city of Czechoslovakia known officially as Bratislava (q.v.).

PRESS GANG. Name given to the bodies of men who formerly carried out the impressment of those liable to forced service in the army or navy. Although impressment could be either for land or sea service, it came to be used almost entirely to secure recruits for the navy. Edward III set up a commission of impressment, 1355, and the methods of carrying out the press were regulated by statute in 1378, and on other occasions. In 1641 Parliament declared the system illegal, but it was used later for land service by Cromwell, and in the 18th century for the navy.

PRESTATYN. Urban dist. of Flintshire, Wales. It stands on the coast and is 4 m. from Rhyl, on the L.M.S. Rly. There are ruins of a castle. Near are lead mines. Pop. 4,085.

PRESTEIGN. Urban dist. and market town of Radnorshire, Wales, also the county town. It stands on the Lugg, with a station on the G.W. Rly. The 15th century church has interesting tapestry and old glass mosaic. The Warden is a hill converted into a public recreation ground; the castle formerly stood here. Market day, third Fri. in the month. Pop. 1,172.

PRESTER JOHN. Priest king in the 12th century. The centre of many legends and theories, by name Jorkhan or Coirkhan,

and a native of Asiatic Tartary, he is said to have been converted from Buddhism to Christianity. When he became king he assumed the title of Prester, i.e. presbyter or elder, vanquished the rulers of Media and Persia, and attempted to march to the aid of the Church at Jerusalem, but got no farther than the Tigris. He was succeeded by his son or brother, who also called himself Prester John, and who was killed by Jenghiz Khan.

PRESTON. County borough, market town, and seaport of Lancashire. It stands near the head of the Ribble estuary, 31 m. from Manchester, on the L.M.S. Rly. The buildings include the town hall, art gallery, and sessions house. Preston is a centre of the cotton

Preston, Lancashire. The Art Gallery, showing the Sessions House on the left

industry; it has also engineering and machinery works, iron and brass foundries, and ship-building yards. The municipality owns the docks and harbour. An ancient festival known as the Preston guild is held every 20 years. Preston sends two members to Parliament. Market days, Mon., Wed., and Sat. Pop. 119,900.

Preston was the scene of a battle fought between the Scots in the interests of Charles I and the Parliamentarians under Cromwell, Aug. 17, 1648, in which Cromwell was the victor. There was some fighting at Preston during the Jacobite invasion in 1715.

Preston North End is the name of an English professional Association football club. It was one of the original twelve clubs to form the Football League, founded in 1888. Preston won the Football Association cup in 1889. Its ground is at Deepdale Road, Preston.

PRESTONPANS. Burgh of Haddingtonshire, Scotland. It stands on the Firth of Forth, 9 m. from Edinburgh, on the L.N.E. Rly. Pop. 2,021.

The battle of Prestonpans was fought between the royal troops and the Jacobites Sept. 21, 1745. The former, under Sir John Cope, landed at Dunbar and marched towards Edinburgh, where the Jacobite army met and routed them. The Jacobites called the engagement Gladsmuir.

PRESTWICH. Urban dist. of Lancashire. It is 4 m. from Manchester, on the L.M.S. Rly. Near is Heaton Park, once a seat of the earl of Wilton, and now the property of the city of Manchester. Pop. 18,750.

PRESTWICK. Burgh of Ayrshire. It stands on the Firth of Clyde, 2 m. from Ayr, on the L.M.S. Rly. It is chiefly known as a golfing centre. Pop. 8,516.

PRETENDER (Lat. *practendere*, to hold forward). One who makes a claim which is either false or not admitted. In a special sense the word is applied to the son and grandson of James II, referring to their claim to the throne of the United Kingdom. James Edward is known as the Old Pretender, and his son Charles Edward as the Young Pretender. See Charles Edward; Jacobites; James.

PRETORIA. City of the Transvaal, capital of the province and administrative capital of the Union of South Africa. It is 45 m. by rly. from Johannesburg, and is an important rly. junction. It stands on both

sides of the Apies river. at the foot of the Magaliesberg Mts. The centre of the town is Church Square, from which the main streets radiate. Among many notable buildings are the Union Government Buildings, built 1910-13, the Transvaal Government Buildings and the law courts. The university college is a constituent college of the University of South Africa. Parks include Burger's and Prince's Parks, the latter named in memory of Prince Christian Victor. There is a branch of the royal mint here. Pretoria was founded by M. W. Pretorius, first president of the S. African Republic. Pop. 54,326 whites.

PRETORIUS, ANDRIES WILHELMUS JACOBUS (1799-1853). Boer leader. One of the leaders of the Great Trek, he reached Natal in 1838, where he was elected commandant-general, leading his commando against the Zulus, 1839, and the British, 1842. In 1852 he concluded the convention with Britain whereby the latter recognized the independence of the Transvaal. Pretorius died July 23, 1853.

His son, Marthinus Wessels Pretorius (1819-1901) succeeded to the command on his father's death. In 1856 he was elected president of the newly founded South African Republic, but resigned in 1871. In 1880 he was associated with Kruger and Joubert in the Boer revolt against Britain. He died May 19, 1901.

Marthinus Pretorius, Boer leader

PRÉVOST, EUGÈNE MARCEL (b. 1862). French novelist. He was born in Paris, May 1 1862, and worked as engineer in a Lille factory until 1891, by which time he had already attained considerable popularity with his stories. His novels include *Le Scorpion*, 1887; *Les Demi-Vierges*, 1894; *L'Heureux Ménage*, 1901; *Monsieur et Madame Moloch*, 1906; *Lettres à Françoise Mariée*, 1908; *Les Anges gardiens*, 1913; and *L'Homme Vierge*, 1929. Some of the above have been dramatised. In 1909 Prévost was elected to the French Academy. Pron. Pray-vô.

PRIAM. In Greek mythology, king of Troy, son of Laomedon and father of Hector, Paris, Polyxena, Cassandra, and many other children. He was popularly credited with fifty sons and daughters. He was the only one of the sons of Laomedon that was spared when Hercules came to take vengeance for being cheated out of his reward for saving

Hesione from the sea-monster. At the taking of Troy, Priam was killed by Neoptolemus, the son of Achilles.

PRIĀPUS. In Greek mythology, god of the reproductive powers of nature and patron of gardens. He was the son of Dionysus and Aphrodite, and was especially worshipped at Lampsacus on the Hellespont.

PRIĀLOF ISLANDS. Group of small islands in Bering Sea, about 200 m. S.W. of the Alaskan mainland. They are a centre of the fur-seal fisheries. The islands were first visited in 1786 by Gerasim PriĀlof. They were acquired by the U.S.A. from Russia in 1867. See Bering Sea.

Prickly Pear. Cactus of tropical America. *Opuntia microdasys*

PRICKLY HEATH (*Perrettia mucronata*) Evergreen shrub of the order Ericaceae. A native of Patagonia, it has stiff oval leaves with toothed edges, and urn-shaped, nodding white flowers. The fruit is a globular berry, about the size of a pea.

PRICKLY PEAR (*Opuntia vulgaris*). Succulent shrub of the order Cactaceae, a native of the warmer parts of America. A jointed, prostrate, or spreading plant, the light green joints are of oval shape, and the leaves reduced to minute scales. The spines

are small, solitary, or absent, though there are clusters of barbed bristles. The flowers are pale yellow, and are succeeded by smooth, pulpy, edible, egg-shaped fruits. Other species are *O. tuna*, with larger fruit (West Indies); and *O. ficus-indica* (Mexico).

PRIDE, THOMAS (d. 1658). English regicide. On the outbreak of the Civil War he joined the Parliamentary army, and in 1645 distinguished himself in command of a regiment at the battle of Naseby. On Dec. 6, 1648, to prevent the Parliament from coming to an agreement with the king, Colonel Pride, with a body of soldiers, forcibly prevented about 140 members from taking their seats, arresting over 40 of them. This episode is known as Pride's Purge. He was a commissioner at the trial of Charles I, and signed the death warrant. He died Oct. 23, 1658.

PRIEST. Word used for a member of the Christian ministry in the Roman Catholic, Greek, Orthodox Greek, and Anglican churches. Derived from the Greek word *presbyteros*, it was used in this sense very early in the history of the Church. It is used, too, in the Old Testament for those who ministered in holy things to the Jews and to officials attached to other religions, e.g. the priests of Baal. Those who looked after the altars in Greece and other countries were also called priests.

Pretoria. Union Buildings, erected 1910-13, seat of the Government of the Union of South Africa
Courtesy of the South African Railways

In the Church of Rome the priests constitute the second order of the ministry. They must be ordained, and, with the bishops and others of high rank in the hierarchy, they alone have the right to administer the sacraments. In the Church of England and other Anglican churches the priests also constitute the second order, deacons being the first. To be a priest a man must be at least 24 years of age and have served for a year or more as a deacon. Here, too, the sacraments can only be lawfully administered by one who has been ordained priest. See Church of England; Deacon.

PRIESTLEY, JOHN BOYNTON (b. 1894). British writer. Born in Bradford, the son of a schoolmaster, he went to Trinity Hall, Cambridge. He served through the Great War, and then began to make a reputation as an essayist and reviewer. In 1926 he wrote a life of George Meredith and in 1927 one of T. L. Peacock, both for the English men of letters series, and in 1929 a brilliant long novel, 'The Good Companions'. His other books include 'The English Comic Characters', 1925; 'The English Novel, 1927'; 'Apes and Angels', 1928, and 'English Humour', 1928. With Hugh Walpole he wrote 'Farthing Hall', and in 1930 appeared 'Angel Pavement'.

J. B. Priestley,
British writer
Harrods

PRIESTLEY, JOSEPH (1733-1804). British chemist. Born at Birstall, Yorkshire, March 13, 1733, he entered the Nonconformist ministry. In 1767 he published his 'History of Electricity', and he carried out many brilliant experiments with electricity from 1761-70. He turned his attention to chemistry in 1770; in 1772 he read his paper on 'Different Kinds of Air', in which he announced the discovery of hydrochloric acid and nitric oxide. His discovery of oxygen, one of the landmarks in the history of chemistry, followed in 1774. Sulphur dioxide and other gases were discovered by Priestley, who died Feb. 6, 1804.

Joseph Priestley,
British chemist

PRIMATE (Lat. primus, first). In England, term applied to the archbishops of Canterbury and York. It means the bishop highest in rank in a nation or province. In the Roman Catholic church primates are bishops to whose see the dignity of vicar of the Holy See was formerly attached. See Archbishop.

PRIMATES. Highest order of the mammalia. It is divided into two sections, the Lemuroidea, which include the lemurs and their relatives, and the Anthroipoidea, which include the monkeys, apes, and man.

Excepting man, all the members of this order are inhabitants of tropical and sub-tropical countries, and are arboreal in habit. They are essentially climbing animals, and the four feet are adapted for grasping. Except in man, the great toe is opposable to the others, but the thumb is often imperfectly so. The upper halves of the limbs are free from the body and not embedded in it. The fingers and toes bear a nail instead of a claw. The eyes are brought round to the front of the head. The mammae are normally only two in number. In the higher primates a more or less erect attitude has been adopted, and in man the brain has been greatly developed. The dentition differs essentially from that of both carnivores and herbivores, and is indicative of a mixed diet. See Animal; Mammal; Zoology.

PRIME MINISTER. Head of the British Government and the principal adviser of the sovereign, called also the premier. He must be a member of Parliament and enjoy the confidence of a majority of the House of Commons. Under the party system he is also the leader of his own party. His powers are enormous, including the selection of the cabinet ministers. Sir R. Walpole is generally regarded as the first prime minister. In 1930 it was proposed to raise the salary of the prime minister from £5,000 to £7,000 a year. See Baldwin, S.; MacDonald, J. R.; etc.

PRIMITIVE METHODISTS. Body of Methodists. They arose as the result of difference of opinion on the subject of camp meetings. Early in the 19th century these were introduced into Staffordshire by an American named Lorenzo Dow. The first camp meeting was held in 1807 and was speedily followed by others. The new connexion grew with remarkable rapidity, and within 30 years numbered 36,000 adherents. In 1852 the connexion was reorganized and was for some years administered in seven districts; but in 1902 it consolidated its system of government. In 1928 the conference meeting in Leicester decided in favour of union with the other Methodist bodies. See Methodism.

PRIMO DE RIVERA, MIGUEL (1870-1930). Spanish soldier and statesman, known also as Marquess du Estella. Born at Jerez de la Frontera, Jan. 8, 1870, he was trained for the army. In 1897 he had a command in the Philippines. Governor of Cadiz in 1915, he became general. In 1921 he was chosen a senator, and about the same time was made captain-general of Catalonia. To remedy the prevailing discontent due to the financial and economic state of the country he headed the malecontents in a bold step. His manifesto of Sept. 12, 1923, was followed by the suspension of the constitution. He became head of a directory of naval and military officers which lasted until 1925, when Primo introduced a civilian administration with himself as premier. He resigned in 1930, and died suddenly March 16, 1930.

Primo de Rivera,
Spanish dictator

PRIMOGENITURE (Lat. primus, first; genitus, begotten). Seniority by birth, and, by extension, the system under which the eldest son succeeded to the entire real estate of a father dying intestate, to the exclusion of all the other children. It was abolished in England by the Law of Property Act of 1925.

PRIMROSE (*Primula vulgaris*). Perennial woodland herb of the order Primulaceae. It is a native of Europe and N. Africa, and grows

profusely in Britain. From the thick, fleshy root-stock the wrinkled and almost stalkless leaves rise in a circle. The pale yellow funnel-shaped flowers are of two forms: in one form there is a long style bringing the round stigma to the mouth of the flower-tube, with the stamens half-way down; and in the other the style reaches only half-way up, whilst the stamens partly fill the mouth. This secures cross-pollination.

PRIMROSE LEAGUE. British political organization. It was formed by a number of Conservatives in 1883, their aim being to spread the principles of Conservatism among the working classes, and the name was that of the favourite flower of the earl of Beaconsfield. Officials are known as knights and dames, and the members are grouped in habitations. The

league is open to both men and women. The headquarters are at 64, Victoria Street, London, S.W.1.

Primrose day is the name given to April 19, the day of Lord Beaconsfield's death. Primroses are worn and his statue in Parliament Square is decorated.

Primula. A greenhouse favourite, *P. obovata*

PRIMULA

(Lat. primus, first). Genus comprising about 150 perennial herbs of the natural order Primulaceae. They are chiefly natives of hilly districts in the N. temperate regions. Five species are natives of Britain: primrose, cowslip, oxlip, bird's eye, and Scottish primrose (*P. Scotica*).

Primus (Lat. first). Term applied to the bishop elected to preside over the synod of the Episcopal Church of Scotland.

PRINCE (Lat. princeps, first). Title of dignity. In Great Britain it and its feminine form princess are only used for the children of the sovereign and the grandsons and granddaughters in the male line. In Italy, Belgium, and other monarchical countries the use is similar. In Germany, before the war, the titles were used for all members of ruling families, and in addition, as in Austria and Russia, distinguished men, as, for example, Metternich and Bismarck, were raised to the rank of prince.

PRINCE OF WALES. This title was given in 1301 to the son of Edward I, and has since been borne by the sovereign's eldest son. The plume, commonly called the Prince of Wales's feathers, is really the badge of the heir apparent, in whom it is vested, whether created prince of Wales or not. This badge consists of a plume of three ostrich feathers enfiled by a coronet of alternate fleurs-de-lys and crosses patée or, and the motto is Ich Dien (German I serve). See Edward.

PRINCE ALBERT. City of Saskatchewan, Canada. On the North Saskatchewan river, it is an important junction on the Canadian National Railways. The industries include flour mills and lumbering. Pop. 7,873.

Prince Albert National Park is 70 miles from the town. It covers an area of 1,400 sq. m., and was opened in 1928.

PRINCE EDWARD ISLAND. Island in the gulf of St. Lawrence, the smallest province of the Dominion of Canada. Northumberland Strait divides it from the mainland. Its area is 2,184 sq. m. Charlottetown, the capital, and Summerside are the chief towns. Originally known as Ile St. Jean, the island was annexed to Nova Scotia in 1763, and in 1773 became a separate colony. It received its present name out of compliment to Edward, duke of Kent, who was then governor-general of Canada. It joined the Dominion in 1873. Pop. 88,615.

Primrose. *Primula vulgaris*, flowering in British woods in spring

PRINCE RUPERT. Port and town of British Columbia. On Kaien Island, at the mouth of the Skeena river, 550 m. N. of Vancouver, it is a terminus of the C.N. Rlys., and has a fine harbour. Coal and oil are found in the neighbourhood, and there are salmon, halibut, and herring fisheries. The chief buildings are the city hall, churches, etc., and there is plentiful electric power. Pop. 7,500.

PRINCES RISBOROUGH. Town of Buckinghamshire. It is 7 m. from Aylesbury, near the Chiltern Hills, with a station on the L.N.E. Rly. The name is due to the fact that the Black Prince had a palace here. About 3½ m. N. of Princes Risborough is Chequers (q.v.). Pop. 2,438.

PRINCETOWN. Village of Devonshire. It stands on the W. side of Dartmoor, 22 m. from Plymouth, with a station on the G.W. Rly. The existence of the place is due to Dartmoor prison, but it is also a centre for visitors to the moor. See Dartmoor.

PRINSEP, VALENTINE CAMERON (1838-1904) British artist. Born at Calcutta, Feb. 4, 1838, he studied under G. F. Watts in London and Gleyre in Paris, where he was a fellow student with Du Maurier. One of the Oxford Union frescoists, he drifted away from pre-Raphaelitism under Leighton's influence. He became A.R.A. in 1878, and R.A. in 1894. He died Nov. 11, 1904. See illus. p. 412.

PRINT. Impression on paper from an engraving on metal, stone, or wood. The chief varieties of engraving are etchings, mezzotints, line engravings, stipple, aquatint, woodcuts, and lithographs. Prints from engravings are classified as states, and vary with the condition of the engraving at the time of printing. Changes constituting a fresh state may take place in the subject, in the handling, or in the lettering, or in all three. Only prints, however, from a completed engraving are recognized as states. See Engraving.

PRINTING. Though prints from wooden blocks may have appeared in Europe in the 6th century from China, it was not until the 15th century that the idea of duplicating copies by a process of inking the raised surface of a block was adopted in the West. It was an easy transition from cutting designs to cutting lettering also. The next step was the making of movable wooden types. Movable metal types cast from moulds appeared about 1450.

Early types were based on the written script. Nothing finer has been produced than the Gothic type "42 line" Bible of 1455, attributed to Gutenberg of Mainz. Of the great early printers, Peter Schöffer, also of Mainz, to whom the invention of cast type is attributed, Sweynheim and Pannartz, of Subiaco, Adolf Ruseh, who first used Roman type, and the Frenchman, Nicolas Jensen, working at Venice about 1470, all deserve special recognition. William Caxton began work, near Westminster Abbey, in 1476-77 (see illus. p. 261).

PRINTING PROCESSES. There are three processes, determined by the nature of the printing surface. (1) Relief or surface printing, for which a general term is found in letterpress printing. In this the printing surface is raised. (2) The intaglio process. (3) Flat surface, planographic, or lithographic printing. An account of Intaglio and Lithography is given in articles bearing these titles.

In letterpress printing the main material consists of movable types or blocks or plates, or stereotype and electrotypes moulded from

them. The arrangement of type and the general preparation of the printing surface before it goes to the machine is included under the heading of composition. In the case of hand-set work, the compositor picks the letters one by one from his cases, and sets them upside down from left to right in a metal case, called a composing stick, gauged to the width of the panel of type decided on. The type is transferred to trays of metal, called galleys. When the matter in galley form has been corrected, the compositor makes up the pages. He arranges or "imposes" them together with any engraved plates or blocks of pictures, or plans which are to be used, in an iron frame or "forme" (see illus. p. 614) in such a way that they fold in proper sequence, with accurate allotment of marginal spaces. With regard to machine composition, the types of machine in most common use are the linotype, the intertype, and the monotype; the first two are generally used for newspapers, the latter mainly for book and magazine printing. (See Linotype: Intertype; Monotype.)

MACHINING. Little change took place in the printing press between the 15th and the 19th centuries. Its chief features are a flat bed on which the forme is placed face upwards, and a folding leaf, holding the paper to be printed. Pressure is applied by lever and screw to a platen of metal, which forces the paper on to

Printing. Diagram showing the main features of a single cylinder flat-bed press

the inked type, and so transfers the impression. In the modern platen machine the paper is placed on the platen and carried to and from the type forme, which is in a vertical position.

The first radical mechanical innovation affecting speed and cheapness was that of König (q.v.) in 1811. In König's machine the paper is applied to the forme by means of a revolving cylinder, which holds the paper in its passage across the type. This is the normal type of machine employed for the production of book printing to-day. The introduction of the impression cylinder developed the factor of speed. The modern newspaper press proceeds with that development by the addition of a type or, rather, plate-carrying cylinder.

A newspaper press is a composite machine with many replicas of the type matter, and cutting and folding apparatus, producing completed copies at several delivery points at from 60,000 copies per hour. The paper spool unwinds itself into the machine, the paper passing between the type and impression cylinders (each pair printing one side of the paper), and so through into the cutting and folding gear. See Half-tone; Intaglio.

PRINTING HOUSE SQUARE. London square. It is at the E. end of Printing House Lane, Water Lane, Blackfriars, E.C. Since 1788 occupied by the printing office of The Times, its name is due to the existence here from the time of Charles II, to Feb., 1770, of the king's printers.

PRIOR. Ecclesiastical title for the member of a monastic establishment second in rank to the abbot, or, where there is no abbot, the head of the establishment. The prior is generally entrusted with the discipline of the monks, management of property, etc. See Monasticism.

PRIOR, MATTHEW (1664-1721). English poet and diplomatist. Born probably at Wimborne, Dorset, July 21, 1664, he was brought

Matthew Prior.
English poet

to London and sent to Westminster School and Cambridge. He spent the greater part of his life in the diplomatic service, at The Hague and in Paris. He was M.P. for East Grinstead Feb.-June, 1701, succeeded John Locke as commissioner of trade, 1700-7, and was commissioner of customs, 1711-14. At first an

adherent of the Whigs, he joined the Tories in 1702. In 1715-17 he was imprisoned in the Tower on a charge of treasonable intrigue in connexion with the treaty of Utrecht, familiarly known as Matt's Peace. Of his two longer works, *Alma*, or *the Progress of Mind*, modelled on *Hudibras*, is the more notable. He died Sept. 18, 1721.

PRISM. Semi-regular solid. The two faces or bases are equal polygons, and the lateral faces parallelograms. A right prism has the lateral faces perpendicular to the bases. If the bases are regular polygons, and the prism is also a right prism, it is called a regular prism. The prism used in optics is usually a triangular prism, i.e. its bases are triangles. See Field Glass and diagram p. 597.

PRISON. Place where persons are confined or restrained in their liberty. Prisons as places of detention are prehistoric, though prisons exclusively for the reception of criminals as apart from political prisoners are comparatively modern; the prison system of punishment is chiefly a product of the 19th century.

The first to call serious attention to the terrible conditions of the prisons in England and Wales was John Howard (1726-90), but though his *State of the Prisons in England* stirred public opinion, it was not till fifty years after his death that the first real steps in reform were taken. In 1839 a new era was inaugurated by a bill for advancing separate confinement of prisoners, and in 1842 Pentonville was finished, the first model prison where isolation was carried out in an extreme form. The aim of all modern prison reform is reform of the prisoner by methods of humanity, as opposed to methods of torture of either body or mind. See Bastille; Dartmoor; Millbank; Newgate; Pentonville; Tower of London, etc.; also Borstal System; Criminology; Reformatory.

PRISON COMMISSION. Department of the home office which looks after the convict prisons in England and Wales. It consists of a chairman and four paid commissioners, assisted by inspectors and other officials. In Scotland similar duties are performed by the Prison Commission, 11, Rutland Square, Edinburgh.

PRISONER'S FRIEND. At courts martial, this is a person, officially styled the friend of the accused, authorised to assist the accused in his defence. He may be a qualified legal adviser or any other person.

PRISONER OF WAR. Subject of a belligerent country detained for a period of war. In early times prisoners of war were regarded as the property of their captors, and as such were liable to slavery, or to ransom, and it was not until the 13th century that the exchange of prisoners began. During the 19th century the growth of humanitarian sentiment brought recognition that a prisoner had certain rights, and the Hague Convention of 1907 included detailed regulations designed to ameliorate life in internment camps.

A prisoner of war is bound to state his true name and rank, but cannot be compelled to give any further information to the enemy. If he attempts to escape, he may be shot down, but is not to be treated as a criminal.

Printing. 1. Wooden hand press, c. 1725, probably similar to Caxton's. 2. Hand power machine, c. 1820, showing beginning of rotary principle

1, Victoria & Albert Museum; 2, from a woodcut

PRITTLEWELL. Dist. of Southend-on-Sea. It lies to the N. of the borough proper, and has a station on the L.N.E.R. There is a fine 15th century church. The remains of the old priory are used as a museum. *See* Southend.

PRIVATEER. Armed vessel privately owned and furnished with letters of marque. These empowered it to attack the ships of any power with which its country was at war.

PRIVET (*Ligustrum vulgare*). Shrub of the order Oleaceae, native of Europe and N. Africa. It has opposite, oblong-lance-shaped leaves and small, funnel-shaped white flowers in abundant clusters. The fruit is a small, round, purple-black berry, which yields oil and a rose-coloured dye.

PRIVY COUNCIL. Originally the king's council, chosen and appointed by him and subject to his personal control. In the Middle

Privet. Leaves and berries of the shrub

1540 it possessed a regular staff of clerks and other officials, and from it most of the existing administrative system has been developed.

The tendency to increase the number of members of the council resulted in the formation of a smaller body which became the modern cabinet. Concurrently the privy council was gradually reduced to formal business. Technically, various ministries, such as the boards of trade and of education, are committees of the privy council, while the judicial committee of the privy council is the supreme court of appeal for the Dominions. Membership of the privy council is a distinction, carrying with it the style "right honourable." *See* Cabinet; Parliament.

PRIVY PURSE. Money granted to the king and queen from the civil list for their own personal expenditure. Under the king's direction the expenditure of this money is managed by the privy purse office, under the keeper. In 1910 the amount was fixed at £110,000 a year. *See* Civil List.

PRIVY SEAL. In the United Kingdom, a seal used by the sovereign. It is second in importance to the great seal, but is now rarely used. The keeper of this seal is known as the lord privy seal (q.v.) and is a cabinet minister.

PRIZE COURT. Court of law held in time of war. On the outbreak of a war involving hostilities at sea every country sets up a tribunal called a prize court, whose business it is to examine the validity of capture of ships and goods made at sea by the navy of its country. Such a court is really an international tribunal, and its decisions ought to be governed by international law. Each country, however, makes its own rules of procedure. *See* Blockade; International Law.

Prize money is the name given to the net proceeds of the sale of enemy property and contraband lawfully captured at sea. Prior to the outbreak of the Great War the distribution of prize money was confined to those ships actually making the capture. In Aug., 1914, this system was suspended, and later one was substituted for it under which the whole prize money proceeds are paid into a common fund, in which every officer and man participates.

PRIZE FIGHT. Term used for a pugilistic contest, fought with bare fists, for a money prize. Such are now forbidden by law in the United Kingdom and the U.S.A., and their place has been taken by contests in which boxing gloves are worn. *See* Boxing.

PROA (Malay prahw). Malaysian sailing boat. Both ends being built sharp, it can sail equally well in both directions, and it is fitted with an outrigger contrivance projecting a boat-like float to prevent capsizing. Rigged with large lateen-like sails, proas attain remarkably high speed.

PROBATE (Lat. probatum, something proved). Official proof of the legality of a will. In English law it is necessary for the will of a deceased person to be proved in the probate division of the high court of justice before it can be acted upon. Probate can be granted by any officer of inland revenue in cases where the personal estate does not exceed £300. When the will is admitted to probate the original will is filed in Somerset House, and is a public document which can be inspected by anybody on payment of a small fee. A copy is then made on parchment, which is called the probate copy, and it is this which is admitted everywhere as evidence of the will. *See* Administration, Letters of; Executor; Will.

PROBATION. System in vogue in criminal courts for releasing delinquents without punishment during good behaviour.

The term probationer is applied to one undergoing trial for membership of a Church or other religious community; or for admission to a profession, such as nursing. *See* Borstal System; Reformatory.

PROBOSCIS MONKEY (*Nasalis larvatus*). Species of monkey found only in Borneo. It is distinguished by its long and bulbous nose, which in the adult male hangs down and conceals most of the mouth. The monkey is about 30 ins. long in body, with a tail of about 26 ins. The hair is chestnut on the head and back, and yellow elsewhere. The face is naked, surrounded with a fringe of outstanding hair.

PROBUS, MARCUS AURELIUS. Roman emperor (A.D. 276-82). A native of Pannonia, he became Aurelian's most distinguished general. On the death of the emperor Tacitus he was proclaimed emperor by the armies of the east, where he was in chief command. He proved an excellent ruler, defeating the Germans, and restoring order in Egypt and Gaul. He was preparing an expedition against Persia when he was murdered.

Marcus Aurelius Probus, Roman Emperor From a coin

PROCESS. Term in English law denoting the various steps taken in legal proceedings, such as the issue of a writ of summons, the issue of a writ of execution, and the like. In Scots law process is a summary warrant for imprisonment issued on the application of the clerk of court against a party who refuses to return a process borrowed from the court.

PROCESS ENGRAVING. General term embodying all processes of photo-mechanical reproduction, i.e. making of printing surfaces, blocks, or mechanically-engraved plates by photographic agency. It supplanted the wood block engraver in the case of letterpress relief printing; by its means photogravure printing has become possible as produced to-day, and in the practice of lithography its adoption has resurrected a method of colour printing that began to show signs of obsolescence in favour of the first two. *See* Colour Printing; Half-tone; Intaglio; Lithography.

PROCONSUL. Magistrate of ancient Rome. He was invested with the power of a consul, and charged with the command of an army or the administration of a province. *See* Consul; Roman Empire.

PROCOPIUS. East Roman emperor, A.D. 365-6. Born in Cilicia, he was a kinsman of Julian the Apostate, who made him joint commander of the army in Mesopotamia. On the accession of Valens (364), Procopius, finding his life in danger, fled to Constantinople and, favoured by popular discontent, was proclaimed emperor. He was later beheaded.

PROCRUSTES (Gr. the stretcher). In Greek legend, the nickname of Polypemon, a robber of Attica, killed by Theseus. He boasted that he had a bed which fitted everyone, and made good his boast by stretching the limbs of those victims who were too short, and cutting them off in the case of those who were too long for the bed. Procrustes and his methods have become a proverbial expression for attempts to make everyone conform to one standard.

PROCTOR. One who manages the affairs of another. It is a contracted form of procurator. The king's proctor is an official

Procrustes Monkey of Borneo

entitled to intervene in a divorce or nullity suit where collusion or fraud is suspected. At Oxford and Cambridge the proctors are two university officials whose duties include that of maintaining discipline.

The representative of certain ecclesiastical bodies in convocation (q.v.) is called a proctor.

PROCURATION. Term for the providing of women for the purpose of illicit intercourse. In England, the Criminal Law Amendment Act of 1885 was directed mainly against the trading in women and girls disclosed by W. T. Stead's investigations. This statute imposes heavy penalties for procuring any girl or woman who is not of known immoral character, either to have illicit relations with any person, to become a prostitute, or to become an inmate of a house of ill-fame. The Act of 1885 was amended by the Criminal Law Amendment Act, 1912.

PROCURATOR (Lat. procurare, to take charge of). An authorised agent, especially one who conducts legal business for another, and is his accredited representative. It is the technical term for an attorney to conduct an action by law, and in Scotland is the usual designation of the legal representative of a litigant in the inferior courts. The faculty of procurators in Glasgow fixes the professional fees of procurators and undertakes the auditing of their accounts.

In Scottish law, procurator-fiscal is the title of the public prosecutor in the sheriff courts. He makes investigation of criminal charges, performs a coroner's duties by inquiring into causes of suspicious deaths, prosecutes cases indicted before the supreme court of judiciary, and is responsible to the sheriff and the lord advocate.

PROETUS. In Greek legend, the twin brother of Acrisius (q.v.). After a struggle he secured part of his kingdom of Argolis. His three daughters were driven mad by Dionysus or Hera. Perseus, to avenge Acrisius, turned Proetus into stone. Pron. Preetus.

PROFESSIONALISM. Term applied to the system under which exponents of games employ their skill as a means of livelihood. It is thus opposed to that displayed by the true amateur, who plays for love of the game or sport without thought of material recompense. There have been few civilizations or countries in which prowess at arms or in some form of sport could not obtain substantial reward.

The latter half of the 18th century in England marked the growth of rivalry and popular interest in sport and games, which has since developed to an amazing degree. Professional pugilists fought with bare knuckles in contests of endurance. Cricket was then on the road to becoming the national game, but, as in football, professional players were a later development. To-day the Rugby game is still largely confined to amateurs. In cricket amateurs hold their own, though many county teams contain a majority of professionals. See Amateur.

PROFIT SHARING. System of industrial management by which the persons engaged in a business or industry receive some proportion of its profit according to a pre-arranged scale. Most profit sharing schemes have grown from the idea that the profits of a business will be materially increased if the employees are given a direct interest in avoiding waste and in maintaining high standards of efficiency. In Great Britain profit sharing has taken its firmest hold in gas-making concerns. Systems of sharing vary widely, and among the difficulties that they have to face are the arrangements for meeting a debit balance on the year's trading, change of ownership of businesses, and problems of common management or co-partnership. See Co-partnership.

PROGRESSIVES. Name applied to one of the parties on the London County Council since its foundation in 1889. Composed of men holding advanced views, it was opposed by the Moderates, later the municipal reformers.

PROHIBITION. Movement for the prohibition of the manufacture and sale of alcoholic liquors for beverage purposes. It originated in the eastern United States, the first Prohibition Act being passed by the Maine state legislature in 1846.

In the early eighties the crusade was revived, and the prohibitionists made steady progress. The Anti-Saloon League, which was formed in 1898, disavowed any political purpose except the prohibition of the liquor traffic, and soon became the centre of activity throughout the Union. By 1917 twenty-seven states out of a total of forty-five—including the whole of the west except California, and nearly all the south—carried prohibitory laws.

In 1913 the reformers organized a committee of 1,000 to obtain a prohibition amendment to the constitution of the United States. The entry of America into the Great War further strengthened the hands of the prohibition party, and on Dec. 17, 1917, a joint resolution was carried through congress, by a vote of 282-128, for the submission of the amendment to the different states. This amendment, known subsequently as the "18th Amendment," declared:

"After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from, the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited."

Eventually every state except three, Connecticut, New Jersey, and Rhode Island, carried the amendment, and President Wilson hastened it by the passage of a war measure prohibiting the sale of drink throughout the United States from July 1, 1919.

Nearly the whole of the Dominion of Canada adopted prohibition during or just after the war period. In a few years, however, it was abandoned in favour of a system of state control, and in 1929 this policy was in force in eight of the nine provinces, Prince Edward Island being the exception. Attempts to carry general prohibition in Australia have not been successful.

In Russia, in Sept., 1914, the sale of vodka and all other spirits was absolutely prohibited until the end of the war, and shortly afterwards the prohibition of the sale of vodka was made permanent throughout the Russian Empire. The Russian revolutionary government, under Kerensky, and also the Bolshevik government continued this policy. See Local Option.

PROJECTILE. Body which can be projected through air or space, and so can be used as a missile. The term is specially applied to those discharged from firearms. See Ammunition; Ballistics; Bullet; Shell.

PROLOGUE (Gr. pro, fore; logos, word). Preface or introduction, more especially one spoken before the commencement of a dramatic performance, either to indicate its nature or to commend it to the audience. The use of the prologue dates back to the classic dramatists, and continued fairly general with new pieces in the English theatre up to the 19th century. See Epilogue.

PROMETHEUS. In Greek mythology, originally a god of fire, later a Titan. The chief legend about him is that he stole fire from heaven for the use of mortals. For this he was chained by Zeus to a rock in Scythia, and every day an eagle consumed his liver, which grew again in the night. Prometheus suffered this torture until he was rescued by Hercules, who killed the eagle and released him from the rock. Pron. Pro-mec-the-wss.

PROMISSORY NOTE. "An unconditional promise in writing, made by one person to another, signed by the maker, engaging to pay on demand, or at a fixed or determinable future time, a sum certain in money, to or to the order of a specified person or to bearer." The person making the promise is the maker or drawer. The person to whom the promise is given is the payee or drawee.

If the payee sues on the note, the drawer can always defend on the ground that there has been no valuable consideration. But if the payee indorses the note to a third party, called indorsee, the latter can sue the drawer for the money without regard to the original want of consideration. See Bill of Exchange.

PRONG BUCK. N. American mammal. It resembles an antelope, but its

horns consist of bony cores supporting sheaths which are periodically shed and renewed. It is about 36 in. high at the shoulder, and the skin is handsomely coloured. It is only found in the western parts of the continent.

PROOF. In engraving and etching, an early impression on paper, or prints, from the plate or stone or wood block. Trial proofs are those printed by the engraver for his own use, as a test of the work. Artists' proofs, which come next, are signed by the artist or the engraver or both. See Print.

PROOF CORRECTION. In printing, term for the work involved in reading and correcting or altering a proof or impression of printed matter before it is cast or otherwise made ready in a technical sense for the press or printing machine. When the copy or MS. has been set up, an impression of the type is taken by means of a hand press. This impression is usually called a galley proof. While a copyholder reads the MS aloud the printers' reader, with the galley proof before him, corrects upon it the mistakes made by the compositor or linotype operator, by the use of such marks

as those indicated in the accompanying illustration. See Printing.

PROOF. Above, corrected proof; below, readers' signs and their meanings

as those indicated in the accompanying illustration. See Printing.

PROOF SPIRIT. Alcohol defined, in English law, as having a specific gravity of 12-13 at 51° F. Such proof spirit must contain 49.24 p.c. by weight, or 57.06 by volume of absolute alcohol. The expressions over proof and under proof are used in connexion with mixtures of alcohol and water. Thirty under proof means that 100 volumes of alcohol and water contain 70 volumes of proof spirit, while 30 over proof means that 100 volumes of spirit mixed with the proper quantity of water will yield 130 volumes of proof spirit. See Alcohol; Whisky.

PROPAGANDA (Lat. propagare, to multiply by layers). Literally, things to be propagated. Until the Great War this word was used mainly to denote the dissemination of religious tenets.

During the Great War there developed an intensive use of means to influence first neutral, and then enemy sentiment, and this was given the name of propaganda. At the beginning of 1918 Lloyd George developed this aspect of warfare by asking Lord Northcliffe to undertake the organization of propaganda in enemy countries, while Lord Beaverbrook was put at the head of the existing department which made its appeal to the neutral states. The headquarters of the former were at Crewe House, London, W.1.

PROPELLER. In aeronautics, strictly that type of airscrew which is attached to the rear of the body of any aircraft, and which propels the machine, as distinct from the tractor airscrew, which is attached in front, and draws the body after it. Colloquially the word is used for any type of airscrew.

PROPERTIUS, SEXTUS (c. 49-16 B.C.). Roman elegiac poet. He was born at Asisium (Assisi) and was educated and made his home in Rome, where he won the patronage of Maecenas and Augustus, and was a friend of Virgil and Ovid. The majority of the earlier poems deal with the relations of the poet with his mistress "Cynthia," but the subjects of the last book are chiefly drawn from Roman legend and history.

Prong Buck. Young specimen of the small North American mammal
W. S. Berridge, F.Z.S.

PROPORTIONAL REPRESENTATION. Term used for a method of electing representatives that aims at reproducing in the elected body the opinions of the electorate in their true proportions. It is worked best in constituencies each returning a number of members. The voter records his preference on the ballot paper and also marks a second name if he so desires. When the counting takes place, a quota of votes is fixed which a candidate must obtain to secure election. Most probably only one or two will succeed in securing election on the first count. To fill the list, therefore, a second process takes place. The papers of the successful candidates are examined for next preferences, and are sorted among the unelected candidates accordingly. When all surpluses have been dealt with, the candidate at the bottom of the poll is declared defeated and his votes are all transferred to the next preferences shown upon them. The process continues until the required number of candidates are left.

In the United Kingdom the Representation of the People Act of 1918, as first introduced, suggested it for large urban constituencies, but this the House of Commons refused to accept, and it was retained only for certain university constituencies. In Northern Ireland proportional representation was introduced in 1921, when the parliament was established, but it was abandoned in 1928. In the Church of England, under the Act of 1919, members of the Houses of Laity and Clergy are elected by this method. It is employed at elections in Germany.

PROROGATION. In parliamentary procedure, the interruption of a sitting of both Houses by royal authority, usually at the close of the session. After prorogation all bills automatically expire, and must be introduced again in the following session.

PROSE. Direct language composed as the vehicle of thought intended to be spoken. It is thus one of the two principal forms into which literature is divided, the other being verse. Its complete emancipation from the laws of metre that are the subject matter of prosody thus furnishes the capital distinction between prose and verse. Rhythm is an integral part of good prose, but if it is to fulfil its primary function the first three essentials of prose are directness, lucidity, and appropriateness of the language it employs.

PROSTATE GLAND. Organ which surrounds the neck of the bladder and first part of the urethra in the male. It is about one and a half inches across and contains a secretion which forms a constituent of the spermatic fluid. Prostatitis, acute inflammation of the prostate, is usually a result of gonorrhoea. Chronic prostatitis may follow.

PROSTITUTION (Lat. pro, before; statuere, to place). Promiscuous sexual intercourse for the sake of gain. The women who practise it, usually for a livelihood, are known as prostitutes. Prostitution has existed in every country and in every age, and all the efforts of Church and State to stamp it out have failed. To-day in the United Kingdom the law treats it as an offence against public order, but cases are extremely difficult to prove and it flourishes openly. In France and other countries prostitution is regulated with varying strictness. See Prostitution.

PROTAGORAS (490-415 B.C.). Greek philosopher and sophist. Born at Abdera in Thrace, he taught in Sicily and latterly at Athens, from which place he fled after conviction on a charge of atheism brought against him for opinions expressed in his treatise on theology. He was drowned at sea. Protagoras was the first to study and write on grammar. He is one of the chief interlocutors in Plato's Dialogue which bears his name.

PROTECTION. In economics, the policy of fostering home manufactures and produce by imposing taxes on the importation of goods from abroad. See Free Trade; Imports; Safeguarding; Tariff Reform.

PROTECTOR. In England a title bestowed on those, usually royal princes or leading noblemen, who acted as governors of the kingdom when the king was a minor or otherwise incapacitated from ruling. Thus the duke of Somerset was protector during the minority of Edward VI. Such protectors were appointed by the privy council. Cromwell's title of lord protector of the Commonwealth was given him in 1653.

PROTECTORATE. Word used in two distinct senses: (1) the authority exercised by a protector or quasi-dictator, with particular reference in English history to the regimes of Oliver and Richard Cromwell; (2) more generally, the protectorship of the weak, especially of less advanced races by a stronger race, and, hence, the territory thus occupied. The term was in frequent use during the latter half of the 19th century, when large tracts of Africa and Asia came under European influence. See Mandate; Zanzibar.

PROTEIN OR PROTEID. Complex organic compound containing carbon, hydrogen, oxygen, and nitrogen with a little sulphur. Proteins form an important part of all living organisms, and are the essential nitrogenous constituents of food. They include the albumen of white of egg, the globulin, fibrin, and albumen of blood, the ossein of bone, the gelatin and collagen of connective tissue, the casein of milk, and the creatin of meat. See Albumen; Globulin.

PROTESTANT EPISCOPAL CHURCH. Official and legal designation of the episcopal Church in America which is in communion with the see of Canterbury. Organized in 1789 as an independent religious denomination, the American Church had, in 1926, 7,299 churches and 1,859,086 members.

PROTESTANTISM. Religious doctrines or principles of protestants. The term arose from the protest lodged by Luther and his followers against the second diet of Spire in 1529, by which enactments were made which continued the protection and endowment of the "old church" in reformed Germany, while not tolerating Lutheranism in Roman Catholic states. The word came rapidly into more general use to describe the system separated from the Roman Church, and by degrees lost its original positive and evangelical character and became little more than an equivalent for the denial of Roman Catholicism.

The source of the separation lies in two main principles. Protestants and Romanists differ as to what is the rule of faith—that is, the standard or authority of Christian truth and practice. Both sides admit the authority of the Scriptures, but to Protestants this is supreme and sufficient, while to Romanists it may be added to by ecclesiastical tradition, and it is always to be accepted as interpreted by the Church. The other main source of divergence concerns the experience of religion. In the Romanist system the sacraments are the sole authorised means of saving grace, and they are authorised to be such only when administered by a validly qualified order of priests. Protestantism finds salvation through the direct and personal relationship of the soul and Christ, unconditioned by the necessity of sacramental and sacerdotal

means. Within the scope of these two great principles lie the rejection by Protestants of the infallibility of the pope and their profound disagreement with the doctrine of transubstantiation.

The aggregate number of persons throughout the world accepting the Reformed principles generally known as Protestantism is 206,900,000. See Church of England; Luther; Nonconformity; Reformation; Roman Catholic Church, etc.

PROTEUS (*Proteus anguinus*). Genus of amphibians, found only in subterranean waters in Dalmatia, Carinthia, and Carniola. It is eel-like in general appearance, 10 to 12 ins. in length, but has four very small and rudimentary limbs, and retains external gills throughout its life. The skin is smooth and flesh-coloured, and the eyes are beneath the skin. The animal is blind. Pron. Proteus.

Proteus. Blind amphibian of subterranean waters, showing the rudimentary limbs
W. S. Berryidge, F.Z.S.

PROTEUS. In Greek mythology, a sea deity, son of Poseidon or of Oceanus. He had the power to foretell the future, but, when consulted, was in the habit of assuming different and sometimes terrifying shapes. Those bold enough to seize him and keep a hold throughout all his changes of form would eventually succeed in getting him to speak. Proteus was supposed to live in Pharos, where he tended Poseidon's sea-monsters.

PROTOCOCCUS PLUVIALIS. Simple one-celled microscopic green plant of the order Protoococcolaceae, common in fresh water and abundant in all standing rain water. It is of spherical form, and of bright green tint with a spot of red—sometimes so greatly extended as to make the whole plant appear red. It multiplies by division into four or more swarmer-spores, each furnished with two motile cilia. They exist as dried-up resting spores on tree trunks and wooden fences, revivifying after rain. Red forms cause the phenomena red-snow and blood-rain.

PROTOCOL (Gr. protos, first; kolla, glue). Originally, a fly-leaf glued on to MSS. to show the writer's name; hence, the original draft of a deed or other document. In diplomacy the word signifies the rough draft of a transaction or the original copy of a treaty, etc.; more particularly it means a diplomatic convention which does not require formal ratification.

PROTOPLASM (Gr. protos, first; plasma, anything formed). Living substance constituting the cells of plants and animals. Physically speaking, protoplasm is a soft, colourless, viscid, transparent or translucent substance composed of two parts. There is a delicate threadlike network, the spongioplasm. It is contractile and elastic, and is often seen to be in very active movement. In among the meshes of this network is a clear, semi-fluid substance termed the hyaloplasm. From a chemical point of view, protoplasm is an exceedingly complicated substance. As long as it is living, there is a constant series of chemical changes going on within it. See Biology; Cell; Life.

PROTOZOA. Zoological term for the phylum of the animal kingdom which includes the lowest forms of all. They consist of single cells, or of colonies of single cells, each of which is capable of separate existence and of reproducing its kind. They are distinguished from all other animals by the two features that in the majority of cases the body consists of a single cell of protoplasm which cannot be differentiated into tissues, and that they reproduce by the whole animal breaking up

into germ cells. The protozoa may be described as specks of jelly, the largest of them being only just visible to the naked eye. A good example is seen in the amocba (q.v.), found in the mud of stagnant ponds.

PROUDHON, PIERRE JOSEPH (1809-65). French political philosopher. Born at Besançon, July 15, 1809, he worked as a printer until 1837, when he published his *Essai de Grammaire Générale*, a philological study. In 1840 appeared his *Qu'est ce que la Propriété?*—a strong attack on the principle of property. Subsequent works were his *Avertissement aux Propriétaires*, 1842; and *Contradictions Économiques*, 1846. In 1848 he was elected to the Assembly, edited the *Représentant du Peuple*, and was imprisoned, 1850. Prosecuted after publishing *De la Justice dans la Révolution et dans l'Église*, 1858, he lived in Belgium, 1858-63. He died Jan. 19, 1865. Proudhon is important as a forerunner of Marx.

P. J. Proudhon, French philosopher

PROUST, JOSEPH LOUIS (1754-1826). French chemist. Born at Angers, Sept. 26, 1754, he became chief pharmacist at the Salpêtrière, Paris. Afterwards he became director of the royal laboratory at Madrid, but was ruined by the Spanish war, the French destroying his laboratory and collections. He returned to France, 1806, later receiving a pension from Louis XVIII, was elected to the academy of science, 1816, and died at Angers, July 5, 1826. Proust discovered grape sugar, 1805, in various natural products, and was the first to demonstrate that the elements combine in a small number of fixed proportions.

PROUST, MARCEL (1871-1922). French author. The son of a doctor, he was born in Paris, July 10, 1871. He began his career by writing for *La Revue Blanche*, and soon published a collection of love stories which attracted attention. He also translated some of Ruskin's books into French. The last 20 years of Proust's life, during which his health was very bad, were passed in writing an immense novel, *À la Recherche du Temps perdu*, a wonderful psychological study of the author's life and times. The first of its seven parts appeared in 1913; the second, 1918, won for the author the Prix Goncourt and a European reputation; the three final parts were only published after Proust's death, which took place on Nov. 18, 1922. Some of Proust's works have been translated into English by C. K. Scott-Moncrieff.

Marcel Proust, French writer

PROVENCE. One of the provinces into which France was divided before the Revolution. It was a province of the Roman Empire, and lay between the Rhône, the Alps, and the Mediterranean. Its capital was at first Aix, and then Arles. Before 900 it had been formed into a kingdom for Boso, brother-in-law of Charles the Bald. This was called the kingdom of Provence, or Burgundy, but it must not be confused with the other kingdom of Burgundy, to the N. It now constitutes the departments of Bouches du Rhône, Var, Vaucluse, and Basses-Alpes.

Provençal was originally the most important dialect of the broader Romance language, the langue d'oc, in the 12-14th centuries the spoken tongue of S. France, Italy, and Spain.

The chivalrous romances of Provence were overshadowed by those of the north, but in

the lyric poetry of the troubadours it was unrivalled in its time. The development of this literature reached its climax during the 12th century and ended practically with the 13th. A notable revival took place in the 19th century. See Burgundy; France; Troubadour.

PROVERB (Lat. pro; verbum, word). Short familiar sentence, an obvious truth or moral lesson. The majority of proverbs were familiar in the mouths of the multitude long before they were written down. Each country, often each part of each country, has its own characteristic sayings, but human nature and experience being essentially at one the world over, there is a marked affinity between them. Frequently the same proverb, with colloquial variations, belongs to so many nations that none could say in which country it was originally born, or whether it was spontaneously generated in all. There have been many compilations of proverbs, both in English and in most other languages.

PROVERBS. Book of. Book of the O.T., belonging to a class of Hebrew writings called Wisdom Literature. The full title is "The Proverbs of Solomon, son of David, King of Israel" (1, 1). The book is a compilation of wise sayings and proverbs, and not, it would appear, the work of a single writer. The divisions of the book have been described as follows: 1, a group of discourses on wisdom and wise conduct, 1-9; 2, a collection of aphorisms in couplet form, 10, 1-22, 16; 3, two collections of aphoristic quatrains, 22, 17-24, 22 and 24, 23-34; 4, a collection of aphoristic couplets, 25-29; 5, a collection of discourses of various characters, 30 and 31.

PROVIDENCE. Capital of Rhode Island, U.S.A. It stands at the head of navigation of Providence river, 45 m. S.W. of Boston. Among prominent buildings are the state house, the Athenæum, and a public library. The chief educational institution is Brown University, founded in 1764. Coal is shipped, and among manufactures are cotton, woollen, and worsted goods. Pop. 267,918.

Facing Providence, on the E. side of the river, is the town of East Providence, which has bleach works and paper mills, besides manufactures of chemicals. Its oyster fisheries are valuable. Pop. 26,088.

PROVINCE (Lat. provincia, territory, etymology doubtful). Word specifically applied to the district round about Massilia (Marseilles), which, as Rome's first conquest outside the Italian peninsula, was known as the Province and which is still called Provence (q.v.). Successive conquests were formed into provinces for administrative purposes, Britain being one, and the term subsequently was used in a wider, more general sense.

For ecclesiastical purposes England and Wales are divided into three provinces, Canterbury, York, and Wales, each being under the jurisdiction of an archbishop.

PROVINCE WELLESLEY. Portion of the colony of Penang on the mainland of the Malay Peninsula. Averaging 8 m. in width, it extends along the coast for 45 m. facing the island of Penang. It was taken over by Great Britain in 1798. The chief town and seaport is Prai. Its area is 280 sq. m. See Malaya; Penang.

PROVOST (Lat. praepositus, placed before). Chief municipal magistrate of a city or

burgh in Scotland. The provosts of Edinburgh, Glasgow, Aberdeen, Perth, and Dundee are styled lord provosts. The term is also applied to the heads of certain colleges, e.g. provost of Eton, King's College, Cambridge, Queen's College, Oxford.

The provost marshal is an officer appointed on a campaign to be chief of the military police. He wears a badge, "P.M.," on his left arm; he receives instructions from the adjutant-general and is attached to G.H.Q. His assistants secure all persons found without passes, collect stragglers, and guard against spies; they arrest military offenders against the rules of the service, keep records of field general courts-martial, and carry out the sentences.

PROXY (late Lat. procurator, acting for another). Term used for a person who acts for another, and also for the authority by which he acts. It is chiefly used in connexion with voting. In the United Kingdom company law allows the employment of proxies, and many shareholders authorise a director or someone else to use their voting powers. Proxies are used in bankruptcy proceedings.

PRUDENTIUS (c. A.D. 348-410). Christian poet, whose full name was Anrelius Prudentius Clemens. Born in Spain, probably at Saragossa, he practised as an advocate, held several provincial appointments, and lived for some time at the court of Honorius. Having lost the imperial favour, he retired to a monastery, and wrote religious poems. His chief works, hexameters and lyrics, are *Cathemerinon*, prayers for daily use; *Peristephanon*, acts of martyrs; *Hamartigenia*, the origin of evil.

PRUDHOE. Urban district of Northumberland. It stands on the Tyne, 11 m. from Newcastle, with a station on the L.N.E. Ry. Near are the ruins of Prudhoe Castle. The chief industry is coal-mining. Pop. 8,924.

Prudhoe Land. Coastal tract of N.W. Greenland. It is situated N. of Hayes Peninsula, and contains the settlement of Etah.

PRUNE (Lat. prunum, a plum). Dried fruit of various plum trees grown in France, Portugal, other European countries, and America, especially in California. The best plums are sun-dried. They are eaten dry, or soaked and stewed, and are valuable for their laxative quality.

PRURITIS. Itching of the skin without signs of local disease. It is most common between the ages of 30 and 40. The condition is most frequently of a neurotic nature, and may occur in persons who are worried or overworked. Lotions containing preparations of tar, carbolic acid, salicylic acid, resorcin, menthol, and other substances may be applied, but are often without effect.

PRUSSIA. Republic of Europe, the largest state of the German Reich. Before 1918 it was a kingdom in the German Empire. Its area is 113,833 sq. m., being over 20,000 sq. m. less than before the Great War. Berlin is the capital and the largest town. Pop. 38,750,000. The prov. of E. Prussia is a detached area separated by the Polish corridor.

Prussia includes the southern part of Schleswig-Holstein, a large part of the Rhine valley, Westphalia, Hanover, much of what was once part of Saxony, Pomerania and most of Silesia (q.v.). The chief rivers are the Rhine, Elbe, Oder, and Weser. The principal industrial areas are Westphalia and Silesia, with their rich coal and iron mines and large manufacturing centres. Agriculture is widely practised.

Prussia started with the electorate of Brandenburg in 1415, but, strictly speaking, Brandenburg-Prussia did not exist until 1660. The various phases of the development of the modern Prussian state may be grouped broadly as follows: (1) the period of the

Providence, Rhode Island. The State House, opened in 1900

Hohenzollern rule from the Great Elector (1640) to the death of Frederick the Great (1786), in which Prussia became a monarchical and military state of the first rank; (2) the Prussian monarchy from 1786 to the death of Frederick William III (1840); (3) the age of the Revolution, of William I and Bismarck (1840-1890), in which Prussia established a Prussian supremacy in Germany; (4) the personal rule of the emperor William II, who by his perpetuation of the state's dynastic autocracy, overweening vanity, and advocacy of a powerful navy, helped to precipitate the Great War.

Prussia was declared a republic in Nov. 1918, and the present constitution was adopted in Nov., 1920. The diet (Landtag) is elected by proportional representation and direct and secret ballot. A state council (Staatsrat) elected by the provincial assemblies on a basis of one representative per 50,000 pop. has the right of rejecting legislation formulated by the diet. There is a ministry under a president or premier.

PRUSSIA, EAST. Province of Prussia. Since 1918 it has been detached from the rest of the country, and is now separated from it by territory belonging to the republic of Poland and the free city of Danzig. Königsberg is the capital; other places include Allenstein and Gumbinnen. The Masurian Lakes are in the province, in which there was a good deal of fighting during the early days of the Great War. In the 15th and 16th centuries East Prussia was ruled by the Teutonic Order. Its area is 14,304 sq. m. Pop. 2,256,350. See Germany.

PRUSSIAN BLUE. Dark blue colouring matter. It was first made accidentally early in the 18th century by a Berlin artist named Diesbach. The compound is made by adding potassium ferrocyanide to a solution of ferric chloride or ferric sulphate, and washing and drying the precipitate. If potassium ferricyanide is employed, Turnbull's or Gmelin's blue is obtained. Another variety is Williamson's blue.

PRUSSIC ACID. Common name for hydrocyanic acid (q.v.). It was so called by Guyton de Morveau because the acid can be made by distilling Prussian blue.

PRYNNE, WILLIAM (1600-69). English puritan. Born at Swainswick, near Bath, he was educated at Oxford, and became a barrister. In 1633 he published *Histrio-Mastix*, an attack on stage plays and regarded as insulting to the queen. For this he was barbarously punished; in addition to fine and imprisonment, he lost his ears and stood in the pillory. In 1637 he was again brutally punished for attacking Laud. In 1640 he was released and given £4,000 by the Long Parliament. An active member of the popular party, he entered the House of Commons in 1648, but was ejected by Colonel Pride and imprisoned. Later he returned to Parliament, became a royalist, and was made keeper of the records at the Tower of London. He died Oct. 24, 1669.

William Pryne,
English puritan

PRZEMYSL. Town of Poland, 60 m. by rly. from Lemberg (Lwow). Formerly an Austrian fortress, it is situated on the San. A hill to the S.W. of the town is crowned by ruins of a castle. Pop. 47,958. Pron. Pzbeem-isl.

There was almost constant warfare around Przemyśl during the earlier part of the Great War. In Sept., 1914, the Russians besieged it. More than once Austria's armies advanced and relieved the pressure, but such relief was only temporary, and each time the siege was

renewed. On March 25, 1915, the fortress and some 120,000 men surrendered. In May, 1915, the Russians in Przemyśl were attacked by an Austrian and Bavarian force, which stormed the forts, and on May 3 entered the city. It remained in Austrian hands until the end of the struggle.

P.S.A. Abbreviation for Pleasant Sunday Afternoon. The movement for providing people with pleasant Sunday afternoons under religious influences was started by John Blackham of West Bromwich in 1875. The meetings were chiefly organized in connexion with the Free Churches, especially the Congregationalists and Baptists, and the movement spread all over the country. In the 20th century it became merged in that known as the Brotherhood (q.v.).

PSALMANAZAR, GEORGE (c. 1679-1763)

Name taken by a literary impostor. Probably a Frenchman and educated by the Jesuits, he was brought to England by an army chaplain, was converted to Christianity, and sent to Oxford. Claiming to be a native of Formosa, he published, in 1704, a *Historical and Geographical Description of Formosa*, partly invented, with an invented grammar of the language. About 1712 he confessed to the imposture,

and became a literary hack, in his later years winning the esteem of Dr. Johnson by his poetry. He died May 3, 1763.

PSALMS, BOOK OF. Book of the Old Testament. It is a collection of 150 poems, divided, in the Hebrew Bible, into five smaller books: (1) Pss. 1-41; (2) 42-72; (3) 73-89; (4) 90-106; and (5) 107-150. According to Jewish tradition the fivefold division was intended to correspond to the fivefold division of the Law, i.e. the Pentateuch. Each of the first four books closes with a doxology, and in the fifth book the last psalm seems to serve as such.

In the Hebrew Bible and in the Septuagint, all but thirty-four bear titles or superscriptions which make statements about the authorship or occasion of composition, or give musical directions.

The practice of singing the psalms has long been an important part of Christian worship. It was usual among the early Christians and has continued until to-day. In the Church of England the psalms are sung through each month, two or three being taken at morning and evening prayer each day.

There are three methods of psalmody, as singing the psalms and canticles is called: (a) responsorial, or between a soloist and the choir; (b) antiphonal, between two choirs or two parts of a choir; (c) direct, sung full without alternation. See Antiphonal; Plainsong.

PSALTER. Book containing the psalms or other hymns, especially metrical paraphrases of the former, either with or without accompanying music.

In England there appeared in 1549 a metrical version of the Book of Psalms by Robert Crawley, with accompanying music, and also in the same year a small volume containing nineteen versions by Thomas Sternhold. With the assistance of John Hopkins and other writers it was gradually enlarged in successive editions, until in 1562 it embraced the whole of the Psalms, set to 65 different tunes, the melody alone being given. The singing of metrical paraphrases still persists in Scotland, but in England only a few of the finest specimens are now used in worship.

PSALTERY (Gr. psalterion, a harp). String instrument used by the Jews, Greeks,

and other early peoples. Its form and character varied, being square, triangular, circular, or irregular, but it was always played by the fingers, with or without a plectrum. It was frequently introduced into pictures by medieval artists, but no specimen is extant.

PSITTACOSIS. Disease of parrots due to a filtrable virus. Even healthy birds may act as carriers, and the disease is transmissible to man, a serious outbreak occurring in England in 1929. In 1930 the importation of parrots was prohibited. See Parrot.

PSORIASIS (Gr. psora, scab). Inflammatory infection of the skin. The cause of this common affection is unknown, but hereditary influences often play a part. The lesion begins as a small, round papule, which soon becomes white as scales form. Ultimately, these develop into patches which may be several inches across. They often disappear spontaneously, but recurrence of the condition is very common. In the early stages, arsenic and salicin administered internally have proved useful. Pron. So-ria-sis.

PSYCHÉ (Gr. soul). In classical mythology, a maiden so beautiful that she aroused the envy of Aphrodite, who sent Cupid to inspire her with love for the meanest of men. Cupid, however, fell in love with her beauty himself, but left her owing to the machinations of her jealous sisters. Psyché then set out to look for Cupid, and after long wandering was united to her lover. Pron. Psy-kee.

PSYCHICAL RESEARCH. Term denoting the scientific study of the more obscure and unexplained activities of the human spirit or of spirit in general. It became current about 1882, when the society for psychical research was founded by Henry Sidgwick, F. W. H. Myers, E. Gurney, and others for the serious study of thought transference, apparitions and haunted houses, hypnotism, trances, clairvoyance, etc.

Modern men of science, with very few exceptions, dismissed all these things as belonging entirely to the realms of superstition and fraud. The founders of the society took another view. They held that the persistent belief of mankind in supernatural occurrences must have been kept alive by some facts, and they determined to submit those facts to sober scientific inquiry. The society still carries on investigations of this kind. Its headquarters are at 31, Tavistock Square, London, W.C.1. See Dream; Poltergeist; Spiritualism.

PSYCHOANALYSIS. Method of investigating the processes of the mind and the fundamental motives of conduct. By the psychoanalyst the human mind is conceived as having two distinct but interdependent aspects, the "conscious" and "unconscious" mind. The former is that which feels and reasons actually and in the present. The latter is conceived as a psychic region which contains the forces collectively described as memory, instincts, habits, etc., and is not directly known to the working conscious mind. Self-centred and primitive, the unconscious mind preserves, active but latent, those desires and impulses which socialised life obliges everyone to "repress" from the upper consciousness.

Between the conscious and unconscious minds there is frequently a conflict, and this may show itself in a serious and lasting neurosis, or merely in some action unimportant in itself, but explicable only with reference to

Psaltery of medieval design. From a 9th century MS.

the hidden and unknown desire which persists in asserting itself. Convinced that many hysteric, neurotic, and neurasthenic ailments, great and small, result from the repression of unpleasant desires, images, or experiences, and especially in early childhood, psychoanalysts seek to discover the nature of these repressions. A group of such repressed ideas is technically known as a "complex."

The dream (q.v.) has been carefully studied by psychoanalysts. Freud's researches in abnormal psychology went to show that the forced repression of sexual instincts was the commonest cause of neurotic disturbances; and he and his school have tended to give sex the paramount place among human motives. Carl Jung (q.v.) has made important developments in the principles of psychoanalysis.

PSYCHOLOGY. Science which classifies and analyses the phenomenon of the human mind. Speaking broadly, there are two schools of psychology. The older school agree in regarding psychology as the science of mental phenomena, meaning by that term sensations, emotions, memories, thoughts, acts of will and the like. Moreover, they are in general agreement about the way in which mental phenomena should be studied. Sensations, feelings, etc., are private property which no one but their possessor can observe. Thus there is, ultimately, only one method of inquiry in psychology, the method of introspection, or of looking into one's mind.

The younger school both disclaim the object and reject the method of the older psychologists. A science, they argue, cannot be based on private knowledge; it must deal with facts open to all competent observers. Hence psychology, if it is to be counted a science, must change its ways and model itself anew upon physiology. Just as physiology seeks to determine how particular organs behave under given conditions, so psychology should interest itself in the behaviour of the individual as a whole when he is brought into carefully stated situations. This does not rule out self-observation altogether, but it does rule out all observation of one's own behaviour which another could not make.

PSYCHOTHERAPY (Gr. psychē, soul; therapeia, treatment). Treatment of mental disorders by influencing the mind. Usually employed for the treatment of hysteria, neurasthenia, and kindred affections, it embraces treatment by suggestion, hypnotism, psychoanalysis, and various forms of re-education where function has been impaired without organic disease.

PTAH. Egyptian deity. The local god of Memphis in the 1st dynasty, he was the divine artificer, creating all things out of the Nile mud. Assimilated to other gods—Osiris, Apis, Sokar—he is represented with a mummified body, wearing a skull cap. Later, as a banded-legged dwarf, he resembled Hephæstus.

PTARMIGAN (Gaelic tarmachan). Species of grouse (*Lagopus mutus*), found in the mountainous districts of N. Europe. In summer the plumage is brownish grey marked with black lines and dark spots, and in winter it is white with the exception of a small scarlet comb, a black line on each side of the head, and black outer tail feathers. It is 14 ins. long, and the legs and feet are thickly feathered. In Great Britain it is restricted to the highest parts of the Scottish highlands and to some of the

western islands. The ptarmigan so closely resembles its surroundings that it is difficult to detect until it takes flight. See Grouse.

PTERODACTYL. Name given to the flying lizard, the fossil remains of which are found in rocks of Mesozoic age. Varying in size from only a foot in the spread of their wings up to some 20 ft., these reptiles were remarkable for their bird-like habits. The wings, however, resembled more those of the present-day bat, being a membrane attached to the body and the long, jointed fingers of the fore limbs. The hind legs bore a strong resemblance to those of reptiles, but the heads of many were more bird-like, possessing jaws which were covered with a horny beak.

Pterodactyl. Skeleton of *P. spectabilis*, a short-tailed flying reptile
By courtesy of the trustees of the British Museum

was the ether. The zones of the heavens were in and beyond the ether, each zone a transparent spherical shell. Each shell or sphere had its own heavenly body which, revolving with it, moved round the earth.

As a geographer, Ptolemy was as celebrated as he was as an astronomer and mathematician. His *Geographikē Syntaxis* was the first attempt to place geography on a scientific basis. He laid down the latitude and longitude of places and constructed maps of the known inhabited world on a mathematical basis in a manner far in advance of his time.

PTOLEMY. Name of several kings of Egypt. Ptolemy I Soter (367-283 B.C.) was one of the favourite generals of Alexander the Great, at whose death in 323 he became satrap of Egypt, and in 305 assumed the kingly title, thus inaugurating the Ptolemaic dynasty, which lasted until 30 B.C. Soter founded Ptolemais in Upper Egypt as a rival to Thebes, built the Serapeum and planned the famous library and museum. In 285 Ptolemy abdicated, and died two years later.

Ptolemy II Philadelphus, King of Egypt
From a bronze bust

Ptarmigan. Hen bird of this species of grouse
W. S. Berridge, F.Z.S.

PTOLEMY OR CLAUDIUS PTOLEMAEUS (fl. A.D. 127-51). Egyptian astronomer and geographer. The dates of his birth and death are unknown, all that is certain being that he conducted his observations in Alexandria during the reigns of Hadrian and Antoninus Pius. His doctrines were incorporated in his great work in 13 volumes, written about A.D. 140, called by the Arabs the *Almagest* (q.v.).

The Ptolemaic system is the theory expounded by Ptolemy to account for the movements of heavenly bodies. He supposed that the moon, sun, and stars revolved in circles about the earth. Beyond the latter, and beyond the fire and water which it supported,

Ptolemy I Soter, King of Egypt
From a coin

Ptolemy II Philadelphus (308-246 B.C.) succeeded on his father's abdication in 285. He opened a canal from the Nile to the Red Sea, and founded the port of Berenice. Ptolemy III Energetes (281-221 B.C.) succeeded his father Philadelphus in 246, and by

marrying Berenice, daughter of Ptolemy Soter's stepson Magas, added Cyrenaica to the kingdom of Egypt.

The remaining Ptolemies were of less importance. Ptolemy IV Philopater, dying in 205 B.C., was succeeded by his son Ptolemy V Epiphanes. Then came Ptolemy VI Philometor. The legitimate line came to an end with Ptolemy X in 80 B.C. Ptolemy XII and

Ptolemy XIII were both brothers of Cleopatra and associated with her in the government. Ptolemy XIV was her son, and Ptolemy XV, the last of the dynasty, who died in 40 A.D., was her grandson.

PTOMAINE (Gr. ptōma, corpse) Alkaloidal substance formed in the process of putrefaction of nitrogenous organic tissues. Such have been regarded as responsible for the symptoms in cases of poisoning by meat, but it is now known that ptomaines are destroyed in the stomach and are therefore unlikely to give rise to symptoms. See Botulism: Poisons.

Ptolemy III Energetes, King of Egypt
From a coin

PTOSIS (Gr. ptōsis from ptein, to fall). Inability to raise the upper eyelid. It may be congenital, or due to injury or disease producing paralysis of the nerve which supplies the eyelid, locomotor ataxia being the most common. See Eye.

PUBERTY (Lat. puber, mature). Age at which the reproductive organs become functionally active. In boys changes characteristic of puberty generally appear between the 14th and 16th years. The rate of growth is increased, the frame and general build begin to approach that of the man, hair appears in the pubic region, and the voice begins to "break." In girls, puberty generally occurs between the ages of 13 and 15. The figure fills out, the breasts become enlarged and rounded, and the menstrual function is established. In hot countries puberty tends to occur at an earlier age than in cold climates.

PUBLICAN (Lat. publicanus) In ancient Rome, a contractor for public business, but more especially for the collection of taxes. The farming of taxes was for long a coveted privilege of the equestrian order at Rome, which was chiefly composed of capitalists and men of business. The actual work of collecting the taxes was done by slaves, freedmen, and other people of humble rank. In practice, owing to the heavy financial responsibility involved, publicans formed themselves into syndicates to carry out any particular contract.

PUBLIC HEALTH. Collective physical health of the community. The department of medicine concerned with the activities of the state in the promotion of health is described as public health or state medicine. Legislative enactments dealing with the subject of health are put into force by central and local authorities. The Ministry of Health is the central authority for England and Wales.

Public health comprises such subjects as housing, sanitation, ventilation, the prevention of infectious diseases, pre-natal and maternity care, infant welfare, the health of school children, the purity of food and water, the health in mines, factories and workshops, the treatment of tuberculosis and of venereal diseases, and so on. A large amount of research is also carried out. Bacteriology has made great advances of recent years and with the knowledge of the causal agents of infection,

ever-improving methods of diagnosis, and provision for isolation of sufferers, most forms of communicable disease are coming under control. See Analyst, Public; Birth Rate; Contagion; Industrial Disease; Infant Mortality; Infection; Notification; Sanitation, etc.

The Royal Institute of Public Health was founded in 1886 to promote the interests of those engaged in public health work. It has well-equipped chemical and bacteriological laboratories for the purpose of study and research, and courses of lectures are given on tuberculosis, etc. The address is 37, Russell Square, London, W.C.

PUBLIC HOUSE. Licensed house where alcoholic liquors are provided for retail sale and consumption within specified hours. See Beerhouse; Ina; Licensing.

PUBLIC POLICY. Comprehensive legal term for the overwhelming interest of the country as a whole. In English law, a contract which is immoral, or in unreasonable restraint of trade, or of a fraudulent or criminal character, is said to be against public policy.

PUBLIC PROSECUTOR. In England, a high legal official, whose duty it is to undertake, on behalf of the government, the prosecution of persons charged with serious crimes. All cases of treason are prosecuted by him, and many other cases of great gravity. He has the right to interfere at any stage of the preliminary proceedings in a criminal case, and to take the prosecution out of the hands of the police or of a private prosecutor.

PUBLIC SCHOOL. Name given in the United Kingdom and elsewhere to a certain type of school. The lines on which these schools are run include the prefectural or monitorial system, i.e. participation by senior boys in the maintenance of discipline, the arrangement of the pupils in forms, their division into houses partly for the sake of competition, and a good deal of attention to sport. Most of the public schools are old foundations, some of them, e.g. Uppingham, having been originally grammar schools, which were reformed and enlarged. Others, e.g. Wellington, are new foundations entirely. The English public school system has spread to Canada, Australia, and S. Africa, and to some extent to the U.S.A. Many girls' schools are now run on public school lines.

PUBLIC TRUSTEE. English official appointed by virtue of the Official Trustee Act, 1906, which became operative Jan. 1, 1908. He is a corporation sole whose business it is to act as executor and trustee of the estate of anyone in England who appoints him. He can be appointed alone, or with a co-trustee or trustees, and the great advantage of so appointing him lies in the certainty that the funds of the trust will not be lost. He charges certain small fees for his services. The office is at Kingsway, London, W.C.2, and there is a branch office in Manchester.

PUBLISHING. Business of multiplying literary works. Printer, publisher, and bookseller were in the early days of printed books combined in one person.

The publisher's functions embrace, besides those of manufacturer, the selection of manuscripts suitable for publication and the commissioning of books on special subjects to suit the requirements

of his market. Most publishing firms have special lines to which they confine themselves; only a few publish books of a certain standard in almost any field of literature. To make a book as attractive as possible, the publisher supplies illustrations, which require the services of special artists, or photographs, maps, schedules, and other devices that adorn and illustrate or help to explain the author's intention.

When a book is manufactured, the business of distribution begins. This is done in different ways; by travellers who visit the booksellers with samples, by creating a demand through advertisements in the public press, by means of reviews which the public expect for their guidance in the periodicals they read, and here and there by means of canvassers who sell books on the instalment plan. See Bookselling.

PUCCHINI, GIACOMO (1858-1924). Italian composer. Born at Lucca, Dec. 23, 1858, he studied under local teachers, worked at Milan conservatoire, 1880-83, and in 1884 his one-act opera, *Le Villi*, was produced. His first great success was with *Manon Lescaut*, staged at Turin, 1893, and its triumph was outdone by that of *La Bohème*, founded on H. Murger's novel, 1896. His other works are *La Tosca*, 1900; *Madama Butterfly*, 1904; *The Girl of the Golden West*, 1910; *La Rondine*, 1917; and *Il Tabarro*, *Sue Angelica*, and *Gianni Schicchi*, one-act operas, 1918. Puccini died Nov. 29, 1924. In 1926 his last opera, *Turandot*, was produced in Milan.

Giacomo Puccini.
Italian composer

or a word of similar sound, is associated with a merry, familiar house spirit in the folklore of many peoples, and there is a curious parallel among the Red Indians of North America, for among the Algonquins Puckwudjines signified the little vanishing people. See Fairy.

PUDSEY. Borough of Yorkshire (W.R.). It is 3 m. from Bradford, on the L.N.E. Ry. The industries include the manufacture of woollens and worsteds, iron and brass founding, and the making of machinery. Pop. 14,315.

PUEBLA. City of Mexico. It stands on the Atoyac river, 65 m. S.E. of Mexico City, at an alt. of 7,200 ft. Among notable buildings are the handsome cathedral, the state government building, the palace of justice, the Palafoxiana library, and an academy of fine arts. The town is an important rly. junction. Pop. 95,535.

PUEBLO (Span. village). Name of certain N. American Indian tribes. Chiefly found in Arizona and New Mexico, they now only number a few thousands. The men cultivate the soil and are famed for their weaving; the women build the houses and make excellent pottery. Their elaborate rites, held in underground halls called Kivas, are mainly concerned with rain-making ceremonies.

PUPERAL FEVER (Lat. puer, child; pareror, to bear). Form of blood poisoning due to infection by micro-organisms during or shortly after the process of child-birth. The use of antiseptic methods, entailing scrupulous cleanliness on the part of doctor and midwife, and thorough sterilisation of all instruments and appliances used, has reduced the incidence of the affection to a very low figure.

Puerperal insanity is the name given to mental derangement associated with pregnancy or parturition. The conditions which most frequently predispose towards puerperal insanity are hereditary influences, seduction, shame, shock, and exhaustion.

PUFF ADDER (*Crotalaria*). Venomous serpent, found in Africa. It has a very large,

Puff Adder. Venomous African snake. Left, distended jaws showing the poison fangs

whence their popular name. Their venom is very virulent, and their habit of lying half-concealed in the sand makes them dangerous to travellers.

PUFF BALL (*Lycoperdon*). Genus of fungi. The spore-bearing portion of the fungus is enclosed in a continuous wall of two layers, of which, by expansion of the inner, the outer layer breaks up into spines or warts. When the spores are ripe the inner wall opens at the apex to release them. Two common and graceful forms, *L. gemmatum* and *L. piriforme*, are edible whilst the flesh is still white. The allied giant puff-ball also affords food before the flesh turns brown. See Fungus.

PUFFIN (*Fratercula arctica*). Sea bird belonging to the auk family. The plumage is black on the crown, back, and wings, and white elsewhere. The bird is remarkable for its very large, adze-shaped beak, which is striped with brilliant red and orange. The decorations of the bill are shed in winter. It is found mainly on the N. shores of Great Britain, the N. temperate zone, and the Arctic, nesting in holes in the ground and crannies in the rocks, and often taking possession of rabbit burrows. Puffins feed upon small fish. In winter most of the birds migrate to the Mediterranean region. See Auk.

Puffin. Sea-bird with large brilliant-coloured beak

PUG DOG. Small toy dog of the mastiff group. It somewhat suggests a diminutive bulldog, from which it has probably been derived. It was introduced into Great Britain in the time of William of Orange, being known as the Dutch pug. Its skull is broad, with a very short muzzle, the tail curls and lies close to the body, and the hair is very short

Pug Dog. Specimen of the toy breed

Pueblo Indian. Old hunter from New Mexico

PUGET, PIERRE (1622-94). French sculptor, architect, and painter. Born at Chateau Follet, near Marseilles, Oct. 31, 1622, he studied in Italy. He is best known by his sculpture, in regard to which he was employed on public works by Fouquet and Colbert. His Milo of Crotona and Perseus and Andromeda were erected in the park at Versailles, and there is a Puget room in the Louvre. He died Dec. 2, 1694.

PUGET SOUND. Inlet in the N.W. of Washington, U.S.A. An arm of the Pacific Ocean, with which it communicates by Juan de Fuca Strait, it has many branches. Its length is 125 m. and breadth 5 m. to 25 m., and it is navigable throughout. On its shores are the ports of Tacoma, at its head, Seattle and Port Townsend.

Pugilism (Lat. pugil, boxer; from pugnus, fist). Term for obsolete bare-knuckle fighting as distinguished from modern boxing (q.v.).

PUGIN, AUGUSTUS WELBY NORTHEM (1812-52). British architect. Born in London, March 1, 1812, he studied under his father, Augustus Charles Pugin. In his early days he was employed on stage scenery and other ventures, but soon turned to architecture, and having embraced Roman Catholicism, designed many churches for that communion. He died Sept. 14, 1852. See Killarney.

PULBOROUGH. Market town of Sussex. It stands on the Arun, 11 m. from Horsham, with a station on the Southern Rly. The large church, partly Early English, contains old brasses. Market day, alternate Mon. Pop. 2,065.

PULHAM. Village of Norfolk. Pulham Market or Pulham S. Mary Magdalene is 3 m. from Harleston, with a station on the L.N.E. Rly. Pop. 984. Pulham S. Mary the Virgin, or Pulham S. Mary, is nearer Harleston, also with a station on the L.N.E. Rly. Pop. 841. There is an airship station at Pulham.

PULITZER, JOSEPH (1847-1911). American journalist. Of Jewish descent on his father's side, he was born at Budapest, April 10, 1847. Going to the U.S.A. in 1864, he served during the Civil War. In 1876-77 he was correspondent of The New York Sun in Washington and Europe; in 1878 he bought The St. Louis Dispatch, which he amalgamated with The Evening Post as The Post-Dispatch; and in 1883 he acquired The New York World. He founded and endowed the school of journalism at Columbia University, opened in 1912. He died Oct. 29, 1911.

PULLEY. Wheel with a flat, convex, or grooved rim, mounted on a shaft or pin upon which it is free to revolve or which is free to revolve with it. As regards the principle of the pulley, Fig. 1 represents a pulley secured by its block or frame to a beam, with a cord passing over it on the ends of which weights W and W' are hung. As the distances d and d' are equal, by the law of the lever it follows that W and W' must be equal in order to balance each other. If, as in Fig. 2, one end of a cord be secured to a beam and passed round the movable pulley A and the fixed pulley B , W will require only half its weight applied at P to balance it, for W is virtually suspended by two cords, and half its weight is borne directly by the beam, whilst the pull of the other half $W/2$ passes over the pulley B . By increasing the number of movable pulleys the effort of P to balance W is decreased by one-half for every pulley; thus in Fig. 3, P and W

are in equilibrium when $P = W/(2 \times 2 \times 2) = W/8$. Combinations of pulleys are known as systems. In Fig. 4 the same cord passes round all the pulleys, and in this case W is equally distributed between the four cords 1, 2, 3, and 4, from which it follows that $P = W/4$.

PULLMAN, GEORGE MORTIMER (1831-97). American inventor. Born in Chautauqua co., New York, in 1839 he began his designs for a new type of rly. coach, and in 1863 built the first Pullman sleeping car. He carried out further improvements in railway carriages, and in 1887 invented the corridor train and introduced dining cars. From his inventions he made a large fortune, and founded the model town of Pullman, later incorporated with Chicago.

George M. Pullman, American inventor

PULPIT (Lat. pulpitum, scaffold, stage, or desk). In ecclesiastical architecture, an enclosed stage or platform, raised above the level of the ground and congregation, from which the preacher delivers his sermon. The pulpit in Roman Catholic churches is generally on one side of the nave, often being built against one of the pillars dividing the nave from the north aisle; the handsomest examples, however, in point of design and carving, are independent structures. The marble pulpits of Siena Cathedral and the Baptistery at Pisa are masterpieces. The wooden examples of the Low Countries include many splendid specimens.

PULSE (Lat. pulsus, beating). Expansion and contraction of an artery, caused by variations in the volume of blood propelled into the circulation at each beat of the heart. The pulse is most conveniently examined in the radial artery a little above the wrist. It varies in rate, strength, regularity, and tension, and the character of each of these attributes furnishes information valuable in the diagnosis of certain constitutional conditions, and of various affections of the heart or arteries. The pulse rate in healthy adults is from 70 to 80. The rate is increased by muscular effort, fever, anaemia, and some other diseases.

PULTENEY, SIR WILLIAM PULTENEY (b. 1861). British soldier. Born May 18, 1861, he joined the Scots Guards in 1881. He served in the Egyptian campaign of 1882, was in Uganda, 1895-97, where he won the D.S.O., and with the Guards went through the South African War. In August, 1914, he was in command of the 6th Division, but was put at the head of the 3rd Corps, and led it until 1918. In 1915 Pulteney was knighted. He became gentleman usher of the black rod in 1920.

Pulley. Diagram showing pulley systems. See text

PUMA (Felis concolor). Large carnivorous mammal of the cat family, widely distributed through N. and S. America. The body is nearly four feet long, tawny in colour. Young animals are profusely spotted with black and have ringed tails, but

Puma. Male and female of Felis concolor. A large American member of the cat tribe. Gambier Bolton, F.Z.S.

they assume the uniform, tawny hue of their parents when about six months old. There are several local varieties. In N. America the puma is commonly known as the mountain lion or the panther, while in S. America it is called the lion or cougar. It is a dangerous foe to deer, horses, and cattle.

Pulpit. 1. Hexagonal pulpit by Niccolò Pisano, 1260, Baptistery, Pisa. 2. Carved wooden pulpit, in mosque of Ala-ed-din, Koniah

Nocturnal in habits, it makes its lair in cavities in the rocks, and usually produces from two to four cubs in a litter.

PUMICE or **PUMICE STONE.** Name given to an effusive igneous rock possessing a spongy texture. Grey in colour, it has been formed by the expansion of occluded moisture. Pumice stone is characteristic of lavas of rhyolitic composition, and is extensively used as a polishing, smoothing, and cleaning stone. Ground to a powder and mixed with soaps, it forms a constituent of many metal polishes. The finest pumice stone is obtained from the Lipari Islands. See Rhyolite.

PUMP. Machine used to move fluids. Pumps may be divided into four main classes according to their working principles: (1) Reciprocating pumps, which draw the fluid in by suction and expel it by the movement of a hucket, piston, or plunger. A familiar example is the hucket pump used to draw water from wells. (2) Rotating pumps, without valves. The best known is the centrifugal, which may be described as a water turbine reversed. (3) Mechanical lifters, such as chains of buckets, which dip into the liquid.

(4) Pumps in which steam, compressed air, or gas acts directly on the fluid. An example is the Humphrey pump. The pump is a four-stroke internal combustion engine of which the pump barrel is the cylinder, and a column of water, continually added to at the suction end and subtracted from at the delivery end, is the piston. Water is taken in during the power stroke, and delivered during all strokes. The valves and the ignition apparatus are controlled by movements of the water in the combustion chamber. Another kind of pressure pump is the air lift. (See diagram, p. 36.)

1. Pump. 1. Bucket pump showing foot valve A, and bucket valve B. 2. Force pump, single acting. 3. Pulsometer pressure pump. Steam enters chamber A through a pipe, ejecting water. Condensation ensues, causing suction, which closes steam inlet and opens suction valve V, allowing more water to enter. Steam simultaneously enters chamber B. when a similar cycle of operations results

PUMPKIN

(Cucurbita popo). Trailing and climbing annual herb of the order Cucurbitaceae. As a cultivated plant it was introduced to Britain from the Levant about 1570. The bristly succulent stems bear five-lobed leaves and strong spiral tendrils. The large yellow flowers are unisexual, though both male and female grow on the same plant. The females are distinguishable by the ovary below the calyx. This develops into the enormous fruit or gourd pumpkin, sometimes weighing over 20 lb. See Gourd.

Pumpkin. Fruit and male flower; inset, female flower

sometimes weighing over 20 lb. See Gourd.

PUMP ROOM. Room in the buildings attached to a mineral spring, in which the waters are drunk by persons undergoing a cure. The most famous place of the kind in England is the pump room at Bath.

PUN. Play upon the similarity of sound in words of different significance. Apart from the happy conversational puns of scores of quick-witted people, the greatest puns are those of Thomas Hood, in whose work the pun achieved an acknowledged position as a literary form. Other users of the pun as an aid to wit, more especially conversational wit, were Charles Lamb, Sydney Smith, Douglas Jerrold, and O. W. Holmes. With the mere word twisting which passed for punning in the burlesques and pantomimes of the latter part of the 19th century the pun fell into discredit.

PUNCH. Alcoholic beverage made of spirits and fruit juice, spice, sugar, and hot water. According to the spirit used, punch is called rum, brandy, or whisky punch. Wine or even ale is sometimes added. Milk punch is made of milk and rum, generally bottled and drunk cold.

PUNCH OR THE LONDON CHARIVARI. British illustrated weekly journal. Devoted to social and political satire, humour, and literary and dramatic criticism, its first issue was published June 17, 1841. Ebenezer Landells, Henry Mayhew, Mark Lemon, and Stirling Coyne were chiefly concerned with its production, and for a short time the three last named were joint editors. Then Mark Lemon became chief editor, and retained this position until his death in 1870. Succeeding editors have been Shirley Brooks, 1870-74; Tom

Taylor, 1874-80; Sir F. C. Burnand, 1880-1906; and Sir Owen Seaman. The original price of 3d was maintained until 1917, when it became 6d

PUNCH AND JUDY.

Name of an English puppet play, performed in the streets by itinerant entertainers. The performer is concealed in a portable frame covered with cloth, the upper part of which is open in front, forming a small covered stage. The puppets are moved from below by the hands of the performer, who utters the dialogue in a nasal falsetto, varied to suit the

characters. There have been various forms of the play but the hero, Punch, is always a violent, pugnacious, but droll and high-spirited rascal, hunchbacked, hook-nosed, and gaily dressed, who with the help of a stout cudgel overcomes all his enemies in succession. Punch is commonly accompanied by his wife, Judy, and a small, lively dog, Toby.

PUNCHESTOWN. Racecourse in Co Kildare, Irish Free State. It is 2 m. from Naas and 24 m. from Dublin, on the G.S. Rlys It is noted for its steeplechases.

PUNIC WARS. Series of wars fought between the Romans and the Carthaginians, or Poeni, for the mastery of the western Mediterranean. In the first Punic War (264-241 B.C.) the cockpit of the struggle was Sicily, the largest portion of which was in the hands of the Carthaginians. In the end the Romans were successful.

In the second Punic War (218-201 B.C.) the scene of the first fighting was Spain, but in 218 B.C. Hannibal led an army first across the Pyrenees and then across the Alps, descended into the valley of the Po, and won victories at Lake Trasimene, 217, and Cannae, 216, but was then checked by Quintus Fabius Maximus, surnamed Cunctator (Delayer). Hasdrubal, brother of Hannibal, made his way from Spain to Italy, with reinforcements, but was defeated and slain at the battle of the Metaurus. Scipio with a Roman army then landed in Africa in 204. Hannibal was recalled in the following year, but at the battle of Zama in 202 his army was completely defeated. By the terms of the peace concluded shortly afterwards the Carthaginians lost Spain.

The third Punic War (149-146 B.C.), provoked by Rome, ended in the fall of Carthage in 146. The city was razed to the ground, and the territory of Carthage became the Roman province of Africa. See Carthage; Hannibal.

PUNISHMENT (Lat. punire, to punish). Infliction of pain or suffering for a misdeed. From early historical times some form of definite punishment of individuals by the state has been recognized. The early forms

were based upon the principle of retaliation, i.e. the infliction of corresponding pain or suffering upon those who had caused them. This theory of punishment remained in wide practice until the middle of the 19th century, when theories of reparation and prevention gradually made headway.

The broad theory is that punishment should act as a deterrent; should penalise the offender only and not the innocent; should be elastic for any particular offence; and should be such as not to destroy the moral sense of the offender or of those carrying out the punishment. See Capital Punishment; Criminology; Flogging.

PUNJAB OR PANJAB. Prov. of India, the land of the five rivers, Jhelum, Beas, Ravi, Chenab, and Sutlej. It lies N.W. of the United Provinces, N. of Rajputana and Sind, and E. of the N.W. Frontier Province, detached from it in 1901. British Punjab comprises 99,846 sq. m., of which 11,000 sq. m. are highlands; the Punjab Indian states cover 37,059 sq. m., of which 12,000 sq. m. are highlands; the highlands being the Himalayan and Siwalik Ranges. Lahore is the capital, and Simla the hot weather capital.

The province is administered by a governor with an executive council of two members (one an Indian) for reserved subjects, and by the governor with three Indian ministers for transferred subjects. There is also a legislative council of 91 members. The Punjab University was founded in 1882 at Lahore as an examining body. It maintains an Oriental college and a law college, and, since 1920, various departments of university teaching, especially in science. Pop., Punjab proper, 20,685,024; Indian states, 4,416,036. See India; Lahore.

PUNKAH. Name for a large fan used in India. It is fixed to the ceiling and worked by a coolie. The word, a Hindustani one, originally meant a small fan, made from the leaf of the palmyra.

PUNSHON, WILLIAM MORLEY (1824-81). English preacher. Born at Doncaster, May 29, 1824, he became a local preacher, and in 1849 was ordained a minister of the Wesleyan Methodist church. Stationed at Carlisle, Sheffield, Newcastle, London, and elsewhere, he became one of the most popular preachers and lecturers in the country. From 1868 to 1873 he was in Canada, and in 1874 he was president of the Wesleyan conference. He died April 14, 1881. See portrait below.

PUNT. Flat-bottomed boat, propelled by means of a pole. In the rules and regulations governing punt races it is defined as a flat-bottomed craft without stem, keel, or sternpost, and the width at each end must be at least one-half of the width at the widest part. Subject to these conditions a punt may be any width or length. There are two styles of using the pole: the running method, and the more general one of pricking. In the former

Punch and Judy show of today. Above, Punchinello of the old Italian stage

Morley Punshon, Methodist preacher

a few steps forward are taken each time the pole is pushed against the head of the river: in the latter, a stationary position is maintained. The pole should be put in the water well in front of the operator, and care is required in gathering it for the next stroke.

Punt. Position for taking a stroke in a racing punt

ostrich feathers, and gold. Of Queen Hatshepsut's expedition, about 1500 B.C., there are graphic sculptured reliefs at Deir el-Bahri.

PUPA. Resting stage in the life history of those insects which undergo a complete metamorphosis. In a true pupa the animal is quiescent; in those cases where it is more or less active it is called a nymph. See Chrysalis; Insect.

PUPIENUS MAXIMUS, MARCUS CLAUDIUS. Roman emperor, A.D. 238. When the tyrant emperor Maximinus had been declared a public enemy by the senate, Papienus was called to the throne, together with Balbinus as joint ruler. However, they could not agree; their authority was defied, and they were both murdered in a revolt of the praetorian guard. See Balbinus.

PUPIL. Opening in the centre of the iris or coloured part of the eye. The iris is provided with muscular fibres by means of which the pupil can be dilated or contracted so as to regulate the amount of light which passes into the eye. Drugs called mydriatics, e.g. atropine, when dropped into the eye cause the pupil to dilate; others called myotics, e.g. physostigmine, cause it to contract. See Eye.

PUPPET (obsolete Fr. *poupette*, a little doll). Figure representing the character of a drama. Puppets are moved by the performer or performers, who are generally concealed and carry on the dialogue, to which the movements are timed. Marionettes (q.v.) are an elaborate form of puppet show, in which the figures are moved by strings. In other forms, as Punch and Judy (q.v.), the guignol of Lyons and the burattini of N. Italy, the figures are moved from below, generally by the hands of the operators concealed in the puppets' costumes.

PURANAS, THE. Scriptures on which Hinduism is based. The principal Puranas are 18 in number, and there are also 18 secondary ones or Upapuranas. Traditionally said to be the works of the compiler of the Vedas, they are of a later period. They include accounts of the Creation, philosophical speculations, instructions for religious ceremonies, genealogies, fragments of history, and legends about gods, heroes, and sages.

PURBECK, ISLE OF. Peninsula in the south-east of Dorset. Lying between the river Frome and Poole Harbour and the English Channel, it measures 12 m. in length and 8 m. in breadth, and is crossed from E. to W. by a range of chalk hills. In the centre is Corfe Castle, and on the S.E. coast is Swanage.

PURBECK BEDS. Name given to the rocks formed at the end of the Jurassic epoch. The rocks extend from Purbeck to Aylesbury. The series is famous for Purbeck marbles, and for building and paving stones.

PURCELL, HENRY (c. 1658-95). English composer. Born in London, he became a chorister at the Chapel Royal and a pupil of John Blow, whom he succeeded in 1680 as organist of Westminster Abbey, becoming in 1682 organist of the Chapel Royal as well. His first opera, *Dido and Aeneas*, was produced in 1675. He composed many other works for the stage, either in the form of incidental music or of complete operas. He also wrote much church music, including anthems, secular songs, and odes, as well as sonatas and lessons for strings and harpsichord. Purcell died Nov. 21, 1695.

Henry Purcell, English composer After Closterman

PURCHAS, SAMUEL (c. 1575-1626). English author. Born at Tbaxted, Essex, he became curate of Purleigh, Essex, in 1601, and vicar of Eastwood, 1604-13. From 1614-26 he was rector of St. Martin's, Ludgate Hill, London, and during this period, from many of Hakluyt's MSS., which he had inherited, he compiled

Pupa of 1. Camberwell Beauty butterfly; 2. Death's Head moth

containing a History of the World in Sea Voyages and Land Travels by Englishmen and others, 1625. Earlier he had written *Purchas his Pilgrim* and *Purchas his Pilgrimage*, works of a similar nature. Pron. *Purkas*.

PURFLEET. Village of Essex. It stands on the Thames, 16 m. E. of London on the L.M.S. Rly. There have been government powder magazines here since 1781. The harbour has wharves for landing and storing goods, and there are facilities for storing oil.

PURGATORY (Lat. *purgatorium*, that which cleanses). Theological term for a state of purification through which the souls of the redeemed who die before attaining perfection are held to pass. The doctrine was gradually developed, and is nowhere directly taught in the Bible. The Roman Catholic Church declares that those who, although saved from eternal punishment, die without having made satisfaction for their sins by the fruits of repentance, require to be purified thereafter by punishments. The pains of purgatory are graduated accordingly and can be mitigated or shortened by the prayers and alms of the faithful, and especially by the Mass. See Hell.

PURIFICATION. Festival observed by the Anglican, Roman, and other churches on Feb. 2, in full the Purification of the Blessed Virgin Mary. Alternatively called in the Prayer Book the Presentation of Christ in the Temple, it commemorates the ceremonial visit of Joseph, the Virgin, and the infant Christ to the Temple, recorded in Luke 2, 22-39.

PURIM. Jewish festival celebrating the escape of the Jews from the plot of Haman. Held on the 14 and 15 Adar, about a month before the Christian Easter, the festivities resemble those of Christmas, including presenting, feasting, and merrymaking, and the performance of religious plays. Formerly an effigy of Haman was carried in procession and finally hanged and burned.

PURITAN. Name primarily applied in the 16th century to those advanced Protestants among the clergy who wished to purify the Church of England from what they regarded as superstitious and corrupt observances retained after the severance from Rome. From the clergy it spread to their supporters among the laity, and then was applied more particularly to the sectaries who stood outside the Church altogether. Generally, though not necessarily, their doctrines were Calvinistic. Of Puritanism in its best signification Milton, Cromwell, and John Bunyan are the supreme types. The harshness and rigidity of many of the Puritan doctrines caused a severe reaction against their predominance, and after the Stuart restoration in 1660 the name of Puritan was held up to derision by such satirists as Butler. The New England states were for many years a Puritan stronghold. See Calvinism; Nonconformity.

PURLEY. Urban district of Surrey. It is 13 m. from London, of which it is a residential suburb, with stations, Purley and Purley Oaks, on the Southern Railway. Pop. 21,491.

PURPLE WORT OR MARSH CINQUEFOIL (*Comarum palustre* or *Potentilla palustris*). Perennial herb of the order Rosaceae, a native of Europe, N. Asia, and N. America. It has a long woody root-stock, and tall stems of purple-brown tint. The leaves are divided into five or seven leaflets with toothed edges. The sparse flowers have short, dark purple-brown petals and larger sepals which are purple on the inner face. The root-stock is an astringent, and yields a yellow dye.

PURSUIVANT (Fr. *poursuivant*, attendant). Title of the junior officers of arms. The pursuivants of the Herald's College, or office of arms, are bluemantle, instituted by Edward III as an extra officer to the Order of the Garter; *rouge croix*, in allusion to the cross of St. George; *rouge dragon*, and *portcullis*, both instituted by Henry VII. Pursuivants, like heralds, wear tabards. The Scottish pursuivants are named Unicorn, Falkland, and Carrick. See College of Arms; Herald.

PURVEYANCE (Lat. *providere*, to provide). Right claimed by English and other kings to requisition, when travelling through the country, whatever was needed by themselves and their retinue in the way of provisions and services. The grievance was dealt with in Magna Carta, and was the subject of much legislation from Edward I's time, but was not abolished until 1660.

PUS. Collection of dead, white blood corpuscles, resulting from inflammation. See Inflammation; Suppuration.

PUSEY, EDWARD BOUVIERIE (1800-82). British divine. Born at Pusey, Berkshire, Aug. 22, 1800, he was a son of Jacob Bouvierie, a son of the 1st Viscount

Edward Pusey, British divine

Folkestone, who took the additional name of Pusey on succeeding to estates there. Pusey became a fellow of Oriel College, Oxford, and was ordained. He made a reputation as a theologian, and in 1828 was elected professor of Hebrew at Oxford and canon of Christ Church. He died Sept. 16, 1882.

Pusey gave much time to studying the usages of the Church in the past, and in a series of sermons laid down the principles on which the High Church movement was founded. The movement was widely successful, and Pusey was its acknowledged head. He contributed to *Traacts for the Times*.

Pusey House, a theological centre in Oxford, is a memorial of his life and work. See Keble J.; Oxford Movement

PUSH BALL. Game invented by M. G. Crane, of Massachusetts, in 1894. It was introduced into Great Britain and played at

Push ball. A run by England in the England v America match at Headingley, Aug. 23, 1902

the Crystal Palace, London, in 1902, but never became popular. There are two sides of 11 players each. The goalposts are 18 ft. high and 20 ft. apart, with a crossbar at the height of 7 ft. from the ground. The ball used is 6 ft. in diameter and weighs 50 lb. Pushing the ball under the bar counts five points, and eight points if it is thrown over the crossbar.

PUSHKIN, ALEXANDER SERGEEVITCH (1799-1837). Russian poet. He was born at Pskov, May 26, 1799. His first poems were published when he was fifteen, and in 1820 Russian and Lyudmila gave him immediate fame. Visiting the Caucasus, he found inspiration for much fresh work, notably *The Prisoner of the Caucasus*, 1822. In 1824 an intercepted letter caused his banishment to his father's estate in the prov. of Pskov, and there for two years he wrote

A. S. Pushkin, Russian poet

much of his best work, including a large part of the autobiographical poem, *Eugene Onegin*, and his great tragedy *Boris Godunov*, 1825. In 1826 he was pardoned by the tsar and allowed to return to St. Petersburg. Poltava, 1828, was a fine narrative poem, including an account of Mazeppa, differing widely from that of Byron. In 1832 Pushkin published the completed *Eugene Onegin*. Wounded in a duel, Jan. 27, 1837, he died two days later.

PUTNEY. District of London. Situated on the Thames, S. of Fulham, and in the co. of Surrey, it forms part of the met. bor. of Wandsworth, is 6 m. from Waterloo, and has stations on the Southern and District Rlys. The parish church of St. Mary, by the bridge, has a 14th century tower and a fine chantry. The bridge, by Sir J. W. Bazalgette, 1886, replaced a wooden structure which superseded an ancient ferry. Putney is the headquarters of many rowing clubs and the starting-point of the Oxford and Cambridge boat race. Putney Heath adjoins Wimbledon Common.

PUTNIK, RADOMIR (1847-1917). Serbian soldier. Born in Kragujevat, and educated at the military academy, Belgrade, he took part in the Serbo-Bulgarian War of 1885, and at the same time was chief of staff of the Danube division. From 1886-92 he was professor in the Serbian military academy. Putnik's radical sympathies made him obnoxious to King Milan, and he lost his position. When Peter ascended the throne in 1903 he made him a general, and Putnik also acted as minister of war. He was commander-in-chief of the Serbs during the First and Second Balkan Wars, 1912-13, and was the real generalissimo of the Serbians during the Great War. He died May 17, 1917.

PUTTING THE WEIGHT or SHOT. Event included in the programme of most athletic meetings. According to Amateur Athletic Association rules, a competitor must stand within a 7 ft. square to cast the shot or iron ball, which should weigh exactly 16 lb. The shot must be "put" by a fair push from the shoulder, not thrown. In 1929 R. G. Hills established the British record, 49 ft. 10½ in., and in 1928 J. Kuck set up the world's record, 52 ft.

PUTUMAYO. Territory (commissary) and river of Colombia, S. America. It borders on Ecuador, and is in part claimed by that republic and Peru. It is named from the river Putumayo or Ico, which traverses it. The capital is Mocoa. The river rises near Pasto in Colombia and unites with the Amazon.

In 1909 allegations were made of gross ill-treatment of native labourers on rubber plantations owned by the Peruvian Amazon Company, a British company formed in 1907. An official inquiry was made, and joint action by Great Britain and the U.S.A. brought the punishment of some of the offenders by the Peruvian government.

PUVIS DE CHAVANNES, PIERRE (1824-98). French painter. Born at Lyons, Dec. 14, 1824, he studied under Henri Scheffer, a brother of Ary Scheffer, Delacroix, and Couture, but developed a wholly original decorative style of his own. In 1876-77 he decorated the Panthéon (Paris) with paintings of the childhood of St. Genevieve, and in 1886-88 completed his great Hemicycle of the Sorbonne. The Marseilles, Amiens, Rouen, and Lyons museums were all adorned with his flat-toned frescoes painted on canvas. He helped to found the New Salon in 1890, and became its president. He died Oct. 24, 1898.

PWLLHELI. Borough, seaport, and market town of Carnarvonshire. It stands on the N. side of Cardigan Bay, 21 m. from Carnarvon, and is served by the G.W. and L.L.S. Rlys. It has a good harbour, is a centre of the lobster and oyster fisheries, and has a coasting trade. Market day, Wed. Pop. 3,809.

PYE, HENRY JAMES (1745-1813). British poet laureate. The son of Henry Pye, M.P., of Faringdon, Berkshire, he was born in London, Feb. 20, 1745, and became M.P. for Berkshire in 1784. He retired from Parliament in 1790, and in that year succeeded Warton as poet laureate, mainly as a reward for his loyalty to Pitt, for though he had a sincere love of letters, his poetry was dull and pedestrian to a degree. He died Aug. 13, 1813.

Henry Pye, British poet laureate. After Drummond

PYELITIS (Gr. pyelos, pelvis). Inflammation of the pelvis or inner part of the kidney. Most often due to a stone in the kidney, or extension of inflammation from the bladder, the symptoms are pain in the back, irritability of the bladder, blood or pus in the urine, and intermittent fever.

PYGMALION. In Greek mythology, king of Cyprus, who made a statue in ivory of a beautiful maiden. He was so charmed with his creation that he fell in love with the statue and prayed to the goddess Aphrodite to give it life. His request was granted, and he married the maiden and had by her a son called Paphus. He is the subject of a drama by G. Bernard Shaw. See *Galatea*.

PYGMY. Name applied to diminutive peoples. The term was used by Homer and Herodotus for fabled races in Ethiopia and India, but now denotes the dwarf tribes encountered by Schweinfurth. du Chaillu,

Stanley, and others in equatorial Africa, and the negritos of S.E. Asia. See illus. p. 41.

PYLON (Gr. gateway). Massive temple portal in ancient Egypt. Developed at Thebes (XVIIIth dyn.), it usually comprised a mono-

Putting the Weight. An Oxford athlete about to cast the shot

lithic lintel, corniced, on lofty jambs, and flanked by two truncated pyramidal towers with sculptured hieroglyphs. The approach was between royal statues, often colossal, and a pair of obelisks. A notable example, Edfu, is 250 ft. wide and 115 ft. high. To-day pylons are used to carry electric cables.

PYLOS. Town in the S.W. of Messenia, ancient Greece. The modern Pylos, or Navarino (q.v.), stands at the S. end of the bay of Navarino. It has a fine harbour. Pop. 2,000.

PYM, JOHN (1584-1643). English statesman. Born at Brymore, Somerset, in 1614 he became member of parliament for Calne, and in 1625 member for Tavistock. He was one of the managers of the impeachment of Buckingham in 1626, one of the chief supporters of the Petition of Right in 1628, and in 1629 an energetic opponent of the tonnage and poundage proposals. Between 1630 and 1640 he was engaged in schemes for the settlement of Connecticut. Pym was in effect the leader of the Short Parliament of 1640, took a principal part in the impeachment of Strafford in that year, and had a share in the Grand Remonstrance of 1641. He was one of the five members whom Charles I. tried to arrest. Pym died Dec. 8, 1643.

John Pym, English statesman

PYORRHOEA. Disease of the tissue surrounding the necks of the teeth. In the nature of a reaction against an external irritant, its characteristic symptom is the exudation of matter from the gums around the necks of the teeth. The gums are inflamed, the bony socket is softened, and the teeth become loose, eventually falling out.

The cause of pyorrhoea is lack of cleanliness at the necks of the teeth. As the teeth are normally coated with muco, and as this is liable to become impregnated with lime salts if it stagnates continually at the necks of the teeth, it is of special importance to eat food of an acid nature, such as vegetables and fruits. Artificial methods which help to prevent pyorrhoea consist in rubbing or brushing the gums, and the use of a slightly acid mouth-wash.

PYRAMID. Stone structure on a polygonal or square base with triangular sides sloping to an apex. Originating in early dynastic Egypt, they are gigantic tombs, each designed for a single interment. About 75 examples remain in Memphis. The design emerged from the mastaba-tomb, and a transitional form occurs in the step-pyramid at Sakkara.

At the end of the IIIrd dynasty Seneferu, when erecting at Medum a similar structure,

Pyramid. Diagram indicating the arrangement of the chambers, passages, and air channels in the Great Pyramid

added the casing blocks to the sides, and removed the funerary chapel to the outside. The step-like appearance of this pyramid results from the demolition of the casing. Seneferu's successor Khufu (Cheops) produced the great pyramid of Gizeh, one of the "seven wonders of the world." Its height was 481 ft., its base line 775 ft., and it comprised 2,300,000 blocks averaging $2\frac{1}{2}$ tons apiece, piled in 210 horizontal courses upon 12½ acres. The outermost covering has disappeared. The entrance, 48 ft. up the N. face, was sealed by a block protecting passages to three main chambers. From the entrance a passage descends to an unfinished chamber 101½ ft. below the plateau level. This was abandoned, and an ascending passage formed at 60 ft. from the entrance. Thence a horizontal gallery diverges to the so-called queen's chamber. The upward ascent leads to the king's chamber, with a granite sarcophagus.

The second Gizeh pyramid, erected by Khafra, was 454 ft. high, with a base of 708 ft. The third, Menkaura's, was 219 ft. high, with a base of 356½ ft. Menkaura also set up a brick pyramid at Dahshur. At Abusir and Sakkara stand the pyramids of Vth and VIth dynasty kings.

The battle of the Pyramids was fought near Embabah, July 21, 1789. In it Napoleon defeated the Mamelukes.

PYRAMIDS. Game played on a billiard table. Fifteen coloured balls are arranged in the form of a compact pyramid, or triangle, the ball forming the apex of the triangle resting on a spot, called the pyramid spot, midway between the centre spot and the billiard spot, and the base of the triangle towards the top cushion. The game is usually played by two persons, and consists of winning hazards, the object being to pocket more of the coloured balls than one's opponent.

PYRAMUS. In Babylonian legend, a youth who loved a maiden named Thisbe. The two agreed to meet by the tomb of Ninus and flee together. Thisbe, arriving first, was frightened away by a lion. Pyramus, thinking she had fallen a victim to the lion, killed himself. Thisbe, returning to find Pyramus dead, killed herself. The story is told in Ovid's *Metamorphoses*, and is made use of by Shakespeare in *A Midsummer Night's Dream*.

Pyargyrite. In mineralogy, one of the valuable silver ores. See Silver.

PYRENEES (Fr. Pyrénées; Sp. Pirineos). Mt. range of S.W. Europe, dividing France from Spain. Extending from Caho de Créens on the Mediterranean to Fuenterrabia on the

Bidasosa, just beneath the Pyrenees.

PYRETHRUM. Garden name for several species of Chrysanthemum, especially the gold feather (*C. praecox*). A native of the Caucasus, it was introduced to Britain in 1804. It is a perennial herb, about 2 ft. high, with aromatic yellow leaves and daisy-like white flowers with yellow centres.

Pyramids of Gizeh. Behind the small pyramid stands the Third Pyramid, on its right the Second, and beyond that the Great Pyramid

PYROXENE. In mineralogy, the name given to a group of silicates. The chief pyroxenes are augite, an aluminium pyroxene; diopside, a calcium manganese; and hedenbergite, a calcium-iron pyroxene. Some of them are cut and polished as gem stones.

PYRRHUS (318-272 B.C.). King of Epirus. Succeeding his father in 306, he was driven into exile in 301, but soon regained the throne. In 281 the inhabitants of Tarentum in S. Italy, then at war with Rome, appealed to Pyrrhus for help. The Romans were defeated at Heraclea, 280, and at Asculum, 279, but at such cost that the term "Pyrrhic victory" has passed into a proverb. An invitation from the Sicilian Greeks for assistance against the Carthaginians took Pyrrhus over to Sicily in 278. The Sicilian campaign was at first successful, but in 276 he returned to Tarentum. His last battle with the Romans took place at Beneventum in 275, and resulted in a defeat. Later, having failed to take Sparta, he attacked Argos, but in the street fighting in that city Pyrrhus was killed by a tile thrown from one of the houses by an old woman.

PYTCHLEY. English hunt. Founded about 1750, with Earl Spencer as its first master, it hunts in Leicestershire and Northamptonshire, from Market Harborough to Northampton.

Bay of Biscay, its length is 270 m. and breadth between 25 m. and 90 m. The highest point is Pic de Nethou (11,200 ft.). Apart from the high-roads and rlys. from Bayonne to San Sebastian, and from Perpignan to Figueras, there are only two carriage-ways across the Pyrenees, though there are some fifty footways. The last link of the railway over the Pyrenees from Pau to Saragossa was opened in July, 1928, and the line from Toulouse to Barcelona in Feb., 1929.

PEACE OF THE PYRENEES. This was a treaty signed in Nov., 1659, between France and Spain, on the Isle of Pheasants in the

The kennels are at Brixworth. The Woodland Pythley, an offshoot, was established in 1874 to hunt the part of the country N. and E. of that now bunted by the older pack. The kennels are at Brigstock. Pron. Pitcheley.

PYTHAGORAS (b. c. 582 B.C.). Greek philosopher. Born at Samos, he settled at Crotona, in Italy, about 529 B.C., and there founded a school or society, half-religious, half-philosophical. His disciples underwent a comprehensive training in gymnastics, mathematics, and music, practised vegetarianism, and believed in immortality and the transmigration of souls. Pythagoras found the first principle of the universe in number. He is regarded as the real founder of the science of geometry, and also as the discoverer of the musical octave. The proof of the famous 47th proposition of Euclid is attributed to him.

PYTHON. In Greek mythology, the serpent born of the mud left by the flood which overwhelmed the world in the time of Deucalion (q.v.) It was killed by Apollo.

PYTHON. Genus of large serpents found in the tropical parts of the E. hemisphere. They belong to the boa family. None of them has poison fangs, but the jaws carry sharp teeth. Usually pythons range from 15 to 20 ft. in length, and have been known to attain 30 ft., with a thickness of body in proportion. They kill their prey by constriction, and live among trees near water, capturing their prey—small deer, goats, and other animals—by night.

Pyx (Gr. pyxis, box). In the Roman Catholic church, vessel in which the sacrament is reserved for administration to the sick.

PYX, TRIAL OF THE. Periodical testing of gold and silver coins issued by the English mint. One gold coin out of every 2,000 minted and one silver coin out of every 60 lb. Troy are tested. The trial takes place in the hall of the Goldsmiths' Company, London.

Q. Seventeenth letter of the English and Latin alphabets. It has the sound of hard c (k), and in English is always accompanied by u: pron. kw. In the termination -que, as in grotesque, opaque, e is mute. Quay is pron. kee. See Alphabet.

Q-BOAT. Name given in the Great War to a ship used to trap submarines. Q-boats masqueraded as merchantmen, and all kinds of camouflaging devices were employed to conceal guns, wireless aërials, etc.

Quadragesima (Lat. quadragesimus, fortieth). Latin name for the first Sunday in Lent, or for the 40 days' fast before Easter.

QUADRANT. Instrument formerly used for fixing the position of a vessel at sea by taking angles. It has been superseded by the sextant (q.v.). The quadrant electrometer, invented by Lord Kelvin, is an instrument for measuring electricity.

Quadrant formerly used in navigation
By courtesy of
Negretti & Zambra

QUADRILATERAL (Lat. quatuor, four; latus, side). Name used for four fortresses grouped for strategic purposes. That composed of the fortified towns of Peschiera, Mantua, Legnago, and Verona enabled the Austrians to maintain their hold on the north of Italy.

Other quadrilaterals were those of N.E. Germany, whose fortresses were Königsberg, Danzig, Posen, and Thorn, and of Poland, consisting of Brest-Litovsk, Ivangorod, Novo-Georgievsk, and Warsaw.

QUADRILLE (It. squadra, a square). Square dance of five figures. It originated in the French ballets of the 18th century, and was later transferred to the ballroom. It is danced by four couples.

QUAESTOR (from Lat. quaerere, to ask, inquiri). Magistrate of ancient Rome. Their number was originally two, but by the last period of the Republic it had increased to 40. Under the empire the number was reduced to 20. A quaestorship was the first step in a public career.

Python. Coiled specimen of the Indian python
W. S. Berridge, F.R.S.

QUAGGA. Name applied to a dark variety of South African zebra. It became extinct about 1870. The name was onomatopoeic, being the natives' reproduction (quā-hā) of the animal's barklike neigh, quā-hā-hā, and was applied by them to zebras in general.

The name is also given to Burchell's zebra. **QUAIL** (*Coturnix communis*). Small game bird about the size of a thrush. Closely related to the pheasant and partridge, it is a native of Europe, Asia, and N. Africa. It is much like a diminutive partridge in shape and general coloration. Vast numbers of the birds are netted in Mediterranean countries during the spring and exported alive for food.

QUAIN, SIR RICHARD (1816-98). British physician. Born at Mallow, co. Cork, Ireland, Oct. 30, 1816, he became house surgeon at University College Hospital, London, 1840. In 1863 he became a member of the general medical council, and its president 1891, in which year he was made a baronet. He was the editor of the Dictionary of Medicine, 1882, and died March 13, 1898.

Quake Grass. Stem and flower spikes

Richard Quain (1800-87), his cousin, was president of the Royal College of Surgeons, 1868, and Jones Quain (1796-1865), another cousin, was famous as the author of Elements of Descriptive and Practical Anatomy, published in 1828.

QUAKE GRASS (*Briza media*) or **TOTTERORASS**. Perennial grass of the order Gramineae. A native of Europe, Asia, and Africa, it has creeping, underground stems and flat leaves. The flowering stems are much branched, and each of the flattened, oval, more or less purple and shining spikes is borne on a long, hair-like stalk.

Quakers. Name originally given in derision to members of the Society of Friends (q.v.).

Quantock Hills. Range in Somerset. The culminating summit is Wills Neck, 1,262 ft.

QUANTUM THEORY. Hypothesis put forward in 1900 by the German physicist Max Planck (q.v.). His law of radiation asserts that the energy of radiation is given out by a radiating body discontinuously, in definite fixed amounts or "quanta," these quanta being proportional to the frequency of the vibrations. Planck's constant, represented by *h*, is the quantity which, divided by the oscillation period, gives the unit of energy.

The amount of energy in the quantum is $h\nu$ where ν is the frequency of vibration.

QU'APPELLE. Town of Saskatchewan, Canada. It is 320 m. W. of Winnipeg, on the C.P.R., and is the centre of a prosperous farming district. It is named after an old post of the Hudson's Bay Co. Pop. 688.

QUARANTINE (Fr. quarantaine, period of 40 days). Period during which ships, goods or persons coming from countries where infectious disease prevails are interdicted from communication with the shore. The term is derived from the fact that usually the period was made to cover 40 days. In Great Britain, the Quarantine Act of 1825 has been replaced by the Public Health Act, 1904. There are regulations under which dogs from abroad are kept in quarantine for a definite period.

QUARITCH, BERNARD (1819-99). British bookseller and publisher. Born at Worbis, in Saxony, of Slavonic origin, April 23, 1819, he settled in London in 1842 and was naturalised in 1847. After working with the publishing house of Bohn, and in Paris, he started as a second-hand bookseller in London, at Castle Street, Leicester Square, removing in 1860 to Piccadilly, where he made his business one of the chief book buying centres of the world.

Quail, a game bird which breeds in the British Isles

His son, Bernard Alfred (1871-1913), also an able collector, joined the business in 1889, and in 1907 transferred its headquarters from Piccadilly to Grafton Street, London, W.

QUARLES, FRANCIS (1592-1644). English poet. Born at Romford, Essex, May 8, 1592, he was secretary to Archbishop Usher in 1629, and chronologer to the city of London from 1639 until his death, Sept. 8, 1644. He is best remembered by his Emblems (moral and religious verse), 1635, and by his prose Enchiridion, 1641, a collection of notable essays and aphorisms. He left a pleasant memory in the minds of all who knew him, and while one of the metaphysical poets, full of strained conceits, and something of a Puritan, he possessed a lively fancy and much felicity of expression. Some of Quarles's religious verses were for long included in English hymnals.

Francis Quarles.
English poet

Quarry Bank. Urban dist. of Staffordshire. Coal mining and iron working are carried on. Pop. 7,400.

QUARRYING. Removal of portions of rock from open pits or caverns cut in the earth for that purpose. The word is connected with the Lat. quadratus, squared, a place from which squared stones are cut.

Methods of quarrying depend mainly on the position of the rock, its bardness, its structure, and the purpose for which it is required. A hill slope is the best site, and in many large quarries the stone is cut out so that the cut surface of the rock is stepped or terraced. The blocks of stone are generally lifted out of the quarry with cranes, and carried to a railway or harbour by trucks run on rails, though in some cases the material is carted away or is let down a hill slope with rope gear. The marble quarries of Carrara (q.v.) are famous.

QUART. British measure of liquid capacity, the fourth part of a gallon. It contains 69.3185 cub. ins., or $2\frac{1}{2}$ lb. of distilled water. The old English quart for wine contained 57.75 cub. ins. and for beer 70.5 cub. ins. The American quart contains 67.2 cub. ins.

QUARTER. As a measure of weight or capacity, the fourth part of a larger measure. e.g. 28 lb. the quarter of a hundredweight. Used for corn measure, it equals eight bushels. The four principal points of the compass are known as the four quarters.

In the plural the term is used for the place where soldiers are accommodated; hence probably the phrase to give quarter, implying that the vanquished will be sent to the soldiers' quarters instead of being killed. Nautically, the quarter is that part of the ship's side situated between the mainmast and the stern.

QUARTER DAY. The days which mark the four quarters of the year. In England and Ireland they are Lady day, Mar. 25; Midsummer day, June 24; Michaelmas day, Sept. 29; and Christmas day, Dec. 25. In Scotland quarter days are Feb. 2, May 15, Aug. 1, and Nov. 11.

QUARTERING. In heraldry (q.v.) the division of the shield into four or more parts, each containing a coat of arms, to indicate direct descent, by intermarriage, from heiresses or co-heiresses of armigerous families. Anciently, quartering was somewhat loosely employed, but in modern grants of family arms the "heirss" principle is strictly adhered to.

Quartering. Heraldic method of showing alliances

Given correct conditions, a husband's quarterly coat may be impaled with the quarterly coat of his wife, their respective quarterings commencing from the top dexter corner of each half of the divided shield. When impalement is unused, quarterings are read by rows across the whole shield. The foreign significance of "seize quarters" is almost unknown in England. The canton, or quarter, is often a mark of difference.

Quarter (canton), heraldic ordinary

QUARTERMASTER. Regimental officer, generally with the rank of lieutenant. He receives, issues, and accounts for rations, stores, and ammunition and is assisted in this by quartermaster-serjeants (Q.M.S.). A quartermaster-general (Q.M.G.), is a general officer in charge of the supply departments of the army, having under him assistant quartermasters-general (A.Q.M.G.).

QUARTERN. Old English term for a measure of capacity, as the fourth part of a pint, the fourth of a peck or stone. A 4-lb. loaf is known as a quartern loaf. See Gill.

QUARTER SESSIONS. English court of law, so called because it usually meets four times a year. In the counties it consists of the justices of the peace for the shire, riding, or other division thereof, and they appoint two of their number as chairman and vice-chairman respectively. Certain cities and boroughs have also a court of quarter sessions, presided over by the recorder.

These courts hear appeals from the ordinary magistrates' courts and appeals about rating and licensing matters. They try indictable offences except treason, homicide, and criminal libel. From their decision a person can appeal to the court of criminal appeal, except when quarter sessions sits solely as a court of appeal from a court of summary jurisdiction.

QUARTERSTAFF. Weapon formerly much used by the English. It was a staff about $1\frac{1}{2}$ ins. in diameter, from 6 ft. to 8 ft. in length and tipped with iron at each end. It was grasped in the middle by one hand and by the other a quarter way along, now at one end and now at the other, as policy dictated, the shifting of the hand giving it a circular play.

QUARTET. Musical composition written for four solo voices or instruments. The former may be for male or female voices alone, or for any combination of the two, the most usual being for soprano, alto, tenor, and bass: the latter, in most instances, is for strings alone, consisting of 1st and 2nd violins, viola, and violoncello. When the pianoforte is used and the 2nd violin omitted, the combination is known as a pianoforte quartet. The term is also used of the performers collectively.

QUARTZ. In geology, name of a mineral formed of silica, SiO_2 , crystallising in the hexagonal system. When pure, quartz is colourless and known as rock crystal. One of the most widely distributed of all minerals, quartz is the principal ingredient of sandstones and a constituent of many clays, granites, and porphyries.

By heating in the oxyhydrogen blowpipe quartz can be fused and drawn out into long threads which are used in the making of torsion balances, galvanometers, etc. Its hardness and transparency when pure make it an excellent material for spectacles, lenses, etc., and it is used in the making of sandpaper, glass, refractory bricks, and cements.

The name quartzite is given to a metamorphic rock composed chiefly of quartz.

QUASSIA (*Quassia amara*). Tree of the order Simarubaceae. A native of tropical America, the alternate leaves are broken up into a double row of leaflets, not unlike those of the ash. The large, tubular, scarlet flowers are clustered. The wood is intensely bitter, and was formerly used as a tonic and in dysentery, but the quassia of modern medicine is furnished by an allied tree (*Picraena excelsa*), a native of Jamaica.

QUATERNARY. In geology, name given to the period of time following the Tertiary. The term is in some respects vague, and various alternative terms have been suggested for the period. Sir A. Geikie divided it into a human period and a Glacial period or the Pleistocene. See Ice Age; Pleistocene; Pliocene.

QUATRAIN (Fr. *quatrain*, four). Complete expression of a single thought in four rhymed lines, as in these, written by the earl of Rochester on Charles II's bedchamber door:

Here lies our sovereign lord the King,
Whose word no man relies on;
He never says a foolish thing,
Nor ever does a wise one.

QUATRE BRAS. Village of Belgium, in the prov. of Brabant. Its name comes from its position at the meeting of the Brussels-Charleroi and Namur-Nivelles main roads, $2\frac{1}{2}$ m. S. of Genappe, and it is famous as the scene of the battle of June 16, 1815, preceding the battle of Waterloo (q.v.). Napoleon ordered Ney to attack the allies at Quatre Bras while he engaged Blücher at Ligny. Wellington prevented the French from scoring a success. The British and their allies lost 4,500 men.

QUATREFOIL (Fr. *quatre*, four; *fenille*, leaf). In architecture, an opening in tracery. It consists of four lobes tangent to the inner side of a circle and meeting each other at

cusps within the circle. Square panels inscribed with a quatrefoil are a common ornament in Gothic architecture. See Gothic Architecture.

Quarterstaff, as used in medieval England. From a print illustrating the fight between Robin Hood and the Tanner

QUAVER. Musical note represented thus: f ; its value being one-eighth of a semibreve. Two or more quavers may be grouped thus: f . Its corresponding rest is r . So far as can be learned, the quaver was invented during the 15th century, being known at first as Chroma, Fusa, or Unca, and later as the Lesser Semiminim. In America and Germany it is called an eighth note, in France it is called a crook or hook (*croche*).

QUAY. Embarkation and landing place, formed alongside a river or seashore, or in a dock or harbour, against which ships may berth. Quays are usually equipped with appliances for the loading and unloading of ships. (See Dock.) Pron. Kee.

Queanbeyan. Town of New South Wales, Australia, in Murray co. It is the rly. junction for Canberra. Pop. 4,020.

QUEBEC. Prov. of Canada. Its area is 594,434 sq. m., of which 583,895 sq. m. are land. The population in 1921 was 2,361,199 (more than three-quarters of French descent). Quebec is the capital. In 1927 an area of some 110,000 sq. m. in the Labrador peninsula was transferred to Newfoundland. Its rivers, excluding the St. Lawrence, are not long. There are numerous lakes.

Quebec produces wheat, barley, oats, and cereals, but is more famous for its horses, cattle, and sheep. From the prov. the world obtains nearly all its asbestos. Much land is covered with forests, and lumbering is an important industry, as is the production of pulpwood. For the industries water power is abundant. The St. Lawrence is the great highway, except in winter. The more populous parts are well served with rlys.

In the Dominion Parliament Quebec is represented by 65 members. Its local affairs are under a lieutenant-governor, a premier and cabinet. The legislature consists of a council of 24 nominated members and an assembly of 85 elected members. There are separate systems of public education for the Protestants and Roman Catholics. The early history of Quebec is really that of Canada (q.v.).

QUEBEC. City of Canada and capital of Quebec prov. It stands on the N. bank of the St. Lawrence on the top of bold cliffs with the river, over a mile wide, at their base. A cantilever bridge crosses the St. Lawrence. Opened in Dec., 1917, it has a main river span of 1,800 ft., and a total length of 3,240 ft. It carries two railway tracks and a footwalk. Outside the walls, overlooking the St. Lawrence, are the Plains of Abraham.

The most important churches are the R.C. cathedral, Notre Dame des Victoires, the Anglican cathedral, and St. Matthew's. Laval University has a library and a picture gallery. The city's finest promenade is Dufferin Terrace, overlooking the St. Lawrence: here is a statue of Champ-lain. The buildings of the legislature form a fine block standing in large grounds. Quebec has a fine harbour and there are extensive docks. Timber is an important industry.

Quatrefoil, architectural example

Quebec. Panoramic view of part of the city as seen from across the St. Lawrence River. 1. Colonnades of Dufferin Terrace, a promenade 1,400 ft. long. 2. Obelisk to Wolfe and Montcalm. 3. at the extreme end of Dufferin Terrace. 4. Chateau Frontenac, the great C.P.R. Hotel. 5. Champlain Statue. 6. Roman Catholic cathedral. 7. Archbishop's Palace. 8. The Seminary. 9. Laval University.

The manufactures include machinery, boots and shoes, leather goods, etc.

Quebec was founded in 1608 by Champlain, the name, an Indian one, referring to the narrowing of the river here. Earlier it was an Indian settlement. Pop. 131,000.

Quebec was captured by the British after a victory over the French on the Plains of Abraham, Sept. 13, 1759. Both the leaders, Wolfe and Montcalm, were killed. The Plains, on which stands a monument to Wolfe and Montcalm, became a public park, 1908.

QUEBRACHO (*Aspidospermum quebracho*). Tree of the natural order Apocynaceae, a native of S. America. Its bark yields the drug known as white quebracho.

QUEEN (Anglo-Saxon *ewen*). Term applied to a woman ruler. A queen regnant rules in her own right; a queen consort is the wife of a ruling king; a queen dowager is the widow of a deceased king. While some countries bar a female from succession to sovereignty, e.g. by the Salic Law, others take a queen only in default of heirs male. In the British Empire a princess succeeds when she has no brothers. See King; Mary; Royal Family.

QUEEN ANNE. Style of architecture, furniture, and silverware that came into vogue in England during the reign of Anne. In architecture, Blenheim Palace, designed by Sir John Vanbrugh (q.v.), is an example of importance.

In furniture, the tendency was towards comfort and homeliness. Walnut was the principal wood, but larger pieces such as the settee were fashioned in oak, as they had been in Jacobean times. Chairs generally show the open type of back, with a fiddle or urn shaped splat. Claw-and-ball feet were common. The seat was generally loose and stuffed. Cabinets, chests of drawers, grandfather clocks, were ornamented with marquetry. Veneering also came into practice. Black and gold lac decoration was introduced from the East, through Holland.

Queen Anne card table, in oak veneered with walnut

By courtesy of the Director, Victoria & Albert Museum, S. Kensington

QUEEN ANNE'S BOUNTY. Fund derived from the first-fruits and tenths of certain clerical incomes. Formerly part of the crown revenue, it was transferred in 1704 by Anne to the Church of England. The money has been used to improve the value of poor livings. The payments, with few exceptions, had been extinguished in 1926. The amount available from capital for the relief of dilapidated assessments on benefices not exceeding £250 in net annual value was £17,061 in 1928.

QUEENBOROUGH. Mun. bor. and commercial port of Kent. On the Isle of Sheppey, it stands at the junction of the Swale and the Medway, 2 m. from Shoerness, and is

served by the S.R. Glass and cement are manufactured. Queenborough is named after Philippa, wife of Edward III. Pop. 3,073.

QUEEN CHARLOTTE ISLANDS. Insular group off British Columbia. They are 130 m. N.W. of Vancouver. Forests abound, anthracite coal is mined, and gold, copper, and iron ores are found. The whites, few in number, fish for halibut in Hecate Strait; the Haida Indians number less than 700. Jedway, Kedda Bay. Queen Charlotte City, and Skidegate are the chief settlements.

Queen Charlotte Sound is a channel of the Pacific coast of Canada. It separates the N.E. of Vancouver Island from the mainland of Canada.

QUEEN ELIZABETH. British battleship, the nameship of a class and the flagship of the Grand Fleet in 1917-18. She was built at Portsmouth Dockyard, and joined the active list Dec. 22, 1914. The first British warship to carry 15-in. guns and to be driven entirely by oil fuel, she is 650 ft. long, 92 ft. in beam, displaces 27,500 tons, and has a speed of 25 knots. In her fuel bunkers 4,000 tons of oil can be carried. She served at the Dardanelles, 1915. It was aboard the Queen Elizabeth that the surrender of the German Fleet was arranged.

QUEENHITHE (Mid. E. *hithe*, haven). London street and dock. In the reign of Elizabeth the dock was the chief water gate of the city, and the tolls levied on corn, etc., landed here formed part of the revenue of queens consort.

QUEEN MARY. British battle cruiser. Of the Lion type, she was sunk by gunfire at Jutland, 1916. Completed in 1913, her details were: length 720 ft., beam 88 ft., displacement 27,000 tons, designed engine power 75,000 h.p., and speed 27 knots. She carried eight 13-in. and sixteen 4-in. guns. She was present at the battle of Heligoland Bight, Aug., 1914. See Lion.

QUEEN MARY LAND. Coastal tract of Antarctica. It lies E. of Kaiser Wilhelm II Land, and was explored by the Mawson Australasian expedition of 1911-14.

QUEEN'S, AND QUEEN'S OWNS. The Queen's is the popular designation of the Royal West Surrey and Royal West Kent regiments and the 16th Lancers. Queen's Own is a designation of the 4th and 7th Hussars

and Cameron Highlanders. The 9th Lancers is officially the 9th (Queen's Royal) Lancers.

QUEENSBERRY, MARQUESS OF. Scottish title held by the family of Douglas since 1682. In 1633 Sir William Douglas, lord of Drumlanrig, was created earl of Queensberry. His grandson, William, the 3rd earl, was made a marquess in 1682 and a duke in 1683. In 1778, when the English titles became extinct, the Scottish titles and the estates passed to William Douglas, earl of March, a descendant of the 1st duke. In 1810 the dukedom, and with it the estates, passed to the 3rd duke of Buccleuch and the marquessate to Sir Charles Douglas.

The 8th marquess was the sportsman who drew up in 1867 the boxing rules called by his name. The peer's eldest son is known by the courtesy title of Viscount Drumlanrig.

QUEENSBERRY, DUKE OF. Scottish title of the family of Douglas from 1683 to 1810. James Douglas, the 2nd duke (1602-1711), was the high commissioner who did a great deal to bring about the union of the English and Scottish parliaments in 1707. He was then made duke of Dover and became a secretary of state. He died July 6, 1711.

In 1778 William Douglas (1724-1810) became the 4th duke. Known as "Old Q," he was a prominent sportsman and was notorious for his extravagances, gallantries and eccentricities. On his death, Dec. 23, 1810, the dukedom passed to the duke of Buccleuch.

4th Duke of Queensberry

QUEENSBURY OR QUEENSHED. Urban dist. of Yorkshire (W.R.), on the L.N.E.R. Stone and coal are worked, and there are manufactures of woollens and worsteds. Pop. 5,870.

QUEEN'S COLLEGE. College of the university of Oxford. Its buildings are in High Street, and its head the provost. It was founded in 1340 by Robert de Eglesfield, chaplain to Philippa, queen of Edward III, and has always had a special connexion with the north of England. It is famed for the Christmas ceremony of bringing in the boar's head at dinner.

Queens' College, Cambridge, was founded by one queen, Margaret of Anjou, and re-founded by another, Elizabeth Woodville. Its old buildings have been restored.

Queen's College, Harley Street, London, is a college for women founded in 1848.

Queen's County. Inland co. of the Irish Free State, since 1922 known as Leix (q.v.).

QUEENSFERRY, SOUTH. Burgh and seaport of Linlithgowshire, Scotland. It stands at the S. end of the Forth Bridge, 9 m. from Edinburgh, on the L.N.E.R. Near are Dalmeay and Hopetoun House; also Barnbough and Dundas Castles. The name is due to the fact that from here Margaret, wife of Malcolm Canmore, frequently crossed the Forth when travelling between Edinburgh and Dunfermline. It was made a burgh in 1363. Pop. 2,193. Opposite South Queensferry, in Fifehire, is the bathing resort of North Queensferry.

QUEENSLAND. State of the Australian Commonwealth. It has an area of about 670,500 sq. m. and an estimated pop. (1929) of 927,000. More than two-thirds of its area is within the tropics. Brisbane is the capital.

Sheep and cattle rearing and dairy products are important. Wool is a staple industry and timber is plentiful. The chief crops are maize, sugar canes, bananas, and pineapples, while the tobacco and cotton crops are increasing. Gold and tin are mined, and copper, manganese, and iron ores obtained. Coal is mined at Ipswich and other centres. Thursday Island is a centre for the pearl and bêche-de-mer fishery. A number of important power and irrigation and rly. extension schemes are being undertaken.

The governor is assisted by a prime minister and cabinet and legislative assembly of 72 members elected for three years by adult suffrage. The upper house was abolished in 1922. Till 1859 Queensland formed part of New South Wales. See Australia, map.

QUEENSTOWN OR COBE. Urban dist. and seaport of co. Cork, Irish Free State. It is situated in Cork Harbour, with a station on the G.S. Rlys. It stands on the slope of a hill, and its finest building is the R.C. cathedral. A naval station, pleasure resort, and yachting centre, it was known as Cove of Cork until, after a visit by Queen Victoria, in 1849 it became Queenstown. Pop. 7,077.

QUEENSTOWN. Town of Tasmania, Australia. It stands on the Queen river and contains reduction works for copper mined at Mt. Lyell, saw mills, and brick works. Pop. 2,920.

QUEENSTOWN. Town of the Cape Province, S. Africa. It stands on a plateau, 3,500 ft. high, and 154 m. from East London. There is a botanic garden. The town is the centre of a district producing wheat and wool. Pop. (whites) 5,232.

QUEST. British exploration ship. Built in Norway, 1917, of oak, pine, and fir, she was first used as a sealer in the White Sea. She is 111 ft. long, 23 ft. in beam, and about 200 tons net burthen. Her sides are 2 ft. thick of solid oak, sheathed with steel. In 1921, after being altered and refitted at Thornycroft works, Southampton, she was used to convey the Shackleton-Rowett Antarctic expedition. In July, 1930, she sailed with an expedition to find an Arctic airway to Canada.

QUETTA. Capital of Baluchistan. The town is situated 5,500 ft. above sea level in British Baluchistan, and is a military outpost guarding the Bolan Pass, through which the strategic rly. from Quetta goes to the Indus valley. A residency was established here in 1876. The town is a trade centre, but the winter cold drives away about a quarter of the population. Pop. 49,000.

QUETZAL OR QUEZAL (Pharomacrus mocinno). Bird of the trogon family, inhabiting the central American uplands from Guatemala to Panama. Its name is derived from an ancient Nahuatl word meaning green feather. The cock bird, the size of a dove, is adorned with carmine breast feathers and upper tail-coverts of metallic green.

The ancient Mexican chiefs forbade the killing of the birds, whose plumes are represented on Maya pottery, sculpture, and picture writings. The bird forms part of the national arms of Guatemala.

QUETZALCOATL. One of the chief gods of ancient Mexican mythology, god of the air and of wisdom, and teacher of the arts. His name signified serpent clothed with green feathers. He was said to have ruled in Mexico in a time of peace and plenty.

Quetzalcoatl. Image of the Mexican god

There are firm, fine sands and a small bathing establishment. Pop. 3,469.

The battle of Quiberon Bay was fought, during a gale, between the British and the French, Nov. 20, 1759, during the Seven Years' War. The British fleet of 33 sail under Hawke, by its defeat of the French (33 sail) under Conflans, shattered the French plan of invading England.

QUICKLIME. Common name for calcium oxide, CaO. It is prepared by burning limestone (calcium carbonate) mixed with coal in kilns. The limestone loses its carbonic acid gas during the process. *Quicklime is employed for making mortar and cement for building purposes.* Slaked lime is made from quicklime by pouring water over it, much heat being evolved during the process. The product, known chemically as calcium hydroxide, is used for making lime-water and is employed in chemical industry. See Lime.

QUICKSAND. Name given to a loose sand in which heavy bodies easily sink. Such sands are composed of small particles and water and do not coalesce under pressure. They are most usually found near the mouths of rivers and in glacial deposits.

Quicksilver. English term, still used, for the metal mercury (q.v.).

QUETISM. Form of mysticism which has arisen at various times in the Church and in several non-Christian religions such as Buddhism. The Quietist practises entire resignation of self in thought, desire, and deed, and in this way seeks such union with God that the Will of God shall take the place of his own will, and his life be identified with the divine operation. The name first came into use through the teachings of a Spanish priest, Miguel de Molinos, author of *The Spiritual Guide*, 1675. Madame Guyon (q.v.) taught quietism in France and was imprisoned for it.

QUILIMANE, KILIMANE, OR QUELIMANE. Port in Mozambique (Portuguese East Africa). It possesses an excellent harbour, and a rly. is being constructed to the Nyasaland Protectorate. Pop. 3,097, including about 350 Europeans.

QUILLER-COUCH, SIR ARTHUR THOMAS (b. 1863). British novelist and critic. He was born at Polperro, Cornwall, Nov. 21, 1863, and educated at Clifton and Trinity College, Oxford. His many novels and stories include *Dead Man's Rock*, 1887; *Troy Town*, 1888; *The Splendid Spur*, 1889; *The Detectable Duchy*, 1893, and others dealing chiefly with Cornish life and scenes. He finished Stevenson's *St. Ives*, 1899. His fine literary taste

and judgement are strikingly manifested in his critical studies, such as *Adventures in Criticism*, 1896, and in his anthologies. Knighted 1910, in 1912 he was made King Edward professor of English Literature at Cambridge. His lectures, e.g. *On the Art of Writing*, 1916, *On the Art of Reading*, 1920, and his *Essays in Criticism*, 1924, circulated widely in volume form. In 1929 appeared *Studies in Literature*. Pron. Cooch.

QUILLWORT OR MERLIN'S GRASS (*Isoetes lacustris*). Aquatic perennial herb of the order Selaginellaceae, a native of Europe, W. Siberia, and N. America. It grows at the bottom of lakes, and has a corn-like base, from which spring stiff awl-shaped leaves composed internally of four tubes with transverse partitions. The spore capsule of the quillwort is borne on the dilated bases of the outer leaves.

QUIMPER. Town and seaport of Brittany. The capital of the department of Finistère, it stands on the river Odet, 38 m. from Brest. The church of S. Corentin, once a cathedral, is one of the finest Gothic buildings in Brittany, having a beautiful lady chapel and a fine choir. The place has a coasting trade and some manufactures. In early times Quimper was the capital of Cornouailles. Pop. 21,000. See illus. p. 307

QUIN, JAMES (1693-1766). English actor. Born in London of Irish descent, Feb. 24, 1693, and educated in Dublin, he came into notice by his rendering of Bajazet in *Tamermagne* at Drury Lane Theatre, 1715, and by killing a fellow actor in a duel. For many years he played leading parts at Lincoln's Inn Fields and Covent Garden. He died at Bath, Jan. 21, 1766.

Quince. Branch with leaves and fruit

QUINCE. Trees and shrubs of the order Rosaceae, genus *Pyrus*. Natives of Europe, Japan, and China, the common species was introduced into Britain in 1573. It is related to the pear and apple, and the fruit is employed to make jam and jellies. The quince flourishes in moist soil.

QUINCUNX (Lat.). Arrangement of five things, one in each corner and one in the centre of a square or oblong space. The term is applied to trees arranged in an orchard so that those in one row face the spaces between those in the neighbouring row. In the fighting formation of the Roman legion the maniples are said to have been in quincunx order.

QUININE. Alkaloid present in the bark of *Cinchona succirubra*. It is used in medicine to stimulate the salivary and gastric secretions in various forms of indigestion, and to ward off malaria or cause it to be much milder.

QUINOA (*Chenopodium quinoa*). Herb of the order Chenopodiaceae, a native of the Pacific slopes of the Andes. It attains a height of 5 ft., with a stout, furrowed stem and somewhat triangular oval leaves with sinuate margins. The small green clustered flowers are succeeded by small fruits, each containing a single seed. The seeds are boiled to furnish a sort of gruel called carapulcra.

QUINQUAGESIMA (Lat. quinquagesimus, fiftieth). Term applied to the Sunday before Lent. Quinquagesima Sunday falls 50 days before Easter and was formerly known as Shrove Sunday.

QUINTAIN. Post set up as a mark and used in practising the knightly art of tilting with the lance: also a target so poised as

to swing round and, unless skilfully evaded, deal a sharp blow from a sandbag hung from the other end of a crossbeam. The word is derived from Lat. quintana, the part of a Roman camp devoted to military exercises.

Quintal. Device set up for tilting on village greens

QUINTAL. Measure of weight used in Spain, Portugal, and S. America. In Spain it is 100 libras, or 101.4 lb., in Portugal 58.752 kilogrammes, or 129.1 lb.

QUINTILIAN (c. A.D. 35-97). Roman rhetorician. His full name was Marcus Fabius Quintilianus. Born at Calagurris in Spain he was educated at Rome, and is known as the author of *The Institutes of Oratory*. The more technical portion of this work has comparatively little interest, but the outline sketch of ancient literature is of great value. The final book, which deals with education, anticipated some modern theories.

QUIRE. Measure of paper, the twentieth part of a ream, i.e. 24 sheets. A newspaper quire contains 27 copies, a printer's quire 25 sheets. See Ream.

QUIRINAL (Lat. collis quirinalis). One of the seven hills on which Rome is built, 170 ft. in height. Situate in the N.E. quarter, it was early seized by Sabines, and the name was popularly connected with Cures, an ancient Sabine town. The palace on the summit has been a residence of the king of Italy since 1870.

Quirinal, Rome. Royal palace and, left, fountain and obelisk

QUIRITES. In Roman history, originally the Sabine inhabitants of the Quirinal. After the union of Sabines and Romans the name was applied collectively to all the citizens of Rome. Later the term was used for civilians as opposed to soldiers. The word has been derived from the Latin *quiris*, a lance, or from Cures, a Sabine town. Pron. Kwiri-teez.

QUITO. City of Ecuador, capital of the republic. Picturesquely placed amid lofty volcanic peaks, at an alt. of 9,350 ft., it lies just below the equator. It has a cathedral, presidential and archiepiscopal palaces, a mint, monasteries, university, etc. Manufactures include saddlery, ponchos, carpets, cotton and woollen goods, jewelry, and articles of Mexican onyx. Hides and rubber are exported. Pop. 82,000. Pron. Kee-to.

Quito, Ecuador. Independence Square and Government buildings

QUOICH. Loch. Lake in the S.W. part of Inverness-shire, Scotland. It is 6 m. long by 2 m. broad.

QUOITS. Pastime which probably had its origin in England and Scotland in the 15th century.

The playing area is formed of two beds of clay, each 3 ft. in diameter and generally 18 yds apart from centre to centre. Into each centre is driven an iron pin, the hob, of which an inch remains above the ground. The quoit is a ring of iron, thick at its inner and thin at its outer edge, not exceeding 8 ins. in diameter and weighing about 9 lb.

Quoits. Method of holding

Matches are played between single players or two on each side, victory going to the player or players whose quoits ring or most nearly ring the hob. All quoits which fall on their backs are foul.

QUORN. Premier English hunt. The name is taken from Quorndon in Leicestershire. The country hunted is about 20 m. by 20 m. in area, Loughborough being roughly its centre, although Melton Mowbray is more frequented. The kennels are near Barrow-on-Soar. The country is said to have been hunted before 1700 by Thomas Boothby with the first pack of foxhounds in England.

QUORNDON. Urban dist. of Leicestershire. It stands on the Soar, 9 m. from Leicester and 2 m. from Loughborough, on the L.N.E.R. Pop. 2,501.

QUORUM (Lat. of whom?) Term used for the minimum number of persons necessary to form a meeting, at which the business of a company, club, or other association is transacted. In the British House of Commons the quorum is forty, and in the House of Lords it is thirty. This proviso is necessary to prevent a mere handful of persons from binding the whole body by their action.

R. Eighteenth letter of the English and Latin alphabets, one of the two liquid consonants, *l* being the other. Its normal sound is that in rat, road, and softer in lard. It is almost inaudible at the end of words, unless a vowel follows. *R* is mute in worsted (yarn), but is audible in worsted (defeated). See Alphabet.

The name *R* is given to a type of British rigid airship. These airships are distinguished by the letter *R* followed by a number. *R34* crossed the Atlantic in July, 1919. On Aug. 1, 1930, *R100* reached Montreal from Cardington, having covered over 3,400 m., in 79 h. *R101* was wrecked near Beauvais, France, on Oct. 5, 1930, when flying to India. The death toll was 48, including Lord Thomson (q.v.), air minister, and Sir Sefton Brancker (q.v.), director of civil aviation. Only 6 persons were saved. See Airship.

RA or **RE.** Egyptian sun god. He was represented as a solar disk traversing the sky in a bark. Assimilated to Horus of Edfu, he became hawk-headed. From the Vth dynasty every king bore a Ra-name.

RABAT. Port of Morocco. It stands on the Atlantic coast at the mouth of the river Ragreb. Carpets and textiles are manufactured. Pop. 38,000. See Morocco.

RABBI (Hebrew, my master). Jewish title for a teacher (Matt. 23, 7). The term is commonly applied to the Jewish clergy, scholars, and doctors of law. Christ was addressed as Rabbi (John 1, 3, and 6).

RABBIT (*Oryctolagus cuniculus*). Animal belonging to the order Rodentia. With the hare (*Lepus*) it is distinguished from the rest of the rodents by the presence of an additional pair of incisor teeth in the upper jaw. The rabbit is distinguished from the hare by its smaller size, shorter ears, legs, and feet and grey colour. Rabbits are less fleet of foot and, unlike the hare, are gregarious, living in burrows. The rabbit is very prolific, and it has been calculated that a single pair in favourable circumstances could have a progeny of over thirteen millions in three years. In Australia the rabbit is a serious menace to agriculture.

The rabbit is largely kept in captivity, as a pet and for commercial purposes, and its domestication has brought about many changes in size, colour, and form. Its fur is made up into cheap imitations of better furs.

Rabbit. 1. Common wild rabbit. 2. White-lured breed

Under the Ground Game Act a tenant in England and Wales may shoot rabbits on his farm, although the sporting rights are reserved to the landlord.

RABELAIS, FRANÇOIS (c. 1490-c. 1553). French author. Born at Chinon in Touraine, where his father was an apothecary, he was educated for the Church, but studied medicine and received his doctor's degree at Montpellier in 1537. He is famous as the author of a series of chronicles narrating the adventures of two mythical giants—*La Vie très horrible du grand Gargantua*, forming Book I, and *Pantagruel*, Roy des Dipsodes, avec ses Faicts et Prouesses Espouvantables, Books II-V; though the author of Book V, which was not published until twelve years after his death, is taken to be him. In these works the author's humours run riot amidst the wildest extravagances and the grossest indecencies. But Rabelais adopted his farcical machinery as the vehicle of his opinions on many subjects which it was then dangerous to discuss in earnest. His work was first translated into English by Sir Thomas Urquhart and Pierre Motteux, 1653-94. Pron. Rahblay.

François Rabelais, French author

RABIES (Lat. rabere, to rave). Disease due to infection by a micro-organism usually conveyed by the bite of a dog. See Dog; Hydrophobia.

Raby Castle, Durham. South front from the park. See p. 1127. By courtesy of Country Life, Ltd.

RABY CASTLE. Seat of Lord Barnard. It is in Durham, 5 m. from Barnard Castle, overlooking the Tees. The original castle was built by a Neville before 1400, but most of the present building is of later date. One of the finest specimens of a feudal castle in England, it is surrounded by ramparts and a moat, and has a keep, a machicolated gateway, and some massive towers. The baron's hall is the chief interior feature. See illus. p. 1126

RACEME. Botanical term for that form of flower grouping (inflorescence) in which the separate flowers are arranged on short lateral stalks from a central axis. Familiar examples are the bluebell and barberry (q.v.).

RACHEL. In the O.T., younger daughter of Laban, sister of Leah, favourite wife of Jacob, and mother of Joseph and Benjamin. With Leah, she took Jacob's part in his quarrel with Lahan. She died in giving birth to Benjamin. The Jewish captives of Nebuchadnezzar passed her tomb on their way to exile (Gen. 29, 31, 35; 1 Sam. 10; Jer. 31; Matt. 2). Over the traditional tomb of Rachel Moses Montefiore, the Jewish philanthropist, erected a small hut in 1849.

RACHEL (1821-58). French actress, whose real name was Elizabeth Félix. Born March 24, 1821, at Mumpf, Switzerland, the daughter of poor Jewish pedlars, she made her début at the Théâtre Français, June 12, 1838, as Camille in Corneille's *Horace*. On Jan. 21, 1843, she won her greatest triumph as Phèdre, in Racine's tragedy, and in 1849 created the part of the heroine in Scrihe and Legouvé's *Adrienne Lecouvreur*. Rachel created a sensation in London in 1841 and 1842, and won fame all over Europe as a tragic actress of supreme genius. She died of consumption at Cannet, near Nice, Jan. 3, 1858. Pron. Rahshel.

RACHMANINOV, SERGEI VASSILIEVITCH (b. 1873). Russian composer and pianist. Born at Novgorod, April 2, 1873 he studied at St. Petersburg and Moscow, and appeared in London in 1899 as a pianist and conductor of his own works. He taught music in Moscow from 1903, worked also in Dresden, visited the U.S.A., 1909-10, and was appointed conductor of the Imperial Opera, St. Petersburg, 1912. His compositions include the operas *Aleko*, 1893, and *Francesca da Rimini*, 1906, orchestral symphonies and piano concertos, chamber music, songs, and piano pieces.

S. V. Rachmaninov,
Russian composer

RACINE, JEAN (1639-99). French dramatist and academician. Early left an orphan, he was brought up by his grandmother, a woman of strong Jansenist leanings, and was educated at Port Royal and the Collège d'Harcourt. Molière produced his first tragedies, *La Théaïde*, 1664, and *Alexandre*, 1665. Between 1667 and 1677 he wrote his tragedies *Andromaque*, *Britannicus*, *Bérénice*, *Bajazet*, *Mithridate*, *Iphigénie*, and *Phèdre*, together with a comedy, *Les Plaideurs* (a satire on the law). His only remaining plays were two of a religious character, *Esther* and *Athalie*. Thereafter he published only four *Cantiques Spirituels* and a history of Port Royal. He died April 21, 1699.

Jean Racine,
French dramatist
From an engraving
by Vertue

Racine's plays are composed of endless talk and discussion, but his skill as an analyst of passion, and especially of love, is remark-

able; while the beauty of his versification deserves the highest praise. Pron. Rasceen.

RACK. Former instrument of torture. It consisted of an oblong frame of wood on which the victim was stretched and his limbs secured by ropes which could be gradually tightened by pulleys or other devices, till the victim confessed or had his limbs dislocated. At its greatest vogue during the reigns of Henry VIII and Elizabeth, the legality of the rack was challenged by the judges in 1628, and it rapidly fell into disuse.

RACKETS. Ball game played on an asphalted court, 60 ft. by 30 ft. in area, enclosed by four walls. The front and side

Rackets. Plan of court

wall another line divides the space into two halves, termed the fault line. Just above the short line, in the angles formed by it and the side walls, are two spaces 8 ft. square, designated service boxes. The game is played by two or four players, one against one (singles), two against two (doubles).

The racket consists of a wooden hoop 7 ins. in diameter, strung as tightly as possible with catgut, with a handle about 30 ins. long. See *Fives*; *Pelota*; *Squash Rackets*.

RACKHAM, ARTHUR (h. 1867). British artist. Born Sept. 19, 1867, he was educated at the City of London School, and has won much success as an illustrator of books, notably *Peter Pan*, 1906; *Aliee in Wonderland*, 1907; and *Wagner's Ring librettos*, published 1910-11.

RACCOON. Small carnivorous mammal related to the bears, confined to America. The common raccoon (*Procyon lotor*) is about 24

ins. long in body, with a tail about 10 ins. in length. It is a stoutly built animal, covered with thick, greyish-brown fur, the tail being ringed with black. The raccoon makes its home in holes high up in the trees, only coming down at night in search of food; it feeds upon small birds and mammals, fish and fresh-water mussels, and occasionally varies its diet with young corn and fruit. In the colder districts it hibernates during the winter. It is hunted and trapped for its fur, with the result that it is no longer numerous in many districts. In South America the crab-eating raccoon occurs.

Raccoon. Common variety of the nocturnal animal of N. America

RADCLIFFE. Urban dist. of Lancashire. It stands on the Irwell, 8 m. from Manchester, on the L.M.S. Rly. The industries include the manufacture of cotton, paper, and chemicals; dyeing and bleaching. The old church of S. Bartholomew was restored in the 19th cent. Pop. 24,759.

RADCLIFFE, JOHN (1650-1714). English physician. Born at Wakefield, he made a reputation as a physician, first in Oxford and then in London, and became medical attendant to William III, Mary, and Anne. He was a member of parliament, and died at Carshalton, Nov. 1, 1714. Radcliffe was a

Radcliffe Observatory, Oxford. Principal buildings with right, the dome for the large double telescope

benefactor to Oxford, as with money bequeathed by him were built the library, observatory, and infirmary that bear his name, also perpetuated by travelling fellowships for students of medicine. In 1929 it was proposed to transfer the observatory to S. Africa.

RADEK, KARL (h. 1885). Bolshevist leader. Born at Lemberg of Jewish parents, his name was originally Sobelsohn. He became associated with the Socialist party in Poland, and wrote a great deal for the press. Later he went to Germany, and in the Great War was in Switzerland, in both countries doing journalistic work for his cause. In 1917 he became associated with Lenin and others in organizing the Bolshevist movement. For ten years one of its leaders, in 1927 he was expelled from the party, and in 1928 was banished to Siberia.

RADIATION. Name given to energy, emitted by material bodies, which traverses space without the aid of an apparent material medium. According to the electro-magnetic theory such energy is dependent on wave motion in the ether.

This theory has been modified by the ideas which have arisen from new conceptions of the atom, so that, according to views enunciated by Planck, radiant energy is given out in minute pulses of energy, called by Planck quanta.

Radiant energy as commonly understood may be explained from the example of a hot body suspended in air or any gas. There is loss of heat due to conduction through the gas or convection currents set up in it, and this loss of heat depends on the presence of material particles in the gas. But if the hot body were suspended in a perfect vacuum, it would still shed its heat, or radiate its energy, in all directions, quite independently of the absence of material particles. See *Atom*; *Heat*; *Light*; *Matter*; *Radium*.

RADICAL OR RADICLE (Lat. *radix*, root). Term applied in chemistry to elements (simple radicals) or groups of elements (compound radicals). It usually denotes a compound radical or group of units capable of passing unaltered from compound to compound. The names of radicals generally end in the syllable -yl. Exceptions are ammonium and cyanogen.

RADICAL (Lat. *radix*, root). Term applied to those who desire large changes in the social and political order. In Great Britain the radical party has been an advanced section of the Liberal party; its equivalent in France is the left. The term was also applied to thinkers such as Bentham and James Mill, who tried to introduce a philosophic theory of government based on first principles. They were individualists and economists, but later radicals believed in a constant enlargement of the area of state control. See *Liberal*.

RADIO-ACTIVITY. The term radio-activo is applied to substances, such as uranium, radium, thorium, actinium, and their compounds, which have the property of spontaneously emitting radiations possessing the following characteristics: 1. They will penetrate substances opaque to ordinary light. 2. They will affect a photographic plate in a dark room. 3. They will produce luminescence and phosphorescence in certain substances placed near them. 4. They have the power of "ionising" any gas through which they pass. Like properties are also exhibited by other radiations, e.g. by Röntgen or X-rays, but the X-rays are not emitted spontaneously, and have to be excited by some external agency.

In 1896 Becquerel found that salts of uranium emitted photographically active rays independent of previous exposure to light. Later, other substances were found to give off similar rays. Rutherford showed that the radiations from radio-activo substances were of three distinct types, which he called the alpha, beta, and gamma rays (α , β , and γ). The α rays are positively charged atoms of helium. The β rays, negatively-charged particles of small mass, are electrons moving with high velocity. The γ rays consist of electro-magnetic impulses of very short wavelengths, analogous to X-rays. Far more penetrating than the α or β rays, their ionising power is less than that of the β rays, and about 1,000 times smaller than that of the α rays, and their photographic and phosphorescent actions are correspondingly small.

The radiations given off by a radio-element are parts of the disintegrating atom. The new atoms formed may be unstable and break up in their turn, giving off a characteristic type of rays, and this transformation process continues through a number of stages. Only about one atom of radium in about 100,000,000,000 breaks up every second, or about half the atoms in 1,800 years, and each disintegrating atom expels an α particle. The residual atom is called radium emanation or radon—a heavy gas, transforming with the expulsion of an α particle to half-value in about four days. A number of succeeding transition products are denoted by the names radium A to radium F, the transformation of each being accompanied by the emission of either α or β particles, or both. These changes go on spontaneously, and cannot be controlled by outside agencies. See Atom; Chemistry; Element; Isotopes; Matter; Radium.

RADIO COMMUNICATION. Name for telegraphy and telephony carried out by means of electro-magnetic waves. The abbreviation "radio" is used loosely to denote broadcasting, especially in America. The Radio Times is a weekly publication of the B.B.C. World Radio, another B.B.C. weekly, publishes the programmes of foreign broadcasting stations.

A radio beacon is a wireless station which sends out signals for the guidance of ships or aircraft. See Broadcasting; Thermionic Valve; Wireless.

RADISH (Lat. radix, a root) Genus of annual and biennial herbs of the order Cruciferae and genus Raphanus. The garden radish (*Raphanus sativus*) was introduced to Britain in 1548. Radishes prefer a light, rich soil, and thrive best in one which has been heavily manured for previous crops. The long-rooted radishes are the best for early or spring sowing, and the round or turnip radishes for summer treatment.

RADIUM (Lat. radius, ray). Radio-active element. Its chemical symbol is Ra, atomic weight 225.95; atomic number 88; melting point 700°C. Discovered by M. and Mme. Curie in 1898,

it is a silver-white metal, which tarnishes rapidly on contact with air. Radium belongs to the uranium family, and is a transition product of uranium (q.v.). The chief source of radium is the mineral pitchblende, in which it appears in minute quantities. Radium is remarkable for its radio-active properties, being several million times more powerful in this respect than uranium. In addition to pitchblende deposits of N. Bohemia, the Belgian Congo, and elsewhere, the element is recovered from the mineral carnotite in the U.S.A., etc.

Radium is extensively used in medicine, especially in certain types of skin diseases, e.g. tuberculous lesions, in cases of exophthalmic goitre, sarcoma, carcinoma, rodent ulcer, etc. Malignant tumours should be treated with radium only when operation is impossible. Tubes containing radium emanation are inserted in the growth. The address of the London Radium Institute is 16, Riding House Street, Portland Place, W. See Curie, Pierre: Radio-activity; X-Rays.

RADLETT. Village of Hertfordshire. It is 5 m. from St. Albans and 15 m. from London, on the L.M.S. Rly., and is a residential suburb of London. An aerodrome was opened here in 1930.

RADLEY. Village of Berkshire. It stands on the Thames, 4 m. from Oxford, on the G.W. Rly. Radley College was founded in 1847. It has over 300 boys. Pop. 1,074.

RADNOR, NEW. Village of Radnorshire. It is 7 m. S.W. of Presteigne, on the G.W. Rly. There are remains of the castle, once a stronghold of the Mortimers. About 3 m. S.E. is the village of Old Radnor.

EARL OF RADNOR. This is a British title borne in turn by the families of Robartes and Pleydell-Bouverie. The first family held it from 1679 to 1757.

The second family of earls began with William Bouverie, Viscount Folkestone (1725-76), the descendant of a Huguenot merchant; he was made earl in 1765. The earl owns much land at Folkestone, and his chief seat is Longford Castle, Wiltshire. His eldest son is called Viscount Folkestone.

RADNORSHIRE. Inland co. of Wales. Its area is 471 sq. m. In the E. and S. it is fairly level, but the rest is hilly, and there is picturesque scenery in the valleys. The wild district in the centre is known as Radnor Forest. The principal river is the Wye; others are its tributaries, the Elan, Lugg, Arrow, and Ithon. The Elan is utilised to supply Birmingham with water. Oats and wheat are grown and sheep are reared. There are mineral springs. The L.M.S. and G.W. Rlys. serve the co. Presteigne is the co. town; others are Knighton, Rhayader, and Llandrindod Wells. Pop. 23,517.

RADON. Radio-active element, a gaseous emanation from radium, symbol Rn; atomic weight 222; atomic number 86. A heavy gas, it is short-lived, and loses half its radio-active power in 3.82 days. Enclosed in fine tubes (radium needles) radon is largely used in the treatment of certain diseases. See Radio-activity; Radium.

RADSTOCK. Urban dist. and market town of Somerset. It is 16 m. from Bristol, on the G.W. Rly. The main industry is coal-mining, the town being the centre of the Somerset coalfield. Market day, Sat. Pop. 3,661.

RAEBURN, SIR HENRY (1756-1823). Scottish painter. Born March 4, 1756, he was apprenticed to a goldsmith in Edinburgh. He soon began to paint water-colour miniatures, and, after studying with David Martin, passed to portraiture in oils. On the advice of Reynolds, he set out for Italy in 1785 and worked for two years in Rome. He painted most of the notable Scotsmen and Scotswomen of the day. His portrait of Dr. Nathaniel Spens, perhaps his masterpiece, is in the Archers' Hall, Edinburgh, and both the Scottish National Gallery and Portrait Gallery are rich in his works. He was elected A.R.A. in 1814 and R.A. in 1815. In 1822 he was knighted, and he died in Edinburgh on July 8, 1823.

Sir Henry Raeburn, Scottish painter. Self-portrait.

perhaps his masterpiece, is in the Archers' Hall, Edinburgh, and both the Scottish National Gallery and Portrait Gallery are rich in his works. He was elected A.R.A. in 1814 and R.A. in 1815. In 1822 he was knighted, and he died in Edinburgh on July 8, 1823.

RAEMAERKERS, LOUIS (b. 1869). Dutch cartoonist. Born at Roermond, Holland, April 6, 1869, he studied at Amsterdam and Brussels. He began by painting portraits, landscapes, genre, and posters, and was master of a drawing school at Wageningen in Gelderland. In 1908 he started drawing political cartoons, and during the Great War became famous for his scathing satires on Kultur and its practical application.

RAFA OR RAFAH. Town on the Egyptian side of the Palestine-Egypt frontier. It lies 20 m. S. of Gaza, on the Mediterranean coast, and 30 m. from El Arish (q.v.). It was prominent in the British conquest of Palestine, and gave its name to a battle fought between the British and the Turks, Jan. 9, 1917, which resulted in a British victory. The real struggle took place at Magruntein, but the battle is usually known as that of Rafa. See Palestine.

RAFFIA WORK. Manufacture of a variety of articles from bast dyed in different colours. Raffia is usually obtained ready dyed. It is damped slightly and is then twisted on a beard cut in the shape of the required object, or it may be plaited and used to make various articles, just as straw plait is used, with the advantage that it is more pliable and therefore easier to handle.

Radnorshire. Map of the inland county of Wales. Most of it is undulating or hilly, while in the centre is the mountainous tract, Radnor Forest.

Radish. Bunch of the roots.

RAFFLES, SIR THOMAS STAMFORD (1781-1826). British administrator. Born July 5, 1781, he entered the service of the E. India Co., and in 1805 was sent to Penang. He became a master of the native languages, and in 1811 was made governor of Java, a position he kept until 1816, when the island was restored to the Dutch. In 1818 he was made governor of Benecoolen, and in 1819 the E. India Co., at his instigation, acquired Singapore, whither he went to set up an administration. He returned to England in 1824, and died July 5, 1826.

RAFFLESIA. Genus of leafless and stemless parasites of the order Rafflesiaceae, natives of the East Indies. The vegetative portion of the plant consists of threads, like the mycelium of a fungus, in the tissues of species of vines and figs, the only external evidence of its presence being afforded when the huge flower-hud breaks forth. *Rafflesia arnoldi* measures 3 ft. across the opened flower. The petals, etc., vary from a quarter to three-quarters of an inch thick, are of a reddish tint, and with a smell like carrion which induces flies to fertilise the flower.

Rafflesia. Flower of *R. arnoldi*, the leafless and evil-smelling parasite

RAGLAN. Village of Monmouthshire. It is 7 m. from Monmouth, on the G.W. Rly. Above the village stand the ruins of Raglan Castle, including a gateway and remains of the hall and towers. Pop. 676.

RAGLAN, FITZ JAMES HENRY SOMERSET, 1ST BARON (1788-1855). British soldier. A younger son of the 5th duke of Beaufort, he was born Sept. 30, 1788. He entered the army in 1804, and during the Peninsular War served on Wellington's staff. At Waterloo he lost a hand. In 1854, having been made a baron in 1852, he went out in command of the force sent to the Crimea, and he remained there until his death, June 28, 1855. He married a niece of Wellington, and his son,

1st Baron Raglan, British soldier. After A. Morton

Richard (1817-84), became the 2nd baron. The 3rd baron, George (1857-1921), was governor of the Isle of Man, 1902-19.

RAGTIME. In music, a form of syncopation by prolongation used by American composers and their imitators in modern coon songs. Claimed as original, it has, however, been used in some form in all ages.

RAGUSA. Seaport of Yugoslavia; the Slav name is Duhrovnik. It is on the Adriatic, 105 m. S.E. of Spalato (Split), and is surrounded by a wall with numerous towers. The buildings include the former palace of the rulers and the cathedral. The harbour being partly closed by sand, large vessels use Gravnsa, about 4 m. distant. Oil, silk, leather, and liqueurs are produced. Long under Turkish rule, Ragusa became Austrian in 1814, passing to Yugoslavia after the Great War. Pop. 14,266.

Ragusa. Ancient town and harbour on the east shore of the Adriatic

Another Ragusa is a town of Sicily. It is a manufacturing centre. Pop. 57,150.

RAGWORT (*Senecio jacobaea*). Perennial herb of the order Compositae, a native of Europe and Asia. It has leafy stems about 4 ft. high, with deeply lobed, dark green leaves, and large clusters of bright yellow, rayed flower-heads.

RAIKES, ROBERT (1735-1811). British philanthropist. Born at Gloucester, Sept. 14, 1735, his father was the proprietor of The Gloucester Journal. In 1757 he succeeded to the family business, which he carried on until 1802. Meanwhile, he had become interested in the question of prison reform, but it was his establishment of a Sunday school in Gloucester, in a building still preserved, in 1780, that made his fame. He died April 5, 1811. See Sunday Schools.

RAIL. Name given to birds of the family Rallidae, widely distributed and distinguished by having laterally flattened bodies suitable for passing through dense undergrowth. They are comparatively long in the leg and toes. The tail is short and the head small, the beak long, and curved at the tip. In Great Britain the family is represented by the corn-crake, coot, water-hen, and named occurs sparsely in

Rail. The water-rail; it nests in the sedges. W. S. Berridge, F.Z.S.

RAILWAY. The germ of the modern railway is found in the wooden tracks laid down to facilitate the haulage by animal power of wagons or trams of coal. To reduce the wear by laying sheets of iron on these wooden rails was an obvious expedient, and in the late 18th century they were made entirely of iron, and east L-shape, an upright portion being added on one side of each to keep the wheels on the track. Such rails were called plate rails. The wheels ran on the flat horizontal part of the rail. Later, running on the top or edge of the rail, and the modern type of edge rail gradually developed.

The first public line was the Surrey Iron Rly., from Wandsworth to Croydon, authorised by Parliament in 1801. Here animal traction was employed, and the first application of steam traction is credited to Richard Trevithick on a plate-way in South Wales in 1804. The Stockton and Darlington Rly., opened in 1825 and now merged in the L.N.E.R. system,

BRITISH RAILWAYS IN 1913 AND 1925

	1913	1925
CAPITAL		
Receipts	£1,106,191,858	£1,168,400,000
Expenditure	£1,141,543,561	£1,216,100,000
Net Annual Revenue	£47,242,814	£45,200,000
Appropriation	£46,172,494	£44,900,000
Average rate of interest and dividend paid on capital receipts ..	4.17%	3.8%
RAILWAY WORKING		
Passenger train receipts ..	£34,525,821	£88,000,000
Goods train receipts ..	£64,254,895	£103,300,000
Other receipts	£1,014,864	£1,800,000
Expenditure	£75,704,320	£154,100,000
Mileage of railroad, including sidings, reckoned as single track	50,604	52,567
Mileage of electrically worked track	—	549

is the oldest passenger rly. The original intention was to use animal power, but at the instance of George Stephenson the steam locomotive was adopted instead. It was, however, the Liverpool and Manchester Rly., opened in 1830, which finally established the supremacy of the steam locomotive.

The years in which various countries first opened steam rlys are: Austria and France, 1828; United States, 1829; Belgium and Germany, 1835; Russia, 1838; Italy, 1839; Switzerland, 1844; Spain, 1848; Canada and Mexico, 1850; Sweden, 1851; Norway and India, 1853; Portugal, Brazil, and Australia, 1854; Egypt, 1856; South Africa and Turkey, 1860; Japan, 1872; and China, 1887.

RAILWAY REORGANIZATION. During the Great War, and until Aug. 15, 1921, the bulk of the British rlys. were under Government control. In 1920, while the gross revenue was barely double what it was in 1913, the expenditure had increased more than threefold, and the revenue was less than half the amount required to meet the fixed interest on the debenture and rent charge stocks.

The Railways Act, which became law in Aug., 1921, provided for the reorganization of the railways in Great Britain by amalgamating them into four large groups. (1) Southern group (London and South-Western; London, Brighton and South Coast; and South-Eastern and Chatham); (2) Western group (Great Western and the railway companies in South Wales); (3) North-Western, Midland and West Scottish group (London and North-Western; Midland; Lancashire and Yorkshire; North Staffordshire; Furness; Caledonian; Glasgow and South-Western; and Highland); and (4) North-Eastern, Eastern

Railways. 1. Grand Street, New York, with the elevated railway on each side. 2. Electric suspension rope-way from Koblern down to Bozen, Italian Tirol. 3. Cable tunicular to Reichenbach Falls, Switzerland. 4. Rack railway up Mount Pilatus

Railways. Passenger train, with second and third class carriages, on the Liverpool and Manchester Railway, opened in 1830. From a print of 1833

and East Scottish group (North-Eastern; Great Central; Great Eastern; Great Northern; Hull and Barnsley; North British; and Great North of Scotland). The scheme came into operation on July 1, 1923, and the official titles chosen were: Southern; Great Western; London, Midland and Scottish; and London and North-Eastern. The Act provided for the establishment of a Rates Tribunal, which should fix charges in such a way that the companies would secure an annual revenue equivalent to that of 1913.

After Jan. 1, 1928, made the appointed day under the Act of 1921, the companies tackled the problem of a falling revenue. All grades in the service agreed to a reduction of 2½ per cent. of their salaries and wages. Steps were taken to secure a larger share in the road traffic, and more inducements were offered to intending passengers. The lines of the Irish Free State have been amalgamated into a single system, the Great Southern Railways.

ELECTRIC RAILWAYS. The working of rlys. by electric traction, in which the trains are driven by current conveyed through fixed conductors placed beside or above the rails, to motors mounted either in the cars or in a separate locomotive, has made great strides within the last generation. London has a unique electric rly. system.

RACK RAILWAYS. On gradients exceeding 1 in 25 the ordinary kind of adhesion locomotive becomes impracticable. Gradients up to 1 in 12 can be climbed, under favourable conditions, by trains of which all the wheels are driven. On steeper grades a positive means of haulage is required, the most usual being that afforded by the engagement of driven cog-wheels with a rack laid between the running rails and fixed firmly to the sleepers.

LIGHT RAILWAYS. These are secondary rlys., to serve the needs of sparsely inhabited agricultural areas. They are often of narrow gauge, and efforts are made to render them as cheap as possible both in first cost and in operation. Steep gradients and sharp curves may be permitted, and sometimes the lines run along the public roads.

RAILWAY CLEARING HOUSE. Institution in London for dealing with the through traffic on the rlys. of Gt. Britain. There the financial relations of the various companies are adjusted. It is at Seymour St., N.W.1.

RAILWAY AND CANAL COMMISSION. This judicial body was first appointed in 1873, and reorganized in 1888. Its work is to decide questions at issue between the rly. companies and traders and the public generally. It is located at the Royal Courts of Justice, London.

RAILWAY RATES TRIBUNAL. Body set up in 1921 to fix the rates that the rlys. of Gt. Britain may charge in order to obtain a net annual revenue equal to

what they earned in 1913. Its offices are at 2, Clements Inn, London, W.C.2.

RAIN. Condensed water vapour of the atmosphere falling in drops. If a mass of air containing water vapour is cooled, some of the vapour may condense into tiny drops of moisture so light that the air can support them. In this manner fog, clouds, and mists are formed. If condensation proceeds further, the tiny drops amalgamate and form larger drops, which are too heavy to be held in suspension, and a fall of rain ensues.

The general term rainfall is used to signify the aqueous precipitation from the atmosphere, whether in the form of rain, hail, or snow. The study of rainfall is concerned with the reasons why precipitation occurs in particular areas, with the quantity which falls annually, and with the distribution from month to month, or from season to season.

Water vapour is always present in the atmosphere; warm air has a greater capacity for water vapour than cold air; it rains whenever warm wet air is sufficiently chilled. The air is warmest at its lowest levels, consequently rising air is chilled and is likely to deposit rain. Mountains and other elevated regions are rainier than the neighbouring lowland. Very cold air, below freezing point, is almost perfectly dry, and further cooling fails to produce a fall of snow. The rainless areas of the world are the deserts. See Meteorology.

RAIN GAUGE. Instrument used for measuring the fall of water, whether in the form of

rain, hail, or snow. A funnel catches the rain and leads it into some kind of vessel. At fixed times the precipitation is poured from this vessel into a measuring glass. The graduations record inches or mm. of rain.

RAIN-MAKING. Among primitive peoples, e.g. N. Africa and N. India, many usages and rites have been practised with the object of inducing rainfall. In modern times attempts have been made to cause rainfall by bombarding clouds with gunfire, the dispersion of chemicals from aircraft, etc. To induce the deposit of moisture from the air on dusty roads the latter are sometimes sprinkled with calcium chloride.

RAINBOW. Name given to the phenomenon caused by the internal reflection and refraction of rays of light in the spherical globules of raindrops. A rainbow is always seen in the part of the sky away from the sun, its height varying inversely as that of the sun. The colours of the rainbow are those of the spectrum in the same order, red being outside. Occasionally a second concentric and fainter bow is observed with the colours in the reversed order. The intensity of the colours of a rainbow depends largely on the size of the raindrops. Rainbows at night indicate fine weather the following day; in the morning, wet weather.

RAINFORD. Urban dist. of Lancashire. It is 4 m. from St. Helens and is served by the L.M.S. Rly. Coal is mined in the neighbourhood. Pop. 3,552.

Rainbow. A second and even a third are may appear if the light is strong

Dr. G. A. Clarke

Rain. Map showing the distribution of the rainiest regions and the hot deserts of the world in relation to the season of maximum precipitation and the prevalent winds as indicated by arrows

RAINY or **RÉNÉ**. Lake on the borders of Canada and U.S.A. It lies 155 m. W. of Lake Superior, and is about 50 m. long by from 3 m. to 8 m. broad.

RAINY, ROBERT (1826-1906). Scottish divine. Born in Glasgow. Jan. 1, 1826, the son of a professor of medicine at Glasgow University. he was educated there. After training at New College, Edinburgh, he became a minister of the Free Church at Huntly in 1851, and in 1854 removed to Edinburgh. In 1862 he was chosen professor of church history at New College, and in 1874 he became its principal. He resigned in 1900, and died at Melbourne. Dec. 22, 1906. Rainy had a good deal to do with the union of the U.P. and Free Churches.

RAISIN. Dried grape. They are used as a dessert fruit and in the making of puddings. Raisins are imported from France, Spain, Turkey (see Sultana), and Asia Minor. The ordinary raisin is made by drying in an oven, but the better sort are sun-dried. See Grape.

RAISULI, AHMED BEN MOHAMMED (1875-1925). Moroccan bandit. Of noble birth, he alleged certain grievances against the sultan and became chief of a robber gang. In 1907 he kidnapped Sir H. Maclean (q.v.), who was ransomed for £20,000 and a quantity of military stores, Raisuli being also made governor of the province of Fassi. His death was announced in April 1925.

RAIT, ROBERT SANGSTER (b. 1874). British historian. Born Feb. 10, 1874, and educated at Aberdeenshire and Oxford, from 1913-29 he was professor of Scottish history and literature in Glasgow university, and from 1918-30 historiographer-royal for Scotland. In Oct., 1929, he was appointed principal of Glasgow university. His published works deal mainly with Scottish history.

RAJA. Indian title of honour meaning king. It is given to rulers and others and sometimes hereditarily by the British government to Hindus, as that of nabob to Mahomedans. It is the usual title of Malay and Javanese princes. The feminine is ranee. The related word raj means rule.

RAJPUTANA. Group of Indian states of N.W. India bounded by Bombay, the Punjab, the United Provinces, and Central India. Jaipur is the largest city. Ajmer-Merwara is a British province enclosed within the state. Jodhpur, Bikaner, Jaipur, and Udaipur are the largest states. The area is 128,987 sq. m.

The Rajputs are found in the northern regions of India, and are politically predominant in Rajputana. The name means king's son. Pop. 9,844,384. See India.

Rakahanga. Pacific island, a dependency of New Zealand. It is 25 m. N. of Manihiki and 670 m. N. of Rarotonga. Pop. 327.

RALEIGH or **RALEIGH, SIR WALTER** (c. 1552-1618). English soldier, courtier, and writer. Son of Walter Raleigh, he was born at Hayes Barton, near Budleigh Salterton. After service with the Huguenots, 1569-78, he went on a voyage of discovery with his half-brother, Sir Humphrey Gilbert, reaching the West Indies. He appeared at the English court in 1581, and became a favourite with Elizabeth, who knighted him in 1584. In 1578 and 1583 Raleigh was associated with the unsuccessful attempts of Sir Humphrey Gilbert to plant a colony in N. America. Gilbert was lost at sea, 1583, and in 1584 Raleigh fitted out an expedition which planted itself in what is now known

Sir Walter Raleigh, English courtier and soldier. Portrait by unknown artist in the National Portrait Gallery.

as North Carolina, probably on the island of Roanoke. Raleigh named the colony Virginia, a name given for many years to the whole seaboard from Florida to Newfoundland. He made his famous voyage to the Orinoco in quest of El Dorado in 1595, and in 1596 he took a leading part in the Cadiz expedition, and distinguished himself at the Azores in 1597.

On the accession of James I, 1603, Raleigh was charged with plotting against the new king. After a scandalously unfair trial he was found guilty and condemned to death. Reprieved on the scaffold, he was sent to the Bloody Tower, where, with his wife and son, he lived until Jan. 30, 1616, when he was released to lead another expedition to the Orinoco. As was inevitable, he came into collision with the Spaniards. On his return he was arrested, was arraigned on the old charge of treason, and executed in Old Palace Yard, Westminster, Oct. 29, 1618.

RAM. In engineering, a plunger driven out of a cylinder by water under great pressure to exert a strong squeezing or lifting force. A ram pump is one which raises water by means of the latter's own velocity. See Hydraulics.

The term ram is used for the projecting bow of a ship, used for sinking other vessels.

RAMADI. Town of Iraq (Mesopotamia). On the Euphrates, it is 59½ m. W. by N. of Bagdad. It was the scene of a battle fought between the British and the Turks, Sept. 28-29, 1917, in which the whole Turkish force surrendered. Cavalry were employed with great effect in pursuing the Turks. See Mesopotamia.

RAMAH. Name meaning a height, used in the Bible for a number of places difficult to identify. One was the site of Rachel's tomb. The modern Er Ram (Ramah), 6 m. N. of Jerusalem, was associated with the life of the prophet Samuel, and figured in the wars between the ten tribes and the tribe of Judah. It was captured by the British, Dec. 28, 1917.

RAMBOUILLET. Village of France. It is 30 m. from Paris and is famed for its château, the summer residence of the president of the French Republic. The château has magnificent parks and gardens laid out by Lenôtre, and a dairy built by Louis XVI. It passed into the possession of the nation at the Revolution.

RAMEAU, JEAN PHILIPPE (1683-1764). French composer. Born at Dijon, Oct. 25, 1683, he became a church organist in Lille and Clermont-Ferrand before settling in Paris in 1722. He attracted attention by his treatise on harmony issued in 1722, and in 1723 one of his lighter pieces was mounted at the Opéra Comique. His opera Hippolyte et Aricie was played at the Opéra, 1733, the first of a score, notable among which was *Castor et Pollux*, 1737. His harmonic theories profoundly influenced musical development in the 18th century. Rameau died in Paris, Sept. 12, 1764.

RAMESES or **RAMESSES**. Name of two Egyptian kings of the XIXth and of nine of the XXth dynasty. **Rameses II**, styled the Great, and long reputed to be the Pharaoh of the Oppression, reigned for 67 years from about 1300 B.C. He waged tedious wars against the Hittites, which resulted in his 21st year in a treaty preserved in a hieroglyphic version at Karnak, and in cuneiform on a tablet that was found at Boghazköi in 1907. The greatest of Egyptian builders, one half of the temples still extant date from his reign, and his name or portrait occurs in nearly every great group of ruins. See Abu-Simbel; Karnak; etc.

Rameses II, Head of the mummy. Cairo Museum.

Rameses III, the Rhampsinitus of Herodotus and the virtual founder of the XXth dynasty, reigned for 32 years from about 1200 B.C. His majestic Theban temple at Medinet Habu, together with the great Harris papyrus in the British Museum—133 ft. in length, the longest known—record his military achievements and opulent temple-gifts.

Ramie fibres, magnified about 10 times.

RAMIE. Bast fibre of a stinging nettle, the *Boehmeria tenacissima* or *B. nivea*, also known as rhea and China grass. The latter name is given to fibre band-cleaned from the bark in China, and fine native cloth hand-made from long unspun fibres thus derived is sold as grass cloth. The yarn has great tensile strength, but is brittle. The fibre is heavy and very inflammable, does not contract when wetted, and is short of elasticity. Incandescent gas mantles, are made from ramie, as the ash of the fabric does not shrink like cotton upon burning. The fibre is used in the making of cordage, nets, and in paper for banknotes.

RAMILLIES. Village of Belgium. It is 12 m. from Namur and is famous for the British and Dutch victory over the French, May 23, 1706. The former were led by Marlborough and the French by Villeroi. Nearly all the French artillery was captured, and they lost about 15,000 in killed, wounded, and prisoners. The losses of English and Dutch were under 4,000.

RAMPANT. In heraldry, a four-footed beast or monster, represented as standing on its hind legs, pawing the air, and with jaws open. It is then said to be rampant. But a horse in this position is often described as *forcené*, or *éfréné*, the nostrils being dilated, and the eyes of a different tincture from that of the body. See Heraldry.

Rampion. A flower spray.

RAMPION (*Campanula rapunculus*). Perennial herb of the order Campanulaceae, a native of Europe, W. Siberia, and N. Africa. It has a thick, fleshy root. The lower leaves are stalked and oval, the upper stalkless and slender. The blue flowers resemble those of the harebell (*C. rotundifolia*). The root of the rampion is edible.

RAMPOLLA, MARIANO MARCHESE DEL TINDARO, CARDINAL (1843-1913). Italian statesman. Born at Polizzi, Sicily, Aug. 17, 1843, he entered the diplomatic service of the Holy See. Having been nuncio at Madrid, he was created archbishop of Heraclea in 1882. Five years later Leo XIII gave him the red hat and made him papal secretary of state. On the death of Leo XIII, 1903, Rampolla's election as his successor seemed certain, but Austria exercised her veto. Rampolla resigned, and died Dec. 16, 1913.

RAMSAY, ALLAN (1686-1758). Scottish poet. Born Oct. 15, 1686, at Leadhills, he collected and rewrote old Scottish songs and ballads, which were published in 1724 as *The Tea Table Miscellany* and *The Evergreen*. In 1725 he published *The Gentle Shepherd*, a pastoral marked by genuine poetic feeling. In Edinburgh, in 1726, he opened a bookseller's shop. He died Jan. 7, 1758.

Ramsay's son, Allan Ramsay (1713-84), was born in Edinburgh, and studied art in London and Rome. About 1757 he came to

London, and soon established his reputation by his sound, if somewhat undistinguished, portraiture. He died Aug. 10, 1784. Examples of Ramsay's work are in the National Portrait Galleries in London and Edinburgh.

RAMSAY, SIR WILLIAM (1852-1916). British scientist. Born in Glasgow, Oct. 2, 1852, he was educated at Glasgow and in Germany. In 1880 he was appointed professor of chemistry at University College, Bristol, and became principal in 1881. He remained at Bristol until 1887, when he became professor of chemistry at University College, London, retiring in 1912. Knighted in 1902, in 1904 he received the Nobel Prize for chemistry. He died July 23, 1916.

Sir William Ramsay,
British chemist
Lafayette

Ramsay's research resulted in the discovery that the nitrogen from the air contains a new element, argon (q.v.). Searching for other sources of argon, he discovered a new element, helium, in a mineral called cleveite. Later he discovered krypton, neon, and xenon, gases which occur in minute quantities in the air.

RAMSAY, SIR WILLIAM MITCHELL (b. 1851). British archaeologist. Born in Glasgow, March 15, 1851, in 1880 he won a travelling studentship at Oxford, and subsequently spent many years in travel in Asia Minor. In 1882 he became fellow of Exeter College, and in 1885 of Lincoln College, Oxford, in the latter year being appointed professor of classical art in the university. In 1886 he was appointed professor of humanity at Aberdeen, which position he held till 1911. In 1928 he excavated at Antioch, in Pisidia, a triumphal arch of the emperor Augustus. He reconstructed the inscription composed by the emperor himself just before his death. This was found in 280 fragments.

Sir William Ramsay,
British archaeologist
Elliott & Fry

RAMSBOTTOM. Urban dist. of Lancashire. It stands on the Irwell, 4 m. from Bury, on the L.M.S. Rly. The industries include calico printing and bleaching and the making of cotton and woollens. Pop. 15,381.

RAMSEY. Market town and urban dist. of Huntingdonshire. It is 10 m. from Huntingdon on the L.N.E. Railway. The beautiful church of S. Thomas à Becket is partly Norman. There are slight remains of a Benedictine abbey. Market day, Wed. Pop. 5,136.

RAMSEY. Market town and seaport of the Isle of Man. It stands on Ramsey Bay, on the N.E. coast, at the mouth of the river Sulby, 14 m. from Douglas, with which it is connected by rly. and electric tramway. The town has good sands, promenades, and a pier. In N. Ramsey is Mooragh Park, with a marine lake. Market day, Mon. Pop. 4,297.

RAMSGATE. Borough, seaport, and watering place of Kent. It is on the E. coast, in the Isle of Thanet, 74 m. from London, being served by the Southern Rly. Steamers go to and from London, and also to Boulogne and elsewhere. Two stone piers enclose a fine harbour. With the exception of the

church of S. Lawrence, the chief churches are modern. The Roman Catholic church of S. Augustine is a fine example of A. W. Pugin's work. The promenade known as Prince Edward Promenade and Undercliff Drive was opened in 1926. A wide arterial road from the W. end of the town to the West Cliff forms the improvement known as St. Lawrence Cliffs. Pop. 36,503 See Frith, W. P.

RAND OR WITWATERS. RAND. Gold-mining district in the Transvaal, S. Africa. The ridge extends some 40 m., and its reefs contain, it is estimated, the largest reserve of auriferous ores in the world. Johannesburg is the centre of the goldfield, which was proclaimed in 1886. In 1929 the output of gold totalled £45,000,000, making a total output since the mines were opened of just about £1,000,000,000. See Gold; Johannesburg; Transvaal.

RANELAGH. Former London place of amusement. It was named after Richard Jones, 1st earl of Ranelagh, who built a house and laid out gardens here, 1690-91. From 1742-1803 they rivalled Vauxhall (q.v.) for concerts, masquerades, etc. A notable feature was the Rotunda, resembling the British Museum reading-room. The grounds are now part of Chelsea Hospital.

The Ranelagh Club is a London social and sporting club. Established in 1894, in Barn Elms Park, S.W., it provides facilities for polo, golf, croquet, tennis, etc.

RANGE FINDER. Instrument used to ascertain the distance of the target from the firing point. Most types depend on the principle of measuring the angles of the triangle which is formed by making the target the apex and the instrument the base: and in order to simplify the measurements to be taken it is usual to arrange that one of the base angles is a right angle, leaving only one unknown angle to measure. The instrument is thus actually a goniometer (angle measure). In the Barr and Stroud instruments the angles which two beams of light from the target make with the opposite ends of a known base line are measured. The base line is formed by a rigid metal tube having at each end reflecting prisms, which divert the beams of light along the axis of the tube. At the centre other prisms divert the beams into a single eyepiece, and are so arranged that the beam of light from the right end forms the upper, and that from the left the lower, half of the field. The angles of the reflecting prisms must be varied to enable a continuous complete image to be obtained of targets at varying distances from the base.

RANGOON. Capital of Burma. On the Rangoon river, about 21 m. from its mouth, it is the main export centre of the great Burmese rice-fields, other exports including teak, raw cotton, petroleum, and hides. Native industries include wood and ivory carving and silver work. To the W. of the royal lake lies

the magnificently gilded Shwe Dagon Pagoda, one of the greatest pilgrimage shrines of Buddhism. Modern buildings include Government House, Jubilee Hall, Anglican and R.C. cathedrals, and other features are the native bazaars and the lakes to the N. of the city. In 1920 a teaching university with two art colleges was established. Pop. 345,505.

Ramsgate. The Royal Parade on the sea front of this Kentish resort

RANJITSINHJI, KUMAR SHRI (b. 1872). Indian prince and cricketer. Born at Saradar, India, Sept. 10, 1872, and educated at Cambridge, his wonderful powers as a cricketer soon attracted attention, and in 1895 he became a member of the Sussex county team. In 1896 and 1900 he was at the head of the English batting averages, and he played for Cambridge University and for England against Australia. In 1906 he succeeded his cousin as maharaja of Nawanagar.

RANKE, LEOPOLD VON (1795-1886). German historian. Born Dec. 21, 1795, at Wiehe, in Thuringia, he became a good classical scholar, and after leaving the university was for a time a teacher at Frankfurt-on-Oder. There he wrote, in 1824, his first book, and on the strength of it was made professor extraordinary at Berlin. After further study abroad, Ranke became full professor at Berlin in 1837, and there he lectured and taught almost until his death. He was made historiographer of Prussia, and died in Berlin, May 23, 1886.

Ranke's works, as collected in 1881, fill 51 volumes. The greatest are probably his History of the Popes, which has been translated into English, and his History of Germany during the Reformation.

RANNOCH. Loch or lake of N.W. Perthshire, Scotland. It lies to the E. of the bleak moorland dist. of Rannoch and has a length of 9 m. It receives the Eicht, and is drained by the Tummel into the Tay.

RANUNCULUS. Genus of annual and (mostly) perennial plants, of the order Ranunculaceae. The most popular wild member, the buttercup, is one of 28 natives of Britain. Others have been introduced into gardens from abroad at various dates since 1596. The old garden ranunculus (R. asiaticus) is tuberous-rooted, and should be planted in good loam.

The varieties are innumerable, and the flowers of all shades and colours.

RAPALLO. Seaport and health resort of the Italian Riviera, 16 m. by rly. E.S.E. of Genoa. It has a castle and a Roman bridge and near is a popular pilgrimage church. Lace and olive oil are the principal manufactures. Tunny fishing is an industry. Pop. 7,177.

The treaty of Rapallo was signed by Italy and Yugoslavia, Nov. 12, 1920. By it the frontier between the two nations was fixed, and Italy renounced Dalmatia, but Zara, together with its commune and several adjacent communes, were placed under Italian sovereignty. Both powers recognized the

Rangoon. Main building of the famous Shwe Dagon pagoda

Range Finder. Diagram illustrating principles on which the Barr and Stroud instruments are constructed

independence of Fiume. Finally it settled the Adriatic question, giving Yugoslavia possessions on the E. coast. Both nations ratified the treaty early in 1921. See Italy; Yugoslavia.

RAPE. Cruciferous forage crop which may either take the place of ordinary roots in a rotation or be grown as a catch crop. It is an excellent sheep feed. There are two kinds, the smooth-leaved summer rape (*Brassica campestris*) or dwarf, and the rough-leaved winter rape (*Brassica napus*) or giant. Swede and turnip are derived from these respectively, but have developed enormously thickened roots. Colza (q.v.) oil is obtained from the seeds, which are also made into oilcake, a cattle food.

RAPE. Division of the county of Sussex. It is the equivalent of the hundred in other counties. There are six rapes, Hastings, Perensy, Lewes, Bramber, Arundel, and Chichester. See Sussex.

RAPHAEL. In the O.T. Apocrypha, one of the seven angels which present the prayers of the saints and go in and out before the glory of the Holy One (Tobit 12, 15). He is represented as being sent to cure Tobit of blindness and to bind the evil spirit Asmodeus.

RAPHAEL (1483-1520). Italian painter. Born at Urbino, April 6, 1483, his father was Giovanni Santi, a poet and painter, whose name latinised into Sanctius was in the son's italianised back into Sanzio. When seventeen he went to Perugia, to work in the studio of Perugino, and later on in Florence, he made a particular study of the work in sculpture of Donatello and Michelangelo, and of the

Raphael, Italian painter
Self-portrait, Uffizi Gallery

paintings of Leonardo. To this period of his career can be attributed his long series of paintings of the Madonna and Child and his greater altarpieces. In 1508 he was entrusted by Julius II with the decoration of certain rooms in the Vatican. It was then that he painted his great group of the Greek Philosophers, generally known as the School of Athens. Raphael's designs for the tapestries of the Sistine Chapel were prepared in 1515, and seven of them can be inspected at the Victoria and Albert Museum, London. In 1514 he was appointed by Leo X to succeed Bramante as architect of S. Peter's. He died on April 6, 1520.

His most popular pictures are the Madonna de San Sisto, in Dresden; the Madonna della Sedia and the Madonna del Gran Duca in Florence; the St. George and the Dragon in Leningrad; the portraits in the Pitti Gallery, in Florence; and the Ansidei Madonna in London. See Gregory VII; Julius II.

RAPHIA PALM (Raphia). Small genus of trees of the order Palmae, natives of tropical Africa, Madagascar, and S. America. They have short trunks, but the erect leaves are frequently of enormous length. Those of *R. ruffia*, from the Mascarene Islands, are 50 or 60 ft. long, and of feather-form. The flower spikes also are large—6 ft. long. *R. tadicera*, native of the Amazons, has leaves of similar length and 7 ft. or 8 ft. wide, whose leaf-stalks, 12 to 15 ft. long, serve many of the uses of bamboos. *R. vinifera* (wine palm), native of W. Africa and the Amazons, from the similar use made of its leaf-stalks, is known as the bamboo palm.

RAPHOE. Town of co Donegal, Irish Free State. It is 15 m. from Londonderry. Raphoe grew up around a monastery, and was made a bishopric in the 8th century. In 1835 the see was united with that of Londonderry. Pop. 748.

RAPIER (Fr. *rapière*). Light, slender sword of highly tempered steel used solely for thrusting. It is about three feet in length, and was a favourite weapon with duellists in the 16th and 17th centuries. The successor to the rapier as a duelling weapon was the shorter small-sword of the 18th century. It was developed to its best in Italy and France.

Rappahannock. River of Virginia, U.S.A. It rises in the Blue Ridge, and flows into Chesapeake Bay. Its length is 250 m.

RARE EARTH. Name given to certain metallic oxides formerly regarded as elementary bodies, as yttria, ceria, ceria, lanthana, samaria, and didymia. They are conveniently classified according to the elements they yield: I. The yttrium group, consisting of dysprosium, erbium, holmium, terbium, thulium, yttrium, ytterbium, and lutecium. II. The cerium group, consisting of cerium, europium, gadolinium, lanthanum, neodymium, praseodymium, samarium, and scandium. III. Thorium. IV. Zirconium. The oxides are known as rare earths because of the comparatively small quantities which are found in minerals. See Hafnium; Illium; Masurium, etc.

RASPBERRY (*Rubus idaeus*). Shrub of the order Rosaceae. Natives of Britain and other European countries, raspberries will thrive in any soil except clay, or one that has a clay subsoil. The canes are planted in autumn or spring, at a distance of 2 ft. apart and 4 ft. between the rows. They require some support. As fruit is borne only on one-year-old canes, the old wood is cut away ruthlessly at the end of each season.

The principal disease, raspberry spot, may be dealt with by spraying with a weak solution of sulphate of copper, or Bordeaux mixture.

RASPUTIN, GREGORY (1873-1916). Russian fanatic. Generally called Rasputin, which means the immoral, his real name was Novikh, and he was born at Pokrovsky, Siberia. He began life as a fisherman, but soon showed himself a drunkard and a thief, and was punished for stealing. He became a professional pilgrim, and eventually acquired the reputation of a saint and a faith healer.

Gregory Rasputin,
Russian fanatic

Raspberry. Fruit and leaves
of a cultivated cane

Rat. Left, brown rat and, right, black rat, two British species of the rodent. The former is larger and more ferocious than the latter. See above

W S Berridge, F.Z.S.

In 1905 he went to St. Petersburg and gained an influence at the Russian court, which was much increased by the tsarina's belief in his ability to cure and keep cured the tsarevitch, her ailing son. Gradually he acquired a com-

manding position and made and unmade ministers, while continuing his dissolute life. On Dec. 29, 1916, he was assassinated in Petrograd.

RAT. Term applied to many rodents of the family Muridae, which includes the mice, rats, hamsters, voles, lemmings, and many others. The largest group of the rodents, it is world-wide in distribution.

The rats proper are found only in the old world. Great Britain possesses two species, the black rat and the brown rat. The black rat is shorter in body than the more familiar brown species but has a longer tail. Its hair is greyish black on the upper parts and pale yellow below. The tame white and piebald rats are said to be descended from this species. The brown rat is larger than the black rat, and more ferocious in disposition. Rats prefer the neighbourhood of human dwellings and farms on account of the ease with which food may be obtained.

In England the Ministry of Agriculture has devoted much energy towards exterminating rats, and various county councils throughout the country have organized periodical campaigns. An Act of 1921 placed on householders the onus of destroying rats and mice on their premises under penalty of a fine.

RATAFIA. Generic name for cordials or liqueurs made from, and flavoured with, cherries, almonds, apricots, peaches, nectarines, or plums. The crushed kernels, as well as the flesh of the fruit, are steeped in the spirit, afterwards distilled. Pron. ratafeca.

RATEL (*Mellivora*). Genus of carnivorous mammals, related to the badger, and found in India and S. Africa. Contrary to the usual rule of coloration, their upper parts are light grey and the under ones black. They have stout bodies and short legs and tail. They live in burrows, and feed by night upon small birds and mammals and honey.

RATES. In the United Kingdom, term for the money raised by local authorities.

The oldest rate is the poor rate, first levied in 1597. Later other rates were levied for the expenses of highways, sanitation, education, etc. To-day, however, the rates are consolidated into a single general rate which is levied and collected by the town or urban council or other local authority, which distributes the proceeds among the various authorities concerned. The one exception is the water rate, which is collected separately.

Rates are levied at a certain figure in the £ on all property except agricultural. For this purpose each factory, shop or house has a rateable value which is something less than the annual rent. To ascertain this value a valuation is made every five years. In 1896 agricultural land was relieved of half its rates, and in 1929 a further measure entirely relieved this form of property from rates.

Other important changes in rating came into force in that year. These include the relief of all premises where productive industry is carried on, factories and the railways share in this benefit. See Assessment.

RATH. Irish hill-fort. An earthen embankment, usually round, often stake-fenced, it protected, in the larger examples, the

Ratel. Example of the burrowing
carnivore, allied to the badger
W S Berridge, F.Z.S.

residence of a chief and his dependents. Nearly 30,000 remain, and the term enters into 700 place-names. as Rathlin, co. Antrim

RATHLIN OR RAGHERY. Island of Ireland, off the N coast of co. Antrim. It measures 6 m. from E. to W. and has a breadth of 1½ m. S. Columba founded a church here. Pop. 350.

RATHMINES. Suburb of Dublin, Irish Free State. It has a station on the Great Southern Railways, and was included in the enlarged city of Dublin in 1930. Pop. 39,984

RATHMORE, DAVID PLUNKET, BARON (1838-1919). Irish statesman. Born Dec 3, 1838, the third son of the third Baron Plunket, he was called to the Irish bar in 1862. In 1870 he was elected M.P. for Dublin University. Plunket became solicitor-general for Ireland, 1874-77, paymaster-general, 1880, and first commissioner of works, 1885. He was again commissioner of works 1886-92, and in 1895 he was raised to the peerage as Baron Rathmore. Later he was associated with railways. He died Aug. 22, 1919.

Baron Rathmore,
Irish statesman

RATHVEN. Coast parish of Banffshire, Scotland. It is 4 m. W.S.W. of Cullen, on the L.M.S. Rly., and contains numerous cairns and tumuli. Pop. 15,400.

RATIBOR. Town of Silesia, Germany. It stands on the Oder at the point where it becomes navigable, and is an important rly. and road junction, 95 m. by rly. from Breslau. Situated on the outskirts of the Upper Silesian coalfield, it has iron foundries and manufactures machinery, especially railway rolling stock. There are also paper mills and sugar factories, and the place does a considerable trade in coal and agricultural produce. Pop. 49,072.

RATIONALISM (Lat. ratio, reason). In philosophy, the theory that reason is the chief, if not the only, source of knowledge. It is opposed to both empiricism and sensationalism. According to the rationalist, reason is an original faculty which supplies us with concepts and first principles, different from the data of sense, which make it possible to go beyond sensible knowledge and attain the reality of things. While, however, some regard these concepts as innate in the mind, others regard them as immediately discerned by the mind, as intuitive principles.

In theology, rationalism, as opposed to supernaturalism, is the system which interprets all religious belief and dogma in the light of reason, rejecting the authority of tradition.

RATIONALIZATION. Term much used in industry in 1929 and 1930 for improved methods of manufacturing. Among the results of the rationalization process are a growing control over the market, a growing standardization of process and output, and an increasing output per worker.

RATIONING. The assigning by authority of a restricted amount of food, per head of the population, in time of national shortage. In Great Britain during the Great War the first food to be rationed was sugar. This was carried out in 1917 by the issue of sugar cards from London, entitling each individual to purchase a certain quantity of sugar per week from a retailer selected by the purchaser. Later other staple foods were controlled, and under the Rationing Order, 1918, ration books were issued by the Ministry of Food. These books had to be registered for the purchase of sugar, fats, butcher's meat, and bacon, and detachable counterfoils or coupons were provided for successive weeks.

RATISBON OR REGENSBURG. City of avaria. It stands at the junction of the

Danube and the Regen, 85 m. from Munich. The chief building is the cathedral, largely 13th century: the towers were completed in

Ratisbon, Bavaria. West front
of the 13th century cathedral

the 19th century. It contains some fine works of art. Other churches are those of S. James and S. Ulrich. The church, which has a detached belfry, and the cloisters remain of the abbey of S. Emmeran. There are a town hall dating from the 14th century, a number of fine old houses, including the Golden Cross Inn, in the crooked streets, and, more modern, a palace built by the king of Bavaria. The industries include a trade along the river and the manufacture of iron and steel goods, pottery, etc. Pop. 76,948.

RATTAN (*Calamus rotang*). Reed-like climbing plant of the order Palmae. A native of India, it has large, arching, feather-like compound leaves, three or four ft. long. The stems of this and several other species furnish the "canes" of commerce, used for walking-sticks and basket-work, and, when cut into thin strips, for the seats of cane-bottomed chairs. The stems are only an inch or two in thickness.

RATTAN PALM. Dwarf palm of the order Palmae, a native of China and Japan. The stems are about a foot and a half high, growing in dense tufts, rough with the decayed bases of former leaf-stalks. The leaves, which have long slender stalks, are divided into five to seven spreading leaflets.

Rattan, foliage and fruit
of the climbing plant

RATTLESNAKE (*Crotalus*). Genus of venomous snakes, including about 16 species, natives of America, mostly of N. America.

Rattlesnake. Texas rattlesnake
coiled, with rattle lifted
W. S. Berridge, F.Z.S.

Like the vipers, they possess poison fangs. In most species the coloration is of a protective character, and their movements when hunting are stealthy. The characteristic "rattle," terminating at the tail, consists of a series of horny cups loosely articulated, so that vibration of the tail produces the rattling sound. Obscure in its purpose, this noise is produced by the animal when excited. See Reptile; Snake.

RATTRAY. Burgh of Perthshire, Scotland. It stands on the Erich, opposite Blairgowrie, 9 m. from Dunkeld. There are mills for flax

spinning, and near the town are traces of a castle. Pop. 1,740.

RAUCH, CHRISTIAN DANIEL (1777-1857). German sculptor. Born at Arolsen in Waldeck, he studied sculpture under Valentin and Ruhl, and later entered the household of Frederick William III at Berlin. His greatest work was the monument of Frederick the Great at Berlin, unveiled 1851. One may cite also the mausoleum of Queen Louise at Charlottenberg, the Dürer monument at Nuremberg, and statues of the Tsar Alexander, Blücher, and Maximilian of Bavaria. He died Dec. 3, 1857.

RAUNDS. Urban dist. of Northamptonshire. It is 8 m. from Wellingborough, on the L.M.S. Rly. S. Peter's church has a spire 183 ft. high. It contains some old tombs, and has other interesting features. The chief industry is the manufacture of boots and shoes. Pop. 3,763.

RAVEL, MAURICE (b. 1875). French composer. Born at Chorme, March 7, 1875, he studied at the Conservatoire in Paris. His works include a ballet, Daphnis and Chloe, many pianoforte pieces and some songs, as well as a number of orchestral works.

RAVEN (*Corvus corax*) Large bird of the crow family, found throughout the N portions of both hemispheres. Its plumage is black with purple reflections, and it is about 25 ins. in length. The beak is strong and massive. Formerly common throughout Great Britain, it is now found only in mountainous and secluded districts, more especially about the N. shores of Scotland and in the Western Islands. It is a powerful bird on the wing and soars high in the air, but it rises from the ground in a very slow and flapping fashion. The raven is omnivorous in diet, and all kinds of animal food, eggs, fruit, grain, insects, and grubs are readily devoured. In captivity it makes an intelligent, amusing, but very mischievous pet.

Raven, a bird of
the crow family

RAVEN-HILL, LEONARD (b. 1867). British artist. Born March 10, 1867, and educated at Bristol and Devon Co. School, he studied at Lambeth school of art, and in Paris under Bouguereau. After painting and exhibiting at the Salon and Royal Academy for some years, he founded the illustrated Butterfly, 1893, and in 1896 began to draw for Punch.

RAVENNA. City of Italy. It stands in a marshy plain, 6 m. from the Adriatic, 44 m. by rly. E.S.E. of Bologna. It is still surrounded by old walls, which were once washed by the waters of the Adriatic. Of very ancient origin, it is second only to Rome in the importance of its early Christian art. Its cathedral dates from the 4th century. Other old churches include those of S. Giovanni Evangelista, dating from 425; San Vitale, from about 530; S. Apollinare in Classe, from about 535; and the Mausoleum of Galla Placidia, from 440, notable for its mosaics. Ravenna

Ravenna. The cathedral, which
dates from the 4th century

contains a museum of Roman and Byzantine antiquities, the tomb of Dante, and a valuable library. Of its important Roman structures nothing now lies above ground. Ravenna was the seat of the exarch of the Eastern Emperor until 752. Pop. 78,997. See Dante.

Ravenscar. Seaside resort of Yorkshire (N.R.) It is 10 m. from Scarborough, with a station on the L.N.E. Rly.

RAVENSPUR. Ancient seaport of Yorkshire. It stood near Spurn Head, and in the 14th century was a prosperous seaport. Here, in 1399, Henry IV landed. Soon the sea began to encroach, and by 1500 the place had disappeared.

RAVENSTHORPE. Town of Northamptonshire. It is 8 m. from Daventry. There is another Ravensthorpe in Yorkshire (W.R.), a manufacturing centre. Pop. 6,719.

RAVENSWOOD. Town of Queensland, Australia. It is the terminus of a branch line from the Townsville-Cloncurry rly., is 78 m. from Townsville, and the centre of a goldfield. Pop. 2,000.

RAVENSWORTH. Village of Durham, 3 m. from Newcastle-upon-Tyne. Here is Ravensworth Castle, the seat of Lord Ravensworth. In 1642 Thomas Liddell (d. 1650) was made a baronet for supporting Charles I, and in 1821 Thomas Henry, the 6th baronet, was made a baron. Henry Thomas, the 2nd baron, was made an earl in 1874, but the earldom became extinct when the 3rd earl died in 1904. The barony survived, and in 1919 Gerald W. Liddell became the 6th baron.

RAWALPINDI. Division, dist., and town of the Punjab, India. The division lies in the N.W. of the province; it is sparsely populated, mainly by Mahomedans.

The dist. lies W. of Kashmir and W. and N. of the Jhelum. Most of it is a high plateau, much dissected by ravines. Forest covers a considerable area. Wheat, pulses, and millet are grown. The area of the division is 21,391 sq. m.; dist., 2,010 sq. m. Pop., div., 3,460,710; dist., 560,224.

The town is situated on a tributary of the Sohan, has strategic roads and rlys., and is an important military cantonment. It has rly. workshops, a brewery, and an arsenal. There is trade with Kashmir. Pop. 101,142.

RAWDON. Urban dist. of Yorkshire (W.R.) It is 5 m. from Bradford, on the L.M.S. Rly. The chief industry is the manufacture of cloth. The marquess of Hastings took from here the title of earl of Rawdon, his ancestors having lived at Rawdon Hall. Pop. 3,784.

RAWLINSON, SIR HENRY CRESWICK (1810-95). British Orientalist and diplomatist. Born at Chadlington, Oxfordshire, April 11, 1810, while in Persia in the service of the East India Company he devoted his leisure to the study of the cuneiform inscriptions. In 1840 he became political agent at Kandahar, and rendered valuable service throughout the Afghan War. Four years later he was made consul at Bagdad, where he collaborated with Layard in his excavations at Nineveh and elsewhere. In 1859 he was appointed minister plenipotentiary to Persia, but retired a year later. Rawlinson wrote largely on the cuneiform inscriptions, and was the author of a History of Assyria. He was made a baronet in 1891. He died in London, March 5, 1895.

RAWLINSON, HENRY SEYMOUR RAWLINSON, 1st BARON (1864-1925). British soldier. Born Feb. 20, 1864, he was the eldest son of

Sir H. C. Rawlinson, to whose baronetcy he succeeded in 1895. In 1884 he joined the 60th Rifles, transferring to the Coldstream Guards in 1892. In 1898 he joined

Lord Rawlinson,
British soldier
Russell

Kitchener's staff in Egypt, and was in the expedition that recovered Khartoum. He served in S. Africa and was commandant of the Staff College at Camberley from 1903 to 1906. When the Great War broke out Rawlinson was made director of recruiting at the war office. In Sept. he was put at the head of the 7th Division, which took part in fierce fighting in 1914-15. At the end of 1915 he was given command of the Fourth Army, and was responsible for the main attack on the Somme in July, 1916. Early in 1918 he was appointed to the Versailles council. In March, however, after the disaster of St. Quentin, Rawlinson was recalled to the front, and his Fourth Army took a brilliant part in the final offensive. In 1919 he was created a baron, and awarded £30,000 for his war services. Commander-in-chief in India, 1920-25, he died Mar. 28, 1925, when the peerage became extinct. Consult Life, Sir F. Maurice, 1928.

RAWMARSH. Urban dist. of Yorkshire (W.R.) It stands on the Don, 2 m. from Rotherham, with a station on the L.M.S. Rly. The chief industries are the making of iron and steel, bricks, and pottery. Pop. 17,911.

RAWTENSTALL. Borough of Lancashire. It is 19 m. from Manchester, on the L.M.S. Rly. Cottons and woollens, felts, and slippers are manufactured, and there are coal mines in the neighbourhood. Pop. 28,376.

RAY. In geometrical optics, a line of light. It was defined by Newton as the least portion of light that can be propagated or stopped alone. More recently it has been described as the motion of a particle of light; and is more precisely defined as the straight line in which the radiant energy that produces the sensation of light is propagated to any given point. See Light; Refraction.

RAY. Name given to many fishes of the Elasmobranch order, including the sharks and skates. In the rays the skeleton is cartilaginous, the body is flattened, and the pectoral fins greatly expanded. See Skate.

RAYLEIGH. Village of Essex. It is 7 m. W. by N. of Southend-on-Sea, with a station on the L.N.E.R. It is mentioned in Domesday Book, and has a moated mound which marks the site of Sweyn's Castle. Pop. 3,125.

RAYLEIGH, JOHN WILLIAM STRUTT, 3RD BARON (1842-1919). British physicist. Born at Langford Green, Essex, Nov. 12, 1842, he succeeded to the title in 1873. Appointed to the chair of experimental physics at Cambridge and director of the Cambridge laboratory in 1879, he was professor of natural philosophy at the Royal Institution, 1887, a post he held till 1905, when he became president of the Royal Society. In 1908 he was appointed chancellor of Cambridge University. He was appointed to the Order of Merit, 1902, and in 1904 was given the Nobel prize for physics. He died June 30, 1919.

Rayleigh's researches resulted in the remarkable discovery that the atmosphere contained several, till then, unknown gases. In other branches of science Rayleigh left the enduring mark of his genius. See Argon.

Lord Rayleigh,
British physicist
Russell

His son, Robert John Strutt, 4th Baron Rayleigh (b. 1875), early showed much of the brilliance of his father, to whose title he succeeded in 1919. He made a study of radium.

RAYNAUD'S DISEASE. Localised contraction of the blood vessels in the extremities, causing the fingers or toes to become cold and white, or "dead." Attacks may be brought on by exposure to cold or emotional disturbance. The condition passes off quickly.

Rayon. Alternative name for artificial silk prepared from forms of cellulose. See Artificial Silk; Viscose.

RAZORBILL (*Alca torda*).

British sea bird of the auk family. It is 17 ins. long in body, and the plumage is greenish black on the upper parts, brown on the throat, and white below. The beak is very massive, and is flattened laterally. The bird generally much resembles the extinct great auk, of which it is the nearest living relation. The razorbill occurs sparsely around the British coasts.

Razorbill. British sea bird allied to the extinct Great Auk

RAZOR SHELL OR **RAZOR FISH.** Popular name for the solen. This is a common bivalve mollusc of which several species occur off British coasts. The shell is long and narrow.

Razor Shell. The common bivalve *Solen siliqua*

REACTION OR REGENERATION. In wireless reception, the use of regenerative amplification, by causing the currents in the plate circuit of a triode valve to react on the grid circuit. A coil connected in the plate circuit is coupled magnetically to the grid coil, in which it induces current variations in step with those of the plate current. Thus the oscillations set up in the valve by incoming waves are strengthened. The degree of reaction is controlled by a variable condenser, hence called the reaction condenser.

READE, CHARLES (1814-84). British novelist and dramatist. Born at Ipsden House, Oxfordshire, June 8, 1814, he became a barrister, but soon turned to literature. He began with plays, of which the best known are *Masks and Faces*, 1852, written in collaboration with Tom Taylor, *The Lyons Mail*, and *Drink*, 1879, adapted from Zola's *L'Assommoir*. His reputation was made, however, with his novels, especially with *The Cloister and The Hearth*, 1861. Of the others may be mentioned *Peg Woffington*, 1852; *It is Never too Late to Mend*, 1856; *Hard Cash*, 1863; *Griffith Gaunt*, 1866; *Foul Play*, 1869; and *The Wandering Heir*, 1875. He died April 11, 1884.

READING. County borough of Berkshire, also the county town. It stands on the Thames, where it is joined by the Kennet, 36 m. from London, and is served by the G.W., Southern, and L.N.E. Rlys. The churches of S. Lawrence and S. Mary and the restored chapel of the Grey Friars are interesting. The museum contains relics from Silchester (q.v.). A university college was opened here in 1892, and in 1926

Charles Reade,
British novelist

Sir H. Rawlinson,
British Orientalist

this was made into a university. The gaol, in which Oscar Wilde wrote *De Profundis*, was closed in 1919. Some ruins of the Benedictine abbey remain, and the grounds are public property. Reading is an important agricultural centre, being especially noted for seeds. It has large engineering works and biscuit factories. In 1929 an aerodrome was opened at Woodley. Pop. 93,799.

READING. City of Pennsylvania, U.S.A. It stands on the Schuylkill river, 59 m. N.W. of Philadelphia, and is served by the Philadelphia and Reading and the Pennsylvania rlys. Reading lies in an important coal and iron mining region, and trades in agricultural produce. It has rly workshops, iron and steel works, machine shops, woollen and worsted mills, and hosiery, hardware, and boot and shoe factories. Pop. 112,707.

READING, RUFUS DANIEL ISAACS, 1ST MARQUESS OF (b. 1860). British lawyer and administrator. Born in London, Oct. 10, 1860,

Lord Reading,
British lawyer.
Russell

he became a barrister in 1887, and in 1898 a Q.C. In 1904 he entered Parliament as Liberal M.P. for Reading, and in 1910 was appointed solicitor-general and knighted. Soon promoted attorney-general, he was the first occupant of that office to be a regular member of the cabinet. In 1913 Isaac was made lord chief justice, the first Jew to hold that position, and in 1914 a baron. In 1921 he became governor-general of India, retiring in 1926. Made a viscount in 1916, he was created earl in 1917, and was raised to the rank of marquis in 1926. His eldest son is known as Viscount Erleigh.

REAL. Coin formerly used in Spain, Portugal, and Mexico. In Spain it was the tenth part of an escudo and was nominally worth 2½d. The Mexican real was one-eighth of the American dollar.

REALISM. In literature, term applied to the school of writers of fiction who describe life with strict fidelity to actual fact and detail, as opposed to the schools of romanticism or classicism. The realist tendency, often called also naturalism, became crystallised into a definite school, mainly under French influence, in the second part of the 19th century. Realism in painting and sculpture aims at the direct representation of any object as it is. See Romanticism.

As a philosophical term, realism has two distinct meanings. As opposed to nominalism (q.v.), it is the theory, held by certain of the schoolmen, that general ideas, the universals, had an existence independent of individuals and the individual mind. As opposed to idealism, it is the theory that external objects have an existence independent of any thought about them, and that our knowledge of them is immediate or intuitive.

REALPOLITIK (Ger. policy of reality). Term used during the last thirty years of the German empire to denote the political attitude inaugurated by Bismarck and pushed to extreme lengths by his successors. The adherents of Realpolitik maintained that the politician should look primarily to the material interests of his nation, disregarding abstract theories and humanitarian ideals. See Bismarck; Germany.

REAL PROPERTY. One of the two sections into which property is divided under English law. In early times actions at law

Reading. Municipal offices and parish church of St. Lawrence

were of two kinds, real and personal. A real action was where the plaintiff asked the court to award him the thing (*Lat. res*) sued for. A personal action was when the plaintiff simply asked for damages against the person he sued. The only "res" that could be specifically recovered was freehold land, which was accordingly called "real" property. If a man was deprived of a leasehold interest or of a chattel he could not get it back again, but had to be content with a personal action for damages. The Law of Property Act, 1925 modified the effects of the distinction between real and personal interests in land.

REAM. Measure of paper. It consists of 480 sheets, or 20 quires. The perfect, lung, or printer's ream contains 516 sheets, a news ream, 500 sheets.

REAR ADMIRAL. Officer of the British navy, the lowest of flag rank. He is distinguished by the broad gold band with one narrow gold band and our above it upon the cuff. Rear admirals are the next in rank above commodores, and equivalent to major-general in the army and to air vice-marshal in the R.A.F.

Rear Admiral's cap badge

RÉAUMUR. Name given to a thermometer scale invented by R. A. F. de Réaumur (1683-1757). The difference between the freezing and boiling points of water is divided into 80 degrees. See Thermometer.

REBEC. Medieval string instrument of Oriental origin. It seems to have died out about the middle of the 17th century. Its shape was that of a pear cut in half longitudinally. A modification in the 12th century was called the Rubebe or Rybybe, which eventually became the parent of the viol and the fiddle.

REBEKAH. In the O.T., sister of Laban and wife of Isaac. The mother of Jacob and Esau, she invented the plan by which her favourite son Jacob deprived Esau of his father's blessing.

REBUS (Lat. by things). Allusive representation of a name or thing by means of pictorial devices. In heraldry, such devices were common during the Middle Ages. See Allusive Arms.

RÉCAMIER, JEANNE FRANÇOISE JULIE ADELAÏDE BERNARD (1777-1849). French society leader. Born at Lyons, Dec. 4, 1777, she came to Paris, 1784, married Jacques Récamier, a wealthy banker, 1793, and about 1798 became an intimate friend of Madame de Staël. In 1811 she was forbidden by Napoleon, who feared her enmity, to live in or near Paris. She returned in 1815, was the intimate friend of Benjamin Constant, and her later years were passed with

Châteaubriand. Her salon at L'Abbaye-aux-Bois was a famous social centre. She died in Paris, May 11, 1849.

RECEIPT. Acknowledgment of payment. It is not necessary in English law. A debtor cannot refuse to pay what he owes unless the creditor gives him a receipt. At the same time, if the creditor should so refuse, and the debtor declines to pay, and the creditor sues for his money, the judge will probably make the creditor pay the costs because of his unreasonable conduct. A receipt is *prima facie* evidence of payment; but the person who gave it is always at liberty to show, if he can, that although he gave a receipt he did not receive payment; or that there is a mistake. A receipt for money of £2 or over must bear a twopenny stamp, or otherwise cannot be used as evidence. It is an offence to omit to stamp such a receipt.

RECEIVER. In English law, (1) a person appointed by the court to hold property of any kind and preserve it for the benefit of those persons who are ultimately held to be entitled to it; (2) a person appointed by a mortgagee or debenture holder under a power in the deed to receive the rents and profits of the mortgaged property, and, after paying expenses, to pay what is due to the mortgagee.

When a person presents his own petition in bankruptcy, or a successful petition is presented against him by a creditor, a receiving order is made. (See Bankruptcy: Official Receiver.)

To receive property knowing it to have been stolen (including property acquired by false pretences, or extorted) is a criminal offence.

RECHABITES. Religious order of the Hebrews. Founded by Jehonadab, son of Rechab (2 Kings 10, 15-28), who assisted Jehu to destroy the worshippers of Baal, the sect or clan calling themselves "sons of Rechab" maintained the religion of Jehovah in purity, abstaining from wine, having no possessions, but living in the land as "strangers" (Jer. 35, 6-7). The term was revived in the 19th century by total abstainers known as the Independent Order of Rechabites.

RECONSTRUCTION (Lat. re-, again, construere, to put together). Term used in commercial law. When a limited liability company has suffered heavy capital losses, and it is not desired that the concern shall cease business altogether, it is not unusual to reconstruct the company. This is generally done by formally winding-up the company and transferring its business and assets to a new company, paying for the assets by shares in the new company which are only partly paid up, distributed amongst the old shareholders.

The term reconstruction is specially applied in American history to the process of restoring normal relations after the Civil War between the seceded southern states and the Union. It was again employed in 1917 and subsequent years to describe the plans evolved for the rebuilding of Europe after the Great War. There was a Ministry of Reconstruction in Great Britain from 1917 to 1920.

RECORDER. In England, a legal official of a city or borough. He is always a barrister of some standing. The appointment and duties of a recorder are now regulated by the Municipal Corporations Act, 1882. Under this statute, when a borough or city has a separate court of quarter sessions the crown may appoint a barrister of five years' standing to be recorder. He has precedence next after the mayor; but cannot be M.P. for the borough. Under the Act he cannot sit on the

Madame Récamier. From the painting by David, in the Louvre, Paris

town council. He must hold his sessions at least once a quarter, and is the sole judge there. He hears certain appeals, and can try almost any crime except murder and treason. A recorder holds office during good behaviour, and is a J.P. for the borough. He must take, before the mayor and two town councillors, the oath of a justice of the peace and sign a declaration to discharge the duties of his office well and faithfully.

RECORDER. Instrument of the fipple flute family, having a very soft and sweet tone akin to the song of birds. It was a very favourite instrument in Tudor times, and is referred to in Elizabethan literature, e.g. in Hamlet; 3, 2. The instrument had eight finger-holes, and had a compass of about two octaves. It became known as the flûte-à-bee or English flute, and was eventually ousted by the stronger-toned transverse or German flute. At Chester there is a set of four.

Recorder. Sweet-toned instrument akin to the flute

RECORD OFFICE, PUBLIC. British national institution. It is situated N. of Fleet Street, between Chancery Lane and Fetter Lane, London, E.C., on what was known as the Rolls Estate, and is the repository of state papers from 1100 to the present time. The keeper of the records is the master of the rolls. The muniment rooms are arranged along narrow brick-paved passages, the entrances to which are guarded by iron doors, and the shelves on which the documents are preserved are of slate. Domesday Book is preserved here. Facilities are

Record Office, London. Main front in Chancery Lane

offered for private research work. There is also a record office in Dublin Castle for the Irish Free State

RECTIFIER. In electricity, a device which converts alternating current into uni-directional current. It is employed in connexion with electric arc lamps and motors taking current from an A.C. main. The rectifier has come into use also for converting A.C. current into D.C. for wireless receivers, thus doing away with the need for batteries. The electrolytic rectifier makes use of the fact that, in a cell containing electrodes of lead and aluminium, current will pass freely from the lead to the aluminium, but not in the reverse direction. The mercury vapour rectifier converts in a somewhat similar manner, as the vapour offers high resistance to current in one direction, but very little resistance in the other. In a common type of apparatus a thermionic valve is used as the rectifier.

RECTOR (Lat. ruler). In ecclesiastical law, an incumbent of a benefice who enjoys all the tithes, whereas a vicar draws only a part. The word is also widely used in the United States for the incumbents of parishes in the Protestant Episcopal Church. The Roman Catholics use it mainly for the head of a religious house or college. At Oxford the heads of Lincoln and Exeter Colleges are known as rectors. In Scotland each of the four universities has a lord rector. See Benefice.

RECTUM. Terminal part of the large intestine, ending in the anus. It is about 8 inches long. Dilatation of the veins in the mucous membrane in the lower part of the rectum gives rise to haemorrhoids or piles. Inflammation of the rectum is known as proctitis, and may be due to chronic constipation, new growths, or threadworms. Prolapse of the rectum is a condition in which a part of the tube protrudes through the anal orifice. It occurs in children and weakly persons, or may be the result of chronic constipation, piles, and other disorders of the rectum.

RECULVER. Place in Kent, the site of the Roman Regium. It is on the S. shore of the Thames estuary, 3 m. E. of Herne Bay. There are remains of a fortress. Two towers, known as The Sisters, form a landmark; they are remains of an Early English church. British and Roman coins have been found.

RECUSANT (Lat. recusare, to refuse). Name formerly applied to those who refused to conform to the Church of England. The word was mostly used in the 16th and 17th centuries with reference to Roman Catholics who evaded the penal laws which obliged them to attend services in the English churches.

RED ADMIRAL (Vanessa atalanta). Common British butterfly. The expanse of the wings measures nearly 3 ins. The ground

Red Admiral butterfly poised in readiness for flight
John J. Ward, F.Z.S.

colour of the fore wings is velvety black at the tips with white spots; then comes a scarlet band, and the base of the wings is brownish. The hind wings are brown with a scarlet border. The insect is common in gardens and hedgerows towards autumn. The caterpillar is green with yellow spines, and feeds on nettles. See Butterfly.

RED BEAN (Sophora secundiflora) Small evergreen tree of the order Leguminosae, a native of Texas. The glossy leaves are broken

Red Bean. Foliage and flower spike

up into oval leaflets, and the violet flowers are in long sprays. The seed pods contain five or six hard, glossy, scarlet beans which contain a poisonous alkaloid having physiological effects similar to tobacco. They were much used by the Indian tribes as an intoxicant.

REDCAR. Borough and seaside resort of Yorkshire (N.R.). It is 8 m. from Middlesbrough, on the L.N.E. Rly. There is a fine beach, with good bathing and golf links, and also a racecourse. Pop. 16,401.

RED CROSS. International emblem of organizations formed for the relief of sick and wounded in war, and also, since the Great War, of the famine-stricken and for fighting epidemic disease. The founder of the movement was a Swiss, Henri Dunant (1828-1910). As a consequence of his efforts international

conferences on the subject of forming relief agencies were held in Geneva, 1863-64, resulting in the Geneva Convention of the latter year. Under this, which was accepted by 54 governments between 1864 and 1907, the International Red Cross Society was founded, with headquarters at Geneva, whose emblem was the Swiss flag with colours reversed.

In all countries the care of the sick and wounded in war is primarily the duty of the state. In Great Britain, both army and navy have their own medical and nursing services. But the strain put on these organizations in time of war makes the help of civilian societies essential. The British Red Cross Society, which was founded in 1870 and incorporated in 1908, provides additional nurses, voluntary aid detachments of persons qualified to do the less skilled work of the hospitals, and skilled physicians and surgeons. Under the conventions which govern the relations of nations in time of war, immunity from attack is accorded to Red Cross workers. See Knights Templars; Nursing; S. John.

The British decoration, the Royal Red Cross, was instituted in 1883 for nurses and others who tend the sick and wounded.

Red Cross. British decoration for nurses

RED DEER (Cervus elaphus). Largest species of the deer family found in Great Britain. It now occurs wild chiefly in the highlands of Scotland and in the western islands, on Exmoor in England, and in co. Kerry in Ireland. The stag stands about 4 ft high at the withers, the hind being about 6 ins. shorter, and the weight of a fine specimen may attain 400 lb. The pelt is reddish brown, sometimes tinged with grey on the upper parts, and much lighter beneath, with a yellowish patch on the rump. The reddish tinge is peculiar to the summer months. The stags carry fine antlers, the number of branches or tines roughly indicating the age. See Antler; Deer.

RED DEER. Town of Alberta, Canada. It is an important junction on the C.P. and C.N. Rlys. It is 100 m. from Calgary, and a farming district on the Red Deer river. Coal is mined in the vicinity, there are lumber mills and elevators, and the industries include quarrying and brickmaking. Pop. 2,006.

REDDITCH. Market town and urban dist. of Worcestershire. It stands on the Arrow, 15 m. from Birmingham, with a station on the L.M.S. Rly. There are manufactures of needles, pins, hooks, motor cars, etc. Market day, Sat. Pop. 16,810.

REDESDALE. District of Northumberland. It consists of the valley of the river Rede, or Reed, and extends for about 20 m. from the Scottish border to the N. Tyne at Reedsmouth. The dale forms one of the main routes between England and Scotland.

RED FLAG. Symbol of international socialism. Red has been traditionally recognized as the colour of social revolutionary movements in modern times. The words of the socialist song The Red Flag are by Jim Connell, and have been set to several tunes.

REDHILL. Market town of Surrey, part of the borough of Reigate. It is 21 m. from London and is an important junction of the Southern Rly. The town takes its name from the red sand which was formerly dug on the common here. Fuller's earth is obtained in the

neighbourhood. The Foundling Hospital was temporarily removed to Redhill in 1926. Market day, Mon. See Reigate.

REDISTRIBUTION. Term in politics for a change in the size and number of the constituencies returning members to parliament. It is usually made to meet the changes brought about by the movements of population. In the United Kingdom the first great redistribution of seats was effected by the Reform Act of 1832, when a large number of small boroughs were deprived of the privilege of sending two members to parliament and large places were given it. Other redistributions were effected by the Reform Acts of 1867, 1884, and of 1918, when the parliamentary representation was made to correspond more closely to the populations of the various areas. See Commons, House of; Reform Acts.

REDMOND, JOHN EDWARD (1851-1918). Irish politician. Son of William Archer Redmond, he belonged to a family of landowners long associated with co. Wexford. Educated by Jesuits at Clongowes, and at Trinity College, Dublin, John began life as a clerk in the House of Commons and became a barrister, but in 1881 he turned to a political career and was returned as Nationalist M.P. for New Ross. His abilities as a speaker and his family connexions made him prominent.

John Redmond,
Irish politician
Russell

When the split in the Nationalist party occurred in 1891, Redmond adhered to Parnell, and on his death became the leader of his followers in Parliament. In 1900, when the two sections of the Nationalist party united, he was chosen as their leader. In 1895 he was returned for N. Wexford, and from 1891 onward represented Waterford city. Redmond was leader of the party when Home Rule was granted in 1914 and the outbreak of the Great War suspended its introduction. He was a member of the Dublin convention, but before the triumph of Sinn Féin, at the general election of 1918, he died, March 6, 1918.

His brother, William Hoey Kearney Redmond (1861-1917), was returned to Parliament as M.P. for Wexford borough, later representing Fermanagh and East Clare. To the end he remained an active follower of his brother both in and out of Parliament. At the outbreak of the Great War Redmond took a commission in the Royal Irish regiment and went to the front in 1915. On June 7, 1917, he was hit while his men were attacking near Wytchachte, and died the same day.

REDPOLL (*Acanthis linaria*). British song-bird. Closely related to the linnet genus, it is found chiefly in the N. districts of Great Britain; also in Europe, Asia, and N. America. The plumage is reddish brown on the upper parts, with a deep crimson crown, pink breast, and white under parts. It feeds upon insects and seeds.

Redpoll. Crimson-headed song-bird related to the linnet
W. S. Berridge, F.Z.S.

RED RIVER. River of N. America. It rises in Minnesota, and flows S., then W., and

finally N. between Dakota and Minnesota into Manitoba, where it enters Lake Winnipeg after a course of 700 m.

The Red River Settlement was a colony in Canada, in the valley of the Red River. It is now part of the prov. of Manitoba. It was founded in 1811-12 by the earl of Selkirk. When in 1869 the Hudson's Bay Company's rights were transferred to the Dominion of Canada, there was strong opposition among the population of this district. Under the presidency of Louis Riel (1844-85) a provisional government was set up, but the rebellion was suppressed in Aug., 1870.

RED ROT (*Fomes annosus*). Woody fungus of the order Polyporaceae. It is very destructive to coniferous trees. The spore-bearing body is evident on the trunks and exposed roots of infected trees as a thick rugged knob, of which the white portion is extensively pitted with the openings of the spore-bearing tubes.

REDRUTH. Market town and urban district of Cornwall. It is 9 m. from Truro, on the G.W.R., in the midst of a tin and copper mining district. Near is Carn Brea, a rock 749 ft. high, with British remains, and a ruined castle. Market day, Fri. Pop. 9,920.

REDS. Term popularly applied to the Bolshevik faction of the Russian revolutionaries in contradistinction to the Whites. The term originated with the Red guards set up by the Bolsheviks. See Bolshevism; Russia; Soviet.

RED SEA. Arm of the Indian Ocean between Arabia and N.E. Africa. It extends from the isthmus of Suez, 1,200 m. to the S.E., to the strait of Bab-el-Mandeb. At the N. end are two arms, the gulfs of Suez and Akabah (Aqaba). From 100 to 200 m. wide, the coasts are fringed with coral reefs and lined by sandy deserts. Since the earliest

Redshank. Seashore bird of the plover family
W. S. Berridge, F.Z.S.

REDSHANK (*Tringa totanus*). British shore bird. It belongs to the plover family. The plumage is pale brown on the upper parts, with a tail barred with black and white, and whitish under parts. The legs and feet are bright orange red, and the body is about 12 ins. long. It is moderately common on the sandy shores of the E. counties of England. Its wider range includes Europe, Asia, and Africa.

Redstart. British song-bird
W. S. Berridge, F.Z.S.

of the Continent. The cock bird has bluish-grey plumage on the upper parts, with black throat and bright bay under parts. The hen is reddish grey on the upper parts, with pale red breast and flanks and whitish throat. Its food consists of insects and grubs.

REDUCING AGENT. In chemistry, a substance which removes oxygen, chlorine, etc., from compounds. Such substances are hydrogen, carbon, aluminium, etc. The term

is used in a wider sense for any substances which bring about conversion into other substances. Some compounds themselves act as reducing agents, e.g. stannous chloride, much used in testing for salts of mercury. Sulphurous acid, ferrous sulphate, sodium thiosulphate, and alcohol have also special applications in chemistry as reducing agents.

In metallurgy reduction means the liberation of a metal from its ore.

RED-WATER TREE (*Erythrophloeum guineense*) OR **SASSY TREE.** Tall evergreen tree of the order Leguminosae, a native of W. Africa. It has small, yellow flowers in terminal clusters. When the tree is cut a red juice flows from the incision. An allied species (*E. labouchei*) is the Ah-pill of Queensland and other parts of Australia. It has close-grained, hard, red wood—the hardest produced by Australia—used for spear-heads.

REDWING (*Turdus iliacus*). British song-bird. It is related to the thrush, which it resembles. It is a winter migrant from N. Europe, and as it feeds almost exclusively on insects, it often suffers great privation in severe weather. It possesses a clear and loud voice.

Redwing. Song-bird closely related to the thrush
W. S. Berridge, F.Z.S.

REDWOOD (*Sequoia gigantea*) OR **WELLINGTONIA.** Large evergreen tree of the order Pinaceae. A native of the mountains of California, it attains a height of over 320 ft., with a trunk diameter of 35 ft. The leaves are

Redwood. Open cone and leaves

small and scale-like, overlapping on the branches and twigs. The male flowers are single or several together at the ends of shoots; the female flowers at the tips of other shoots may be passed over as growth buds. A specimen has been computed from its growth rings to have been over 3,000 years old.

REE. Lough or lake of the Irish Free State. Formed by the expansion of the river Shannon, it lies between the cos. of Roscommon, Longford, and Westmeath. It is 17 m. long and from 1 to 7 m. broad.

REED (*Phragmites communis*). Large perennial herb of the order Gramineae. It is a native of Europe, Asia, Africa, America, and Australia, growing on the margins of lakes, streams, and up wet sea-cliffs. It is of very erect growth, the stout, round stems attaining a height of 10 to 15 ft., with broad, flat, rigid leaves. The flowers are gathered in a large, oval, purplish plume. The reed is the predominant plant in the fens of East Anglia.

Reed. *Phragmites communis* at the margin of a pool

REED. In music, the medium by which vibrations are set up in certain organ stops (oboe, tuba, etc.), and in some orchestral instruments, oboe, clarinet, bassoon, saxophone, etc. The former are generally of metal, the latter of a kind of large grass which grows in S. Europe. A pipe enhances the tone and resonance of the organ reed. In the orchestral instruments the tube is essential, the reed being merely the excitatory medium.

In weaving the term reed is applied to a comb-like portion of the loom, consisting of vertical, parallel wires, through the dents or openings of which the warp threads are passed. The reed serves to separate the warp threads, and to beat home the weft, against which its wires are driven by the sley, or oscillator of the loom. See Loom.

REED, EDWARD TENNYSON (b. 1860). British artist. Born March 27, 1860, the son of Sir E. J. Reed, he was educated at Harrow, and became an artist in black and white. In July, 1889, he began to contribute to Punch, in 1890 joining its regular staff. His most popular drawings were the Contrasts series, 1890-91; Prehistoric Peeps, 1893; and a series of parliamentary caricatures.

REEDBUCK. Species of antelope found in Central and S. Africa. It is nearly 3 ft. high at the shoulder, and has pale brown hair on the upper parts with dingy white beneath. The horns are only about 12 ins. long, and rise nearly straight from the forehead, bending slightly forward at the tips. These antelopes were formerly very common in the Transvaal, South Africa, but have now become rather rare.

Reedbuck. Antelope formerly common in the Transvaal

REED BUNTING OR **REED SPARROW** (*Emberiza schoeniclus*). Small European bird. Common in most parts of Britain, it frequents rivers or swampy ground, where it builds its nest among the reeds or in small trees. Gregarious in habit, it feeds chiefly on water plants, insects, and small molluscs. The head and throat of the male are black; the back and wings red-brown; the under parts and a band around the neck, white.

Reed Bunting on a rush

REED MACE (*Typha-latifolia*), OR **CAT'S-TAIL**. Tall perennial herb of the order Typhaceae. A native of Europe, N. and W. Asia, N. Africa, and N. America, it grows on the margins of lakes and rivers, and has a short, creeping root-stock, from which the round erect stems rise to a height of 7 ft. The long, broad, nearly flat leaves may be 6 ft. long. The female flowers are densely packed in a purple-brown spike or "mace" around the upper part of the stem above which is the yellow "tail" of male flowers. There is a smaller and less common species (*T. angustifolia*) growing in pools and ditches. It is often, but wrongly, styled bulrush (q.v.).

Reed Mace. Leaves and flower spike

REEL. Scottish national dance. It is performed by two or more couples, and called accordingly a foursome, sixsome, or eightsome reel. The music is provided by the bagpipes or fiddle. It is a circular dance with quick, gliding movements, involving much whirling and a graceful forming of the figure eight.

REEVE (A.S. *geréfa*). Term applied to various public and private officials in England, chiefly in the Middle Ages. From Anglo-Saxon times the reeve was the steward or bailiff of an estate, who maintained order, collected dues, and supervised labour. The word and office survive in the Scottish grieve.

The term prevails in Canada, where the title reeve is given to the president of a town or village council. See Sheriff.

REEVES, JOHN SIMS (1818-1900). British tenor singer. Born at Woolwich, Sept. 26, 1818, he sang the baritone part of Rudolph in La Sonnambula at Newcastle-upon-Tyne, 1839, and joined Macready's Drury Lane company as tenor, 1841. He sang again in opera in London in 1847, and entered upon his long career as an oratorio singer in 1848, singing in such works as Judas Maccabaeus, the Messiah, and Elijah until his farewell appearance in 1891. He was also famed as a ballad singer. He died at Worthing, Oct. 25, 1900.

John Sims Reeves. British singer

REEVES, WILLIAM PEMBER (b. 1857). New Zealand politician. Born at Canterbury, New Zealand, Feb. 10, 1857, he was called to the bar of New Zealand. He turned to journalism and politics, became member of the parliament of New Zealand, 1887-96, and was minister of education, labour, and justice from 1891-96. He then became agent-general for the colony, and was its high commissioner, 1905-9. From 1908-20 he was director of the London School of Economics. He wrote *The Long White Cloud*, a History of New Zealand, 1898, and *State Experiments in Australia and New Zealand*, 1902.

REFECTORY (Lat. *refectorium*, from *reficere*, to restore). Term applied to a large hall in an abbey or kindred group of monastic buildings, where the monks or nuns took their meals. It was often a detached building, but in other cases was incorporated in the general ground-floor plan. See Abbey; Monasticism.

REFEREE. One to whom any matter or question is referred for decision. The term is applied in several connexions. In law it may mean a person known as an official referee; a medical practitioner appointed under the Workmen's Compensation Act, 1906; or a person appointed under the Coal Mines Act, 1911. In certain sports a referee is the official who controls the game or contest while it is in progress. See Arbitration; Boxing; Football.

The Referee is the title of a London Sunday newspaper devoted primarily to sport, music and the drama, which first appeared in 1877.

REFERENDUM (Lat. to be carried back or referred). In politics, term applied to the reference of laws passed by the legislative authority, or of original legislative proposals, to the electors for acceptance or rejection. The taking of a referendum may be either compulsory or permissive. The system is highly developed in Switzerland.

In the U.S.A. the referendum in various forms is a recognized part of the machinery of government in the states and municipalities, and is being increasingly employed for purposes of general legislation. It is also employed in Australia. The permissive form of referendum includes the origination of legislation

which, if adopted by the direct vote of the electors, must be taken up by the legislature.

REFLECTION (Lat. *reflectere*, to bend back). In physics, general phenomenon occurring in all kinds of wave motion. It is most noticeable in the case of light.

If a beam of light be reduced to a theoretical ray it is reflected in one direction, and it is said to undergo regular reflection. The point where a ray of light strikes the reflecting surface is the point of incidence. A perpendicular to the reflecting surface through this point is called the normal; the angle the incident ray makes with this normal is the angle of incidence; the angle the reflected ray makes with it is the angle of reflection. Without reflection, bodies not luminous in themselves would be invisible. See Optics; Refraction.

Reflection. Diagram showing law of reflection. Ray of light ABC makes equal angles ABD, CBD with the perpendicular to the reflecting plane BE

REFLEX ACTION. Muscular action which is the result of an afferent impulse, i.e. an impulse originating in a stimulus external to the body and conveyed by a nerve to a part of the central nervous system, which then sets in motion the muscles necessary to produce the action. If the skin be pricked an impulse is carried by the nerve which has been stimulated to a nerve centre, and from this another impulse is sent down to the appropriate muscles, causing them to withdraw the limb from the source of pain. Other instances of reflex action are the watering of the eye and the movements of the eyelids when a speck of dust enters the eye, and the watering of the mouth which occurs at the smell or sight of food. A true reflex action is independent of the will and may occur in states of unconsciousness. See Brain; Nerve.

REFORM (Lat. *re-*, again; *formare*, to form). Literally, to restore or form again. In politics, it has come to be used for the process of changing the condition of the people or the constitution by constitutional means as opposed to revolution, which uses violent and unconstitutional means.

REFORM ACTS. In British history, the name is given to the series of Acts reforming parliamentary franchise and the composition of parliament, and designed to secure an adequate expression of the popular will in government. Formally described as the Representation of the People Acts, these are the Acts of 1832, 1867, 1884-85, 1918, and 1928.

The Reform Act of 1884 made uniform the household and lodger franchise throughout the United Kingdom; the Act of 1918 gave the franchise to all men over 21 years with a six months' residence qualification, and to women over 30 years who were local government electors or the wives of such electors; the 1928 measure allowed all women over 21 years to vote on the same terms as men. See Commons, House of; Representation.

REFORMATION. Name given to the great religious revolution or reconstruction of Western Christendom in the 16th century. During the Middle Ages there had been periodic demands for reformation within the Church, but the distinctive feature of the 16th century Reformation was its insistence upon a revision of doctrine.

Martin Luther successfully led the revolt, the seeds of which had been sown in the 14th century by Wycliffe in England and later by Hus in Bohemia. The actual occasion of revolution was Luther's denunciation in 1517 of Pope Leo X's inordinate sale of

indulgences (q.v.). In theory Lutheranism or Protestantism substituted for the church authority that of the Scriptures. Its weakness consisted in the fact that the Scriptures needed interpretation. Protestantism inevitably broke up into sects, each upholding its own interpretation. Notable were the Calvinists or Huguenots and the Zwinglians.

The revolution which Luther initiated followed varying lines of development in the various countries of Europe, and in 1563 the council of Trent definitively established the limits of Roman Catholicism. By that time Spain and Italy were secured for the Papacy; England, Scotland, and Scandinavia were secured for Protestantism; in France it was still uncertain whether Catholics and Protestants would settle down to mutual toleration. The German states became Catholic or Protestant, according to the predilections of their rulers. In Poland, Bohemia, and Hungary it was still uncertain which of the creeds would conquer. The Protestants of the northern Netherlands were still under the yoke of Spain. See Huguenot; Luther, Martin; Papacy; Protestantism.

REFORMATORY SCHOOL. State-aided institution at which young offenders are lodged, and receive industrial training to equip them for useful citizenship. The Reformatory School Act of 1854 empowered criminal courts to send offenders under 16 years old to a reformatory school.

The use of these means of reclamation is regulated by the Children Act, 1908. Young persons between the ages of 12 and 16 who are convicted of any offence punishable by penal servitude or imprisonment may be committed to a certified reformatory school for not less than three nor more than five years, but in any case must not be detained beyond their 19th birthday. See Borstal.

REFRACTION. In optics, a phenomenon caused when waves of light from one medium pass into another medium. Usually when light waves traverse two media, the waves have their directions changed or refracted.

It is due to refraction that mirages exist, that the day appears longer than it is, etc. An example of the effect of refraction is seen when a walking-stick is partly submerged in water. The stick appears to be broken at the surface of the water due to the different indices of refraction of air and water. In the figure A B is a ray of light refracted at B along the line B C. B D is the plane between the two media, and E B F the perpendicular at that plane. The refracted ray makes with the normal an angle whose trigonometrical sine bears a constant ratio, for any two particular media to the sine of the angle the incident ray makes with the normal. See Iceland Spar; Light; Optics; Polarisation.

The refractometer is an instrument for determining the refractive index of solids, liquids, or gases.

REFRIGERATION. Application of cold for the preservation of food. The principle is old, and cold caverns, cellars and, where

available snow, have always been used for the purpose. The freezing mixture of ice and salt was known in the 17th century. In 1834 Jacob Perkins invented a machine which included in simple form the principles of the modern refrigerator: the evaporator, the compressor, the condenser, and the refrigerator, and since that time many types have been invented.

The principal kinds are: (1) The air machine, in which the cooling process is accomplished by the alternate compression and expansion of air. (2) The absorption machine, based on the alternate vaporisation and condensation of some substance. While the condensed vapour is re-evaporating it takes up heat from the bodies round it, thus accomplishing refrigeration. A common type is that in which ammonia dissolved in water is the medium. (3) The vapour compression machine is one which acts by the mechanical compression of a condensable vapour. Any liquid which can be alternately liquefied and vaporised serves, and the substances used are water, sulphuric ether, sulphurous acid, ammoniac, and carbonic acid the last three being the favourite media.

The introduction of refrigerating plant has developed the Australian, New Zealand, and Argentine frozen and chilled meat trade, and has facilitated the transport of butter, cheese, fruit, fish, and other perishable products. It has prevented enormous losses in ordinary stores and shops.

REGALIA (Lat. regalis, royal). Emblems belonging to the sovereign as such. The regalia of the sovereign of Great Britain and Ireland include S. Edward's crown, the imperial crown, S. Edward's staff and sceptre, the royal orb, a pair of bracelets or armillae, a ring, a mantle and other garments, a pair of spurs, the ampuila or golden eagle—a receptacle for the anointing oil—and a spoon for the oil. Others are the five swords, two of state, one of temporal justice, one of spiritual justice, and the curtana. There are also crowns and staves for the queen consort.

Regensburg. German name for the city of Bavaria also known as Ratisbon (q.v.).

REGENT (from Lat. regere, to rule). One who rules temporarily for a sovereign. A regency is necessitated by the minority, mental or physical incapacity, or absence of the sovereign, or by the infancy of the heir to the throne. Sometimes a council acts as regent. The most famous regent of Scotland was James Stuart, earl of Murray or Moray.

REGENT'S CANAL. Canal within the co. of London. It was constructed in 1812-20. The E. end is opposite the Surrey Commercial Docks; it goes through the N. of Regent's

Park to join the Grand Junction Canal in Paddington. In 1928 it became part of the canal system known as the Grand Union.

REGENT'S PARK. A London park. Mostly in the bor. of Marylebone and partly in that of St. Pancras, between St. John's Wood and Camden Town it contains the

Regent Street. The newly built Quadrant, looking towards Piccadilly Circus

gardens of the Zoological, Botanic, and Topophilite societies. There is an artificial lake and the Regent's Park Canal skirts the N. side. On the W. side are Regent's Park College and S. Dunstan's Hostel for Blind Soldiers. Deriving its name from the prince regent, afterwards George IV, it was laid out in 1812, and was opened to the public in 1838. In 1930 it was announced that the Botanical Gardens were to be merged into the rest of the park.

REGENT STREET. London thoroughfare. It runs from Waterloo Place, Pall Mall, and, passing Piccadilly (formerly Regent) Circus and Oxford Circus, finishes at Langham Place. One of London's great shopping centres, it was made, in 1813-20, from designs by John Nash to connect Carlton House (q.v.) with Regent's Park. After the Great War, as the leases which were crown property fell in, much of Regent Street was rebuilt, and it was opened by King George V in June, 1927.

REGGIO EMILIA. City of Italy. The ancient Regium Lepidi, it stands on an affluent of the Po, 38 m. by rly. N.W. of Bologna. The cathedral was founded in the 12th century. The church of Madonna della Ghiara is a beautiful Renaissance domed structure dating from 1597. There are Renaissance palaces, and the house where Ariosto

Regalia of the British Sovereign. 1. Imperial crown. 2. Orb. 3. S. Edward's crown. 4. Ampulla. 5. Anointing spoon. 6. Spur. 7. Curtana. 8. Sword of state. 9. Queen's sceptre, with dove. 10. Queen consort's sceptre. 11. Imperial sceptre, with cross. 12. King's sceptre, with dove. 13. Sword of offering. 14. Sword of temporal justice. 15. Sword of spiritual justice. 16. Spur. 17. S. Edward's staff. 18. Maces

Copyright of H.M. the King

was born. The city was founded in 187 B.C. by M. Aem. Lepidus. In medieval times it was a republic, passing under the control of the Este family in 1409. Pop. 89,611.

REGICIDE (Lat. rex, king; eadere, to kill). Literally, one who kills a king. It is specially used, however, for those who were responsible for the death of Charles I in 1649. Of the 150 members of the court of justice that tried the king, 67 voted for his execution and 59 signed the death warrant, and these, with the officials and executioners, were the regicides. After the restoration of Charles II, 29 of them were sentenced to death, but the sentence was only carried out in 10 cases, the others being imprisoned for life.

REGILLUS. In ancient geography, a small lake in Latium, E. of Rome. It was famous for the defeat of the Latins by the Romans, 496 B.C. The story of the fight is told in Macaulay's *Lays of Ancient Rome*.

REGIMENT (Lat. regere, to rule). Military term for a body of soldiers. In the British army the infantry is grouped into regiments, most of which have a name and number. It consists of a number of battalions, each commanded by a lieutenant-colonel. The cavalry is also organized in regiments. The artillery and engineers each form officially a single regiment. The word was first used in the 16th century, when each unit raised was called a regiment. With the foundation of a regular army came the practice of numbering the regiments. See *Army*; *Battalion*; *Devonshire Regiment*, etc.

REGINA. Capital of Saskatchewan, Canada. It is in the S. of the province, in the centre of the wheat-growing area, 360 m. from Winnipeg, on the C.P. and C.N. Rlys. It is the western headquarters of the Royal Canadian Mounted Police. Regina's industries are distributing and manufacturing, including the making of agricultural implements, motor cars, bricks, and machinery, as well as tanning and milling. Pop. 37,329.

Regina. Dominion Government buildings, Customs and Post Office

REGISTER. Division of the human voice. It arises from the nature of the vocal cords, and evincing a difference of tone quality. As the tension of the cords cannot be carried beyond a certain point, the upward range is continued by means of a change of mechanism. Different teachers have different names for these registers, the most common being chest, head, and falsetto. The aim of the teacher is to blend the registers so that the transition from one to another is effected without an abrupt change of quality.

REGISTRATION. Act or fact of registering. The word is used in several connexions. In Scots law it means the transcribing of documents in a public register, in order that an exact copy may be preserved for use in the event of the destruction of the original.

The registration of births, marriages, and deaths was made compulsory in England and Wales in 1836, and came into force in 1837. Before this time the only official source of information on this subject was the parish register. The registration of electors is a preliminary to the exercise of the franchise.

During the Great War a registration card, or identification card, was issued in Great Britain under the National Registration Act,

1915, to all males and females between the ages of 15 and 65.

Letters containing money can be registered at any post office for a small fee, and luggage can be registered with railway companies. The carrying authorities then assume responsibility for loss up to a certain amount.

REGNAULT, HENRI VICTOR (1810-78). French physicist. Born at Aix-la-Chapelle, July 21, 1810, in 1840 he was appointed professor of chemistry at the École Polytechnique, Paris. He became professor of physics at the Collège de France, 1841, and director of the Sèvres porcelain factory, 1854. He died Jan. 19, 1878.

Regnault made a reputation for his measurements of many physical constants, particularly those concerned with specific heat. He also carried out a series of experiments on the densities, pressures, and volumes of gases which had an important effect on the kinetic theory of gases, and did valuable work by his researches on the haloid and other derivatives of unsaturated hydro-carbons.

RÉGNIER, HENRI FRANÇOIS JOSEPH DE (b. 1864). French poet and novelist. Born at Honfleur, Calvados, Dec. 28, 1864, he came to occupy a leading position among Mallarmé, Verlaine, and other so-called Symbolists. His many volumes of poetry included *Épisodes*, 1888; *Aréthuse*, 1895; and *La Cité des Eaux*, 1903. Among his works in prose fiction are *Le Trèfle Noir*, 1893; *La Canne de Jaspe*, 1897; *Le Passé Vivant*, 1905; and *La Peur de l'Amour*, 1906.

REGULUS, MARCUS ATILIVS. Roman general. He became consul for the second time in 256 B.C., and was at first successful in an expedition against the Carthaginians, but was finally defeated and taken prisoner. According to the story, Regulus was sent by the Carthaginians in 250 B.C. to Rome, under parole to return if the peace which the Carthaginians desired was not arranged. Regulus advised the Romans against that policy, and returned to Carthage, where he was brutally put to death.

REHAN, ADA (1860-1916). American actress. Born in Limerick, April 22, 1860, she made her first stage appearance at Newark, New Jersey, in 1874, and showed her versatility as a comedy actress in over 200 parts in Augustin Daly's company, 1879-99. Her fame rested chiefly on her Shakespearean renderings, notably her *Rosalind*, *Portia*, *Cordelia*, *Desdemona*, and *Mistress Ford*. She appeared first in London in 1884, returning in 1886, 1888, 1890, and 1893-95. Retiring in 1906, she died Jan. 6, 1916.

REHOBOTH. Jewish king. Son and successor of Solomon, his treatment of the tribes led to a revolt of all except Judah and Benjamin, and a division of the kingdom. During his reign Judah was conquered by Shishak, founder of the XXIInd Egyptian dynasty (1 Kings 12 and 14; 2 Chron. 12).

REHOBOTH. Town and dist. of S.W. Africa. The town is 60 m. S. of Windhoek, at the head of the Great Fish River Valley.

The dist. has a coloured pop. of 9,300, about 4,000 of whom belong to the Bastards, a tribe of mixed descent. In 1918 they petitioned to be taken under the protection of Great Britain.

REICHSTADT, NAPOLEON FRANCIS JOSEPH CHARLES, DUKE OF (1811-32). Son of Napoleon I by the emperor's second marriage, he was born in Paris, March 20, 1811, and was created king of Rome. On the fall of the empire in 1814, Napoleon abdicated in his favour, but the empress Marie Louise

hastened with her child to Vienna, and no effort was made to establish his right. In 1818 the emperor of Austria made him duke of Reichstadt. He died July 22, 1832. Rostand's play *L'Aiglon*, 1900 is written about him.

REICHSTAG. Literally, the day of the empire, a word often translated into English as diet. The Reichstag met whenever summoned by the emperor until 1663; from then until 1866 it met regularly at Ratisbon.

When in 1871 the German Empire was founded, the name was given to one of the two houses set up in Berlin. It was composed of 397 members elected by a popular franchise for five years. The name and constitution of the Reichstag were retained after the changes of 1918. After the election of 1930 there were 575 members. See *Diet*. Empire, Holy Roman.

REID, SIR GEORGE (1841-1913). Scottish portrait painter. Born at Aberdeen, Oct. 31, 1841, he studied under Mollinger and Israels. He painted genre in the Dutch manner, but is best known by his realistic portraiture. He was elected A.R.S.A., 1870, R.S.A. in 1878, and P.R.S.A. in 1891, when he was also knighted. He died Feb. 9, 1913.

REID, SIR GEORGE (1845-1918). Australian politician. Born in Renfrewshire, Feb. 25, 1845, he went with his parents to Sydney, and in 1864 entered the civil service there. In 1880 he was elected to the legislature of New South Wales, and in 1883 he became a minister. From 1894-99 he was prime minister, and in 1901 he became leader of the opposition in the new Parliament of the Commonwealth. In 1904 he was premier for nearly a year. In 1908 Reid left politics, and from 1909-14 was high commissioner for Australia in London. In 1916 he was chosen M.P. for St. George's, Hanover Square, and he died Feb. 12, 1918.

Sir George Reid, Australian statesman
Russell

REID, THOMAS MAYNE (1818-83). British novelist. Born at Ballyroney, co. Down, April 4, 1818, he emigrated to America in 1839, and served in the U.S. army in the Mexican War of 1847. His experiences are embodied in a series of stirring novels of adventure, among which the best known are *The Rifle Rangers*, 1850; *The Scalp Hunters*, 1851; *Adrift in the Forest*, 1865; and *The Headless Ho seman*, 1866. Mayne Reid returned to Europe in 1849. He died Oct. 22, 1883.

REID, WHITELOW (1837-1912). American journalist, author, and diplomat. Born at Xenia, Ohio, Oct. 27, 1837, in 1869 he entered the office of *The New York Tribune*, of which he afterwards became editor and chief owner. He was minister to France, 1889-92. Twice special envoy to England, at the Diamond Jubilee of Queen Victoria, 1897, and the Coronation of Edward VII, 1902, he was appointed ambassador to Great Britain in 1905. He died in London, Dec. 15, 1912.

REIGATE. Borough and market town of Surrey. It is 23 m. from London, on the Southern Rly. The church of S. Mary Magdalen is mainly Perpendicular, but has fine transitional Norman arcades in the nave. Lord Howard of Effingham is buried here. There are numerous caves beneath the town, which has an agricultural trade. The old windmill on the heath had been used as a church for 50 years. In 1928 it was renovated and reopened as such. The borough includes the adjoining town of Redhill (q.v.). Market day, Mon. Pop. 28,915.

REIGN OF TERROR. Term applied to the period in the French Revolution during which supreme power was in the hands of the

Duke of Reichstadt, Son of Napoleon I

Committee of Public Safety formed by the Jacobins, July, 1793. In addition to supporters of the old regime, hundreds of the revolutionaries themselves perished on the scaffold as a result of the general atmosphere of suspicious mistrust. See French Revolution; Jacobins; Robespierre.

REIMS. Town of France. It lies on the right bank of the Vesle, 99½ m. by rly. (via Soissons) E.N.E. of Paris. It is an important rly. centre, and is linked by canal with the Aisne and Marne. It is the seat of an archbishop and a centre of the champagne industry.

The cathedral is one of the noblest Gothic buildings of France. The choir was completed 1241, and the W façade with its three portals with over 500 statues, also in the 13th century. The whole was completed in 1428, but the spires were destroyed by fire in 1481. The rose window over the W portals, the beautifully carved N. portal, and the twin W. towers, 267 ft., are among famous features of the exterior. The bombardments of 1914-18 severely damaged the building.

The archiepiscopal palace (15th-17th century, with a 13th century chapel) was destroyed by fire, 1914. The fine 17th century town hall was gutted in 1917. The abbey church of S. Remi, 12th-15th century, and founded in the 6th century, was severely damaged, 1918. The Roman Porte de Mars, 4th century, still stands, but the Hôtel Dieu was destroyed, 1916, and the 13th century Maison des Musiciens demolished by shellfire, though its famous statues were preserved.

From 987 onwards Reims was the scene of the coronation of all the French kings save six. It was bombarded by the Germans throughout the Great War. Pop. 100,998.

REINCARNATION. Term meaning the assumption of human nature a second time or more than once. It is used to describe the process involved in the theory known as metempsychosis or the transmigration of souls, which maintains that all personalities or types of being (including animals) enter into life upon the plane of earth not once but many times, and assume different forms at every reappearance. The theory was held in India and discussed by the Greek philosophers, notably Pythagoras and Plato. See Psychological Research; Transmigration.

REINDEER (*Cervus tarandus*). Species of deer found in N. Europe, Siberia, Newfoundland and Canada, and the United States.

Reindeer. Male of the North European species of deer
W. S. Berridge, F.Z.S.

It is the only deer that has been successfully domesticated. Both sexes bear antlers. The feet are remarkable for their breadth and great spread, an adaptation for travelling on snow in winter and boggy land

in summer. In colour it is usually brown, with white on the neck, under side, and inner flanks. In height the reindeer ranges from 44 to 48 ins. at the shoulder in Europe but has been known to attain 5 ft. in Canada. The European reindeer occurs from Scandinavia to E. Siberia, but in many districts it is now very rare in the wild state. It is the beast of burden in Lapland and in parts of Norway and Siberia. In the wild state it spends the summer in the grassy valleys, and moves in winter to the mountains, where it lives on lichens and moss. The American reindeer is known as the caribou (q.v.).

REINDEER. Lake and river of Canada mainly in Saskatchewan. The lake is in the N.E. of the prov. Its outflow is at the S end by the Reindeer river, which flows almost due S. to join the Churchill.

Reims. West front of the cathedral before it was damaged during the Great War. It is considered the most beautiful work of the Middle Ages

REINHARDT, MAX (b. 1873). Austrian theatrical producer. Born at Baden, near Vienna, Sept. 9, 1873, he made his first stage appearance in Berlin, 1894, where he founded a cabaret theatre, the Schall und Rauch, and the Kleines Theater, 1902. As manager of these, and of the Neues Theater from 1903, and the Deutsches Theater and Kammerpiel from 1905, he earned a great reputation for his brilliantly conceived productions of serious drama. In England he was best known as producer of *Sumurun*, 1911, and of *The Miracle*, played at Olympia, London, 1911-12, and of *Oedipus Rex*, 1912. Consult *The Theatre* of Reinhardt, H. Carter, 1914.

Max Reinhardt, Theatrical producer

Reins. Controlling or guiding straps or cords attached to the bit of a ridden or driven horse. See Bridle; Driving.

REITH, SIR JOHN CHARLES WALSHAM (b. 1889). British engineer. A son of Rev. George Reith, he was educated in Glasgow and at Gresham's School, Holt. Trained as an engineer, he served with the Royal Engineers in France in 1914-15 and was afterwards employed by the Admiralty and the Ministry of Munitions. In 1919 he became general manager of W. Beardmore & Co., Ltd., and in 1920 of the British Broadcasting Co. In 1927, when he was knighted, his position was that of director of the Broadcasting Corporation.

Sir John Reith, British engineer

REJANE, GABRIELLE CHARLOTTE (1857-1920). French actress. Born in Paris, June 6, 1857, her real name being Charlotte Réju, she made her début at the Odéon, 1875. She was an actress of great versatility and disciplined technique, and made a memorable

appearance as Catherine in *Madame Sans-Gêne* at the Gaiety Theatre, London, 1894, also in the same part, her most popular, in New York, 1895. The *Théâtre Réjane*, Paris, was opened in 1905. She died June 14, 1920.

REJUVENATION. The theory that a man's life can be prolonged by replacing the worn-out interstitial glands with young, healthy glands obtained from the higher monkeys. It was first advanced in 1910 by Dr. Serge Voronoff (q.v.).

RELAPSING FEVER. Acute fever caused by infection by a spirochaete. Different forms of the parasite occur in Europe, America, Asia, and Africa, and cause differences in the symptoms, but all are characterized by recurring bouts of fever.

RELATIVITY. Mathematical principle formulated by A. Einstein in 1905. It is the principle that the velocity of light is constant for all observers, whatever the relative movements of the systems of reference (the earth, for example) to which they are attached, and that the movements of these systems are compensated for the observers by changes in what in mechanics are termed the space and time co-ordinates.

In our ordinary life we regard distances and intervals as invariable, and unaffected by the particular objects or events which occupy them. From ancient times this principle seemed to mathematicians to suffer from a serious theoretical defect, viz., it was not a direct means of comparing distance with distance and interval with interval, and there was no way of knowing, with the certainty mathematics requires, that measuring rod and clock do not alter shape when they are moved.

In 1675, Roemer, a Danish astronomer, postulated the hypothesis that light signals do not arrive at the instant of emission, but occupy a definite interval of time proportional to their distance in space. He calculated the velocity of light with an extraordinary accuracy, and the discovery led Newton to postulate absolute space and time. With the rise of electro-magnetic science in the 19th century, the velocity of light became of prime importance. Attempts were made to measure the effect on that velocity of movements of the system in which the light had its source. The Michelson-Morley experiment (1886) left no doubt that the effect which was being looked for did not exist at all. The experiment was designed to show the movement of the earth in space and its direction, by means of the change which the velocity of this movement ought to have produced in the velocity of the light projected from the instrument and reflected back to it from a fixed mirror. Michelson repeated the experiment in 1928, again with negative results.

It was suggested by Fitzgerald that when matter moves through the ether the latter, being fixed and all pervasive, may bring about a contraction of the matter in the direction of the movement, and this would account for the experiment being negative. About the same time Lorentz suggested that this contraction effect might be a character of the electrons which constitute matter.

Einstein ignored all theories and based his mathematics purely on the experiments. He accepted the results without explaining them, and formulated the principle of relativity. As all our observations of physical phenomena are actually dependent on light signals it must

Mme. Réjane as Catherine in *Madame Sans-Gêne*

follow that the velocity of light is constant for all observers. The new principle demonstrated the impossibility of assigning absolute values to the time of an event, or to the place of its occurrence, since these depended on its relations to other events, and these relations were different for all observers attached to moving systems of reference, such as the earth.

In 1908 Minkowski produced a construction of the universe conceived as a four-dimensional continuum, the fourth dimension being time. In the four-dimensional world there is no simultaneity. Any two events which for one observer occur at one instant may for every other observer be separated by an interval. Also there is no absolute place of anything. Any two events which for one observer happen in one place, for all other observers may be in different places.

In 1915 Einstein announced a new principle for the calculation of the phenomena of gravitation, and this was found to give (allowing for a practically negligible margin of error) the exact correction needed to reconcile the discrepancy in Mercury's orbit. This had hitherto defied all attempts to explain it conformably with Newton's law.

It was found that if the new general principle of relativity were adopted, Newton's law would have to be as entirely set aside and replaced as his absolute space and time had been by the special principle. Working out the gravitational field of the sun by the new principle, Einstein found that it showed that if the stars could be seen near the sun, i.e. in its gravitational field, they would be found to be displaced proportionately to their distance from the centre of the sun. The total eclipse of the sun on May 29, 1919, offered an opportunity of testing the matter, and Einstein's predictions were fulfilled.

The new principle rejects the notion of force and the idea of any action, direct or indirect, of one body on another. It declares inertia and gravitation to be one and the same phenomenon, either being the equivalent of the other, and it interprets the phenomena of gravitation, not by the properties of the masses, but by the geometrical structure of the space in which they are moving. This space in the neighbourhood of rotating masses of matter acquires the special geometrical character which constitutes a gravitational field. See Ether; Light; Matter.

RELIC (Lat. reliquiae, remains). In a religious sense, the body or part of a body of a saint or martyr, or some article associated with a saint or martyr, preserved as an object of devotion or veneration. Generally the word implies that which is left of an object after the loss or decay of its other parts, or a souvenir of one who is dead. Examples of religious relics are the remains of holy men preserved in churches or shrines; fragments supposed to have belonged to the true Cross (q.v.), and the Holy Coat (q.v.) of Treves.

Relievo in bronze. Part of the door of the Baptistery, Florence, by L. Ghiberti

RELIEVO. Italian term for the sculpture in relief used in the decoration with figure compositions of walls and other flat surfaces. The Greeks and Romans practised it in its simpler forms. Donatello's John Baptist on the font at Siena, completed in 1427, shows the treatment in a modified form; but Ghiberti's gates for the Baptistery at Florence

are the first conspicuous instance of its employment. See Florence.

RELIGION (Lat. religare, to bind). All that deals with the relations between God and man.

The following classification of religions has been suggested by a leading authority: (1) Religions of the natural life and of an animistic force, vaguely many and indefinitely one, whereby man seeks outward security through a power as personal as his own dim sense of his own personality in the communistic stage at which he lives permits.

(2) Religions of anthropomorphism and external morality. (3) Religions of ecstasy and asceticism and acosmic morality, which either do not depend on gods, or whose gods are pantheistic and identified with the order of things, because, seeking to solve the problem of the world by escaping from it, they do not depend for help on any power that rules the world, e.g. Buddhism.

(4) Religions of monotheistic tendency and ethical dualism, which, having realized the organization of good and evil in the world, seek to secure a higher life by faith that the power of light must prevail over the powers of darkness. The typical example is Zoroastrianism, but the later Greek religion also belonged to it.

(5) Religions of true monotheism and reconciliation, which secure the spiritual life by making it the one eternal purpose, and by faith in the one God who works through all things for it. To it belong especially prophetic Judaism and Christianity.

The following table gives an idea of the relative strengths of the various religions. The figures cannot be more than approximate, as there must be certain overlapping.

Heathen	125,500,000
Jews	16,000,000
Hindus	230,000,000
Confucianists and Taoists	350,500,000
Buddhists	150,000,000
Shintoists	25,000,000
						525,500,000
Christians:						
Roman Catholic	340,000,000
Greek Catholic	150,000,000
Protestants	210,000,000
						700,000,000
Mahomedans	209,000,000
Unclassified	51,000,000
						1,867,000,000

RELUCTANCE. Resistance offered by a substance to the magnetic flux in a magnetic circuit. The flux is equal to the magnetomotive-force divided by the reluctance. Reluctivity or specific reluctance is the reciprocal of magnetic permeability (q.v.).

REMAND (Lat. remandare, to order back). In law, the adjournment by a criminal court of the hearing of a charge against an accused person. The prisoner may be either retained in custody or admitted to bail. A remand in custody, if by verbal order, must not be for more than three days; if on a written warrant, it should not exceed eight clear days. See Trial.

REMARQUE, ERICH MARIA (b. 1898). German writer. Member of a French family long settled in the Rhineland, he served on the German side in the Great War. After the war he became a teacher, journalist, etc., and in 1929 published *All Quiet on the Western Front*, a book embodying his war experiences, which had an enormous sale throughout the world.

REMBRANDT (1606-69). Dutch painter, whose full name was Rembrandt Harmensz van Ryn. Rembrandt was born at Leiden, July 15, 1606. He studied at Amsterdam and Leiden, and finally settled in Amsterdam in 1631. His fame was firmly established by the Anatomy Lesson, now at The Hague, which he painted in 1632. During the following years his commissions and pupils increased in numbers, and among the productions of these prosperous years were *The Bride of Tobias*

(Hermitage, Leningrad), 1636; *The Angel leaving Tobias* (Louvre), 1637; *The Marriage of Samson* (Dresden), 1638; and the self-

Rembrandt. Self-portrait of the Dutch painter

portraits now in the National Gallery, London, 1640. In 1640 came *The Canal*, first of Rembrandt's landscape etchings from nature, *The Windmill* etching following in 1641. After the completion in 1642 of the great painting generally called *The Night Watch* (Amsterdam), Rembrandt's fortunes seemed to be crossed. But these last years of misfortune saw some of his finest works, among them *The Adoration of the Magi* (Buckingham Palace), 1657; a fine self-portrait (Munich), 1658; and the *Syndics of the Guild of Drapers* (Amsterdam), 1661. Rembrandt died in poverty at Amsterdam, Oct. 8, 1669.

REMINGTON, PHILIP (1816-89). American manufacturer and inventor. Born at Litchfield, New York, Oct. 31, 1816, he became one of the controlling heads of his father's small-arms factory. He was the inventor of the breech-loading rifle which bears his name, and in 1873 was one of the first to construct a practical typewriter. He died April 4, 1889.

Remus. Twin brother of Romulus, the legendary founder of Rome. See Romulus.

RENAISSANCE (Fr. from re, again; naître, to be born). In Jebb's phrase, "the whole process of transition in Europe from the medieval to the modern order." In a restricted sense the Renaissance means the revived study, in the new secular as contrasted with the old monkish spirit, of the literature of classical antiquity.

This revival of learning, as it is also called, was itself a chief agent in the emancipation of the mind of man from the trammels of effete dogmatism, and in the creation of a fresh intellectual atmosphere and of fresh ideals of life. It may be said to have begun in Italy with Petrarch and Boccaccio. But the real movement dates from the time when Manuel Chrysoloras of Constantinople lectured on Greek at Florence, 1396, and in other cities. Henceforth classical studies were pursued by the new generation of humanists with growing enthusiasm, to which a further impetus was given when, on the capture of Constantinople by the Turks, 1453, many Greek scholars sought asylum in Italy.

Meanwhile the movement thus initiated by Italy spread to other countries, especially to France and Germany. In England, too, the revival of learning was the product of Italian influence.

RENAISSANCE ARCHITECTURE. This describes the style of building practised in Italy and Western Europe during the age of the revival of classical learning. Sometimes the word is restricted to the earlier phases of the process. In modern England an alternative for the term Renaissance architecture was Italian style, but further study has brought a knowledge of French, German, Spanish, and other Renaissance styles. The English Renaissance style now applies sometimes to the earlier works only; sometimes to the later and more scholarly ones as well. The phases are distinguished also by separate names, as Elizabethan, Jacobean, Stuart, Georgian, etc. As examples of the Italian Renaissance style in England, St. Paul's Cathedral and Somerset House may be mentioned as known to everyone.

RENAN, JOSEPH ERNEST (1823-92). French philosopher. Born at Tréguier, Brittany, Feb. 27, 1823, and educated for the priesthood, he left the seminary of S. Sulpice in 1846. For a time he was an assistant master. In 1850 he secured an appointment at the Bibliothèque Nationale, Paris, and visited Italy. One of a commission sent by the French Government in 1860 to Phœnicia and Palestine, his appointment, 1861, to the professorship of Hebrew at the Collège de France, owing to clerical opposition, was not ratified until 1870. In the meantime he lost by death his sister, Henriette, whose devotion he commemorated in *Ma Soeur Henriette*, 1895 (Eng. trans. Brother and Sister, 1896), and published his *Vie de Jésus*, 1863. This, which formed the initial volume of his *Histoire des Origines du Christianisme*, was written mainly during his visit to Syria. He died Oct. 2, 1892.

RENFREW. Burgh and the county town of Renfrewshire, Scotland. It stands on the left bank of the Clyde, 5 m. W. of Glasgow, on the L.M.S. Rly. Castlehill marks the site of the castle of the Stewarts. Shipbuilding is the staple industry, and engineering, weaving and dyeing are engaged in. Pop. 14,129.

RENFREWSHIRE. County of Scotland. In the S.W. of the country, it is bounded N. and W. by the Clyde, only a small portion lying N. of that river. Its area is 240 sq. m. The surface is generally undulating except in the S., where there are hills. The chief rivers are the Carls, Black and White tributaries of the Clyde; Lech. There is one of several lakes. The part along the Clyde is an industrial area, and herein are Paisley, Greenock, Port Glasgow and Gourock. Elsewhere agriculture is carried on. Renfrew is the county town. The county is served by the L.M.S. Rly. The prince of Wales hears the tit of baron of Renfrew.

Renfrewshire. Map of the Scottish county south of the Clyde

Pop. 292,200.

RENI, GUINO (1575-1642). Italian painter. Born at Calvenzano, Nov. 4, 1575, he studied under Denis Calvaert and with the Carracci. Influenced by Caravaggio, for some years he followed his naturalistic style; his later work, however, is more voluptuous. Many years of his life were passed in Rome, where Pope Paul V befriended him, but his masterpiece, a *Nativity*, is in the church of S. Martino, Naples, and he ended his career at Bologna. He died Aug. 18, 1642.

Guido is amply represented in English and other European galleries.

RENMARK. River port of South Australia, on the Murray. It is 74 m. E. of Morgan. It is a prosperous centre of co-operative fruit growing by irrigation, and was one of the earliest irrigation colonies. Pop. 4,800.

RENNES. Town of France, capital of the dept. of Ille-et-Vilaine, and of the former province of Brittany. It lies at the confluence of

the rivers Ille and Vilaine, 232 m. by rly. W.S.W. of Paris, and is a rly. junction. It is the seat of an archbishop, and has a university. The industries include tanning, and there is a trade in agricultural produce and livestock. The cathedral, an old foundation, was begun in 1787 and completed in 1844. The church, Notre Dame-en-S. Mélaire, dates from the 13th century. The palais de justice, built 1618-54, was the meeting place of the old parlement of Brittany. The second Dreyfus trial took place here in 1899. Pop. 83,418.

RENNET. Extract from the lining of the fourth or rennet stomach of the calf. It is used for curdling milk in cheese-making. The salted linings used in the preparation of rennet are known as vells. The curdling action is due to the ferment rennin, which causes the casein to coagulate and entangle the fat. Rennet also contains another ferment, pepsin, that plays a part in the ripening of cheese. See Cheese.

RENNIE, JOHN (1761-1821). British engineer. Born at Phantassie, Haddingtonshire, June 7, 1761, in 1784 he obtained a position with James Watt, and the same year designed for him a steam engine. In 1791 he began as an engineer at Blackfriars, London, on his own account, carried out the construction of several canals, and was responsible for the building or improvement of many docks and harbours, including the London docks, Hull docks, and the dockyards at Sheerness and Chatham, and the great

John Rennie, British engineer

breakwater at Plymouth. Waterloo, London, Southwark, and Kelso Bridges were also all products of Rennie's genius. He died in London, Oct. 4, 1821.

His eldest son, George (1791-1866), extended the operations of the firm, while his second son, Sir John Rennie (1794-1874), constructed works at Woolwich, Sheerness, and Plymouth.

RENOIR, PIERRE AUGUSTE (1841-1919). French painter. Born at Limoges, Feb. 25, 1841, he settled in Paris in 1859, and studied under Gleyre, becoming associated with the Impressionist group. His principal subjects were from contemporary Paris life, but he also painted landscapes, flower studies, and some Algerian scenes. His art is distinguished by movement and gaiety of colour. He died Dec. 3, 1919.

RENOVN. British battle-cruiser. Launched at Govan in 1916, she displaces 26,500 tons, is 750 ft. in length, with 112,000 h.p., giving a speed of 32 knots. She carries six 15-in., fifteen 4-in., and two 3-in. guns. The Renown conveyed the prince of Wales on his Canadian tour in 1919 and other empire tours. She also conveyed the duke and duchess of York to Australia in 1927.

RENT (Lat. reddere, to pay). Money or other payment made for the use of land and also for the use of houses and other buildings.

The older economists regarded rent as the share of production that falls to the owner of the land, as opposed to interest and wages that fall to the capitalist and the worker respectively. Of these Ricardo put forward the theory of rent associated with his name. By

this, rent is the amount produced by land in excess of that produced by land on what is called the margin of cultivation.

Although quite sound in theory, Ricardo's idea is subject to certain qualifications. The intermixture of land and capital is so close, especially in the older countries, that rent tends to approximate more and more to interest on money invested. There are, however, differences between rent and other forms of income, due to those between land and other forms of capital, and on these are based proposals for the special taxation of land values.

In the popular sense rent is the payment made for the occupation of factories, houses, land, etc., and is therefore only a form of interest on capital. It is regarded as due in England and Wales on the four quarter days, but the occupiers of the bulk of the houses in the country pay weekly. Landlords of small houses usually pay the rates thereon and include this amount in the weekly rent.

RENT RESTRICTION. Method adopted during the Great War and afterwards in the United Kingdom to protect tenants from an increase of rent and to safeguard their tenure. This was done by a series of Acts of Parliament beginning in 1915, when it was provided that tenants of dwelling houses in respect of which the annual rent or the rateable value, calculated in August, 1914, did not exceed £35 in the metropolitan police district, £30 in Scotland, and £26 elsewhere, should have the following privileges: (1) the rent or mortgage interest could not be raised except to meet the cost of structural alterations, or a rise in rates when the landlord pays them; (2) no tenant could be turned out so long as he paid the rent and performed the other duties of his tenancy, and was not guilty of committing waste or of conduct which was a nuisance, unless the landlord reasonably required the house for the occupation of himself or one of his employees. In May, 1918, another Act was passed. This deprived those who had bought dwelling houses within the operation of the 1915 Act since Sept. 30, 1917, of the right of securing possession.

In 1920 a further measure raised the values of dwelling houses coming within its operation to £105, £90, and £78 respectively. The main points were:

Landlords of the houses or flats coming under the Act were able to raise the rent over the standard rent, i.e. usually that existing in Aug., 1914, by 40 p.c., if they did all the repairs, plus 8 p.c. of the cost of structural alterations, plus any increase in rates since Aug., 1914. Premiums were forbidden under pain of £100 fine, and the same penalty attached to persons convicted of making an undue profit from furnished houses. The county court was made the chief tribunal.

The Act of 1920 expired in June, 1923, so in that year a further measure was passed. This extended the life of the Act for another two years, or until June 24, 1925, and provided that as the houses became unoccupied they became automatically decontrolled. Further extensions kept the Acts in force until 1931.

The Act of 1914 debarred landlords from levying distress, or foreclosing, or re-entering into possession in respect of agreements after Aug. 4, 1914, for rentals not exceeding £50 without leave of the court.

RENTON. Town of Dumfriesshire, Scotland. It stands on the Leven, 2 m. from Dumfries, on the L.M.S. Rly. The principal industries are dyeing, bleaching, and calico printing. Pop. 4,965.

REPAIRS. By English law the liability to execute the necessary repairs to a house is entirely a matter of contract. There is no liability in law on either landlord or tenant, except in the case of houses of the working classes. As to such houses, the Housing and Town Planning Act, 1909, enacts that in any

contract made for the letting of a house (or part of a house) for habitation at a rent not exceeding £40 in the county of London. £26 in a borough or urban district with a population of 50,000 at least, and £16 elsewhere, there is an implied condition at the commencement of the tenancy that the house is in all respects reasonably fit for human habitation. Further, there is an implied contract by the landlord that the house shall during the holding be kept by him in all respects reasonably fit for human habitation.

In Scotland the landlord is, in the absence of stipulation to the contrary, liable to repair the house in a reasonable manner, having regard to its age and class.

REPARATIONS. Term applied to the agreement under the treaty of Versailles by which Germany undertook to indemnify the Allies for material destruction and damage done to property in the occupied areas and elsewhere in the Great War. The payments were gold and securities and material of many kinds. The details of all the arrangements were supervised by an inter-allied commission. By 1923 the payments, both in money and kind, had seriously fallen off. Britain put forward a scheme for a total payment of £2,250,000,000, but this France refused to accept and her troops occupied the Ruhr.

The Allies then set up two committees of investigation, one under the presidency of Gen. Charles G. Dawes, and the other of Reginald McKenna. Their conclusions were accepted by the Allies in 1924, and the Dawes Plan, as it was called, came into being. It provided Germany with a loan of £40,000,000 and fixed a scale of payments. This was £50,000,000 for the first year, rising to £125,000,000 for the fifth. Owen P. Young, an American, was appointed to receive the payments. In Sept., 1928, he reported that to the end of the fourth year Germany had fulfilled her obligations under the scheme.

On Oct. 30, 1928, Germany asked for a revision of the scheme, and a committee of experts was formed. Lord Revelstoke and Sir Josiah Stamp representing Britain at its deliberations in Paris. For a while the experts disagreed, France refusing to consider lower payments, and a deadlock ensued. Finally, Owen Young, chairman of the committee, prepared a new plan, midway between those of Germany and the Allies, which was agreed to in principle between Germany's chief creditors at the Hague Conference, Aug. 1929. Under the Young Plan, which fixed the amount of the reparations at thirty-eight milliard gold marks, Britain agreed to evacuate the Rhineland in Sept. and France in June, 1930, in return for Germany's consent to the Allies' agreed demands. See Dawes, C. G.; Germany; Rhine; Ruhr.

REPORTING. In journalism, the writing of reports of public speeches or descriptions of events of public interest. Notable examples are the reporting of parliamentary proceedings, trials in the law courts, and cases in the police courts. The term is applied also to the official reporting of Parliament. Reporters of legal trials are often barristers.

Of recent years verbatim reporting has been reduced to a minimum, and confined to the recording of speeches of primary importance or of trials of a sensational character, the formal record of which is introduced by a descriptive summary. See Hansard; Shorthand.

REPOUSSÉ. Art of ornamenting thin sheets of metal by hammering out designs from the back of the sheet. Practised by the Egyptians and Etruscans, it reached its highest perfection in the 16th century, in the time of Benvenuto Cellini (q.v.). In carrying out the art a large number of small hammers of varying sizes and weights are used. When the design has been hammered out from the

back or the inner surface of the article, the raised portions are generally finished by gravers or chasers. The metals which have chiefly been used in the practice of this art are gold, silver, copper, tin, and lead. Beautiful examples of repoussé work are in the museums at S. Kensington, London. See Casque.

REPRESENTATION (Lat. *re*, again; *præ*sentare, to present) In politics, the method by which people entrust the duties of legislation and government to men and women of their choice. The representatives, as they are called, are chosen by election in which the vote of the majority is decisive, and institutions based on this principle are the foundation of democratic government. Representation in the modern sense was unknown in the civilization of the ancients. There the citizen and freemen acted, whenever necessary, in person, but if a choice had to be made, it was usually done by lot or went by seniority. Kings and priests may be said to have represented the people, but not in the modern sense of the word. See Franchise; Reform Acts.

REPRESENTATIVES, HOUSE OF. Lower house of the Congress of the U.S.A. Its membership varies in number from time to time, being settled every ten years on a population basis. In 1910, by the census, it was fixed at 435, or one for every 212,407 inhabitants. According to the census of 1920 the number should be 460, but in 1930 no alteration had been made. An election takes place every two years. Since 1920 women have been able to elect or be elected exactly as men.

The elected chamber in the Parliament of the Australian Commonwealth is also called the House of Representatives. In 1929 the number of representatives was 76. They are elected for three years unless the House is dissolved earlier.

REPRIEVE. In law, withdrawal of the sentence on a prisoner for an interval of time whereby the execution is suspended (Blackstone). This may be done by the judge when he is not satisfied with the verdict or with the legality of the conviction. A reprieve is granted as of right to a woman who is capably convicted, and who, on pleading pregnancy, is found by a jury of matrons to be quick with child. There is another form of reprieve, by the royal grace, and in every country the head of the state has the power of reprieve by way of grace.

REPRODUCTION. Biological term expressing the act or process by means of which new organisms are produced from pre-existing individuals. It also includes the whole chain of events as the result of which life is continued from one generation to another. In all the higher animals reproduction is sexual, the individuals of each species falling into two groups having very different characteristics, male and female respectively.

In some cases, in both plants and animals, the process of reproduction is entirely parthenogenetic, no males having ever been observed. In most unicellular organisms conjugation does not seem to occur, and even when it does it is apparently an exceptional case, there being always long intervals in which

the reproduction takes place asexually. Most biologists believe that the function of sex in the process of reproduction is to mingle the characteristics of both parents. See Biology: Life; Mendelism; Parthenogenesis; Sex.

REPTILE (Lat. *reptilis*, crawling) Class of Vertebrates with cold blood, which breathe air by means of lungs and are reproduced by eggs, which are sometimes retained in the body until ready to hatch. The class consists of five existing orders, but fossil reptiles constitute as many more orders. Of existing orders one

is represented solely by the iguana-like Tuatara (*Sphenodon*) of New Zealand, the second by the tortoises and turtles, the third includes the crocodiles and alligators, the fourth the lizards, and the fifth the snakes. Formerly the amphibious animals (*Batrachia*) were classed as reptiles, but the soft glandular skin, devoid of scales or plates, and the fish-like larval stage

separate them. The skull is bony, and the jaws furnished with teeth, except in the turtles and tortoises, where they approximate more to a bird's bill. See Alligator; Chameleon; Crocodile; Gecko; Iguana; Lizard; Snake, etc.

REPTON. Village of Derbyshire. It is 5 m. from Burton-upon-Trent, on the L.M.S. Rly. The church of S. Wystan has a crypt and other remains of an earlier Saxon building. Some buildings of the monastery, founded in 1172, form part of the school, and the hall is the headmaster's residence. Repton School, founded in the 16th century, developed into a leading public school, and has now over 400 boys. Pop. 1,929.

REPUBLIC (Lat. *res publica*, public affairs). Form of state opposed to a monarchy. The modern democratic republic begins with the adoption of federal republicanism by the British colonies in North America, 1776, soon followed by the centralised French republic, 1793. Latin America followed the U.S.A. with republican constitutions.

The Great War made Europe and the world predominantly republican, federal republics being established in Germany, centralised republics in Austria, Poland, Czechoslovakia, Finland, and the other Baltic states; and an entirely new type, Soviet republics, in Russia and her remaining dependencies. See Democrat; Federalism; Soviet.

REPUBLICAN. Political party in the U.S.A. The party organized by Thomas Jefferson was the first to bear this name, though it became afterwards the Democratic one. The existing Republican party dates from the anti-slavery agitation, the name being adopted in 1854.

The leading features of the Republican programme have been the strengthening of the central government as against the local spirit of the separate states; the maintenance of a gold standard; and the protection of American manufactures by a tariff system. Most of the presidents elected since the Civil War have been republicans.

REQUIEM. Name given to the Mass for the dead, the word being the first of the introit of this office—*Requiem aeternam dona eis, Domine*—Grant to them eternal rest, O Lord. The requiem mass is sung on All Souls' Day, Nov. 2. Music for sung requiems has been

Reptile. Viscera of a serpent: A. Mouth. B. Gullet. C. Trachea. D. Lung. E. Liver. F. Stomach and Intestine. G. Egg. H. Ovary. I. Cloaca. J. Vent.

written by many great composers, among them those of Palestrina, Vittoria, Mozart, Cherubini, Berlioz, Brahms, and Verdi.

REREDOS (rear; Fr *dos*, Lat. *dorsum*, back). In ecclesiastical architecture, the screen or wall at the back of an altar. Originally it was merely a hanging of silk or tapestry; in the Middle Ages it became more substantial, but was still movable; and in the middle of the 16th century the fixed reredos came into

Reredos in Winchester Cathedral, probably begun in the 15th century, and restored 1884-91

use. In England it assumed early a more definitely architectural character, and was covered with elaborate Gothic detail. The 14th century reredos in Durham cathedral, the 15th century example in the chapel of All Souls, Oxford, and the one at Winchester may be cited. See Altar. Pron. rear-doss.

RESERVATION. Act of retaining unconsumed a portion of the consecrated elements at the Eucharist for future use. In early Christian times the object of the reservation was to provide (1) for the needs of the sick; (2) for those who lived in isolated districts; (3) for those who were prevented by persecution or other lawful cause from attending the Eucharist itself.

At the Reformation, Protestantism for the most part abandoned the practice. Article XXVIII of the Church of England declares that "The Sacrament of the Lord's Supper was not by Christ's ordinance reserved, carried about, lifted up, or worshipped." In 1899 the court of the archbishops refused to sanction reservation. The subject was again raised during the discussions on the new Prayer Book in 1927-28. It was proposed to allow reservation, with safeguards against its being used for adoration, but this was disliked by a majority of the House of Commons. See Eucharist.

RESERVOIR. Construction for the storage of water. Reservoirs are of three kinds: impounding reservoirs, formed by damming the course of a stream and creating a lake, or increasing the size of one already existing; storage reservoirs, into which water is pumped, or conveyed by an aqueduct, to deposit suspended matter; and service reservoirs, for filtered water. The last are generally of comparatively small size, covered in, and situated at a sufficient height above the area served to give a good pressure.

Impounding reservoirs, used either for irrigation or town supply purposes, are designed to collect a large part of the surface water from an extensive catchment area. Lake reservoirs formed by dams are of enormous capacity. Some storage reservoirs

are formed by damming a valley or depression, but more commonly are wholly artificial. See Dam; Hydraulics.

RESIDENT. Diplomatic officer appointed to the capital of a state bound by certain obligations to the country to which he belongs. The sovereigns of such states, though nominally independent, are guided in their international action, and sometimes in domestic affairs, by the advice of the resident.

RESIN. Name given to certain vegetable and mineral substances consisting entirely of various combinations of carbon, hydrogen, and oxygen. Nearly all resins are translucent solids at normal temperatures, occasionally transparent, usually aromatic, and melt easily. Resins are divided into two broad classes, oleo-resins and gum resins. The former contain volatile aromatic oils which are driven off by distillation, and the latter gummy and mucilaginous substances which may be removed by dissolving in alcohols.

The resins of commerce are chiefly vegetable resins, e.g. common resin or rosin, obtained from various species of pine trees. Amber is a fossil coniferous resin. Resins are used in varnishing, lacquer work, in the manufacture of soap, waxes, printing inks, greases, and as antiseptics. See Amber; Balsam; Gum; Lacquer; Turpentine.

RESISTANCE. In an electric conductor, the measure of the extent to which it resists or opposes the passage of an electric current. The practical unit of resistance is the ohm. The resistance of a conductor varies according to the material of which it consists; of all practicable conductors copper offers the least resistance. In proportion as resistance increases, heat in the conductor is developed and the E.M.F. of the current is lowered. In a conductor of uniform section throughout, the total resistance increases directly in proportion to its length, but decreases in proportion as the cross-sectional area of the conductor is increased. In another sense, resistance is any object interposed in a circuit which develops or opposes resistance to the current flow. Such are coils of wire, connected in series, inserted in a circuit for the express purpose of increasing resistance. See Electricity; Ohm; Wireless Telegraphy.

Resistance. Type of wire-wound resistance (shown with holder) extensively employed in broadcast receiving apparatus

RESONANCE. (Lat. *resonare*, to sound back). Production of vibrations in a body by the action of a periodic force which has the same period of vibration as the natural period of the body. It occurs frequently in sound. If, for example, two tuning forks of the same pitch are held near each other, and one is sounded, the sound waves sent out by it will strike the second fork, and cause the latter to vibrate in unison.

Electric resonance occurs when an electrical circuit has a natural period equal or nearly equal to the period of the source of impulses or alternating electromotive force. See Sound; Wireless Telegraphy.

RESPIRATION. Process by which oxygen is conveyed to the blood, and carbon dioxide and water vapour, the waste products of the tissues, are removed. In marine animals this process is effected through the gills, in land animals through the lungs. In man the organs through which respiration is effected are the air passages, composed of the larynx, trachea,

the bronchi, and the lungs. The movements of the thorax are caused by the diaphragm and the intercostal muscles, which, by contracting, bring about an increase in the volume of the chest cavity. The lungs expand with this increase of volume, and air is drawn into them through the air passages. The respiratory muscles then relax, and the elastic recoil of the chest and lungs expels the air. The rate of respiration in a healthy adult is from 14 to 17 per minute. It is increased by exercise, febrile conditions, and certain diseases of the lungs. See Artificial Respiration; Lung.

REST HARROW (*Ononis spinosa*) or **WILD LIQUORICE.** Shrubby dwarf perennial of the order Leguminosae, a native of Europe, W. Asia, and N. Africa. It has a creeping root-stock, above or below ground whose rooting gives it so firm a hold that it was said to arrest the plough or barrow in its progress. The fruit is a small pod. In dry soils the stems become more erect and develop spines.

Rest Harrow. Leaves and flowers

RESTIGOUCHE.

River of New Brunswick, Canada. It rises in the W. of the province, flows N.E., and then turning E. forms the boundary between Quebec and New Brunswick. It is 225 m. long, and falls into Chaleur Bay. The name, an Indian one, means "the river in the shape of a hand," the river having five main branches. It is only partly navigable.

RESTORATION, THE. In English and Scottish history this term means almost always the restoration of Charles II in 1660. In France it refers to the restoration of the Bourbons in 1814. The so-called Restoration period in England embraces the years after 1660. The poets and wits who led the movement in literature are the poets and wits of the Restoration, and a group of playwrights, Congreve and Wycherley among them, are known as the Restoration dramatists.

RESTRAINT (Lat. *restringere*, to draw back). Literally, the act of hindering or limiting. Restraint of marriage is a restriction attached to a bequest forbidding a devisee to marry. The law of England looks on marriage with favour—no doubt as much for political as for moral reasons. Therefore gifts given upon conditions restraining marriage will generally be held to be given as if such conditions had not been made.

By the law of England an agreement in undue restraint of trade is bad, as being against public policy. By such an agreement is meant one whereby a person binds himself not to exercise his trade, profession, or calling in such a way as to fetter himself unduly. The reason why such an agreement is void is because it is to the public interest that all men should be free to work and carry on business.

RESURRECTION (Lat. *resurgere*, to rise again). Term specially used of rising from the dead. The conception is first found in the O.T. in the two records of restoration of life by a prophet (1 Kings 17, 20-24; 2 Kings 4, 32-37). It is applied figuratively to the nation's restoration from Divine judgement to Divine favour (Hosea 6, 1-3). To the hope of national restoration there attached itself the hope of individual restoration from death to life. This belief was afterwards extended to include the bad as well as the righteous

(Daniel 12, 2); the one class to be consigned to eternal torture, the other to be blessed with eternal life. In the Christian doctrine no material identity is affirmed between the body laid in the grave and the body raised. What is unequivocally asserted is that the personality of which the identity is maintained will not be disembodied, but possess an organ of activity and communication described as spiritual because adapted to spiritual uses.

The Christian doctrine of the resurrection of the dead is based on the belief that Jesus Christ rose from the dead on the third day.

Resurrection Men was the term used for the men who made a practice of disinterring lately dead bodies in order to sell them for dissecting purposes. See Bodysnatching.

RESZKE, JEAN DE (1850-1925). Polish singer. Born at Warsaw, Jan. 14, 1850, he studied singing in Italy. He appeared as a baritone in opera in Venice, 1874, London, 1875, and Paris, 1876. Turning tenor, he made a sensation by his performance in Madrid, 1879, and in Paris, 1883, in *Hérodiade*, and *Le Cid* of Massenet, and from 1888-1900 performed regularly at Covent Garden. His Wagnerian performances were specially memorable. He died April 3, 1925.

His brother Édouard (1855-1917) was born in Warsaw, Dec. 23, 1855, studied singing at Milan and Naples, and became a leading bass at the Théâtre Italien, Paris, 1876, later joining the Opéra there. With his brother he appeared regularly at Covent Garden from 1888-1900. He died May 29, 1917.

RETAINER. Fee of a nominal amount paid to a barrister in order to retain his services either generally, or for a particular case. A barrister so retained has a right to be briefed at a fee proportioned to his rank and standing at the bar.

RETFORD. East. Borough and market town of Nottinghamshire. It stands on the river Idle, 18 m. from Newark on the L.N.E. Rly. A large agricultural trade is carried on. The chief buildings are S. Swithin's church, the town hall, and the corn exchange. There is a grammar school, founded in 1552. Market day, Sat. Pop. 13,412.

RETINA. Membrane composed of ten layers of tissue. It forms the innermost covering of the interior of the eyeball, extending forwards to within a short distance of the margin of the pupil, and consists of an expansion of the optic nerve. The retina is the structure upon which fall images formed by rays of light passing through the lens. See Eye.

RETORT. Generally an apparatus in which a mixture or compound is broken up by the aid of heat or chemical action. One or more of the constituents of the contents of the retort is volatilised and expelled from the apparatus into another appliance where it may be condensed or absorbed and so collected. There are three broad classes: first, the well-known appliance of the chemical laboratory, made usually of glass, but sometimes of earthenware, clay, or metal; secondly, the fireclay or iron chamber of the ordinary gas works, in which coal is destructively distilled; and thirdly the vessels used by the metallurgist for the extraction of certain metals from their ores and for the separation of the metals of amalgams.

RETRIEVER. Sporting dog of the spaniel group, produced by a cross between the lesser black Newfoundland and the water spaniel. It is employed for retrieving game on land as the water spaniel does in water.

Three types of the retriever are recognized by sportsmen. The Labrador is, as a rule, merely a small black breed of Newfoundland; the flat or wavy-coated is the result of a cross between the Labrador and setter and collie; and the curly-coated is a cross with a considerable strain of poodle in him, and is equally good in water or on land. A retriever should have what is known as a tender mouth, and should hold the game without mangling it. See illus. below.

RETURNING OFFICER. Official who conducts an election. In parliamentary elections the duties are performed by the sheriff in counties, and in boroughs by the mayor. At parliamentary elections the returning officer receives nominations for the vacant seat, and also the cautionary deposit of £150 from each candidate. It is also his duty to see that the election is held in the manner prescribed by law. He announces the result and reports it in proper form to the Speaker. See Election.

REUNION. Name applied to the union of the various Christian churches. The movement for reunion took shape and strength during the 19th century, and in the 20th several unions took place. In England three of the Methodist bodies, in 1907, united to form the United Methodist Church, and the Free Church and the United

Presbyterian Church united in Scotland in 1920 to form the United Free Church of Scotland. In 1929 this latter body was united with the Church of Scotland. In England proposals for a reunion of all the Methodist churches were approved by the bodies concerned in 1928. In the U.S.A. and Canada reunion has made great advances.

REUNION, ÎLE DE LA. Island of the Indian Ocean, belonging to France. It lies about 420 m. E. of Madagascar, and has an area of 970 sq. m. The capital is St. Denis. The island was taken over by a French explorer in 1638, and was known as Bourbon from 1649. Pop. 186,637, of whom 180,694 are French.

REUSS. District of Germany, part of Thuringia. In the Middle Ages it came under the rule of a line of counts who were vassals of the emperor. One of them was known as der Russe, or the Russian, and this became the name of his county, which, in 1564, was divided into three parts. The branch ruling one died out, but the other states remained, their rulers being known as the princes of Reuss-Greiz and Reuss-Schleiz-Gera. In 1871 both states joined the German Empire. In April, 1919, the two, being then republics, were united into one, and in Dec., 1919, they became part of the republic of Thuringia (q.v.).

REUTER, LUDWIG VON (b 1869). German sailor. He was appointed commander-in-chief of the German naval force which, under the terms of the Armistice, had to be surrendered to the Allies. On Nov. 21, 1918, flying his flag in the battleship Friedrich der Grosse, he delivered up the German

fleet to Admiral Beatty, and later accompanied it to Scapa Flow. On June 21, 1919, Von Reuter ordered it to be scuttled. He returned to Germany in Jan. 1920, and in 1921 wrote *Scapa Flow*, 4th ed., 1928.

REUTER, PAUL JULIUS, BARON DE (1816-99). Founder of Reuters news agency. Born July 21, 1816, he became a bank clerk, and the organization that bears his name began in 1849 with a pigeon post instituted by him for the dispatch of commercial news between Brussels and Aix-la-Chapelle. Soon after the first cable was laid between Dover and Calais, Reuter became a naturalised British subject, set up his headquarters in London, 1851, and converted the business into a limited liability company in 1865. He was made a baron by the duke of Saxe-Coburg in 1872, and died at Nice, Feb. 25, 1899, being succeeded by his son Julius Clement Herbert (1852-1915). The offices are on the Thames Embankment, E.C.4.

REVAL.

Capital and chief port of Estonia. Its Estonian name is Tallinn. Standing on the bay of Reval, at the mouth of the gulf of Finland, it presents a fine appearance from the sea, but its principal streets are narrow, steep, and badly paved, and its numerous medieval houses, though picturesque, are ill

Reval. Towers of the ancient city gates

sued to modern requirements. It has an excellent harbour, and is connected with Russia by the Reval-Narva Leningrad rly., and by other lines with Port Baltic, Haapsalu, Pärnu (Pernau), Pskov, and the Latvian system. Among its industries are ship-building, distilling, and the manufacture of cotton, pulp, and paper, furniture, and other wood products. Pop. 132,000. See Estonia.

REVEL. Term for a noisy, riotous feast or merry-making. It was applied to the English and Scottish foolery carried on under a lord of misrule or abbot of unreason (q.v.). At an early date entertainments at court were known as revels, and the official whose duty it was to arrange and control these entertainments was known as the master of the revels.

REVELATION (Lit an unveiling). Name used to describe the self-manifestation of God to man or the disclosure by God of Divine truth to man. In every form of religion there are two sides: (1) the quest of man for God; (2) the impartation by God of truth to man. The second aspect is known as Revelation. The belief in Revelation assumes the possibility that God can communicate knowledge of Himself to man. This communication is made in many forms. It may come through nature. See Bible: Inspiration.

REVELATION, BOOK OF. Book of the N.T. The title is derived from the Greek word Apokalypsis (unveiling, or revelation), and hence the book is often called The

Reszke. Left, E. de Reszke as Mephistopheles; right, J. de Reszke as Lohengrin

Retriever, flat-coated type. See below

Ludwig von Reuter, German sailor

Apocalypse. It belongs to a special type of literature known as Apocalyptic, and stands in the same class as the Book of Daniel and the many Jewish Apocalypses which appeared in the intermediate period between the O.T. and N.T. Tradition ascribes the authorship of the book to John the Apostle, but this has been questioned by modern scholars.

REVERSION (Lat. *revertere*, to turn back). Term used in English law. It denotes the estate which remains in a grantor after the determination of a particular estate granted by him. Thus A, the owner in fee simple of a house, grants a lease to B for 99 years. A is said to have the reversion expectant on the determination of the lease.

BIOLOGICAL REVERSION Reversion to type is a biological phenomenon to express the reproduction of an ancestral characteristic. It may happen in two ways. The individual may revert towards an ancestor through the loss of some power of development in the germ-cell from which he sprang. Secondly he may reproduce an ancestral characteristic which has been missing in recent generations. Reversions to type occur occasionally when domestic varieties of animals are crossed experimentally, but they also arise in pure-bred individuals. See Atavism; Biology; Heredity.

REVOLVER. Pistol with a revolving cylinder comprising a group of cartridge chambers, capable of firing a number of shots without reloading. The principle of revolving barrels is of considerable antiquity, and a few specimens of flint-lock revolvers are known. The "pepper-box," one of the earliest percussion cap revolvers, had four or six barrels, generally all bored in the same block of metal, which rotated round a central axis as the hammer was worked. The development of the revolver is chiefly due to the efforts of Colonel Colt. By 1835 he had produced a very efficient weapon having one barrel and a revolving cylinder with six chambers. The latter were muzzle-loading, and the hammer had to be cocked by hand for each shot to be fired.

Breech-loading revolvers began to appear about 1850. Up to 1890 most revolvers were of the solid frame type, the empty cartridge cases being ejected one at a time through a slot in the end plate by means of a sliding pin. The self-ejecting type of weapon was invented by Smith and Wesson. Double-action revolvers, i.e. those in which a long pull on the trigger cocks the hammer and then lets it fall to fire the shot, also became general about the same time. See Pistol; Rifle.

REYKJAVIK. Town and seaport of Iceland, capital of the island. It stands on the Kollafjord, an opening on the S.W. coast.

Notable buildings include the cathedral, observatory, library, and museum. In the largest square in the town is a statue of Thorvaldson. There is steamer connexion with Copenhagen, and fish, butter, and skins are exported. Pop. 25,217. See Iceland.

REYNOLDS, SIR JOSHUA (1723-92). British painter. He was born July 16, 1723, at Plympton, Devonshire, his father, Samuel Reynolds, being master of the grammar school there. He studied art in London and then returned to Devonshire, where he painted a number of portraits. In 1744 he was again in London, and five years afterwards went out in the Centurion to the Mediterranean, and spent some time in Italy. In 1760 he settled in Leicester Square, London, where he remained for the rest of his days. Reynolds was a popular man in society. His intimate friend was Dr. Johnson. Others were Burke, Garrick, and Goldsmith, and it was Reynolds who, in 1764, suggested the formation of the Literary Club. When the Royal Academy

Sir Joshua Reynolds, British painter
Self-portrait

was founded in 1768 Reynolds became its first president, and received the honour of knighthood, and for the next 20 years exhibited in its gallery some of his most notable pictures. In 1791 he became blind, and on February 23, 1792, he died. He was buried in St. Paul's cathedral.

Reynolds was the great English master of portraiture. An unassuming draughtsman, a wonderful colourist gifted with a profound sense of decoration and a graceful humour, his portraits represent the finest of English art in its grandest form. Fine examples of his pictures are in the National Gallery, Wallace Collection, National Portrait Gallery, and Royal Academy, in private collections, and

also in many of the great private galleries of the U.S.A. See illus. pp. 7, 74, 93, 201, 218, 285, 325, 476, 613, 618, 653, 664, 673, 740, 752, 799, 815, etc.

RHADAMANTHUS. In Greek mythology, the son of Zeus and Europa, and brother of Minos, king of Crete. On account of the uprightness of his life he was made one of the judges of the dead in Hades, the others being Minos and Aeacus.

RHAETIA. Province of the Roman empire. It lay S. of the Danube and corresponded roughly to the greater part of Tirol with the adjoining Grisons. The Rhaetian Alps extend into Italy, Switzerland, and Austria, and include the Bernina, Albula, and part of the Ortler Alps. The loftiest peak is the Piz Bernina, 13,304 ft., and the chief pass the Splügen, nearly 7,000 ft. in alt. See Alps.

In geology, rhaetic beds is the name given to those rocks found at the top of the Triassic and at the base of the Jurassic. The rocks were so called from their occurrence in the Rhaetian Alps. They consist of shales, limestone, marls, and sandstones and contain

many fossils, including those of some of the earliest known mammals.

RHATANY (*Krameria triandra*). Shrub of the order Polygalaceae, a native of Peru. It has alternate, oval, leathery leaves, covered with silvery hairs. The flowers are bright scarlet and irregular in form. The dried root with its red-brown bark is well known in medicine, affording a form of tannic acid used as a tonic and as an astringent.

RHAYADER. Market town of Radnorshire, Wales. It stands on the Wye, with a station on the G.W. Rly., 14 m. from Llanidloes. The town grew up around a castle built about 1180 by the English to defend the district against the Welsh. Near are the valleys of the Elan and Claeerwen, wherein are the reservoirs that supply Birmingham with water. Market day, Wed. Pop. 910.

RHEA. In Greek mythology, daughter of Uranus, Heaven, and Ge, the Earth. She was the wife of Cronos (q.v.), by whom she was the mother of Zeus, Demeter, Hera, Poseidon, and Pluto. Rhea, originally a Cretan divinity, became early identified with the Phrygian goddess of nature and fertility, Cybele. In art, Rhea is represented as wearing a mural crown, and with lions either sitting by her throne or drawing her chariot.

RHEA OR AMERICAN OSTRICH. Genus of running birds. They occur only in S. America and resemble small ostriches, except that the head and neck are feathered, the feet have three toes instead of two, and the tail is rudimentary. Three species are usually recognized, the common rhea, Darwin's rhea, and the long-billed rhea. Their feathers are used for making brooms.

Rheims. Anglicised name of the historic French city Reims (q.v.).

RHENUM. Chemical element, a homologue of manganese. Its symbol is Re, and its atomic number 75. It was found in the mineral columbite by the German chemists Noddack and Tacke in 1925. Associated with rhenum was another manganese homologue, with the atomic number 43, and this was named manganium by the discoverers.

RHEOSTAT. In electricity, an adjustable resistance to control the flow of electric energy through a circuit. A common form of rheostat

used for starting motors and controlling the strength of a magnetic field is as follows. An arm, moved by an insulated handle, is mounted at one end on a spindle in connexion with the circuit. The other end describes a circular path, and sweeps a number of brass studs set closely together. Each stud has connexion with its neighbour through a wire coil or bar of metal of high resistance, and that at one end of the series is joined up to the circuit. In the zero position the arm is off the studs; when it touches the first stud the current is admitted through all the resistances in series, and as it passes from stud to stud the resistances are cut out in succession until the last stud is reached and all obstruction

Rhea, South American bird allied to the ostrich
Gambler Bolton, F.Z.S.

Reykjavik. Parliament buildings and the cathedral

removed. A simpler form of rheostat is used in broadcast receiving sets. See Electricity.

RHESUS OR BENGAL MONKEY (*Macacus rhesus*). Small long-tailed monkey of the family Cynopithecidae, common throughout N. India. It is usually nearly 2 ft. long in body, with a tail varying from 6 to 8 ins. Its fur is brown, with a greyish or greenish tinge, and the bare parts of the face are red in old specimens. It is regarded as a semi-sacred animal by many of the Hindus, and

Rhesus or Bengal monkey, an animal common in N. India
W. S. Berridge, F.Z.S.

may be found in considerable numbers in the precincts of certain temples. It feeds mainly on fruit and seeds, but will also eat insects. In captivity it displays great intelligence, while its hardy constitution recommends it to the street organ-grinder.

RHEUMATIC FEVER. Acute disease due to an infective agent which has not yet been isolated. The temperature rises to 102° F. or more; then in a few days one or more of the joints become swollen, hot, painful, and reddened. The knee and ankle are the joints most frequently affected, but any joint may be involved. Involvement of the heart is a frequent and serious complication.

The essential feature in the treatment is to keep the patient absolutely at rest, so as to diminish the strain on the heart. The diet should be light. The affected joints should be wrapped in cotton-wool, and padded splints often give relief. As internal medicines, salicin or salicylates and potassium acetate and citrate are largely used.

RHEUMATISM (Gr. *rheumatismos*, flux or rheum). Term popularly used for painful affections of the muscles or joints. It embraces, from the physician's point of view, several distinct conditions, among them arthritis. Acute rheumatism is equivalent to rheumatic fever. See Arthritis; Fibrositis, etc.

RHEUMATOID ARTHRITIS OR **ARTHRITIS DEFORMANS.** Disease of the joints, the exact cause of which is unknown, but is probably infective. In the acute form the symptoms resemble those of rheumatic fever, the joints becoming swollen and painful. The chronic form is more common, the first symptoms being pain and swelling in a joint. Gradually other joints become involved. As the disease progresses, the tissues of the joints undergo various changes, with the formation of bony outgrowths.

Treatment consists in maintaining the general health and giving a nourishing diet. Salicylates or potassium iodide may be prescribed. Counter-irritation of the joints by the application of blisters is often serviceable.

RHINE. European river. It rises in Switzerland, flows between France and Germany, then through Germany and Holland to the North Sea, after a course of over 800 m. The head-streams rise near the sources of the Rhône and Reuss, and the combined stream passes between Switzerland and Liechtenstein N. to Lake Constance. Below the lake it flows W. and plunges over the falls near Schaffhausen and at Zurzach, and receives the Aar before it reaches Basel. It flows between Alsace and Baden, and receives the Ill, Neckar, Main, and Moselle, and passes Strasbourg, Mannheim, Mainz, and Coblenz.

Below Bonn the river enters the great European plain, and bears gradually W. to the sea; Cologne and Düsseldorf are the chief German cities, and Rotterdam is the great Dutch port on the delta. The Ruhr and Lippe are the chief lower tributaries. The distributaries of the delta leave the main stream almost as soon as Holland is reached; these are the Waal, Yssel, Lek, Crooked or Old Rhine, and Vecht. Canals connect the Rhine navigation with the Danube, Meuse, Seine, Saône, and Rhône, and other canalisation schemes are projected. See Bingen; Bonn; Germany; Lorelei; Rhône; Versailles, Treaty of.

RHINELAND, RHINE PROVINCE OR RHENISH PRUSSIA. Province of Prussia. It is the most westerly and the most densely peopled province of the republic. The Ruhr coalfield is the basis of the great industries of the Düsseldorf dist.; the Saar coalfield is in the S.W. (See Saar.) Coblenz is the capital. Its area is 9,478 sq. m.

The idea of an independent Rhineland republic, begun after the Great War, resulted in its proclamation on Oct. 21, 1923, at Aix-la-Chapelle, but the movement did not come to anything. After the Great War the Rhineland was occupied by the Allies. The last British troops withdrew in Dec., 1929, and the last French troops in June, 1930. Pop. 7,256,978 See Germany; Reparations.

RHINITIS (from Gr. *rhis*, nose). Inflammation of the mucous membrane of the nose. Acute catarrhal rhinitis may be the familiar cold in the head, or may be caused by irritating gases, dust, or pollen of plants, catarrh due to the last being spoken of as hay fever. In the hypertrophic form of chronic rhinitis there is thickening of the tissues covering the bones of the inside of the nose.

Rhinoceros. Indian species, distinguished by its thick folds of skin, resembling plates of armour
Gambier Bolton, F.Z.S.

RHINOCEROS. Genus of large ungulate mammals, confined to Central and S. Africa and S. Asia. Five species are usually recognized, of which three occur in Asia.

The Indian rhinoceros has one horn, and is distinguished by the thick tuberculed skin, which is folded in places. It stands a little over five feet high at the shoulder, and is of heavy and clumsy appearance. It is found in swampy spots in the jungle, and is usually timid and inoffensive. The Javan and Sumatran rhinoceroses are smaller in size, and the skin is smooth and inclined to be hairy. The latter species has two horns, usually short. The black rhinoceros, a native of Africa, ranges from Abyssinia to Cape Colony. It has two horns, and the skin is smooth and almost hairless. The upper lip is prolonged and pointed, and somewhat prehensile. The white rhinoceros, the largest of all, sometimes attains a height of over six feet at the shoulder. It lacks the pointed upper lip of the black species, and has a tuft of hair at the tip of each ear. It is found in the S. Sudan, the Congo, and S. of the Zambesi.

RHINOPLASTY. Term applied to plastic surgery as far as it affects the nose. When the organ is deformed as a result of disease or

injury it is often possible to improve its appearance in great measure and in some cases to restore it completely. The operation may only incur skin grafting, but if the bones are flattened a piece of gristle may be transplanted from the ribs, or a piece of bone from the shin or haunch bone, in order to provide a firm basis for the skin.

RHODE ISLAND. State of the U.S.A., one of the original thirteen. Its area is 1,300 sq. m., of which 246 sq. m. are water. The surface is fairly level in the S., with plains and swamps along the coast, but hilly in the N. and E. Narragansett Bay extends inland for 30 m. and contains several islands, from one of which the state derives its name. A little farming is carried on, but the chief industrial interests are manufactures. Providence is the capital; other large towns are Pawtucket and Woonsocket. Pop. 716,000.

RHODE ISLAND RED.

American breed of fowl. There are two varieties, the rose-comb, and single-comb. The colour is a deep red, with black tail and black markings on the wing primaries. A good winter layer, with large brown eggs, it makes a good table bird also.

Rhode Island Red. Cockerel of this American breed

RHODES (Gr. *Rhodos*). Island in the Aegean Sea, sometimes included in the Dodecanese. It lies 12 m. from the coast of Asia Minor, and is 550 sq. m. in area.

The island was probably called Rhodos from its cultivation of roses (Gr. *rhodon*). Its three chief towns, together with Chnidos and Halicarnassus in Asia, and the island of Cos, formed the Doric hexapolis, or league of six cities. The island first acquired political importance when the three towns in 408 B.C. built a new city called Rhodos, which became the capital of the island. Rhodos lost its independence in the time of Alexander the Great, but regained it after his death, and soon became a thriving commercial centre. Its code of maritime laws was later adopted by the Romans and through them by modern European states.

For their support of Rome during her wars against the Seleucid emperors of the East, the Rhodians were rewarded with mercantile privileges and an increase of territory. Later included in the Byzantine empire, Rhodos was the headquarters of the Knights Hospitallers, 1309-1523, when it was captured by the Turks. The island was occupied by Italy during the Italo-Turkish War of 1912. By the treaty of Sévres, after the Great War, Italy received Rhodos and neighbouring Dodecanese islands. Pop. 45,000.

RHODIAN WARE. Class of glazed pottery, also known as Turkish ware, formerly made in Rhodos. The ground is generally pure white, with bold designs in blues, greens, etc., outlined with a dark pigment. The glaze is unusually thick.

RHODES. Capital of the island of Rhodos. Situated in the N.E. corner of the island, it is a port of call for Levant steamers. Among the remains of the Knights Hospitallers are the castle; the Street of the Knights, which contains remains of the houses of assembly of the Knights Hospitallers; and the Grand Hospital of the Knights, restored by the Italian government and converted into a museum in 1914. Pop. 25,000.

RHODES, CECIL JOHN (1853-1902) British statesman. A son of the vicar of Bishop's Stortford. He was born July 5, 1853. Educated at the local grammar school, he went out to Natal as a youth, but returned to spend some time at Oriel College, Oxford. Soon he was again in S. Africa, where he became interested in the diamond industry, then in its infamy. In this he became one of the leading figures and from it he derived much of his vast wealth.

The creation of the De Beers Co. was the work of him and his associates.

The political career of Rhodes began in 1881, when he was elected a member of the legislature of the Cape Province. He started at once to work for the extension of British power, and he continued this after he became premier in 1890. In 1889 he secured a charter for the British S. Africa Co., and later the great area under the company was named Rhodesia. He was responsible for bringing Bechuanaland under British authority, and another of his successes was the acquisition of Mashonaland. In 1896, as a result of the Jameson raid into the Transvaal, Rhodes resigned office, and also his position as managing director of the British S. Africa Co. In 1899, when war broke out with the Boers, he helped to defend Kimberley, and he was still in S. Africa when he died March 21, 1902. He was buried on the Matopos Hills. Much of his wealth was left to the university of Oxford.

RHODES TRUST. Trust established under the will of Cecil Rhodes for the purpose of granting scholarships at the university of Oxford to students from the British Oversea Dominions, the U.S.A., and Germany.

The normal yearly value of the Rhodes scholarships is £300, but in 1921 a bonus of £50 was added. Later the amount was fixed at £400. Under the will, 60 scholarships were endowed for the British Empire, two for each state of the U.S.A., and five to be nominated by the German Emperor from Germany. The last named were withdrawn by Act of Parliament during the Great War but were afterwards restored. The number of scholars at one time is about 200. The London office of the trustees is at Seymour House, Waterloo Place, S.W. Rhodes House, Oxford, erected as a centre for the scholars, was opened in 1929.

RHODES, WILFRED (b. 1877). English cricketer. Born at Kirkheaton, Yorkshire, Oct. 29, 1877, he first played for his county in 1899, securing his place as a left-handed slow bowler. For thirty years he kept his place in the Yorkshire eleven, and he played many times for England. In 1926 his bowling was the decisive factor in winning for England the final Test Match at the Oval.

RHODESIA. Territory of British South Africa, named after C. J. Rhodes, and until 1923 administered by the British South Africa Co. It consists of Southern Rhodesia, a self-governing dominion, and Northern Rhodesia, a crown colony.

SOUTHERN RHODESIA. This extends from the Transvaal province northward to the Zambezi river, and has an area of 148,575 sq. m. The pop. is 39,174 (whites) and 900,000 (natives). It is rich in gold reefs and other minerals and possesses great agricultural resources. Maize is the largest crop, and tobacco, citrus fruits and various native cereals are grown. S. Rhodesia, which was granted responsible government in 1923, is administered by a governor and an elected legislative council. The seat of government is at Salisbury. Bulawayo is another important centre.

NORTHERN RHODESIA. This extends from the Zambezi river to the border of the Congo Free State and Tanganyika. It has an area of 291,000 sq. m., and a pop. (European) of 4,624 and 1,150,000 (natives). The country is chiefly a high plateau, much of it suitable for farming and grazing. Lead and copper are mined. N. Rhodesia is under a governor and a nominated legislative council. The most important centres are Livingstone (the seat of the government), Broken Hill, Fort Jameson, Abercorn and Kasama.

The outstanding interest of prehistoric

Rhodesia lies in its mine-workings, as well as in upwards of 500 ruined stone structures between the Zambezi and Limpopo rivers. Discoveries made by an Italian scientific expedition in 1930 seem to prove that the S. Africa of ancient times was in the relatively undisturbed possession of cave-dwelling Bushmen.

RHODIUM (from Gr. rhodon, rose). A rare metallic element. It is hard, ductile, malleable at red heat, white with a bluish tinge resembling aluminium. Its chemical symbol is Rh; atomic weight 102.91; atomic number, 45; melting point, 2000° C.; specific gravity, 12.1. Discovered in 1804 by William Hyde Wollaston, in platinum sands from the Ural Mts., it is one of the platinum group of metals and is always found in native platinum and generally with that metal in the Urals and S. America.

RHODODENDRON. Genus of evergreen shrubs and trees of the order Ericaceae. They are natives of the East Indies, China, Japan, India, the mts. of Europe, and N. America, and have been introduced into Britain at various dates since 1656, when *R. hirsutum*, the hairy alpenrose, came from Switzerland. The flowers are of all shades and colours, except blue. There are over 200 species.

RHODONITE. A manganese silicate belonging to the pyroxene group of minerals, in which part of the manganese has been replaced by iron, calcium, or zinc. The mineral has a glassy appearance, is some shade of red in colour usually, and is found in Scandinavia, Germany, Russia, N. America, etc. Some varieties are cut and polished for gem stones.

RHODOPE MOUNTAINS. Outlying chain of the Balkan Peninsula (q.v.), in Mace-

donia and partly in Thrace. It extends S.E. from the Sofia district towards Adrianople and the Aegean Sea. The loftiest peak is Muss-Alla Dagb, alt. 9,613 ft. S.E. of this rises the range Dospad Dagb (Bulg. Despotog Dagb), a name sometimes applied to the parent chain.

RHONDDA or *YSTRADYFODWG*. Urban dist. of Glamorganshire, Wales. It stands in the valley of the Rhondda, 7 m. from Pontypridd on the G.W.R. A great coal-mining centre, Rhondda sends two members to Parliament. Pop. 162,500.

The river Rhondda flows 15 m. S.E. to the Taff at Pontypridd.

RHONDDA, DAVID ALFRED THOMAS, VISCOUNT (1856-1918). British merchant and politician. Born at Aberdare, March 26, 1856, his father, Samuel Thomas, was a successful grocer who became interested in collieries. David, who was educated at Clifton and at Caius College, Cambridge, became head of the Cambrian Colliery and other colliery companies in S. Wales. He was Liberal M.P. for Merthyr, 1888-1910, and for Cardiff, 1910; president of the local government board, 1916-17; and food controller in 1917. In 1916 he was created a baron. He died July 3, 1918, just after he had been promoted viscount.

Lord Rhondda's title passed to his daughter, Margaret Haig (b. 1883), who succeeded to many of his positions, and became known as an advocate of women's rights.

RHÔNE. River of Switzerland and France. It rises in a glacier in the Bernese and Pennine Alps, and flows into the Lake of Geneva. Emerging at Geneva it flows to Lyons, where it is joined by the Saône, and at Arles breaks into two main branches, the Petit Rhône and the Grand Rhône, and several lesser streams. The Rhône is connected by canal with the

Rhine, Loire, Yonne, Seine, and with Marcellines. Between the Swiss frontier and the sea power stations are being built to supply electric current. The river is 504 m. long. The Rhône dept. of France lies contiguous with the depts. of Saône-et-Loire, Loire, Isère, and Ain, and is chiefly industrial. Its area is 1,104 sq. m. Pop. 993,900.

RHUBARB. Edible-stalked herbaceous plant of the order Polygonaceae, genus *Rheum*, a native of Siberia. The stalks are stewed and eaten as a sweet and used in jam making; the roots possess medicinal properties. Preparations of rhubarb are employed for disorders of the stomach and of digestion in children. From one variety, champagne rhubarb, an effervescent beverage is made. The leaves are poisonous to animals and dangerous to human beings.

Rhododendron. Flower cluster of the hardy shrub

Rhubarb. Leaves and flowers of the common edible species

Rhodesia. Map of the British possession in S. Africa

RHUDDLAN OR **RHYDDLAN**. Town of Flintshire. It stands on the Clwyd, 8 m. from Denbigh, on the L.M.S. Rly., and is famous for its 12th century castle, now in ruins. On Rhuddian Marsh, it is said, Offa of Mercia defeated the Welsh in 795. Pop. 1,701.

RHYL. Urban dist. and watering place of Flintshire. Wales. It stands at the mouth of the Clwyd, 30 m. from Chester, on the L.M.S. Rly. There are good sands, a pier, and winter gardens. Pop. 13,396.

RHYME OR **RHME** (Anglo-Saxon, rim; Gr. rhythmos, rhythm). In poetry, the repetition, at the end of one or more lines, of the sound or combination of sounds at the end of another line. In English verse the last stressed vowel and all the following sounds of each rhyming line are identical, the preceding consonants being different, whereas in French verse the latter may be identical (rich rhyme), provided that the words are not the same. Intimately associated with accentual metre, rhyme was avoided in Greek and Latin poetry.

RHYMNEY OR **RUMNEY**. River of England and Wales. Forming the boundary between Monmouthshire and Glamorganshire, it enters the Bristol Channel 2 m. E. of Cardiff.

Rhymney is also the name of an urban dist. of Monmouthshire. It stands on the Rhymney, 2 m. from Tredegar, on the G.W.R. There are coal mines and steel works. Pop. 11,691.

RHYOLITE (Gr. rhein, to flow; lithos, stone). In geology, name given to an acid lava of porphyritic texture and siliceous composition. The rock may be glassy, like pumice stone, scoriaceous or vesicular, and is found in many volcanic regions.

RHYTHM. In its general connotation rhythm is one of the three essential elements of music, the others being harmony and melody, and it is the distinguishing characteristic of dancing. Resulting from the intimate association of poetry with music, all verse having originally been composed for intoning to the harp or singing to the pipe or lyre, rhythm draws the capital distinction between poetry and prose, which is the vehicle of thought intended to be spoken. Verse, whether rhymed or unrhymed, is written in metre and strict rhythm, on its technical side thus becoming a subject for the grammarian, of whose science the laws of versification form part under the name of prosody.

RIB. In the human being, one of a series of paired, curved bones. They are twelve in number on either side of the body, and in either sex. Posteriorly, the ribs articulate with the spinal column. Their anterior ends terminate in the costal cartilages. The first seven pairs articulate with the sternum or breast-bone. The cartilages of the next three are attached to the cartilage of the rib above each. The extremities of the last two ribs are free, and these are termed "floating ribs." See Anatomy.

RIBBLE. River of England. It rises on the E. of Wharfedale and flows through Yorkshire and Lancashire to the Irish Sea. Its length is 75 m.

RIBBLESDALE, **BARON**. British title borne by the family of Lister, 1797-1925. The first baron was Thomas Lister, M.P., a Lancashire manufacturer, and in 1876 his descendant, Thomas (1854-1925), became the fourth baron. He was a lord in waiting to

Queen Victoria, a captain in the Rifle Brigade, a connoisseur and master of the royal buckhounds 1892-95. He died Oct. 21, 1925.

RIBBON (Fr. ruhan, from Old French riban, ruband). A narrow woven strip in a textile fabric, usually silk or satin; also part of the insignia of a knightly order. Power looms are used in making nearly all fabric ribbons, though a certain amount of artistic work is executed on hand looms. The chief centre of the ribbon industry in Great Britain is Coventry.

The word ribbon is used in a military sense for the specially coloured ribbons from which medals are suspended. To avoid the inconvenience of wearing the medals constantly, a piece of its proper ribbon, $\frac{3}{4}$ in. deep, is worn on the left breast, and where more than one ribbon is used, they are placed side by side, in order of precedence from the right of the wearer. See Medal.

RIBBON FISH. Popular name given to various deep-sea fishes which have the body elongated and laterally compressed so as to resemble a ribbon. Some attain a length of 20 ft., with a depth of a foot, and a thickness of little more than an inch. See Oar Fish.

RIBBON GRASS (*Phalaris arundinacea*). Stout, tall grass of the order Gramineae. A native of the N. temperate regions, the cultivated variety variegata has broad, flat, striped leaves. The wild form grows on river banks and the margins of lakes, and is known as reed-grass.

RIBCHESTER. Village of Lancashire. It stands on the Ribbles, 5 m. from Blackburn. It is notable as the site of a Roman station Bremetennacum.

RICARDO, **DAVID** (1772-1823). British political economist. Born in London of Jewish descent. April 19, 1772, he made a large fortune on the stock exchange, and took a keen interest in economic and scientific questions. His *Principles of Political Economy and Taxation*, 1817, is noted for its exposition of the theory of economic rent. In politics a Radical, he died Sept. 11, 1823. See Rent.

RICCI, **MATTEO** (1552-1610). Jesuit missionary. Born at Macerata on Oct. 6, 1552, he entered the Society of Jesus in 1571 and was a missionary in China from 1583 till his death at Peking, May 11, 1610. He published a valuable book of memoirs and information relative to Chinese history.

RICE (*Oryza sativa*). Grass of the order Gramineae, native of Asia and Australia. It is extensively cultivated wherever there are marshy lands and a temperature between 60° and 80° Fah. Fifty or more varieties are known. Each grain stands on a separate footstalk.

Besides furnishing a staple food in China, India, and Japan, rice is used in the manufacture of starch, vinegar, and other commodities. In Japan it yields an alcoholic drink called saké. It is used in Great Britain by distillers, and in the East arrack is made from it. The bulk of the rice crop is consumed in the countries where it is produced. In Burma, the husk is used as fuel in specially designed furnaces, or is converted into producer gas.

RICE, **JAMES** (1843-82). British novelist. Born at Northampton, Sept. 26, 1843, and educated at Queens' College, Cambridge, he became a barrister, 1871, and took up journalism. His fame rests on his collaboration in the writing of novels with Walter (afterwards Sir Walter) Besant, a partnership which began

with Ready Money Mortiboy in 1872, and included *The Golden Butterfly*, 1876, the most successful of all. He died April 26, 1882.

Rice Bird. Popular name for the bobolink (q.v.). The name is also applied to the Java sparrow, common in aviaries.

RICE FLOWER (*Pimelea*). Genus of trees and shrubs of the order Thymelaeaceae, natives of Australasia. They have opposite or scattered leaves and tubular flowers, mostly in clusters or dense beads, at the tips of the annual shoots. They are largely cultivated as greenhouse plants, the best known being *Pimelea spectabilis*, with white flowers in dense globular heads, surrounded by bracts.

RICE-PAPER PLANT (*Fatsia papyrifera*). Shrub of the natural order Araliaceae. A native of Formosa, it grows to a height of about 8 ft., and has large, lobed, downy leaves and drooping clusters of greenish flowers. Rice paper is made from the white pith.

Rice-paper Plant. Head of leaves

RICH. English family. It was founded by Richard, 1st Baron Rich (c. 1496-1567), of Leez or Lees, now Leighs, Essex, who founded Felsted grammar school. His grandson, Robert (d. 1619), was first earl of Warwick of the 1618 creation, and married Penelope Devereux (c. 1562-1607), daughter of the 1st earl of Essex and the Stella of Sidney's sonnet sequence, Astrophel and Stella.

RICHARD I (1157-99). King of England. The third son of Henry II and Eleanor of Aquitaine, he was born at Oxford, Sept. 8, 1157. Having taken a crusader's vows before his accession, July 11, 1189, he threw himself with ardour into the crusade then being organized, and passed only six months of his reign in England. Popularly known as Coeur de Lion, the Lion Heart, he was largely responsible for the capture of Acre in June, 1191, but in Sept., 1192, made a three years' truce with Saladin. On his way home, in disguise, through the territory of his enemy, Leopold, duke of Austria, he was captured, handed over to the emperor, Henry VI, and held to ransom. This being paid, he returned to England in March, 1194. He was mortally wounded while besieging the castle of Chalus, April 6, 1199, and was buried at Fontevault. In 1191 he married Berengaria of Navarre.

RICHARD II (1367-1400). King of England. A son of Edward the Black Prince, he was born at Bordeaux, Jan. 6, 1367, and succeeded his grandfather, Edward III, as king, June 21, 1377.

For eight years he ruled with moderation and wisdom. After 1386, however, he became despotic. When John of Gaunt died in 1399, he seized the inheritance of Lancaster, which should have passed to Henry of Hereford. Then when Richard had gone to Ireland, Henry returned to England and Richard was forced to abdicate.

Rice. Plant and ripe spikelet, of this important cereal

in his favour, Sept., 1399. Richard was imprisoned in Pontefract Castle, where he died or was murdered, Feb. 14, 1400.

RICHARD III (1452-85). King of England. The youngest brother of Edward IV, he was born at Fotheringhay Castle, Oct. 2, 1452, and usurped the throne, setting aside the lawful king, his nephew Edward V. A

Richard III,
King of England
Nat. Port. Gall.

man of great ability but of little or no principle he was crowned July 6, 1483. Edward and his brother were imprisoned in the Tower, and there murdered. On Aug. 7, 1485, the young earl of Richmond, Henry Tudor, landed at Milford Haven, and on the 22nd Richard was slain at Bosworth. He was known as Crookback because one of his

shoulders was higher than the other.

RICHARDSON, SAMUEL (1689-1761). English novelist. Born in Derbyshire, he came to London at seventeen, and became a prosperous master printer. When over fifty he turned his mind to novel writing. His first novel, *Pamela or Virtue Rewarded*, appeared in 1740; *Clarissa Harlowe*, in 1748; and *Sir Charles Grandison*, in 1754, all are in the form of letters. Excelling in his knowledge of feminine psychology, Richardson represents a notable landmark in the evolution of the novel. He died July 4, 1761.

RICHARDSON, THOMAS (1870-1912). English cricketer. Born at Byfleet, Surrey, Aug. 11, 1870, he first played for his county against Essex at Kennington Oval in 1892. He took part in four test matches in England against the Australians, one in 1893 and three in 1896, and toured with English teams in Australia. One of the most consistent fast bowlers that ever lived, he died July 3, 1912.

RICHBOROUGH. British seaport. It stands on the estuary of the Stour between Sandwich and Ramsgate. It was developed during the Great War after April, 1916, till the works covered an area of 2,200 acres. From here a cross-Channel train ferry went to France, carrying war material. It was purchased in 1925 for industrial development. There are ruins of a Roman castle.

RICHIEU. River of Canada. It issues from Lake Champlain, and falls into Lake St. Peter, an expansion of the St. Lawrence, at Sorel. Its length is 210 m. It is also known as the Chambly and the St. John.

RICHIEU, ARMAND JEAN DUPLESSIS, CARDINAL, DUC DE (1585-1642). French statesman. Born Sept. 5, 1585, he was the real director of French policy almost throughout the reign of Louis XIII. Of this policy the leading features were the aggrandisement of France, the concentration of power in the hands of the monarch and his chosen ministers, and religious toleration.

Cardinal Richelieu,
French statesman
After P. de Champaigne

Throughout he had to defend himself against the intrigues of the nobles; but when he died, Dec. 4, 1642, all France enjoyed complete liberty of conscience, the crown was supreme, and France had definitely established her position as the first military power in Europe.

RICHEPIN, JEAN (1849-1926). French poet, dramatist, and novelist. He was born at Médéa, Algiers, Feb. 4, 1849. Romantic in his verse and a realist in many of his stories, his many novels include *Les Morts Bizarres*, 1876; *Le Pavé*, 1883; *La Miseloque*, 1893; *Contes 'Espagnoles'*, 1901; *L'Aile*, 1911. Among his plays are *Nana Sahih*, 1883; *Le Filihustier*, 1888; *Par le Glaive*, 1892; *Don Quichotte*, 1905; *La Route d'émeraude*, 1909. He died Dec. 12, 1926.

RICHMOND. Mun. bor. and residential suburb of Greater London. It is on the slope of a hill in Surrey, 9 m. from Hyde Park Corner. The town is served by the Southern and District Rlys., is connected with the Piccadilly Tube at Hammersmith, and has excellent tramway and omnibus services. The

hor., which includes Kew, Petersham, and part of Mortlake, was incorporated in 1890 and is famous for its associations with royalty. The remains of the palace, in which Elizabeth died, were restored, 1913-19. The Old Deer Park is now the venue of the Richmond Horse Show and various sports. The terrace gardens, public since 1886, command a magnificent view over the river. The Star and Garter hotel, founded in 1738, was pulled down in 1919 to make room for a home for disabled soldiers and sailors. Pop. 46,639.

Richmond Park, a royal demesne of 2,250 acres, famous for its trees, its deer, and general picturesqueness, contains White Lodge.

RICHMOND. Mun. bor. and market town of Yorkshire (N.R.). It stands on the left bank of the Swale, 50 m. from York, on the L.N.E. Rly. Of the Norman castle, the magnificent keep and some other portions remain. The grammar school is modern, although the foundation dates from the 16th century. Richmond has an agricultural trade and some manufactures. Races are held here. Near are the ruins of Eashy Abbey. Richmond was the head of a large honour, and from here various princes took the title of duke. Market day, Sat. Pop. 5,000.

RICHMOND. City and port of entry of Virginia, U.S.A. The capital and largest city of the state, it stands on the James river, 115 m. by rly. S. of Washington. It carries on an extensive trade in tobacco, and has important ironworks, machine shops, and rly. plant works. It has flour mills and manufactories of wagons, carriages, lumber products, trunks, hags, and boxes. Founded in 1733, Richmond became a city in 1782. It has been the state capital since 1779. Pop. 171,667.

RICHMOND, GEORGE (1809-96). British portrait painter. Born at Brompton, London, March 28, 1809, he was greatly influenced by William Blake. He became A.R.A. in 1857 and R.A. in 1867. He died in Portman Square, London, March 19, 1896.

RICHMOND, SIR WILLIAM BLAKE (1842-1921). British painter. Born in London, Nov. 29, 1842, a son of George Richmond he became specially prominent in connexion with the decoration of the inner dome of St. Paul's with mosaics. He was Slade professor at Oxford, 1878-83; became A.R.A.

in 1888 and R.A. in 1895; and was created a knight in 1897. He died Feb. 11, 1921.

RICHMOND AND GORDON, DUKE OF. Title held by the family of Gordon-Lennox. Charles Lennox, natural son of Charles II by Louis de Kéroualle, was made duke of Richmond in the English and duke of Lennox in the Scottish peerage in 1675. Charles, 4th duke, was lord-lieutenant of Ireland, 1807-13, and governor-general of Canada, 1818-19. Charles Henry (1818-1903), 6th duke, held several government offices and was Conservative leader in the Lords, 1867-76. In 1836 he inherited the estates of the last duke of Gordon and took that name. His son, Charles Henry, the 7th duke (1845-1928), was a Conservative M.P. 1869-88. The duke's seats are Goodwood and Gordon Castle.

RICHMOND AND LENNOX, FRANCES TERESA STUART, DUCHESS OF (1648-1702). Mistress of Charles II. Born July 8, 1648, she was educated in France, and, coming to England as a maid of honour to Catherine of Braganza, was Charles's favourite from 1663-67, when she made a runaway match with the duke of Richmond and Lennox (d. 1672). She returned to court in 1668, and died Oct. 16, 1702. She was the model for the figure of Britannia on British copper coins.

RICHTER, HANS (1843-1916). Austrian orchestral conductor. Born at Raab, Hungary, April 4, 1843, he became chorus master at the Munich opera, 1868. He conducted the first performance of *Lohengrin* at Brussels, 1870, and of *The Ring of the Nibelungen* at Baireuth, 1876, and accompanied Wagner to London in 1877. From 1897-1911 he was conductor of the Hallé Orchestra, Manchester. He died at Baireuth, Dec. 5, 1916.

RICHTER, JOHANN PAUL FRIEDRICH (1763-1825). German author and humorist, often spoken of as Jean Paul. He was born March 21, 1763, at Wunsiedel, Bavaria. After studying theology at Leipzig, he turned to literature, and won fame in 1795 with his *Hesperus*.

Johann Paul Richter,
German author

Richmond, Yorkshire. Ruins of the Norman castle and the bridge over the river Swale
Frith

Another of his earlier works was *Blumen, Frucht und Dornenstücke* (Flower, Fruit and Thorn Pieces), 1796-97. His later works included *Titan*, 1800-3, a romance which some critics, as did the author, regard as his greatest work; *Fliegjahre* (Wild Oats), 1804-5, new ed. 1901; and *Schmelzle's Reise* (Schmelzle's Journey), 1809. He died Nov. 14, 1825.

RICHTHOFEN, MANFRED VON (1892-1918). German airman. Born May 2, 1892, he became a cavalry officer. During the Great War he commanded the 11th air chasing squadron or "circus" and claimed to have brought down the British airman, Major Hawker, V.C. He won his 80th victory in April, 1918, in which

month he received the order of the Red Eagle with crown and swords. He was shot down behind the British lines near the Somme on April 21, 1918. In his

Baron von Richthofen, German airman

Memoirs, published in August, 1917, he made interesting references to British airmen, crediting them with skill and daring.

RICKETS or **RACHITIS**. Disease of infants resulting from faulty diet and characterised by impairment of nutrition. Rickets is most prevalent among the poor children of large towns. Bad housing, over-

crowding, insufficiency of food, and prolonged lactation are conditions conducive to the development of the disease, but the essential cause is the absence or insufficiency of certain important constituents in the food called vitamins.

The symptoms begin insidiously, and are generally noticed about the sixth to ninth month. The child shows a disinclination to walk, and is listless and peevish. There is a general soreness of the body, and as the disease progresses, changes in the bones become manifest. Common complications are bronchial catarrh, pneumonia, bronchitis, and laryngismus stridulus. If the disease is not treated in the early stages death may occur from complications, or, when adult life is reached, there may be serious and permanent deformity.

RICKETTS, CHARLES (b. 1866). British artist. Born in Geneva, Oct. 2, 1866, he started the Vale Press and did much designing for the theatre. In 1922 he was made A.R.A., and in 1928 R.A. Of his works, *The Death of Don Juan* is in the Tate Gallery, London, and *Montezuma* is in Manchester. His books include one on Titian.

RICKMANSWORTH. Urban dist. of Hertfordshire. It stands at the junction of the rivers Chess and Colne, 4 m. from Watford on the L.N.E. and Metropolitan Rlys. and the Grand Union Canal. There are brewing and printing industries. Near is Moor Park (q.v.), now a residential district. Pop. 8,512.

RICKSHAW or **JINRIKSHA** (Jap. jin, a man; riki, strength; sha, a car). Japanese vehicle, seating one person and drawn by a man. It consists of a light chair mounted on two large wheels and generally provided with a movable hood. The coolie who draws it runs between the shafts. It has been introduced elsewhere. See illus. p. 791.

RIDEAU. Lake, river, and canal of Ontario, Canada. The lake is 42 m. S.W. of Ottawa, and discharges into the river, which joins the Ottawa at Ottawa. The canal, 126 m. long and built 1826-34 for military purposes, connects Ottawa with Kingston, on Lake Ontario.

RIDGE, WILLIAM PETT (1860-1930). British novelist. He was born near Canterbury. His work, which is characterised by a humorous and sympathetic understanding of the lower and lower middle class life of London, includes *Mord Emly*, 1898; *Erb*, 1903; *The Wickhamses*, 1906; *Name of Garland*, 1907; *Thanks to Sanderson*, 1911; *The Kennedy People*, 1915; *The Bustling Hours*, 1919; *Ernest Escaping*, 1926, and *Affectionate Regards*, 1929. In 1923 appeared *A Storyteller's Forty Years* in London. He died Sept. 29, 1930.

RIDING. Term applied to horsemanship. It may be broadly defined as getting the best work out of a horse for a given object, with a minimum of distress to horse and rider.

In England one will best conform to the national school of riding by carefully observing the old jingle: "Your head and your heart

keep up. Your hands and your heels keep down. Your knees keep close to your horse's sides, and your elbows close to your own." Women and girls have forsaken the side saddle in order to ride like men.

RIDING. Literally, the third part, a corruption of thridding. Of Scandinavian origin, the word was brought by the Danes into England, and just before and after the Norman Conquest a number of counties were divided into ridings with riding courts. Yorkshire is divided into three ridings, East, North, West. Each is an administrative co. with its own lord-lieutenant and council.

RIDLEY, MATTHEW WHITE RIDLEY, 1st Viscount (1842-1904). British politician. Born in London, July 25, 1842, son of Sir

Matthew White Ridley of Blagdon Hall, Northumberland, he was educated at Harrow and Balliol College, Oxford. Entering Parliament as a Conservative in 1868, he was under-secretary to the home office, 1878-80; financial secretary to the treasury, 1885, and home secretary, 1895-1900, when he retired and was made a viscount. He died at Blagdon, Nov. 28, 1904. He did much to develop the port of Blyth.

RIDLEY, NICHOLAS (c. 1500-55). English prelate and reformer. Born in Northumberland, and educated at Pembroke Hall, Cambridge, he was canon of Canterbury, 1541, canon of Westminster, 1545, bishop of Rochester, 1547, and bishop of London, 1550. He helped to prepare the first prayer book of 1548, and to found S. Thomas's Hospital and Bethlehem (Bedlam) Hospital. When Edward VI died he sided with Lady Jane Grey, and was committed to the Tower by Mary. In 1554 he was condemned for heresy, and, with Latimer, was burnt at Oxford, Oct. 16, 1555. See Latimer, H.

RIEL, LOUIS (1844-85). Canadian rebel. Born at St. Boniface, Quebec, Oct. 23, 1844, the son of another Louis Riel, he came

to the front as leader of those who opposed the transference of the Hudson Bay territories to the Dominion. The Red River Expedition,

Louis Riel, Canadian rebel

Rifle. Diagram of Lee-Enfield mechanism. Magazine, H, holds 10 cartridges. The bolt being open, a cartridge is pressed up by spring, J, and pushed into barrel, A, as bolt moves forward. Simultaneously, through cocking piece, B, and sear, F, the rifle is cocked ready for firing. When trigger, E, is pulled, striker, C, forced forward by spring, D, fires cartridge. Withdrawing bolt ejects spent cartridge. G is trigger spring; K, magazine release catch, and L, the charger guide.

Above, rifle and bayonet

under Wolseley, 1870, crushed the movement. Riel escaped, and in 1873 was elected a member of the Dominion Parliament. He was expelled, again elected, and then outlawed. In 1885 he was asked by the half-breeds to champion their cause; a rebellion ensued, and that having been crushed, Riel surrendered. He was found guilty of treason and was hanged at Regina, Nov. 16, 1885.

RIENZI, COLA DI (c. 1312-54). Roman patriot. The son of an innkeeper, he became a notary. Embittered by the death of his brother, who had been murdered by a patrician, Rienzi threw all his energies into the cause of the people. In May, 1347, he was proclaimed tribune, but after a few temporary successes he was crushed in the ensuing

December, and fled. In 1354, after many vicissitudes, Rienzi was sent as senator to Rome by Innocent VI, but he had lost his popularity, and while attempting to quell a riot he was killed, Oct. 8, 1354. Bulwer Lytton wrote a novel, and Wagner based an opera on his life-story.

RIEVAULX. Village of Yorkshire (N.R.). On the Rye, its name a corrup-

tion of Rye Vale, it is famous for the ruins of its abbey, founded in 1130 and the oldest Cistercian house in Yorkshire.

RIF or **ER-RIF**. Mountainous dist. in N. Morocco, bordering upon the Mediterranean. The mountains extend for about 180 m. from the W. frontiers of Algeria to the Jebel Hassan, S.W. of Tetuan, whence a N spur, known as the Sierra de Bullones, runs towards Ceuta and terminates in the Jebel Musa. The country is within the Spanish zone. See Morocco.

RIFLE. Firearm of the musket type, with a grooved barrel which causes the bullet to rotate during flight and so increase the accuracy of fire. The invention of rifled firearms occurred about 1500, but the military weapon of to-day is largely the product of 19th century invention, noteworthy stages in which have been in the making of new bullets and the introduction of breech-loading, smokeless powder, and the magazine.

Examples of development in the rifle are found in the Prussian needle gun, 1841, the French chassepot, 1866, the American Winchester repeating rifle of 1867, the British Enfield, converted by the Snider breechlock, the Martini-Henry, 1871, the German Mauser of 1871-84, the French Lebel, 1885, the Austrian Mannlicher, 1886, and the .303-in. British Lee-Enfield rifle of 1888. Now all military rifles are between .256 and .315 inch.

About 1900 a shorter weapon was introduced by Switzerland, Great Britain, and the U.S.A. The next development was the pointed bullet of 1905. Muzzle velocities are about 2,900 ft. per second. In 1928 a prize offered by the British Government for a self-loading rifle was won by the B.S.A. Thompson, the invention of General G. Thompson, of the U.S.A. army, and made by the British Small Arms Co. It can fire, so it is claimed, 35 shots a minute.

Sporting rifles are made in much the same form as sporting shot-guns with bores from .360 to .600 in. Most of them fire a short bullet and employ smokeless powder. There is now a wide choice of magazine sporting rifles similar to the military types.

A National Rifle Association was founded in London in 1859 to promote rifle shooting. Its meetings were held on Wimbledon Common till 1890. They are now held at Bisley (q.v.).

RIFLE BIRD OR **RIFLEMAN** (*Ptiloris paradis*). Genus of birds of paradise found in Australasia and New Guinea. It has purplish-black plumage with green and bronze reflections, the throat being covered by a shield of feathers of a metallic lustre.

RIFLE BRIGADE. Regiment of the British army. Raised in 1800, this regiment has taken part, with distinction in most of the wars engaged in by Britain since that date. The regiment had, in addition to its regular battalions, a number of service and territorial battalions in the Great War, in which it gained 10 V.C.'s, 206 D.C.M.'s, 9 M.C.'s, 914 M.M.'s. Its death roll was 11,245, and to perpetuate the memory of the fallen a memorial has been erected at Winchester, where is the regimental depot.

RIFLE CORPS, KING'S ROYAL. Regiment of the British army, known also as the 60th Rifles. Formerly the 60th Foot, this regiment was raised in 1755, and took a leading share in the campaigns in America and in all Wellington's campaigns down to 1814. In the Great War it had six regular and special reserve battalions, and about 20 service battalions. In Dec., 1920, the name of the regiment was altered to The King's Royal Rifles, but in March, 1921, it reverted to its previous title. The depot is at Winchester.

RIFT VALLEY. Type of valley produced by the sinking of a crustal block between two parallel faults. The Red Sea occupies part of a rift valley, which extends from the valley of the Jordan to Lake Nyasa, in Central Africa. Glenmore and the Central Lowlands of Scotland are also examples of this type of valley.

RIGA. Baltic seaport and capital of Latvia. Founded in 1201, it stands on the Dvina, 9 m. from its mouth.

The city lies on both banks of the river, the old town being on its right. In it are the old cathedral and newer ones for the Greek and Roman Catholic faiths. It also contains some old churches, the castle, now used by the president of the republic, and buildings for the legislature and the government departments. A university has been founded. Riga is a railway centre and has a shipping trade, as well as a number of manufacturing industries. Pop. 339,000. See Latvia.

The gulf of Riga is a large shallow opening of the Baltic Sea. It is 90 m. long and 60 broad, and its chief affluent is the Dvina.

RIGAUD, HYACINTHE (1659-1743). French painter. Born at Perpignan, he was admitted to the Academy as a portraitist in 1687, and qualified as an historical painter in 1700. Louis XIV, Philip V of Spain, Charles XII of

Sweden Augustus II and Augustus III of Poland were among his sitters, while he also portrayed many eminent artists and litterateurs of his time.

RIGHT. In political speech, the party or section of a party holding views of a conservative or moderate character as opposed to the more extreme ones of the left. Its use in this sense arose in France during the Revolution. When the National Assembly formed itself at Versailles in 1789, the moderate men, quite by accident, found seats on the right of the hall, and the extremists on the left. This arrangement persisted.

RIGHT OF WAY. In English law, a form of easement involving the right to pass over land in the possession of others. By the Prescription Act of 1832 it is enacted that uninterrupted enjoyment of a right of way for 40 years is an indefeasible right, on condition that it is proved by user down to the time of the commencement of the action, unless the consent in writing of the owner has been obtained to the enjoyment of the right. By the same Act "no claim by custom, prescription, or grant, to any way or other easement... which has been enjoyed twenty years without interruption shall be defeated by showing the commencement of the right within the time of legal memory." A private right of way across a particular piece of land may be claimed by immemorial usage, or be granted to an individual by special permission.

RIGI. Mountain mass of central Switzerland. It rises between the lakes of Lucerne, Zug, and Lowerz, and is mostly in the canton of Schwyz. It is 35 m. in circuit and has an alt. of 5,906 ft. The summit commands a magnificent panorama of the snow-clad Alps, the Jura, the Vosges, the Black Forest, and parts of Württemberg and Bavaria.

RIG-VEDA (Sanskrit, praise-song). Name of the oldest section of the Vedas (q.v.). It is a collection of 1,017 hymns addressed to Indra, Agni, Varuna, Soma, the Maruts and other nature gods. The compilation probably dates from about 1000 B.C., but the hymns themselves, to which many authors' names are traditionally appended, may be from 1,000 to 500 years older, and are the oldest literature in any Indo-European language. More than 10,000 verses in all, in a great variety of metres, they were composed in archaic Sanskrit, and handed down by word of mouth for many generations. Taken as a whole, they throw much light on the social life and ideas of the primitive Aryan communities, which were passing from the pastoral to the agricultural stage of culture.

RIMINI. City of Italy, in the prov. of Forlì. The ancient Ariminum, it stands on the Marecchia, 69 m. by rly. S.E. of Bologna. Successively Umbrian and Etruscan, the city fell to the Romans in 268 B.C. It has a triumphal arch to Augustus, a Roman bridge, and ruins of an amphitheatre. A monument indicates the spot where Caesar addressed his troops after crossing the Rubicon. The castle of the Malatestas is now used as a prison. The Palazzo Ruffo was the scene of the assassination of Francesca da Rimini in 1285. On the shore is a sea-

bathing station. There are extensive fisheries. Pop. 61,042. See Francesca.

RIMMON. Syrian deity worshipped at Damascus. His temple, the house of Rimmon (2 Kings 5, 18), probably contained the altar which Ahaz reproduced at Jerusalem (2 Kings 16). Alternatively called Hadad, he is identifiable with the Babylonian thunder god Ramman and the Assyrian Adad.

RINDERPEST (Ger. cattle plague). Highly contagious and fatal disease of cattle and other ruminating animals. It is indigenous in India, China, Russia, Tibet, and common in S. Africa, but has not been found in Great Britain since 1877. It arises from a specific contagion, and it is believed that the infection enters the body of the animal through the mouth or nostrils, and thence spreads to all the organs. It is a fever, with very high temperature, and is almost invariably fatal, death following in from four to seven days from the first attack. No cure is known.

RING (A.S. hring, circle). Circular band, usually of metal, and frequently set with precious stones, worn on the fingers. In ancient Rome a ring was given as a pledge of betrothal, and this custom may still be traced in the practice of giving a gem-ring when a marriage engagement is agreed upon. Marriage rings were adopted by the Church from the pagan custom of placing a ring on the bride's finger, as a symbol of possession.

Wedding rings have nearly always retained the plain circle form in use to-day, with the exception of Jewish marriage rings, which are heavy, elaborately carved, broad bands with inscriptions. A ring, the "marriage ring of England," is used in the coronation ceremony. The Doge of Venice wore a ring of office, and this he cast into the Adriatic Sea on Ascension Day of each year as a token of the marriage of the republic to the sea. Mourning rings sometimes have hair of the deceased plaited or formed into conventional designs, placed under crystals or white sapphires; others are enamelled black, and bear portraits, emblems, or inscriptions. Ecclesiastical rings were early worn on the first finger of the right hand, then on the third of the left, the marriage finger, because it is supposed to communicate direct to the heart by an artery.

Another kind of ring is the signet ring. On it was engraved or carved a symbol, or symbols, peculiar to its owner so that he could use it for making an impression in wax or clay, equivalent to a signature. The rings mentioned in the Bible are of this type.

RING MONEY. Primitive form of metallic currency used in ancient Egypt, Gaul, Ireland, Norway, etc., and still used in some parts of Africa. It arose from, and is often indistinguishable from, golden articles of adornment worn by barbaric peoples.

RINGBONE. Disease of horses, a cause of lameness. It results from inflammation of the periosteal covering of the bone below the fetlock. It is usually set up by a blow, a kick, or some similar accidental cause. The seat of the disease is usually the short pastern bone known as the "corona." Ringbone is commonest in heavy horses or animals with upright pastern, but is rare in bloodstock. In all cases special shoeing is essential.

Ring Dove (*Columba palumbus*). Name which is sometimes given to the common wood pigeon. See Pigeon.

Rifle Brigade badge

King's Royal Rifle Corps badge

Riga, Latvia. Greek Orthodox cathedral, built 1877-84

Rimini, Italy. Triumphal arch of Augustus, erected B.C. 27

Ring. Gold signet engraved with coat of arms
Pict. & Albert Mus. S. Kensington

Ring Money. Modern piece from Africa

RING OUZEL (*Turdus torquatus*) or **MOUNTAIN BLACKBIRD** European song-bird of the thrush family. Its feathers are black with a narrow edging of greyish white, and it has a white patch on the throat. It arrives in England in April and breeds in a few districts in Devonshire, Derbyshire, and the N., nesting often in a tuft of heather.

Ring Ouzel, European bird of the thrush family

Ring Snake. Alternative name for the common non-poisonous grass snake (q.v.).

RINGWOOD. Market town of Hampshire. It stands on the Avon, 24 m. from Southampton on the S.R. At the end of the New Forest, it is a tourist centre and is noted for its ale. Woollen gloves are manufactured. Ringwood is said to have been founded by the Romans as a military post. Market day, Wed. Pop. 5,131.

RINGWORM or **TINEA.** Affection of the skin due to the growth of a fungus. Common ringworm is most often seen in children between 5 and 15. It occurs frequently on the scalp, starting as a small, scaly spot, which gradually enlarges and becomes almost denuded of hair. The disease may last for years if not treated and is contagious.

RIO DE JANEIRO (São Sebastião do Rio de Janeiro). Federal capital of the United States of Brazil. It lies on the W. shore just inside the entrance to the bay of Guanabara. The name commemorates its discovery on Jan. 1, 1502. There is, however, no river of that name, the bay being a wide lagoon fed by small streams from the surrounding mountains. The main artery of the city is the Avenida Rio Branco. It is lined with splendid modern buildings, and continued along the shore of the bay, past the residential suburbs of Botafogo and Gloria, by the Avenida Beira Mar, which is constructed with a sea-wall of granite and laid out in gardens and walks to an extent of 4 m.

Rio de Janeiro has many fine ancient buildings, e.g. the Candelaria church, while the Monroe palace, national library, and national museum are excellent specimens of modern architecture. The Carioca aqueduct, in which the water of Rio is brought, extends from the mountains of Santa Thereza to those of Santo Antonio. The hospital, Santa Casa da Misericórdia, is one of the largest institutions in the world. There are schools of medicine and law, a polytechnic school, conservatory of music, and various academies for art, science, and commerce. In the newer section of the city the streets are fairly broad and lit by electric light. There are many squares and public places. Extensive harbours have been constructed. The principal export is coffee; imports are cereals, coal, and manufactured goods. It is estimated that the population of the Federal District, which is administratively co-extensive with Rio, is 1,300,000.

Rio de Janeiro was discovered by the Portuguese and Italian navigators Gonçalves and Vespucci in 1502. It is governed by a

prefect appointed by the government and assisted by a municipal council.

RIO DE ORO (Sp. river of gold) Spanish colony along the coast of W. Africa, S. of Morocco. The country forms an E. extension of the Sahara and is administered by the governor of the Canary Islands. Villa Cisneros is the capital. Its area is 65,500 sq. m. Pop. 253.

RIO GRANDE. Name of two rivers of Brazil. One rises in the mts. on the W. border of Bahia State, and joins the São Francisco at Barra. From the N. it receives several affluents. Its length is about 300 m. The other unites with the Paranaíba to form the Paraná after a course of about 440 m.

The Rio Grande del Norte or Rio Bravo del Norte is the name of a river in the U.S.A. It rises in Colorado, and flows to the gulf of Mexico. Its length is 1,800 m.

RIO TINTO, MINAS DE (Sp. coloured river mines). Town of Spain, in the prov. of Huelva. It stands near the source of the river Tinto, 52 m. by rly. N. of Huelva, and is the centre of one of the most celebrated copper-mining regions of the world. Pop. 9,669.

RIPLEY. Urban dist. and market town of Derbyshire. It is 10 m. from Derby, on the L.M.S. Rly. There are some textile manufactures, and around are coal mines and iron works. Market day, Sat. Pop. 13,298

RIPLEY. Parish of Surrey. It is 5 m. from Woking, on the main road from London to Portsmouth, several miles of which are sometimes called the Ripley Road. Pop. 2,847.

RIPLEY. Village of Yorkshire (W.R.). It stands on the Nidd, 3 m. from Harrogate, on the L.N.E.R. Ripley Castle has been modernised. Pop. 231.

RIPON. City and mun. bor. of Yorkshire (W.R.). On the Ure, it is 24 m. from Leeds, on the L.N.E.R. The chief building is the cathedral, which replaced an earlier one, of which the crypt remains. Its erection occupied about three centuries, and consequently it displays all styles of architecture, from the Norman apse through the Transitional transcripts to the Perpendicular work in the choir and elsewhere. It was restored in 1862-72. Ripon is a spa, having baths and a pump room. It has a trade in agricultural produce and manufactures of leather goods. Near are Studley Royal and Fountains Abbey. Pop. 8,400.

Rio de Janeiro. Air view of the city, showing the famous Avenida Rio Branco running from the docks on the north to Botafogo Bay on the south
Aircraft Operating Co., Ltd.

RIPON, FREDERICK JOHN ROBINSON, 1ST EARL OF (1782-1839). British statesman. Born in London, Oct. 30, 1782, the second son of the second Baron Grantham, he was educated at Harrow and Cambridge. He early took up a political career, entered Parliament in 1806, and filled many public offices. He was created Viscount Goderich in 1827 and earl of Ripon in 1833. He died Jan. 28, 1839.

RIPON, GEORGE FREDERICK SAMUEL ROBINSON, 1ST MARQUESS OF (1827-1909). British statesman. Born Oct. 24, 1827, he was the son of Viscount Goderich, later earl of Ripon. He sat in the Commons 1852-59, when he succeeded his father as earl of Ripon. In 1859 he became under-secretary for war, in 1863 secretary for war, in 1866 secretary for India, and in 1868 lord president of the council. He was the chairman of the commission appointed to settle the Alabama dispute, and was created a marquess in 1871. He was governor-general of India from 1880 to 1884. In 1886 he was first lord of the admiralty: from 1892-95 he was secretary for the colonies, and from 1905-8 lord privy seal and Liberal leader in the Lords. He retired in 1908, and died at Studley Royal, July 9, 1909. His son, Frederick

Marquess of Ripon, British statesman

Ripon, Yorkshire. View of the finely proportioned cathedral, showing the two west towers and one central tower
Dixon Scott

(1852-1923), succeeded him, and on his death, Sept. 22, 1923, the title became extinct.

RIPON FALLS. Falls on the river Nile. Discovered by Speke on July 23, 1862, they consist of three distinct falls near the beginning of the Nile where it issues from Victoria Nyanza.

RISCA. Urban dist. of Monmouthshire. It stands on the Ebbw, with a station on the G.W.R. There are chemical and tinplate works, and around are coal mines. Pop. 16,746.

Risdon. Town of Tasmania. Near Hobart, it has one of the largest zinc-producing plants in the world, run by water power.

RISHTON. Urban dist. of Lancashire. It is 3 m. from Blackburn, on the L.M.S. Rly. Paper and fire-bricks are made, and in the vicinity are coal mines, cotton mills, and stone quarries. Pop. 7,016.

RISTORI, ADELAIDE (1822-1906). Italian actress. Born at Cividale del Friuli, Jan. 30, 1822, she made her first success in Rome in 1849 as the heroine of Alfieri's *Myrrha*. In 1855 she was favourably received in Paris, and she made her London début as Medea at The Lyceum, June 4, 1856. She died Oct. 9, 1906.

RITCHIE, CHARLES THOMSON RITCHIE, 1ST BARON (1838-1906). British politician. Born at Dundee, Nov. 19, 1838, the son of a merchant, he was educated at the City of London School. He entered Parliament in 1874, and as president of the local government board 1886-92 was responsible for the Act creating county councils. Later, as president of the board of trade he was responsible for initiating the work of that department in settling labour disputes. In 1900 Ritchie became home secretary, and 1902 chancellor of the exchequer. In 1905 he was made a baron, and he died Jan. 9, 1906. His son Charles, 2nd baron (h. 1866), became chairman of the Port of London authority in 1925.

RITE (Lat. ritus, custom). Religious act or ceremony performed according to established custom or precept. The term is also used of the general body of services used by a church or group of churches. In the Roman Catholic Church the congregation of rites regulates the general uniformity of practice in matters of divine worship.

RITUALISM. System of conducting worship according to a ritual or certain prescribed forms or ceremonies. It has come to be used, however, usually in a derogatory sense, of the High Church or Tractarian movement in the Church of England. The Oxford movement led many clergymen to pay greater attention to ceremonial in worship, and altar lights, vestments, incense, etc., were introduced in many churches. These were authorised, it was urged, by the ornaments rubric of the Prayer Book, but many churchmen objected to them, and in several cases legal proceedings were taken. A royal commission inquired into this subject in 1867, and in 1874 the Public Worship Regulation Act was passed. In 1906 a royal commission on ecclesiastical discipline made further recommendations for checking excessive ritual. See Lincoln Judgement; Oxford Movement.

RIVER. Channel by which the rainfall on the land reaches the sea or basins of inland drainage. A river system or drainage area comprises the main river and its tributaries. The line bounding the drainage area is called the water divide or watershed.

Some rivers, especially those which flow through rainless areas and receive their water only from rains near their sources, are intermittent, and by excessive evaporation may cease to flow in their lower reaches. Most rivers have seasonal periods of flood, due either to heavy rainfall or to the melting of snows at their sources. Rivers in high latitudes freeze in winter, but an undercurrent generally remains in motion. When such rivers break up in spring there are heavy floods. In the N. hemisphere rivers flowing polewards are deflected by the rotation of the earth, and press against their E. banks; those flowing equatorwards press against their W. banks. The banks of a river are termed right and left, applied in the direction of flow. Drainage follows the natural slope of the ground.

Among the longest rivers of the world are the Nile, 4,400 m. long, the Mississippi-Missouri, 5,431 m., the Amazon, 3,550 m., the Yang-tse, 3,500 m., the Ob-Irtish, 3,500 m., and the Amur, 2,920 m. (from source of the Argun).

RIVER HOG (Potamochoerus). Species of ungulate mammal found in W. Africa. It has bright red bristles, and is often known as the red river hog. It occurs in herds in swampy parts of forests, usually near rivers, and feeds upon plants and roots, often doing great damage in the native plantations.

RIVERINA. Dist. of Australia, in New South Wales. It includes all the counties situated between the Lachlan and Murray rivers W. of the meridian of Wagga-Wagga. Entirely a lowland with an average rainfall of 20 ins., and possibilities of irrigation from the Murrumbidgee and the boundary rivers, and comprising a small artesian basin which yields subterranean water through bores, the Riverina is an excellent wheat-growing area and very suitable for sheep rearing. The Murray red gum is localised here.

River Plate. Combined estuary of the Uruguay and Paraná rivers in S. America.

RIVIERA. Health resort on the Ligurian Sea, extending from Fréjus to Leghorn. Backed by the S. slopes of the Maritime and Ligurian Alps and the Ligurian Apennines, it stretches for 140 m. E. and W. of Genoa as the Riviera di Levante and Riviera di Ponente respectively.

In the W. the French littoral surrounds the principality of Monaco; here are Nice, Antibes, Hyères, Villefranche, and Monte Carlo. In the Italian section to the E. are Savona, Genoa and Spezia. The indigenous flora has been so enriched with imported plants that there are specimens of all the most notable plants of the world. The season extends from November to May. Cannes, Mentone, Grasse, San Remo, Rapallo, Bordighera are other fashionable centres, but there are many others off the main roads. See Cannes; Nice.

RIVIERE, BRITON (1840-1920) British painter. Born in London, of Huguenot descent, on Aug. 14, 1840, he was educated at Cheltenham and Oxford. Riviere established his reputation firmly by his Academy picture, *Charity*, in 1870. He became an animal painter of remarkable skill, and among his notable successes were *Circé*, 1871; *Daniel*, 1872; *Sympathy*, 1878; *Actaeon*, 1884; *Adonis Wounded*, 1887. Examples of his work are to be seen in the Tate Gallery, many provincial galleries, and at that of the Guildhall, London. Elected A.R.A. in 1878, Riviere became R.A. in 1881, and died April 20, 1920.

RIVIÈRE DU LOUP. River of Quebec, Canada. It rises in the highlands of the prov. and falls into the St. Lawrence about midway between the cities of Montreal and Quebec.

RIZZIO or **Riccio**, **DAVID** (c. 1533-66). Italian musician, favourite of Mary Queen of Scots. A native of Pancalieri, near Turin, he attracted the attention of Mary, who gave him an appointment, first as a singer, and then as secretary. His influence at court gradually increased, and by about 1564 he was one of the most powerful persons in the kingdom. This made the nobles jealous, while Darnley believed that the queen and her servant were lovers. The outcome was a plan to kill Rizzio, and the deed was carried out, March 9, 1566, at Holyrood. See Holyrood; Mary Queen of Scots.

ROACH (*Leuciscus rutilus*). Common freshwater fish. It is found in nearly all the British rivers, and in most European rivers N. of the Alps. It is of silvery colour, with red fins in the adult. It is a popular fish with the angler, as its wary habits call for considerable skill to take adult specimens, but its qualities as a table fish are poor. See illus. above.

ROAD. Public highway for traffic. The Romans were the first great road makers, but road making decayed with the fall of the Roman Empire. Already, when the Saxons came to Britain, the roads had largely fallen into disuse, and it was not until the reign of George III that any serious attempt was made

to deal with communications. This was the era of Turnpike Acts, providing for the maintenance and remodelling of roads, the cost to be met by tolls.

In France, Trésaguet adopted the Roman system of putting in a solid foundation of large stones to support the successive upper layers of smaller material. In England Macadam early in the 19th century introduced his system of covering roads with layers of hard stone broken into cubical pieces, which under pressure would jam and become consolidated. His successor, James Telford, who remodelled the great London-Holyhead road, followed Trésaguet in insisting on the importance of a strong foundation, but his surfacing method differed from that of Macadam.

A substantially made modern highway is constructed in a trench excavated to a depth of about 18 inches and bottom-rolled. In the Telford foundation the earth is covered with large stones closely packed and firmly wedged. Then follows a layer of well-rolled broken stone, thicker at the centre than at the edges. The surfacing is usually two layers of two-inch "macadam," followed by a dressing of chips or gravel. In the strictly macadamised form the foundation consists of layers of stones larger than those for the top, and all the material is consolidated by the roller as put in. Macadam entirely deprecated the use of water in road making, but in the modern methods of steam-rolling water is freely used.

The concrete road is an entirely modern method of road construction, designed for heavy traffic. It is made by placing on a foundation of concrete a continuous web of steel mesh, upon which any description of surface favoured by individual surveyors, or necessitated by local conditions, is placed. The main traffic arteries of cities are paved with asphalt (q.v.), wood blocks, or granite blocks, on a foundation of concrete. These pavements, though expensive, are durable.

Since the Great War a number of new main roads have been constructed to provide for the increasing amount of motor traffic. Some of these have a carriage way 30 ft. wide, which allows comfortably for the movement of three lines of traffic. In Great Britain there are about 179,000 miles of public roads, of which 25,000 miles are in Scotland. They have been classified by the ministry of transport, 25,528 miles being graded as Class I and 15,747 included in Class II.

ROAD CONTROL. There is a roads department of the ministry of transport, whose offices are at Whitehall Gardens, London, S.W.1. It took the place, in 1919, of the road board set up in 1909 to construct new roads and to improve existing ones. Under the Local Government Act, 1929, county councils became the highway authorities for all roads in rural districts and for all Class I and Class II roads outside the county and metropolitan boroughs. There is a special road fund derived from motor licence duties, and administered by the ministry of transport.

The use of the roads by motor vehicles was the subject of an important Act of Parliament passed in 1930. This abolished the speed limit and increased the penalties for dangerous driving.

ROANOKE. City of Virginia, U.S.A. It stands on Roanoke river, 55 m. W. of Lynchburg. There are rly. workshops, flour mills, bridge works, and agricultural implement, twine, motor vehicle, and hydraulic factories. Pop. 58,208.

The Roanoke river flows through Virginia and N. Carolina to Albemarle Sound. Including the Staunton, it is 450 m. long.

Roach. Fish common in British and N. European rivers. See below W. S. Berridge, F.Z.S.

David Rizzio, Italian musician

River Hog. Species of pig found in herds in the forests of W. Africa

ROARING. Complaint affecting horses. Roaring or whistling in a horse may result from catarrhal affections of the throat, but the fault more usually arises from defects in the air passages, and is in such case hereditary. It is particularly a failure of the thoroughbred horse, more especially those of Barb stock. There is no cure, but a tracheotomy tube inserted in the throat prevents the sound. Judicious dieting is useful.

ROARING FORTIES. Part of the S. oceans between 40° and 50° S lat. Here the sailor encounters the prevalent and frequently boisterous W. winds of the S. hemisphere, the Brave West Winds.

ROBERT. Name of three kings of Scotland. Robert I was the official designation of the ruler who is better known as Robert Bruce. See Bruce, Robert.

Robert II (1316-90) was a grandson of Robert the Bruce, his mother being the king's daughter; his father was Walter the steward of Scotland and, having taken this for a surname, Robert was the first of the line of Steward or Stuart kings. When only two years old, Parliament chose him as Bruce's successor, but the birth of a son to Bruce in 1324 changed the position. This son, David II, became king in 1329, and from then until 1371 Robert was one of the chief men of his kingdom. When David died childless in 1371, Robert, then an old man, succeeded. He died May 13, 1390.

His son, Robert III (c. 1340-1406), by his mistress, Elizabeth Mure, was declared legitimate and made earl of Carrick. As a ruler he was incompetent, and the kingdom was governed by relatives. He died April 4, 1406.

ROBERT. Name of two dukes of Normandy. The first, known as Robert the Devil, was duke from 1028 to 1033. He was the father of William the Conqueror. The second was William's eldest son, who became duke on his father's death in 1087. In 1106, having been on crusade, he was defeated in battle by his brother Henry I, and passed the rest of his life in prison, dying at Cardiff in Feb., 1134.

ROBERTS, FREDERICK SLEIGH ROBERTS, EARL (1832-1914). British soldier. Born Sept. 30, 1832, at Cawnpore, the son of Sir Abraham Roberts, he became second lieutenant in the Bengal Artillery, 1851. During the Mutiny he saw active service at Lucknow and Cawnpore, and was awarded the V.C. In 1863 he was engaged in the Umbeyla expedition, and in 1867 in the Abyssinian campaign. On the outbreak of the Afghan War in 1878, Roberts, as commander of the Punjab Frontier Force, was ordered to invade Afghanistan. In Oct., 1879, he took Kabul, and in 1880 led the famous march from Kabul

to Kandahar, covering 313 miles in 22 days and defeating the Afghans. Commander-in-chief in India, 1885-93, and in Ireland, 1895, he was given the command-in-chief of the army in S. Africa in Dec., 1899.

In Jan., 1901, Roberts, now created earl and field marshal, became commander-in-chief of the British Army. The office was abolished in 1904, and he was retired, becoming president of the National Service League, and advocating the raising of a citizen army. During a short tour of the front in 1914 he caught a chill, which on Nov. 14 proved fatal. He was buried in S. Paul's Cathedral. His only son, Frederick Hugh S. Roberts, a lieutenant in the artillery,

was mortally wounded at Colenso, Dec. 15, 1899, and posthumously awarded the V.C. His elder daughter became Countess Roberts.

The Lord Roberts Memorial Workshops train disabled soldiers and sailors in various handicrafts. The address is 120, Brompton Road, London, S.W.

ROBERTS, ARTHUR (b. 1852). British comedian. Born Sept. 21, 1852, he made his first appearance as a mimic and vocal comedian in 1878. He was successful in the variety halls, until he transferred to the theatrical stage in 1883, establishing a reputation in musical comedy and comic opera. He returned to the music hall stage in 1904.

Arthur Roberts,
British comedian
Claude Harris

ROBERTS, CHARLES GEORGE DOUGLAS (b. 1860). Canadian author. Born near Fredericton, New Brunswick, Jan. 10, 1860, he was educated at the university of New Brunswick. He became a schoolmaster in 1879; edited *The Week*, 1883-84, and was professor at King's College, Nova Scotia, 1885-95. He served in the British army in the Great War. He became known as a prolific writer of verse, essays, and fiction, and especially of tales of animal life in the Canadian wilds.

ROBERTS, JOHN (d. 1880). British billiards player. He was born at Liverpool, and in 1844 became marker at Oldham. He introduced spot-stroke play; and in March, 1862, made the record break, up to then, of 346, which included 55 spot hazards. He held the championship until defeated by his pupil, W. Cook, in 1870. Roberts died in London.

His son, John Roberts, jun. (1847-1919), was born at Manchester, Aug. 15, 1847. For many years he was the most accomplished and attractive billiards player in the world. When playing against E. Diggle, on May 3-4, 1894, he compiled a magnificent spot-barred break of 1,392. Roberts won the professional billiards championship in 1870, against Cook, holding the title against him in 1875, 1877, and 1885, and beat C. Dawson, 18,000 up level, by 1,814, for £200 and the championship in 1899. He died Dec. 23, 1919.

ROBERTS, MORLEY (b. 1857). British novelist. Born in London, Dec. 29, 1857, he was educated at Bedford and Owens College, Manchester. He led a varied and adventurous life in Australia, the U.S.A., etc. His books include *The Western Avernus*, 1887; *Red Earth*, 1894; *The Great Jester*, 1896; *A Son of Empire*, 1899; *The Promotion of the Admiral*, 1903; *The Private Life of Henry Maitland*, supposed to be based on the life of George Gissing, 1912; *Hearts of Women*, 1919; and *On the Old Trail*, 1927.

ROBERTSON, FREDERICK WILLIAM (1816-53). British divine. Born in London, February 3, 1816, Robertson studied first for the law and then for the army. Having given up the idea of a commission, he entered Brasenose College, Oxford, and in 1840 was ordained in the Church of England. In 1847 he was appointed incumbent of a proprietary chapel at Brighton, and there he remained until his death, Aug. 15, 1853.

F. W. Robertson,
British divine

In a few years Robertson, although not popular in the usual sense of that word, made himself one of the most influential preachers of the 19th century, and his sermons are among the few that rank as literature.

ROBERTSON, THOMAS WILLIAM (1829-71). British dramatist. Born at Newark-upon-Trent, Jan. 9, 1829, he began life as an actor, tried journalism, was rejected for the army, and had written several unsuccessful dramas before he achieved success with *David Garrick*, 1864. His other plays include *Society*, 1865; *Ours*, 1866; *Caste*, 1867; and *School*, 1869. *Caste*, his best piece, originally produced by the Bancrofts at The Prince of Wales's, still holds the stage. Robertson had the faculty of creating life-like characters, and his plays reflect accurately the manners of his time. He died in London, Feb. 3, 1871.

ROBERTSON, SIR WILLIAM ROBERT (b. 1860). British soldier. Born at Welbourn, Lincolnshire, he enlisted as a private in the 16th Lancers in 1877. Corporal in 1879, sergeant in 1882, and troop-serjeant-major in 1885, he became second lieutenant in the 3rd Dragoon Guards in 1888. From 1888-96 he served in India as an intelligence officer, receiving the D.S.O. On passing out of the staff college in 1898, he joined the intelligence department at the War Office, and served on the staff in the S. African War.

Robertson went to France in August, 1914, as Q.M.G. of the expeditionary force, and was chief of the staff, Jan.-Dec., 1915. From Dec., 1915, till early in 1918 he was chief of the imperial general staff. He held the Eastern Command, 1918-19, and was commander-in-chief of the British Rhine forces, 1919-20. For his war services Robertson, who had been knighted in 1913, was made a baronet, and received £10,000. In Aug., 1919. He was created a field marshal in 1920.

ROBESON CHANNEL. Strait separating N.W. Greenland from N.E. Ellesmere Island, Arctic America. It connects Hall Basin on the S. with Lincoln Sea on the N. It is 50 m. long. See Arctic Exploration.

ROBESPIERRE, MAXIMILIEN MARIE ISIDORE (1758-94). French revolutionist. Born at Arras, May 6, 1758, he was one of the representatives of the Third Estate when the states-general met in 1789. He soon became prominent among the extremists.

Robespierre was elected to the National Convention which met at the end of Sept., 1792, and proclaimed the Republic. In the Convention he was at first, with Danton, leader of the extreme section known as the Mountain, who after the execution of the king, Jan. 21, 1793, entered upon their victorious struggle with the Girondists. Elected July, 1793, to the recently appointed Committee of Public Safety, Robespierre was the person most responsible for the Reign of Terror. From April 5, 1794, he became in effect Dictator. But the Terror grew intolerable; a conspiracy was organized, and on July 27 he was denounced in the Convention. He was arrested, and next day, July 28, the head of him whom Carlyle called the "Sca-

to Kandahar, covering 313 miles in 22 days and defeating the Afghans. Commander-in-chief in India, 1885-93, and in Ireland, 1895, he was given the command-in-chief of the army in S. Africa in Dec., 1899.

In Jan., 1901, Roberts, now created earl and field marshal, became commander-in-chief of the British Army. The office was abolished in 1904, and he was retired, becoming president of the National Service League, and advocating the raising of a citizen army. During a short tour of the front in 1914 he caught a chill, which on Nov. 14 proved fatal. He was buried in S. Paul's Cathedral. His only son, Frederick Hugh S. Roberts, a lieutenant in the artillery,

green incorruptible" fell under the guillotine. See French Revolution; Jacobins.

Robespierre is the title of a drama in five acts by Victorien Sardou (q.v.).

ROBEY, GEORGE (b. 1869). Stage name of George Wadde. British comedian. Born Sept. 19, 1869, he made his first appearance on the music-hall stage at the Oxford, in 1891, where he soon acquired a great reputation as a comedian. In 1915 he appeared in the revue, *The Bing Boys are Here*, at the Alhambra, and was later connected with other revues. During the Great War he supported many charitable organizations.

Toulham & Banfield

ROBIN (*Erithacus rubecula*). Song-bird of the thrush family. Often called the robin redbreast, it is a native of Europe, W. Asia, and across Africa to the Canaries and Azores. The bright red forehead, face, and breast separated by a blue-grey line from the greenish-brown of the upper parts, make it distinct from all other British birds. Its full bright black eye and long legs are other prominent features. The sexes are alike in colour. The food consists mainly of insects, worms, and spiders, occasional berries, and in winter household scraps. The sweet but limited song of the robin may be heard at all seasons. Many of the birds of the year migrate in autumn.

Robin or Redbreast
W. S. Berridge, F.Z.S.

ROBIN HOOD. Central character in romantic stories told in old English ballads and songs of a robber outlaw head of a band which dwelt in Sherwood Forest. He was a famous bowman, and robbed the rich that he might give to the poor, and is variously said to have been a goodly yeoman and a certain Robert who claimed to be earl of Huntingdon. The ballads and poems concerning Robin Hood were collected by Joseph Ritson in 1795.

ROBIN HOOD'S BAY. Watering place of Yorkshire (N.R.). It stands at the N. end of Robin Hood's Bay, an opening of the North Sea, 6 m. from Whitby, on the L.N.E. Rly. It consists of an old fishing village on the cliffs and a modern part.

ROBINSON, JOHN (c. 1576-1625). English Puritan. Born probably in Nottinghamshire, he was educated at Cambridge. Having been ordained, he worked in Norwich, but his Puritan opinions brought him into disfavour. He joined the separatists, and in 1608, to escape persecution, went to Amsterdam. In 1609 he became pastor of a church at Leiden, where he formed the idea of a Puritan colony in America. In 1620, largely owing to his efforts, the Pilgrim Fathers set sail, but Robinson himself never crossed to them. He died March 1, 1625. See Congregationalism; Pilgrim Fathers.

ROBINSON, LENNOX (b. 1886). Irish dramatist. A son of the Rev. A. C. Robinson, he was born at Douglas, Cork, Oct. 4, 1886. His first play, *The Clancy Name*, was produced at the Abbey Theatre, Dublin, in 1908. From 1910-14 and again 1919-23 he was manager of the Abbey Theatre, and between 1915-25 he was an organizing librarian of the Carnegie Trust. His plays include *The Dreamers*, 1915, *The Whiteheaded Boy*, 1916, *The Lost Leader*, 1918, *The Big House*, 1926, and *The Far Off Hills*. He has also written novels and some short stories.

ROBINSON, MARY (1758-1800). English actress and royal favourite. Born at Bristol, Nov. 27, 1758, she came to London, and made her first appearance as Juliet at Drury Lane, Dec. 10, 1776. On Dec. 3, 1778, she appeared as Perdita to Smith's Leontes in Garrick's adaptation of *The Winter's Tale*, and captured the affections of the prince of Wales, afterwards George IV, who quickly tired of her. She was subsequently the mistress of Charles James Fox, and died in poverty, Dec. 26, 1800.

Mary Robinson,
British actress

ROBINSON, WILLIAM HEATH (b. 1872). British artist. Born May 31, 1872, he studied art in London at the R.A. school, and soon made his mark as an illustrator of books. He was better known, however, by his humorous drawings in *The Sketch* and other British and American periodicals.

ROBINSON, WILLIAM LEEFE (1895-1918). British airman. Born in India, July 14, 1895, he was commissioned from Sandhurst in 1914 and joined the R.F.C. the following year. On the occasion of the Zeppelin raid on London, Sept. 3, 1916, Robinson brought down the first Zeppelin in England, at Cuffley, and received the Victoria Cross. In May, 1917, he was brought down at Donai while flying, and remained a prisoner until Dec. 14, 1918. He died at Stanmore, Dec. 31, 1918.

ROBOT. Automaton or figure of a man or woman that can walk and talk. Its possibility was indicated by Karl Kapek in R.U.R. and other writers, and in 1928 one was shown in London at Maskelyne's Theatre. A steel man, walking and speaking by electricity, was shown at the Royal Horticultural Hall in Dec., 1928, and Mr. R. M. Hamilton invented a Robot bookmaker, a kind of improved totalisator. See Automaton.

W. Leefe Robinson,
British airman

ROB ROY (Gael. red Robert). Popular name for Robert MacGregor (1671-1734), Highland robber. Son of a freebooter, he was brought up at Balquhider, and early made a name for himself by his daring exploits and cattle-stealing raids. After the battle of Sheriffmuir he made various raids on the S. and W. until captured. He soon escaped, and was a fugitive until his pardon in 1727, after which he settled in Balquhider, where he died Dec. 28, 1734. He is the hero of the sixth of the *Waverley* novels, published Dec., 1817.

A type of canoe first built by John Macgregor (q.v.) was known as Rob Roy, and used by him on his journeys. Such canoes weigh about 70 lb. See Canoe.

ROBSART, AMY (c. 1532-60). The daughter of Sir John Robsart of Siderstern, Norfolk, she married Robert Dudley, afterwards earl of Leicester (q.v.), at Sheen, June 4, 1550. In 1560 Amy went to Cumnor Place, near Oxford, a house belonging to her husband, and on Sept. 8 was found at the foot of the stairs with her neck broken, and suspicion fell on Dudley. She is the heroine of Scott's novel *Kenilworth*.

ROBSON, THOMAS FREDERICK (1822-64). Stage name of Thomas Robson Brownhill, British actor. After some years in obscure theatres he acquired, in 1853, a sudden reputation for burlesque at the Olympic Theatre, London, of *Macbeth* and *Shylock*. In 1857 he undertook the management of the theatre, appearing with great success in domestic dramas. He died Aug. 12, 1864.

ROC (Arab. rokh). In Oriental legend, a bird of gigantic size. In one of the stories of Sinbad the Sailor, in the Arabian Nights' Entertainments, it is said to feed its young with elephants. It was by tying himself to the leg of a roc that Sinbad was carried safely from the island on which he had been left.

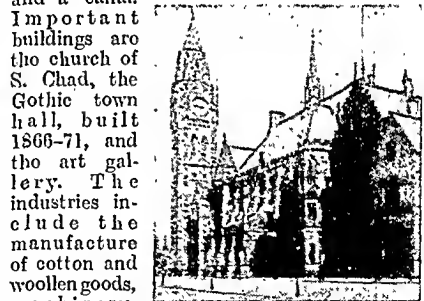

ROCAMBOLE or **SAND LEEK** (*Allium scorodoprasum*). Bulbous herb of the order Liliaceae, native of Europe. It has long, narrow leaves with a central keel down the underside. The tall flower stem ends in a head of small red-purple flowers margined with white; it produces little purple bulbs, which are used for the same purpose as those of garlic.

Rocambole.
Bulb, leaves
and flower

ROCH (c. 1295-1327). French saint. Born at Montpeller, he made a pilgrimage to Rome, after which he devoted himself to the care of the sick in Italy during a great pestilence. Accused as a spy, he died in prison, Aug. 16, 1327. S. Roch, the patron of the plague-stricken, is widely venerated in S. Europe.

ROCHDALE. County borough of Lancashire. It stands on the Roch, 11 m. from Manchester, and is served by the L.M.S. Rly. and a canal. Important buildings are the church of S. Chad, the Gothic town hall, built 1866-71, and the art gallery. The industries include the manufacture of cotton and woollen goods, machinery, and asbestos.

Rochdale. Town Hall, built
1866-71 in the Gothic style
Frith

Rochdale is noted as the cradle of the cooperative movement and the home of the statesman John Bright. Pop. 92,700. See Cooperation.

ROCHE, ALEXANDER IGNATIUS (1861-1921). Scottish painter. Born at Glasgow, Aug. 17, 1861, he studied at the local school of art, and afterwards in Paris. Returning to Glasgow in 1883, he settled down as a painter of landscapes with figures, and in 1896 removed to Edinburgh, and developed portrait painting. He became an A.R.S.A. in 1894, and R.S.A. in 1900. In 1900 he decorated the banqueting hall, Glasgow municipal buildings, with frescoes. He died March 10, 1921.

ROCHEFORT, HENRI. Popular name for the French journalist, Victor Henri, marquis de Rochefort-Lévesay (1832-1913). Born in Paris, July 29, 1832, he became a journalist, and in 1868 started a weekly, *La Lanterne*. This was suppressed, but, after a short exile, he founded *La Marseillaise*, which also was suppressed and its editor imprisoned. His activities in the Commune brought upon him a sentence of imprisonment for life. In 1874 he escaped from New Caledonia, and in 1880, an amnesty having been proclaimed, he returned to France. He founded *L'Intransigent*, supported Boulanger, and was elected to the Chamber. Prominent as an opponent of Dreyfus, he died June 30, 1913.

ROCHELLE, LA. Town and seaport of France. It lies in the bay enclosed by the islands of Ré and Oléron, and has a fine harbour. The harbour of La Pallice, 3 m. to the S.W., begun in 1890, is one of the best on the W. coast of France. Shipbuilding and allied industries are important. Pop. 41,521.

La Rochelle. Porte de la Grosse Horloge, 14-15th cent.

The towers of S. Nicolas, La Chaîne, and La Lanterne are landmarks of the old port. The hôtel de ville, with fortified walls of the late 15th century, dates mainly from 1595-1607, with fine Renaissance façades in the courtyard. The cathedral of S. Louis, 1742-62, stands on the side of the old church of S. Bartholomew. The episcopal palace is now a museum, and the town has many interesting medieval and Renaissance houses. In the 16th century the town became a Huguenot stronghold.

ROCHESTER. City of Kent. It stands on the Medway, 8 m. from Maidstone, on the Southern Rly. The cathedral was erected in the 11th and 12th centuries, but later many additions and alterations were made. Features are the Norman west front, the crypt, the nave, and the tower with 20th century spire. The ruins of Gundulph's Tower perpetuate the name of an early bishop. Of the Norman castle, the main relic is the massive keep. King's School was refounded by Henry VIII. Two old houses are Eastgate House, now a museum, and Restoration House. Near is Gad's Hill Place, the residence of Charles Dickens. The industries include the manufacture of cement, agricultural implements, steel, and oilcake. Pop. 31,933.

ROCHESTER. City and port of entry of New York, U.S.A. It stands on both banks of the Genesee river, 7 m. from its mouth in Lake Ontario, 68 m. E.N.E. of Buffalo. Across the river the New York State barge canal is carried by an aqueduct. Rochester is the seat of a university. Flour-milling and the manufacture of machinery, camera and photographic appliances, thermometers, boots and shoes, are industrial interests. Pop. 316,786.

ROCHESTER, EARL OF. English title held by the families of Wilmot and Hyde. It was given to Henry Wilmot, one of the most devoted followers of Charles II, in 1652. His son, John Wilmot (1647-80) succeeded to the earldom in 1658. It became extinct when Charles, the 3rd earl, died in 1681. In the same year the earldom was revived for Laurence Hyde, only to become extinct again when his son died in 1758.

Rochet as worn by Anglican bishops

ROCHET (French; Ital. *roccetto*) Ecclesiastical vestment. A kind of surplice, it is now worn by bishops under, instead of over, the chimere. The name *rochet* dates from about the 17th century, but the garment is much older. In its medieval form it had narrow sleeves.

ROCK. Geological term for certain hard masses of the earth's crust. A rock may be an aggregate of mineral particles of one kind only; but most rocks contain several minerals, and their chemical composition varies. Parts of the crust are either molten or subject at various times to melting, and their materials sometimes reach the surface in the form of lava. By analogy it is concluded that a number of rocks now formed of crystalline minerals were at one time molten in the crust. These rocks cut across the structures of other masses, send out veins into adjacent fissures, and sometimes include fragments of the rocks into which they have intruded. Such rocks are grouped with superficial lavas under the name *igneous*, which implies consolidation from a molten state. Slow cooling promotes coarseness of grain; rapid cooling allows some of the constituents to remain uncrystallised, i.e. in a glassy state. The basalts of Vesuvius and the diorites and granites that form mountainous scenery in Britain are *igneous*.

Another great group of rocks is styled *sedimentary*. Wherever rock of any kind is exposed at the earth's surface, it comes under the action of forces which cause it to break down and crumble. The mineral particles, moreover, decompose in various degrees, according to their chemical composition. Quartz is practically indestructible, and its

Rochester, Kent. Cathedral from the N.W., showing the Norman west front and modern central tower

fragments go to form sands, becoming smaller and ultimately rounded as they travel, until they come to rest in a valley-floor or sea, and are held together to form sandstone by the deposition of some mineral cement.

Lastly, *igneous* or *sedimentary* rocks in which new structures, or new minerals, or both, have arisen through the action of pressure or heat, or commonly of both, in the earth's crust are styled *metamorphic* rocks. Slate, schist, and gneiss, for example, are representative types of metamorphic rocks. See Fault; Geology; Isocline; Mineralogy; Petrology; Stratum; etc.

Rock Cress. Large genus of annual and perennial herbs of the order Cruciferae, also known as *Arabis* (q.v.).

ROCKEFELLER, JOHN DAVISON (b. 1839). American capitalist. Born July 8, 1839, he began business as a commission agent, and in 1862 became connected with the oil business, building the Standard Oil Refinery at Cleveland, Ohio, in 1865. Five years later a combination of firms was formed as the Standard Oil Company with a capital of £200,000,

J. D. Rockefeller being president. By 1882 the combine had absorbed or outvalued nearly all similar concerns in the U.S.A., and Rockefeller had become the wealthiest man in the world. He retired in 1911, having already devoted large sums to charitable and educational objects. His son, John D. Rockefeller, jun. (b. 1874), was associated with his father's many enterprises.

John D. Rockefeller, American capitalist

The Rockefeller Foundation is a fund established by J. D. Rockefeller "to promote the welfare of mankind throughout the world." From it grants have been made to educational and other societies throughout the world. The Foundation's capital is over £32,000,000.

The Rockefeller Institute for medical research was founded by John D. Rockefeller, sen., in New York city, 1901. The donor erected and endowed the necessary buildings at a cost of £800,000.

ROCKET (*Hesperis matronalis*). Perennial herb of the order Cruciferae, known also as *dame's violet* (q.v.). The name *rocket* is also applied to several other plants, e.g. London rocket (*Sisymbrium iris*), dyer's rocket or weld (*Reseda luteola*), sea rocket, yellow rocket.

ROCKET. Firework, in which the charge is so arranged that, when ignited, the case and charge are propelled through the air. Rockets were probably among the earliest missiles containing gunpowder, and preceded artillery in the use of explosives in battles.

An ordinary rocket consists of a stout cardboard case, closed at one end and with a restricted orifice at the other, which is fastened to a stick. The case is filled with gunpowder, tightly rammed, and formed with a conical hole for the greater part of its length, a short piece of quick-match being provided to ignite it. Generally a clay plug is placed above the powder, and in the head of the rocket is a small charge of gunpowder, and one or more coloured stars, a piece of quick-match communicating ignition from the main charge through the plug. When the rocket attains its maximum height the powder which is contained in the head explodes, blowing open the case and allowing the stars which have ignited to fall in a shower.

In 1928 a car propelled by rockets was shown in Berlin. Driven by the ignition of 24 rockets in succession, it attained 112 miles in an hour. Rocket propulsion has also been tried for boats and aeroplanes.

Rocket apparatus placed ready for action, showing rocket with thin line which it carries to the ship in distress

connexion is thus established. By means of the thin line a hawser is hauled to the ship in distress and made fast to the shore, and the rescue is carried out by means of a sling or breeches buoy, which is hauled backwards and forwards along it.

ROCK FERRY. Watery place of Cheshire, a suburb of Birkenhead. It stands on the estuary of the Mersey and is served by the L.M.S. and G.W. Rlys. There is steamer connexion with Liverpool. See Birkenhead.

ROCKET APPARATUS Contrivance consisting of rocket and tube, by means of which a thin line is thrown to a vessel wrecked near the shore, the range being about 100 yards, and

ROCK FISH. Popular name for certain species of wrasse (q.v.), a large group of fishes which occur among rocks and coral reefs. Several species are found round the British coasts.

ROCKHAMPTON. Town in Queensland. It lies on the Fitzroy river, 420 m. by rail N.W. of Brisbane. The terminus of the Central Queensland Rly., and the port for the mines at Mt. Morgan, it has rly. connexions with Brisbane and the other capital cities. The dist. grazes many cattle, and contains meat works, collieries, and gold and copper mines. Pop. 30,000.

ROCKINGHAM. Village of Northamptonshire. It stands near the Welland, 8 m. from Kettering, and is noted for its castle, of which some ruins remain. S. Leonard's church has monuments of the Watson family. To the S. and E. of the village extended the royal deer forest of Rockingham. Pop. 163.

ROCKINGHAM, CHARLES WATSON WENTWORTH, 2ND MARQUESS OF (1730-82) British statesman. Born May 13, 1730, he was made earl of Malton in 1750, and in the same year became marquess of Rockingham. In 1761 he was chosen leader of one of the sections of the Whigs, becoming active at this time as an opponent of Bute. In 1765 Rockingham became prime minister, but he was compelled to resign in 1766. He remained an opposition leader until March, 1782, when he was again at the head of a ministry, but three months later, July 1, 1782, he died. He left no children, and his titles became extinct.

ROCKINGHAM WARE. Pottery formerly made on the estate of the marquess of Rockingham, at Swinton, near Sheffield. The works were established in 1745. Rockingham ware is of a chocolate hue, the teapots, which are characteristically long, coffee-pots, jugs, and mugs being lined with white. Faint blue and white pottery was also produced in these works.

ROCKINGHAM WARE. Plate of this ware made about 1826. British Museum.

ROCKLING (Motella). Genus of shore fishes belonging to the cod family and nearly related to the ling. They are all of small size, and are represented in the British seas by several species. The young of one of these was formerly known as the mackerel midge, and was long regarded as forming a separate genus.

ROCK ROSE (Helianthemum chamaecistus). Trailing shrub of the order Cistaceae, a native of Europe, W. Asia, and N. Africa. It has opposite, oblong leaves, hairy on the upper side and downy beneath. The clear yellow flowers are over an inch across. It abounds on chalk hills and dry soils. Many other species and varieties of great beauty are widely cultivated in rock gardens. See Rose.

Rock Rose, a trailing shrub found on chalk hills

ROCKY MOUNTAIN GOAT (Oreamnus or Haploceros montanus). Goat-like mammal, found only in N. America. It occupies a doubtful position between the goats and the antelopes. In size it resembles a large sheep, and is covered with long white hair. The horns are black, and rise from the forehead with a slight backward curve. It is found only in the most remote parts of the mountains, and lacks the wariness of the true goats.

ROCKY MOUNTAINS. Name for the mountain system which stretches the whole length of N. America. Strictly, it should be limited to the E. ridge to the section of mountains abutting on the plains which comprise the middle of the continent. In this restricted sense the Rockies vary in width from 20 to 60 m.

In the N. section the peaks are in general below 8,000 ft. Between the Peace and Missouri rivers lie the S. Canadian Rockies, with considerable areas over 10,000 ft. high and many notable peaks. Here are the Crow's Nest and Kicking Horse passes. S. of the Canadian border this section is continued at a lower elevation as the Kootenay Mts.

The main area of the U.S. Rockies is the broadest part of the system. In N.W. Wyoming is the volcanic yellowstone region; farther E. lie the Big Horn Mts., and farther S. the Wind River Mts. In the S. of Wyoming the ridge becomes a lofty plateau, the Laramie Plains, which form a connexion with the ranges of Colorado, where Blanca, Pike's Peak, and Long's Peak, all over 14,000 ft., reach the highest points of the true Rockies.

In total length the Rockies stretch through 50° of latitude, with a general bearing to the N.W. from long. 100° W. to long. 150° W.; this implies a total length in excess of 4,000 m. See Canada; Crow's Nest; United States.

ROCOCO (Fr. roc, rock). In architecture and decoration, the name given to a style that prevailed in France and elsewhere on the Continent from the middle of the 17th century to the end of the 18th. It consists of an excessive use of curves, irregular disposition of doors and windows, and superabundance of ornament, imitating rock work and shells. The term has come to be applied to anything extravagant and tasteless in style.

ROD, POLE, OR PERCH.

Measure of length and area. Lineally, it is 5½ yds., or 16½ ft.; as a sq. rod, pole, or perch it contains 30½ sq. yds., or 272½ sq. ft.; 160 rods equal one acre. The sq. rod is used largely in measuring brickwork.

RODD, SIR JAMES RENNELL (b. 1858). British diplomatist. Born Nov. 9, 1858, he entered the diplomatic service in 1883 and was made second secretary to the British embassy at Rome in 1891. In 1893 he was in charge of the British agency at Zanzibar, and he remained in Africa until 1901. Rodd returned to Rome as secretary of legation in 1901, and from 1904 was British minister at Stockholm. He was ambassador at Rome, 1908-19. He was knighted in 1899, and created G.C.B. in 1920. In 1928, and again in 1929, he was elected Conservative M.P. for Marylebone. Sir Rennell published several volumes of poems, and in prose The Violet Crown, 1891.

RODENT (Lat. rodere, to gnaw). Animal belonging to the order Rodentia. The teeth are specialised for gnawing hard substances.

There is usually only one pair of incisors in each jaw, but these are largely developed and are chisel-shaped. As they have enamel on their outer side only, use tends to keep the edges very sharp. They continue growing throughout life, so that if one of them is lost or destroyed, the opposite one continues to grow till it may enter the other jaw, or may so curve as to prevent the mouth from opening. In other cases it curves round and assumes the form of a monstrous tusk. The canine teeth are always absent, and there is a considerable gap between the incisors and the molars. In most of the rodents the claws are blunt and usually somewhat broad, and the animal does not rest on them when engaged in walking.

Nearly all the rodents are strictly vegetarian in diet. The great majority of them burrow in the ground, though some are arboreal and a few aquatic.

Hibernation is a common habit in this order, while many species store up large provisions of food for the winter. Among the rodents are included the squirrels, marmots, beavers, jerboas, rats, mice, hamsters, voles, lemmings, porcupines, agoutis, earies, hares, and rabbits. They are world-wide in distribution. See Rat, etc.

RODENT ULCER. Form of cancer of the skin. It is generally restricted to elderly persons, and most frequently affects the face, particularly the forehead or the skin around the eye. The condition begins as a small papule which ultimately ulcerates. Progress is usually very slow and painless. Gradually, however, the ulceration increases, until it may involve a large area of the skin and eat into the underlying structures. Treatment by X-rays, particularly in the early stages, is very effective.

RODEO. Originally a rounding-up of cattle, usually for branding. Cowboys on the plains of S. America become very expert at catching the cattle, and exhibitions of their skill became public spectacles in the large American cities. In 1924 a rodeo was held at Wembley, in connexion with the exhibition there. Pron. Ró-dó-o.

RODIN, FRANÇOIS AUGUSTE (1840-1917). French sculptor. Born in Paris, Nov. 14, 1840, he studied drawing at a free school. His first important work, a bust named The Man with the Broken Nose, was rejected by the Salon, 1863. In 1875 he went to Italy, where he studied the work of Michelangelo, Donatello, and other masters. Returning to France, 1877, his noble figure study, The Age of Bronze, created a favourable impression.

The great Gate of Hell, undertaken for the

Rocky Mountain Goat. White-coated mammal found in the mountain fastnesses of N. America
W. S. Berridge, F.Z.S.

Rodent. Diagram showing arrangement of teeth in a hare

Rococo. Capital of a column in rococo style

Auguste Rodin, French sculptor

Musée des Arts Décoratifs in 1880, occupied him for most of the latter part of his life. The Damvillers monument to Bastien-Lepage was completed in 1889; the Nancy statue of Claude Lorrain occupied 1889-92. The Burghers of Calais group, commissioned in 1886, was completed in 1895; a replica was erected in Victoria Tower Gardens, Westminster, in 1918. In 1905 Rodin presented 20 of his works to the British people. He died at Meudon, Nov. 17, 1917.

RODING. River of Essex. It rises about 2 m. N.W. of Dunmow, and flows for 34 m. to the Thames, 2 m. S.E. of East Ham. The lower course has been canalised to Ilford.

H.M.S. Rodney. British battleship completed in 1927
Stephen Cribb, *Southsea*

RODNEY. British battleship. A sister ship to the Nelson, she was laid down in 1922 and completed in 1927. She displaces 35,000 tons and carries nine 16-in. guns and twelve 6-in. guns, as well as lighter ones. Her total length is 702 ft. and she burns oil fuel. The ship cost £7,500,000. See Battleship; Nelson.

RODNEY, GEORGE BRYDGES RODNEY, 1st Baron (1719-92). English sailor. Born in London, Feb. 13, 1719, he distinguished himself in the battle off Ushant, 1747. Promoted to flag rank in 1759, he bombarded Havre in that year, and in 1761, while in command of the Leeward Islands station, captured Martinique, Santa Lucia, Grenada, and St. Vincent. In 1779 he received orders to relieve Gibraltar, and this he performed by defeating the Spanish fleet off Cape St. Vincent, Jan. 16, 1780. In 1782 he went to the W. Indies and defeated Grasse off Martinique, April 12, 1782. The French were routed, but Rodney refused to pursue. He was recalled, but was made a baron. He died May 23, 1792. The barony passed to his son George (1753-1802), whose descendant became the 8th baron in 1909.

1st Baron Rodney,
English sailor
After Reynolds

1782. The French were routed, but Rodney refused to pursue. He was recalled, but was made a baron. He died May 23, 1792. The barony passed to his son George (1753-1802), whose descendant became the 8th baron in 1909.

ROE, SIR THOMAS (c. 1581-1644). English explorer and ambassador. Born at Low Leyton, near Wanstead, Essex, he secured an appointment at court and was knighted. In 1610 he sailed up the Amazon and to the Orinoco. He made two other voyages to the same quarter in quest of gold. In 1615 he was sent as ambassador to the court of the Mogul, where he obtained privileges for the English merchants which established the foundations of British supremacy in India. He died Nov. 6, 1644.

Part of his journal as ambassador to the Mogul was published by Samuel Purchas (q.v.), and the whole narrative was issued by the Hakluyt Society in 1899.

ROEDEER (*Capreolus capraea*). Small species of deer. It stands about 26 ins. high

at the shoulder, and the colour of the pelt is reddish in summer and olive brown in winter, with a large white patch on the rump. The antlers are about 8 ins. long, and rise almost vertically from the head, usually with three short tines. The head is short and the ears rather large in proportion. The roe deer occurs throughout most parts of Europe, and is indigenous in Great Britain. See Deer.

ROEHAMPTON. District of Surrey, on the W. of Putney Heath. It once formed part of Putney and Mortlake Park. On part of the park was erected the convent of the Sacred Heart. Other buildings of note include Manresa House, a Jesuit college connected with S. Joseph's R.C. church; Dover House, Downshire House, Roehampton House, and Queen Mary's Hospital, where soldiers maimed in the Great War are provided with artificial limbs and trained in handicrafts. During the Great War Roehampton was a headquarters for training of the dirigible balloon section of the R.A.F. See Artificial Limb.

ROGATION DAYS. Three fast days observed by the Roman Catholic and Anglican churches. They are the Monday, Tuesday, and Wednesday before Ascension Day, the preceding Sunday, the 5th after Easter, being known as Rogation Sunday. In the Church of England, which has no special prayers for these days, the only survival of the processions are the perambulations of parishes, still maintained in some places, and known as beating the bounds (q.v.).

ROGERS, SAMUEL (1763-1855). British poet. Born at Stoke Newington, July 30, 1763, he entered his father's bank as a youth, and became head of it in 1793. His leisure was devoted to the cultivation of literature, and by 1792 he had established his fame as a poet with the very successful *Pleasures of Memory*. About this time Rogers took rooms in the Temple, and his breakfasts became famous. His other poems include *Columbus*, 1810, a fragment of an epic, *Jacqueline*, 1814, *Human Life*, 1819, probably the best of his works, and *Italy*, 1822. He died Dec. 18, 1855. Rogers amassed a magnificent art collection and library that after his death was sold for £50,000. Consult S. Rogers and his Circle, R. E. Roberts, 1910.

ROHILLA. People of Afghan race. Early in the 18th century they settled in a territory to the N.W. of Oudh, to which the name Rohilkhand was given. There they came into conflict with the Marathas, against whom they secured the help of the nawab of Oudh, Suraj-ud-Dowlah. For this assistance the Rohillas promised 40 laes of rupees to the nawab, but they only discharged a portion of their debt, whereupon the nawab made a bargain with Warren Hastings, who, in return for a sum of money, promised to send a force against the Rohillas. The result was the short Rohilla war of 1774, in which the tribesmen were quickly crushed. See Hastings, Warren.

ROKEBY. Village of Yorkshire (N.R.). It stands where the Greta falls into the Tees, 3 m. from Barnard Castle. It owes its fame to Scott's poem. Pop. 150.

ROLAND. Frankish soldier, celebrated in legend as the greatest of Charlemagne's paladins. The historic Roland or Hruotland was slain by the Basques when they overwhelmed the rearguard of Charlemagne's army on its return from an expedition against the Moors of Spain in 778. Popular tradition transformed Roland into a national hero, the

nephew of Charlemagne, and his assailants into Saracens. As Orlando, Roland is the hero of Ariosto's *Orlando Furioso*.

The Song of Roland, the national French epic, is the oldest and finest of the extant chansons de geste. Written probably by a Norman, between 1066 and 1099, it is based on distorted memories of the disaster to Roland.

ROLAND DE LA PLATIERE, MARIE JEANNE PHILPON (1754-93). French memoir and letter writer and revolutionary leader. She was the daughter of an engraver named Philpon, and was born in Paris, March 18, 1754, and in 1780 married Roland de la Platière, husband and wife becoming prominent among the Girondist leaders. Madame Roland's letters and memoirs throw much light on the period, and reveal her as one of the most brilliant intellects of her time. She was guillotined Nov. 8, 1793. Her last words have become famous: "Oh, Liberty, what crimes are committed in thy name!" Her *Mémoires*, first published in 1820, and her *Lettres*, 1867, have been many times reissued.

Madame Roland,
French writer and
revolutionary leader

ROLLAND, ROMAIN (b. 1866). French author. Born at Clamecy, Nièvre, Jan. 29, 1866, he devoted himself to literature and became professor at the Sorbonne. The thesis which he wrote for his degree, *Les Origines du Théâtre Lyrique Moderne*, 1895, was crowned by the French Academy. His plays, *Aërt*, 1898; *Le Triomphe de la Raison*, 1898; *Danton*, 1901; and *Le 14 Juillet*, 1902, were not greatly successful, and he turned to other literary fields. He produced a rapid succession of notable works, including *Le Théâtre du Peuple*, 1904 (Eng. trans. 1919); critical biographies of Beethoven, 1903; Michelangelo, 1907 (Eng. trans. 1912); Handel, 1916; and Tolstoy, 1911 (Eng. trans. 1911); and *Musiciens d'Autrefois*, and *Musiciens d'Aujourd'hui*, 1908 (both translated into English, 1915). While producing these books Rolland had also been engaged upon his masterpiece, *Jean-Christophe*, published in ten volumes, 1905-12 (Eng. trans. 1911-13). Rolland received a Nobel prize for literature, 1915.

Romain Rolland,
French author

ROLLER. Group of birds, including several genera, widely distributed throughout the E. hemisphere. In general appearance they resemble crows, but have plumage of very brilliant colours. The blue roller (*Coracias garrula*) breeds in S. Europe, and occasionally visits Great Britain. It is like a jay, has chestnut brown and blue plumage, and is about 12 ins. in length. The name is derived from the habit of these birds of appearing to lose balance and roll over when in flight, especially by the males.

ROLLER SKATING. Pastime of skating on wheels. This form of skating was in vogue in the United Kingdom as early as 1800. At first a fixed axle type of skate was used, but with the inclined axles principle and

Roller, the blue species which visits Great Britain

four wheels to each skate, introduced from America in 1863, the execution of figures on roller skates became possible. In 1879 the National Skating Association was formed to promote the sport; and in 1890 the Olympia hall, at West Kensington, was opened as a roller-skating rink. With the advent of the ball-bearing skate the pastime increased in favour. See Skating.

Roller Skating. Ball-bearing four-wheel type of roller skate

ROLLESTON. Village of Staffordshire. It stands on the Dove, $\frac{3}{4}$ m. from Burton-upon-Trent, with a station on the L.M.S. Rly. Rolleston Hall, standing in a fine park, was the seat of Sir Oswald Mosley, Bart., but the estate was sold in 1919. Here Sir Oswald began the manufacture of standard bread.

ROLLRIGHT, GREAT AND LITTLE. Two villages of Oxfordshire. They are situated in the Cotswold Hills, 3 m. N. and N.W. respectively of Chipping Norton, and have a total pop. of about 400. Half a mile from Little Rollright are the important megalithic remains, the Rollright Stones. The isolated King's Stone and the clustered Whispering Knights are the chief stones left.

ROLLS. Name used for documents of historic interest and value, such as the Pipo Rolls and others in the Public Record Office. The Rolls Series are editions of the early English historians published from time to time under the direction of the Master of the Rolls, who is the head of the office as well as a legal official. The Rolls Chapel stood in Chancery Lane, London, E.C.

Charles Stewart Rolls, British engineer Elliott & Fry

ROLLS, CHARLES STEWART (1877-1910). British engineer and airman. Born in London, Aug. 28, 1877, a younger son of the 1st Baron Llangattock, he was educated at Eton and Trinity College, Cambridge. After some engineering work at

Crewe, Rolls devoted his time to popularising the motor car in England. He formed the company which became Rolls-Royce, Ltd. About 1901 he turned his attention to aeronautics, and, making many daring flights, was soon one of the best known of British airmen. He was killed while flying at Bournemouth, July 12, 1910. There is a statue to him in the these works at Monmouth.

ROCKING HOLIC CHURCH, The fishes belonging to him acknowledging the related to the ling. The pope. It claims to and are represented by founded by Jesus several species. The yel to teach all nations formerly known as the mar it asserts that it long regarded as forming ad to S. Peter and **ROCK ROSE** (Helianthe church is in cistus). Trailing shrub of the Christ taught, a native of Europe, W. Asia, aple incarnate, has the Mass, the ler without echange

Rock Rose, a trailing shrub found on chalk hills

of the pope, who is college of cardinals bishops. The members the jurisdiction of ointed by the pope, cerous clergy, the otus bishops, and varieties bound by beauty and friars cultivated wet, and gardens. Stomen,

eioistered and contemplative, who are engaged in teaching and nursing.

The distinctive doctrines of the church include the immaculate conception of the Virgin, the seven sacraments, the sacrificial aspect of the Mass, purgatory, the invocation of saints and the supremacy and infallibility of the pope. Auricular confession to a priest is obligatory, and under the name of penance it is one of the seven sacraments.

The Roman Catholic population of the world is estimated at 340,000,000, and of these 2,156,146 are in England and Wales, 600,000 in Scotland, and 3,242,670 in Ireland. In England and Wales there are 4 archiepiscopal and 14 episcopal sees, in Scotland 2 and 4, and in Ireland 4 and 24 respectively. Predominantly Roman Catholic countries are Italy and Spain, nearly the whole of Central and South America, Lower Canada, and the Irish Free State. See Catholic Emancipation; Papacy; Reformation; S. Peter's; Vatican.

ROMANCE. Name given to a group of languages, including a number of dialects, spoken in most of those countries of S. and W. Europe which once belonged to the Roman empire. These languages are: Italian, Spanish, Portuguese, Provençal (with Catalan), Rhaeto-Romanic (spoken in the Grisons and Tirol), Rumanian, and French. They are all descended from Latin, not the literary, but the popular language. The Romance languages exhibit great wealth of new formations, such as augmentatives and diminutives. The vocabulary is in the main Latin. The most mixed is Rumanian, into which Slavonic, Turkish, Greek, and Illyrico-Albanian elements have made their way. Italian has remained most faithful to the parent language, while French exhibits the greatest divergences. See Franco; Latin; Provence; Spain, etc.

ROMAN EMPIRE. The date accepted by Roman antiquaries for the foundation of Rome was 753 B.C. Early Rome was engaged in almost incessant warfare. The right bank of the Tiber was in possession of the Etruscans, and there were turbulent raiders in the mountains in all directions. The inhabitants of the plains of Latium, the Latins, were closely akin to the Romans.

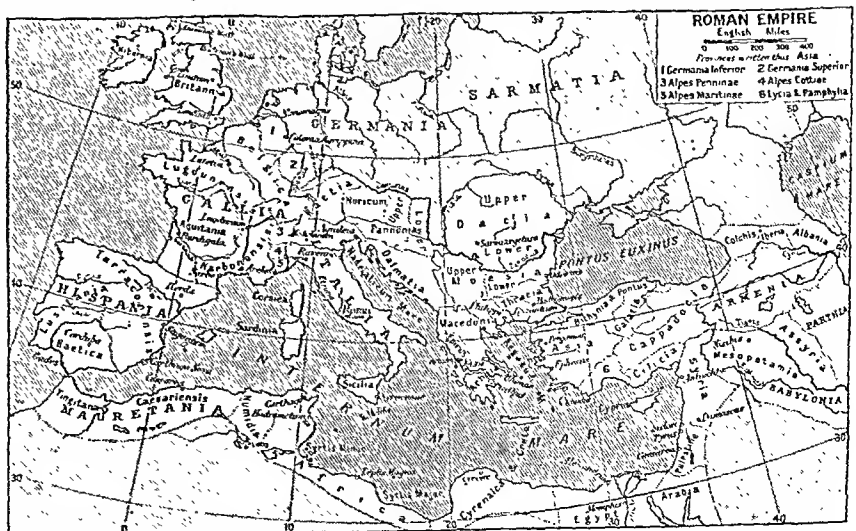

Rome was originally a member of a confederation of Latin-speaking communities, of which she was a principal defensive outpost. Nothing but a very closely knit military and civil organization could have enabled Rome to exist in the earliest period. At first a monarchy, Rome became a republic. The first great step towards empire was obtaining control over the League of Latin cities, which

was achieved finally in 338 B.C. The control of the Greek cities in Campania was obtained about the same time, and soon the Etruscans were subjugated, and by the beginning of the third century B.C. Rome had the control of the whole peninsula.

Rome's greatest ordeal in these early days was the long struggle with Carthage. After three great contests (264-241 B.C., 218-201, and 149-146) Carthage was utterly destroyed. Macedonia was conquered and annexed, and in 133 the last king of Pergamum bequeathed his dominions to Rome, and they became the Roman province of Asia. About the same time the first steps were taken towards the conquest of Gaul. The last annals of the republic were filled with the struggles for control of the Roman polity between military commanders—the Scipios, Marius, Sulla, Pompey, Julius Caesar, and Mark Antony—and then the republic perished. The imperial system itself emerged from a great scene of bloodshed, within and without Italy. The victory of Augustus at Actium in 31 B.C. raised him to undisputed dominion.

Augustus (63 B.C.-A.D. 14), the first Roman emperor, did not aim at any extension of the empire, though there were frequent and sometimes serious wars with the German and other barbarian tribes upon its confines. He established the Pax Romana, the Roman Peace, within the empire itself. The provinces were admirably governed and Italy flourished greatly. Even the extinction of his line, when Nero perished in A.D. 68, shook the foundations of the imperial edifice but little. The Julian-Claudian line was succeeded by the nominees of the eastern forces in the person of Vespasian. Following Nerva came the soldier emperors of great ability, Trajan and Hadrian, and after them the Antonines, the best governors of the whole imperial period. The philosopher-emperor, Marcus Aurelius, gave place to a feeble and vicious son, Commodus; on his assassination, A.D. 180, military nominations followed for several generations. Aurelian, in 270, found the empire ready to crumble away, owing to internal weakness and dissensions and the formidable assaults of Germanic tribes.

On the accession of Diocletian, one of the greatest of the emperors, a new era began. He reconstituted all the imperial institutions and, for administrative purposes, divided the empire into two spheres, an eastern and a western. In 330 Rome was deprived of its pre-eminence by Constantine the Great, who gave the old Greek city Byzantium a new name, Constantinopolis. Following his death his

Roman Empire. Map of the Empire at its greatest extent, during the reign of Trajan, A.D. 98-117

three sons divided the empire. Then followed a succession of emperors, including Julian the Apostate, Valentinian, Gratian, and Honorius, during whose reigns there was continuous fighting. By the end of the first quarter of the 5th century the Goths had overrun Italy and Gaul; Vandals and Germans were in Spain. Rome itself was sacked by Alaric in 410 and plundered by the Vandals in 455. The mighty empire was succeeded by the medieval empire known as the Holy Roman Empire, and by the Byzantine empire at Constantinople. *See* Augustus; Empire; Hadrian; Nero; Rome, etc.

ROMANES, GEORGE JOHN (1848-94). British scientist. Born at Kingston, Canada, where his father was a professor, May 20, 1848, he completed his education at Caius College, Cambridge. Deciding to make scientific research his life work, he made many biological observations in a laboratory of his own, at Dunskaith, in Scotland. The results of his work appeared in various papers and lectures, and brought him the F.R.S. He died in Oxford, May 23, 1894.

George J. Romanes,
British scientist

His works include *Animal Intelligence*, 1881; *Mental Evolution in Animals*, 1883; *Darwin and after Darwin*, 1892-97; and *Essays*, 1897. He also wrote *The Fallacy of Materialism and Thoughts on Religion*. Consult his *Life and Letters* by his wife, 1896. Pron. Ro-mahnez.

The *Romanes Lecturo* is delivered annually at Oxford. It was founded by George John Romanes in 1891, the terms being that a man of eminence shall be elected annually to lecturo on a scientific or literary topic.

ROMANESQUE. In general, the style of building prevalent in Europe from the 4th century to the 12th. Based on Roman architecture, it expressed and developed the principle of the round arch and the vault, but locally it differed widely from its exemplar in plan and constructive aim. Thus the Romanesque period witnessed the development of the cruciform church, the standard type of medieval church, from the basilica.

Broadly speaking, the style followed two separate lines of development, those of the East and the West. That of the East, radiating from Constantinople, was known as the Byzantine (q.v.), that of the West was profoundly modified by Byzantinism, especially in Venice, Ravenna, and along the Adriatic shore, and shared with it certain distinctive features, such as the springing of the arch direct from the cushion capital. The progress of Romanesque towards Gothic was more rapid in France than elsewhere. Among the principal features of a decorative character in Romanesque building was the arcade. In England, Romanesque appeared in the 11th century in the form of Norman architecture. It flourished also with local peculiarities in Provence, where, in the 11th and 12th centuries, it is spoken of as the Roman style. *See* Apse; Arcade; Architecture; Basilica; Capital; Mosaic; Rome.

ROMANI. Town of Egypt, in the N. of the Sinai peninsula. It is 20 m. E. of the Suez Canal, on the rly. from El Qantara (El Kantara) along the Mediterranean coast. It gives its name to a battle fought here in Aug., 1916, between the British and the Turks, sometimes called the second battle of Katia. On Aug. 3 the Turks carried the dunes, but the Australians and New Zealanders were reinforced and the dunes were recaptured. Fighting continued during Aug. 5-7, the British steadily driving on the Turks. The Turkish losses were estimated at 10,000, of whom 5,000 were prisoners. *See* Palestine.

ROMANIA. Name given sometimes to the Latin kingdom of Constantinople, which was founded by the Crusaders in 1204, and lasted until 1261. In 1203 the members of the fourth crusade restored Isaac Angelus and his son, Alexius IV, to the throne of Byzantium. Certain troubles arose between the allies, the result being that the Crusaders captured the city. Then the new empire was founded, its first ruler being Baldwin, count of Flanders. The latter was taken prisoner in Greece, and his successors could do nothing to maintain, much less to extend, their authority. The Byzantine emperors, who had retired to Asia Minor, won back their lost territory piecemeal until in 1261 Michael Palaeologus retook Constantinople and the Latin empire came to an end.

ROMAN LAW. System of civil law evolved in the Roman state from the time of the kings until its codification by Justinian. Its importance lies in the fact that it is still the basis of a large part of European jurisprudence, as well as of the systems in other parts of the world, such as S. America and S. Africa, which were built up originally on the same basis. Further, it lays down many principles which are common to the English law.

Taking the Twelve Tables (450 B.C.) as the starting point, the sources of Roman law may be summarised as follows: (1) Imperial decisions, whether made in the form of commands to officers (Mandata), replies to appeals from public bodies (Epistolae), or from magistrates (Rescripta), or of judgments (Decreta), or of general laws (Edicta.) (2) Equity of the Praetors and Curule Aediles (3) Opinions of the juriconsults (Responsa prudentium), of whom the greatest were Paulus, Ulpian, Papinian, Gaius, and Modestinus. The best part of Roman law may be ascribed to the juriconsults, though the praetors also built up a sort of case law, very useful and effective till codified by the Edictum Perpetuum of Salvius Julianus in the reign of Hadrian (A.D. 117-138). In A.D. 529-34 came the Institutes and Pandects of Justinian.

ROMANOFF. Name of the family which occupied the throne of Russia, 1613-1917. It derives its name from Roman, a member of an old noble house, whose daughter, Anastasia, married the tsar Ivan the Terrible, while his son, Nikita, married the princess Eudoxia, a descendant of Rurik, the founder of the Russian monarchy. Nikita's son, Feodor, became the patriarch Philaret of Moscow, and his son, Michael Romanoff, was elected tsar in 1613. The male line ended with Peter II in 1730, when Anna, daughter of Ivan II, ascended the throne. On the extinction of her line, which happened on the death of the empress Elizabeth in 1762, the crown passed to the Holstein-Gottorp or Oldenburg branch, descended from Anne, a daughter of Peter the Great. The family occupied the throne until the abdication of the tsar Nicholas II (q.v.), March 15, 1917. *See* Ekaterinburg; Russia.

ROMANONES, FIGUEROA Y DE TORRES MENDIETA Y DE ROMO, DON ALVARO, COUNT OF. Spanish statesman. He entered the Cortes as Liberal deputy for Guadalupe, and first held office in 1905, when he was minister for public works, agriculture, and commerce. In Nov., 1912, he became Liberal prime minister on the death of Señor Canalejas. Next month the collective resignation of the Cabinet was announced, but Romanones remained in power at the head of a new cabinet until Oct., 1913, when he resigned. Romanones took office as prime minister again in Dec., 1915, and remained in office until May 1, 1917. Foreign minister, Nov., 1918, he was prime minister, Nov., 1918-April, 1919.

ROMANS, EPISTLE TO THE. One of the four principal epistles of the apostle S. Paul. The epistle would seem to have been written

from Corinth towards the end of the apostle's third missionary journey, and to have been intended to prepare the way for a visit to the Roman Christians. Its purpose is to explain the universal character of the Gospel and the leading ideas of Christian doctrine, and to give practical advice.

The epistle was written about A.D. 58 to a community which included both Jews and Gentiles. Its genuineness is fully attested. It was used freely by the author of 1 Peter, and by Clement of Rome, Ignatius, and Polycarp. It has much in common with other epistles written by S. Paul. *See* Bible; Paul.

ROMANTICISM. Movement in art. Embodying a revolt against the classic tradition in art, it began about the middle of the 18th century and permeated all western Europe. It constituted an appeal to the emotions instead of to the intellect, and reached its climax of intensity in the first part of the 19th century, affecting the modes of the day, when materialism in the industrial world had become all-powerful. Its principal manifestations were the school of figure painters headed by Géricault and Delacroix, and that of the Barbizon painters of landscape, while the same ideal was taken up by the English Pre-Raphaelites.

The term romantic movement is given to a phase through which imaginative fiction in prose and verse passed in the period approximately covered by the last third of the 18th and the first third of the 19th century.

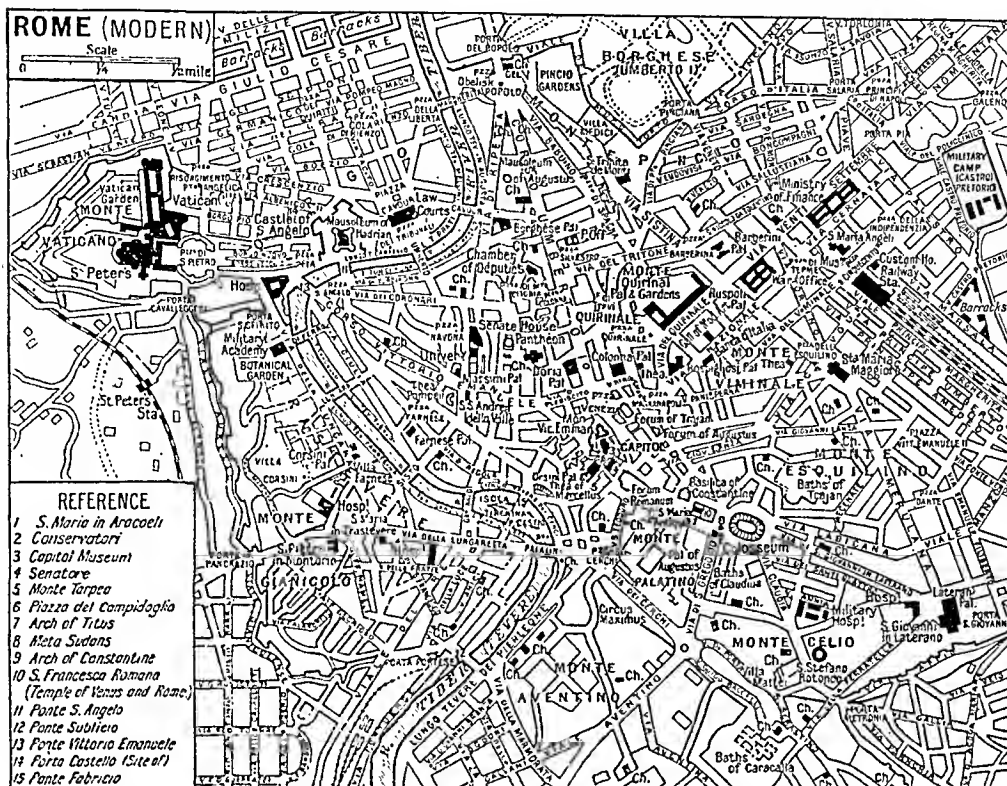

ROME. City of Italy, in the province of Latium, and the capital of the kingdom. It stands on the Tiber, mainly on the left bank, 17 m. from its mouth. The most modern region is N.E. and E. of the Campus Martius and beyond the Corso, covering the slopes and plateaux of the Pincian, Quirinal, Viminal and Esquiline hills. Among the most prominent modern buildings are the monument to Victor Emmanuel II, the law courts, the Chamber of Deputies, the Bank of Italy, the Policlinico (hospital), and the home of the Ministry of Marine. Pop. 914,631

Rome: plan of the Forum Romanum. 1. Arch of Titus. 2. Temple of Vespasian. 3. Arch of Septimius Severus. 4. Forum of Peace. 5. Column of Diocletian. 6. Orators' platforms. 7. Black Stone. 8. Arch of Augustus. 9. Spring of Iuturna. 10. Temple of Vesta. 11. Temple of Marcus Aurelius and Faustina. 12. Mamertine dungeon. 13. Senate House. 14. Voting place. 15. Record Office. 16. Pool of Curtius. 17. Altar of Julius Caesar. 18. Palace of Numa. 19. House of the Vestals. 20. Granaries

The traditional date of the foundation of Rome is 753 B.C. The nucleus of the city was the Palatine hill. There were other settlements on the surrounding hills, and these were fused into one about the middle of the 6th century B.C., when the Cloaca Maxima was constructed, and the adoption of the Forum as a market place made possible. To this period belongs the building of the earliest city walls, which enclosed the seven hills—Palatine, Capitol, Aventine, Caelian, Esquiline, Viminal, and Quirinal.

Augustus completed what Julius had begun, and displayed much activity in other directions, so that his boast that he found Rome of brick and left it of marble is amply justified. He erected three groups of public buildings in the Campus Martius, restored no fewer than 82

Rome. Plan of the capital city of Italy, showing the principal churches and public buildings

temples, built others, including that of Apollo on the Palatine, and constructed the first public baths. His successors constructed a splendid palace on the Palatine hill, while Nero occupied the whole district between the Palatine and Esquiline with his enormous Golden House. Vespasian built the first permanent amphitheatre, the Colosseum, added a new forum, that of Peace, and rebuilt the temple of Jupiter on the Capitol. To his second son, Domitian, is mainly due the construction of a still more magnificent imperial residence on the Palatine. Domitian also began the construction of a new forum, which was finished by Nerva. The series of imperial fora was completed by Trajan, who also brought another aqueduct to Rome, and erected enormous public baths on the site of the Golden House.

Besides the immense villa which he erected for himself near Tivoli, Hadrian is responsible for the temple of Venus and Rome, for the Pantheon in its present form, and for his mausoleum, which later became the Castle of S. Angelo, the great fortress of the popes, and the bridge leading to it. Marcus Aurelius imitated Trajan in erecting a column on which his campaigns were represented in bas-relief.

Septimius Severus was the next great builder. The temple of Vesta, the house of the Vestals, and other buildings were restored by him, and he made a considerable addition to the imperial palace on the Palatine. His son Caracalla built huge thermae on the Via Appia. In 283 a fire gave Diocletian the opportunity of further restorations; he was also responsible for the colossal baths which bear his name. Muxentius erected the greater part of the huge basilica in the Forum which his conqueror, Constantine (Constantine), completed.

In the pontificate of Sixtus V (1585-90), with the new S. Peter's planned in course of erection, Rome took on the outward appearance which it had until after 1870. By the construction of an aqueduct which supplied the hills, he rendered them once more fit for habitation, and the transformations he wrought in the streets are noteworthy. The re-erection of many ancient obelisks did much to give them a striking termination. After 1870, the growth of the modern city led not only to the occupation of almost all the areas within the city walls by buildings, but to the construction of numerous suburbs. See Appian Way: Aure-

quests. These sculptures aimed more and more at giving the effect of paintings. Decadence soon set in. The arch of Trajan suffers from overcrowding, and the bird's-eye reliefs from the arch of Septimius Severus lack proportion and perspective. Portrait sculpture, however, continued to flourish, the busts of Caracalla and that of Philip the Arabian showing frank and intimate characterisation. The handicrafts, gem cutting, silver and brass work, and especially die-cutting (for coins), flourished under the early empire, and wall decoration, as illustrated by the Pompeian and Roman frescoes, reached a high level.

lian's Wall, illus.; Capitol; Catacomb; Colosseum; Forum; S. Peter's; Vatican, etc.

ROMAN ART. In republican times the Romans mainly employed Etruscans or Greeks in the erection and adornment of their buildings. But by the last century of the republic a flourishing school of portrait sculpture had arisen. There are extant busts of Caesar, Pompey, and Cicero, and Pasitales had founded a school which practised adaptation of Greek types rather than their direct copying. Under Augustus the Greek influence was still dominant in sculpture, though the close association of this art with history, particularly military history, was purely Roman.

Tho Ara Pacis Augustae (13 to 9 B.C.), celebrating that emperor's pacification of the West, inaugurated a series of triumphal arches decorated with reliefs. This form of sculpture reached its zenith under the Flavian emperors, when the arch of Titus was built, and though technical accomplishments declined under Trajan, a new form was developed in the "continuous" spiral relief such as those on the columns of Trajan and Antoninus, representing imperial contin-

Rome. The city viewed from the dome of S. Peter's. In the foreground is the great piazza, beyond which flows the Tiber, with the Castle of S. Angelo and the houses of parliament on its left bank. In the distance, on the right, is seen the marble monument to Victor Emmanuel

ROMFORD. Urban dist. and market town of Essex. It stands on the Rom, a tributary of the Thames, 12 m. N.E. of London, and is served by the L.N.E. and L.M.S. Rlys. The main industry is brewing, but there are engineering and other works. An arterial road runs from Woodford and Wanstead to Romford. Market day, Wed. Pop. 19,448.

ROMILLY, SIR SAMUEL (1757-1818). British legal reformer. Born, of Huguenot descent, in London, March 1, 1757, he was called to the bar in 1783. He was deeply influenced by his study of Rousseau and Beccaria, and became a strong advocate of humanitarian principles in criminal law. In 1806 he became solicitor-general, and he was an M.P. from 1806 until his death. Romilly secured the abolition of the death penalty for certain classes of petty theft, and consistently supported measures of reform and emancipation. He committed suicide, Nov. 2, 1818, following on the death of his wife.

Sir S. Romilly,
British lawyer
Sir T. Lawrence

His son John (1802-74) was solicitor-general and later attorney-general. In 1851 he was made master of the rolls and was the last master to sit in the Commons. In 1865 he was made a baron. He died Dec. 23, 1874.

ROMNEY, NEW. Borough of Kent, one of the Cinque Ports. It is 75 m. from London and 8 m. from Hythe, on the Southern Rly. It lies in the extensive level tract of rich pasture land known as Romney Marsh, which is protected against the encroachment of the sea by an earthen embankment stretching from New Romney to Hythe. The church of S. Nicholas is mainly Norman. In the Middle Ages Romney was the chief of the Cinque Ports. The encroachments of the sea have destroyed its harbour, and it is now about a mile from the coast. Littlestone-on-Sea is part of the borough. It is called New Romney to distinguish it from Old Romney, a village 2 m. to the W. Pop. 1,605.

The title of earl of Romney has been borne since 1801 by the family of Marsham. In 1905 Charles Marsham (b. 1864) became the 5th earl. His eldest son is called Viscount Marsham. An earlier earl of Romney was Henry Sidney (1641-1704), a son of Robert Sidney, 2nd earl of Leicester, who was created earl of Romney in 1694. He died unmarried, April 8, 1704.

ROMNEY, GEORGE (1734-1802). British painter. Born at Dalton-in-Furness, Dec. 15, 1734, he worked with his father, a cabinet-maker, studying drawing in spare moments. His first pictures of note were *The Death of Wolfe*, 1763, purchased for the council chamber at Calcutta, and *The Death of King Edmund*, 1765. Slowly building up a connexion as a portrait and subject painter, he prospered sufficiently to visit Italy. On his return he became fashionable and a rival of Reynolds, painting, among others, the duke of Richmond, Lady Warwick and her Children, "Perdita" Robinson, and Lady Russell and Child. From 1782-85 most of his attention was devoted to Lady Hamilton, of whom he painted many character portraits. He died at Kendal, Nov. 15, 1802. Examples of his work are in the National and the National Portrait Galleries, London. See illus. pp. 699, 801, 1007.

George Romney,
British painter
From the portrait by
M. Archer Shee, R.A.

ROMSEY. Borough and market town of Hampshire. It stands on the Test, 10 m. from Southampton, with a station on the

Southern Rly. The chief building is the beautiful church, originally that of a Benedictine nunnery. Romsey grew up around a religious house for women, founded probably by Edward the Elder about 910. Near is Broadlands, once the seat of Lord Palmerston. Market day, Thurs. Pop. 4,826.

ROMULUS. Legendary founder of Rome. He was represented as a son of Mars by a daughter of Numitor, son of the last king of Alba Longa. When her twin sons Romulus and Remus were born, mother and children were cast into the river by order of Amulius, brother of Numitor. The children drifted ashore and were suckled by a she-wolf. On reaching manhood they slew the usurper Amulius and re-instated their mother's father Numitor. They then proceeded to found a city on the Palatine Hill. Romulus was taken up to heaven in a fiery chariot by his father Mars, and thereafter worshipped by the Romans as a god under the name Quirinus. See Rome.

RONALD, SIR LONDON (b. 1873). British musician. Born in London, June 7, 1873, his family name being Russell, he studied at the Royal College of Music, 1885-90, appeared on the platform as a pianist, 1890, and conducted light opera on tour. He conducted many famous Continental orchestras, 1908-9, and became conductor of the New Symphony (now Royal Albert Hall) Orchestra, 1908. In 1910 he became principal of the Guildhall School of Music. His compositions include much incidental music for stage productions, e.g. *The Garden of Allah*, 1920, and over 200 songs. In 1922 he was knighted.

RONALDSHAY or **RONALDSAY.** Two islands of the Orkneys, Scotland. North Ronaldshay is 3 m. long and 2 m. broad. The North Ronaldshay Firth, which separates it from Sanday, is dangerous to navigation. Pop. 440.

South Ronaldshay is 3 m. long and 4 m. broad, and has remains of several Picts' houses. Pop. 2,000.

The title of earl of Ronaldshay is borne by the eldest son of the marquess of Zetland (q.v.).

RONCESVALLES or **RONCEVAUX.** Village of Spain. In the Pyrenees, 5 m. S. of the French frontier and 21 m. N.E. of Pampeluna (Pamplona), it is famous as the scene of the defeat of the rearguard of Charlemagne under Roland (q.v.). There is a remarkable 13th century pilgrimage church containing relics of the paladin. Pop. 142.

RONDA. Town of Spain. It stands on the Guadiaro river, 43 m. W. of Malaga, on both sides of a deep, rocky gorge, surrounded by mountains. The old town was built by the Moors, and besides some Roman and Moorish relics, it has one of the largest hull rings in Spain. Pop. 22,700.

RONDEBOSCH. Suburb of Cape Town, S. Africa. It is 5 m. to the S. of the city proper and is a residential area. Here is Groote Schuur (q.v.).

RONSARD, PIERRE DE (1524-85). French poet. Born at La Poissonnière, Vendôme, Sept. 11, 1524, he became a page at court. He was in Scotland and England in the retinue of Mary of Guise for three years. Returning to France, he lived in court circles until about 1572, when he retired to the country. He died at Tours, Dec. 27, 1585.

About 1549 Ronsard became leader of La Pléiade, the object of which was to revolutionise French poetry by the imitation of the masterpieces of classical antiquity. In accordance with this programme, Ronsard wrote Hymnes on the Homeric model, and Pindaric odes. His best work, however, is his sonnets and lyrics.

Pierre de Ronsard,
French poet

Romsey, Hampshire. Abbey church of S. Mary, from the south-east. It is in Norman style
Frith

RÖNTGEN, WILHELM KONRAD (1845-1923). German physicist. He was born at Lennep, in the Prussian Rhine prov., March 27, 1845. In Nov., 1895, while professor at Würzburg, he announced the discovery of the rays which bear his name. In 1899 he was appointed professor of experimental physics at Munich and in 1901 he received the Nobel prize for physics. Röntgen was awarded the Rumford medal of the Royal Society and the Barnard medal of Columbia University for his discovery of the Röntgen or X-rays. He also carried out valuable research work on the conductivity of heat of crystals, magnetic rotation of polarised light, absorption of heat of gases, etc. He died on Feb. 10, 1923. See X-Rays. Pron. Runtgen.

W. K. Röntgen,
German physicist

ROOD (A.S. *rōd*, cross). Old name for a cross or crucifix. It is specially used for the great crucifix which in English churches, from the 14th century to the reign of Elizabeth, generally stood on the rood-screen dividing the chancel from the nave. In some churches a gallery, from which parts of the service were recited, ran along the top of the screen.

ROOD. Unit of land or superficial measure, equal to one-fourth of an acre. It is divided into 40 rods, or 1,210 sq. yds. The name is cognate with rod.

ROOF. Part of a building which, being nearest to the sky, protects the interior from sun and rain. In the hot, nearly rainless countries of the East the prevalent type of roof is flat. Where heavy rainfall or snowfall may occur it is sloped, the angle of the slope varying with, and often being characteristic of, the particular style of architecture employed. The average slope of an ancient Greek roof was not more than 16 degrees, that of Roman, Romanesque, and Renaissance styles was some six degrees steeper, while the Gothic pitch sometimes reached as much as 60 degrees. See Mansard.

ROOK (*Corvus frugilegus*). Common bird of the crow family. The plumage is black with purple reflections. It is common in Great Britain, and nests in large colonies in the tops of high trees, preferably near human dwellings. The male often shares the duty of incubation with the female. Rooks are very gregarious, and their morning and evening flights to and from the feeding grounds are familiar sights in the country. The food consists mainly of grubs and insects, and in this way the birds more than compensate the farmer for the seed that they consume

Rook. Gregarious
bird of the crow
family
W. S. Berridge, F.Z.S.

ROOKE, Sir GEORGE (1650-1709). English sailor. Going to sea as a lad, he saw service against the Dutch. The victory of Barfleur, 1692, was practically due to Rooke's gallantry and seamanship, and he was knighted in 1693. Lord commissioner of the admiralty in 1694, he became commander-in-chief of the Mediterranean fleet in the following year, and in 1697 of the Channel fleet. In 1702 Rooke seized Vigo and totally destroyed the Franco-Spanish fleet anchored there. In 1704 he assisted in the capture of Gibraltar. He died Jan. 24, 1709.

ROOKWOOD. Municipality in Cumberland co., New South Wales, Australia. The necropolis, 9 m. by train from Sydney, is on the route to Paramatta. There are meat-preserving works and brick fields. Pop. 5,450.

ROON, ALBRECHT THEODOR EMIL, COUNT VON (1803-79). German soldier. Born April 30, 1803, he entered the Prussian army in 1821. He joined the topographical department, wrote books and lectured to the young officers before becoming a member of the general staff and tutor to Prince Frederick Charles. He rose in rank, and in 1859 was made minister of war and in 1861 also minister of marine. He resigned his office at the war office in 1873, and was for a short time president of the Prussian ministry. He died Feb. 23, 1879. Roon's great work was to reform the Prussian army, which he did, in spite of much opposition, between 1848 and 1866.

ROOSEVELT, THEODORE (1858-1919). American politician, author, and traveller. Born in New York, Oct. 27, 1858, he entered politics on his graduation from Harvard. As leader of the Republicans in the New York state assembly, 1882-84, as Federal civil service commissioner, 1889-95, and as New York City police commissioner, 1895-97, he fought corrupt politicians; he established, too, his reputation as a big game hunter. When the Spanish War began Roosevelt became lieutenant-colonel of the Rough Riders. He returned, a popular idol, to be elected governor of New York State, 1899-1900. On the assassination of President McKinley, in Sept., 1901, the forceful reformer succeeded to the office of president. He was re-elected in 1904 by an enormous majority over his Democrat opponent, A. B. Parker.

Theodore Roosevelt, American politician

In the negotiations leading to the end of the Russo-Japanese War (1905) Roosevelt fought strenuously for peace, thus earning in 1906 the Nobel Prize. He built up the U.S. navy, and was the first president to make his country felt all over the world. At home, meanwhile, he continued his war on the immoral alliance of the political machines and great financial interests, and initiated a movement for the conservation of the natural resources of the country. He ceased to be president in 1908, but the policy of his successor, W. H. Taft, so dissatisfied him that he formed the Progressive or Bull Moose party. He ran as its presidential candidate in 1912, but was unsuccessful. He conducted explorations in Brazil, 1913, and he died unexpectedly, Jan. 6, 1919.

ROOT. Lower extremity of the main stem in higher plants. Its beginnings are evident, usually, in the seed, where the embryo has two poles, one ascending and becoming the shoot, the other descending and becoming the primary root. Its functions are two-fold—it anchors the plant in the ground, and absorbs from the soil water in which mineral salts are dissolved. The growing point is protected from injury in its passage through the soil by a sheath of cells (root-cap) constantly renewed from within. The general course of the root is

straight down, but its hydrotropism may induce it to turn aside to water. It branches laterally, but the branch roots have a more horizontal orientation with a tendency to grow away from the main or tap root. If a stone or other obstacle checks the onward growth of a root, the tip works around it and then resumes its former course. The food collection is accomplished by abundant single-celled root-hairs situated near the tip. The root increases in thickness in proportion to the growth of the stem. See Botany; Plant.

Root. Method of pruning roots of fruit trees. 1. Diagram showing how roots grow. 2. Shortening tap root of young tree. 3. Treach dig round older trees to permit of pruning their roots

ROOT CROPS. The term root crop is applied not only to turnips, swedes, mangolds, sugar beets, carrots, and parsnips, where the part harvested is actually a root, but also to potatoes, which are tubers, or thickened underground stems, and to such things as rape, kohlrabi, or field cabbages, which occupy the same place in a rotation of crops.

ROOT PARASITES. Plants which attach themselves to the roots of other plants, from which they absorb water and food. Some of these, like toothwort and broomrape, are total parasites, obtaining the whole of their nourishment in this way, and therefore producing no true leaves. Others, like eyebright, are partial parasites, obtaining only crude fluid from their hosts and elaborating it in their leaves.

ROOT, ELIHU (b. 1845). American statesman. Born at Clinton, New York, Feb. 15, 1845, he was called to the New York bar in

Elihu Root, American statesman

1867. As secretary of war in McKinley's cabinet, 1899-1901, he reorganized the war department and introduced several reforms into the army. Under Roosevelt, Root was secretary of state, 1905-9, serving as senator from the latter year until 1915. In 1910 he was appointed member of The Hague tribunal, being awarded the Nobel peace prize in 1912. As an international jurist, he had much to do with setting up the permanent court of justice under the League of Nations.

ROPE. Cordage of a certain circumference, usually one inch or over. There is, however, no definite standard. Until the 19th century, ropes were laboriously made by hand, a ropeway, often a quarter of a mile in length, being essential, two workmen working together. One carried a bundle of hemp or other material, and the other looked after a wheel on which were a series of hooks to which the hemp was

fastened. This wheel was turned as the rope spianer walked down the ropeway making his yarn. The latter was afterwards twisted into strands, and the strands into ropes. Hemp, flax, cotton, manila, sisal, and jute are the chief fibres used in the manufacture of ropes other than wire ropes. See Wire.

ROPEWAY. Wire cable on which a carriage is supported and run on wheels for the purpose of transport. Aerial ropeways are an alternative to railway tracks laid on the ground. Strong wire cables, strung on towers, carry the load in specially designed suspended buckets. If the ropeway has a sufficient gradient, it will work by gravity alone, assuming the loaded carriers to travel downwards. Otherwise power is required to operate it. Very long ropeways are usually divided into sections that are independent of one another, each provided with winding and tension drums, and the carriers are transferred from one section to the next over short level shunt rails.

ROPER. River of North Australia. Formed from the rivers Strageways and Chambers, it flows E. to the gulf of Carpentaria. Navigation is somewhat impeded by the bar at the mouth, but it is navigable by boats of 12 ft. draught for 90 m. to Leichardt's Bar.

ROPER, MARGARET (1805-44). Eldest daughter of Sir Thomas More (q.v.). One of the most learned and at the same time one of the most womanly women of her time, she, about 1525, married William Roper (1496-1578), her father's biographer. She is said to have secured her father's head after his execution. She was buried in Chelsea Church, but the head of Sir Thomas More is believed to have been discovered in June, 1824, in a leaden box in the Roper vault at St. Dunstan's, Canterbury. Her character is reflected in Ann Manning's *The Household of Sir Thomas More*.

RORKE, KATE (b. 1866). British actress. Born in London, Feb. 22, 1866, she first appeared at the Court Theatre, London, 1878, and after her performance in T. W. Robertson's *School*, 1880, became a player of comedy parts, being associated with Sir C. Wyndham. From 1889 she played leading parts with Sir John Hare, and in 1904 appeared in the title-role of G. B. Shaw's *Caedra*. In 1906 she became professor of dramatic art at the Guildhall School of Music. In private life she is Mrs. Douglas Cress.

RORKE'S DRIFT. Place on the Tugela river, Natal, S. Africa. It is 23 m. from Dundee and is famous for the stand made by a few British soldiers against a Zulu army, Jan. 22, 1879. Under Lieuts. Chard and Bromhead, 80 men of the S. Wales Borderers beat back the enemy, who finally withdrew.

ROSA, CARL AUGUST NICOLAS (1842-89). German operatic impresario. Born at Hamburg, March 22, 1842, his original name being Rose,

Carl Rosa, German operatic impresario

he appeared in England as a violinist, 1854, studied music in Leipzig and Paris, and directed concerts at Hamburg, 1863-65. In 1875 he formed the Carl Rosa Opera Company (q.v.) to play opera in English in London and most provincial theatres. Rosa, who actively promoted composition of English operas, died in Paris, April 30, 1889, and his company was continued after his death.

ROSA, SALVATOR (1615-73). Italian painter. Born at Arenella, near Naples, June 20, 1615, he went to Rome in 1635, and was commissioned by Cardinal Brancaccio to decorate his palace at Viterbo. In 1639 he was again in Rome, and distinguished himself at the carnival as actor, poet, and singer. Involved in Masaniello's revolution at Naples in 1647, he returned to Rome in 1652. Having routed

hostility by his satirical verses, he withdrew to Florence, where he lived nine years, painting and writing poetry. He died in Rome, March 15, 1673. One may cite especially his Prometheus (Spada Palace) and his large battle picture in the Louvre.

ROSAMUND, called the Fair (c. 1140-c. 1176). Mistress of Henry II. A daughter of Walter de Clifford, she, according to tradition, lived at Woodstock, and was acknowledged by the king about 1174. On her death soon after, she was buried in the church of Godstow Nunnery near Oxford. Legend told of a maze or hower built for Rosamund by Henry, to which Queen Eleanor penetrated, and forced her rival to drink poison. The ruins of the maze in Woodstock park were shown in the 17th century, and Rosamund's well is still to be seen there. She is introduced in Scott's novel, *Woodstock*.

ROSAPENNA. Pleasure resort of co. Donegal, Irish Free State. It stands on an opening off the N. coast of the county, and can be reached from Londonderry by car and steamer. In the late 19th century attention was drawn to its beautiful surroundings.

ROSARIO. River port and city of Argentina. It stands on the Paraná river, 214 m. by river and 237 m. by rly. N.W. of Buenos Aires, and is an important rly. centre and the principal port for the N. provinces. Wheat, hides, wool, linseed, and other products of the pampas, quebracho, copper and other ores are the main exports. The industrial establishments include shoe factories, meat-packing establishments, saw mills, breweries, tanneries, and sugar mills.

ROSARY (late Lat. *rosarium*, chaplet of roses). Device for assisting in the repetition of prayers. Largely used by Hindus and Moslems, the practice of counting prayers by beads was probably introduced into Christendom by the Crusaders, though tradition says that a direct revelation for its institution was made to S. Dominic (q.v.). The form in common use in the R.C. Church is a string threaded with 50 small beads divided into groups of ten by larger beads. The former represent Ave Marias, the latter Pater Nosters.

ROSAS, JUAN MANUEL (1793-1877). Argentine statesman. Born at Buenos Aires, March 30, 1793, he acquired a cattle run, and to protect himself against the hostile Indians organized an armed force of followers which ultimately gave him great power. He was made governor of the state of Buenos Aires, and in 1835 was chosen dictator of Argentina. He ruled with great cruelty, and by mixing in the affairs of Uruguay he brought about the interference of Britain and France. In 1849 he secured peace with those Powers, but in 1852 a rival defeated him, and Rosas fled to England, dying March 14, 1877.

ROSCIUS (d. 62 B.C.). Roman comic actor, whose full name was Quintus Roscius Gallus. He was born a slave at Solonium near Lannvium, and reached a perfection in his art that became proverbial. He obtained

the favour of the dictator Sulla and enjoyed the friendship of Cicero.

The name has been applied to many well-known actors, such as Richard Burbage; David Garrick; William Henry Betty, the young Roscius; and Ira Aldridge.

ROSCOE, Sir Henry
ENFIELD (1833-1915).
 British chemist and politician. Born in London, Jan. 7, 1833, he was appointed in 1857 professor of chemistry at Owens College, Manchester, which afterwards became the university. He first prepared pure metallic vanadium and conducted other original researches, but is best known as a teacher of chemistry and an educationist. Roscoe was knighted in 1894, and represented S. Manchester in the House of Commons. 1885-95. He died Dec. 18, 1915.

ROSCOMMON. County of the Irish Free State, in the prov. of Connaught. Its area is 990 sq. m. The surface is flat, save in the N., where there are hills rising to over 1,000 ft., and to a lesser extent in the E. The Shannon forms the E. boundary; another boundary river is the Suck, and there are the Arigna and the Boyle. Of many lakes the chief are Ree, Allen, Boderg, and Boffin. Sheep, cattle, and pigs are reared, and oats and potatoes are grown. The plain of Boyle is famous for its pasture. The county is served by the G.S. Rlys. Roscommon is the county town; other places are Boyle, Elphin, Castle-rea, and Strokestown. Pop. 83,556.

ROSCOMMON. County town of Roscommon, Irish Free State. It is 18 m. from Athlone and 55 from Dublin, on the G.S. Rlys. The town owes its origin to S. Coman, who about 700 founded a monastery here. Later a Dominican priory was founded. There are ruins of a castle. Pop. 1,830.

ROSCREA. Town of Tipperary, Irish Free State. It stands on the Little Brosna river, 47 m. from Limerick, with a station on the G.S. Rlys. Roscrea owes its name and origin to S. Cronan, who, in the 7th century, founded an abbey here. There is a round tower, partially intact, and in the fabric of

Rose : four varieties. 1. Dog rose. 2. Dwarf rambler.
3. Sweet-scented red rose. 4. Hybrid tea rose
1. F. B. Hinkins; 2, 3 & 4. Reginald A. Malby

two churches
are remains
of two religi-
ous houses.
Pop. 2,772.

ROSE. The rose (natural order Rosaceae) is the emblematic flower of Britain, whose cultivated forms have been improved from strains or varieties of the wild dog rose, or briar. It includes numerous hardy and half-hardy trees and shrubs, the vast majority of which are deciduous.

Tea roses are among the earliest flowering of roses. The hybrid perpetual class is the most valuable for general garden purposes, and consists of roses which have been cross-fertilised with the object of obtaining as lengthy a period of bloom as possible. Climbing roses have a vigorous stem growth, and are suitable for training to cover walls, pergolas, etc.

Roses are usually grown in one of two forms—as standards or bushes. A standard rose is primarily a staked native briar of about 3 ft. in height, known as the stock, to which is united by grafting the scion, or bud, of a highly cultivated rose, which the stock is intended to succour. The bush rose has a much shorter stock, and is grafted at about planting level. The bush method of cultivation will give a greater number of blooms than the standard, but they may not be of such size or quality. The natural colours of roses are white, pink, crimson, and yellow, though hybridisation has produced what are known as florists' varieties to the extent of between three and four thousand. The number is being added to each season.

THE HERALDIC ROSE. The rose is prominent in English heraldry, the white flower having been adopted as the badge of the House of York, and the red by the House of Lancaster. The two were united by Henry VII, who introduced the Tudor rose, first borne quarterly, red and white; then dimidiated red and white; and finally a red rose within a white one. In cadency it is the mark of the seventh son.

ROSE APPLE (*Eugenia jambos*). Evergreen tree of the order Myrtaceae. A native of Malaya, it attains a height of 20-30 ft., and has oval or lance-shaped, stalked leaves. The four-petalled white flowers are borne on short leafy shoots in clusters of three or five, and are succeeded by more or less oval red fruits, about an inch across, containing one or two poisonous seeds embedded in rose-scented edible pulp.

ROSEBERRY, ARCHIBALD PHILIP PRIMROSE, 5TH EARL OF (1847-1929). British statesman. Born in London, May 7, 1847, he was the son of Archibald, Lord Dalmeny (1809-51), by his marriage with Catherine (d. 1901), daughter of the 4th Earl Stanhope, who became duchess of Cleveland. He went from Eton to Oxford, but left in 1868 without a degree, and in the same year succeeded his grandfather.

Lord Rosebery,
British statesman

The earl soon began to attract attention by thoughtful speeches. A wealthy marriage and the friendship of Gladstone added to his importance in political circles, and in 1881 he took office as under-secretary to the home office. In 1883 he entered the Cabinet as first commissioner of works; in 1885 was lord privy seal. Adhering to Gladstone when Home Rule was introduced, he became foreign secretary in 1886. In 1892 he returned to the foreign office, and in 1894, on Gladstone's retirement, he became prime minister. He was not altogether acceptable, however, to many of the Liberals, and the upshot was the resignation of the ministry in June, 1895. Rosebery retained the leadership of the party until 1896, when he formally resigned. To support the conclusion of the S. African War he placed himself at the head of the imperialistic section of the Liberal party, and later he came out in opposition to the fiscal proposals of Chamberlain. He won the Derby three times, in 1894, 1895, and 1905. In 1892 he was made a Knight of the Garter, and in 1911 he was created earl of Midlothian. After a long period of retirement Lord Rosebery died at Epsom, May 21, 1929.

Rosebery also attained eminence as a man of letters. His speeches on literary and kindred subjects were felicitous in phrase and full of thought, while his books show a wide historical knowledge, insight, judgement, and power. The chief are the monograph on Pitt; Sir Robert Peel, 1899; Napoleon, the Last Phase, 1904; Lord Randolph Churchill, 1906; and Chatham, 1910. His *Miscellanies, Literary and Historical*, appeared in 1921.

In 1878 Lord Rosebery married Hannah, daughter and heiress of Baron Moyer de Rothschild. Their younger son, Neil Primrose, was killed in Palestine, Nov. 18, 1917. See Dalmeny.

ROSE CHAFER OR ROSE BEETLE (*Cetonia aurata*). Species of beetle, common in the S. counties of England. In colour it is greenish gold on the upper parts and bright copper beneath. The grub-like larvae are found among vegetable refuse and decaying wood, while the adult feeds upon flowers.

ROSEMARY. Hardy evergreen shrub with fragrant leaves. It is a native of S. Europe, whence it was introduced into Britain in 1548. It attains a height of about 3 ft., and has purple flowers. The leaves yield a valuable oil, one of the chief constituents of eau de Cologne.

ROSENEATH. Village of Dumharton-shire. It stands on the S.W. side of Gareloch 2½ m. from Helensburgh. Near is Roseneath Castle, a seat of the duke of Argyll. Pop. 1,800.

ROSENTHAL, MORITZ (b. 1862). Galician pianist. Born at Lemberg, Dec. 19, 1862, he studied there and in Vienna, where he made his first concert appearance in 1876. He studied also under Liszt, 1876-78, appeared in Paris and St. Petersburg, 1878, and retired from public playing, 1878-84, in order to study classics and philosophy. His superb technique and great interpretative powers made him one of the foremost pianists of the day.

ROSE OF JERICHO (*Anastatica hieracuntica*). Annual herb of the order Cruciferae. A native of Syria and N. Africa, it has somewhat oval leaves and small white, four-petalled flowers. After flowering, the leaves fall off and the stalks curve towards the centre of the plant, forming a lattice-sphere, in which form the plant dies and dries, gets blown out of the ground, and bowls along before the wind. On coming, perhaps many months later, into moist surroundings, all the parts straighten out and the seed-pouches open and disperse their contents.

ROSE OF SHARON. Name of an unknown flower, perhaps the autumn crocus, or a narcissus, mentioned in The Song of Solomon, 2, 1. The name is popularly given to *Hibiscus syriacus*, an ornamental shrub related to the mallows, and to *Hypericum calycinum*. See St. John's Wort.

ROSES, WARS OF THE. Contest for the crown of England between the houses of York and Lancaster. It is so called because the Yorkists took a white rose as their badge and the Lancastrians a red one. It is usually regarded as opening in 1455 at St. Albans and closing in 1485 at Bosworth.

Henry VI was periodically insane, and the next heir, after 1447, was Richard, duke of York. In 1453 a son was born to Henry, and in 1455 Richard took up arms asserting that he was the rightful king. A battle was fought at St. Albans, after which there was a lull until 1459, when the struggle was renewed. At Northampton in 1460 Henry was defeated and made prisoner, but an agreement was soon reached to the effect that he should remain on the throne, but with Richard, and not his own young son, as his recognized successor.

Incensed at this compact, Henry's wife, Margaret, collected her friends together and in a battle at Wakefield York was killed. His son, later Edward IV, then became the head of the Yorkists, and the warfare continued with increasing ferocity. Edward, having just been proclaimed king in London, routed the Lancastrians at Towton, all this happening in 1461. The Lancastrians suffered further defeats in 1464 and seemed thoroughly crushed, when the quarrel between Edward and his principal supporter, the earl of Warwick, in 1470 changed the fortunes of war. Edward saved his life by escaping from the country, and Henry was brought out of prison and declared king. Next year Edward returned, and the Lancastrians suffered their final disasters at Barnet and Tewkesbury. See Barnet; Edward IV; Henry VII.

Rosemary. A
flowering spike

ROSETTA. Town in Egypt on an arm of the Nile delta. Once an important harbour, it is now, owing to the rise of Alexandria as a seaport, unimportant. Pop. 23,048.

The Rosetta Stone is an inscribed black basalt slab which, discovered by one of Napoleon's officers in 1799, and acquired by Great Britain at the capitulation of Alexandria, 1801, reached the British Museum in 1802. Bearing an inscription in three versions, hieroglyphic, demotic, and Greek, it furnished the key to hieroglyphic writing. See illus. below.

ROSEWATER. Water tintured with the essence of roses obtained by distillation. A rosewater dish is a bowl designed to hold rosewater which can be sprinkled over the hands. They are frequently used in the East after eating, and occasionally in Western countries replace the customary finger-bowl. Several examples belong to the Clothworkers' Company, including one presented by Pepys.

ROSE WINDOW. In architecture, a circular window divided into a number of compartments by tracery. Large windows of this type are a feature of great cathedrals; they are generally filled with stained glass.

Rosetta Stone. Inscribed slab of black basalt that furnished the key to hieroglyphic writing. See above

ROSEWOOD. Commercial term applied to the dark coloured timber of many distinct species of trees. The American product is from *Dalbergia nigra* and species of *Machacarium*. Burmese rosewood is *Pterocarpus indicus*; Canary rosewood is the striped wood of a shrub (*Convolvulus scoparius*); Indian rosewood, *Dalbergia latifolia* and *D. sissooides*. The wood is much used in making furniture.

ROSICRUCIAN (Lat. ros, dew; or rosa, rose; crux, cross). Name given to a secret brotherhood. It did not attract wide attention in Europe until the early part of the 17th century, when it arose in Germany, and spread thence to France and England. The keystone of the Rosicrucian arch is an idealised form of alchemical philosophy. The sign of the order was a rosy cross, and its name is derived by some authorities from dew (ros), regarded as a solvent of gold, and identified with light because the figure of a cross (crux) contains, in various presentations, the three capital letters of the word lux=light, or knowledge. Rosicrucianism, in one form or another, still exists.

Rose of Jericho, showing, left, the carved-in stalks of the dead plant, and, right, the plant expanded for the dispersal of the seeds

Rose Chafer or Rose
Beetle, actual size

ROSLIN OR ROSSLYN. Village of Midlothian. It stands on the N. Esk, 6 m. S. of Edinburgh, on the L.N.E. Rly. The chapel, built in the 15th century, is celebrated for its carvings and for the "prentice pillar." The place gives the title of earl to the family of St. Clair Erskine. Pop. 1,797.

ROSS. Market town and urban dist. of Herefordshire. It stands on the Wye, 12 m. from Hereford, on the G.W. Rly. The church of S. Mary the Virgin is a fine old building in the Decorated and Perpendicular styles. The Man of Ross, John Kyrle (q.v.), is buried in the church. Market day, Tues. Pop. 4,790.

Sir James Ross,
British explorer

ROSS, SIR JAMES CLARK (1800-62). British explorer. Born in London April 15, 1800, he went to sea at the age of 12 and served in the Arctic expeditions of W. E. Parry, 1821-27. Member of Booth's expedition of 1829-33, he discovered the magnetic pole in 1831. In 1839 he was given command of an Antarctic expedition with the Erebus and Terror vessels, discovering Victoria Land and Mt. Erebus, and reporting that the South Pole was unattainable. Knighted on his return in 1843 he died April 3, 1862.

ROSS, SIR JOHN (1777-1856). British explorer. Born June 24, 1777, he entered the navy when a boy. In command of the Isabella, he was sent in 1818 to discover the north-west passage, but after passing Baffin Bay he returned. In 1829 he commanded the Victory, a paddle steamer, on a similar voyage. After three years spent in the ice amid great hardships, he was picked up by a whaler and returned home. Ross was knighted for his services, and in 1851 was promoted rear-admiral, having first taken part in a search for Franklin. He died Aug. 30 1856.

Sir John Ross,
British explorer

ROSS, SIR RONALD (b. 1857). British physician. Born May 13, 1857, and educated at S. Bartholomew's Hospital, London, he entered the Indian Medical Service, 1881, and took up the study of malaria. In 1897-98 he discovered the life history of malaria parasites in mosquitoes, and in 1899 he was leader of the expedition to W. Africa. Ross was awarded the Nobel prize for medicine in 1902. Throughout the Great War he had the sole control in connexion with malaria problems. Afterwards he became director of the Ross Institute for tropical diseases at Putney. He was knighted in 1911.

Sir Ronald Ross,
British physician
Elliott & Fry

ROSSA, O'DONOVAN (1831-1915). Irish Fenian leader. Born at Rosscarbery, co. Cork, his real name was Jeremiah O'Donovan, and he early became connected with the Fenian brotherhood. Sentenced to 20 years' penal servitude for treason-felony in 1865, he was elected M.P. for Tipperary, 1869, and was released conditionally in 1871. He then resided in the U.S.A., and opened a fund for the support of dynamite outrages. He visited England in 1894, and attempted to address the House of Commons. Expelled from the Fenian brotherhood in 1886, he had little political influence in later days, and died in New York, June 29, 1915.

ROSSALL. English public school. It stands on the sea shore at Rossall, Lancashire, 3 m. from Fleetwood, its station. Founded in 1884, it was incorporated in 1890, and consists of nine houses. There is a preparatory school.

ROSS AND CROMARTY. County of Scotland. Its area is 3,089 sq. m. It consists of the two counties of Ross and Cromarty, which were separate until 1889. It has a long, irregular coastline, pierced by Dornoch Firth, Cromarty Firth, and Beaulie Firth on the E. and by Lochs Broom, Ewe, Torridon, Carron, and Aish, and the Gairloch on the W. It includes parts of Lewis and several of the smaller Hebrides. The surface is very mountainous. Of the rivers the chief are the Orrin, Oykel, and Conon. Lochs include Maree, Fannich, Luichart, and Glass. Most of the surface is given up to deer forests; elsewhere sheep and cattle are reared; the fisheries are valuable. The L.M.S. Rly. serves the county. Dingwall is the county town, others being Stornoway, Tain, Cromarty, Fortrose, Invergordon, and Strathpeffer. Pop. 65,800.

ROSSE, WILLIAM PARSONS, 3RD EARL OF (1800-67). British astronomer. Born at York, June 17, 1800, he was educated at Trinity College, Dublin, and Magdalen College, Oxford. From 1823-34 he represented King's County in Parliament. He carried out a series of improvements in the great reflecting telescope at Birr Castle. Rosse made many valuable observations of nebulae and star clusters, and announced the discovery of spiral nebulae. President of the Royal Society 1849-54, he died Oct. 31, 1867.

The earldom dates from 1806, when it was bestowed upon an Irish baron. The family seat is Birr Castle, near Parsonstown, and the earl's eldest son is called Lord Oxmantown.

ROSSETTI, CHRISTINA GEORGINA (1830-94). British poet. She was born in London, Dec. 5, 1830, being the sister of D. G. Rossetti.

On the threshold of womanhood an unfortunate love affair helped to give to her writing its note of sadness. As published, her works include Verses, privately printed, 1847; Goblin Market and Other Poems, 1862; The Prince's Progress and Other Poems, 1866; Sing-Song, a book of nursery rhymes, 1872; A Pageant and Other Poems, 1881; Verses, 1893; New Poems, 1896. She also wrote some short stories and devotional prose. Her death took place Dec. 29, 1894.

ROSSETTI, DANTE GABRIEL (1828-82). British poet and painter, whose full name was Gabriel Charles Dante Rossetti. Born in London, May 12, 1828, he was the eldest son of Gabriele and Frances Mary Rossetti, refugees from Naples. His father was professor of

Italian at King's College, London. He studied drawing under J. S. Cotman, and entered Cary's Academy in Bloomsbury, 1842, and the R.A. schools, 1846. His literary power developed in advance of his painting; The Blessed Damozel and several sonnets were composed about 1847. In 1848, however, he became the pupil of Ford Madox Brown, a

Ross and Cromarty. Map of the large Scottish county. Inset, part of Lewis and smaller islands of the Hebrides included in the county

step which led to his acquaintance with Holman Hunt and Millais, and incidentally to the formation of the Pre-Raphaelite Brotherhood. About 1852 he became engaged to Elizabeth Eleanor Siddal, the model for his Beatrices and of Millais's Ophelia. The two were married in 1860. In 1855 he made the acquaintance of William Morris and Burne-Jones, and two years later took part in the decoration of the Oxford Union. He died at Birchington, Kent, April 9, 1882.

D. G. Rossetti,
British poet and
painter
Self-portrait

His younger brother, William Michael Rossetti (1829-1919), became a clerk in the civil service in 1844. In 1869 he became assistant secretary of inland revenue, and he retired in 1894. He was a member of the Pre-Raphaelite Brotherhood, recording in his diary its proceedings, and editing The Germ.

ROSSI, GIOVANNI BATTISTA DEI (1494-1541). Italian painter, commonly known as Il Rosso and Maître Roux. Born at Florence, he evolved an inventive and original style from the study of Michelangelo and Parmigiano. From Florence he went to Rome, where he had a good reputation. When the town was sacked in 1527 he escaped to Volterra, then made his way to France, where he designed the great gallery at the château of Fontainebleau, and painted a series of frescoes illustrative of the life of Francis I. Having falsely accused his friend Pellegrini of theft, he committed suicide through remorse.

Another painter of this name was Francesco dei Rossi (1510-63). He was a Florentine, known as Il Salvati, and two examples of his work are in The National Gallery, London.

ROSSINI, GIOACHINO ANTONIO (1792-1868). Italian composer. Born at Pescara, Feb. 29, 1792, he produced his first opera, La Cambiale di Matrimonio, in 1810. Several light pieces followed, and Tancred was

Christina Rossetti,
British poet
After D. G. Rossetti

produced at Venice in 1813. The Barber of Seville appeared at Rome, 1816, and became universally popular.

G. A. Rossini,
Italian composer

ROSSLAND. Town of British Columbia, Canada. Only 6 m. from the U.S. boundary, it is served by the C.P. and C.N. Rlys., and is a centre for the surrounding iron, copper, and gold mines. Pop. 2,097.

ROSSLARE. Seaport of co. Wexford, Irish Free State. It is 6 m. from Wexford, and is served by the G.S. Rlys. Formerly only a fishing village and coastguard station, it came into use as a port in 1906, when the harbour was reconstructed to serve as a terminus for the route from Fishguard opened by the G.W. Rly. Pop. 670.

ROSS SEA. Part of the Antarctic Ocean, between South Victoria Land and King Edward VII Land. It contains Ross Island, and is blocked to the S. by the Ross Ice Barrier. Its coasts, with adjacent islands and territories, were annexed by New Zealand in 1923. See Antarctic Exploration.

ROSTAND, EDMOND (1868-1918). French dramatist. Born at Marseilles, April 1, 1868, his earliest play, *Le Gant Rouge*, was a failure, but in 1894 *Les Romanesques*, produced in England as *The Fantasticks*, made it clear that a writer had arisen who might restore the poetic drama to the French stage; the possibility seemed assured with the success of *La Princesse Lointaine* in 1895. In 1897 came Rostand's great triumph with *Cyrano de Bergerac*. *L'Aiglon* followed in 1900, and in 1901 the author was elected to the French Academy. In 1910 came, after various delays, the fantastic play *Le Chanteur*, all the characters of which were represented as fowls. *Les Musardises*, a collection of early poems, was published in 1911. Rostand died Dec. 2, 1918. See *Bergerac*, S. *Cyrano*.

Edmond Rostand,
French poet

ROSTOCK. Town and port of Mecklenburg-Schwerin, Germany. It stands on the Warnow, 60 m. N.E. of Schwerin. The Gothic Rathaus dates from the 14th century. The church of S. Mary contains a Romanesque font of 1290 and an astronomical clock. Linen is manufactured, and there are breweries and distilleries, vinegar, soap, and colour factories, and ship yards. There is trade in grain, cloth, horses, and cattle. Its outport is Warnemünde. The city has a university and was one of the most important members of the Hanseatic League. Pop. 77,669.

ROSTOV-ON-THE-DON. Town of Russia, capital of the N. Caucasian Area. It stands on the right bank of the Don, and owes its importance to its facilities for navigation and its position at the junction of three rly. systems. The chief exports are grain and wool. Pop. 308,284.

There is another Rostov, also called Great Rostov, 35 m. S. of Yaroslavl, on the Moscow-Yaroslavl rly. It is famous for its antiquities, chief of which are the Kremlin and the Uspenski cathedral. Pop. 19,952.

ROSTRUM. In modern usage any raised platform from which a speaker addresses an audience. In ancient Rome, only in the plural form, *rostra*, the word was used to indicate the tribunal or platform in the Forum. From it magistrates addressed the assembly of the people. It was so named because it was ornamented with the beaks or rams (*rostra*) of ships captured from the enemy in naval battles. See *Forum*; *Rome*.

Rostrum. Reconstruction of the rostra in the Forum of Rome

ROSYTH. British naval base on the Firth of Forth. Rosyth was one of the principal bases, and very important in particular as a docking and repairing base of the Grand Fleet during the Great War and the headquarters of the cruiser squadrons. In the latter part of the Great War the main elements of the Grand Fleet were moved from Scapa Flow to Rosyth. Its inception coincided with the change of the naval front from the Channel to the North Sea.

The activities of the dockyard were much reduced after the peace of 1918, and in 1925 it was reduced to a care and maintenance station.

ROTARY CLUB. Movement among business men which takes for its motto service, not self. The idea of the Rotary Club originated with Paul Harris, a Chicago lawyer, who in 1905 sought to establish a little club of men, each representing a different trade or profession, for the interchange of opinion on business and other matters. Religion and politics were excluded from discussion. In 1911 the idea took root in Great Britain, and there are now clubs in most of the business centres.

ROTHAMSTED. Agricultural experimental station, near Harpenden, Herts. It was founded by John Bennet Lawes (q.v.) in 1843, and endowed by him in 1889. With him was associated Joseph Henry Gilbert.

A continuous series of important researches has been carried out on the 40 acre Rothamsted estate and in the attached laboratories. Among discoveries is that of super-phosphates. Wheat has been grown continuously on the Broadbalk field from 1843, and experiments have been made on different manures, including the question of loss in drainage water. Similar experiments have been carried out on barley, oats, root crops, etc.

ROTHBURY. Urban district and market town of Northumberland. It stands on the Coquet, 11 m. from Alnwick, on the L.N.E. Rly. Near is Cragside, the seat of Lord Armstrong. Market day, Thurs. Pop. 1,682.

ROTHENBURG OR ROTHENBURG-OB-DE-STAUBER. Town of Bavaria. It stands on a plateau, above the Tauber, 36 m. W. of Nuremberg. The Rathaus, dating partly from 1240 and partly from 1572, has a tower 160 ft. high. The Franciscan church dates from 1285-1309. The church of S. Jacob, 1373-1436, has notable carvings and stained glass windows. It is still surrounded by its carefully preserved medieval walls. Rothenburg was captured by Tilly in the Thirty Years' War, an event commemorated annually by a play. Pop. 8,828.

ROTHERFIELD. Village of Sussex. It is E. of Ashdown Forest, 8 m. S.W. of Tunbridge Wells, on the Southern Rly. The river Rother rises near. The church was once part of a monastery. Pop. 2,821.

ROTHERHAM. County borough and market town of Yorkshire (W.R.). It stands at the junction of the Rother and Don, 6 m. from Sheffield, on the L.M.S. and L.N.E. Rlys. The church of All Saints is a fine perpendicular

15th century building. The main industries are iron and brass founding. On the old bridge across the Don are the remains of a chapel. Market days, Mon. and Sat. Pop. 68,045.

ROTHERHITHE. London district, in the metropolitan borough of Bermondsey. It is served by the Southern and Metropolitan Rlys., and includes the Surrey Commercial docks (q.v.) and Southwark Park. The parish church of S. Mary, on the W. side of the entrance of the Thames Tunnel (q.v.), was rebuilt in 1715. Rotherhithe Tunnel, for foot passengers and vehicular traffic, connects Lower Road, Rotherhithe, with Commercial Road East, being under the Thames. It was opened June 12, 1908. See *Bermondsey*; *London*.

ROTHERMERE, HAROLD SIDNEY HARMSWORTH, 1st Viscount (b. 1868). British newspaper owner. He was born at Hampstead, April 26, 1868, being a younger brother of Viscount Northcliffe. He entered his brother's publishing business in 1889, and had a good deal to do with its development into *The Amalgamated Press*. The brothers were also associated in buying *The Evening News*, founding *The Daily Mail* and then *The Daily Mirror*, and opening pulp and paper mills in Newfoundland and elsewhere.

Lord Rothermere,
British
newspaper owner

In 1914 Sir Harold Harmsworth, who had been made a baronet in 1910, severed his connexion with *The Daily Mail* and took over full control of *The Daily Mirror*. In 1915 he founded *The Sunday Pictorial*, and in 1922, after Lord Northcliffe's death, he became chief proprietor of *The Daily Mail*. In 1917 he was director of the army clothing department and in 1917-18 he was minister for air. In 1914 he was made a baron and in 1919 a viscount. Lord Rothermere has made some princely gifts for public purposes. In 1930 he founded the United Empire League. His two elder sons were killed in the war. His third son, Esmond (b. 1898), was M.P. for Thanet, 1919-29.

ROTHERS. Burgh of Moray, Scotland. It is near the river Spey, 10 m. from Elgin, on the L.M.S. Rly. Distilling is the main industry. There are remains of a castle, once a seat of the Leslie family. Pop. 1,265.

The title of earl of Rother was borne by the family of Leslie since 1457. The earl's seat is Leslie House, Fife, and his eldest son is called Lord Leslie. Pron. Roth-er.

ROTHESAY. Burgh and watering place of Buteshire, Scotland, also the county town. It stands at the head of Rother Bay, on the E. side of the Isle of Bute. The chief building is the castle, restored by the marquis of Bute in 1871-77. The town is a yachting centre. Pop. 15,218.

Rother Bay, Scotland. View of the town and harbour

The heir-apparent to the British throne bears the title of duke of Rother Bay, it having been created in 1308.

ROTHSCHILD. Name of a family of Jewish financiers. They derive their name from the sign of the red shield by which their house at Frankfort was known. Founded by Meyer Anselm Rothschild (1743-1812), a banker and money changer of Frankfort who made a fortune during the French campaigns in Germany, the family separated on his death, and his five sons, who were all made Austrian barons in 1822, extended the business through Europe. Nathan Meyer

M. A. Rothschild, founder of the banking house

Rothschild (1777-1836) went to Manchester in 1798 and moved to London in 1805, and his son, Lionel (1808-79), was best known by his labours for Jewish emancipation. Lionel's son, Nathaniel Meyer (1840-1915), was M.P. for Aylesbury, 1865-85, when he was made a baron. He was succeeded by his son, Lionel Walter (b. 1868). The family seat is Tring Park, Hertfordshire. It contains a zoological museum.

ROTHWELL. Urban dist. of Northamptonshire. It is 4 m. from Kettering, on the L.M.S. Rly. Boots, shoes, and clothing are manufactured. The chief buildings are the church of Holy Trinity, with memorials to the Tresham family, and the market house, which, begun in 1577, remained unfinished until the 20th century. Pop. 4,368.

ROTHWELL. Urban dist. of Yorkshire (W.R.). It is 4 m. from Leeds. The chief church is Holy Trinity, a fine building restored. Around are coal mines. Pop. 15,249.

ROTOR SHIP.

Name given to a ship propelled by the pressure of the wind upon vertical revolving metal cylinders, which take the place of sails. In a German vessel thus equipped, in 1925, two cylinders, about 40 ft. in height, were caused to rotate by an oil engine, and the vessel was steered by altering the relative speed of the cylinders.

Rotor Ship, showing the metal cylinders which replace sails

ROTORUA.

Township of N. Island, New Zealand. Near the lake of the same name, it is 171 m. by rail from Auckland, in the midst of a 150 m. stretch of country abounding in geysers, hot and cold lakes, fumaroles, etc. It is owned and managed by the state as a health and tourist resort. Pop. 2,800.

ROTTEN ROW. London riding track, in Hyde Park (q.v.). It runs W. from Hyde Park Corner to Coalbrookdale Gate, and returns E. on the N. side of the carriage drive between Albert Gate and Alexandra Gate. The name is derived either from the layer of tan which forms the surface, or from route du roi, a road kept sacred to royalty.

ROTTERDAM. City and seaport of the Netherlands. It lies on the branch of the Rhine delta known as the Maas, joined here by a small river, the Rotte, and is 17 m. by rly. E. of the Hook of Holland. The main part of the town, intersected by many quays and canals, is on the right bank; opposite the long quay called the Boompjes lie the North Island and the suburb of Feijenoord.

Rotterdam is connected with the sea by the Nieuwe Waterweg, which admits large vessels from the Hook of Holland, and has a large transit trade. Imports include grain, metals,

coal, petroleum, tobacco, coffee, and Dutch colonial produce generally; about one-half of Dutch industrial exports pass through Rotterdam. Shipbuilding with allied industries are of primary importance, and there are manufactures of cigars, spirits, and chemicals.

The Groote Kerk, or church of S. Lawrence, begun in 1412, a large Gothic building, with unfinished tower, 1449-1651 (210 ft.), stands near the centre of the Hoogstraat, the chief street of the town. The Boymans Museum has a notable collection of Dutch paintings. The Exchange, 1772, with modern additions, and the Stadhuis or Town Hall, 1835, are noteworthy. Pop. 577,694. See Netherlands.

ROUBAIX. Town of France. It stands on the Canal de Roubaix, which connects it with the Schelde and Deûle, 6 m. N.E. of Lille. It has manufactures of woollens, cotton, linen, shawls, and velvets, and iron and copper foundries and machine works. The 15th century church of S. Martin was rebuilt in 1849. Other buildings include the national school of industrial arts and a modern town hall. Occupied by the Germans, 1914-18, it was re-occupied by the British, Oct. 18, 1918. It has been adopted by Bradford. Pop. 115,441.

ROUBLE. Russian coin. It is divided into 100 kopecks and is in circulation as a silver coin under the Soviet. Ten roubles make a chervetz, which is the monetary unit of the republic. Before the Great War its normal value was 2s. 1½d., and after 1917 paper roubles were issued to an enormous extent.

ROUEN. City and port of France. It lies on the Seine, 87 m. by rly. N.W. of Paris. The main part of the town is on the right bank of the river, which is lined with extensive quays, and is connected with the industrial quarters on the left bank by bridges. The chief industry is the spinning, preparation, and dyeing of cotton. At the suburb of Sotteville are rly. workshops. During the Great War Rouen was an important British base. Modern alterations have driven broad, handsome streets through parts of the old town, but Rouen still remains a picturesque city.

The cathedral, a large Gothic structure, dates chiefly from the 13th century. There are some beautiful rose windows and some fine monuments. The Gothic church of S. Ouen, 14th cent., is architecturally more remarkable, though marred by a modern W. front. S. Maclou (1440-1521) has doors carved by Jean Goujon, and S. Vincent and S. Patrice are famed for their stained glass. The Palais de Justice, 15-16th centuries, was the seat of the parlement of Normandy. Bonsecours, on a hill to the E. of Rouen, is a pilgrimage shrine. Pop. 122,898. See Normandy.

Rotterdam. 1. The Delft Gate, the old north gate of the city, built 1766. 2. Maas and Royal bridges

ROUGE ET NOIR (Fr. red and black). Gambling game with cards. It is played on an oblong table covered with green cloth, having at either end two large diamonds coloured red and black respectively and a triangular space called inverse. In the centre are two divisions known as couleur.

Six packs are shuffled together, from which the dealer takes a convenient quantity in his hand each time a coup is dealt. Court cards count ten, and the ten down to ace bear their face value. The dealer first deals for noir until the pips on the cards faced in a line number 31 or not more than 40; and then does the same for rouge, the winning row being that containing pips totalling the nearest to 31.

Players who stake on couleur wager that the winning colour will be the same as the first card turned; those backing inverse, that it will be the opposite. Stakes placed on the red or black diamond denote the backing of that particular colour to win. The dealer holds the bank; the others are punters. See Roulette.

ROUGET DE LISLE, CLAUDE JOSEPH (1760-1836). French soldier and poet. Born at Lons-le-Saunier, Jura, May 10, 1760, he owes his fame entirely to the song, La

Rouen. 1. Panoramic view dominated by the great 13th century Gothic cathedral. 2. Church of S. Ouen; this facade was added to the 14th century structure in 1848-51

Marseillaise (q.v.), which he wrote and composed in 1792. He was imprisoned under the Terror. Wounded at Quiberon, 1795, he left the army and lived in straitened circumstances until Louis Philippe granted him a small pension in 1830. He died June 26, 1836.

ROUGH RIDER. Originally one who rode or trained untried horses, i.e. a horse-breaker. From that it came to be used for soldiers in the cavalry and artillery who did this kind of work, and who wore a spur on the sleeve as a badge. Still later, bodies of mounted men raised for service in time of war called themselves roughriders; among such were the City of London Yeomanry and the regiment raised by T. Roosevelt for service during the Spanish-American War.

ROULETTE.

Gambling game. The roulette wheel itself is sunk in the centre of an oblong table covered with green cloth. The base of the wheel is poised on ball-bearings,

and by turning with the hand a small cross-bar rising from its axis, it can be made to revolve very rapidly.

The circular bed is divided into 37 compartments. Zero is coloured green; the other compartments are black and red alternately; 32 being black, 15 red, and so on. A white ivory ball is thrown into the moving machine,

the ball being spun in an opposite direction to that in which the wheel is rotating, in order to avoid all chance of cheating by sleight of hand on the part of the operator; the compartment in which the ball finally rests indicating the winning number.

ROUNDEL OR **ROUNDELAY** (Fr. rond, round). In music, the tune to which a poem of the same name was sung, and in which the first strain was repeated at intervals, thus giving the impression of a circle or round. In instrumental form this has developed into the rondo. Roundel was also the name of a dance in which the performers stood in a circle.

In heraldry, roundels are circular or rounded charges, having different names according to their tinctures: yellow, a bezant; silver or white, a plate; red, a torteau; blue, a hurt; green, a pommel; black, an ogress, a pellet, or a gunstone; purple, a golpe or wound; sanguine, a guzo; tenné, an orange.

ROUNDERS. Ball game once very popular in Great Britain. In 1889 the Rounders Association of Liverpool and Vicinity and the Scottish Rounders Association were formed, and rules drawn up. The area of play was made in the form of an elongated diamond; the number of players restricted to ten on each side, and the dimensions of the "bat" fixed at 35 ins. in length by 3½ ins. in diameter. The ball was made harder in substance, and thereafter, to put the striker out when running between bases, a fielder had to touch him with it instead of throwing it at him as formerly was allowed. The last man in may call for "three fair hits for the rounder," and if successful in hitting the ball to a sufficient distance to enable him to negotiate safely the whole round of the bases he obtains another innings for his side. See Baseball

ROUNDHEAD. Name applied to the supporters of the Parliamentary cause in the Civil War in derisive reference to the close-cropped hair of the Puritans.

ROUND TABLE OR **TABLE ROUND.** In medieval legend, the table at which King Arthur and his knights dined, also an order of knighthood maintained by Arthur. The table is first mentioned by Wace, and described at length by Layamon. It was round in order to avoid rivalry for precedence.

ROUND TOWER. Tall slender stone structure, of which there are notable examples in Ireland. Apparently erected in the 9th to 13th centuries, these towers served as detached bellies, watch towers, and strongholds for ecclesiastics and their valuables. Of 120 recorded, 10 still retain their conical caps. See Brechin; Broch; Glendalough.

ROUP. Common and serious disease attacking fowls which are too closely confined. In the catarrhal form the fowl shows symptoms of a severe cold, with discharge from the nostrils and the mouth, which later dry up, producing what is known as dry roup.

Roup. In Scotland, a sale by auction. The conditions of sale are called articles of roup and the seller is the exposor.

ROUSSEAU, JEAN JACQUES (1712-78). French philosopher. The son of a watchmaker who was also a dancing master, Jean Jacques Rousseau was born at Geneva. He ran away to Savoy, where Mme. de Warens harboured him, and for many years he lived in her house, performing the duties of an upper servant and enjoying the privileges of an adopted son. In 1741 he went to Paris, and settled there. He formed a connexion with Thérèse le Vasseur,

J. J. Rousseau, French philosopher After Ramsay

a seamstress, who remained his companion until his death. The five children whom she bore him were deposited in the Foundling Hospital, where all trace of them was lost.

In Paris Rousseau contributed mainly on musical subjects, to the Encyclopédie; and in 1750 he found himself famous as the author of a prize essay. He then cut himself off from social life and lived in simple fashion in the country, supporting himself by copying music, while writing books which gave him a place among the immortals. The first of these was a novel, *La Nouvelle Héloïse*, which launched the romantic movement in French literature. *Le Contrat Social*, which came next, might be described as an impassioned version of Locke's *Treatise on Government*. In *Émile*, Rousseau advocated natural religion as a substitute for the doctrinal teaching of the Church. To avoid arrest on account of the opinions expressed in *Émile*, Rousseau went to Switzerland and then, after a few years, to England. In 1767, having quarrelled with Joseph Hume and other friends, he returned to France and lived under an assumed name. In 1770 he settled in Paris. His *Confessions* were published after his death, on July 2, 1778.

ROUSSEAU, PIERRE ÉTIENNE THÉODORE, (1812-67). French painter. Born in Paris April 15, 1812, he travelled in Anvergne and Normandy, and in 1848 settled at Barbizon. For thirteen years from 1835 his pictures were regularly rejected by the Salon jury on account of their departure from established conventions; in 1849, however, a new jury admitted his work and awarded him a first class medal, and henceforward his progress was unimpeded. He died Dec. 22, 1867. See Barbizon; also illus. p. 194.

Rowan Tree. Cluster of flowers and leaves

N. and W. Asia, and N. America. Its leaves are divided into six to eight pairs of slender leaflets. The small clustered creamy-white flowers are succeeded by bright scarlet fruits.

ROWE, NICHOLAS (1674-1718). English dramatist. Born in Bedfordshire, and educated at Westminster, he wrote eight plays, of which the best are *The Fair Penitent*, 1703, and *Jane Shore*, 1714. The former is notable as containing the character of Lothario, who has passed into the currency of the language as the typical deceiver of women. Rowe is a master of pathos. In 1715 he was made poet laureate, and he died Dec. 6, 1718.

ROWFANT. District of Sussex, 4½ m. W. of East Grinstead on the Southern Rly. In the old Tudor house here Frederick Locker-Lampson (q.v.) lived for the last 20 years of his life, and here stored his valuable library. Among the books may be noted a fine copy of the Shakespeare first folio, 1623; many early editions of Shakespeare's plays, Pope's copy of Chapman's translation of Homer, 1611, rare editions of the Elizabethan dramatists, and of Bunyan, Defoe, Swift, Goldsmith, Fielding, Wordsworth, Thackeray, and Dickens.

ROWING. Sport which centres in the race rowed annually, since 1829, between crews representing the universities of Oxford and Cambridge, and the annual regatta which takes place at Henley.

Three inventions differentiate modern oarsmanship in racing craft on rivers from rowing in pleasure boats or in fishing and other boats on the open sea. These are the outrigger, the

smooth and keelless hull, and the sliding seat. The outrigger appeared first in the university race of 1846, and the first keelless boat soon followed. The slide was invented in Chicago in 1857. The improvement it meant was soon recognized, and the university race of 1873 was rowed on slides which gave a movement of about 12 in. Much thought has also been expended, notably by Dr. Edmond Warre, on the build of boat most suited for racing, and the length of the oars has been almost as prolific a subject for controversy.

The art of rowing can only be learnt on the water, with the help of an experienced coach. It is important to catch the beginning from the stretcher, to throw the weight from the feet on to the blade at the same time as the legs of the rower begin to shove the slide back, and to finish the body-swing exactly as the slide reaches the back stops.

Thomas Rowlandson, British caricaturist Self-portrait

ROWLANDSON, THOMAS (1756-1827). British caricaturist. Born in Old Jewry, London, he studied at the R.A. schools, and in Paris. Until 1780 he painted and exhibited landscapes, portraits, and history in the grand manner. The Westminster election of 1784 brought him into notice as a political satirist. The "dedicate investigation" of 1809 into the conduct of Princess Caroline, and the popular feeling against Napoleon gave him further opportunities of exercising his art. Most of these drawings for public consumption are crudely coloured and coarse. He is seen to greater artistic advantage in the *Three Towns* of Dr. Syntax, with text by William Combe, which appeared in Ackermann's *Poetical Magazine*. He died in London, April 22, 1827.

ROWLEY REGIS. Urban dist. of Staffordshire. It is near the Stour, 5 m. from Birmingham, on the G.W. Rly. Surrounded by coal mines, its industries include ironworks, potteries, and chain works. Pop. 40,025.

ROWTON, MONTAGUE WILLIAM LOWEY-CORRY, BARON (1838-1903). British politician. A son of Henry Corry and grandson of the earls of Belmore and Shaftesbury. He was born Oct. 8, 1838, and educated at Harrow and Trinity College, Cambridge. His father was first lord of the admiralty under Lord Derby in 1867-68, and in 1866 young Corry became private secretary to Disraeli. He retained that position until Beaconsfield's death, having been in the closest touch with the Tory leader throughout.

Baron Rowton, British politician Elliott & Fry

In 1880 he was made a baron. Rowton died unmarried. Nov. 9, 1903, when his title became extinct. Beaconsfield left all his papers to Rowton, who did not, however, write the official Life of the statesman. See Beaconsfield.

ROWTON HOUSE. Building designed to provide comfortable and inexpensive lodgings, with some of the amenities of club and hotel life, to single men of good character and in poor circumstances. The scheme was devised by Lord Rowton, and the first Rowton House was erected by him at his own cost in Bond Street, Vauxhall, with accommodation for 477 persons. It was opened Dec. 15, 1892. Its success, financial and social, was such that in 1894 a company was formed to extend the work. Similar institutions were opened in London at King's Cross, Newington Butts, Hammersmith, Whitechapel, and Camden Town, with a total accommodation for 4,694 persons.

Roxburghshire. Map of the Scottish border county

ROXBURGH. Former burgh of Roxburghshire, Scotland. It stood near where Kelso now stands, at the junction of the Teviot and Tweed, and gave its name to the county. There was a castle here in the 11th century, a favourite residence of the Scottish kings. Around it the town grew until it was one of the most important in Scotland. The town gradually became smaller, until to-day nothing is left of it. About 2 m. away is New Roxburgh, on the L.N.E. Rly.

ROXBURGHE, DUKE OF. Scottish title borne since 1707 by the family of Ker. Robert Ker, a son of William Ker of Cessford, was made earl of Roxburghe in 1616. By special arrangement this title passed on his death to his grandson, William Drummond, who took the name of Ker, and his descendant John became the 5th earl in 1693. He was secretary of state for Scotland, and, having helped to bring about the union of the two kingdoms in 1707, was in that year made a duke.

John, the 3rd duke, formed a famous and valuable library, sold in 1812, and gave his name to the Roxburghe club. He died in 1804, and in 1812 the titles were successfully claimed by Sir James Innes, Bart., a descendant of the 1st earl; he took the name of Innes-Ker, and from him the later dukes are descended. Their chief seat is Floors Castle near Kelso. The duke's eldest son is known as the marquis of Bowmont.

John, 3rd Duke of Roxburghe After W. Hamilton

ROXBURGHSHIRE. Border county of Scotland. Its area is 666 sq. m., and it is sometimes called Teviotdale after its chief river. The Tweed and Liddel (Liddesdale) also give their names to beautiful dales here. The surface is hilly in the S.E., where are the Cheviots, and in the N., where the Eildon Hills enter the county. Much land is devoted to grazing sheep, while tweeds are manufactured. The rivers are noted for their fishing. Jed-

burgh is the county town; other places are Hawick, Kelso, and Melrose. The peel towers include Fernieburst, Branxholm, Harden, and Hermitage, while there are abbey ruins at Melrose, Jedburgh, and Kelso. There are fine examples of hill forts. Pop. 41,400.

ROYAL ACADEMY. English art institution. Founded Dec. 1, 1768, by George III, it provided for the appointment of a president and forty Academicians, and for the holding of annual exhibitions. The Academicians

were to include professors of all branches of the fine arts, thus inaugurating the educational side of the Academy's activity now represented by the Academy schools.

In 1780 rooms in Somerset House were assigned to the Academy. In 1834 it was removed to Trafalgar Square, and in 1869 to Burlington House, Piccadilly. The annual exhibition opens the first Monday in May, and lasts till August. Included in the R.A. premises is the Diploma Gallery, so called from the fact that it consists of works presented by Academicians on their election. The administration of the Chantrey Bequest is vested in the president and council. See Academy; Chantrey, Sir F.

ROYAL CANAL. Waterway of the Irish Free State. It extends from the Liffey, at Dublin, to the Shannon, at Richmond Harbour. Constructed between 1789-1802, it is 96 m. in length, has a width of 44 ft. and a depth of 6 ft. It is owned by the G.S. Rlys.

ROYAL EXCHANGE. London building for merchants and bankers. It is between the Bank of England and Cornhill, E.C. The third on the same site, it was built from

ROYAL FAMILY. Term used in the United Kingdom for the sovereign and the members of his family, including uncles, aunts, and cousins. It is used in a similar sense in other countries ruled by kings; in countries ruled by emperors the term imperial family was substituted. Since 1917 the name of the royal family has been Windsor, taken by royal proclamation in July, 1917. See George V; Mary; York, Duke of, etc.; also table below.

Royal Exchange, London. Portico of the building opened in 1844

ROYAL FERN OR FLOWERING FERN (*Osmunda regalis*). Large, handsome fern of the order Osmundaceae. The feathery fronds, 10 or 12 ft. long and about 3 ft. broad, are broken into large, paired leaflets, again divided. At the upper part of the fertile fronds the leaflets are more or less contracted and concealed by the clusters of spore cases, which look like red-brown flowers. It lives in bogs and wet woods. See p. 1174.

ROYAL FUSILIERS. Regiment of the British army. Known as the City of London Regiment, it was raised in 1685 by command of James II. It first saw service in the Flanders campaigns of 1692-95, and later

Royal Family. Genealogical table of the British Royal Family

distinguished itself in the Peninsular, Crimean and S. African wars. During the Great War in addition to its four regular battalions a number of specially raised service battalions were included, Sportsmen's, Stock Exchange, etc. Its territorial battalions were increased to four times their original number (see London Regiment). The depot is at Hounslow.

Royal Fusiliers. Badge of the regiment

800 officers, men, and visitors perished. A later Royal George was a yacht, built for George IV and occasionally used by Queen Victoria. Part of her fittings are preserved at Virginia Water.

ROYAL HOUSEHOLD. Term applied to attendants of the sovereign. The existing system of government in monarchical countries has developed largely from the sovereign's household.

In the United Kingdom to-day the king's household is a large one, divided into several departments. Under the lord chamberlain are seven lords in waiting, the gentlemen in waiting, the gentlemen at arms, and many others. Other high officials are the lord steward and the master of the horse. There is an ecclesiastical household, called the college of chaplains, and a medical household. The master of the household and the crown equerry have each a department. For more personal matters there is the department of the treasurer and the private secretary's office. There is a ceremonial department under a comptroller. The king has also a separate household in Scotland.

Royal Fern *Osmunda regalis*. See page 1173

Other members of the royal family have households. That of the queen is under a lord chamberlain, and includes a mistress of the robes and a number of ladies of the bedchamber. Other royal households, e.g. that of the prince of Wales, are under comptrollers. See King.

Royal Scots. Badge of the regiment

ROYAL SCOTS. Regiment of the British army. Known also as the Lothian Regiment until Dec., 1920, when its official title became The Royal Scots (The Royal Regiment), this is the oldest British regiment, dating from 1633. It took a notable part in the battles of Blenheim, Oudenarde, and Malplaquet, and served in the Peninsular War. It fought at Quatre Bras and Waterloo, and, later, in the Crimea, China, and South Africa.

In the Great War over 50,000 men enlisted in the regiment. The regimental depot is at Glencorse, and the colonel-in-chief of the regiment is Princess Mary.

Royal Scots. Corporal in full uniform

ROYAL SOCIETY, THE. Premier scientific society in the United Kingdom. It originated in a meeting in London, 1645, of a number of learned inquirers after knowledge, for the discussion of various speculations in natural philosophy and of experiments connected therewith. In 1648-49 some of the members removed to Oxford, where they met in Dr. Wilkins's rooms at Wadham College. About ten years later most of them returned to London, and resumed their meetings at Gresham College, E.C., becoming organized in 1660 as a society, which, on April 22, 1662, was incorporated.

The society met at Gresham College, except for a short time at Arundel House, 1666, until 1710, when a move was made to Crane Court, Fleet Street, E.C. In 1780 the society moved again to rooms provided by the government in Somerset House, and in 1857 to its present home in Burlington House, Piccadilly. Its fellowship, the F.R.S., is regarded as one of the world's great honours. Several medals are offered each year in encouragement of scientific research and discovery, e.g. Davy and Darwin medals. See Academy; Burlington House.

The Scottish equivalent is the Royal Society of Edinburgh, which developed from a philosophical society founded in Edinburgh in 1739. Its headquarters are at 22, George Street, Edinburgh, and its members are known by the letters F.R.S.E.

ROYAL SOVEREIGN. Nameship of a class of British battleships completed 1915-16. They are 624½ ft. long, 88½ ft. in beam, displace 25,750 tons, and have engines of 40,000 h.p., giving a speed of about 22 knots. They burn oil. Their armament consists of eight 15-in., fourteen 6-in., and two 3-in. guns, and 21-in. torpedo tubes. Besides the nameship, the class contains the Royal Oak, Resolution, Revenge, and Ramillies. There was an older class of battleship in the British navy bearing these names. See Battleship.

ROYAN. Seaside resort of France. It lies at the mouth of the Gironde, 63 m. N.N.W. of Bordeaux. Its S. aspect and fine sands make it a popular bathing resort. There is a small harbour. Pop. 10,242.

ROYAT. Pleasure resort of France. It stands on the Tirolaine, at an alt. of 1,495 ft., about 2 m. S.W. of Clermont-Ferrand. Its thermal springs and beautiful environs attract many visitors. Pop. 2,170.

ROYCE, JOSIAH (1855-1916). American philosopher. Born in California, Nov. 20, 1855, he was educated at the university of California, and in Germany. In 1878 he returned to his own university as a tutor, and in 1892 was made professor of philosophy. In 1914 he went to Harvard as Alford professor of natural religion and moral philosophy. Royce taught objective idealism, that the relation between the subject and the object of thought is one of absolute identity and of logical voluntarism. All logic is logic of the will; truth is instrumental so far as it is a means of obtaining the object of all human willing. Morality consists in free, active loyalty to a thing or community. Royce died Oct. 4, 1916.

ROYSTON. Market town and urban dist. of Hertfordshire. It is 12 m. from Hitchin, on the L.N.E. Rly. In 1742 a cave, containing carvings of the Crucifixion, etc., was discovered, and many Roman relics have been found. Royston crow is another name for the hooded crow. Market day, Wed. Pop. 3,826.

ROYSTON. Urban dist. of Yorkshire (W.R.), England, 4 m. from Barnsley, with a station on the L.M.S. Rly. The chief buildings are the church of St. John the Baptist, restored in 1859, and the grammar school, founded 1607. Pop. 6,250.

ROYTON. Urban dist. of Lancashire. It is 3 m. from Oldham on the L.M.S. Rly. The chief building is S. Paul's church, and the main industry is cotton manufacture. Pop. 17,194.

RUABON OR RHUWABON. Town of Denbighshire, Wales. It is 5 m. from Wrexham, on the G.W. Rly. In the parish church are monuments to the Williams-Wynn family, whose seat, Wynnstan, is near. Bricks, tiles, and chemicals are manufactured, while coal and iron ore are mined near. Pop. 3,387.

RUANDA. Dist. of the Belgian Congo. Formerly it was the N.W. corner of German East Africa, but with Urundi, S. of it, was assigned to Belgium as mandatory of the League of Nations. It is bounded N. by Uganda, E. and S. by Tanganyika Territory, and W. by Lake Kivu. The country is mainly mountainous. Usumbura is the capital. The area is about 20,550 sq. m.

H.M.S. Royal Sovereign, nameship of the class of battleships constructed 1915-16

RUBÁIYÁT. Plural of Rubai, a Persian word meaning quatrain or verse of four lines in which the first two and fourth lines rhyme. One quatrain or stanza is a rubai, and a number of verses or complete poem is a Rubáiyát. The best known is the Rubáiyát of Omar Khayyám, translated into English by E. Fitzgérald. See Fitzgérald, E.; Omar Khayyám.

RUBBER. Milky juice obtained mainly from trees of the genus *Hevea*, Ceara, Castillo, etc.; natives of S. and Central America.

Other rubber-bearing trees and vines are known, including *Ficus elastica* of the East (see India Rubber Plant), and others native to Africa, Madagascar, Malaya, and Borneo.

For a long time S. America, and especially Brazil, was the sole and afterwards the chief source of rubber. It was procured in a rough and ready fashion by the natives slashing the wild rubber trees with axes, and collecting the juice or latex in small cups. The rubber was cured by repeatedly dipping a

paddle into the latex and revolving the paddle over a smoky fire of bark and nuts. The principal tree was *Hevea brasiliensis*. On account of its excellent quality, fine hard Para was preferred above all other rubbers.

In 1873 the authorities of Kew Gardens determined to try if rubber seeds could be procured from the Amazon districts and planted in British possessions in the East. Seeds were obtained with great difficulty and planted in Kew Gardens, and the seedlings produced were transported to Ceylon and Singapore in 1876. Their descendants now cover hundreds of square miles in Southern India, Ceylon, the Federated Malay States, the Straits Settlements, Sumatra, Java, and Borneo.

Rubber. Seed and seedling of *Hevea brasiliensis*

Charles Macintosh of Glasgow produced his waterproofing process in 1823, turning out a product free from the stickiness and odour associated with earlier attempts. This laid the foundations of the rubber industry. The vulcanisation process was discovered independently by Hancock and Goodyear about 1842-3. By subjecting rubber to the combined action of sulphur and heat it gained in strength and elasticity, became free from stickiness, and the rubber goods thus prepared were able to withstand climatic influences.

There is scarcely any art, industry or sport in which rubber is not used in some form or other. The many products include, e.g. the threads used in elastic tapes and wearing apparel, rubber springs, tires and brake blocks for vehicles, soles and heels for footwear, floor coverings and paving blocks. In the form known as ebonite or vulcanite, rubber is moulded and turned to form a multitude of small articles.

In 1850 the output of rubber was estimated at 1,000 tons. In 1929 the export from producing countries was estimated at 860,200 tons, of which 25,000 tons were wild rubber. The demand kept roughly parallel with the increasing production until about 1920, when there were signs of over-production, and the price dropped to 1s. per lb. Restriction of output was adopted in 1922 by the British interests, and remained in force until 1928. In 1929 the average price was 10½d. per lb.; in the autumn of 1930 it fell to 3d., the lowest on record. See illus. below.

RUBENS, PAUL ALFRED (1875-1917) British composer. Born in London, April 29, 1875, he was educated at Winchester and studied law. His real talent, however, was the writing of music for the stage. Among his successes were musical numbers for *Florodora*, 1899; *A Country Girl*, 1902; *The Cingalee*, 1904; *Miss Hook of Holland*, 1907; *The Balkan Princess*, 1910; and *The Girl from Utah*, 1913. He died Feb. 5, 1917.

RUBENS, PETER PAUL (1577-1640) Flemish painter. Rubens was born June 29, 1577, at Siegen, Westphalia, where his father,

Peter Paul Rubens
Flemish painter
Self-portrait

a prominent citizen of Antwerp, was living in exile. After his death, 1587, Rubens was able to go to Antwerp, where he worked under Verhaeght, van Noort, and Otto van Veen or Voennius. From 1600 he was painting in Italy, returning to Antwerp in 1608, where he was soon recognized as one of the greatest painters of the day. A man of wide culture, he several times engaged in diplomacy, carrying out missions at Delft, 1626, Madrid, 1628, London, 1629, and at The Hague, 1632. He died May 30, 1640.

Rubens is credited with about 1,250 authentic works. Brussels, Antwerp, and Vienna have some masterpieces, and the National Gallery, London, contains over 30 works.

RUBICON (mod. Rugone or Urgone). In ancient geography, a stream forming the boundary between Italy and Cisalpine Gaul. Its crossing by Julius Caesar began the Roman civil war, 49 B.C. The phrase to cross the Rubicon is equivalent to burning one's boats, taking an irrevocable step. See Caesar, Julius.

RUBIDIUM. One of the rare elementary metals. Its chemical symbol is Rb; atomic weight, 85.44; atomic number, 37; specific gravity, 1.52; melting point, 38.5°C. It is wax-like and soft, even at very low temperatures; oxidises rapidly in air, and burns on water with violet flame, decomposing the water and liberating hydrogen, which takes fire. It forms amalgams with mercury. The metal is silvery white in colour, and is called rubidium from the deep, red colour of its lines in the spectrum. Rubidium is used to line the glass bulb of the photo-electric cell, where it forms the electron-emitting layer.

RUBINSTEIN, ANTON GREGOROVITCH (1829-94). Russian pianist and composer. Born at Wechotynetz, in Bessarabia, Nov. 28, 1829, he studied piano-playing in Moscow and Paris, and in 1840 played in Paris before Liszt and Chopin. He studied composition in Berlin, 1844-48, and settled in St. Petersburg, where he became court pianist, 1858, and director of the imperial conservatoire, which he founded, 1862-67. Between 1867-73 he toured widely in Europe and America, and died Nov. 20, 1894. His operas, numbering 18, are seldom played, though many of his piano compositions and a few songs are well known. He published his memoirs in 1889.

RUBY. Red, transparent variety of corundum. Dichroic by transmitted light, enabling it to be distinguished from similar stones, e.g. garnet, spinel, etc., it is inferior only to the diamond in hardness, and appears equally brilliant in natural or artificial light. The finest rubies are those possessing a deep, clear, carmine colour, and are known as pigeon's blood rubies. The best dark red rubies are obtained from Mandalay in Burma, and in Siam and Ceylon. A number of so-called rubies are not varieties of corundum. Many are garnets, e.g. Australian rubies and Cape rubies. The Siberian ruby is a tourmaline.

RUDD OR REDEYE (*Leuciscus erythrophthalmus*). Common fresh-water fish, found throughout Great Britain and Europe. It has red fins and eyes, and closely resembles the roach, but the dorsal fin is placed rather farther back. It is of small value for the table.

Rudd. Small fresh-water fish resembling the roach

RUDDER. Flat frame hinged on the stern-post of a vessel, by which the vessel's course is determined. When the rudder is in a line with the axis of the vessel, no deviation occurs, but a slight turn to port or starboard swings the vessel's head to starboard or port respectively. Small boats are usually steered by a tiller passing through the rudder-head, while larger vessels are steered by a wheel, which on being turned pulls the rudder to one side or the other by means of chains connecting it with the rudder-head. In steamships steam steering-gear is fixed aft, and the steering is done from the navigating bridge. Vertical rudders are fitted to airships and aeroplanes for similar steering purposes. See Ship.

RUDNIK. Ridge of hills in Northern Serbia, called also Suvobor. Along the ridge, which separates the valleys of the Kolubara and Upper Morava, the Austrians and Serbians, in Nov., 1914, fought the battle generally called the battle of the Kolubara (q.v.).

RUDOLPH. Name of two German kings and Roman emperors. Rudolph I (1218-91) was count of Hapsburg before he became king in 1273. He greatly increased the area of the land under his rule and was the real founder of the greatness of the Hapsburg empire. He died July 15, 1291. Rudolph II, a son of Maximilian II, became emperor in 1576 and ruled also over Hungary and Bohemia. In 1606, after an ineffective rule, he was deposed, and he died Jan. 20, 1612.

Rudolph, Crown Prince of Austria

Rudolph II, became emperor in 1576 and ruled also over Hungary and Bohemia. In 1606, after an ineffective rule, he was deposed, and he died Jan. 20, 1612.

RUDOLPH (1858-89) Crown Prince of Austria. Born Aug. 21, 1858, the only son of Francis Joseph, emperor of Austria, he showed considerable ability as a naturalist and a linguist, while his travels led him to write two books: *Fifteen Days on the Danube*, 1881, and *A Journey in the East*, 1884. In 1881 he married Stephanie, daughter of Leopold II, king of the Belgians, and they had one daughter. On Jan. 30, 1889, Rudolph was found shot at Mayerling, near Vienna.

RUDYARD. Village of Staffordshire. It is 2 m. from Leek, on the L.M.S. Rly. Here is Rudyard Lake, 2 miles long, which forms a reservoir for the Trent and Mersey canal. Pop. 78.

RUE OR HERB OF GRACE (*Ruta graveolens*). Perennial sub-shrub of the order Rutaceae. A native of S. Europe, it has alternate, much-divided, bluish-green leaves, the ultimate leaflets being oblong. They are plentifully supplied with oil glands, from which proceed the powerful odour characteristic of the plant and the bitter taste. The small yellowish flowers are combined in clusters. Rue has long been used in medicine as a stimulant and narcotic.

Rue. Leaves and flowers

RUFF (*Macetes pugnax*). Bird of the sandpiper sub-family. The plumage is of mottled brown, grey, and black, with pale buff underparts, and the length is about 12 ins. In the breeding season the male develops a tuft of long feathers on either side of the head and a broad ruff or shield of feathers on the throat. This accounts for the name of the bird. The female, or reeve, lacks these appendages. These ruffs are constantly distended and

Rubber. 1. Seven-year old plantation in Sumatra. 2. Para rubber gatherer, solidifying milk after tapping tree. 3. Hevea tree, tapped with the Huber knife. 1 and 3 from *The Rubber Cultivation on the East Coast of Sumatra*, by J. H. Hookey.

displayed during courting time. The bird was formerly abundant in marshes in many parts of England, to which it is a summer migrant, but has now been almost exterminated. In winter it migrates from N. Europe and Asia to the Mediterranean, Africa, and India.

RUFFE or **POPE** (*Acerina cernua*). Fresh-water fish. It is very much like a perch, to which it is closely allied, but lacks the vertical stripes of that fish, and has spots on the dorsal fin, and seldom exceeds five inches in length. It is found in clear running streams throughout southern and middle England and Central Europe, and feeds upon worms and insects.

Ruff with feather tufts on throat in breeding season

RUFJI. River of Tanganyika Territory. Rising N.E. of Lake Nyasa, it flows N.E. to its junction with the Ruaha just above Pangani Falls. From this point the direction is E. to the coast opposite the island of Mafia. Here in July, 1915, the German cruiser Königsberg (q.v.) was destroyed by a British force.

RUGBY. Market town and urban dist. of Warwickshire. It stands on the Avon, 30 m. from Birmingham, and is served by the L.N.E. and L.M.S. Rlys. It is a rly. junction and a hunting centre. The industries include engineering works. Rugby is an important radio station. Market days, Mon. and Sat. Pop. 25,220.

Rugby, Warwickshire Part of the school buildings

RUGBY SCHOOL. English public school. It was founded in 1567 by Lawrence Sheriff, a native of Rugby and a courtier, also a member of the Grocers' Company. It has property around Rugby and in London, and is governed by 12 trustees. The first building was near the parish church, whence it was removed to its present site about 1740. In 1809 the present buildings were begun, and constant additions were made during the 19th century. The number of boys is about 600, accommodated in nine houses. Rugby became a great public school mainly under the direction of Thomas Arnold (q.v.), headmaster, 1827-42. It was the first home of Rugby football.

RUGBY UNION. Association of clubs playing the Rugby game of football. There the four of these unions in the United Kingdom, ment, uch for England, Scotland, Ireland, and It took In order to secure uniformity in the the battle English union was founded by a few Oudenarde, 71, and the others came into exist- quet, and sene afterwards. The rules of the Peninsular War, n up and, if necessary, altered at Quatre Brttee. In addition to arranging Waterloo, and, laother matches, and looking the Crimea, China, nterests of the game, the South Africa.

In the Great War over 50,000 men enlisted in the regiment. Ther regimental depot is at Glencorse, and the colonel-in-chief of the regiment is Princess Mary.

RUGELEY. Urban dist. and market town of Staffordshire. It is 7 m. from Lichfield, on the L.M.S. Rly. In the neighbourhood are the Cannock Chase collieries, and other industries include milling and tanning. Market days, Tues. and Thurs. Pop. 4,607.

RÜGEN. German island in the Baltic Sea. It is separated from Pomerania by the mile-wide strait of Strelasund, and has an area of 373 sq. m. Steep chalk cliffs, reaching an alt. of 500 ft., on the E. coast, form the edge of the E. hills. The coastline is exceedingly irregular. Grain, fish, and cattle are the chief products. Bergen is the chief town. The island was Danish from 1168, Pomeranian from 1325, Swedish from 1648, and has been Prussian since 1815. Pop. 53,883.

RUHLBEN. Racecourse near Berlin. During the Great War it was converted into an internment camp for civilian prisoners, among whom were large numbers of British subjects who were unable to get away on the outbreak of war, and also many British seamen of the merchant service. See Internment.

RUHNEN. DAVID (1723-98). German scholar. Born at Stolp, Pomerania, Jan. 2, 1723, he was educated at Wittenberg. From there he went in 1743 to Leiden, where he made a special study of Greek. His wonderful abilities soon brought him to the front, and in 1757 he became lecturer in Greek at Leiden. Chosen a professor in 1761, in 1774 he was elected university librarian. He died May 14, 1798. Ruhnken was one of the band of scholars who restored Greek to a high place in secular studies.

RUHR. River of Germany, a right tributary of the Rhine. It flows almost due W. through the rich coal and iron area of Rhenish Prussia for 145 m. to join the Rhine at Ruhrort.

During the Great War the Ruhr district was one of Germany's chief munition centres. It was also one of the principal centres of revolution in Nov., 1918. In Jan., 1923, the French, in consequence of Germany's failure to pay reparations, occupied the Ruhr district, including Essen. The Germans retaliated with industrial passive resistance, and a deadlock ensued until Sept., when the German government ordered work to be resumed. In 1925 the occupying troops left the district. See Essen; Germany; Reparations.

RUISLIP. District of Middlesex. It lies between Harrow and Uxbridge, and has a station on the Met. Rly. It forms part of the urban dist. of Ruislip-Northwood. The ancient flint and stone church of S. Martin, restored in 1869-72 by Sir Gilbert Scott, has a tower with a peal of eight bells. To the N. runs the brook Pin, and near is Ruislip reservoir. Pop., urban dist., 9,113. Pron. Rye-slip.

RULE, BRITANNIA.

British national song. Written by James Thomson, and composed by Dr. Thomas Arne, it was one of the numbers in a masque, Alfred, written in 1740 for the prince of Wales as part of an entertainment given at Chifden. The song immediately attained great popularity, and has now reached the dignity of a British national or patriotic ode. See Arne, T. A.; Thomson, James.

RULE OF THE ROAD. Regulation enforced by law to ensure safety in the use of thoroughfares by vehicles and riders. In Great Britain the rule of the road, unlike that prevailing in most continental countries and America, is to keep to the left, and to pass in that position all traffic coming in an opposite direction; but on overtaking any vehicle, to draw towards the centre of the road, and pass on the right side of the vehicle overtaken.

At sea the rule of the road is a convention for the guidance of a ship when meeting another. Port means the left-hand side of a ship and starboard the right. The rule of the road is for ships to pass port to port. At night a green light is shown on the starboard and a red light on the port.

RUM. Ardent spirit distilled properly from fermented cane sugar. It is made in the W. Indies. Its brown colour is imparted by caramel, or storing in sherry casks, or by both. The poorest rum is made from molasses, or from the refuse from sugar-making. In France an inferior sort is made from beet sugar. Rum is usually distilled at some 40 p.c. overproof. See Alcohol; Distillation.

RUM. Island of the Inner Hebrides. Inverness-shire. It is 15 m. from Ardnarmurchan Point, is 8 m. long and 7½ wide, and covers 42 sq. m. Pop. 90.

ROMANIA. State of S.E. Europe, a member of the League of Nations. It now has an area of 122,282 sq. m. and a population estimated at over 17,000,000. Rumania consisted in 1914 of the two principalities of Wallachia and Moldavia, together with the Dobruja on the other side of the Danube. To these were added after the Great War Bessarabia to the E., and Bukovina to the N. of Moldavia, with Transylvania and parts of the Banat. The capital is Bukarest (Bucharest).

The chief agricultural crops are maize, wheat, barley, oats, and rye. Forests cover about 17,000,000 acres. Large numbers of sheep, cattle, and other livestock are reared. The country is rich in minerals, including salt, lignite, petroleum, iron, copper, and lead.

Rumania, from the point of view of production and industry, can broadly be divided into two areas, the Old and the New Rumania. The former, with the exception of its vast supplies of petroleum, is mainly an agricultural area. The latter, particularly Transylvania, is largely a mineral-producing and industrial area. The chief petroleum districts are around Prahova, Damboritz, Bacau, and Buzau. Salt mining is a state monopoly. It is carried on over an area of some 250 sq. m. in the Lower Carpathians. There are over 9,000 m. of state rlys. and several private lines.

Rumania. Map of the Balkan kingdom as constituted after the Great War

chiefly in Transylvania. A radio station was built in 1929

Rumania corresponds to the Roman province of Dacia (q.v.). In the 14th century the two principalities of Walachia and Moldavia began to take definite shape. In 1456 Walachia fell under Turkish rule, and during the next few centuries it only enjoyed brief spells of comparative liberty. In the 15th century Moldavia's independence was threatened by the Turk, and the principality was eventually forced to admit Turkish suzerainty.

Rumania. Old farmer and his daughter in their orchard

their princes being elected for life instead of, as hitherto, holding their office at the pleasure of the Porte.

At the conclusion of the Crimean War the principalities were granted their independence under the suzerainty of the Porte, while a European Commission, in 1858, decided that each principality should have its own prince and elective assembly. The desire for union was, however, strong, and in 1866 a new constitution was promulgated, declaring the country to be a single and indivisible state under the name of Rumania.

The independence of Rumania was recognized both in the treaty of San Stefano in 1878 and in the treaty of Berlin signed in the same year, but she was compelled to accept the Dobruja in exchange for Bessarabia, which was annexed by Russia. The results of giving Rumania territory across the Danube, her natural frontier, were seen during the Second Balkan War in 1913, when she joined in the attack on Bulgaria and received as her share of the spoil a strip of land adjoining her former possession in the Dobruja.

On Aug. 27, 1916, Rumania, in accordance with a secret agreement with the Allies, declared war on Austria-Hungary. Germany immediately replied with a declaration of war. By Dec., 1917, Rumania had been completely conquered by the Austrians and Germans.

The peace treaties of 1919 gave Rumania the Rumanian lands in Hungary, Austria, and Russia, thus more than doubling her area and population, and virtually uniting the whole nation. The settlement introduced large alien elements—Magyar, German, Ukrainian, and Tartar—into the population. Another difficulty lay in the economic reorganization of the lands annexed from Hungary. Finally, the backward political and social condition of the kingdom made democratic measures necessary for the reform of the electoral system.

Almost at once the enlarged kingdom was invaded by the Bolsheviks under Bela Kun, but this inroad was beaten back. In 1920 a constituent assembly had been elected, and in 1922 the king and queen were crowned in the ancient city of Alba Julia. In 1923 a new and democratic constitution was adopted.

On July 20, 1927, King Ferdinand died. His son Carol had renounced the succession, but a party in the state still wished him to be king. However, his son Michael, a boy of six, succeeded, and a regency council was appointed. In 1930 Carol was reinstated as king. The constitution provides for a senate of 170 members and a chamber of deputies of 347.

RUMBOLD, SIR HORACE GEORGE MONTAGU (b. 1869). British diplomatist. Born Feb. 5, 1869, he was a son of Sir Horace Rumbold (1829-1913), who ended a long career in the diplomatic service by becoming ambassador in Vienna. Entering the same service, young Rumbold was sent to Teheran in 1895, Vienna, 1897, Cairo, 1900. In 1913, after experience at Munich and Tokyo, he was appointed councillor of embassy at Berlin. Minister to Switzerland, 1916-19, in the latter year he went to Poland, and in 1924 as ambassador to Spain. In 1928 he was transferred to Berlin.

RUMELIA, EASTERN. Dist. of S. Bulgaria. The middle portion is the wide level valley of the Maritsa; it lies between the Rhodope Mts. in the S.W. and the Balkans in the N. The chief town is Philippopolis (Plovdiv). Burgas, on the Black Sea, is the chief port. The province was Turkish before 1885, when it became Bulgarian. Its area is 11,641 sq. m. Pop. 1,372,065. See Bulgaria: Philippopolis.

RUMFORD, KENNERLEY (b. 1870). British singer. Born in London, Sept. 2, 1870, he was educated at King's School, Canterbury, and, gifted with a powerful bass voice, studied singing in Paris and under Henschel in London. He made his first concert appearance in London, 1897. In 1900 he married Clara Butt (q.v.), with whom he sang in many concert tours at home and abroad.

RUMINANT. Name given to those hoofed mammals of the even-toed order which chew the cud. In these animals the stomach is divided into a series of chambers. The hastily eaten and swallowed food passes into the rumen or paunch, whence it is later regurgitated to the mouth and thoroughly chewed, after which it passes to another division of the stomach for digestion. This provision meets the needs of animals which in a wild state graze largely and hastily by night, and then lie up under cover, where the food can be masticated at leisure. Oxen, sheep, goats, deer, and camels are ruminants. See Mammal.

RUNCIMAN, WALTER (b. 1870). British politician. The eldest son of Sir Walter Runciman, Bart., he was born at South Shields, Nov. 19, 1870. In 1899 he was elected M.P. for Oldham, losing his seat at the general election of 1900. In 1902 he was returned for Dewsbury, which he continued to represent until 1918. Runciman began his official career as parliamentary secretary to the local government board in the Liberal ministry formed in 1905. In 1907 he was made financial secretary to the treasury, and in 1908 he entered the Cabinet as president of the board of education. From 1911-14 he was president of the board of agriculture, and from 1914-16 of the board of trade. In 1924 and again in 1929 he was returned as M.P. for W. Swansea, and he acted as one of the Liberal leaders. In 1929 his wife was returned as Liberal M.P. for S. Ives.

RUNCORN. River port, market town, and urban dist. of Cheshire. It stands on the Mersey, 16 m. from Liverpool and 28 m. from Manchester, and has a station on the L.M.S. Rly. Here the Bridgewater Canal falls into the Mersey, and the Manchester Ship Canal passes by the town. Its industries include the manufacture of chemicals, soap, rope, etc. A rly. viaduct and a transporter bridge cross the Mersey here to Widnes. Market day, Sat. Pop. 18,393.

RUNE (Old Norse, *rún*, secret counsel). Any character in the pagan Scandinavian script. Derived, directly or indirectly, from a pre-Christian W. Greek alphabet, the first six characters in this system of writing denoted f, u, th, o, r, c. Runic alphabets are hence called futhorcs or futharks. The characters comprise uncurved strokes, adapted at first

for wood-carving, and to avoid following the grain they were made upright or slanting. Later on they proved to be equally suitable for incising bone, metal, and stone.
